LIFE AND DEATH. In Jewish thought both life and death are part of the divine plan for the world.

Life
The opening chapter of Genesis states that all things are created by God. They are, therefore, all purposeful. They all have some value, as is clearly implicit in God’s judgment on the created order: “God saw everything He had made, and behold, it was very good” (Gen. 1:31). But it is man who is at the apex of creation and the highest level in the order of value. All other things were created for his sake and constitute the theater of his operation and creative ingenuity.

Since life is the highest good, man is obliged to cherish it and preserve it. Every person is under mandate to marry and procreate in order to share in perpetuating the human species (Yev. 63b). He must preserve himself in a state of health. The Talmud includes many rules of hygiene and cautions against making one’s home in a community where there is no competent physician (Sanh. 17b). Maimonides included a chapter on rules of health in his code *Mishneh Torah*, since “the preservation of the health of the body is one of the godly ways” (Yad 4). The rabbis ruled that the preservation of life supersedes the fulfillment of all commandments, except the prohibitions against murder, unchastity, and idolatry (Yoma 82a). One should be concerned as much with the preservation of others’ lives as with one’s own life. Rabbi Akiva regarded the commandment to love one’s neighbor as oneself the most fundamental precept of the Torah (Sifra 19:18). Whoever sustains a single person, taught the rabbis, is as one who sustains the whole world, and whoever destroys a single person is as one who destroys the whole world; for every person bears the divine image, and every person was created unique and irreplaceable. Each one, therefore, has a right to say: “For my sake was the world created” (Sanh. 4:5). Indeed, man’s obligations are not limited to his fellowmen. They extend to all existence. He must not wantonly and unnecessarily destroy any object in the world nor inflict pain on any living creature. In this spirit the 18th-century rabbi Ezekiel Judah Landau forbade hunting (S. Wind, Rav Yehezkel Landau (1961), 54).

In stressing the sanctity of human life, the rabbis often
went beyond biblical precedent. For example, the Bible calls for capital "punishment for a wide variety of crimes, but the rabbis limited such punishment to conditions which in effect made the law inoperative. The Mishnah brands a court that imposes a sentence of capital punishment once in seven years, or according to another tradition, once in 70 years, a murderous court (Mak. 1:10).

Death
In view of the high value attached to man, death, which puts an end to man and his achievements, is the most baffling phenomenon. The account of Adam's sin (Gen. 2) is the biblical attempt to deal with the problem. Rabbinic literature contains a variety of views on the subject. Some rabbis regarded death as a punishment meted out to Adam and his descendants because of his sin in the Garden of Eden (Gen. R. 16:6), but others held that death was an appropriate termination for a finite creature and that it had been preordained at the time of creation (Gen. R. 30:8; Ex. R. 2:4). Death is the price paid for new birth, for the continued emergence of a new generation. Death must be deemed a good, noted Maimonides, since it is the means of "perpetuating existence and the continuity of individual beings through the emergence of one after the withdrawal of the other" (Guide 3:10).

Death was also robbed of its terror by the belief that after death individuals survive as incorporeal spirits (Ket. 103a; "… who has implanted within us eternal life”). The Reform liturgy drops the praise of God as intellect, attained by pursuing a life of virtue and wisdom. The righteous would be rewarded with eternal bliss in paradise and the wicked, punished in hell (see "Garden of Eden, *Gehinnom, and *Beatitude".

The final mitigation of the terror of death in rabbinic literature was the belief in the "resurrection of the dead and the world to come. At the end of the historical process God will create the dead anew reuniting body and soul, and then the resurrected dead will enjoy the bliss of the "world to come." The literalness of the belief in the resurrection appears to have been questioned by some rabbis. Thus, one view expressed in the Talmud states that in the world to come "there is no eating or drinking, no begetting children, no commerce, envy, hatred, or competition, but only this: that the righteous sit with crowns on their heads and delight in the splendor of God’s presence" (Ber. 17a). The technical term for resurrection is teḥiyat ha-metim, literally, "the revival of the dead." But there were Jewish philosophers, beginning with Philo, who interpreted this figuratively as referring to the immortality of the soul. Maimonides, especially, inveighed against the notion of a physical resurrection as man’s final state, and insisted that ultimate happiness consists of the incorporeal existence of men’s intellect, attained by pursuing a life of virtue and wisdom.

To accentuate the rejection of a belief in physical resurrection, the Reform liturgy drops the praise of God as the meḥayyeh ha-metim ("He who revives the dead") from the Amidah and substitutes note’a be-tokhenu hayyei olam ("… who has implanted within us eternal life"). The Reconstructionist prayer book substitutes for meḥayyeh ha-metim, zokher yeẓirav le-hayyim be-rahamim ("… who in love rememberest Thy creatures to life"). But many Jewish modernists use the traditional text, interpreting it, no doubt, as an allusion to the soul’s "immortality.

LIFE SCIENCES.

Introduction
Biology has become a vast subject which has increasingly merged with traditionally separate disciplines, particularly chemistry and physics. Indeed "life sciences" is now a more appropriate term than "biology." Furthermore the life sciences have provided the basis for most of the advances in medical science which stand up to objective scrutiny. In common with other sciences, the life sciences are an international enterprise and traditional schools of biological study based on personal opinion, ethnic approaches, or religious belief have become mainly obsolete. Indeed attempts to base investigations in the natural sciences on political or ethical considerations have proved disastrous. Furthermore there is now little prospect that an individual scientist or even a small group of scientists will make an important scientific contribution in isolation. Thus a specifically Jewish interpretation of the life sciences is a matter of continuing historical and ethical interest but of limited relevance to scientific discovery in modern times. In contrast advances in medical science have made ethical issues a matter of central but not exclusive concern to Jews. Nevertheless it is equally mistaken to assume that religious belief has been entirely supplanted by a reductionist approach. Indeed it would be false to conclude that scientists universally explain all aspects of life including human consciousness solely in physico-chemical terms. This remains a live issue for many Jewish and non-Jewish scientists concerned with the life sciences which has scarcely been resolved by the continuing debate of physicists and cosmologists. Advances in genetics have illuminated many genealogical issues of specific Jewish interest such as the history of the kohanim and the nature of many inherited diseases encountered predominantly in Jews. This entry reviews areas of the life sciences to which Jews have made notable contributions since 1800 C.E. It alludes only briefly to related areas of crucial importance to these contributions which are considered in other entries.

The following account of the contributions of Jewish scientists in key fields is necessarily brief. Their achievements are described more fully in their separate biographical entries. Their achievements will be better understood by readers who have consulted general sources of scientific information in order to gain some understanding of the areas of scientific endeavor to which Jewish scientists have contributed.

Prelude to the Modern Era
Although research in the life sciences is in intellectual terms now entirely non-sectarian, it is nonetheless legitimate to
consider the extent to which discoveries in the modern era were anticipated in traditional Jewish belief. Biological issues are raised in different contexts throughout the Bible. Genesis relates the divinely ordered hierarchy of species and much of Leviticus is concerned with classifying species as the basis for the dietary laws. In the Mishnah and the Talmud the tractates of the order Zera'im deal with agricultural laws and thereby consider many issues relating to animals and plants. These observations are not systematic or analytical in any modern sense. Indeed it is difficult to determine the extent to which they originate from Jewish sources or from the folklore of earlier or contemporary cultures. One of the earliest attempts to collate the then available knowledge of nature systematically was Maimonides’ treatise on drug names whose efficacy is no less established than many similar drugs in contemporary complementary medicine. Long in advance of Darwin, there were challenges to the literal interpretation of Genesis that all living species were present at the creation. Indeed some authorities espoused views current in the Hellenistic and Roman world that living organisms can arise from inorganic substances through spontaneous generation. These seemingly fanciful notions have been given scientific respectability by modern debate about the origins of life on Earth and, even more speculatively, elsewhere in the universe.

Many Jewish beliefs on biological matters were based on direct observation especially at times when Jews lived predominantly in rural communities and engaged in agricultural pursuits. These observations were undoubtedly embellished by reports of miraculous deeds allegedly witnessed by travelers in an age of greater credulity. However, there is little reason to believe that there was any specific Jewish interpretation of the biological basis for the key events of birth, life, and death in human kind, the life cycle of other species, or of botanical events. The main rabbinical preoccupation was with the religious and ethical dimensions of human life. It is tempting to interpret textual passages in the Bible and other literary sources as evidence for early scientific insight anticipating modern discoveries. For example Jacob’s manipulation of Laban’s goat herds and sheep flocks is sometimes taken as astonishing insight into Mendelian principles of genetic selection (Gen. 30:32–43). Yet it is entirely possible that his experience had simply endowed him with exceptional powers of observation rather than modern analytical insight. Perhaps most importantly through the ages and often in common with other monotheistic faiths, Judaism’s religious authorities have not attempted to interfere with man’s attempts to understand the natural world through observation and the exercise of reason.

Life Sciences in the 19th Century
In the early 19th century Jews made many contributions which helped to lay the basis for rational investigation. In common with other scholars they were commonly polymaths with the freedom to roam intellectually because of the limited factual knowledge available in general and the constraints on academic activities. Even when antisemitism disrupted academic careers, re-location was relatively simple as individual speculation and observation were all important and laboratory technology was rudimentary. Robert *Remak was the first (c. 1840) to describe the major constituents of the embryo and also described salient anatomical features of the nervous system. Jacob *Henle made new observations on the structure of the kidney (c. 1830) and theorized that infectious agents existed which are too small to be discernible by conventional microscopes, a prediction fulfilled by the later discovery and characterization of viruses. Between 1850 and 1890 Ferdinand *Cohn improved microscope design and adapted this advance to study the developmental stages of plants, algae, and bacteria. Furthermore he was arguably the first naturalist to discern the association between bacterial infection and disease. In the latter half of the century Nathanael Pringsheim made fundamental discoveries concerning plant morphology and physiology and founded the German Botanical Society. His contemporary Julius von *Sachs was also one of the first botanists to study and publish systematic studies of plant physiology. At this time Eduard *Strasburger further clarified the life history of plants. His findings have stood the test of time and led to his appointment to a chair in Jena at the age of 24, a remarkable achievement in the Germany of 1869 for a scientist of any religion. Not all the contributions of Jewish scientists of this era were so soundly based. Jacques *Loeb’s work on parthenogenesis from the 1880s on was largely fanciful but still visionary in anticipating the momentous cloning techniques developed more than a century later.

Life Sciences in the Modern Era
By the beginning of the 20th century the challenges in the life sciences were at least more clearly defined. These are too numerous to list in full but the major problems were to understand the nature of heredity, the control of cell growth and differentiation, the biochemical processes which maintain the life of cells and organisms, and the processes which enable specialized systems such as the nervous system to operate. Human ability to manipulate these processes for medical or other purposes was so limited that ethical questions were almost entirely philosophical. At the beginning of the 21st century there are few controversies concerning the basic mechanisms operating in areas of former ignorance or the likely directions of future advances. The main challenge to investigators is how to order the vast amount of information generated by the greatly expanded scientific enterprise.

Complete mapping of the human genome has opened the still more complex field of proteomics which seeks to categorize and explain the actions and interactions of the huge range of proteins transcribed from the genome. This task would be impossible without the simultaneous advances in computing techniques and the mathematical handling of experimental data. This reality emphasizes the interdependence of all branches of the natural sciences.

A related challenge is the daunting range of ethical issues generated by advances in scientific techniques, particularly...
when applied to medicine and agriculture. The ethical difficulties are compounded by the social issues. A century ago, scientific progress was understood and debated by a privileged coterie of savants. Even politicians were largely indifferent unless the advance had military applications or was likely to increase national prestige. Today the practical application of most scientific advances is likely to provoke public debate and progress depends on a dialogue between scientists, politicians, and appropriately educated laymen.

**THE MOLECULAR BASIS OF HEREDITY.** Hermann *Muller's* early appreciation of the importance of gene mutation in Darwinian selection emphasized that biologists long recognized the need to understand the mechanisms of genetic transmission. The elucidation of the structure of DNA was arguably the greatest achievement of 20th-century science. This discovery started the process of clarifying the molecular basis of genetics. It also established the central dogma that DNA determines the sequence of RNA, which in turn governs protein synthesis, even though exceptions to this rule were found later. Rosalind *Franklin's* crystallographic picture of DNA, the Mona Lisa of scientific illustrations, was the key to Watson's insight that the DNA molecule is a helix. Her experiments were made possible by the application of X-ray crystallography to defining protein structure. Pioneers in this field included John *Bernal* and Sir Max *Perutz. Perutz used this technique to

achieve the first biophysical description of a major molecule of biological importance, namely hemoglobin. Marshall *Nirenberg was one of the scientists who worked out the process by which the genetic information in DNA is transcribed by messenger RNA as the first step in protein synthesis. Once it was realized that the sequence of DNA bases is the genetic language it became necessary to devise methods for reading these sequences. One method was devised by Walter *Gilbert, who also showed that not all base sequences are utilized by the cell in protein synthesis even though these seemingly inactive “introns” later proved to have functional significance. Another important advance was Arthur *Kornberg’s discovery of the first of the enzymes named DNA polymerases which regulate the copying of the DNA strand and hence the transmission of the cell’s genetic information in newly synthesized DNA. Matthew *Meselson dissected the mechanisms by which DNA from different sequences recombine in the process of transferring genetic information. He also elucidated some of the ways in which DNA repairs mistakes liable to give rise to harmful mutations, a vital defense against the potentially disastrous effects of UV irradiation and other mutagenic agents. Another key development was the characterization of the enzymes which act on RNA transcribed from DNA to which Sidney *Altman made vital contributions. Indeed his work suggested the possibility that the earliest life forms on Earth may have been solely RNA dependent.

**THE ORIGINS OF MOLECULAR BIOLOGY.** Advances in genetics were accompanied by experiments in genetic manipulation using viruses called bacteriophages (phage) which infect bacteria. The interactions between phage and bacteria proved a vitally important model for understanding gene function and also the mechanisms which control gene activation and expression. Exploitation of this system marked the origins of what is now termed molecular biology. The findings in this model have proved broadly applicable to all other living species. Gunter *Stent, Salvador *Luria, Francois *Jacob, and Andre *Lwoff were members of the small and now legendary group of phage workers who transformed biology in a manner analogous to the revolution in physics initiated by quantum theory. They analyzed the interactions between phage and bacterial genes to formulate the general principles which determine the activation of some genes to initiate cellular events and other “repressor” genes which control activated genes. The manner in which repressor genes function was largely elucidated by Mark *Ptashne in an analogous experimental system. These insights into the manner in which genes operate were strengthened by Joshua *Lederberg’s finding that bacteria exchange genes in a process termed recombination thereby altering the characteristics of the recipient bacteria. This work was extended by Stanley *Cohen’s successful isolation and transfer of bacterial and mammalian genes, the technique of gene cloning now in universal use.

The isolation and study of defined DNA sequences was advanced by the discovery of enzymes by Daniel Nathans termed “restriction enzymes” which reproducibly cut DNA into manageable segments for analysis. Another vital step in the development of genetic manipulation was Sol Spiegelman’s discovery that RNA sequences stick specifically to the DNA sequences from which the RNA was transcribed, a process termed hybridization. The ability to dissect and reconstruct genes was also greatly advanced by Paul *Berg’s experiments with phage and also with mammalian cells infected by the virus SV40. He was also one of the first scientists to appreciate that a powerful method of discovering the function of a gene is to induce a deliberate mutation which will thereby cause the damaged DNA sequence to malfunction. Gene activation and repression is also an essential process in normal embryonic development. Chaim *Cedar discovered that chemical modification of DNA, a process known as methylation, is a key step in gene activation.

These advances in genetics were used by Sydney *Brenner to map the genetic control of the developing nervous system in the small worm C. elegans. These studies helped to establish the principle that the origin of human diseases can be investigated by detecting mutant genes and the abnormal proteins these genes encode. Robert *Horwitz’s studies on the same species also highlighted the importance of genetically programmed cell death in normal development and function.

**Virology.** Elucidating the mechanisms of molecular genetics led to a greatly improved understanding of viral replication in cells and known viral infections. The new techniques also disclosed a viral cause for many diseases of previously unknown origin. Furthermore the longstanding suspicion that viruses may play a role in cancer and many chronic diseases is now open to rational investigation. Aaron Shatkin and Seymour S. *Cohen unraveled the sequential stages in viral infection of cells and Sir Aaron *Klug’s work clarified the process assembly of new virus particles in infected cells. David *Baltimore and Howard *Temin found important exceptions to the previous dogma that all genetic information flows from DNA to RNA by showing that some RNA viruses transcribe DNA copies as the initial step in the production of new virus particles through the action of an enzyme called reverse transcriptase. Without this discovery the nature of AIDS and other retroviral infections could not have been rationally investigated. Although others had reported the induction of leukemia in mice with transmissible viruses many years before Charlotte Friend described similar findings in 1957, the interactions with cellular genes responsible for the disease were not elucidated before the work of Harry *Rubin in the 1960s and Harold *Varmus in the 1970s. Another achievement in virology was Baruch *Blumberg’s discovery of hepatitis B virus which has proved not only of enormous clinical and epidemiological importance but has also given great insight into the genetic factors which determine the outcome of viral infections in different individuals. The history of research on “viral” infections continues to be unpredictable and a field where yesterday’s heresy becomes a new orthodoxy. Stanley *Prusiner’s work has
established that infectious proteins called “prions” are devoid of nucleic acids yet are self-replicating and cause certain degenerative diseases of the nervous system.

CELL BIOLOGY. Cells have proved to be mini-organisms of great complexity and one can only discuss those fields of research on cell biology to which Jewish biologists have made especially significant contributions. Most tissues consist of self-renewing cells; their life cycles and the factors which regulate these cycles are of great basic interest and medical relevance. Marc Kirschner’s work has helped to understand the signal pathways which induce cell division. The cell interior contains a complex network of channels and associated structures for the transport, processing, and degradation of proteins and other complex molecules imported into the cell or exported as the products of specialized cells. The findings of James Rothman and Randy Schekman have helped to clarify the structure and function of the most important of these cellular components. Another area of current basic and potential clinical interest is the identification and propagation of stem cells with full or limited potential to mature into specialized cells. Irving Weissman and Leo *Sachs were amongst the earliest workers to achieve success in this technically demanding field. It has also become apparent that cell division and maturation depend on the actions of growth factors produced by many cell types in a complex, inter-dependent manner. Nerve growth factor was the first such factor to be identified, by Rita *Levi-Montalcini, and Stanley Cohen. Cohen later discovered epidermal growth factor. These factors are now collectively termed “cytokines.”

RECEPTORS, SIGNALS, AND PHARMACOLOGY. Cell membranes, their receptors, and the signals these receive largely govern the behavior of cells and organs. Martin *Rodbell and Alfred *Gillman greatly expanded our understanding of the receptor molecules which respond to external stimuli such as hormones and toxins and the signals these transmit to the cell in order to induce an appropriate response. Robert Lefkowitz and Ephraim *Katzir’s scientific achievements center on the biophysical properties of membrane receptors. Especially noteworthy events in the development of pharmacology were Robert *Furchgott and Salvador Moncada’s contributions to identifying nitrous oxide as a key molecule governing blood vessel flow and the similar role of prostacyclin discovered by Sir John Vane.

BIOCHEMICAL PATHWAYS. There is a consistent record of major contributions by Jewish scientists to characterizing the biochemical pathways which provide energy and govern other metabolic processes. This progress was greatly assisted by the introduction of isotopic methods for studying biochemical pathways by scientists who included Mildred *Cohn, David *Rittenberg, and Sidney Udenfriend. The crucial roles of oxidation and energy generation were appreciated early in the history of biochemistry and largely worked out by Otto *Warburg, extended by Fritz Lehmann’s analysis of acetylation and further clarified by David Keilin. The related problem of energy creation in muscles was clarified by Otto *Meyerhof. The pathways for carbohydrate and urea metabolism and related intermediate pathways were characterized largely through the research of Philip Pacy *Cohen, Gerty *Cori, Hans Krebs, and Sarah Ratner. The steps in cholesterol synthesis were elucidated by Konrad *Bloch. The vital role of cholesterol receptors in controlling blood levels was established by Michael *Brown and Joseph *Goldstein.

Modern biochemistry has revealed a myriad biochemical processes other than the classical metabolic pathways. Edmond *Fischer and Sir Philip *Cohen have made key contributions to understanding protein phosphorylation, a complex process of fundamental importance for regulating a wide range of cell functions. The regulatory importance of the ubiquitin system has been shown by Aaron *Ciechanover and Avram *Hershko especially with respect to protein degradation. Carbon utilization is central to photosynthesis in plants and carbohydrate metabolism in mammals and was first methodically investigated by Melvin *Calvin. The precise structure of enzymes and other proteins as well as their amino acid sequence is crucial to their function, a problem largely resolved by the contributions of Christian *Anfinsen and William *Stein.

Two examples serve to illustrate specialized fields in the life sciences in which Jewish scientists have been especially prominent.

THE NERVOUS SYSTEM. Working out how each of the one hundred billion nerve cells in the brain communicates with one thousand other nerve cells is an enduring, largely unsolved challenge. The once controversial role of chemical neurotransmitters in communication between brain cells was firmly established by Julius *Axelrod’s work on noradrenaline and Paul *Greengard’s analysis of dopamine mediated signaling. The details of how peripheral nerves activate muscle fibers by releasing acetylcholine have been clarified by Sir Bernard *Katz. The part played by chemical neurotransmitters in transmission in the sympathetic and parasympathetic nervous system was also controversial until Otto *Loewi unequivocally demonstrated the role of acetylcholine and adrenaline. The basis of peripheral nerve function conduction was equally difficult to resolve before Joseph *Erlanger’s detailed analysis of the electrical impulses involved in this process. The mechanisms of drug action on the brain are of practical importance, an area greatly illuminated by Hans Kosterlitz’s studies in the field of natural opiate substances produced by the brain and the receptors on which these act. A still more formidable problem is to understand one of the brain’s most distinctive functions, namely memory; Eric *Kandel’s work showed that protein synthesis generated by nerve connections is involved in this process. The special senses pose different questions. Selig *Hecht and George *Wald have analyzed the molecular basis of the events in the retina which induce visual images after light exposure. Richard *Axel was one of the
two scientists who showed that the recognition of the wide range of smells depends on receptors in the brain and not in the nose as one might have assumed. Another crucial issue is the role of genetic factors on brain function and susceptibility to neurological disease, an area of study largely founded by Seymour "Benzer.

**THE IMMUNE SYSTEM.** Simply stated, the central problem in immunology is to understand how the body rapidly generates molecules which combine specifically with the distinctive, mainly protein antigens expressed by infectious agents while avoiding autoimmune reactions with its own tissues. An early clear statement of the issues formed the basis of Ilya "Mechnikov's 1908 Nobel lecture. Michael "Heidelberger and Felix "Haurowitz were amongst the first scientists to analyze the antibody response in detail. This process culminated in the development by Cesar "Milstein and his colleagues of homogeneous monoclonal antibodies reactive with a single antigen. This advance has had momentous implications for the diagnosis and treatment of immunological and other diseases, for laboratory diagnosis and for biotechnology. The immune response to infections and indeed all foreign antigens is genetically controlled, a discovery largely based on the work of Baruj "Benacerraf, Michael "Sela, and Phil "Leder. This control is largely determined by surface structures termed histocompatibility antigens in general and the HLA system in man which are expressed primarily by cells engaged in immune responses. Jack "Strominger contributed to the chemical and structural characterization of these antigens. The first recognition that certain human diseases result from autoimmunity came from the work of Noel "Rose, Deborah "Doniach, and Ivan "Roitt. Among the greatest achievements of applied immunology is the virtual elimination of poliomyelitis with vaccines developed by Jonas "Salk and Albert "Sabin.

**ORIGINS OF LIFE.** Modern times have witnessed a loss of any inhibitions by Jewish scientists about discussing the origins of life on Earth. This has expanded into exobiology, the possibility that life exists elsewhere in the universe. Sol "Spiegel and Leslie "Orgel have proposed that self-replicating RNA was the primordial molecule in all life forms. Sidney "Fox argued that amino acids, the building blocks of proteins, became self-organized into replicating microspheres, an idea for which Stanley "Miller has provided experimental support. A more general theory advanced by Stuart "Kauffman is that randomly associating molecules in the correct chemical medium of the primitive Earth became autocatalytic and matured into living forms on a random basis. The subject has matured into a respectable topic for debate in scientific and religious circles.

**Conclusions**

The success of Jewish scientists in the life sciences as in other branches of science reflects a logical extension of traditional Jewish reverence for learning. However, this success has not been achieved by ignoring other aspects of Jewish learning and enterprise. An analysis of their careers shows that many have continued to support Jewish communal activities and even more have identified with Israel in general or have forged links with Israeli academic institutions. Indeed traditional scholarship and scientific discovery have been mutually supportive. "A scientific paper is a grave act to be undertaken with the utmost seriousness. To me it's holy writ and it should be an achievement that cannot be altered" (Joshua "Lederberg, 1996).

[Michael "Denman (2nd ed.)]

**LIFSHITZ, URI (1936– ),** Israeli painter. Lifshitz was born in kibbutz Givat ha-Sheloshah. His first paintings were lyrical abstractions, influenced by the Israeli painter "Yosef "Zaritsky. His compositions are restless, with intense line and color. Since the late 1950s Lifshitz has become one of the leading representatives of the "New Figuration" in Israel art. He uses dramatic images as a direct and immediate reaction to social problems. In his large and expressive paintings of the 1960s, there is a mixture of abstract background and twisted figures drawn with black contours, and the artist himself is involved in the drama depicted on the canvas. There is a feeling of ironical criticism of the surrounding world, for example in his painting *In the Field* (1969), and the drawings *I am a chair and I don't know* (1969). In 1972, he held an exhibition in Tel Aviv, showing paintings and etchings made during 1971 in Spain. These reflect another artistic turning point in which he is inspired by Velasquez and Goya. In *After Velasquez* (1971) he uses a portrait made by the Spanish artist as an element in an abstract surrounding. Lifshitz has received many awards, including the Marc Chagall Fellowship in 1966.

[Judith "Spitzer]

**LIFSHITS, SHIYE-MORDKHE (1829–1878),** pioneering Yiddish lexicographer, author, and a theoretician of the Yiddish movement in the 19th century. With a solid intellectual background (he was a student of mathematics, physics, chemistry, languages) Lifshits propounded the idea of a secular Jewish culture on the basis of Yiddish. As a close friend of S.Y. "Abramovitch (Mendele "Mokher Sforim), it is thought that Lifshits was instrumental in convincing the "grandfather of modern Hebrew and Yiddish literature" to switch from Hebrew to Yiddish as a means of literary expression. A pioneer of the idea of Yiddish press, it is also assumed by some that under Lifshits’ influence A. "Zederbaum began to publish the epoch-making Yiddish periodical Kol Mevasser, where Lifshits became a literary contributor on various topics. Lifshits’ lexicographic achievements are to a large extent unsurpassed in their quality and reliability, especially in depicting the South Eastern (Volhynian) Yiddish dialect. The manuscript of one of his dictionaries (Yiddish–German, German–Yiddish) unfortunately was lost. His excellent *Ruish-yidisher verter-bikh* went through four editions (1869–86). The Yiddish-Russian dictionary, *Yidish-rusisher verter-bikh*, was published in 1876.

A man of progressive ideas, Lifshits opened a tailor shop in the 1870s in Berdichev (where he died and was probably...
LIFSHITZ, DAVID
(1907–1993), U.S. rosh yeshivah and rabbinical leader. Lifshitz was born in Minsk and studied under Simeon *Shkop in the Grodno yeshivah and at the Mir yeshivah. In 1935 he succeeded his father-in-law, Joseph Joselowitz, as rabbi of Suwałki where he soon established a yeshivah. Lifshitz became active in all communal affairs and assisted Hayyim Ozer *Grodzinski of Vilna in safeguarding the interests of Orthodoxy. After the deportation of the Jews of his community by the Nazis, Lifshitz succeeded in immigrating to the United States, where in 1942 he became a rosh yeshivah at Chicago’s *Hebrew Theological College. In 1945 he was appointed to a similar position at Yeshiva University. Lifshitz was active in guiding Orthodox Jewry in its relationship to the State of Israel and urged the religious parties to form a united religious front. He was a member of the presidium of the Union of Orthodox Rabbis, the rabbinical advisory board to Torah u-Masorah, and a director of Ezrat Torah, which aided rabbis and scholars throughout the world.

BIBLIOGRAPHY: O. Rand, Toledot Anshei Shem (1950), 76f.

LIFSHITZ, NEHAMA (1927– ), folk singer of Yiddish and Hebrew songs. Born in Kaunas (Kovno), Lithuania, where she started her schooling at the Hebrew high school, Nehama Lifshitz was evacuated with her parents during World War II to Uzbekistan. After returning in 1946 to Soviet Lithuania, she studied at the Vilna conservatoire and in 1951 she gave her first concert. At an all-Soviet competition in 1958 she received the title of laureate of estrada (folk) artists. She traveled throughout the U.S.S.R., giving concerts of Yiddish (and some Hebrew) songs, drawing large crowds, including many young Jews. In 1959 and 1960 she visited France, Belgium, and Austria. In 1969 she was allowed by the Soviet authorities to immigrate to Israel where she was enthusiastically received as “the voice of the Jews of silence.” On the occasion of her 70th birthday, Gila Flam and friends of the singer published in her honor an album including some of the recordings she made while in the Soviet Union.

[Michael Denman (2nd ed.)]

LIGETI, GYÖRGY (1923– ), composer and teacher. Ligeti’s paternal great uncle, violinist Leopold Auer, was the teacher of Jascha *Heifetz and Mischa *Elman. Ligeti was born in Transylvania (then Hungary) and began his music studies at the conservatory of the provincial center of Kolozsvár (1941–43). In 1944 he was called up to the labor corps and only by chance was not sent to the death camps. In 1945–49 he was a student of composition at the Academy of Music in Budapest; among his teachers were Farkas, Veress, and Járday. From 1956 he became a teacher of harmony and counterpoint at the Academy. During those years he composed choral settings in folk style to meet the requirements of the Communist authorities while searching for his own style in pieces consigned to his desk drawer. In 1956, after the Soviet suppression of Hungary, Ligeti left for Austria, and in 1973 accepted a permanent position at the Musikhochschule in Hamburg, Germany, where he made his main home. The premiere of his Atmosphères for orchestra (1961) won him fame in avant-garde music circles. His unique technique of composition in this work, which he called “micropolyphony,” was his highly individual transformation of the European Renaissance technique of multivoiced canons: Ligeti caused the polyphony to be unheard since the motives imitated were too short to distinguish them. His idea was to show the process of gradual change, to create a new type of musical phenomenon, called by him “continuous flow.” “Micropolyphony” was also used in his Requiem (1966), Lux aeterna (1966), and Lontano (1967). In 1974–77 Ligeti composed his opera Le Grand Macabre (libretto based on Gherardeschi’s play), which was staged at many European theaters with great success. The opera is a stylistically varied work full of irony and satire. From the 1980s the composer became interested in various folk cultures, from his native Hungarian to Balkan, Caribbean, African, and Far Eastern. The rhythmic complexity and modal uniqueness of those cultures inspired the creation of the different musical language of his last three decades (Etudes for piano, from 1985, Violin Concerto, 1993, etc.). He received numerous honors, including the UNESCO International Music Council Music Prize and the Polar Music Prize of the Royal Swedish Academy.

“LIGHTFOOT, JOHN (1602–1675), English Hebraist and Bible scholar. Lightfoot, a Puritan, was master of Catherine Hall, Cambridge, from 1650 and three years later he became vice-chancellor of Cambridge University. He began studying Hebrew after his ordination, but at first gave his attention to Bible research on scientific lines, publishing works such as Harmonia, Chronica et Ordo Veteris Testamenti (1647). However, he soon turned to rabbinic literature, a field in which he became the outstanding Christian authority of his time, showing a remarkable expertise in talmudic and midrashic scholarship. He published a Descriptio Templi Hierosolymitani (1650), on the Temple of Herod, and Horae Hebraicae et Talmudicae (1658–74), a study of the rabbinic sources of and background to the New Testament gospels. His first venture in Hebraica, published at the outset of his career, had been Erubbin; or Miscellanies, Christian and Judaical, and others... (London, 1629), and as a result of his unusual and objective investigation of rabbinic literature Lightfoot was accused of “rabbinism.” He contributed to Bryan’s Biblia Sacra Polyglotta (London Polyglot Bible; 1654–57), revising the Samaritan Pentateuch and specially preparing a geography of Palestine for the work. A Latin edition of his complete writings was later issued by his contemporary, Johann *Leusden, professor of Hebrew at Utrecht.

LIKUVT AZAMOT (Heb. ליקעת עצמות, lit., “gathering of the bones”). In ancient Erez Israel, the interment of the corpse did not take place immediately after death. First the body was left in the sepulchral chamber for some time until it was reduced to a mere skeleton, and afterward the bones were gathered together and then solemnly interred in the final resting place (TJ, MK 1:5; 80c–d; Sem. 12). This duty was generally performed one year after death by the children of the deceased and the laws of mourning were practiced on the day of the final interment (MK 8a; Sem. 12). Mourning was not continued the next day even if the gathering of the remains was only then completed. It was forbidden to deliver mournful eulogies on this occasion, and public condolences were not extended. However, the departed was praised and private condolences were conveyed (MK 8a; Sem. 12–13). The remains had to be reverently handled, and they could not, for example, be transported to their final resting place in a saddle bag (Ber. 18a). It was not considered respectful for the son to touch the remains of his parents directly with his bare hands (Sem. 12). Those engaged in the meritorious deed of likkut azamot were exempt from reading the *Shema, and from all other positive commandments (Sem. 13). The gathering of the bones could not take place during the intermediate festival days since such an event would infringe upon the joy of the festival (MK 1:5). The laws pertaining to likkut azamot are also applicable in instances when *disinterment is permissible. However, when the coffin is still intact and is not opened during the disinterment procedure, the laws of mourning do not apply (TJ, Sanh. 6:11, 23d).

LILIENTHAL, EPHRAIM MOSES

retired from the IDF and entered politics, Ariel Sharon supported the establishment of a Palestinian state – in Jordan. In 1978 Menahem Begin spoke of a solution of the Palestinian problem in the form of “autonomy.” In general the Likud has been slower than Labor in accepting the concept of the establishment of a Palestinian state in most of the West Bank and Gaza Strip.

Though a secular party, the Likud has been more traditional and respectful of Jewish tradition than the Labor Party, and even though its leadership has not been less Ashkenazi than Labor’s, it has been viewed as more hospitable to Sephardim. In terms of Jewish settlement in the territories occupied in 1967, such settlement began when Labor was still in power, but the settlement movement received much more governmental backing and support after the Likud came to power in 1977, with Ariel Sharon playing a major role in this respect in his various ministerial capacities.

Like the Labor Party, the Likud underwent a process of democratization from the end of the 1980s, but whereas in Labor the broad party membership was given most of the power to elect its representatives and leaders, in the Likud most of the power has remained in the hands of the Central Committee. This has weakened the traditional Likud leadership and strengthened extremist elements.

After receiving 39 seats in the elections for the Eighth Knesset in 1973, the Likud emerged as the largest parliamentary group after the elections to the Ninth Knesset in 1977 with 43 seats. In the 1981 elections it received 48 seats, in 1984 41 seats, in 1988 40 seats, in 1992 32 seats, in 1996 (together with *Tzomet and Gesher) 32 seats, in 1999 19 seats, and in 2003 38 seats. There was a Likud prime minister in the years 1977–84, 1986–92, 1996–99, and from 2001. From 1984 to 1990, from 2001 to 2002, and again in 2005 when the Likud formed a National Unity Government with Labor. However, in late 2005, Ariel Sharon broke away from the Likud to form the Kadimah Party (see *Israel, State of: Political Life and Parties) and consequently, in the 2006 elections, the Likud won just 12 seats with Binyamin Netanyahu again at the helm. The first time the Likud managed to get its candidate elected as president of the state was in 2003, when Moshe *Katzen ran against Shimon *Peres.

LILIENTHAL, EPHRAIM MOSES (1874–1925), Austrian illustrator and printmaker. Lilien was born in Drohobycz, Galicia. He studied art in Cracow for a short time, but lack of funds forced him to return home. He eventually earned enough as a sign painter to go to the Academy of Fine Arts in Vienna. In 1895 he worked in Munich as a cartoonist, where he obtained his first commission for the magazine Jugend; three years later he moved to Berlin, where he soon became known as a book illustrator. Lilien was the first artist to become involved in the Zionist movement. He took an active part in three consecutive Zionist Congresses and was a member of the “Democratic Fraction, which stressed the need to foster Jewish culture. In 1900 there was published Jada, a volume of ballads on Old Testament themes by a pro-Zionist German poet, Boerries Freiherr von Muenchhausen, illustrated by Lilien. This was followed by Lieder des Ghetto in which social adversity and the rejection of poor Jews were reflected. In 1902 he was one of the founders of the Berlin publishing house, *Juedischer Verlag, which he served not only as an illustrator but also as editor, manager, and publicity agent. Between 1908 and 1912 the first three volumes, of its planned ten, illustrated books of the Bible appeared. He collaborated closely with Theodor *Herzl; Lilien’s photograph of the Zionist leader on the Rhine bridge, his Herzl portrait, and his decorations for the Golden Book of the Jewish National Fund became familiar to Zionists all over the world. In 1905 Lilien, along with Boris *Schatz and others, was a member of the committee formed to establish the *Bezalel School of Art in Jerusalem. He taught there for some months in the following year and revisited Palestine three times, on the last occasion as a lieutenant in the Austro-Hungarian army during World War I. In 1908 Lilien turned from book illustration to etching. Many of his etchings are views of Austria and Hungary, while others record his impressions of Palestine, Damascus, and Beirut. His drawings, executed mainly in India ink, show a crisp, elegant line and a strong contrast between black and white areas. Lilien combined biblical and traditional Jewish themes with the motifs and methods of Art Nouveau. His art expressed Jewish hopes and desires in the era of Zionism that looked beyond the exile.

[Alfred Werner / Jihan Radjai-Ordoubadi (2nd ed.)]

LILIENTHALL, MOSES LEIB (1843–1910), Hebrew writer, critic, and political journalist. Born in Kedainiai, near Kovno, Lilienthall was one of the leaders of the Haskalah in its last period and a leader of Hibbat Zion.

His Life and Public Activity

His first teachers were his father, R. Zevi, a poor cooper, and his maternal grandfather, who was a teacher. Steeped in Talmut, Lilienthall established two yeshivot at the age of 22. At the same time, he began studying the Haskalah literature, secular subjects, and Russian and disseminated his views in public. In 1866 fanatic religious elements in Wilkomir, where he was then living, began to persecute him for his beliefs. Lilienthall retaliated in articles and an exchange of letters published in Ha-Karmel and *Ha-Meliz. In 1868 he published his
LILIENBLUM, MOSES LEIB

articles "Orhot ha-Talmud" and "Nosafot le-Orhot ha-Talmud" in *Ha-Meliz*, advocating reforms in religion and in society. Lilienblum stated that the Talmud contains progressive ideas modified to suit time and place, while the Shulhan Arukh is rigid in tone and out of touch with life. He criticized the outstanding rabbis of his time through the pages of *Ha-Levanon* and *Kevod ha-Levanon*. In 1869 Lilienblum moved to Odessa, where he published his political satire, *Kehal Refa'im* (1870), in which he attacked many of his contemporaries, rabbis, writers, and editors, and called for the normalization of Jewish life through agricultural labor and the rational organization of work in industry, crafts, and commerce.

In 1871 Lilienblum began to edit the Yiddish journal, *Kol Mevasser*. In a series of articles he drew a grim picture of Jewish education in the *heder* and in the yeshivot of the time. In articles written in 1871–73 he raised the problems of the emancipation of women, the mismanagement of Jewish community life, and religious and individual freedom. In his article "Olam ha-Tohu" (1873), a critique of Abraham Ḥaim *Mapu*’s book *Ayit Zavu'a*, he wrote of the need to reflect life as it really is, without romanticism, superstition, mysteries, or imagination, "a material view of life." In 1873–76 Lilienblum wrote his masterful autobiography *Hatteot Nēurim*, in which he described his struggles and suffering and the development of his beliefs. From 1874–81 Socialism became the main subject of his writing. He published his article "Mishnat Elisha ben Avuyah" in Lieberman's *Ha-Emet*, urging the importance of labor in the life of the individual and the nation. He deliberately dated the article "The Day of Atonement, 1877." The year of the pogroms (1881) marks a radical shift in Lilienblum's career. He became a nationalist and a leader of the * Hibbat Zion* movement in Russia. He was one of the founders of the Odessa committee in 1883, and two years later was appointed its secretary and secretary of the Odessa *hevra kadisha* ("burial society").

Lilienblum the Publicist

Lilienblum's career as a journalist had three stages: (a) 1866–70, the period of his struggle for religious reform. Lilienblum believed that the Jewish religion was stagnating and hindering the development of the nation. During this period Lilienblum advocated the introduction of the evolutionary principle into the field of religious practice. His main desire was to create close cooperation between Jews and their non-Jewish neighbors to be expressed in moderate reform of the more rigid religious precepts. (b) 1870–81, abandonment of the principle of religious evolution and the adoption of the demand for equal rights to be granted by the state as a prerequisite for the renaissance of Judaism in the spirit of the Haskalah. The Haskalah and progress are not a guarantee against antisemitism, and civil equality cannot be created only as a result of internal reforms in Judaism. (c) From 1881 until his death, the belief that the roots of antisemitism lie in the Aryan society's instinctive enmity toward the Semitic Jews. Legal equality is no guarantee of social equality. The aim of nationalist movements is either total assimilation of the Jews or their expulsion from their countries of residence. The source of the trials of the Jewish people lies in their constituting a nation within a nation. There is no basis for the hope that progress will bring about the end of antisemitism. The process of assimilation will not be implemented because of the firm stand of the Jewish people against the forces of disintegration, nor does it provide a solution to the problems of the Jewish people. Lilienblum concluded that it was necessary to concentrate the nation as one group in its own territory, and regarded Palestine as the suitable location, since there the nation would not constitute a foreign body; he opposed the creation of a Jewish haven in the U.S. His proposal was that land be purchased from the Turks and a quasi-governmental entity be established. It was not sufficient merely to establish settlements. In his view, the solution to the Jewish problem lay in the elimination of the Diaspora, and in the attainment of the status of an independent nation. The return to Zion could be implemented if the nation willed it. Lilienblum placed great hopes in the masses and in a certain stratum of the Jewish intelligentsia, whose task would be to arouse the desire for national independence. From 1889 onward he conducted a debate in the pages of *Ha-Meliz* and *Ha-Shahar*, with *Aḥad Ha-Am*, "Ben-Avidgor*, Zalman *Epstein, S.I. *Hurwitz, and *Dubnow, developing the ideology of the Hibbat Zion movement and practical Zionism. He grasped the dynamic and aggressive character of antisemitism, as did *Smolenskin, and foresaw the threat of total physical destruction of the Jewish people. Lilienblum rejected as artificial the autonomist approach, advocated by Dubnow, for the solution of the Jewish problem and regarded the theories of Aḥad Ha-Am and his disciples as making the existence of the Jewish people dependent on metaphysical speculations. He stressed that the Jewish people wanted to live for the sake of living and not for any purpose beyond life.

Lilienblum the Critic and Writer

In his literary criticism Lilienblum adopted the concepts of critical realism, bordering on nihilism, as advocated by Pisarev, Dobrolyubov, and Chernyshevski, even after having abandoned their political and social ideology. His literary and lyrical talent was small. *Kehal Refa'im*, his satirical work, is, in its way, an imitation of *Erter*’s satires, and the motifs are common ones in Haskalah literature. His only real contribution to literature is *Hatteot Nēurim* (Vienna, 1876), his autobiography. Despite the sparsity of plastic description, the work is distinguished by its pathos and its insight into the inner emotional and moral conflict of the protagonist who struggles with social mores and the Jewish tradition.

Lilienblum wrote his literary criticism from the pragmatic viewpoint with the aim of educating the Jewish people to a true material view of life and freeing them from the useless life of the imagination. He admired only "real things." This anti-aesthetic pragmatic approach runs throughout his work and his critical articles. All art must be examined in the light of its usefulness to society. Lilienblum attached no importance to style and language as an integral part of artistic expression.
He was contemptuous of imagination. He dismissed most love poetry as lacking innovation, and regarded any deviation from rational logic to mysticism, such as the Kabbalah and Hasidism, as constituting a dangerous deviation from reality. He therefore rejected the Nietzschean revolt as expressed by Berdyczewski, his Ha-Keradim she-ba-Lev, and the worship of hidden impulses. Lilienblum's philosophy is that “there is no aim in life except life itself.”

**His Books**
Lilienblum prepared his own works for publication and they were published posthumously by J. Klausner in four volumes, *Kol Kitvei Lilienblum* (1910–13). *Derekh Teshuvah* (1899) and *Derekh Leaavor Golim* (1899) were not included in this collection. Some of Lilienblum’s letters were printed in *Hed ha-Zeman*, in *Ha-Olam*, in *Reshumot*, and in *Ketavim le-Toledot Hibbat Ziyyon*, edited by A.A. Druyanow in *Behinot* and in *Perakim*. His letters to J.L. Gordon were published in 1968, edited by S. Breiman, who also edited his autobiographical writings (3 vols., 1970). Lilienblum wrote a play in Yiddish entitled *Zerubbavel* (1887); he also edited the fifth volume of *Luah Ahtasaf* (1897).

[Shimon Oren]

**LILIENTHAL, DAVID ELI** (1899–1981), U.S. attorney, public official, and specialist in the development of natural resources. Lilienthal, who was born in Morton, Illinois, graduated from Harvard Law School in 1923 and was admitted to the Illinois bar that year. He practiced law in Chicago and was special counsel to that city in litigation concerning telephone rates until 1931. From 1926 to 1931, when he was appointed to the Wisconsin Public Service Commission, he also edited the journal *Public Utilities and Carriers Service*. In 1933 he was chosen by President Roosevelt to be director of the Tennessee Valley Authority. He held that post until 1941 when he was promoted to TVA chairman. In these capacities he defended TVA against attacks by Wendall L. Willkie and the power companies, resisted attempts to undermine the nonpolitical nature of appointments to the agency, and strove for decentralization of administration, voluntary cooperation of local communities, and planning in response to their needs.

In 1940 he left the TVA, as he was appointed by President Truman as the first chairman of the U.S. Atomic Energy Commission, which managed the peacetime use of nuclear power. His “Lilienthal Plan” called for an end to the nuclear arms race through international control of all atomic energy. He also publicly questioned the wisdom of America’s decision to produce the hydrogen bomb. In the wake of controversy created by these views, Lilienthal returned to private life in 1950. In 1955 he formed the Development and Resources Corporation, a private venture in the designing and execution of development plans for underdeveloped countries. He served as a consultant on the utilization of human and natural resources to the governments of Colombia, Peru, Italy, Brazil, Iran, and Vietnam for various periods after 1955.

[Bernard Sternsher / Ruth Beloff (2nd ed.)]

**LILIENTHAL, MAX** (Menahem; 1815–1882), educator, author, and rabbi. Born in Munich, Bavaria, Lilienthal completed his studies at the university of his native town, and in 1839, on the recommendation of Ludwig Philippsen, was appointed director of the Jewish school of Riga. He succeeded in this position, and also became known for the sermons which he delivered in German at the Riga synagogue (published as *Predigten in der Synagoge zu Riga*, 1841). He formed a friendship with the Russian minister of education S.S. *Uvarov, to whom he dedicated the above work.

In 1841, on the recommendation of Uvarov, the czarist government invited Lilienthal to draw up a project for the establishment of state schools for Jews providing a European-type education. Lilienthal set out upon his task by attempting to persuade the community leaders in the *Pale of Settlement* to accept the project. His mission encountered opposition and mistrust among Jews there. Orthodox circles, and particularly the Hasidim, considered the project an attempt by the government to destroy traditional Jewish education, and possibly even to convert the Jews, while the maskilim also expressed misgivings. Lilienthal’s meetings with the representatives of the Jews of Vilna, one of the main centers of Russian Jewry, ended in failure. His attempts to issue threats in the name of the government (it is not clear whether he was authorized to do so) aroused revulsion, while his strategy of contacting the representatives of the Orthodox and Hasidim and ignoring the maskilim alienated the latter from him. The publication of his proposals to invite teachers from Germany for the projected schools was a cause of further mistrust. In *Minsk Lilienthal found open hostility accompanied by personal abuse. His reaction, in 1842, was an appeal to Uvarov to enforce “educational reform” on the Jews through a series of laws. The minister of education refused to do so, but by means of a decree (June 22, 1842) he hinted to the Jews that the czar himself was in favor of the reform.

In order to sever the connection between the projected “reforms” and the personality of Lilienthal, Uvarov appointed
a commission composed of Jewish personalities to study the proposals. Lilienthal was called upon to undertake an extensive journey through the Jewish centers to assess public opinion and guide it in the desired direction. Having learned from his previous experiences, Lilienthal on this occasion did not repeat his former suggestions, such as the employment of teachers from abroad and the imposition of a tax on the melammedim (heder teachers), and succeeded in winning sympathy. However, his tactics in seeking an alliance with the Orthodox against the maskilim once more led to his failure. Lilienthal's appeal in Maggid Yeshuah (Vilna, 1842) brought a sharp retort from Mordecai Aaron *Guenzburg in the pamphlet Maggid Emet (Leipzig, 1843). The Commission for the Education of the Jews completed its task in 1843, and in 1844 a law for the establishment of state schools for the Jews was issued. In 1844, however, at the height of his success, Lilienthal had to leave Russia secretly. It appears that he had become convinced that the intentions of the czarist government were insincere and that it was scheming to exploit the network of schools as an instrument for eventual conversion to Christianity. The government's demand to exclude the study of Talmud from the curriculum marked the turning point in his outlook. Additionally, the law for the establishment of the schools was accompanied by other anti-Jewish laws in various spheres.

In 1845 Lilienthal immigrated to the United States, settling in New York City where he conducted a private boarding school for a few years. In 1849 he became rabbi of a short-lived union of the city's German congregations and directed their day schools. From 1855 until his death Lilienthal was rabbi of the important Bene Israel congregation of Cincinnati, which he led in the direction of moderate Reform. As a civic leader in his city on friendly terms with its Christian clergy, he was a member of its board of education (1860–69) and a trustee of the University of Cincinnati from 1872 until his death. He was perhaps the leading Jewish exponent in his day of the rigorous exclusion of all religious teaching from the public schools. Lilienthal actively cooperated with his fellow townsman Isaac Mayer *Wise in promoting Reform Judaism throughout the West, and was the publisher of The Sabbath Visitor from 1874, founder of the scholarly Rabbinical Literary Association, and taught at *Hebrew Union College from its opening in 1875. In 1887 he published Freiheit, Frieulung und Liebe, a collection of poems.

[Encyclopaedia Hebraica]

LILIENTHAL, OTTO (1848–1896), German inventor and aeronaut. Born in Anklam, Pomerania, Lilienthal and his brother, Gustav, studied the flight of birds and while still at school succeeded in constructing a glider. During the next few years the brothers built many gliders and executed a large number of flights. Lilienthal demonstrated the superiority of arched wings over flat-surfaced types, and brought gliding flight into a regular practice. He made over 2,000 flights, but finally while in flight his machine was upset by a sudden gust of wind, and he was killed near Rhinow. He wrote Der Vogelflug als Grundlage der Fliegekunst (1893), and Die Flugapparate (1894). Lilienthal also made technical improvements in steam boilers, and designed children's building blocks. The Lilienthal brothers' Jewish origin has been disputed.

BIBLIOGRAPHY: G. Halle, Otto Lilienthal (1926), incl. bibl., 186–90; A. and G. Lilienthal, Die Lilienthals (1930); S. Kaznelson, Juden im deutschen Kulturbezirk (1296), 1953.

[Encyclopaedia Hebraica]

LILITH, a female demon assigned a central position in Jewish demonology. She appears briefly in the Sumerian Gilgamesh epic and is found in Babylonian demonology, which identifies similar male and female spirits – Lilu and Lilith respectively – which are etymologically unrelated to the Hebrew word laylah ("night"). These mazikim ("harmful spirits") have various roles: one of them – the Ard-lat-Lilith – preys on males, while others imperil women in childbirth and their children. An example of the latter kind is Lamashut, against whom incantation formulæ have been preserved in Assyrian. Winged female demons who strangle children are known from a Hebrew or Canaanite inscription found at Arslan-Tash in northeastern Syria and dating from about the seventh or eighth century B.C.E. Whether or not Lilith is mentioned in this incantation, which adjures the strangers not to enter the house, is a moot point, depending on the addition of a missing letter: “To her that flies in rooms of darkness – pass quickly, quickly, Lil[ith].” In Scripture there is only one reference to Lilith (Isa. 34:14), among the beasts of prey and the spirits that will lay waste the land on the day of vengeance. In sources dating from earlier centuries, traditions concerning the female demon who endangers women in childbirth and who assumes many guises and names are distinct from the explicit tradition on Lilith recorded in the Talmud. Whereas the Babylonian Lilu is mentioned as some kind of male demon with no defined function, Lilith appears as a female demon with a woman's face, long hair, and wings (Er. 100b; Nid. 24b). A man sleeping in a house alone may be seized by Lilith (Shab. 151b); while the demon Hormiz, or Ormuzd, is mentioned as one of her sons (E. 73b). There is no foundation to the later commentaries that identify Lilith with the demon Agrath, daughter of Mahalath, who goes abroad at night with 180,000 pernicious angels (Pes. 112b). Nevertheless, a female demon who is known by tens of thousands of names and moves about the world at night, visiting women in childbirth and endeavoring to strangle their newborn babies, is mentioned in the Testament of Solomon, a Greek work of about the third century. Although preserved in a Christian version, this work is certainly based on Judeo-Hellenistic magic. Here the female demon is called Obizoth,
and it is related that one of the mystical names of the angel Raphael inscribed on an amulet prevents her from inflicting injury. Lilith is identified as a demon in the Dead Sea Scrolls (11Q295). The name Lilith was also inscribed on incantation bowls of Sassanian Babylonia. Although such bowls were not an exclusively Jewish phenomenon, some invoke rabbinic divorce formulas to exorcize demons.

Midrashic literature expands the legend that Adam, having parted from his wife after it had been ordained that they should die, begat demons from spirits that had attached themselves to him. It is said that “he was encountered by a Lilith named Piznai who, taken by his beauty, lay with him and bore male and female demons.” The firstborn son of this demonic union was Agrimas (see the Midrash published in Ha-Goren, 9 (1914), 66–68; Dvir, 1 (1923), 138; and L. Ginzberg, Legends of the Jews, 5 (1925), 166). The offspring of this Lilith fill the world. A transmuted version of this legend appears in the Alphabet of Ben Sira, a Midrash of the geometric period, which sets out to explain the already widespread custom of writing amulets against Lilith. Here she is identified with the “first Eve,” who was created from the earth at the same time as Adam, and who, unwilling to forgo her equality, disputed with him the manner of their intercourse. Pronouncing the Ineffable Name, she flew off into the air. On Adam’s request, the Almighty sent after her the three angels Swny, Snsnwy, and Smnglf; finding her in the Red Sea, the angels threatened that if she did not return, 100 of her sons would die every day. She refused, claiming that she was expressly created to harm newborn infants. However, she had to swear that whenever she saw the image of those angels in an amulet, she would lose her power over the infant. Here the legend concerning the wife of Adam who preceded the creation of Eve (Gen. 2) merges with the earlier legend of Lilith as a demon who kills infants and endangers women in childbirth. This later version of the myth has many parallels in Christian literature from Byzantine (which probably preceded it) and later periods. The female demon is known by different names, many of which reappear in the same or in slightly altered forms in the literature of practical Kabbalah (as, for example, the name Obizoth from the Testament of Solomon), and the place of the angels is taken by three saints – Sines, Sisinnios, and Synodoros. The legend also found its way into Arabic demonology, where Lilith is known as Karina, Tabi’a, or “the mother of the infants.” The personification of Lilith as a strangler of babies is already clear in Jewish Midrashic literature, written in Babylonian Aramaic, which predate the Alphabet of Ben Sira. A late Midrash (Ba-Midbar Rabbah, end of ch. 16) also mentions her in this respect: “When Lilith finds no children born, she turns on her own” – a motif which relates her to the Babylonian Lamashu.

From these ancient traditions, the image of Lilith was fixed in kabbalistic demonology. Here, too, she has two primary roles: the strangler of children (sometimes replaced in the Zohar by Naamah), and the seducer of men, from whose nocturnal emissions she bears an infinite number of demonic sons. In this latter role she appears at the head of a vast host, who share in her activities. Belief in her erotic powers led some Jewish communities to adopt the custom of sons not accompanying their dead father’s body to the cemetery because they would be shamed by the hovering presence of their demon step-siblings, born of their father’s seduction by Lilith. In the Zohar, as in other sources, she is known by such appellations as Lilith, the harlot, the wicked, the false, or the black. (The above-mentioned combination of motifs appears in the Zohar 1, 14b, 54b; 11, 96a, 111a; 11, 19a, 76b.) She is generally numbered among the four mothers of the demons, the others being Agrat, Mahalath, and Naamah. Wholly new in the kabbalistic concept of Lilith is her appearance as the permanent partner of Samael, queen of the realm of the forces of evil (the sitra ahra). In that world (the world of the kelippot) she fulfills a function parallel to that of the Shekhinah (“Divine Presence”) in the world of sanctity: just as the Shekhinah is the mother of the House of Israel, so Lilith is the mother of the unholy folk who constituted the “mixed multitude” (the erev-rav) and ruled over all that is impure. This conception is first found in the sources used by Isaac b. Jacob ha-Kohen, and later in Ammud ha-Senali by his disciple, Moses b. Solomon b. Simeon of Burgos. Both here, and later in the Tikkunei Zohar, there crystallizes the conception of various degrees of Lilith, internal and external. Likewise we find Lilith the older, the wife of Samael, and Lilith the younger, the wife of Asmodeus (see Tarbiz, 4 (1932/33), 72) in the writings of Isaac ha-Kohen and thereafter in the writings of most kabbalists. Some of these identify the two harlots who appeared in judgment before Solomon with Lilith and Naamah or Lilith and Agrat, an idea which is already hinted at in the Zohar and in contemporary writings (see Tarbiz, 19 (1947/48), 172–5).

Widespread, too, is the identification of Lilith with the Queen of Sheba – a notion with many ramifications in Jewish folklore. It originates in the Targum to Job 1:15 based on a Jewish and Arab myth that the Queen of Sheba was actually a jinn, half human and half demon. This view was known to Moses b. Shem Tov de Leon and is also mentioned in the Zohar. In Livnat ba-Sappir Joseph Angelino maintains that the riddles which the Queen of Sheba posed to Solomon are a repetition of the words of seduction which the first Lilith spoke to Adam. In Ashkenazi folklore, this figure coalesced with the popular image of Helen of Troy or the Frau Venus of German mythology. Until recent generations the Queen of Sheba was popularly pictured as a snatcher of children and a demonic witch. It is probable that there is a residue of the image of Lilith as Satan’s partner in popular late medieval European notions of Satan’s concubine, or wife in English folklore – “the Devil’s Dame” – and of Satan’s grandmother in German folklore. In the German drama on the female pope Jutta (Johanna), which was printed in 1565 though according to its publisher it was written in 1480, the grandmother’s name is Lilith. Here she is depicted as a seductive dancer, a motif commonly found in Ashkenazi Jewish incantations involving the Queen of Sheba. In the writings of Hayyim Vital (Sefer ha-Likkutim (1913), 6b), Lilith sometimes appears to people in the form of a cat, goose,
or other creature, and she holds sway not for eight days alone in the case of a male infant and 20 for a female (as recorded in the Alphabet of Ben Sira), but for 40 and 60 days respectively. In the Kabbalah, influenced by astrology, Lilith is related to the planet Saturn, and all those of a melancholy disposition – of a “black humor” – are her sons (Zohar, Ra‘aya Meheimmim 111, 227b). From the 16th century it was commonly believed that if an infant laughed in his sleep it was an indication that Lilith was playing with him, and it was therefore advisable to tap him on the nose to avert the danger (H. Vital, Sefer ha-Likkutim (1913), 78c; Emek ha-Melekh, 130b).

It was very common to protect women who were giving birth from the power of Lilith by affixing amulets over the bed or on all four walls of the room. The earliest forms of these, in Aramaic, are included in Montgomery’s collection (see bibl.). The first Hebrew version appears in the Alphabet of Ben Sira, which states that the amulet should contain not only the names of the three angels who prevail over Lilith, but also “their form, wings, hands, and legs.” This version gained wide acceptance, and amulets of this type were even printed by the 18th century. According to Shimmush Tehillim, a book dating from the geonic period, amulets written for women who used to lose their children customarily included Psalm 126 (later replaced by Ps. 121) and the names of these three angels. In the Orient, also amulets representing Lilith herself “bound in chains” were current. Many amulets include the story of the prophet Elijah meeting Lilith on her way to the house of a woman in childbirth “to give her the sleep of death, to take her son and drink his blood, to suck the marrow of his bones and to eat his flesh” (in other versions: “to leave his flesh”). Elijah excommunicated her, whereupon she undertook not to harm women in childbirth whenever she saw or heard her names. This version is doubtless taken from a Christian Byzantine formula against the female demon Gyllo, who was exorcised by the three saints mentioned above. The transfer from the Greek to the Hebrew version is clearly seen in the formula of the 15th-century Hebrew incantation from Candia (see Crete), which was published by Cassuto (RSO, 15 (1935), 260), in which it is not Elijah but the archangel Michael who, coming from Sinai, encounters Lilith. Though the Greek names were progressively corrupted as time elapsed, by the 14th century new Greek names for “Lilith’s entourage” appear in a manuscript of practical Kabbalah which includes material from a much earlier date (British Museum Add. Ms. 15299, fol. 84b). The story of Elijah and Lilith included in the second edition of David Lida’s Sod ha-Shem (Berlin, 1710, p. 204) is found in the majority of the later amulets against Lilith, one of her names being Striga – an enchantress, either woman or demon – or Astriga. In one of its mutations this name appears as the angel Astaribo, whom Elijah also encountered; in many incantations he takes the place of Lilith, a substitution found in a Yiddish version of the story dating from 1695. Also extant are versions of the incantation in which Lilith is replaced by the Evil Eye, the star Margalya, or the demon familiar in Jewish and Arab literature, Maimon the Black. In European belles lettres, the Lilith story in various versions has been a fruitful narrative theme.

Lilith is identified as a demon in the Dead Sea Scrolls (11Q14Ap). The name Lilith was also inscribed on incantation bowls of Sassanian Babylonia. Although such bowls were not an exclusively Jewish phenomenon, some invoke rabbinic divorce formulas to exorcise demons. Belief in her erotic powers led some Jewish communities to adopt the custom of sons not accompanying their dead father’s body to the cemetery because they would be shamed by the hovering presence of their demon step-siblings, born of their father’s seduction by Lilith.

Medieval Christian theology shows no explicit awareness of the Lilith of the Alphabet of Ben Sira, but its emphasis on female responsibility for the seduction and fall of Adam and Eve and the association of women with temptation and sin reflects a similar tradition. Christian literary texts allude to Lilith, usually in relation to Satan, but sometimes in relation to figures who are sexually miscast. For example, Lilith is the grandmother of the female pope described in a 15th-century German drama by Theodoricus Schernberg; she appears as Adam’s first wife in poems and art by Dante Gabriel Rossetti; in Victor Hugo’s La Fin de Satan; in a play by Achim von Arnim; and in Goethe’s Faust.

In recent years, feminists have reconfigured the Lilith myth, claiming it reveals male anxiety about women who cannot be kept under patriarchal control. Lilith is admired as a woman who opposed Adam’s attempts at hegemony over her; who had a firm will, and who possessed the power of secret knowledge to assert her autonomy. In feminist versions of the creation story, Lilith demands equality with Adam. Her expulsion from the Garden of Eden indicates not her evil, but the intolerance of male entities, Adam and God, who insist on defining and controlling women. Her independence and knowledge reveal not her demonic nature or sexual miscasting, but represent all women seeking liberation from the imposition of narrow gender roles. In a feminist Midrash, Judith Plaskow imagined Lilith returning to the Garden of Eden and forming a friendship with Eve, who now began to question her subservience to Adam. Plaskow’s story concludes with God and Adam left in confusion, fearing “the day Eve and Lilith returned to the garden, bursting with possibilities, ready to rebuild it together.”

Feminist reclamation of Lilith in the last quarter of the 20th century include the Lilith Fair, an annual summer women’s music festival; Lilith Magazine, the first Jewish feminist periodical, founded in 1975; and a women’s bookstore in Berlin named Lilith. Lilith is also the subject of art, poetry, and even new religious rituals designed to affirm women’s strength and spirituality.

**LILITH**, non-profit independent U.S. Jewish feminist quarterly directed at a popular female audience. Founded in 1976 by a group of women led by Susan Weidman Schneider, *Lilith: The Independent Jewish Women’s Magazine* has been concerned with fostering discussion of Jewish women’s issues and with putting them on the agenda of the Jewish community. The magazine, to quote its editors, "charts Jewish women’s lives with exuberance, rigor, affection, subversion and style." The magazine features award-winning investigative reports, new rituals and celebrations, contemporary and historical personal narratives, entertainment reviews, fiction and poetry, and art and photography.

**LILLE**, city in the département of the Nord, N. France. The Jewish community of Lille was formed in the 19th century. Beginning in 1872, Lille became the seat of a chief rabbinate. Its Jewish community of Lille was formed in the 19th century. Beginning in 1872, Lille became the seat of a chief rabbinate. Its Jewish community of Lille was formed in the 19th century. Beginning in 1872, Lille became the seat of a chief rabbinate. Its Jewish community of Lille was formed in the 19th century. According to the census of the Jewish population in occupied France carried out at the beginning of 1942, there were 1,259 Jews then living in Lille, only 247 of whom were born there. The Commissariat Générale aux Questions Juives (CGQJ) maintained an office in Lille. In reprisal for an underground raid the Germans executed five Jews in Lille in March–April 1942. Of the 461 French and foreign-born Jews who were deported from the region of the Nord, only 125 returned. Among those deported was Léon Berman, who was rabbi of Lille from 1936 to 1939 and who published a work titled *Histoire des Juifs de France*. He was arrested along with his wife and son in October 1943, interned at the camp of Drancy, and eventually transported to a death camp. In 1947 there were 2,800 Jews in Lille, which was the seat of the regional consistory. The Lille community maintained a number of institutions, including a synagogue erected in 1874, a number of small prayer halls, youth groups, a kosher butcher, and a community center. It also published a community bulletin.

**LIMA**, ancient capital of the Peruvian viceroyalty and capital of *Peru*; population more than 8,866,160 (2005). Ninety-eight percent of Peru’s Jewish population of about 2,700 live in the city. The discovery of Peru and its enormous mining potential attracted a large number of *Conversos* who disregarded the restrictions on the immigration of New Christians and arrived in the capital founded by Francisco Pizarro in 1535. Most of them arrived during the period of unification of the Spanish and Portuguese crowns (1580–1640), and were known as "Portuguese." On February 7, 1569, Philip II, king of Spain, decreed the royal document by which he ordered the establishment of the Inquisition in Lima that was to start the persecution of judaizers and descendants of Jews.

Until 1595, however, the number of victims was very small, and the Crypto-Jews could prosper especially in the import and export trade. The first auto-da-fé took place in Lima on December 17, 1595. Ten Judaizers were judged, four of them were released, and one, Francisco Rodriguez, was burned alive. On December 10, 1600, 14 judaizers were punished; on March 13, 1605, 16 judaizers; later the frequency and the numbers declined.

The general pardon for all the judaizers declared in 1601 attracted a considerable number of New Christians, most of whom were Crypto-Jews who had acquired an important position in the economic life of the Spanish colony. Therefore the sensational trials against judaizers were generally conducted against those who had accumulated a fortune, all their possessions being confiscated by the Holy Office after their condemnation. This was the case with Antonio Cordero, the local representative of a merchant from Sevilla, who was denounced by a local trader for having declined to sell on the Sabbath and having refused to eat pork. A secret investigation was conducted, accompanied by torture, which led to the great auto-da-fé of January 23, 1639 with 60 judaizers. The most famous among them was Francisco Maldonado de Silva, who remained in prison for 12 years, during which he maintained his loyalty to the Jewish faith and even converted two Catholic prisoners to Judaism. All the rest were members of what the Spanish authorities called “The Great Conspiracy” congregation of Crypto-Jews in Lima. The last victim of *La Complicidad Grande* was Manuel Enriquez, who was burned at the stake in 1664 together with the effigy of Murcia de Luna, who died at torture. This exemplary display of severity, together with the menace of total expulsion in 1646, from which they were able to free themselves through the payment of the fabulous sum of 200,000 ducats, curtailed the offense of judaizing for many years. According to unsubstantiated sources there were 6,000 Crypto-Jews in Peru.
The last victims of the accusations against judaizers were Ana de Castro, on December 23, 1736, and Juan Antonio Pereira, on November 11, 1737. The last activities of the Inquisition in Lima were in 1806. At that time there were no remaining Crypto-Jews recognized as such. A very famous family of Crypto-Jews during the colonial period was that of “León Pinelo.”

The León Pinelo Family

During the period of the Viceroyalty this family flourished, being gifted with exceptional intellectual qualities that were manifested in a variety of activities in Spain, Peru, and Mexico, whether in the legal profession, theology, or various branches of knowledge. The León Pinelo school in Lima is named after the brothers Juan, Antonio, and Diego, children of Captain Diego López de León and Catalina de Esperanza Pinelo, distant relatives of the Pinelli of Genoa.

Juan López, the grandfather of the brothers León Pinelo, was a Portuguese Jewish merchant who, together with his wife, was burned alive in Lisbon in 1595. The survivors of the family immigrated to Valladolid, where they remained while Diego, the father, moved to Buenos Aires in search of a better situation. When his position was stabilized thanks to his commercial activities, he managed to reunite the family in 1605.

Juan, the first son of Diego López de León, was born in Lisbon (Portugal). He studied in Chuquisaca (Bolivia). He moved to Lima with his father and brother Antonio. Juan distinguished himself as an orator in the court of Philip IV, and was named canon of the Cathedral of Puebla (New Spain), where he ended his life. The second son, Antonio de León Pinelo, was born in Valladolid in 1590. He studied in the Universidad de San Marcos (in Lima). He was mayor of the Oro mines, and in 1621 he returned to Spain as the attorney of the city of Buenos Aires. In Madrid he established himself in the court, commanding everyone with his erudition. He was known as “the Oracle of America” for the vastness of his knowledge in matters concerning the Indies, particularly South America. He is credited with having established the basis, together with the judge Solórzano Pereira, of the famous collection of laws that was issued by the Spanish Crown for the government and administration of the colonies in the New World and printed in four volumes under the title Recopilación de las Leyes de las India (Collection of the Laws of the Indies). The idea of the collection of laws developed in Lima, when both León Pinelo and Solórzano Pereira cemented their friendship during a period when the former was endowed with a chair at the Universidad de San Marcos. Antonio de León Pinelo gained fame for being the first bibliographer to teach works published about America. He was a friend of Lope de Vega, Ruiz de Alarcón, and other well-known Spanish writers. His project on the History of Lima recounted the development of the capital of the Viceroyalty from the time of its foundation. In 1629 he was appointed relator in the Council of the Indies, a position that gave him access not only to the legislature promulgated for the colonies across the sea, but also enabled him to undertake the collection of the treaties on the administration of these territories. At the end of his life he was named chronicler of the Indies, in charge of writing the annals of the American past. He died in 1660.

Diego, the youngest brother, was born in Córdova del Tucumán. He started his university studies in Lima and finished them in Salamanca. Upon his return, he held chairs at the Universidad de San Marcos and was its rector between 1656 and 1658. In his judicial career he was general protector of the natives of Lima. He is especially remembered with respect to the apologetic treatise of the University of San Marcos (Hypomnema Apologeticum Pro Regali Academia Limensi, 1643), in which he defended the scientific hierarchy of the institute as well as the cultural achievements of the Peruvians, which he considered underevaluated by European scholars.

“León Pinelo” School in Lima

The history of the León Pinelo school began with the visit of Natán Bistritzky, who arrived in Peru in March 1945 on a mission of the Jewish National Fund. Bistritzky encouraged the leaders of the Jewish community, which at the time comprised only 2,500 persons, to create the Comité Pro-Colegio Hebreo with the objective of founding a Jewish day school in Peru. The community chose the name of “León Pinelo” for his historical ties with the Jewish and Peruvian people. The school was opened on May 1946 with 33 students. During its 50 years of existence, more than 1,600 students graduated from the school, with a high level of Jewish education. Most of the graduates continued their studies in universities in Peru, Israel, or the United States, and work as professionals in Peru or abroad.

LIMA, MOSES BEN ISAAC JUDAH (1605–1668), Lithuanian rabbi and halakhist. Lima studied at the yeshivah of Joshua *Falk in Cracow, where he became friendly with many who later were leaders of the generation. In 1637 he served as rabbi of Slonim and in 1650 was av bet din of Vilna, his colleagues being *Ephraim b. Jacob ha-Kohen and *Shabbetai Kohen, author of the *Siftei Kohen. In 1655 he was appointed rabbi where he served until his death. One of his three sons, Raphael, published his father’s work Ḥelkat Mehokek (Cracow, 1670), a commentary on the Shulḥan Arukh, Even ha-Ezer, outstanding for its critical perceptiveness and profundity and acknowledged as one of the best halakhic works of the later generations. It was accepted as an authoritative work in its field, despite its difficult style, which at times makes a supercommentary necessary. The Beit Shemuel of *Samuel b. Uri Shraga Phoebus is devoted largely to a discussion of Lima’s book. For the benefit of rabbis and posekim Lima and Samuel compiled Kunteres ha-Agumot, appended to chapter 17 of Even ha-Ezer, containing the essence of hundreds of books and responsa concerning the permission of agunot to remarry. Some
later authorities expressed reservations as to whether it was permissible to base oneself on the work for practical decisions without reference to the sources. Of Limal’s other works, there remain only a number of responsa in various collections.

[Israel Moses Ta-Shma]

LIMAN, ARTHUR L. (1932–1997), U.S. lawyer. Born in New York City, Liman grew up in a suburb, Lawrence, L.I. He graduated magna cum laude from Harvard and then from Yale Law School, where he was first in his graduating class. Soon after he became an associate at Paul, Weiss, Rifkind, Wharton & Garrison, a firm with ties to the Democratic Party. Liman was considered a masterly legal strategist who represented both corporate tycoons and scalawags but made his public mark investigating pivotal events like the Iran-contra affair and the prison uprising in Attica, N.Y. Liman occupied the public stage in the summer of 1987 when he was chief counsel to the Senate committee investigating the Reagan administration’s arms-for-hostage scheme known as the Iran-contra affair. On live television Liman jousted with Lieut. Col. Oliver L. North and other witnesses. The scandal centered on the sale of United States arms to Iran in the mid-1980s to obtain the release of American hostages in Lebanon. The sale, which involved diverting some of the profits to Nicaraguan contra insurgents, was done clandestinely and in violation of stated American policy. Liman was considered a master of cross-examination, a litigator with total recall of intricate details and supreme self-assurance. His blue-chip clients at Paul Weiss included Time-Warner, GAF, Weyerhaeuser, Pennzoil, Heinz, Continental Grain, CBS, and Calvin Klein. He also represented the fugitive financier Robert L. Vesco, Dennis B. Levine, a convicted Wall Street inside trader, and Michael R. Milken, who admitted violating Federal securities law. Liman earlier was chief counsel to a New York State panel that spent a year investigating the inmate rebellion at Attica state prison, in which 43 inmates and guards were killed during four days of rioting and hostage-taking in September 1971. His commission issued a 470-page report that concluded that an assault by state troopers to recapture the prison, ordered by Gov. Nelson A. Rockefeller, was ill-considered and far too harsh, leading to needless loss of life. It was published in book form and was so well written that it was nominated for a National Book Award.

[Stewart Kampel (2nd ed.)]

LIMBURG, JOSEPH (1866–1940), Dutch politician. One of the founders of the Liberal Democratic Party, Limburg was a member of the second chamber of parliament (1905–17). The education act adopted in 1917 bears his name. He was a member of the Netherlands delegation to the League of Nations in 1920. In 1926 he was entrusted with the formation of a cabinet, but failed and left politics. He was a member of the Council of State until 1940, when, on the Netherlands’ surrender to Germany, he committed suicide.

LIMERICK, seaport in southwestern Ireland. Jews began to settle there after the beginning of the Russian persecutions at the close of the 19th century. The attitude of the townspeople was hostile, and attacks on the Jews occurred in 1884. Nevertheless, immigration continued and a synagogue was established in 1889. The majority of the newcomers engaged in the drapery business; others in grocery and furnishing, trading partly on the “hire-purchase” system. In 1904, owing to the preaching of Father Creagh of the Redemptorist Order, an anti-Jewish riot broke out, followed by a boycott, and many Jews left. (The most complete account of the “Limerick pogrom,” as it was sometimes called, may be found in Dermot Keogh’s Jews in Twentieth-Century Ireland (1998), 26–53.) The community is now extinct.

[Cecl Roth]

LIMITATION OF ACTIONS.

The Concept and its Substance

In the talmudic period, Jewish law generally did not recognize the principle that the right to bring an action could be affected by the passage of time (i.e., extinctive prescription); in the post-talmudic period, it came to be recognized as a principle that there was a limit to the claimant’s right of instituting action on account of the passing of time, without extinction of the underlying right itself. In Jewish law, the principle of limitation of actions is grounded on the reasoning that delay in instituting action serves to cast doubt on the reliability of the claimant’s evidence. Consequently, prescription serves to deprive the plaintiff of a remedial action only if the defendant denies the existence of the right forming the subject matter of the action, but not if he admits its existence.

In the Talmudic Period

In the Talmud, the principle of limitation of actions – apart from two exceptional cases – was wholly unrecognized: “a creditor may recover his debt at any time, even if it has not been mentioned” (Tosef., Ket. 12:3; cf. the version in TJ, Ket. 12:4, 35b and TB, Ket. 104a).

THE WIDOW’S CLAIM FOR HER KETUBBAH. One exception to the general rule is the claim of a widow for her *ketubbah, which becomes prescribed under certain circumstances. In a dispute with R. Meir, the scholars held that “a widow, as long as she lives in her husband’s house, may recover her ketubbah at any time; when, however, she lives in her father’s house [and not with the heirs, and is therefore not inhibited from claiming her ketubbah from them], she may recover her ketubbah within 25 years only” (from the date of her husband’s death; Ket. 12:4).
Thereafter, her right to recover the ketubbah is extinguished, on the assumption that she has waived it, taking into account the great delay in instituting action and the fact that the ketubbah "is not like a loan and therefore she has not suffered any loss" (Ket. 104a and Rashi ad loc.). R. Meir expressed the contrary opinion that, as long as she lives in her father's house, she may recover her ketubbah at any time, but as long as she lives in her husband's house, she may only recover her ketubbah within 25 years, for "25 years suffices for her to extend favors in exhaust-}

Thereafter, her right to recover the ketubbah is extinguished, on the assumption that she has waived it, taking into account the great delay in instituting action and the fact that the ketubbah "is not like a loan and therefore she has not suffered any loss" (Ket. 104a and Rashi ad loc.). R. Meir expressed the contrary opinion that, as long as she lives in her father's house, she may recover her ketubbah at any time, but as long as she lives in her husband's house, she may only recover her ketubbah within 25 years, for "25 years suffices for her to extend favors in exhaustion of her ketubbah" (as it may be assumed that during this period she made use of the assets of the estate to render favors (gifts) to her neighbors in an amount corresponding to the value of her ketubbah: Ket. 12: 4 and Rashi ad loc.). In the opinion of R. Ishmael, the period is three years only (Tosef., Ket. 12:3). The halakah was determined according to the first view (Yad, Ishut, 16:21–24; Sh. Ar., EH 101:1–4). In talmudic times, this limitation of action in the case of a widow seeking to recover her ketubbah after the lapse of 25 years from the date of her husband's death already applied only where she was not in possession of the ketubbah deed; there was no limitation of action if she was in possession of such a deed at the time her claim was brought. Similarly, her right of action for recovery of the ketubbah remained intact even though she lived in her parents' home after her husband's death, provided that the attitude of the heirs toward her was particularly favorable ("delivering her maintenance to her on their shoulders"), on the presumption that the nature of this relationship had served to inhibit her from demanding her ketubbah from them (Ket. 12:4: 104b). On the widow's death, her heirs too could recover her ketubbah only within 25 years (Ket. 12:4), commencing, according to some of the posekim, from the date of their succeeding to her right, i.e., on her death (Tur and Sh. Ar., EH 101:1), and according to others, from the date that the cause of action arose, i.e., on the death of the husband (Rashi and Hananel, Shevu. 48a; Beit ha-Behirah, Ket. 104b).

**The Widow's Claim for Maintenance.** Another exception to the general rule is to be found in a halakhic ruling from amoraic times stating that a delay of two years on the part of a poor widow – or three years on the part of a rich one – in claiming "maintenance from the estate of the deceased husband barred her from recovering maintenance for the period which had elapsed (Ket. 96a; TJ, Ket. 11:2, 34b has two or three months, respectively). The reasoning behind this quasi-limitation of action is likewise based on the assumption that the widow, by virtue of her delay, has waived her claim for maintenance (Rashi Ket. 96a; Beit ha-Beherah ibid.; Yad, Ishut, 18:26; Tur and Sh. Ar., EH 93:14). If, during the aforesaid period, the widow has borrowed for her maintenance or if she has been in possession of a "pledge, she cannot be presumed to have waived her claim for maintenance and it does not become prescribed (TJ, loc. cit.).

**Roman Law**

Roman law of that period also did not recognize the principle of limitation of actions, although there were the actions tem-
Turkey) decided that where no reasonable justification could be found to account for the delay, the court should endeavor to effect a compromise between the parties (Resp. Maharashdam, hM 367), while Isaac *Adarbi, Medina’s contemporary and compatriot, charged the court with compelling the parties to a compromise in a suit based on a long-delayed claim (Divrei Rivat no. 109). Until this time, i.e., the beginning of the 17th century, no fixed period of prescription had been determined and the court would investigate and determine each case on its merits.

Fixed periods for limitation of actions. From the beginning of the 17th century, the need became increasingly felt for precise legal directions concerning the period within which a defendant could expect a particular action to be brought against him. Jewish law accordingly came to recognize the principle – by way of takkanah and custom (see *minhag) – that the mere lapse of time sufficed to impugn the credibility of the evidence in support of the claim, without the need for any particular investigation by the court. Consequently, if the defendant denied the existence of the debt, he was absolved from liability when he delivered an oath as to the truth of his plea. At the same time the substantive principle, basic to prescription in Jewish law, that the lapse of time did not operate to extinguish the underlying right itself, was preserved, so that a debtor who did not deny the existence of the debt – and certainly one who admitted it – was obliged to make repayment notwithstanding prescription of the right of action. The period of prescription was determined in advance – generally three years and in certain cases six (Pinkas ha-Medinah, Lita, ed. by S. Dubnow, 1925), Takkanah 205 of 1628; Benjamin Zeev Wolf, Miseret ha-Shulhan, 61, n. 16; Zevi Hirsch b. Azriel, Ateret Zevi, to Sh. Ar., ibid.; Jacob Lorbeerbaum, Netivot ha-Mishpat, Mishpat ha-Kohanim, n. 18). Once more, this new development with regard to the law of prescription was not immediately accepted by all the halakhic scholars. Thus Abraham *Ankawa (19th century, Morocco), in commenting on this development in Polish and Lithuanian Jewish centers, remarked that it was “a great innovation, and presumably a takkanah they enacted for themselves, although contrary to the law, for whatever reason they had at the time” (Kerem Hamar hM no. 33). So too, at the beginning of the 18th century, Jacob Reicher (Galicia) had decided in accordance with the principles laid down in the Shulhan Arukh, in a matter concerning an old deed (Shevat Yáakov, vol. 3, no. 182). His younger contemporary, Jonathan Eybeschuetz expressed the opinion that “at this time much scrutiny is required to keep the court from giving effect [in the case of an old deed] to a fraudulent suit” (Urim hM 61, n. 18). In the course of time, however, this development came to be accepted as part of the law of prescription, and was even refined and supplemented by certain additional rules, namely: if the debt cannot be recovered from the debtor on account of his impoverishment, prescription is interrupted for the period of his impoverishment; prescription does not apply during the period in which either the plaintiff or defendant is a minor; prescription does not bar the institution of an action if the debtor has waived such a plea in writing, in clear and unequivocal terms, even after completion of the period of prescription (Kesef ha-Kedoshim 61:9).

In the State of Israel

A substantial number of the various provisions of the Prescription Law, 5718/1958 accord with the principles of prescription in Jewish law, including the principle that “prescription shall not per se void the right itself” (sec. 2). On the other hand, this law includes the provision that an admission by the defendant of the plaintiff’s right shall only have the effect of nullifying the period of prescription already accrued if the admission is not “accompanied by a plea of prescription” (sec. 9). This provision is at variance with the Jewish law principle that the defendant – if he has admitted the existence of the plaintiff’s right – is not entitled to void the claim by pleading that the period within which the action may be instituted has lapsed.

For prescription with regard to immovable property, see *Hazakah.

[Menachem Elon]

In the Rabbinical Courts the question of the limitation of actions has also been raised in the context of “the law of the kingdom is law” (“Dina de-Malkhuta Dina”), viz., whether Rabbinical Courts must abide by existing state law or custom under which certain actions are limited, when this would negate the option of taking legal action.

Rabbi Ben-Zion Ouziel is of the opinion that Jewish Law only recognizes the principle of a passage of time limiting a right with regard to evidence, e.g., to disqualify a document, and only if other corroborative evidence impugned the authenticity or validity of the document, raising the possibility of a miscarriage of justice. Accordingly, he rejected unqualified compliance of Rabbinical Courts with state law in this context. In his opinion, limitation of actions cannot be regarded as a custom (and hence binding), because the binding nature of a custom is only applicable with regard to the accepted modes of acquisition, which the merchants have agreed to be bound by. By contrast, a promissory note in the hand of the creditor is proof of debt, and the argument that due to the custom of limitation the creditor has waived his claim supports the “robbery” of the debtor, and “robbery cannot be permitted on the basis of custom” (Mishpetei Ouziel, hM 28. 8).

In the Israeli Supreme Court the aforementioned position of Jewish Law on limitation of actions prompted the Supreme Court (Justice Menachem Elon), at the end of its decision in the Boyer case (CA 216/80 Boyer v. Shikun Ovdim, 38 (2) PD 561, 569) to make the following recommendation to a litigant who won his case exclusively on the basis of the claim of limitation: “this is a classic case in which it is proper and desirable to go beyond the strict letter of the law (lifnim mi-shurat ha-din). For a detailed discussion of the matter, see “Law and Morality, and the Supreme Court decisions cited (ibid).
Moreover, the position taken by Jewish Law on limitation, which accepts the doubtful veracity of the evidence without negating the substance of the claim, was instrumental in establishing and confirming the position of the Israeli Supreme Court on this matter. It ruled that the laws of limitation should be interpreted so as to give priority to clarifying the truth rather than bestowing immunity on the litigants (CA 4114/96 Hameiti v. Hachsharath Hayishuv, p. 521(1) 857, Justice Tirkel).

**LIMOGES**

Capital of the Haute-Vienne department, central France. A Jewish source, Sefer Yeshu’at Elohim (in A.M. Habermann, Gezerot Ashkenaz ve-Zarefat (1945), 11–15) contains an account of a semi-legendary anti-Jewish persecution in Limoges in 992 resulting from the activities of an apostate from Blois. The Christian writer Adhémar of Chabannes relates that in 1010 Bishop Alduin of Limoges gave the Jewish community the choice of expulsion or conversion. It is possible that both sources refer to the local manifestation of the general anti-Jewish persecutions which occurred around 1009 and which were followed by baptisms and expulsions. At any rate, whether or not the Jews were expelled from Limoges, the expulsion order was no longer in force from the middle of the 11th century; a certain Petrus Judaeus is mentioned in a local document between 1152 and 1173 and Gentianus Judaeus in 1081. Around the middle of the 11th century R. Joseph b. Samuel *Bonfils (Tov Elem) headed the Jewish community of Limoges and Anjou. The beginnings of the modern Jewish community in Limoges date from 1775. During World War II, Limoges became the largest center of refuge for Alsatian Jews; about 1,500 families and many institutions were transferred to the town. The present community, which was formed in 1949, grew to more than 650 by 1970 and possessed a synagogue and community center.

Blumenkranz, Juifs et Chrétiens… (1960), index; Z. Szajkowski, Analytical Franco – Jewish Gazette (1966), 286; Roth, Dark Ages, index.

**LIMOUX**

Town in the department of Aude, *Languedoc*, southern France. The existence of a Jewish community there is confirmed toward the end of the 13th century. Its privileges were withdrawn in 1292, as were also those of a number of other Jewish communities in Languedoc, but were restored in 1299. In 1302, the Jews of Limoux, again together with those of other localities in Languedoc, were freed by *Philip IV (the Fair), from liability to prosecution by inquisitors. At the beginning of the 14th century, some Jews from Limoux were living in Narbonne. A new community may have been constituted after 1315; this would be the one referred to in the Shevet Yehudah (ed. by A. Shochet, p. 149) under the name יֶשעַת as having been massacred by the *Pastoureaux in 1320.

[Bernhard Blumenkranz]

**LIMPIEZA DE SANGRE**

(Sp., “purity of blood”), an obsessive concern in Spain and Portugal from the 15th century, based on the mythical goal of a society in which all but the most humble functions would be exercised by “pure-blooded” Christians. In varying degrees this obsession afflicted Spain until well into the 19th century; blood purity was still a requirement for admission to the military academy until 1860, when it was legally abolished. In Portugal all legal distinctions between Old and *New Christians were officially removed in 1773. Limpieza de sangre continues to be a matter of concern on the island of Majorca, where Christians of Jewish ancestry are disdainfully referred to as *chuecas and frequently suffer discrimination because of their “impure blood.”

Although the pure-blood statutes established by the various communities of Spain in the 16th century adopted a routine formula directed against all Christians descended from Moors and heretics as well as Jews, the problem, both in its historical origins and in its latter consequences, mainly concerned those of Jewish ancestry. The first such measure of which details are known, the so-called Sentencia-Estatuto adopted in Toledo in 1449 in the course of a popular uprising under the leadership of Pedro *Sarmiento against royal authority, was directed solely against the Toledan *Conversos. It prohibited them from testifying in legal proceedings and excluded them from all public office, especially notaryships which were most frequently in their hands, “under penalty of death and confiscation of all their goods.”

This extraordinary measure against the Conversos or New Christians was a direct consequence of a series of anti-Jewish riots which swept through Spain in 1391. Protests against and denunciations of the Sentencia-Estatuto arose both among the affected converts as well as distinguished ecclesiastics of non-Jewish origin, including Pope Nicholas v. Nevertheless, the pure-blood statutes spread to such an extent that by 1500 most Spanish organizations, secular or religious, insisted on “blood purity” as a qualification for membership. The controversy concerning the legality and propriety of the limpieza de sangre discriminations continued until well into the 17th century, and Conversos were excluded from an increasing number of guilds, religious confraternities, most colleges, religious and military orders, and residence in certain towns. Churches and cathedrals reserved even their most humble benefices for Christians “without the stain of Jewish blood,” leading one polemicist to observe that Jesus himself would have failed to qualify as a porter in Toledo Cathedral.

**Bibliography:**...
Spain's obsession with blood purity in the 16th and 17th centuries led to considerable social turmoil. A leading supporter of the limpieza de sangre statutes in the early 17th century was Juan Escobar del Corro in his Tractatus. His work suggests that the racial or ethnic grounds for the opposition to the Conversos cannot be canceled by religious and theological reasons. The limpieza de sangre was introduced when it was no longer possible to reject a descendant of Jews purely on religious grounds. As generations passed and the memory of the Jewish ancestry of Converso Spaniards faded, efforts were redoubled to unearth the traces of their long-forgotten “impure” forefathers. Communities vied with one another in the severity of their pure-blood statutes. The Old College of Saint Bartholomew of Salamanca, the source of Spain's most important leaders, took pride in refusing admittance to anyone even rumored to be of Jewish descent. Hearsay testimony and words spoken in anger to the effect that someone was a Jew, or a descendant of Jews, sufficed to disqualify a man, a kind of “civil death” understandably feared by Spaniards. As investigations into ancestries ranged even farther into the distant past, until “time immemorial” as some put it, even families considered Old Christian lived in constant fear lest some remote, forgotten “stain” be brought to light or a hostile rumormonger destroy their reputation.

Since no one could be absolutely certain of his blood purity “since time immemorial,” limpieza de sangre ultimately became a qualification negotiated through bribed witnesses, shuffled genealogies, and falsified documents.

Américo Castro's attempt to demonstrate that the roots of the limpieza de sangre are to be found, not in the Christian-Iberian anti-Jewish feelings, but in much older sources, very distant from Spain, namely Jewish ones, has been rejected by scholars, such as B.Z. Netanahu. Castro claims that the Jews introduced their racial beliefs into Spain, just as they introduced the Inquisition. Castro brings his evidence from ancient biblical sources, medieval rabbinc literature, and Spanish Jewish scholars, but is clearly unfounded and often based on mistaken views of the Jewish sources.

[Albert A. Sicroff / Yom Tov Assis (2nd ed.)]

**Lincoln, Town in Eastern England.** The medieval Jewish community (first mentioned in 1159) was probably the second in importance in England after London. During the crusader riots which swept the country in March 1190, the Jews were attacked and took refuge under the protection of the sheriff. The citizens were subsequently fined for their unruly conduct. St. Hugh, the great bishop of Lincoln, protected the Jews, who later joined their fellow townsmen in mourning his death in 1200. The most prominent Anglo-Jewish financier of the time was “Aaron of Lincoln (c. 1123–86), whose operations extended over every part of the country but were especially important in Lincolnshire. R. Joseph of Lincoln is mentioned as a scholar (c. 1125–36). In the second half of the 13th century, the outstanding Lincoln Jews were Hagin (Hayyim), son of R. Moses b. Yom Tov of London, who was “archpresbyter of English Jewry (1258–80), and his brother “Benedict of Lincoln (d. 1276?), identical with the tosafist R. Berachia of Nicole, who has left some significant literary remains. The latter was absolved at the time of the ritual murder accusation in 1255 associated with the name of “Little” St. Hugh of Lincoln when 91 Lincoln Jews were sent to London for trial and 18 executed. Notwithstanding this, the community continued to be important. In 1266, during the Barons’ Wars, the “Disinherited Knights” attacked the Lincoln Jewry, sacked the synagogue, and burned the records registering debts. On the expulsion of Jews from England in 1290, assets were registered of 66 households (not all still alive), and the property which fell into the king’s hands exceeded £2,500, in addition to 30 houses. Specimens of medieval Jewish architecture, including a building which was probably the synagogue, may still be seen in the former Jewry (now Steep Hill). A small Jewish community existed again in Lincoln at the beginning of the 19th century. There was a small community of evacuees during World War II. At the outset of the 21st century, while no synagogues existed, a Lincolnshire Jewish community organization was maintained by the Progressive movement.

[Cecil Roth]
national questions of Jewish equality and anti-Jewish discrimination. Lincoln participated in two matters of Jewish historic significance. The first related to the appointment of Jewish chaplains for the army and for military hospitals. Legislation passed by the House of Representatives in July 1861 required that a chaplain be a “regularly ordained minister of some Christian denomination.” Although a Jewish layman, Michael Allen did serve as chaplain; he resigned his commission after being accused of serving illegally. A campaign of public pressure was undertaken to change the law, and in December 1861 the Rev. Arnold Fishel of New York went to Washington, under the aegis of the Board of Delegates of American Israelites, to act as lobbyist and civilian chaplain. He secured an appointment with Lincoln who wrote him promising to use his best efforts “to have a new law broad enough to cover what is desired by you in behalf of the Israelites.” New legislation was introduced in both the House and the Senate. By July 1862, a new law made it possible for rabbis to serve as military chaplains alongside Protestant ministers and Catholic priests, for the first time in history—a major step in the Americanization of the Jewish religion. Had Lincoln ignored Fishel’s representations, or actively opposed them, it is unlikely that either house of Congress would have passed the legislation.

In December 1862, General Ulysses S. Grant issued an order compelling all Jews from the area of his command, on the alleged grounds that Jews were engaging in illegal trade. This was brought to Lincoln’s attention by a Jew from Paducah, Kentucky, Cesar Kaskel, in January 1863, and Lincoln, recognizing the injustice of the order, issued instructions for its immediate cancellation. General-in-Chief H.W. Halleck, in the second of a series of telegrams, explained to Grant that “as it in terms proscribed an entire religious class, some of whom are fighting in our ranks, the President deemed it necessary to revoke it.” Lincoln, consenting to see another Jewish delegation after he saw Kaskel, assured the group, which included Rabbis Isaac M. Wise and Max Lillenthal, that “to condemn a class is, to say the least, to wrong the good with the bad. I do not like to hear a class or nationality condemned on account of a few sinners.”

Lincoln was a close friend and political associate of Abraham Jonas, a Jew from Quincy, Illinois, and their correspondence reveals a warm mutual appreciation and common political loyalties.

American Jews have felt especially attracted to Lincoln as the emancipator of the black slave, as a victim of violence, as a dreamer of peace, and as the spokesman of a way of life “with malice towards none, with charity for all,” which matches the idealism of the prophets.

[Bertram Wallace Korn]

**LINCOLN, TREBITSCH** (1879–1943), adventurer and politician. The extraordinary career of Trebitsch Lincoln, born Ignacz Trebitsch in Budapest, the son of a Jewish merchant, has become well known through Bernard Wasserstein’s biography, *The Secret Life of Trebitsch Lincoln* (rev. ed. 1989). In his career, he worked as a Presbyterian, later Anglican convert, and as an assistant to pioneering British social investigator Sebohm Rowntree. Then, remarkably, he was elected to the British Parliament as a Liberal from January to December 1910, immediately after changing his name to “Lincoln” and acquiring British citizenship. Defeated at the general election of December 1910, in quick succession he pursued a career as a failed company promoter in London and as a German spy during World War I, followed by a three-year stretch in a British prison for fraud. In 1920, even more remarkably, he served as press secretary to the right-wing, militarist government of Wolfgang Kapp in Germany, where he met the then unknown Adolf Hitler. From 1921 Lincoln lived in China, becoming a Buddhist priest under the name of Chao Kung. During World War II he worked for Japanese and, remarkably, German intelligence; it is believed, however, that he may have been murdered by the Gestapo in 1943. He wrote an *Autobiography of an Adventurer* in 1932. Some historians have seen his life as emblematic of the marginality of many Central European Jews of his time.

[William D. Rubinstein (2nd ed.)]

**LINDAU**, town in Bavaria, Germany. Jews are first mentioned in tax lists of 1242. The 13th-century town charter allowed Jews to trade in pledges on loans and the local Jewish oath was short and humane. In 1344 the Jews offered to make loans at very advantageous terms (43½% interest instead of the 216⅔% demanded by Christians) if they were offered civic rights. Individual Jews were granted special civic status in 1385 and 1409. In 1348 Charles IV granted the town the local Jewish oath; in that same year the community was destroyed during the Black Death persecutions. However, they were again in residence by 1358. In 1430, 15 Jews, accused of the murder of a boy, were burned and the rest were expelled. In 1547 the city was granted the right to exclude the Jews, a privilege reaffirmed in 1559. Even during the 18th and early 19th centuries Jews were only allowed to stay for short periods on special permits. The group of Jews who settled in Lindau, seven in 1810, never numbered more than 30 and had fallen to only four in 1939. In 1967 two elderly Jews were still living in Lindau.

**LINDER, MAX** (originally Gabriel-Maximilien Leuvielle; 1883–1925), French silent movie comedy star. Linder was born in Saint-Loubès to a family of vintners. His first film was *Première Sortie d’un Collégién* (1905); thereafter he turned out perhaps one film every week or so, to 1914. The character of the natty, slightly run-down, but highly-spirited Max achieved worldwide renown, inspiring Charlie Chaplin to develop a similar character early in his career. Linder fought in World
War I, permanently impairing his health and affecting his emotional stability. His last film was *Roi du Cirque* (1925). Few copies of his films have been saved.

**LINDHEIM, IRMA LEVY** (1886–1978), U.S. Zionist leader. She was born in New York City to a wealthy, assimilated family. She was educated in social work at Columbia University. During World War I she served as an ambulance driver, and in 1919 became president of the Seventh District of the Zionist Organization. She entered the Jewish Institute of Religion in 1922 and was accepted as a candidate for a rabbinical degree, while continuing her studies at Columbia under John Dewey. Irma Lindheim first visited Palestine in 1925 and incorporated her experiences into her book *Immortal Adventure* (1928). On her return to the U.S. she devoted herself to work with the Jewish National Fund. She became president of Hadassah (1926–28), and simultaneously was national vice president of the ZOA. Attracted by the Halutz philosophy, Irma Lindheim joined the Labor Zionist group in 1930 and helped organize the League for Labor Palestine in 1932. In 1933 she decided to settle in Israel and moved to kibbutz Mishmar ha-Emek. She wrote many articles, and her autobiography, *Parallel Quest*, was published in 1962.

[Gladys Rosen]

**LINDO,** English family descended from ISAAC (LORENZO RODRIGUES) LINDO (1638–1712), who was born in Badajoz. After being penanced in 1656 as a Judaizer by the Inquisition in the *Canary Islands, he settled about 1670 in London, where he became an elder of the synagogue and was a signatory of the *Ascanot of 1694. He was one of the earliest “Jew Brokers” of the city (1697). His descendants continued in that capacity until the 19th century and the entire series of their brokers’ medals is preserved. Other members of the family included MOSES (1712–1774) who immigrated in 1756 to South Carolina and became inspector general and surveyor of indigo, drugs, and dyes. He experimented scientifically with dyes and was responsible for some ambitious projects. ABRAHAM ALEXANDER, formerly of Jamaica, wrote pamphlets on the affairs of the island, and, in England, against the Reform movement. He delivered an address in the Sephardi Synagogue on the death of William IV in 1837. DAVID ABRABANEL (1772–1852), an active English communal worker, was at one time president of the elders of the Sephardi community. He was connected by marriage to the Disraeli family, and was the mother of Benjamin “Disraeli. His daughter ABBIGAIL (1803–1848) wrote *Hebrew and English and English and Hebrew Vocabulary, also Hebrew and English Dialogues* (1837; other eds. 1842, 1846) which displayed considerable learning as well as awareness of the potentials of Hebrew as a spoken language. ELIAS HAYYIM (1783–1865) settled in London after a mercantile career in St. Thomas (West Indies) where he was president of the Jewish community. He published an English translation of “Manasseh Ben Israel’s Conciliator (1842), A History of the Jews of Spain and Portugal (1848), and a Jewish Calendar for Sixty-Four Years (1858) containing much historical information. Some of his unpublished translations of Jewish classics are in the library of Jews’ College, London. The Lindos were closely related to many other Sephardi “cousinhood” families of note in Britain, including the “Mocattas and the “Montefiores.

[Cecil Roth]

**LINETZKY, ISAAC JOEL** (1839–1935). Yiddish and Hebrew novelist, essayist, and translator. He was born into a hasidic family in Podolia, Ukraine, but in his youth rebelled against this milieu and became a spokesman of the Haskalah. Linetzky published his first Hebrew article in the journal *Ha-Melits* in 1865 and his first Yiddish article in its Yiddish supplement, *Kol Mevaser*, in 1867. In the same weekly he published his novel *Dos Poylishe Yingl* (“The Polish Boy,” 1869), criticizing Jewish life and satirizing Hasidim. His language was coarse, colorful, and grotesque. The novel appeared in 30 editions – the last in Kiev in 1939. A sequel appeared in 1888 in Shalom Aleichem’s almanac, *Di Yidische Folksbibliotek*, under the title *Der Vorem in Khreyn* (“The Worm in the Horseradish”) and in book form as *Nit Toyt, nit Lebedik, oder dem Poylishn Yingls a Zun (“Neither Dead nor Alive, or the Polish Boy’s Son,” 1898). Linetzky also published various collections under the title *Linetskis Ksovim* (“Linetzky’s Writings,” 1876), as well as pamphlets and brochures. Among these are *Der Beyzer Marshelik* (“The Angry Jester,” satirical poems, 1879); *Americka tsy Erets Yisroel* (“America or the Land of Israel,” 1888); and *Di Kurtse Geografye fun Palestine* (“The Short Geography of Palestine,” 1888). In the collections *Linetskis Ksovim* he formulated his positive approach to Yiddish, regarding the language not only as a vehicle for enlightenment, but as a medium of literary expression. Linetzky translated into Yiddish part of Heinrich Graetz’s history of the Jews (1883–89), Lessing’s *Nathan der Weise* (1884), and J. L. Gordon’s *Kozo shel Yod*. Though Linetzky’s vogue faded with the rapid development of Yiddish literature and the emergence of great writers of the classical period, his major novel, *Dos Poylishe Yingl, retains an enduring place in Yiddish literature.

Introduction

Foreword

The literature of linguistics arose against a background of both the literature of the *masorah and the exegetical literature of the Bible which is incorporated in the Talmuds and in the Midrashim. Breaking away from them, it came to constitute an independent branch of literature, with its own delimitations of subject matter, its own system, and phraseology.

The Beginning of Linguistic Literature

It is generally assumed that its formation was completed by the beginning of the tenth century C.E. at the latest. It is also commonly held that the works of "Saadiah Gaon – Agron (Egron), the first edition of which was written in 902, and Kutub al-Lugha – are the first two books of linguistics proper – the former dealing with lexicography and the latter with grammar.
The authors of the 12th century such as Abraham *Ibn Ezra (see for example the list of the “scholars of the language” in the introduction to his *Moznayim), considered Saadia Gaon to be the first grammarian; so too scholars of the 19th (such as Bacher) and 20th centuries (Skoss). The creation of this branch in Jewish literature was assisted at the beginning of the tenth century by a number of factors. First, the shaping of the form of the biblical text with regard to its letters, vocalization, cantillation, and masorah had been completed by the school of *Ben-Asher in Tiberias. From among the different vocalization systems which the Jews established in the third quarter of the first millennium C.E., the Tiberian system had already spread in the Diaspora and become established as the authoritative vocalization of the biblical text. This vocalized, cantillation-marked, masorah-bound text would serve the grammarian as a faithful source for the Hebrew language and he would describe the rules according to it. Secondly, at the beginning of the tenth century the cultural centers of the Jews were within the realm of influence of Arab culture and the contact between the two cultures was already quite close. Hence the intellectuals among the Jews already knew the linguistic teachings of the Arabs, which had developed as early as the eighth century. The Jewish grammarian was accordingly destined to describe the Hebrew language with the concepts and tools of that linguistic theory. Thirdly, it is possible that the emergence of *Karaism – for which the Bible was the sole source of Judaism and which therefore needed to carefully scrutinize the meanings of the words in it – stirred even the Rabbanite Jews to examine the Bible anew in a way which differed both from the masoretic literature and from the talmudic-midrashic literature.

Linguistic Literature and Its Background

It is rather astonishing that the initial emergence of the linguistic literature of the Jews had to be so late in time. There is, however, general agreement that in Semitic this kind of metalinguistic discourse could not have begun before the invention of the vowel points. As far as Hebrew is concerned this means that linguistic literature could not have begun until after the third quarter of the first millennium C.E. However, already in the literature of the talmudic period there are statements (and expressions) which were later adopted by grammarians in their treatises. Bacher (1895, 20–23) cites such statements from Sefer Yeẓirah, Berliner (1879), and others before him, e.g., Stern, Mavo le-Korot ha-Lashon, printed together with Teshuvot Talmidei Menahem, etc., 1870, 0–x), Gross (on Menahem, 1872) and after him *Skoss (1932/3, 1–12), gathered from talmudic and early midrashic literature expressions which seem to us grammatical statements. But these statements are outside the realm of linguistic literature, and as Goldziher (ZOMG, 1880, 375–384) already warned, care has to be taken not to attribute linguistic aims to statements whose aims were midrashic or mystic. As for the inventors of the nikkudim, it goes without saying that the act of providing the biblical text with vowel points itself presupposes a well-established phonological theory. But the generations which in the seventh and eighth centuries participated in this work did not leave us any explicit statement of their theory, as they were wholly concerned with its realization in providing the Bible text with vowel points, cantillation signs, and some other diacritical devices. Throughout the late eighth and ninth centuries, though, Jews produced a vast literature about the masorah. But this literature too stands outside the field of linguistics. Indeed, an essential difference separates the masoretic literature from the linguistic with regard to their respective aims, subjects, methods of investigation, and the phrasing of their discussions. The literature about the masorah always deals with the actual Bible text, i.e., with the written form and its actualization in reading. Its exclusive aim is to set (or preserve) a norm with regard to both the orthography of the Bible and its recitation. Its main activity is to enumerate certain types of actual occurrences (for example, homographs), to register them in classified lists, to provide them with mnemotechnical titles and to formulate rules concerning the occurrence of cantillation signs, vowels and letters. Abstractions used in these rules are the names of the types of cantillation signs, vowel signs, and letters, i.e., abstractions on the basis of the orthographic form. The masorah is an anonymous literary creation produced by many generations. Its statements are generally phrased in Aramaic (the mnemotechnical statements, for example) or in rhymed Hebrew prose (see *Masorah). Linguistic literature, on the other hand, is an investigation of the Hebrew language, of which the biblical text is a survival. Its aim is not to fix (or preserve) a norm for the orthography of the text or its recitation, but to describe the rules of the language, of which the text is a partial actualization. It does not enumerate the occurrences in the text, but imposes upon the Bible a grid (or system) of abstract linguistic units, classified and graded, and illustrates the operative abstractions by actual occurrences in the text. It then draws analogies from occurrences in the Bible to words which do not occur in it, whether found in the language or potential in it. It even makes assumptions, states principles, and comes to conclusions which are applicable to all languages including Hebrew, or specifically to Hebrew. During the ninth century there probably existed a vast literature which while masoretic substantively is already grammatical adjectively. Some remnants of this literature are known, especially through the efforts of scholars such as Allony. This type of literature did not disappear at the beginning of the tenth century but continued to exist, though not as prominently. To this type of masoretic (-grammatical) literature belongs also Dikdukei ha-Teʾamim by Aaron Ben Asher (ed. Dotan, 1967), written about the same time as Kutub al-Lughah by Saadia Gaon; but the two works are on the opposite sides of the border which separates masorah literature from linguistic literature. Dikdukei ha-Teʾamim deals with cantillation signs, the vocalization of certain occurrences, and the ways of noting the šewa’. It contains sections taken from the literature written about the masorah which the author then endorses. Some hold that this compilation is a “new creation” (Dothan), while others
believe that it was purposely done “uncritically” (Kurt Lewy). Everyone admits that it represents the end of the literature which aspired to fix a norm for the text. In *Katub al-Lugha*, Saadiah Gaon opens his discussion with general suppositions (*muqaddamat*; *māʿârif*; *qawāʿid*), some of which are universal in his opinion, while others are specific to Hebrew. On the basis of these suppositions he formulates rules of language (*qawānīn*). He does not count the occurrences but classifies and grades his abstractions and calculates their number. He does not even need the actual occurrences of the text, except as concrete illustrations of his abstractions. He even considers what is possible in the language and what is not (such as the precluded combinations of sounds). Aaron Ben Asher wrote in Hebrew in rhymed prose, while Saadiah, under the influence of Arabic linguistics, even borrowed its form of presentation. Thus Saadiah Gaon crossed the border which divides Masorah literature from linguistic literature. While Ben Asher, the last of the masoretes, was also among those who brought the literature about the Masorah to its zenith, Saadiah Gaon was the first grammarian among the Jews.

**The Development of Linguistic Literature**

**Foreword: A Well-Defined Unit**

Until the beginning of the 16th century the authors of linguistic literature were almost exclusively Jewish. (Members of other religions, such as the Christians, who did produce works about Hebrew linguistics at the beginning of the 16th century did so only on the basis of the work of earlier or contemporary Jewish authors.) This literature, excepting the work of Samaritan grammarians, had two joint bases: the Masoretic Text of the Bible and the Arabic approach to grammar. Notwithstanding the differences of approach and opinion among the authors, it may be assumed that this literature consolidated into one linguistic school; and it is still the only one which the Jews have established in the investigation of the Hebrew language. Founded though it is on the two bases, it is worthwhile to consider this literature, whose course of development spans six centuries, as one well-defined and well-delimited unit in the history of the literature which deals with the scientific study of the Hebrew language.

**The Four Periods**

**The Criteria of Division.** This unit can be divided into two parts, the border separating them being the middle of the 12th century, and two periods can be distinguished in each of the parts:

I. The time of the first attempts, which extends from the beginning of linguistic literature until the end of the tenth century.

II. The creative period, which reaches the middle of the 12th century;

III. The period of dissemination, ending in the first half of the 13th century;

IV. The period of the “standstill,” which extends to the first half of the 16th century.

The first period is separated from the second by the publication of the works of Judah Ḥayyūy. An historical event separates the second from the third period: the tribulations of 1148 in Spain, followed by the migration of the Spanish scholars to the Christian lands. The third period is separated from the fourth by the appearance of the *Mīkhkhol* of David *Kimhi*. The fourth period ends with the first attempts of the Christian authors to write grammars for the Hebrew language – Johann *Reuchlin* (1506), Sebastian *Muenster* (1542) – in order to spread the knowledge of Hebrew among the Christians, and with *Mikneh Avram* (1523), the first systematic methodical attempt to apply Latin linguistics to the Hebrew language. A short survey of each period follows:

**Period I: The First Attempts.** Throughout the tenth century C.E. works dealing with language were written (all in Arabic) in the East and in North Africa. In the second half of the century works were produced in Spain as well, but in Hebrew. It is in this period that the first attempts were made at exposition on the Hebrew language: the *Agron* of Saadiah Gaon is the first attempt at establishing a prototype of a dictionary for Hebrew, while *Katub al-Lughah* is the first grammar of biblical Hebrew. In the second quarter of the century Judah *Ibn Quraysh* wrote his *Risāla*, the first attempt at systematic comparison of biblical words, to Aramaic words, to Hebrew words from the Mishnah and Talmud, and to Arabic words. In *Kitāb al-Sab‘in Lafza al-Mufraḍa* Saadiah Gaon had already tried to explain *hapax legomena* of the Bible according to their use in rabbinic literature. At about the same time *Dunash ibn Tamim* also dealt with the close connection between Hebrew and Arabic in the area of vocabulary. Toward the middle of the century David b. Abraham *Alfāsī* wrote the first comprehensive dictionary for Hebrew and biblical Aramaic, known in Arabic as *Jāmi‘ al-Alfāz*, and in Hebrew as *al-Agron*. In the third quarter of the century *Menahem ibn Saruq* wrote his *Mahberet*, the first comprehensive dictionary for biblical Hebrew and Aramaic to be written in Hebrew, and also the first linguistic work written in Spain. Controversy over the *Mahberet* was then carried on in Hebrew until the end of the period and involved *Dunash b. Labrat*, who wrote 180 criticisms of Menahem, the students of Menahem who replied to some of those criticisms, and a student of Dunash who in turn answered some of those objections. It is assumed that about the same time the “criticism” against Saadiah Gaon was written, allegedly by the same Dunash b. Labrat. However, neither the identity of the author of these “criticisms” nor the question of the language in which they were written has been clarified (see, however, Del Valle Rodriguez and others, section 6 below). Works of authors who wrote in Arabic (Saadiah Gaon, Ibn Quraysh, Ibn Tamim, Alfāsī) were widespread in the 11th century. Grammarians used them and quoted them whether they agreed with them or not, and in the East they served as a model for authors in the first half of the 11th century (*‘Abū al-Faraj*, *‘Hai Gaon*). However, in the middle of the 12th century, with the shift of the centers of Judaism from the Arab realm to
the Christian lands, these works, not having been translated into Hebrew, were slowly forgotten in the Christian West, being remembered only from secondary sources, until ultimately they were completely lost. The surviving remnants were discovered only recently. The works written in Hebrew, however, understandably fared better. The Mahberet of Menahem, for example, was found in many copies among the Jews of Italy and (northern) Franco-German Jewry and its influence continued until the end of the 12th century.

**Period II: The Creative Period.** In this period most of the works were written in Spain, and all in Arabic. The description of biblical Hebrew was completed in these works, in the areas of both grammar and the lexicon. In the year 1000 Hayyūṯ wrote his two works on the Hebrew verb — Kitāb al-Afʿāl Dhawāt Hārūf al-Līn and Kitāb al-Afʿāl Dhawāt al-Mīthlāy; and thus a new period in the history of Hebrew linguistic literature was begun. In these works he applies the principle of the tri-radical root which had already been used in Arabic language theory since the eighth century. The first third of the century saw the controversy over these works of Hayyūṯ: by the second decade of the century Jonah *Ibn Janāḥ had written his Kitāb al-Mustalḥaq, in which he completed that which Hayyūṯ had “overlooked” and in a few instances even rejected the analysis of Hayyūṯ, suggesting his own solutions. *Samuel ha-Nagid wrote Rasāʾil al-Riḥāq, in which he objected to some of the comments made by Jonah ibn Janāḥ in his Kitāb al-Mustalḥaq. At that, Jonah ibn Janāḥ replied to the Rasāʾil al-Riḥāq in Kitāb al-Tashwīr and Samuel ha-Nagid replied in turn in his Kitāb al-Ḥujja. Jonah ibn Janāḥ replied in Kitāb al-Taswīla to other objections — reports of which had reached him in Saragossa — that the Nagid and his associates had voiced against Kitāb al-Mustalḥaq. A work entitled Kitāb al-Īstīfāʾ was written in Saragossa, adding criticism of the works of Hayyūṯ which Ibn Janāḥ had not dealt with in Kitāb al-Mustalḥaq. Ibn Janāḥ replied to this work in Risālat al-Taqrīb wa al-Tashīl and Samuel ha-Nagid deals with grammar in the introduction to this work. It was lost, however, and only a few small remnants have survived. Ibn Janāḥ set down with the wisdom of age a complete description of biblical Hebrew in his work Kitāb al-Tanqīh, which consists of two parts: Kitāb al-Lumaʿ (grammar) and Kitāb al-Uṣūl (a dictionary). This two-part work, with the writings of Hayyūṯ and the shorter works of Ibn Janāḥ mentioned above, form the first complete description of biblical Hebrew, and no similar work — comparable in scope, depth, and precision — was written until modern times. This description constitutes the high point of linguistic thought in all the literature under discussion. In the second half of the 11th century certain Bible commentaries used the grammatical analyses and the dictionary definitions found in the works of Hayyūṯ, Ibn Janāḥ, and Samuel ha-Nagid. A series of monographs on defined linguistic issues was also written, in which their authors tried to go more profoundly into the teachings of their predecessors. Isaac *Ibn Yashush wrote Kitāb al-Taṣārīf, apparently on the subject of inflection, in the middle of the century, but it has been lost. In the third quarter of the century Moses b. Samuel *Gikatilla wrote Kitāb al-Tadhkīr wa al-Taʿīnīth, a monograph concerning grammatical gender based on the statements of Ibn Janāḥ in Kitāb al-Lumaʿ, chapter 37 (38), and on various entries in Kitāb al-Uṣūl. At the end of the third quarter of the century Judah *Ibn Balʿam tried to give an exhaustive description of the particles of Hebrew in his Kitāb Ḥuṣūf al-Mašānī; this subject had already intrigued Abū al-Faraj at the beginning of the century and Ibn Janāḥ in Kitāb al-Uṣūl. He also dealt with two topics which had not as yet been described systematically: denominative verbs in his Kitāb al-Afʿāl al-Muṣṭaqqa min al-Asmāʾ, and homonyms in his Kitāb al-Taḥnīs. In the last quarter of the century Isaac *Ibn Barūn wrote Kitāb al-Muwaṣzana bayn al-Lugha al-Ībrāniyya wa al-Lugha al-ʿArabiyya (“The Book of Comparison between the Hebrew and the Arabic Languages”); it is the most complete in-depth study of the relationship between Hebrew and Arabic until that time. In contrast to Ibn Quraysh, Ibn Tamim, Dunash b. Labrat and others who dealt with the comparison between Hebrew and Arabic in relation to vocabulary, Ibn Barūn also deals with grammar in the introduction to this work. It seems that introductions to linguistics were also written, such as Sefer ha-Maftelah (?) of Levi *Ibn Altabban, composed in the third quarter of the century, and perhaps adaptations were made, such as al-Kāmil (?) of *Jacob b. Eleazar. Commentaries and criticism were written too, such as “pseudo-Ibn Yashush,” which was probably an explanation of statements of Samuel ha-Nagid. There were also works written of which we have only heard and whose very names are unknown, such as the writing of *David ha-Dayyan ibn Hajjar, which apparently...
concerned the vowels. In the second quarter of the 12th century Moses *Ibn Ezra wrote in Arabic his Kitāb al-Mahādara wa al-Mudhākara, the first Hebrew poetics. The authors of this period are the great creators of Hebrew linguistics. It is they who determined its scope, consolidated its system, and formulated its rules. It is they who fixed its terminology and phraseology; in part Aramaic-Hebrew, being drawn from the Masorah literature, and in part Arabic, being borrowed from Arabic linguistic literature.

Period III: the period of dissemination. The tribulations of 1148 caused a sudden cessation of original contributions in Hebrew linguistics. The Jewish intellectuals of Spain who were exiled to Italy and to southern France brought with them the works which had been written in Spain and began to spread their contents among intellectuals in their new lands. The dissemination was accomplished in two ways: Hebrew adaptations and Hebrew translations. The Spanish exiles began to compose works in Hebrew which are nothing more than summaries of the ideas of Hayyūyī, Ibn Janāh, Samuel ha-Nagid and other authors who had taught them. These adaptations include the grammatical works which Abraham ibn Ezra wrote during his wanderings in Italy and France between 1140 and 1160: Moznayim (Rome, 1140); a work defending Saadiah Gaon (title unknown); Sefat Yeter (= Sefer Yesod Diqduqu) (Lucca, 1140–45); and Zahot (Mantua, 1145); Sefer ha-Shem and Yesod Mispar (both in Beziers before 1155), and Sefah Berurah (apparently also in southern France). In 1161 Salomon ibn Parhoḥ wrote Mahberet ha-Arukh in Salerno, Italy, which is so faithful a representation of the works of Hayyūyī and Ibn Janāh that it was once mistaken for a condensed translation of them. Joseph *Kimh wrote his Sefer Zikkaron in Narbonne. To conclude the survey of adaptations, the Sefer ha-Makor of Isaac ha-Levi may be mentioned. On the other hand, Spanish exiles began to translate into Hebrew the most important works that had been written in Spain. Moses ha-Kohen Gikatilla had already translated the two important works of Hayyūyī by the third quarter of the 11th century, thus being the first to render grammatical works from Arabic into Hebrew. Abraham ibn Ezra translated the three works of Hayyūyī again, apparently in Rome in 1140. Judah ibn *Tibbon completed his translation of Kitāb al-Tanqīh of Ibn Janāh in 1171 at Lunel, calling it Sefer ha-Diqduq: the first part of it, Kitāb al-Luma', under the title Sefer ha-Riqmah; and Kitāb al-Uṣūl under the name Sefer ha-Shorashim. From Judah ibn Tibbon we know of other attempts to translate Kitāb al-Uṣūl. At the end of the 12th century (or at any rate no later than the second quarter of the 13th century) Obadiah ha-Sefardi translated the Kitāb al-Mustalḥaq of Ibn Janāh, calling it Sefer ha-Hassagah. At Beziers in the mid-13th century, Solomon b. Joseph b. Job translated Ibn Janāh’s Kitāb al-Taiswā‘a (“The Book of Rebuke”) under the incorrect title Sefer ha-Hashva‘ah (“The Book of Comparison”), and Risūlāt al-Tanbīh, which he called also Sefer ha-Ma‘āneḥ. There is also an anonymous translation of the three monographs of Judah ibn Balam. Complete or almost complete copies of all these translations exist, except for those of Ben Job, of which only fragments are extant. In the last quarter of the 12th century Moses b. Joseph Kimh wrote Mahalakh Shevilei ha-Da‘at, for which he already used the works of Abraham ibn Ezra and even those of Joseph Kimh. David Kimh ended the work of adaption with his Sefer Mikhlol. This work is constructed in the same way as the Kitāb al-Tanqīh of Ibn Janāh. It also consists of two parts: grammar – Mikhlol, and lexicon – Sefer ha-Shorashim. For the content he drew upon the works of Hayyūyī and Ibn Janāh, apparently in their Hebrew translations, and upon the works of adaptors who preceded him. In the Mikhlol the theoretical foundations, the methodological clarifications, the substantiations and explanations were reduced, and the mechanical, technical, paradigmatic side appended. The author gave prominence to the verb, devoting much space to it. This work of David Kimh, which did more than any other to spread the ideas of Ibn Janāh among the Hebrew-reading intellectuals, is the one which helped cause Ibn Janāh’s own works to be forgotten. While the two parts of Sefer Mikhlol were printed many times (Heleg ha-Inyan [Sefer ha-Shorashim] from 1480, and Heleg ha-Diqduq [Mikhlol] from 1532–34), the works of Ibn Janāh himself were not published, even in their Hebrew translations, until the second half of the 19th century. At the end of the period under discussion Moses b. Isaac of London wrote Sefer ha-Shoḥam, the first linguistic work written by a Franco-German Jew upon the basis of the linguistic theory of the Spanish grammarians, as found in the writings of Abraham ibn Ezra, Parhoḥ, and Joseph Kimh, and in the translation of the works of Hayyūyī and of Kitāb al-Mustalḥaq.

Although the works of adaptation and translation obviously made but a slight original contribution to linguistic thought, it would be difficult to exaggerate the importance of this literary activity. It was the translators and adaptors who saved Hebrew linguistics from oblivion and made it a permanent branch in the history of Jewish literature. They also translated into Hebrew the Arabic grammatical terms used in the works of Hayyūyī and Ibn Janāh, and they fixed a mode of exposition for grammatical and lexicographical issues, that has existed until today in the study and teaching of the Hebrew language and in Hebrew biblical exegesis.

Period IV: the “standstill.” During this period the West produced as much literature as during period III, yet from the aspect of quality there was almost a complete lack of progress. This period in the West bears the stamp of the almost exclusive influence of the works of period III, primarily that of the Mikhlol of David Kimhī. Since the works of period III, which were written in Arabic, were forgotten, the Mikhlol became the authoritative formulation of Hebrew linguistics, the authoritative source for grammarians and lexicographers. The unshakable prestige of the Mikhlol was further strengthened by the widespread distribution of the Bible commentary of David Kimhī. Some of the authors of period IV copy the statements of David Kimhī in the most minute detail, while others take
over most of his theories, though critically. No matter what, they were always dependent on his work. Most of the books of this period are partial adaptations of their sources and are of a practical nature, such as introductions to the study of Hebrew, and textbooks or learning aids to vocalizers of the biblical text. Despite the standstill of this period, however, sporadic attempts were made at widening the scope of linguistic literature. A chapter on the rules of poetic meter was regularly included in grammars and even complete works on poetics and rhetoric were written. A few dictionaries were written for types of post-biblical Hebrew, such as al-Murshid al-Kafi by Tanhum Yerushalmi, which was a dictionary of the Mishneh Torah of Maimonides, and Tishbi by Eliezer (Baḥur) *Levita, which is a partial dictionary of talmudic and post-talmudic Hebrew. Eliezer Levita also wrote a dictionary for the Aramaic of the Targumim of the Bible, entitled Meturgeman. The first dictionaries of synonyms were also written: Hotam Tōkmnit of Abraham *Bedersi (second half of the 13th century) and Oḥel Mōṇid of Solomon b. Abraham of Urbino (1480). In the second quarter of the 15th century Isaac b. Kalonymus wrote Meʿir Nativ (or Yaʿir Nativ) in Provence – the first concordance of biblical Hebrew. At the beginning of the 15th century Jehiel of Italy wrote Makre Dardekei, a Hebrew-Italian-Arabic dictionary, the first of its type. In the manner of Rashi, Abraham ibn Ezra, the Kimhists, and others, several authors began to cite foreign loanwords from the vernaculars of the Jews and the languages of the Christian environment, in dictionaries, grammars, and commentaries. A small number of works written during this period are concerned with theoretical issues. First, the demand for basing linguistics upon logic began to make itself felt. In a way this was a rebellion against the mechanical nature of the Mikhlol and a return to the theoretical nature of Kitāb al-Luma*. This tendency is already felt in the surviving portions of the work of Nethanel (b. al-Fayyūmi) of Yemen, of the 12th (?) century. It is prominent in Radukot Keseḵ of Joseph ibn *Kaspi, who lived in Provence in the first third of the 14th century. It is most outstanding in Māáseḵ Efod of Prophiṭ *Duran (1403), which also contains criticism of the Mikhlol. Theoretically there is a dialectical return in this work to Ibn Janāḥ, and this is one of the two most important contributions of this period to linguistics. Secondly, contact with Latin linguistics increased, i.e., it was already represented by such scholars as Donatus. Joseph Kimhi was already influenced by this contact at the time when he mentioned the grammatica of Latin together with the nabw (grammar) of Arabic. This influence is especially noticeable at the very end of the period. In 1523 Abraham de *Balmes in his Mikneh Avram tries to apply the ideas of Latin grammar to the description of the Hebrew language. Thus he devotes a chapter, the seventh, entitled Harka-vah (“composition”), to the syntax of the Hebrew word. This work, together with Māáseḵ Efod of Prophiṭ Duran, constitutes the most important contribution of the period, and actually begins a new chapter in the history of this literature. In 1506 Johann Reuchlin published Rudimenta Linguae Hebraeae. Based on David Kimhi, it is the first Christian work for the instruction of Hebrew to Christians. In Basel in 1541, Sebastian Muenster wrote Meleḵet ha-Dikduk ha-Shalem, which is based on the work of Eliezer Levita. Thus it was that research into the Hebrew language ceased being exclusively Jewish and became part of European culture; with this too a new period in the history of Hebrew linguistic literature began.

The Motivating Factors for Writing on Linguistics
Around the end of the first millennium c.e. writing about linguistic issues was a new phenomenon in Jewish literature, considered by many important people as a vain, senseless activity. Therefore, in their introductions, the authors discuss the motivating factors which stimulated them to write their linguistic works. They seek to prove to their readers that it is incumbent upon Jews to take up the investigation of their language and their arguments include the following points: (1) language is the means for all discernment and linguistics is the means for all investigation and wisdom; (2) the fulfillment of the commandments depends upon the understanding of the written word, and in turn, the proper knowledge of the language is impossible without the aid of linguistics; (3) the Hebrew language is the most ancient tongue and the most perfect. When it was a living language it was incomparably rich and extensive, and had the Jews not been exiled from their land knowledge of it would now be complete. However, because of the exile it was forgotten for the most part and only a small part of it remained – i.e., the part contained in the 24 books of the Bible and another small segment contained in rabbinic literature. The Jews face the danger that their knowledge of their language will continue to be defective, or even forgotten altogether, because of their wanderings and the distance in time from the years when Hebrew was a living language. They are therefore obliged to preserve their cognition of the language in every way. In order to safeguard this knowledge the authors undertook to write their works. Consequently they had a twofold purpose. On the one hand they wanted to increase the knowledge of the language and thereby aid the understanding of the written word, and on the other hand they wanted to provide Hebrew writers with a suitable literary tool, and to prevent them from deviating from the rules of the exemplary language of the Bible. These two aims are already expressed by Saadiah Gaon, reappearing in a new guise in the authors who follow him. The actual motivation for producing a particular work, though, was sometimes polemical. The controversy which raged between Saadiah and the Karaites motivated him to write al-Sabʾin Lażza al-Mufrada. Later the frequent debates with the Christians stimulated the Jews to establish linguistic aids for themselves. Isaac b. Kalonymus wrote the first concordance to the Bible in the middle of the 15th century as an aid in refuting the proofs which Christians cited from Scripture. It is possible that this was also one of the motivations behind the writing of a Hebrew–Italian–Arabic dictionary at the beginning of the 15th century in Southern Italy. Controversies existed even among the grammarians themselves. The history of linguistic literature contains a succession of "criticisms,"
“replies,” and “replies” to the replies, a characteristic case being the above-mentioned exchange involving Menahem and Dunash. About two hundred years afterwards Jacob “Tam wrote Hahhrīt (“Decisions”), intending to decide between the Mahberet of Menahem and the “objects” of Dunash. Joseph Kimhi criticized the “Decisions” of Jacob Tam in his Sefer ha-Galui, and Benjamin, a student of Jacob Tam, replied to the criticism of Joseph Kimhi. There is another work also attributed to Dunash, criticizing the linguistic works of Saadiah Gaon, but as yet there has been no satisfactory identification of the author. Abraham ibn Ezra wrote Sefer ha-Haganah (Pseudo-Sefat Yeter) to defend Saadiah Gaon against the “cricicism” mentioned above. Mention has already been made of the controversy which raged about the works of Ḥayyūj, between Ibn Janāḥ and his group and Samuel ha-Nagid and his group. In 1517 Elisha b. Abraham wrote Magen David in Constantinople, defending David Kimhi against the 60 “objections” which Profat Duran had raised against his work.

Description of the Language

Biblical Hebrew. From the motivating factors for this writing, it is easy to imagine that they dealt mainly with the language of the Bible. This language is considered complete and ideal: There is harmony and balance in its structure; it has been measured in the scales of justice and law; its rules are logical and its expressions clear. It is free of error and contradiction; everything in it can be explained and substantiated. Yet these characteristics are not obvious from the actual text, rather being hidden in it, so that it is the main task of grammar to reveal them after detailed investigation. Such investigation thus becomes the main object of the grammarian. This self-imposed limitation to biblical Hebrew is already noticeable in the Agron of Saadiah Gaon, where about 80% of the words explained are from the Bible. It is likewise clear from the Kutub al-Lughah, in which he discusses nothing but the grammar of Bible. This attitude prevailed among the authors who followed him, and lasted for centuries.

The Status of Post-biblical Hebrew. All types of post-biblical Hebrew, including mishnaic Hebrew, were marked as inferior and degenerate, for the fate of the language supposedly resembled that of the people. During the entire period under discussion not even one grammar on mishnaic Hebrew was written, nor any one work which described biblical Hebrew and mishnaic Hebrew as one. Still, mishnaic Hebrew was granted a special status; since the sages lived and worked at a time closer to the prophets, it was assumed that details of language remained in the Mishnah which were not included in the Bible. Therefore they used the Mishnah for their works, especially for understanding difficult words, such as hapax legomena. This comparison, mostly lexical, was already begun by Saadiah Gaon in al-Sab‘in Lufza al-Mufara. Ibn Quraysh followed him in his Risāla, and all the others continued it. Ibn Janāḥ in Kitab al-Luma‘ compares biblical Hebrew to mishnaic 28 times, and in Kitab al-Uṣāq 307 times. Needless to say, it never occurred to these grammarians to describe the Hebrew used in post-mishnaic texts, such as pijyyutim. They neither listed its forms nor explained its words. They did not even deal with the Hebrew used in the writings of the Spanish poets who were their contemporaries. Only infrequently did they cite a verse of poetry and then it was not because they were interested in a practical description of its language, but rather to criticize or invalidate it, or to endorse it in accordance with usage found (whether frequently or rarely) in the Bible, or according to the virtually possible use of biblical language. There were some who were very severe in these roundabout judgments (such as Moses ibn Ezra and Abraham ibn Ezra), and others who were lenient (Ibn Janāḥ). The dichotomy between biblical and post-biblical Hebrew was absolute in the grammars and dictionaries. However, in works of poetics, illustrative examples were cited from both biblical and post-biblical poetry. Saadiah Gaon in Agron likewise cites the payyanim of Palestine for illustration, and Moses ibn Ezra quotes the poets of Spain in Kitab al-Muhaddara wa-l-Mudhakara. Because of this dichotomy, as time passed special dictionaries were compiled for post-biblical varieties of Hebrew: Rav Hai Gaon compiled towards the end of the first millennium his Kitab al-Hawi, an anagrammatic dictionary covering the Bible and the entire post-biblical Hebrew and Aramaic literature up to his time. *Nathan b. Jehiel wrote Arukh, a dictionary covering the Talmuds and the Midrashim, at the beginning of the 12th century, while in the middle of the 13th century, Tanhum Yerushalmi wrote Al-Mursid al-Kaft (mentioned above), an extensive work in Arabic for the Hebrew of the Mishneh Torah of Maimonides, which of course includes most of the vocabulary of mishnaic Hebrew. In 1541 Elijah Levita wrote Tishbi, which is, as mentioned above, a partial dictionary for the Hebrew of the Talmud and post-talmudic literature. Also extant are 15th- and 16th-century Yemenite dictionaries for Maimonides’ Mishneh Torah, based also on his commentary to the Mishnah.

Comparison with Aramaic and Arabic

Comparison as a Means to a Better Understanding of Hebrew. From the very beginning of linguistic literature the authors compared Hebrew to Aramaic and Arabic, as a means to their main goal, the clarification of biblical Hebrew. Their explanation for this was as follows: Hebrew is the oldest of languages; in Genesis 11:1 it is called “one language and one speech,” being “the language which Adam laid down.” The three languages were “one language” at their source, and even after they separated from one another, Hebrew remained the “principal one,” the others being “derivative” languages. In any event, because of the common origin and because of the geographical closeness of their first users, there is a high degree of affinity between them from borrowing, as well as from source. Although Arabic continued in all its richness and to a large extent so did Aramaic, Hebrew was for the most part forgotten. Hebrew linguistics was therefore likely to be aided by these two languages in solving difficult problems in the investigation of biblical language, such as the explanation of
certain place-names in the Bible, hapax legomena, and rare forms. The resultant comparative linguistic studies chiefly involved vocabulary, and sometimes grammar as well. A similar explanation is already found early in linguistic literature, as for example, in the Risāla of Ibn Quraysh.

**Comparison with Aramaic.** Everyone agreed on the necessity for the comparison to Aramaic, Alflāsī and Menahem even including biblical Aramaic in their dictionaries. At the beginning of the 11th century Abū al-Faraj devoted the eighth chapter of his al-Mushtamīl to the grammatical comparison between Hebrew and biblical Aramaic, while Ibn Janāh compares Hebrew to Aramaic ten times in Kitāb al-Luma’ and 266 times in Kitāb al-Uṣūl. Moses b. Isaac (middle of the 13th century) added a lexicon of biblical Aramaic to the third part of his Sefer ha-Shoham, and in 5331 Elijah Levi wrote Meturgeman, a dictionary for the Aramaic in the Targumim of the Bible.

**Comparison with Arabic.** Comparison with Arabic was also instituted at the start of linguistic literature. Whereas the authors of the tenth century – Dunash ibn Tamim, Alflāsī, and Dunash b. Labrat – dealt with comparison in the area of vocabulary, Ibn Quraysh also used it somewhat for grammar. However, Menahem and his disciples were opposed to such comparisons. Dunash b. Labrat felt compelled to compile a list of 167 Hebrew words “whose solution is their meaning in Arabic,” in order to prove to him the necessity of comparison with Arabic, and to “accuse” Menahem of having himself followed the system of such comparison when he used in his definitions the term דלשת (”as its sound”) which was understood by Dunash “as its meaning in Arabic.” Yet this opposition continued, so that Ibn Janāh, who compares Hebrew to Arabic 56 times in Kitāb al-Luma’ and 254 times in Kitāb al-Uṣūl, was obliged (in the introduction to the former work) to explain the nature of the comparison between the two languages in an apologetic tone. However, despite the opposition, the comparison between the two languages, which reached its peak in Ibn Barūn’s Kitāb al-Mawāzana bayn al-Lugha al-Ibrāniyya wal-Lugha al-‘Arabiyya, became an important methodological tool in Hebrew linguistics. The topic of linguistic comparisons has been thoroughly studied by Maman (2004; see section 12 under Authors and Their Works below).

**General Works.** There are two main types of works in linguistic literature: the grammar and the dictionary. This division was already developed by Saadia Gaon: Agron is the first attempt known to us of a prototype of a dictionary, while Kutub al-Lugha is the first grammar of which we know. Yet the clear delimitation of the areas of grammar and lexicography was a slow process, which ended only in the 1040s with the Kitāb al-Tanqīh of Ibn Janāh. Prior to Kitāb al-Tanqīh general linguistic works were usually written without any differentiation of categories whatever. One work of this type is that of Abū al-Faraj, the greatest Karaites grammarian, written at the beginning of the 11th century in Jerusalem. The author gave it the interesting title: Kitāb al-Mushtamīl ‘alā al-Uṣūl wa al-Fuṣūl fi al-Lugha al-Ibrāniyya (“The Comprehensive Book of the Roots and Branches, i.e., of the General and Particular Principles, of the Hebrew Language”). It is mentioned by Ibn Janāh, who was his junior, as well as by Ibn Ba’am, Moses ibn Ezra, and Abraham ibn Ezra. It is quite an extensive work, its largest manuscript covering 579 pages, and is divided as follows: Part I is on the ten principles (uṣūl) which can be applied to any word whose form needs to be established; Part II, with 18 chapters, deals with in infinitives; Part III deals with the letters of the alphabet and their division into basic letters (jawhariyya) and servile letters (khawādim); Part IV deals with particles; Part V, containing 16 chapters, is a potpourri of grammatical issues (such as gender, number, relation (nisba), conjunctive pronouns, the transitive and intransitive verb, and so on), lexicological matters (such as synonyms and homonyms), and other points; Part VI deals with the conjugation of the verb h-l-kh; Part VII is a lexicographical section, in which verbs of at least three radicals are arranged according to the anagram system; and Part VIII is a comparison of Hebrew and biblical Aramaic. The first general dictionaries (the Al-Agron of Alflāsī and Mahberet of Menahem) are to some degree also comprehensive linguistic works, discussing grammatical issues both in introductions (and with Alflāsī also in prefaces to the sections) and within the entries themselves in the form of digressions. Both in the “criticisms” of Dunash and the “replies” of the pupils, grammatical issues are raised along with lexicographical matters. In his introduction to his “criticism” Dunash set out concisely and by chapter titles, a programmatic plan for the benefit of authors of mahbarot. Among the “replies” of the pupils of Menahem one finds the “long objection,” the first (polemical) discussion of the rules of meter for the poetry of Spain. Hence it is in Jonah ibn Janāḥ’s Kitāb al-Tanqīh that grammar and lexicography are first delimited. In Kitāb al-Luma’ (grammar) the author refers to his dictionary 33 times and in Kitāb al-Uṣūl (dictionary) he refers 146 times to his grammar, thus clearly dividing the two main fields of linguistics.

**Lexicography.**

**The arrangement of the dictionaries.** The division of the letters of the alphabet into base letters and supplemental letters, first found in the writings of Saadia Gaon, is used by the early authors in the arrangement of their dictionaries. In the first part of Agron, the words are listed in the alphabetical order of their first two base letters, but those words which are written with sin in the Bible are listed there under samekh. Saadia Gaon is also inconsistent when the second letter is waw or yod, and does not bother at all about the alphabetical order of the letters which follow the second letter. It is in his writings too that we first find the combination of incompatible consonants, listed in the Agron under such entries as נל, צל, and treated as “non-existent”; in the second part of the Agron the words are arranged in alphabetical order according to their final letters. These two arrangements were supposed...
to serve the purpose for which the Agron was written; the first was to supply the paytanim with a list of words for acrostics, while the second was for rhymes. No other Hebrew dictionary is known in which the entries are arranged alphabetically according to the final letter; in others the conventional arrangement by the initial letter predominates. This is the way the words are listed in the Risāla of Ibn Quraysh, and in the first general dictionaries: Al-Agron of Alfāsī and Mahberet of Menahem: with Kitāb al-Uṣāl of Ibn Janāh this order became the regular one for arranging dictionaries. There were a few attempts to arrange the entries in the order of an anagram, as in the seventh chapter of al-Mushtamil of Abū al-Faraj, which deals only with tri-radical roots and quadri-radical roots derived from them. There the dictionary entries are divided into groups. The following are found in the extant remnant of the letter ‘ayin: with nun, yod, and supplemental letters. The former are those which remain in all the derivatives of a particular group of words. There are six permutations theoretically possible for every entry of three radicals (321; 231; 312; 132; 213; 123). From the six possible roots only those actually found in the Bible are listed. Under דער (321) all other possible permutations of the roots are listed, namely: דער דער (312), דער דער (312), דער דער (132), דער דער (213), דער דער (123). The roots found in other entries are cited in this arrangement. The entries with the roots in the section involving the letter ‘ayin are displayed in the table Entries with Roots Involving the Letter ‘ayin.

The Kitāb al-Hāwī of Hai Gaon is likewise arranged in this manner (see bibliography in section 13 under Authors and Their Works below). Most of the dictionaries, however, as mentioned above, were arranged alphabetically according to the initial letter. Even the Al-Agron of Alfāsī and the Mahberet of Menahem were already organized this way, though they are not consistent in detail. Each consists of an introduction and twenty-two sections, corresponding to the initial letters of the entries. In Al-Agron each section – except the sixth, which deals with way – is divided into chapters following the order of the second letter of the entry. Although in theory each section should be divided into 22 chapters, actually this occurs for only three letters: nun, yod, and sin; for example, (1) דק (2) ב… (22) ה. The other sections are incomplete because Alfāsī does not include incompatible combinations as chapters. Each chapter opens with a list of the names of the entries to be discussed, with illustrative Bible passages, followed by the actual entries. In Menahem’s work each of the 22 sections (each called a mahberet) is divided into entries, which are listed at the beginning. In the printed version the uniliteral (one-letter) words of each mahberet are given, at the beginning, the other entries following in the alphabetical order of their second letters. Entries of more than two letters are alphabetized according to their third letters, and so on. It is not known, though, if the Mahberet of Menahem was originally arranged in this way (cf. Kaufmann ZDMG (1886)). Kitāb al-Uṣāl is the first dictionary in which alphabetical order is followed in careful detail. It is also divided into twenty-two sections (maqālāt – “essays”) according to the initial letters of the entries. The order of the entries within the maqāla is as follows: At the beginning of the maqāla the entries whose first two letters are identical are listed; e.g., the fourth “essay,” on the letter dalet, begins with the entry of double dalet, i.e., דד (Prov. 5:19), then the entries follow in alphabetical order – דד, דד and so on. So, too, each time the second letter of the entry changes within the maqāla, for example: bet and dalet (בד, bet and double dalet (בד, bet, and dalet, and alef (בד) and so on. In the introduction to Kitāb al-Uṣāl Ibn Janāh also informs us that if the first two letters are identical (such as בבר, בבר), he did not consider the second letter; thus בבר is not found after בבר, but between בבר and בבר. The works of Hayyūj include a lexicon of the weak verbs arranged according to the gezarot (conjunctives). All the weak verbs are listed as tri-radicals and arranged alphabetically according to the three letters. Moses b. Isaac used the same method in Sefer ha-Shoham, which consists of three parts: the third part, called alfa beta, is a dictionary in which all the words are listed according to morphological categories. First come the verbs, classified according to conjugations: sound, prima yod, prima nun, the hidden medial waw, final he, assimilated initial and final radical, geminate, and quadri-radical verbs. Within each conjugation the verbs are arranged alphabetically. The last part is a dictionary of nouns, which are likewise arranged according to the various patterns, and listed alphabetically according to their roots. It was only in the second half of the 13th century that Abraham b. Isaac Bedersi wrote Hotam Tōkhmit, the first dictionary of synonyms for biblical Hebrew, including 360 groups of synonyms arranged alphabetically according to the words of the entry. Each group contains verbs, nouns, and particles. Bedersi’s lexical and exegetical sources are: Parhon, Ibn Ezra, Ibn Janāh, Hayyūj, Dunash and Menahem. He also mentions the first part of the Moreh Nevukhim of Maimonides. In 1480, Solomon b. Abraham of Urbino wrote the second dictionary of synonyms, Ohel Mōcd, in which he merely enumerates the synonyms in each entry and adds biblical references, only rarely adding the definition.

The Dictionary Entry. In the early dictionaries (e.g., by Alfāsī and Menahem) there are entries of one, two, three letters, and so on. This is based on a differentiation between base and supplemental letters. The former are those which remain in all occurrences of the form, in all declensions of the words and in all the derivatives of a particular group of words. There
are 14 single-letter entries in the work of Alfāsi, and 20 in that of Menahem, who lists them early in the text of the mahbarot as individual entries, whereas Alfāsi enumerates them briefly in the general introduction and deals with them in detail in the introductions to the sections. In the Mahberet about 20% of the entries are of two letters, and 65% are of three letters. There are no major differences between him and Alfāsi on this issue. The internal arrangement of the entries is still neither uniform nor permanent, while both authors enumerate the meanings of the words included in each entry. Menahem divides a third of all the entries into secondary semantic groups (“sections” or “issues”); 64% of all the two-letter entries contain two or more “sections,” while of all the three-letter entries only 30% have two or more “sections.” The high percentage of two-letter entries with several “sections” is to be explained by Menahem’s concept of the dictionary entry, for he included in those two-letter entries words that have weak consonants, which, according to Hayyūy and Ibn Janāh, would come under different entries. After Hayyūy, Spanish lexicographers no longer maintained single-letter entries. Under two-letter entries they listed only particles, pronouns, and bi-radical nouns from which no verbs are derived. Hence, as the number of two-letter entries declined sharply, the number of three-letter entries increased, becoming the largest section of the dictionary. This pattern was finally fixed in Kitāb al-USāl. In the East, scholars continued to list unradical entries and used a great many bi-radical entries in the many condensations made from the al-Agron of Alfāsi. In the Christian countries the Mahberet of Menahem was the only pattern for compiling dictionaries until the third quarter of the 12th century. Thus Nathan b. Jehiel wrote Arukh at the start of the 12th century according to the pattern of the Mahberet; and Menahem b. Solomon wrote his Even Boḥan (1143) in the same way. Even in the first half of the 13th century a dictionary was written in German according to this pattern by a certain Samson. There is a finished system for the internal arrangement of a dictionary entry in Kitāb al-Usṭghnaʿ of Samuel ha-Nagid, as may be seen from the two complete entries that we have (yunak, ṣano). The entry consists of three parts: The first includes the various meanings of the root in a systematic order, accompanied by examples. The second part gives explanations drawn from the literature of earlier exegetes and grammarians, some of them quoted by name. The third part gives a detailed inventory (the entry ṣano borders on a concordance list) of the grammatical forms derived from the root under discussion, beginning with the verb forms and followed by the nominal forms. Ibn Janāh discusses the internal arrangement of entries at the end of his introduction to Kitāb al-USāl. In general, at the start of an entry he lists the meaning which he considers the main one and then gives its derivative forms in which this meaning is found. He defines the citations grammatically with the aid of terms derived from the root ṣan. For the verb he notes conjugation, tense, and so on, and for the noun its pattern, status, gender, and number. After listing the other meanings, he draws attention to the degree of relation between the various meanings of the entry, for which he uses fixed terms. Not intending to make an exhaustive list of the forms, he offers a small selection of illustrations which are to suffice for the explanation of the meanings of the root and for an understanding of the forms derived from it. He does not, however, discuss grammatical issues extensively, but instead refers the reader to Kitāb al-Lūmā and to his other works. He is very brief with weak roots since he does not intend to repeat the statements of Hayyūy or those statements already made in his Kitāb al-Mustalḥaq, but he does treat in detail sound roots, particles, nouns from which no verbs are derived, nouns of size and weight, plants and animals. Thus in the work of Ibn Janāh a balance is created within the entry between the semantic definition of the root and the grammatical definition of the forms derived from it.

Grammatical Works

KUTUB AL-LUGHĀ BA SAADIAH GAON. The first grammar extant, though not in its entirety, is Kutiṭ al-Lughā of Saadiah Gaon. Six of its 12 parts, containing 63 pages, have been published, and the content of a further four is known. The first part, devoted to the letters, apparently discussed their division according to the organs of speech (laryngeals, palatals, linguals, dental, and labials), their division into the radical and servile letters, and the precluded combinations of letters (to, sh, ṣ, ṣ, m, etc.). The second part, al-Tafkhīm wa al-Ikhtīṣār (“Augmentation and Contraction”) deals with two topics. It opens with pairs of words each of which virtually shares one meaning, and compares the two in each case – e.g., ʿalakām (Isa. 44:26), which is an expansion of ʿalākta (Amos 9:11). This expansion is of a special type, the augmented word having two adjacent occurrences of the same letter, instead of the single occurrence in the contrasting form. Also surveyed are pairs of words in which there are, respectively, one and two adjacent occurrences of the same combination of letters, such as ṣeṣṭaḥ (Prov. 4:8), in contrast to ṣeṣṭaḥ (Isa. 57:14). Here, too, one word is an augmented form of the other. The second subject treated in this section is contraction. As forms in which contraction does not occur he mentions nouns in which the initial letter is ḫ, ḥ, l, m, n, p, t (such as ṭob, ṭob, ṭob, ṭob, ṭob, ṭob), while the forms which do show contraction are those derived from these basic forms, but lacking the initial letters (such as ṭob (Judg. 20:6), ṭob, ṭob, ṭob, ṭob, ṭob). Other pairs of words are listed there, such as ʿalīy (1 Chron. 12:39) in which there is contraction as opposed to ʿalīy in which there is no contraction. The third part, al-Taṣrīf (“Inflection”), begins with a tripartite division of the parts of speech – noun, verb, particle – and with their definitions as accepted in Arabic grammar. Inflection for Saadiah Gaon is the faculty of a word: to occur with the servile letters; to occur with the ten possessors; and to have “tense” apply to it. He classifies the parts of speech according to their capacity for inflection as defined above, and calculates the number of forms which can theoretically be fixed at each level of classification and for each part of speech. For example, for the verb he calculated that there are 48 forms of
simple inflection (without objective pronominal suffixes) and another 368 forms of compound inflection (with the objective pronominal suffixes) — 416 forms in all. The section closes with a table of forms for the inflection of the verb, followed by examples of forms of the verb from the Bible. The fourth part, 
(al-Tasālīl wa al-Irkha ("Dages and Rafēh"), deals with the ability of the letters to occur with the ḏagēs or without it, treating the subject according to the various forms of inflection. The fifth part, al-Qawl fi al-Nagham ("The Vowels"), begins with assumptions — in his opinion, universal — concerning the phonetic structure of the word, and deals with the articulation of the vowels, surveying those which can occur together in one word containing two vowels. Also discussed in this section are the changes which occur in the vowels of a word when the concepts of plural, construct state, tense, and pause apply to it. The sixth part, al-Juzm ("The Šewā’"), deals with two types of Šewā’: sakina (quiescent) and mutaharraka (vocal), the different qualities of the latter being described. The seventh part is called al-Abruwa wa- s, ḥ, ḏ, ("the non-laryngeals and the laryngeals"), while the eighth is called ḡ, ḥ, ḏ, ḫ ("the laryngeals"). The two sections deal with two aspects of the same topic — the changes which are peculiar to the vocalization of the laryngeals, and the changes in vocalization which take place in the immediate context of laryngeals. He lists 50 changes in all. In the ninth part, al-Zawāʾid wa al-Lawāḥiq ("Added Consonants and Expletives"), Saadia Gaon deals with other types of additions, which are not instances of tafkhīm ("augmentation") in principle; yet in fact this section contains matters already discussed in the second part of the work. The interchangeable letters are dealt with in the tenth part. The pattern which Saadia Gaon set down for Hebrew grammar is characteristically pioneering work, but it was not accepted by his successors; his ideas were only in part repeated in the works of later grammarians; yet two of them became the foundation of Hebrew linguistics. His division of the letters into base and supplemental became the basic assumption for the arrangement of the first dictionaries, and his division of words into three types — noun, verb, particle — with his definitions of them, became the very foundation for all grammatical discussion of the work. In particular his statements about letters, vowels, the Šewā’, and the phonetic structure of the word were influential. However, the method by which he described the grammar of the word was too simplistic and too primitive. Most of the material which Saadia Gaon collected in the second part as occurrences of augmentation was to be treated, beginning with Ḥayyūj, in chapters concerning the inflection of medial waw verbs, geminate verbs and quadrilaterals. Most of the occurrences of contraction cited there are treated, beginning with Ḥayyūj, under the inflection of prima ‘alef, prima yod, and final he verbs. However, even in the grammar of the word the grammarians accepted some of his basic suppositions: for example, that when confronted by a great number of different occurrences in the text, the grammarian must differentiate and describe the relations between uṣūl (basic forms) and fūrū’ (secondary forms which he can represent as branching out from the first), and also describe the relations between the various basic forms. This differentiation is the starting point for all grammatical description. Ḥayyūj and Ibn Janāh applied it to all items of grammar.

WORKS OF ḤAYYŪJ ON WEAK AND GEMINATIVE VERBS. Monographs written on decided grammatical subjects are the works of Ḥayyūj, above all his two works on weak and geminative verbs. In these works Ḥayyūj formulated the rule that every Hebrew verbal root consists of at least three letters. This is based upon the concept which Ḥayyūj had, following the Arab grammarians, concerning the phonetic structure of the word. According to this concept a word consists of letters which cannot be uttered except as accompanied by one of the vowels; a word cannot consist of one consonant, but must be always of two at least, the one which begins the word being always accompanied by a vowel (and hence a mobile letter), while the letter which closes it (a quiescent letter) is never accompanied by a vowel. Between the opening mobile consonant and the concluding quiescent consonant, a mobile letter or letters or even a quiescent consonant or consonants can occur. In any event, two quiescent consonants will not occur successively unless preceded by a mobile letter. (According to this concept, a word such as דנק contains two quiescent letters, the yod and the second dalet, preceded by the mobile letter.) This concept opened the way for the classification of the letters according to their mobility or quiescence, which Ḥayyūj formulated as follows. All letters of the alphabet can occur in mobile or quiescent form. However, with regard to quiescence there is a difference between (י)ק, ן, ʿ, and all the other letters, which are “visible” when they are quiescent, that is, both written and pronounced. In contrast to them (י)ק, ן, ʿ can at times be “hidden”: though found in the structure of the word, they are not realized in its pronunciation and sometimes not even in its written form. Thus in the word בְּקַמ ל (Hos. 10: 14), the ‘alef is quiescent, hidden in the pronunciation but visible in the writing; in the word בַּקֵל this ‘alef is equally quiescent, but hidden both in pronunciation and in writing. So too, a word such as בְּמַעֲרָה (Ezek. 41: 15) ends with a quiescent ‘alef hidden in pronunciation but visible in the writing, while the word בְּלַעֲר ends with a quiescent ‘alef hidden both in pronunciation and writing. These two assumptions — that every root consists of at least three radicals and that the letters (י)ק, ן, ʿ, are distinctive with regard to their quiescence — formed a descriptive framework for the discussion of the roots that include one of these four letters. These roots, like all those in the language, consist (according to the very definition of the concept “root”) of three radicals. In the actual verb forms derived from these roots, one finds that these letters occur in mobile or in “visibly” quiescent form (as do all the other letters in the language). However, they sometimes occur as hidden quiescent letters or, more precisely, are hidden in the pronunciation but visible in the writing, as with the yod in בַּנַּב, and at times they occur hidden both in pronunciation and orthography, as does the initial yod of the root in the word בַּנַּב. The grammarians who preceded Ḥayyūj,
comparing a form such as יֵשִׁבָא with a form like יֵשּׁ ת, and seeing that the יֹד, present in the first word, is missing from the second form, concluded that in these words, too, the יֹד is not a root letter, and accordingly fixed the root as a bi-radical: יֵשָא. Hayyyūj, according to his suppositions, analyzed the case differently: The root always consists of at least three letters, in this case יֵשָא. The absence of the יֹד in the form does not mean that it cannot be considered a root letter. It is simply missing from some of the actual forms derived from this root, and compensation needs to be made for its absence. This compensation he finds, for example, in “elongation” (madd), as in the case of the šere under the law in יֵשָא. Hayyyūj assumes, therefore, the existence of hypothetical tri-radical roots and a complete table of conjugations of basic forms (astīyyat), in which there are no missing letters. He establishes the base forms by analogy with the parallel forms of all the “sound” verbs which include the four letters under discussion:

\[ \text{יֵשָא} / \text{יֵשִׁבָא} = \frac{יֵשִׁבָא}{יֵשָא} \]

These base forms either do not occur in the biblical text, or occur in it as exceptional forms from which one can neither draw analogies nor derive rules. Yet only in relation to these hypothetical base forms can one describe the actual forms. Hayyyūj seeks to explain the difference between the actual form יֵשָא (and the hypothetical form יֵשִׁבָא) which is adduced by analogy with the basic form יֵשָא (astīyyat), by a certain number of devices, such as: (1) the deficiency and its compensation; (2) the substitution of one letter for another; (3) assimilation and the gmination which follows it. In the actual description concepts were created: the first, the medial, and the final radical of the root, respectively. Following the convention of the Arab grammarians, these concepts were denoted by reference to the three letters of the root יֵשָא, as follows: the letter which occupies the position of the pe, the ‘ayin, and the lamed. If all four of the weak letters occurred in all three positions of the root as hidden quiescents, Hayyyūj would have to deal with 12 groups of roots. However, he considers that there are only four groups of verbs whose roots contain weak letters, namely:

1) the prima ‘alef
2) the prima יֹד
3) verbs with a medial weak radical
4) verbs whose final radical is weak.

These are in effect the four chapters of the first work of Hayyyūj: Kitāb al-Af‘al Dhwāt Ḥurūf al-Lin. Defective forms also occur for verbs whose roots contain identical second and third radicals; these are dealt with in the second work of Hayyyūj: Kitāb al-Af‘al Dhwāt al-Mithla‘ān. Having established a theoretical framework to deal with the derivation and conjugation of the weak verbs, Hayyyūj goes on to explain why analogy does not apply to the verbs whose roots contain weak letters. He bases his explanation on the postulate that in Hebrew there is difficulty in pronouncing the (ך)ך, ʾ, ʼ, quiescently and therefore these letters were “hidden,” that is, not pronounced. He also included a dictionary of weak verbs, classified according to the groups mentioned above. For every root he listed the derivative verb forms, in each instance explaining the actual forms which, according to his suppositions, differed from the analogous base form.

**The Kitāb al-Lūmā of Ibn Janāh.** The most profound and comprehensive grammar is Kitāb al-Lūmā’ by Ibn Janāh. According to the author, this work constitutes a whole only together with the two above-mentioned works of Hayyyūj, and with his own smaller works. For the subjects of the 45 (46) chapters, see *ʾIbn Janāh. It is possible to get some idea of the scope of the work by classifying its chapters according to the pattern of traditional grammar accepted today. The work begins with the division of parts of speech, with which his predecessors had already dealt, but he improves the definitions of Saadia Gaon and their logical foundation. The different types of expressions are also classified in this chapter. Matters of pronunciation are considered in 13 chapters: a discussion of the letters, each one’s place of articulation, and its position in the word, whether as base or supplemental letter. The meanings of the supplemental letters are given the most detailed discussion of this topic extant. Interchange of letters is also treated, as well as assimilation, the marking with a dagesh, and the mappiq he of the third person feminine pronominal suffix. Vocalization, too, is discussed: interchange of vowels, the changes which occur in vocalization because of the laryngeals, the vocalization of the conjunctive waw (including waw conver- sive), and of the interrogative he. This concludes the issues of pronunciation. The grammar of the word – derivation and accidence – is treated in 13 chapters; the formation of the word, i.e., the derivation and the accidence of the verb and the noun, is treated in a unit which runs for five chapters. Pronominal suffixes, relation (nisba), plural and dual forms, determination and indefiniteness, genders and numbers, are also discussed. The other chapters of the work deal with topics which are today included under syntax and rhetoric. Seven chapters are devoted to syntactical topics, including apposition, government of the verb, the construct case, and agreement in gender. Five chapters cover rhetoric: ellipsis, pleonasm, repetition, inverse order – forward or backward. Five of the six remaining chapters discuss classified groups of exceptional occurrences which the grammarian cannot include under any of the rules which he fixed or formulated. Therefore he uses an operative device called taqādīr (surmise), by means of which he expresses the intention of the written form, thus removing the exceptional character of the occurrences, so that they fall under one of the rules which he has established. Finally, in chapter 34 (35), he deals with all the linguistic means for expressing the question, that cannot be included in any of the accepted linguistic divisions. This attempt to present the subjects of the work according to the main topics of accepted grammatical thought does, indeed, give some idea of the scope of the grammatical study of Ibn Janāh, but it is likely to distort his division of the material and the methodological principles underlying it. Ibn Janāh did not divide grammar into the accepted sections of today,
such as phonology, morphology, and syntax. We have seen that in chapter 34 (35) he deals with all the means (letter, particle, word) to express various types of questions. This is the way he treats other matters too, such as “compensation” (badal), which he treats in a unit of successive chapters: interchange of letters in chapter 6 (7), interchange of vowels in chapter 7 (8), and apposition in chapter 8 (9). From this point of view chapter 31 (32), dealing with changes in order, is interesting. It begins with a change in the order of the letters within a word (ןしば–(driver)), proceeds to deal with verbs in which the order of the weak letter changes (יתַננה–inseam), and ends with a change in the order of the words, such as (Ps. 104:6), which means (he claims) לְעַל מִמְּסָרָה a man.

THE GRAMMATICAL WORKS OF PERIOD III. The aim of the grammatical works written in period III (1150–1250) was to express in a concise Hebrew version the contents of the works of Hayyûj and Ibn Janâh. Adaptations made in the West include the works of Abraham ibn Ezra, Parhon, and the Kimhî; and in the East, the works of Isaac ha-Levi b. Eleazar: Sefat Yeter and Rikmah. There are only meager innovations of principle in these works; rather, they attempt to consolidate a permanent framework for the discussion of grammatical issues. Hence they emphasize the mechanical and paradigmatic aspects of the grammar of the word.

Sefer Zahot by Abraham ibn Ezra. This tendency is already noticeable in Sefer Zahot of Abraham ibn Ezra (1145), whose contents are as follows: Chapter 1 deals with the vowels, the śewa‘, nominal patterns and poetic meter, which are based upon the vowels and the śewa‘. Chapter 2 deals at length with the letters: their names, forms, pronunciation, and use. There follow several chapters on parts of speech: the particles, the noun (including the numerals), and the verb. The author deals extensively with the bi-radical verbs and the conjugations (binyanim). After a short digression in which he discusses words composed of two words or two forms, he deals with quadriradical verbs. At the end of the work there is a short discussion of exceptional forms from the Bible. The main methodological innovation which Abraham ibn Ezra made in Sefer Zahot as compared with Kitâb al-Luma‘ is the discussion of poetic meters; other authors followed in his footsteps, especially in period IV.

Sefer Zikkaron by Joseph Kimhi. This work, divided in two parts, resembles Sefer Zahot in its scope. The order of the discussion in the first part is as follows: the letters according to their pronunciation and use, the formative letters at the beginnings and ends of words, the grammatical categories of the verb, the assimilated letters, the vowels, parts of speech, nominal patterns, and numerals. The second part begins with a discussion about fixing the root, proceeds with the regular verb according to its conjugations (binyanim), and comments upon special forms of binyanim and compound forms, the prima yod, quiescent verbs, verbs with assimilated prima yod, prima nun, verbs with medial waw, medial yod and final he, verbs with assimilated ends, and geminate verbs. The chapter concerning the vowels in Sefer Zikkaron (ed. Bacher (1888), 17–19) is most interesting. Joseph Kimhi determines that the number of vowels in Hebrew (in addition to the śewa‘) is ten: five long and five short. For each vowel there is a corresponding short vowel: for games gadol (י) the pattah gadol (י) is the corresponding short vowel; the correspondent for ser (י) is segol or pattah qatan (י); for holém (י) the correspondent is games hataf (י.e., games qatan (י)); the correspondent to šuruq with waw (י) is šuruq without waw, a vowel whose name is qibbus sefatayim (י); and the correspondent of hireq with yod (י) yod is hireq without yod (י). Joseph Kimhi stated that “with regard to the manner of recitation” the long vowels are treated with "pause and delay" while for the short vowels “you should always be speedy in their reading.” In spite of that the long vowels are not lengthened if the stress of the word is near them. That means that the games of -š is not lengthened except in the last of the following three examples: בַּיָּשָׁן, בַּיָּשָׁן, בַּיָּשָׁן. In any event, if a letter vocalized with a śewa‘ follows the long vowel, then the long vowel is lengthened. Thus there would be a lengthening of the śewa‘ in the word בַּיָּשָׁן, but not in the word בַּיָּשָׁן. The short vowels themselves are not short when they precede a mobile laryngeal, such as in the word בַּיָּשָׁן. By this system there is no difference in pronunciation between בַּיָּשָׁן (the imperative) and בַּיָּשָׁן (the perfect). The scholars of the second half of the 19th century considered this theory to be an essential innovation in comparison with the theory of the seven kings (vowels) as found in the masorah literature and in that of the grammarians who preceded Joseph Kimhi. Instead of the theory of the seven kings, which seemed to them to be basically a system of qualities only, the theory of Joseph Kimhi appeared to be a system consisting of ten vowels which are distinguished from each other by five qualitative contrasts (i, e, a, o, u) and by a contrast in quantity (long-short). They also felt that besides deviating from that of the seven kings, the theory of Joseph Kimhi is rather forced with regard to the Sephardi pronunciation in the Torah reading. Doubts have been expressed concerning this accepted idea; see Ben-David (Leshonenu, 1958). Popularized by Kimhi’s sons in their works, this vowel theory and division was accepted by most of the grammarians of period IV, and is found in Hebrew textbooks to this day.

Mahalakh Shevilei ha-Da‘at by Moses Kimhi. An important step toward the consolidation of a firm systematic framework for the practical discussion of the grammar of the word was taken in Mahalakh Shevilei ha-Da‘at by Moses Kimhi. This short work discusses mainly the definitions, the conjugation tables, citing a few examples. The order is as follows: 1. parts of speech, the grammatical categories of the verb, the letters, rules of the dagêš qal, the stress, the vowels, and the śewa‘; 2. the types of nouns, the patterns and their declensions; 3. the conjugation of the verb according to the binyanim; the weak verbs: prima nun, prima ’ilef, prima yod, medial waw, final ’ilef, final he, geminate and quadri-radical verbs; verbal suf-
fixes; other rules about pronominal suffixes. In the main part of the work – the formation of the verb – the paradigmatic system is especially prominent. The book gained wide distribution because of its practical nature, being used especially by Christians for the study of Hebrew. Elijah Levi added a commentary, Sebastian Muenster translated it into Latin, and it was printed many times.

Mikhlol by David Kimhi. The climax of the attempts to systemize the discussion of the grammar of the word and to fix the study of the verb at its center is Mikhlol of David Kimhi. The work begins with the division of the parts of speech, and correspondingly consists of three parts: Sha’ar Dikduk ha-Pé’alim (“The Chapter on Verbs,” covering 66% of the work), Sha’ar Dikduk ha-Shemot (“The Chapter on Nouns” – 30% of the work) and the chapter dealing with particles, which covers only 4%. The subjects discussed include: 32 forms of conjugation of the basic verb stem, the qal; transitive and intransitive verbs; the formation of the binyanim and their meanings; conjugation tables of the verb in qal with the objective prenominal suffixes; a digression concerning the servile letters and their meanings, and an appendix on the omission of letters and other kinds of ellipsis; and the forms of conjugation of the other binyanim. Between the conjugations of the binyanim there are digressions concerning exceptional forms of conjugation. The weak verbs appear according to their forms and are listed alphabetically after the manner of Ḥayyyūṯ: first verbs whose initial letters are assimilated (prima yod, prima lamed, prima nun), preceded by a discussion of assimilation. Then follow the weak verbs, preceded by a discussion of the special rules for the weak letters. The section on the verb concludes with the quadriliteral and quinqueliteral verbs. The section on the noun covers vocalization (vowels, ṣewāʿ), types of nouns, nominal patterns classified according to morphological groups: regular nouns; weak nouns. Under the regular noun are listed the simple patterns, followed by patterns with a suffix and those with a prefix. The declension of each nominal pattern is discussed. The weak patterns occur in the following order: initial defective; initial, medial, and final quiescent; both defective initial and quiescent final; final ‘alef; quiescent initial and final; geminate nouns: and quadriliteral and quinqueliteral nouns. The section dealing with the particles is arranged alphabetically.

Mā‘aseh Efod by Profiat Duran. Of all the works of the fourth period (from the middle of the 13th century until the beginning of the 16th century) the most important is Mā‘aseh Efod by Profiat Duran, written in 1403. The volume comprises a long introduction (including interesting data for the study of the history of education among the Jews), 32 chapters, and a further chapter as a supplement. The first five chapters deal with the “causaе” of the language in the terms of the accepted scheme of the Middle Ages following Aristotelian philosophy: chapter 1, the nature of language; chapter 2, its purpose; chapter 3, “the cause efficient”; chapter 4, its divisions (the three parts of speech); chapter 5, its elements (the letters, vowels and cantillation signs). Three other introductory chapters follow: on the organs of speech and the production of sounds; on the fate of Hebrew after it was “the most perfect of languages”; here he maintains that about 2,000 roots remain, some 1,000 of them being used for deriving verbs; and on the science of language, which according to his definition includes grammar, rhetoric, and poetics. The actual work begins with chapter 9, which deals with the grammatical categories that apply to the noun. Chapter 10 treats the infinitive, chapters 11 and 12 cover the grammatical categories that apply to the verb, while chapter 14, interchange of letters and of vowels; chapter 15, the binyanim of the verb; chapter 16, the qal; chapter 17, piʿel; chapter 18, hifʿil; chapter 19, pōel (intensive); chapter 20, nifʿal; chapter 21, hitpaʿel; chapter 22, those verbs “whose agents are not mentioned” (puʿal, hofʿal); chapter 23, forms compounded from various binyanim, and quadri-radical verbs; chapter 24, nominal patterns; chapter 25, the fixing of the roots of verbs, nouns, and particles; chapter 26, the pronouns; chapters 27–29, exceptions (ellipsis, additions, change of order) which Ibn Janāḥ had already discussed in Kitāb al-Lumaʿ; chapter 30, the particles; chapter 31, the letters paʿale ṣeḏeq; chapter 32, the pronunciation of the written word, and hence important testimony concerning the Sephardi pronunciation in the reading of the Torah; chapter 33 (supplement) explains why Hebrew was called “the holy language.” By virtue of its scope and its excessive fondness for theoretical discussion this work constitutes something of a revolt against the narrow pattern that David Kimhi established in the Mikhlol, which until then had ruled supreme in linguistic literature. Mā‘aseh Efod is on the one hand an attempt to return to the actual sources of linguistics (the works of Ibn Janāḥ and Ḥayyyūṯ), and on the other hand it is an attempt to base Hebrew grammar on the late-medieval scholastic philosophy of the Christian West. The grammar of Profiat Duran and the dictionary Ratukot Kesef of Joseph ibn Kaspi, who preceded him, were destined to move linguistic literature out of the standstill and barren stereotyped ways which had prevailed under the influence of Mikhlol of David Kimhi. Yet the influence of Mā‘aseh Efod was limited; in the 15th century the empiricism of Mikhlol was re-established.

Mikneh Avram by Abraham de Balmes. At the very end of period IV, in 1523, Mikneh Avram was published. Chapter 1 offers a definition of Hebrew grammar, and classifies the elements of language into two types: the simple elements (the letters and vowels) and the compound (the syllables, words, and compound statements). Chapters 2 and 3 deal with the simple elements. Chapter 2 discusses the letters, their number, respective names, written forms and places of articulation, their classification both in relation to themselves and in relation to the words made from them (the base and the servile letters, compensation for letters, similarity and differences between letters, the combinations of the letters, i.e., possible and impossible combinations); chapter 3 deals with vocalization, the number of the vowels, their form and pronunciation, the rules of vocalization, and compensation for vowels. Chap-
Kristers 4–6 deal with the grammar of the word. Chapter 4 begins with the classification of the parts of speech and deals with the grammar of the noun – the division of the nouns according to their meanings, and nominal patterns. Chapter 5 discusses verbs, their division into binyanim, their gezarot, and analysis. Chapter 6 deals with particles. Chapter 7, headed “Compositio et Regimen,” is the first attempt in the history of linguistic literature to describe the syntax of Hebrew in the operative terms of syntax as shaped by Latin linguistics. Chapter 8 deals with pronunciation, penultimate and ultimate stress, and the maqaf; and at the end there is an appendix by Kalonymus b. David on cantillation.

Through the arrangement of its discussions, this work constitutes the first attempt ever made – and not without success – to gather the grammatical teachings as they had crystallized in Hebrew linguistics under the influence of Arabic linguistics, side by side with the grammatical system which underlies the accepted description of Latin. It thus established a new tripartite pattern for the discussion of Hebrew grammar, comprising phonology, morphology, and syntax. In the chapter Compositio et Regimen de Balmes set up a new framework for the discussion of topics which had been scattered throughout previous works, such as the uses of the servile letter, pronunciation agreement of gender and number, and government of the verb. On the other hand, he deals systematically with new topics, such as the combination of nouns with verbs, combination of nouns with other nouns, the agreement of noun (subject) and verb (predicate), and combination with the aid of particles. Through the talent of his pen De Balmes brought the system of concepts of syntax into Hebrew linguistics. By virtue of its originality and innovations, Kitāb al-Lumaʿ was the most important work in linguistic literature since Kitāb al-Tanqīt. Since its structure deviates from the works discussed hitherto, this work opened up a new era in the history of this Hebrew literature.

THE STUDY OF LINGUISTIC LITERATURE

Fields of Activity
Research concerning linguistic literature has thus far concentrated upon three main activities: a. the publication of the works; b. discussion of the general course of development of this literature; c. discussion about the various authors, the course of their lives, their works, and their part in the development of Hebrew linguistics. A concise survey is given below.

Publication of the Works
This began soon after the invention of printing and has continued until today. Thus, for example, Arukh of Nathan b. Jehiel was one of the first Hebrew books published prior to 1480. Similarly, Nofet Zufim of Judah b. Jehiel, Messer Leon, was printed before 1480, in Mantua. Sefer ha-Shorashim of R. David Kimhi was published in Rome before 1480 as well. In 1492 the book Petah Devarai, whose authorship has not been established with certainty, was printed. In the first half of the 16th century this activity included not only the works of authors of that century (such as Elijah Levi, Abraham De Balmes and others), but also relatively old works: in 1508 Mahalakh Shevilei ha-Daʿat of Moses Kimhi was published, in 1511 Kizzur he-Arukh appeared in Cracow and in the years 1532/1534 Mikhol of David Kimhi was issued in Constantinople. The activity of Elijah Levi throughout the entire first half of the 16th century is especially striking. Not only did he publish his own works and his commentaries to the writings of the Kimhi brothers, but he also edited a collection of grammatical works which he published in 1546 under the title Dikdukim. Following his introduction, the volume includes these works: Mahalakh Shevilei ha-Daʿat by Moses Kimhi; Petah Devarai; Zahot and Moxnayim of Abraham ibn Ezra; Sefer Harkavah and Pirkei Eliyahu of Elijah Levi; and Marpe Lashon and Darkhei Noʿam of Moses b. Habib. From then till the end of the 18th century virtually none of the early works were published, except those of the Kimhi brothers and Abraham ibn Ezra; and when publication of the older works did resume the order in which they were issued was the opposite of that in which they were written: works produced in the 12th century were published before those of the tenth century and the Hebrew translations were published before their Arabic originals. Most of the works of Abraham ibn Ezra were published at the end of the 18th century and at the beginning of the 19th; Mahberet he-Arukh of Parhon was published in 1844, Mahberet of Menahem in 1854, and the Teshuvot of Dunash and the “decisions” of Jacob b. Meir Tam were printed a year later. Until 1844 not even one Hebrew translation of a work written originally in Arabic appeared in print. In 1844 Leopold Dukes published Abraham ibn Ezra’s translation of the works of Hayyūj, while the Arabic originals of Hayyūj were not printed until near the end of the century: Kitāb al-Tanqīt by Nutt (1870), his two main works by Jastrow (1897). In 1856 B. Goldberg published the Sefer ha-Rikmah of Ibn Janāḥ in the Hebrew translation of Judah ibn Tibbon, while the Arabic original Kitāb al-Lumaʿ was published by Derenbourg-(Bacher) only 30 years later (1886). Until the 1850s not one work was published in its entirety in its Arabic original. Munk published the introduction of Ibn Janāḥ to his Kitāb al-Lumaʿ (Journal Asiatique, 1850–51). In 1857 Bargès-Goldberg published the Risāla of Judah ibn Quraysh – the first manuscript of an Arabic-written treatise on Hebrew linguistics to be issued in its entirety. In the 1860s selections from the works of the Karaites authors were published (Pinsker, 1860) as well as Hotam Tōkhnit of Bedersi, Ma‘aseh Efod of Profiat Duran (both in 1865), the “objections” to Saadiah Gaon which are attributed to Dunash (Schoeter, 1866), the “objections” of the students of Menahem and those of the student of Dunash (Stern, 1870). All this activity, which extended from the end of the 18th century to the end of the 1860s, is to be considered, from the point of view of modern editorial technique, as initial attempts; the publications do not meet present-day editorial standards and most of the works need to be republished. In the last 30 years of the 19th century the actual sources of Hebrew linguistic literature were published; between 1870 and 1897 the works of...
Hayyūj and Ibn Janāh were produced in their Arabic originals and with their Hebrew translations. The editions of Hayyūj are: Nutt (1870), Jastrow (1897). The works of Ibn Janāh were published by Neubauer (1873–75), Derenbourg (1880), Derenbourg-Bacher (1886); Bacher (1897); and from then until the present there has been a continuous attempt at improving the printed versions of these works; Bacher (ZDMG, 1884, 1888) published corrections for the Neubauer Usul edition (1873–75), and then (191, 1899) his corrections for the Jastrow edition of the two main works of Hayyūj (1897); Kokowtzow (1911; see bibl.) published his corrections to the Derenbourg edition of the opuscules of Ibn Janāḥ (1880); Wilensky (1929–31, 550–63), published his corrections to the Derenbourg-Bacher edition of Kitāb al-Lumāl (1886); Razhabi (Leshonenu, 1966) listed variant readings to Neubauer (1875). Also published at the end of the 19th century were Sefer Zikkaron of Joseph Kimhi (Bacher, 1888), remnants of Kitāb al-Muwāzana of Ibn Barūn (Kokowtzow, 1890–93), the anonymous work from Yemen (Neubauer, 1891), four chapters from Kitāb al-Mudhākara wa al-Mudhākara of Moses ibn Ezra (Kokowtzow, Vostoiniya Zemetki, 1895). In the 20th century there was a more intensive effort to publish the sources which were written in Arabic: Kokowtzow (1916) published remnants of the works of Samuel ha-Nagid, Ibn Gikatilla and Judah ibn Ba'am, additions to Kitāb al-Muwāzana, a remnant of the works of Nethanel al-Fayyumi (?) and also small selections from pseudo-Ibn Yashush. Skoss (1936–1945) published Kitāb Jamiʿ al-Alfāz of David b. Abraham Alfāsī; he also published (191, 1942, 1952) large sections of Kutub al-Lughā from Saadia Gaon. Klar (Saadia Gaon, 1943) and Allony (Sefer Goldzieder, 1958) published the original text of Saadia's Kitāb al-Sabāʿin Lafza al-Murfada; Zislin (1962, 1965, see bibl.), published a selection from al-Kafī by Abū al-Faraj Hārūn; and Allony (1969) issued the remnants of the Agron of Saadian Gaon. The effort to publish works which were originally written in Hebrew has also continued: Levinger (1929) produced Darkhe ha-Nikkud of Moses b. Yom Tov; Ben-Menahem (1941) published eight pages missing from the version of Safah Berurah by Abraham ibn Ezra; Yalon (1945) published Halikhot Sheva of Almoli; Gumpertz (Leshonenu, 1958) published a chapter from Ein ha-Kore of Jekuthiel b. Isaac ha-Kohen; Yalon (1965) published Shekel ha-Kodesh; Allony (1966) issued Derekh Laḥasot Haruzrim of David b. Yom Tov ibn Bilia. Some of the works printed in the 19th century were reedited in the 20th: Wilensky (1924) republished a part of Safah Berurah by Abraham ibn Ezra; Klar (1946) again published the first part of Sefer ha-Shoḥam of Moses b. Isaac which Collins had already published (1882) and added a second part which had not been printed until then; Allony (1949) published a new selection from Kitāb al-Taḏkīr wa Taʿmīn of Moses ha-Kohen ibn Gikatilla together with the sections which Kokowtzow had printed (1916). Abramson (1963) published sections from the Arabic original of Kitāb al-Taǰmīn of Ibn Ba'am together with the part published by Kokowtzow (1916). Allony (1964) published new selections from Kitāb al-Taǰmīn and from Ḥuruf al-Mālānī by the same author. The most important work published in the 20th century, however, after it had already appeared in print is Sefer ha-Riḵaṁah of Ibn Janāh, which Wilensky reissued (1929–31); and a second edition of the work was printed in Jerusalem in 1964. Especially notable was the publication of a rich selection from the linguistic literature of Samaritan authors which Ben-Hayyim published (1957). Despite this extensive work of publication, knowledge of Hebrew linguistic literature is still defective. Some of the works have been completely lost and we only know of them from mention of their names; of others only quotations exist. Even the works of Hayyūj, Ibn Janāh, and Samuel ha-Nagid – have not reached us in complete form: the works of Samuel ha-Nagid were almost entirely lost, as was the Kitāb al-Tašwīr of Ibn Janāḥ; from the translations made by Solomon b. Joseph ibn Job of Kitāb al-Tašwīr and Risalat al-Tanbih only small parts remain. For further publications in the field up to 1984 see D. Ténè, “The State of the Art in Hebrew Linguistic Literature,” in Meḥqarim be-Lashon 8 (2001), 19–37 (in Hebrew). Latest research achievements are listed below, in the division “Authors and their Works,” sections 1, 2, 5–9, 11–15, 22, 25, 26, 29, 30, 34, 36, 39, 45, 55, 58, 62, 65, 66, 67, 75, 85, 87, 92, 94.

**General Development of Linguistic Literature**

Abraham ibn Ezra gave the first survey of the authors who lived prior to the middle of the 12th century and of their works, in the introduction to his Sefer Moznayim. Some of the later authors followed in his footsteps – e.g., Parhon, Joseph and David Kimhi, Profiat Duran, and De Balmes. In modern times a few surveys of the general process of development of Hebrew linguistic literature have been written. Dukes (1844) reviewed what was known to him about a few of the authors mentioned by Abraham ibn Ezra – 14 in all: Saadia Gaon, Dunash b. Tamim, Ibn Quraysh, Menahem, Dunash b. Labrat, Hayyūj, Hai Gaon, Isaac Gikatilla, Isaac b. Saul, Ibn Janāḥ, Solomon ibn Gabilo, Samuel ha-Nagid, Moses ibn Gikatilla, and Ibn Ba'am. Munk (Journal Asiatique, 1890–91) supplemented this review with many details, especially concerning the Karaite commentators who lived about the time of Saadia Gaon. Neubauer (Journal Asiatique, 1861–63) reviewed the lexicographers of whom he knew from Saadia Gaon until Saadia ibn Danān (the end of the 15th century), but he refrained from discussing dictionaries for post-biblical Hebrew and the dictionaries of synonyms. From among the authors who lived after Abraham he discusses Isaac ha-Levi b. Eleazar, Al-Harizi, Solomon b. Parhon, Jacob b. Meir Tam, Jacob b. Eleazar, the Kimhi family, David ha-Yevani, Joseph ibn Kaspi, and Saadia ibn Danān. Lerner (Ha-Shahar, 1876) is more comprehensive: he reviews the authors and their works from the beginning of linguistic literature until Solomon Levinsohn at the beginning of the 19th century. The authors are arranged in chronological order. He lists all the Rabbanite writers known to him and he mentions incidentally the famous authors found among the Karaites and the Christians. But Rabbanite authors who wrote their works in Arabic are only incidentally mentioned.
These four surveys are outdated, though, and can no longer serve as reference surveys. Bacher (1892, see bibl.) served for a long time as the authoritative review of linguistic literature from its beginning until the 16th century. In his survey he included a bibliographical list up to the year 1890 and an index of names containing over 70 authors or translators. Bacher (ZDMG, 1895) is the first attempt to discuss in a historical-critical manner the grammatical issues found in the talmudic and midrashic literature, in Sefer Yeẓirah, in the masorah literature, and especially in the work of Aaron Ben Asher; he is equally the first to discuss similarly the main grammatical theories of the early authors from Saadiah Gaon to Hayyūy (but not including him). Rozenak (1898) reviews the authors and their works from Hayyūy to David Kimhi, but does not add to Bacher (1892). Hirschfeld (1926; see bibl.) reviews grammatical literature and lexicographers (10th–16th centuries). He mentions the latest research achievements, especially by Kowtzwow (1916, see bibl.). Azar (1927, see bibl.) is a Hebrew translation of Bacher (ZDMG, 1895). The work of Yellin (1945, see bibl.) resembles Bacher’s (ZDMG, 1895); the ideas of grammarians and lexicographers until Hayyūy (but not including him) are also reviewed there. Chomsky (JQR, 1944/45) examines the period ending with David Kimhi with regard to its contribution to the history of linguistic literature. Meiworsky (1955) surveys the study of Hebrew from the beginning until the mid-20th century. For this period, the corresponding chapters add nothing beyond Hirschfeld.

David Téné

Monographs on Authors and their Works

Some of the authors were the subjects of monographs in which the biographical issues were discussed and sometimes even their efforts within the history of Hebrew linguistics were described. The following are the more important:

Miscellaneous Topics

Some of the works published in the past hundred years have tried to clarify problems of a literary historical nature, such as: Is Dunash b. Labrat the author of the “objections” against Saadiah which are attributed to him and were they originally written in Hebrew? Is Judah Hayyūy the same as Judah b. David, a student of Menahem? Who is the author of the additions in the translation made by Ibn Gikatilla of the works of Hayyūy and when were they added? Who is the author of Sheke-ha-Kodesh – and so on. Only a small part of the works deals with actual aspects of linguistics, such as comparison of languages, vowel theories, terminology, etc.

AUTHORS AND THEIR WORKS

Excluded from the following list are those works which are part of the Masorah literature, those which belong to biblical exegesis, and others, such as the Kuzari of Judah Halevi or Guide of the Perplexed by Maimonides, which treat language matters among other issues. The authors have been arranged in chronological order as far as possible, within periods of 50 years. Titles created by contemporary editors are indicated by +. A short description of the work follows each title, together with the place and year of publication, and, as far as possible, the editor is noted as well. Critical editions are noted by "crit. ed." and regular editions by “ed.”

900 C.E.

1. *Saadiah Gaon: Sefer ha-Egron or Kitāb Uṣūl al-Shīr al-Ibrānī. This is the first work on Hebrew lexicography and the first dealing with rules of Hebrew poetry. Two editions are known: the first written in 902 in Hebrew and the second, an expanded version, produced a few years later. A few remnants have survived, representing a fourth or fifth of the total. Crit. ed. N. Allony (Jerusalem, 1969); for a serious textual correction see A. Dotan, “Qeta’ Hadash mi-Sefer Egron,” in: Leshonenu, 45 (1981), 163–212.

Kitāb Fasīḥ Lughat al-Ibrānīyīn or Kutub al-Lughah (“Book of Elegance of the Language of the Hebrews,” or:

+ Alfāz al-Mishna. A small lexicographical work which contains a list of difficult words from the Mishnah translated into Arabic. This list is arranged not alphabetically, but in the order of the tractates, chapters, and mishnayot. The surviving material (134 entries) was published: crit. ed. Allony, Leshonenu (1952–53), 167–78; (1954), 31–48; (1958), 147–72; but see Abramson, Leshonenu, 36 (1954), 49–50.

+ Alfāz al-Talmid (?). A lexicographical work of which no part is extant. Its very existence and identification are still in need of study.

In addition, there are many linguistic issues scattered throughout the commentary of Saadiah Gaon on Sefer Yeẓirah – ed. Lambert (1891); in his translation and commentary of the Bible, and in the various criticisms made against his works.

A comprehensive dictionary of biblical Hebrew, lost in its entirety, even its name being unknown (cf. Kokowitz (1916, Russian part, p. 95, n. 2; Skoss (1936), p. LXII, n. 87 (cr. 41)); Y. Blau (61, s.v. Ibn Quraysh) holds, however, that this was not an independent work but rather the third part of the Risāla.

3. Dunash Ibn Tamim: A work comparing Hebrew to Arabic (and Aramaic) with regard to vocabulary; likewise lost, even as regards its name. Bacher, in ZDMG (1907), 700–04, published part of an anonymous work believing that it was part of this study.

4. David B. Abraham *Alfasi: Kitāb Ḥamzah-alfāz or al-Agron. The most comprehensive dictionary of biblical Hebrew and Aramaic of the tenth century, possibly written in Jerusalem between 930 and 950, and the most detailed dictionary by a Karaite. It was written in two versions, the shorter of which was published: crit. ed. Skoss (1936); idem (1945); while a chapter of the longer version was published by him in JQR (1932–33), 1–43. Other selections from the longer version, of moderate length, were published as a supplement to the abovementioned publication of the shorter version.

(? Criticism of the linguistic works of Saadiah Gaon, attributed to Dunash b. Labrat, and extant in a very Arabicized Hebrew. The problems of the authorship of the book and the language in which it was written have not yet been settled; ed. Schroeter (Breslau, 1866); see, however, C. Del Valle Rodríguez, La Escuela Hebreo de Córdoba (Madrid, 1981), 133–136, 624–633; O. Oshri, "R. Abraham Ibn Ezra, Sefer ha-Haganä al Rav Saadiah Gaon" (Ramat Gan: Bar-Ilan Univ., 1988), 7–9, 26–29; R. Chazon (Master's thesis, Tel Aviv Univ. 1995). According to Del Valle Rodriguez (ibid.), the title's original work was Tjqon haš-šegagot.

7. Students of Menahem: Isaac Ibn Qapron, Isaac Ibn Gikatilla, Judah b. David (Da‘ud): A criticism in Hebrew of Dunash b. Labrat (see section 6 above). It contains in all about 50 replies to the objections which he made against the Mahberet of Menahem; ed. Stern (Vienna, 1870); crit. ed. S. Benavente Robles, Teshubot de los discípulos de Menahem contra Dunash ben Labrat (Granada, 1986). A "major criticism" in this work is directed against Dunash because he began the practice of writing Hebrew poems in the Arabic (quantitative) meter. This is the first known discussion in which Arabic and Hebrew are compared with regard to metrics. The "major criticism" has been printed several times.

8. Yehudi b. Sheshet (or: Shishat): A small work in which this author gave 41 replies to the objections of the students of Menahem (7.1.); ed. Stern (Vienna, 1870), together with 7.1; crit. ed. M.E. Varela Moreno, Yehudi Ben Sheshet, Teshubot de Yehudi Ben Sheshet, Edicion traducción y comentario (Granada, 1981).

10. Abu Sa‘id *Levi b. Japheth: This author condensed the long version of al-Agron of David b. Abraham Alfāsī (see
1000 C.E.

11. JUDAH B. DAVID, known as *HAYYÚJ: Kitāb al-Afʾal Dhawāt Ḥurāf al-Lin. An essay on the grammar of the verb, dealing with verbs which have as a radical of their roots ʾālef, waw, or yod and as the third root letter he. The work, in Arabic, contains theoretical introductions and lexicons arranged alphabetically for the verbs with initial ʾālef or yod, medial waw, and final he; (crit.?) ed. Jastrow (Leiden, 1897).

Kitāb al-Afʾal Dhawāt al-Mithlāyn. A work, also in Arabic, dealing with grammar of double radical verbs, with a theoretical introduction, followed by a lexicon of double radical verbs in alphabetical order; (crit.?) ed. Jastrow (Leiden, 1897), together with Kitāb al-Afʾal Dhawāt Ḥurāf al-Lin. The material of these two works has been the subject of several studies, among them G. Goldenberg, “ʿAl ha-Shokhen he-Halaq ve-ha-Shores ha-ʾIvri,” in: Leshonenu, 44 (1980), 281–92; A. Watad, Mishnato ha-Leshonot shel R. Yehuda Hayyyūj mibbēḥad le-Mannahab bi-Meqoram ha-ʿAravi uv-Targumam ha-ʾIvri (1994); N. Basil, The Grammatical Theory of Rabbi Judah Hayyyúj (in Hebrew; Ramat-Gan: Bar-Ilan Univ., 1992); J. Martínez Delgado, El Libro de Hayyuy (Granada, 2004).

Kitāb al-Tanqīt ("The Book of Vocalization"). Perhaps his first work, it deals with the vowels, both in relation to the letters used with them, and in relation to the accent, especially in segholate nouns. It is written in Arabic; ed. Nutf (London, 1870), together with Gikatilla’s Sefer Otiyyot Ha-Noʾah ve-ha-Meshekh and Sever Poolei ha-Kefel and Ibn Ezra’s Sever ha-Nikkud. A new fragment of the Arabic original has been published by I. Eldar, Meḥqarim be-Lashon, 8 (2001), 141–81.

The fourth work of Hayyyúj is a linguistic-grammatical exegesis to the eight books of the Prophets. Some fragments have been published by Allony, Abramson and Eldar. Hayyyúj has been reestablished along with new fragments by N. Basil, Kitāb al-Natāf le-Rabiʾ Yehuda Hayyyúj (2001).

Concerning the translation of the works of Hayyyúj into Hebrew see Moses ha-Kohen Gikatilla (section 21) and Abraham ibn Ezra (section 36).

Al-Muktaṣar (The Digest), another compendium made out of Al-Kitāb al-Kāfi. See Khan, ibid. 1, p. xxx.

Kitāb al-ʿuqād fī Taṣārif al-Lugha al-ʾIbrāniyya. Perhaps a further condensation of Al-Kitāb al-Kāfi; a selection has been published: ed. Hirschfeld, in *QR* (1922–23), 1–7.

14. JONAH *IBN JANḤ: Kitāb al-Muṣtalḥaq (Sefer ha-Hassaḥah; "The Book of Criticism"). The express purpose of this book (finished in 1012) is to complete the two works of Hayyyúj (Kitāb al-Afʾal Dhawāt Ḥurāf al-Lin and Kitāb al-Afʾal Dhawāt al-Mithlāyn), though this completion is accompanied by critical additions. It was written in Arabic and translated into Hebrew by Obadiah ibn Safardi (see section 46); (crit.?) ed. Derenbourg, *Opuscules et traités* (Paris, 1880); a critical edition of Obadiah ibn Safardi’s Hebrew version has been prepared by Téné and brought to press by A. Maman.

Kitāb al-Taswiʿa (Sefer ha-Tokhabah; "The Book of Redemption," or Sefer ha-Hashvaʿah). A reply to the objections, which had reached Saragossa, made by Samuel ha-Nagid and his friends against Kitāb al-Muṣtalḥaq (see above). It was written in Arabic and translated into Hebrew by Solomon ibn Job (see section 58); (crit.?) ed. Derenbourg, *Opuscules et traités* (Paris, 1880).

Kitāb al-Tashwir (Sefer ha-Hakhilmahah; "The Book of Shaming"). A reply to the criticism which Samuel ha-Nagid had voiced against Kitāb al-Muṣtalḥaq in Rasāʾl al-Rifāʾ (see section 15). This work was written in Arabic, and it is not known whether it was translated into Hebrew: A selection appears in Derenbourg, *Opuscules et traités* (Paris, 1880); a new fragment was identified and published by M. Perez, in: *Kiritat Sefer*, 64 (1993), 1367–87; see also I. Eldar, in: *Meḥqarim ba-Lashon ha-ʾIvrī u-vi-Lshonot ha-Yehudim Muggashim li-Shlomo Morag* (1996), 41–61.

*Risālat al-Taqrib wa al-Tashīl* (Iggeret ha-Keruv ve-ha-Yisur; “The Epistle of Bringing Near and Making Easy”). A kind of explanation for beginners of difficult passages in the introductions of Ḥayyūj to his two works on verbs (*Kitāb al-Afʿal Dhawāt Ḥurāf al-Lin* and *Kitāb al-Afʿal Dhawāt al-Mithlayn*). A Hebrew translation of the Arabic original was made by Jacob b. Isaac Roman in the first half of the 17th century (cf. Bacher in his introduction to *Sefer ha-Shorashim* (1897), xxiii (see section 42 below), but no copy of it has survived. The work was published as (crit.?) ed. Derenbourg, *Opusculeset traités* (Paris, 1880).

*Kitāb al-Tanqīh* (*Sefer ha-Dikduk*; “The Book of Detailed Investigation”). The first complete description of biblical Hebrew, written in Arabic in the 1040s. No other work written by a Jew can be compared to it in scope and theoretical foundation. It consists of two parts:

15. *SAMUEL HA-NAGID* (B. NAGDELA): *Rasāʾil al-Rifā‘* (Iggerot ha-Ha-Vererim or ha-Haverut; “Epistles of the Companions,” or: “of Companionship”). A polemical work in Arabic against some of the comments which Ibn Janāḥ made in his *Kitāb al-Mustalahq* (see section 14) concerning the works of Ḥayyūj. Parts of it have been preserved in St. Petersburg, and one small selection was published: Derenbourg (Paris, 1880), LIX–LXVI (cf. section 14: *Risālat al-Taqrib wa al-Tashīl*).

*Kitāb at-Hujja* (“Book of Evidence”). A polemical work in Arabic in reply to the *Kitāb al-Tashwīr* of Ibn Janāḥ (See section 14: *Kitāb al-Tashwīr*). No part of the book has survived, but it was mentioned by the Nagid himself and by Judah ibn Bāʿam (see section 22).

*Kitāb al-Iṣṭighnā* (“Book of Amplitude”). A large dictionary of biblical Hebrew, in Arabic. Small parts which have been preserved in St. Petersburg have been published: crit. ed. Kokowtzow (Petrograd, 1916), 205–24. Large quotations from the book have been found in an anonymous commentary to Psalms and published by M. Perez, *Shenaton le-Heqer ha-Miqra ve-Hamizraḥ ha-Qadum*, 12 (2000), 241–87. Z. Ūkashy used Hanagid’s poetic language usages to reconstruct some of his lost lexical definitions; see Ūkashy’s dissertation, “Hannagid’s Dictionary based on his Poetry” (in Hebrew; Jerusalem, Heb. Univ., 1998).

18. *DAVID (HA-DAYYAN) IBN HAJJAR*: Abraham ibn Ezra mentions him, saying that he produced a work known as *Sefer ha-Melakhim*, apparently on the vowels, but it has not been preserved. Moses ibn Ezra calls him Abū Suleimān ibn Muhāgir (cf. Bacher on ibn Ezra (1882), 185; Neubauer (1963), 202).

**1050 C.E.**

19. *IBN YASHUSH, ISAAC*: *Kitāb al-Taṣārīf* (*Sefer ha-Zerufim*; “Treatise on Conjugations”). Abraham ibn Ezra mentions it, but the work has not been preserved. The selections published by Derenbourg, *Opuscules* (1880), and Kokowtzow (1916) in fact belong to another work, which perhaps had the same name, but is of a later date (see section 24). Kokowtzow called the latter work “Pseudo-Ibn Yashush” (cf. Bacher on Ibn Ezra (1882), 186).

20. **ELI B. ISRAEL**: He made (in 1066?) a further condensation from the one made by Levi b. Japheth (see section 10) of the long version of *al-Agron* by Alfasī (see section 4 above). It exists in manuscript (cf. Škoss (1936), CXXVII–CXXXIX).

*Kitāb al-Tadḥīkir wa al Taʿnīth* (*Sefer Zekharim u-Nekevot*; “Treatise on Masculine and Feminine Genders”). A monograph in Arabic concerning nouns in the Bible whose usage deviates from the accepted rule with regard to gender. Two selections have been published: crit. ed. Kokowtzow (Petrograd, 1916), 59–66; it was published with an additional selection (altogether about one tenth of the monograph) and a modern Hebrew translation: crit. ed. Allony, *Sinai* (1949), 34–67.

22. **JUDAH IBN BĂLĀM**: *Kitāb al-Taʾnīt* (*The Book of Homonyms*). As far as we know this is the first monograph concerning homonyms. It was written in Arabic with the entries in an alphabetical-dictionary order, and some of the

Kitāb Ḥurif al-Mā‘ānti (Sefer Otiyyot ha-’Inyanim; "Book of Particles"). A lexicon of the particles of Hebrew, written in Arabic, selections of which have been published: crit. ed. Kokowtzow (Petrograd, 1916), 109–32; Allony, Beit Mikra (1964), 87–122.

An anonymous translation is extant of the three works of Ibn Bālām, parts of which have been published at various places and several times. The translation of Kitāb al-Af ‘al-Mushattaqa min al-Asmā‘ was published by: Polak, in Ha-Karmel, 3 (Vilna, 1862–63), 212, 229–230; Goldberg, in Hayyei Olam (1878–79), 53–61; Hirschsohn, Hamisderon (Jerusalem, 1885), 21–23; 42–47. The translation of Kitāb Ḥurif al-Mā‘ānti was published by Fuchs, Ḥahoker (Paris, 1892/93), 113–28; 193–206; 340–2; ibid., (Vienna, 1894), 73–83. It was later published by the editors of the above-mentioned Arabic original of the Ibn Bālām works discussed here; the entire extant material from the philological books has been published by S. Abramson, Sheloshia Sefarim shel Rav Tehuda ben Bālām (1975).

23. LEV ‘IBN ALTABAN: This author wrote a linguistic work which has been lost, even its contents remaining unknown. Abraham ibn Ezra and Elijah (Bahu) Levi refer to it as Sefer ha-Mafteḥaḥ; cf. Pagis, in Leshonenu (1963–64).

24. ANONYMOUS (PSEUDO-‘IBN YASHUSH):
An anonymous work in Arabic which is a kind of long commentary on the linguistic work of Samuel ha-Nagid. It was believed to be the Kitāb al Tatsārīf of Isaac Abū Ibrahim ibn Yashush but Ibn Yashush’s work antedates it by a generation. Sections of the work were published by: Derenbourg, Opuscules (1880), XXXI; Kokowtzow (1916, Russian part), in various places in the notes.

1100 C.E.

25. ANONYMOUS (Karaite)

26. ISAAC ‘IBN BÅRÜN: Kitāb al-Muwāzana bayn al-Lughā al-Ibrāniyya wa al-Arābīyya. A monograph on the connection between Hebrew and Arabic, written in Arabic earlier no than 1080 and no later than 1128. It includes a short grammatical section and a long section on lexicography. About two-thirds of the monograph, which includes more than 600 dictionary entries, has been preserved, and published: crit. ed. Kokowtzow (Petrograd, 1890–93), 1–98; crit. ed. idem (1916), 153–72. A new Genizah fragment from this work has been discovered by A. Maman (see Otzrot Lashon – The Hebrew Philology Manuscripts and Genizah Fragments in the Library of the Jewish Theological Seminary of America (in press), entry MS 8731.1 MS r1978.1; cf. also “Dictionaries and Glossaries from the Collection of the Jewish Theological Seminary of America: Introductory Notes,” in: Leshonenu, 65 (2003), 303–14, esp. n. 17). D. Becker, Meqorot ’Arviyyim shel ‘Sefer ha-Hashva‘a bein ha-’Ivrit ve-’Aravit’ le-Isaac ben Barun (2005), discovered the sources used by Ibn Barun for the Arabic part of his work. He has also been preparing the entire text of Muwāzana for a new critical edition.

27. ’ALI IBN SULEMAN: He made a further condensation of the one made by Abū Sa‘īd Levi b. Japheth (10.1) of the long version of al-Agron of Alfāsī (4.1); preserved only in manuscript in St. Petersburg; cf. Skoss (1936), cxxxix.

28. ABRAMAH IBN QAMNIEL (OR: QANBIL):
According to Joseph Kimhi he wrote a Hebrew grammar, which has been lost.

31. ABU ISHĀQ IBRAHĪM B. FARAJ B. MARUTH: Kitāb al-Tawīli (+Sefer ha-Maslul). A systematic work on the grammar of Samaritan Hebrew. According to Ben-Hayyim (1957), p. 30, it was written in the first half of the 12th century, and is one of the earliest works in the study of the language of the Samaritans. The author did not complete the work, but left only a small part lacking; crit. ed. Ben-Hayyim (Jerusalem, 1957), 3–127 (see especially 30–34).

32. MENAHEM B. SOLOMON: Even Bohan. A comprehensive work for the study of Hebrew, including a grammar, a dictionary (the main part) and a section on exegesis. It was written in Rome in 1143; cf. Bacher, Graetz-Jubelschrift (Breslau, 1887), 94–115. Fragments: ed. Bacher (MHLW (Ozar ha-Sīfrut), 1896), 257–63; idem, Ha-Goren, 4 (1903), 38–58.

33. NETHANIEL (B. AL-FAYYUMI?) OF YEMEN: A Hebrew (-Arabic?) grammar, written in Arabic, part of which has been published; ed. Kokowtzow (Petrograd, 1916), 173–89.

34. MOSES ’IBN EZRA: Kitāb al-Muhādara wa almuhādara. The first work of poetics on Hebrew poetry, based on Arabic poetic theory: chapter 2 was published by Hirschfeld, Arabic Chrestomathy (1892), 61–63; the introduction and the first four chapters were issued by Kokowtzow (Vostochniya Zamełki, 1895), 191–220. An early anonymous translation,

35. JUDAH HADASSI, THE KARAITE: Eshkol ha-Kofer. An encyclopedic work, in Hebrew, which includes an elaborate grammar based on Hayyuj and Ibn Janah (begun in 1149); ed. Eupatoria (1836); inedited chapters ed. Bacher (1896), 431–44.

Sefer Otziyot ha-Noah.
Sefer Poolei ha-Kefel.
Sefer ha-Nikku’d.

Sefat Yeter. A comprehensive systematic grammar for beginners (Lucca, 1140–45). Bacher on Ibn Ezra (1882), 8–17, thought it Sefer ha-Yesod (or Yesod Dikkud), which, in his opinion, was not extant: but Wilensky, k.s (1926/27), 73–77, proved that it was Sefat Yeter. The introduction was published: ed. Bacher on Ibn Ezra (1882), 148–9; crit. ed. N. Allony, Yesod Diqduq hu Sefat Yeter me’et Rabbi Abraham ibn Ezra (Jerusalem, 1984).

1150 C.E.

Sefer ha-Shem (or Sefer ha-Shem ha-Nikkhud). Only in part a grammatical work. Of its eight chapters, the first three and the last two deal with personal names and adjectives; written in Béziers before 1155; ed. Lippmann (Fuerth, 1834).

Yesod Mispar. A short monograph about the numerals; written in Béziers before 1155; ed. Pinsker, in Mavo el ha-Nikhud ha-’Ashuri, Vienna, 1863.

Sefer ha-Yesod (or Yesod Dikkud). (See Sefat Yeter, above.)

37. SOLOMON IBN *PARHON: Mahberet he-Arak. A dictionary preceded by a grammar section, written in Hebrew (Salerno, 1161). It is almost a précis of Sefer ha-Shorashim by Ibn Janah, with various additions taken from the works of Hayyuj, from Kitāb al-Mustalhag, and from Sefer ha-Rikmah; ed. Stern (Pressburg, 1844); inedited fragments: ed. Bacher, in ZAW (1891), 96ff. and in ZHR (1896), 59–61.

38. JACOB B. MEIR (RABBENU *TAM): A work known as Hakhrati in which he set out to decide between Menahem and Dunash; ed. Filipowski (London, 1855, with the objections of Dunash).

39. SAMUEL BEN MEIR (RASHBAM): A grammatical work known as Dayqat is based on pre-Hayyuj grammatical theory, published by Yom-Tov Stein as ‘Shiyurei Yom Tov, Dayqat me-Rabbenu Shemuel u-Perusho al ha-Torah ’al pi ha-Diqduq,” in: Jahrbuch des Traditionstreuen Rabbinerbandes in der Slowak (Tranova, 1923), i–vii, 33–67; crit. ed. R. Merdler, Dayqaqut hM’Rabbenu Shemuel [Ben Meir (Rashbam)] (Jerusalem 1999); Rashbam’s grammatical theory has been studied in a dissertation by Merdler (Hebrew University, Jerusalem, 2004).

40. ISAAC HA-LEV: According to Judah ibn Tibbon, Ha-Levi wrote a book called Sefer ha-Makor. The work has been lost.

41. ISAAC B. JUDAH (?): BARCELONI: According to Judah ibn Tibbon, he translated the first part of Kitāb al-Uṣul of Ibn Janah, but the translation is not extant.

42. JUDAH IBN *TIBBON: Completed the translation of Kitāb al-Tanqūq of Ibn Janah in 1171.

Sefer ha-Rikmah. Translation of the Kitāb al-Luma’ of Ibn Janah; ed. Goldberg (Frankfurt on the Main, 1856); French translation by Metzger, Le livre des parterres fleuris (1889); crit.

43. JOSEPH *KIMHI: Sefer Zikkaron (“Book of Remembrance”). Together with the works of Abraham ibn Ezra, this is the first grammar written in Hebrew on the basis of the language study which had developed in Spain; interesting is his chapter on the division of the vowels into five long and five short ones; crit. ed. Bacher (Berlin, 1888).

Sefer ha-Galui. A reply to the “decisions” of Jacob b. Meir Tam (37.1); ed. Mathews (Berlin, 1887).

Sefer ha-Shorashim. Translation of the Kitāb al-Uṣāl of Ibn Janāh; crit. ed. Wilensky-Téné, (Berlin, 1929–31), second ed. Wilensky-Téné, (Berlin, 1894–97). Together with the works of Abraham ibn Ezra, this is the first grammar written in Hebrew on the basis of the language study which had developed in Spain; interesting is his chapter on the division of the vowels into five long and five short ones; crit. ed. Bacher (Berlin, 1888).

44. JOSEPH HACONSTANDIN: Adat Devarim. A work spanning the dividing line between masorah literature and linguistic literature (unpublished).

45. MOSES B. JOSEPH *KIMHI: Mahalakh Shevilei ha-Da’at. A concise, schematic grammar based on the works of his father and Abraham ibn Ezra. Elijah (Bahir) Levi published it in 1508, and it has been republished many times – according to Hirschfeld (1926), 82, thirteen (fourteen?) times during the 16th century alone; S. García-Jalón de la Lama y M. Veiga Díaz, Repertorio de gramáticas hebreas impresas en Europa en el siglo xvi (Salamanca 2000 = Helmantica 156), 615–18. Last edition Hamburg, 1785.

46. OBADEAH HA-SEFARDI: Sefer ha-Hassagah. Translation of the Kitāb al-Mustalhag of Ibn Janāh Kitāb al-Tanqīt, so named by the translator. See above subentry Kitāb al-Mustalhag.

1200 C.E.

47. DAVID B. JOSEPH *KIMHI: Sefer Mikhlool. A complete description of biblical Hebrew consisting of two parts:

(a) Mikhlool, originally entitled Heleq ha-Diqduq. The most widespread grammar of the Hebrew language. It has been printed many times: Constantinople, 1525, 1532–34, 1533; Venice, 1545, accompanied by the comments of Elijah Levita: Fuert, 1793; and Lyck, 1864.

(b) Sefer ha-Shorashim, originally entitled Heleq ha-Inyan. Based on the most widespread dictionary of the Hebrew Language, Kitāb al-Uṣāl of Ibn Janāh in the translation of Judah ibn Tibbon (see section 42). It was printed in Rome before 1480 and in Naples in 1490 and has gone through several editions, the last two ones, Berlin 1838 and 1847, the latter with the comments of Elijah (Bahir) Levi.

Et Sefer. A short work on vocalization and cantillation signs; ed. Goldberg (Lyck, 1864).

49. ANONYMOUS (DAVIDI): A short work on grammar (second quarter of the 13th century). Poznański (1894) thought that the author had come from Greece and wrote the work in Prague. It begins with a division into three parts of speech and then briefly discusses the noun, verb, milliyot (particles), and at the end vowels; ed. Poznański (Berlin, 1894).

50. ANONYMOUS: (+ Ha-Meliz). A Hebrew-Aramaic-Arabic dictionary on the vocabulary of the Samaritan Pentateuch. According to Ben-Hayyim (1957), 65–73, the work was composed in two stages. In the first stage it was a Hebrew-Aramaic dictionary written at the latest at the end of the 10th or the beginning of the 11th century. The Arabic was added at the second stage by another writer, probably between the second half of the 11th and the beginning of the 14th century. Crit. ed. Ben-Hayyim (Jerusalem, 1957), 439–616.

51. MOSES (AL-)ROTI: In Darkhei ha-Nikkud (see below) Moses b. Yom Tov mentions a grammarian of this name; see Wilensky, HUCA (1936), 647–9.

1250 C.E.

54. *MOSES (B. ISAAC) B. HA-NESI’AH: Leshon Limmudin. In the introduction to Sefer ha-Shoham (see below) the writer mentions that in his youth he wrote a grammatical work with this title.

Sefer ha-Shoham. The first grammatical work, based on the theory of Spanish grammarians, written by a Franco-German Jew; ed. Collins (London, 1882) – the first part; crit. ed. Klar (Jerusalem, 1946), the first and second parts (incomplete).

57. ISAAC HA-LEVII B. ELEazar (?), ISAAC B. ELEazar HA-LEVII (?): Sefat Yeter. A yet unpublished condensed Hebrew translation of the two works of Hayyuj (11.1–2) and of Kitāb al-Mustalhag by Ibn Janāh (14.1). Poznański in: MGW (1895) 251–62, printed the introduction; cf. also Nutt (1870), x.

Ha-Rikmah. A collection of monographs on various grammatical and lexicographical issues which has remained unpublished.

58. SOLOMON B. JOSEPH IBN JOB: Sefer ha-Hašva’ah, Translation of Kitāb al-Taswīrā by Ibn Janāh under this in-
correct title (Béziers, 1264). Small parts have been preserved in manuscripts.

The manuscript has been described by M. Gaspar Remiro, “Los manuscritos de la Biblioteca Nacional,” in: Boletín de la Real Academia Española, 6 (1919) 221–34, “Ms. 5460, fol. 1a–7b”; but several mistakes occurred in the description, which has been corrected by C. Del Valle Rodríguez, Catálogo Descriptivo de los Manuscritos Hebreos de la Biblioteca Nacional (Madrid, 1986), 35–40. The text has been published by J.M. Camacho Padilla, Rabi Yona Ben Gannah. La segunda mitad del Sefer Hahaxua, version hebraica de su Kitab al-Tawsiya por Salomon bar Yosef ben Ayubb (Córdoba, 1929). See also C. Del Valle Rodríguez, Historia de la Gramática Hebreá en España, vol. 10, La gramática hebrea de Ibn Danán en la versión árabe y hebrea, (Madrid, 2004), 428.

Sefer ha-Ma’aneh. Translation of the Risálat al-Tanbih of Ibn Janáh under this title.

61. Samson: A dictionary in which words are often translated into German.

63. JeKuthiel b. Isaac ha-Kohen (or: Zalman NaKdan of Prague): Ein ha-Kore. A work on vocalization; a section of the introduction was published by Hirschfeld (1926, app. 111) from Cod. Brit. Mus. Or. 853; and one chapter has been published, ed. Gumpertz, in Leshonenu (1958), 36–47, 137–46. The work has been studied by I. Eldar, Leshonenu, 40, 190–210; idem, Masoret ha-Qeriah ha-qedam Ashkenzit, 1 (1979), 191–96; idem, Massorat, 5–6, 10–16. A critical edition of the first part, The Grammar, has been published by R. Yarkoni, “Ein Ha-kore’i-yequat’el ha-Cohen,” 1–2 (dissertation, Tel Aviv Univ. 1985).

65. Joseph b. Kalonymus: Two poems on cantillation, one of which has been published, ed. Berliner (Berlin, 1886), under the name Taamei Emet ha-Haruzim.

1300 C.E.

67. Benjamin b. Judah of Rome: Hakdamah. A small work which served as an introduction and supplement to grammars in use in Italy, published as the introduction to Mahalakh Shevilei ha-Da’at of Joseph Kimhi (see section 45); cf. Bacher, in: REJ (1885), 123–44.

68. *Immanuel b. Solomon of Rome: Even Bohan. 175 chapters in four parts, dealing with orthography, grammar, and other matters necessary for biblical exegesis, such as syncope, additions, and metaphesis; cf. Bacher, mgwJ (1855), 251–75.

Ratukot Kesef (“Chains of Silver”). A grammar.

A commentary to Sefer ha-Riknah which has been lost.

72. Sar Shalom: Solomon b. Abba Mari Yari (see section 75) mentions a grammarian of this name.

73. David b. Yom ToV Ibn Bilia: Derekh Lásot Ḥaruzim (?). A short work on poetry written in Provence during the middle of the first half of the 14th century. The title, known only from one manuscript, was possibly given by one of the copyists. The first work which lists 18 types of meters in Spanish poetry; crit. ed. Allony, in Kovetz al Yad (1966), 225–46.

74. SAMUEL BENVENISTE: Solomon b. Abba Mari Yarḥi (see section 75) and Profiat Duran (see section 78) mention a grammarian of this name.

76. ANONYMOUS, from Yemen: Unknown author of an untitled work in Arabic, which deals with the letters, vowels, and cantillation signs; ed. Neubauer (1891).

An expanded Hebrew translation of the work noted in the previous paragraph, including certain grammatical chapters in which a few chapters of *Kitāb al-Luma* of Ibn Janāḥ (1446.1) were adapted, apparently from the Arabic original; ed. Derenbourg, *Journal Asiatique* (1890).

1400 C.E.

78. ISAAC B. MOSES (ALSO PROFIAT *DURAN*): *Ma‘aseh Efod*. A grammar written in 1403 comprising a long introduction, 32 chapters, and a supplement. The most important work since the *Mikhlol* of David Kimhi, it was an attempt to base linguistic studies on scholastic philosophy; (?) crit. ed. Friedlaender-Haohen (Vienna, 1865).

80. JOSEPH B. JUDAH *ZARKO*: *Rav Pe‘alim*. A work dealing with the verb; Amsterdam (1730).

81. ISAAC B. NATHAN KALONYMUS: *Me‘ir Nativ or Ya‘ir Nativ*. The first Hebrew concordance of the Bible, after the manner of the Latin concordance by the Franciscan Arlottus of 1290. The work was intended to assist in debates with Christians, with regard to the evidence they cited from the Bible. Written from 1437 to 1445; ed. Venice, 1533; re-ed. Basel, 1581.

1450 C.E.

82. DAVID B. SOLOM *IBN YA‘HYA: Leshon Limmudim*. A grammar, influenced by David Kimhi and Profiat Duran, which, however, takes the liberty of criticizing them; ed. Constantinople (1506) together with *Shekel ha-Kodesh*; 2nd impression Constantinople, 1579.

83. MOSES BEN SHEM TOV *IBN HABI: Perah Shoshan*. A grammar, quoted in *Darkhei No‘am* and in *Mikneh Avram* of De Balme (see section 93).

Marpe Lashon ("Healing of Speech"). A pamphlet concerning grammar; ed. Constantinople (beginning 16th century); re-ed. Elijah Leviya (Venice, 1546) in *Dikdukim*; ed. Heidenheim (Roedelheim, 1806) *cum Darkhei No‘am*.

Darkhei No‘am ("Pleasant Ways"). Poetics based on Aristotelian philosophy, and rules of meter; ed. Bomberg (1564); re-ed. Heidenheim (Roedelheim, 1806).

84. *JUDAH B. JEHIEL (MESSER LEON): Livnat ha-Sapot*. A long work on Hebrew rhetoric, based on Latin rhetoric as developed by Cicero and Quintilianus with regard to rules and terminology; ed. Mantua (1480); re-ed. Jellinek (Vienna, 1863).

The work *Petah Devarai* is a grammar attributed to David Kimhi or to David, the son of Judah b. Jehiel; ed. Naples (1492); ed. Elijah Leviya (1546) in his *Dikdukim*.

87. DAVID BEN YESHA’I AL-‘ADANI: Al-Jâmi‘ (ha-‘Melîssèf) (or Sharḥ al-‘Alfâz). A Hebrew-Arabic dictionary, composed in Yemen between 1483 and 1486. Its entries are arranged according to the first letter (not according to their root) and based mainly on Maimonides’ *Mishneh Torah* and his commentary to the Mishnah. A facsimile edition of one of the many extant manuscripts has been published (Jerusalem 1988), along with an introduction by Y. Tobi (pp. 175–187) and U. Melammed (pp. 188–189).

1500 C.E.

88. *REUCHLIN, JOHANN: Rudimenta linguae hebraicae*. The first grammar written by a Christian to teach Hebrew to Christians. Written in 1506, it is attached to the *Mikhlol*.

89. ELSHA B. ABRAHAM B. MATTATHIAS: *Magen David* ("The Shield of David"). Written in 1517, in defense of David Kimhi, against 50 criticisms of Profiat Duran (78) and five of David ibn Yahya in the latter’s *Leshon Limmudim* (82); ed. Constantinople, 1517.

90. SAMUEL B. JACOB: *Reshit ha-Lekah* ("The Beginning of Learning"). A grammar divided according to eight parts of speech, which are defined philosophically. It also discusses the
optative. Preserved in manuscript, it has not been printed (cf. Hirschfeld (1926), p. 98).

(?) Shekel ha-Kodesh. A work about poetry in 17 chapters, the first 14 with grammatical content. Printed in the Constantinople edition (1506) of Leshon Limmudim of David ibn Yahya (see section 82) as an anonymous work, and attributed by Allony and by Yalon, KS (1963–64), 105–8, to Almoli; crit. ed. Yalon (Jerusalem, 1965).

92. ELIJAH B. ASHER (*LEVITA, BAHUR) AMSELIYAH B. ASHER (*LEVITA, BAHUR): A commentary on Mahalak Shevi‘ot ha-Da‘at of Moses Kimhi (45.1); Padua, 1504; ed. Pizaro, 1508; re-ed. Venice, 1546.

Bahur. A work on the noun and the verb, supplemented by conjugation tables, written in Rome in 1517; ed. Rome, 1518; reprinted Isny, 1542 as Dikduk Eliyahu ha-Levi.

Pirke Eliyahu. A supplement to Bahur, partly rhymed. It deals with the letters and vowels, the number and gender of the noun, and the particles. Written in Rome in 1519; ed. Pisa, 1520; re-ed. Venice, 1546. In the latter edition a chapter on the classification of nouns was added.

Meturgeman. A dictionary, for words in Aramaic Bible translations. Written in Rome between 1526 and 1531; ed. Isny, 1541.

Tuv Tā‘ām. A work on vocalization, the cantillation signs, and the masorah; written and ed. Venice, 1538.

Masoret ha-Masorah. The first systematic exposition and critical history of the masorah, and the first work to prove that the vocalization and cantillation signs are post-talmudic; written and ed. Venice, 1538.

Tishbi. A dictionary of 712 (=the arithmetical value of ב”ט) Hebrew entries in talmudic and post-talmudic language, written Venice-Isny (1540–41). This work contains many examples of the pronunciation and vocalization of talmudic and post-talmudic Hebrew words by German and Italian Jews; ed. Isny, 1541.

Nimmukin for Sefer Mikhlo (see section 47); ed. Venice, 1545.

Nimmukim for Sefer ha-Shorashim of David Kimhi (see section 47); ed. Venice, 1547 (see A. Maman, Otzrot Lashon (section 26 above), introduction).

93. ANONYMOUS YEMENITE AUTHOR: A dictionary of the Mishneh Torah of Maimonides, dealing only with the first two letters of the alphabet and based mainly on Tanhuma Ye-rushalmi (see section 55); frag. ed. Nathan (Berlin, 1905; inaugural dissertation).

94. ABRAHAM DE *BALMES: Mikneh Avram. A long grammatical work; the first systematic attempt to introduce a long chapter with a complete description of syntax into a Hebrew grammar, and the most original work since the time of Kitāb al-Lūmā‘ of Ibn Janāh; ed. Venice, 1523, with Latin translation; the last chapter (1444–1558), on cantillation, was written by Kalonymus b. David. This work has been studied very little; see D. Tène, “Abraham De Balmes and his Grammar of Biblical Hebrew,” in: History of Linguistics (1996), vol. 2: From Classical to Contemporary Linguistics edited by D. Cram, A. Linn, E. Nowak, (Amsterdam/Philadelphia, 1999), 249–68.

95. SEBASTIAN *MÜNSTER: Melekhet ha-Dikdukh ha-Shalem. A grammatical work, written in 1542, and attached to the works of Elijah Levita (92); ed. Basle, 1542.

[David Tène / Aharon Maman (2nd ed.)]

FROM THE 16TH CENTURY TO THE PRESENT

The Beginnings of Christian Hebrew Studies

The early 16th century is a turning-point in the history of Hebrew linguistics. There occurred then the sudden efflorescence of the knowledge of Hebrew as a part of Christian culture, which meant that Hebrew was no longer an esoteric subject, almost totally confined to Jews, and this eventually brought about a different kind of study of the language, carried on within a different context and intellectual atmosphere. The knowledge of Hebrew had not been entirely absent from the medieval Christian world; but such pockets as existed were entirely derived from Jewish philology and exegesis and contributed little or nothing to the progress of the subject in itself. There is no major name in Christian Hebrew studies between Jerome and Johann *Reuchlin. The sudden growth of Christian Hebrew studies in the early 16th century was part of the humanist impulse, which had revived the study of classical Latin and Greek, and which was animated with a zeal for the original ancient sources and their languages. The spread of printing had given new facilities for study, and the interest in the Bible, already stimulated by the new printed editions, was enormously increased by the Reformation controversies in the Church. There was an interest also in other Jewish sources, for example in the Kabbalah, believed to be a source for philosophy and even for Christian doctrine, and also a stir of interest about the Talmud; Reuchlin was involved in bitter controversy because he opposed the burning of Jewish books as an obscurantist policy.

At first it was far from easy for non-Jews to find out much about Hebrew; the subject had been looked upon with some suspicion; informants were rare, and they might be suspected of seeking to proselytize. Some information came from Jews who embraced Christianity; conversely, some study among Christians was motivated by polemical aims. A freer atmosphere was found in northern Italy, and, soon after, in Ger-
many. Even so, Conrad *Pellicanus, who anticipated Reuchlin with a small book about Hebrew (1503?), had to teach himself the language with only such limited aids as a brief section of the biblical text printed in Hebrew but in Latin characters. Early works such as his were little more than guides to the learning of the script. Nevertheless, the thirst for learning was very great, and substantial knowledge of Hebrew came to exist in the Christian world. Reuchlin’s grammar, published with a dictionary in 1506, was very brief and simple; but by the end of his life his knowledge was considerable, and his immense reputation established Hebrew studies as a recognized subject in European education. He did much to ensure that chairs of Hebrew should be set up in the universities of northern Europe, and his pupils were available to occupy them. Within some decades a tradition had grown up and was accepted in some quarters, according to which Hebrew (and even Aramaic and Syriac) belonged along with Latin and Greek in the proper equipment of the cultivated man. In time, this more humanistic pursuit of Hebrew somewhat declined; Hebrew studies among Christians came to be carried on mainly as a part of theological study, and chairs were commonly occupied by men with theological training, interested primarily in biblical Hebrew; the humanistic cultivation of ancient languages concentrated on Latin and Greek.

The earliest Christian works on Hebrew were not only very rudimentary, but were also heavily dependent on Jewish tradition, and initially they were in no position to advance the subject beyond the state in which they had received it from the hands of their Jewish predecessors. Yet certain seeds of change were present from the beginning. Medieval Jewish grammars and lexicons had generally been in Arabic, or in Hebrew itself. Hebrew linguistic knowledge was now, however, set in a context which included the developed grammars of the classical languages, and works on Hebrew were written in Latin and, later, in various European languages such as German, French, and English. This involved an emphasis on methods of learning, since Christian students, unlike Jewish, generally had no antecedent native experience. More important, it raised questions of terminology: the Jewish tradition had evolved its own terms, or had relied upon the example of Arabic, a sister Semitic language; but could the terminology familiar to Europeans, and based mainly on Latin, also be applied to Hebrew? Certain of the terms which later became standard, such as “absolute state,” go back to Reuchlin; what is now usually called the “construct state,” on the other hand, was in earlier times called status regiminis, the “governing state.” (See also *Hebraists, Christian.)

The person who did most, when the Christian study of Hebrew was established, to pass on to it a fuller heritage of knowledge from the older tradition of Jewish linguistics was Elijah Levita. Born in Germany, he lived most of his life in Italy, and mentally was well integrated with the humanist movement. He wrote several grammatical works, a commentary on the grammar of Moses *Kimhi (1504), and his own Sefer ha-BAHUR and Sefer ha-Harkavah (1517). He was particularly noted for his studies in the masorah, the Masoret ha-Masorah (1538). The work of Levita was made available to a wider circle through the Latin translations of Sebastian *Muenster, professor at Basle from 1529, who was the most influential Christian Hebraist after Reuchlin. Through its clarity, Levita’s work, as adapted, was well suited for teaching. The basis for Hebrew knowledge in the 16th century lay in the work of Moses and David *Kimhi, and to some extent in that of Abraha ibn Ezra, as communicated through men like Levita and Muenster. Thus the main fund of knowledge, provided by medieval Jewish philology in its later and more clearly organized forms, was now directly accessible to Christian readers. The recent survey of Hebrew grammars printed in Europe during the 16th century (S. García-Jalón de la Lama y M. Veiga Díaz, Repertorio de gramáticas hebreas impresas en Europa en el siglo XVI (Salamanca 2000 = Helmantica 156)) enables us to understand and evaluate better the growth of Hebrew knowledge throughout Europe among Christian Hebraists (see also the bibliography included in this survey).

After Levita, however, no Jewish figure appeared for some time to become a recognized leader and authority on biblical studies, especially in the eyes of Christian scholars. Hebrew language studies were, in fact, making less distinguished progress within Judaism than had been the case in the Middle Ages. For this there were several reasons. The main intellectual effort within Judaism was now being directed toward talmudic studies. Catastrophes such as the expulsion from Spain had gravely dislocated Jewish academic life. The contact with Arabic grammar and the Arabic language, which had earlier been so suggestive and fruitful, was now very limited for the Jews of Europe. Finally, the work of discovery and clarification, with comparative reference to the cognate languages (Aramaic and Arabic), which had distinguished the medieval period, had probably gone as far as it could, and progress had already fallen off before 1500.

Correspondingly, the sense of heavy dependence on Jewish tradition which had marked the first Christian study of Hebrew began to pass. It is said of the dictionary of Johann *Forster of Wittenberg (1557) that it set aside the former reliance on rabbinic methods. Yet the dominance of Jewish traditional methods was still clear in the work of the two Johann *Buxtorfs, the elder and the younger. The masorah, a subject carefully studied by Levita, was a matter of extreme interest also to Buxtorf the elder, who wrote a masoretic commentary entitled Tiberias (1620). Buxtorf’s own grammar far surpassed previous works in detail and exactitude. But the very existence of works that, even though written in heavy dependence on Jewish tradition, could be read and assimilated separately from it, made it possible for Western academic study of Hebrew in the universities to draw away from Jewish tradition.

**Stirrings of Critical Attitudes**

The Buxtorfs themselves illustrate how, by the early 17th century, Hebrew studies among Christians were marked less by the humanistic spirit and more by dogmatic theological con-
siderations. Elijah Levita, following the Renaissance interest in detecting the late date of certain traditions, had averred that the vowel points were of late origin, and in 1624 the same argument was taken up by Ludwig Cappellus; but this was vigorously opposed by the Buxtorfs, to whom the argument seemed to threaten the Protestant orthodox view of biblical inspiration.

The question was, in fact, one of the first involving textual criticism, a movement which in the course of time substantially altered the direction of Hebrew language study. Medieval Jewish philology took the masoretic text as its basis, and the only ancient alternative text-form which was substantially used was the Aramaic Targum. Variants known in Hebrew, apart from special classes such as the ketiv and keri, were generally not of great importance for the meaning. Christian study, however, was familiar with older translations such as the Septuagint in Greek (originally a pre-Christian Jewish rendering) and the Latin Vulgate, which had been preserved in Christian tradition; to these was added the Syriac, a version in another Semitic dialect, preserved in Eastern Christianity and now once again made available for study in the West. The possibility was now suggested in principle that forms found in the Hebrew text might be the product of errors in written transmission, and that peculiar linguistic forms might therefore be explained through the decision to prefer a different text. Though there were certain precedents in earlier scholarship, both Jewish and Christian, and though hints of further progress appear, as in the 1620s with Cappellus, it was only in the later 18th century that textual criticism on something like its modern scale became established. The importance of textual criticism for linguistic study was that the grammar and lexicon did not have to accommodate every form transmitted by the textual tradition simply because it was in the text; some of the forms, which had been traditionally difficult for the linguistic scholar, might now be explained as the result of scribal errors. Though the full effect of this argument was not to be seen until much later, it gradually drove a wedge between the older linguistic study and the newer approach.

Throughout the entire period, grammars of Hebrew were published, some of which were very widely used. Most of them, however, were ephemeral, or local in their use, or merely one person’s individual restatement of what was essentially the same grammatical doctrine; and the vast majority did nothing to advance the scientific study of Hebrew. Linguistic works written by Jews came in many cases, though not in all, to use the vernacular languages as the medium of instruction, rather than the Hebrew language itself. Works written in Holland often used Spanish and Portuguese for the needs of the Sephardi community; Italian was used in Italy. A grammar in Yiddish appeared in Prague in 1597. The first Hebrew grammar to be written by a Jew in Latin was that of Baruch *Spinoza, the greatest thinker ever to write a treatise on the Hebrew language. Latin had previously been used once or twice by Jews who had embraced Christianity, but Spinoza, who employed Latin in most of his works, was the first to use it for Hebrew grammar. His work, *Compendium grammaticum linguae hebraeae, is a brief, simple, and modest book, and it had no great effect on the progress of Hebrew linguistics. One sees at certain points the tendency to provide philosophical arguments to account for linguistic facts, a tendency which in Hebrew studies continued to have occasional effect up to the 20th century. Spinoza emphasized the noun as the pre-eminent word-class or part of speech in Hebrew; he seems to have considered the essential basis of verb forms to be the infinitive, i.e., a sort of noun form. He used unquestioningly such Latin terms as Nominative, Accusative, Mood, Case. Spinoza’s effect on later developments was not, however, through the direct influence of his grammar, but through other aspects of his work. He took certain decisive steps toward a historical critical approach to the Bible, declaring it to be clear that the Pentateuch was written not by Moses but by someone who lived many centuries later. Among other significant Jewish grammatical writers of the 17th century mention may be made of Judah Solomon b. Abraham *Norzi of Mantua, author of a detailed masoretic commentary completed in 1626 but published much later (1742–44) under the title Minhat Shai; and, the most important of the writers of the century, Solomon b. Judah Loeb *Hanau.

During the 17th and 18th centuries the study of Hebrew linguistics, in spite of much accurate detailed knowledge, was somewhat hampered and confused by its entanglement with certain more general cultural problems. It was widely supposed that Hebrew was a language of divine origin, and even that it was the language of the Deity Himself; moreover, even as a human language, it was believed to have been the original tongue of humanity, from which others had been derived.

Meanwhile, however, a body of knowledge was being built up which was eventually to lead to a different understanding of the place of Hebrew in the world of language. Other Oriental languages were also being studied; chairs of Arabic existed at a number of universities, and the subject, first cultivated in connection with the missionary impulse directed toward Islam, and later fostered as an auxiliary to the study of Hebrew and the interpretation of the Bible, gradually became an independent academic field. The extensive Syriac literature, already mentioned, was also available. European exploration and curiosity about the Orient greatly extended the linguistic resources of scholarship; the grammar and lexicon of Ethiopic, a language close to Hebrew but formerly almost unknown, were learned. Samaritan texts were studied and printed. Remarkable typographical feats were performed in order to assemble all this material. Excellent polyglot Bibles were published; one of the most important, the London Polyglot of Bryan Walton (1657), contained (usually on the same page, for easy cross-reference) biblical texts in Hebrew along with the Samaritan Pentateuch and a number of Aramaic Targums, plus translations into Greek, Latin, Syriac, Ethiopic, Arabic, and Persian, with a Latin translation of each. To this Bible was added the Lexicon Heptaglotton of Edmund Castell (1669), which presented in a synoptic form the vocabularies of the
Semitic languages involved, along with a separate listing for Persian. Thus material was being assembled for a comparative philological approach more comprehensive and wide-ranging than that which had been possible for the medieval Jewish philologists, whose knowledge had been largely confined to the languages then in use among Jews and in their environment, principally Arabic and Aramaic, as well as Hebrew.

One of the main centers of this wider linguistic knowledge was Holland, and it was here that its effects upon the traditional conceptions about Hebrew were first and most strongly expressed. Albrecht *Schultens emphasized with revolutionary exaggeration the extent of the change brought about by the new knowledge. Far from accepting the traditional view that Arabic (like other languages) was a degenerate form of Hebrew, Schultens maintained that Hebrew was only one Semitic dialect, while the purest and clearest such dialect was Arabic. Numerous difficult passages in the Hebrew Bible could, he believed, be elucidated by appeal to an Arabic word which seemed similar and from which the true sense of the Hebrew could be deduced. But in spite of the high value accorded to Arabic by Schultens, his use of it was infelicitous and far from commendable even from the point of view of an Arabist. He nevertheless began the beginning of an epoch which continued into the mid-20th century, in which one of the main forms of learned linguistic study was the use of cognate languages for the elucidation of difficulties in Hebrew. At this stage, however, the increasing knowledge of cognate languages was not yet organized in a form which made a breakthrough possible, principally because the method, though comparative, was as yet imperfectly historical in character. The impact of Arabic on Hebrew studies continued, and the comprehensiveness of classical Arabic (compared with the limited corpus of biblical Hebrew), along with the apparent primitivity of its forms (which could often appear to provide patterns logically earlier than those of Hebrew), made it increasingly important in the organization of linguistic works about Hebrew. A grammar following roughly the lines marked out by Schultens was written by Nicholas Wilhelm Schroeder (d. 1798) and widely used. A more substantial and permanent influence in approximately the same direction was exercised by Johann David *Michaelis, professor of Oriental languages and theology at Goettingen. The academic Hebraist was now expected to be an Orientalist; this meant not only knowledge of Arabic, but also an awareness of the new information brought by travelers from the East about customs, the physical surroundings of life, and now – in its first rudimentary form – archaeology. By this time the Christian Hebraist was less involved in traditional dogmatism, and was likely, on the contrary, to be something of a rationalist.

One who also contributed much to the appreciation of Hebrew in this period, though one could hardly call him a Hebraist in the technical sense, was the wide-ranging thinker Johann Gottfried *Herder. His essay, "The Origin of Language" (1772), attacks the view that language is a direct gift of God, claiming that it is a human product, though not one deliber-

The Classical Historical Method

The great name in German Hebrew studies in the early 19th century is that of Heinrich Friedrich Wilhelm *Gesenius, professor at Halle, some of whose books, after numerous amendments and revisions, are still standard reference works. Particularly noteworthy are his lexicon, Hebraisches und chaldæisches Handwoerterbuch (17th German edition, 1915; new revision in preparation), which was used as the basis for the English dictionary of Francis Brown, Samuel Rolles *Driver and Charles A. Briggs (1907); and his two grammars, the more detailed Lehrgebäude der hebraischen Sprache (1817), and the briefer Hebraische Grammatik (1813). Indeed, the latter, after successive new editions by Emil *Kautzsch and others, remains the standard reference grammar in many languages today (2nd English edition by Arthur Ernest Cowley, Oxford, 1910). He also wrote a history of the Hebrew language and worked on Samaritan and the Semitic languages in general. Modern readers, who may be impressed chiefly by the detail and the comprehensiveness of Genesius' approach, should know that in his own time his lectures were considered fascinating and drew students from far and wide. The strength of his work lies in its genius for detailed comprehensive empirical observation; his approach was sober and avoided speculation. Yet the empirical accuracy of Genesius' work does not conceal the fact that his conceptual terminology was often unsuited to the subject. He continually used the categories Nominative, Accusative, Genitive, which have formal representation in Latin and German, but not in Hebrew. He had nine declensions of the masculine noun. All forms of the noun are explained as if they were derived from the extant form of the masculine singular absolute. He wrote before the full unfolding of the comparative-historical linguistics of the 19th century, and his careful attention to Arabic or Syriac still does not produce a developmental framework; though his-
torical in one sense, he had not yet made the systematic projections back into prehistory which were essential to the full comparative method. Thus he did not even diagnose that the ending -\textit{am} as in \textit{yomam} ("by day") is genetically connected with the Arabic case ending -\textit{an}. He considered the consecutive \textit{waw} to have been formed from the prefixing of the verb \textit{hayah} ("to be"). Though later revisions of his work incorporated a more historical outlook, some of these defects persisted into modern revisions. For terminology, he still sometimes used the traditional Hebrew terms, but mostly employed Latin terms, though often aware that these might be misleading. He agreed with the older Jewish grammar in calling the two tenses, which later came to be called perfect and imperfect, by the names Past and Future, the idea of aspect not yet having been brought into consideration. The historical aspect of Genesius' work was better revealed within the biblical corpus itself; he was aware of the historical development of the language and distinguished the usage of different writers, as for example pre-exilic and post-exilic, prose and poetic. In the study of meanings in his lexicographical work he was both lucid in presentation and sober in his quest for valid analogies and his avoidance of speculative fancies.

The later editions of Genesius' works, and newer works produced in the following decades, had to take account of the great advances made in comparative philology. Hebrew had been elucidated through knowledge of the cognate Semitic languages as far back as the Middle Ages, long before the method was much applied outside the Semitic family. Yet it was work in the Indo-European languages which in the early 19th century finally evolved a satisfactory comparative and historical method. This method included the projection or reconstruction of a common ancestor language, from which the extant languages were descended by statable changes. By application of the method to the Semitic family, proto-Semitic forms could be reconstructed; these, though not found in any historical document, could yet be deemed to have been the ancestral forms from which, by regular or fairly regular changes, the extant Hebrew (and, similarly, Arabic or Aramaic) forms had been evolved. Moreover, reconstructions could also be done internally, by considering groups of phenomena within one language; for instance, the series \textit{malki}, \textit{malko} ("my king, his king") might suggest that the word "king" was \textit{malk} at a prehistoric date, before it became \textit{melekh} as in extant Hebrew texts. The method enabled a historical explanation to be given to phenomena which might otherwise be empirically registered but not accounted for; and it has remained of great importance, not least because there is no other way of penetrating the time before the earliest biblical texts. The effect of this method was that scholarly grammars eventually came to classify Hebrew forms not under the patterns which they assume in the masoretic text but under those patterns which they are taken to have had in the prehistoric stage; beginning with this prehistoric stage, the grammar undertakes to explain how the extant forms were derived. This is a thorough change in grammatical method, even if the empirical facts observed are the same. Beginning to appear in the late 19th century in grammars such as those of Justus *Olshausen (1861) and Bernhard Stade (1879), it reached monumental proportions only in the 20th century in the grammar of Hans *Bauer and Pontus Leander (1922) and the revisions of Genesius by Gotthelf *Bergstraesser (1918).

This method also raised new questions, or old questions in new and more rigorous forms. The importance within it of the sound changes by which the reconstructed ancestor language alters into the extant dialect brought the question whether these changes followed an invariable rule or whether they might allow occasional exceptions. The matter was of great importance in lexicography, for a dictionary was expected to state some kind of etymology and give data of cognate forms in other Semitic languages, and the validity of these depended on the degree to which the normal sound correspondences must be insisted on and the degree to which similarities of meaning which seemed overwhelming might be expected to override them.

The new interest in linguistic discovery could also suggest new approaches to Hebrew. Knowledge of the Slavonic languages emphasized the category of aspect in verbs (nature of the action done, e.g., whether completed or not completed), and something similar was seen in Greek. The tenses of Hebrew had traditionally been regarded as past and future, both through the influence of Latin grammar and through the older Jewish view of the matter, but it was thought that something closer to the category of aspect might be more suitable, since the classification as past and future had long given much trouble. A number of important works in the 20th century were devoted to the attempt to define the verb system of Hebrew and to explain its evolution in relation to what is known of sister languages.

**Modern Trends**

The hundred years following Genesius, then, were a period of more radical historical questioning about the development of the Hebrew language. The basic task was now seen no longer as that of classifying and registering the forms, but rather as that of piecing together a historical development, of which only certain portions were evident on the surface. This trend was further emphasized by certain other circumstances.

The first of these was the rise of historical criticism and its application to the sources of the biblical books. This made it possible to discern different linguistic strata in what had generally been taken in the past as unitary documents. Within the Pentateuch, for instance, the separation of chronologically different strata was accompanied by the identification of linguistic constants as characteristics of each. This process assisted in the identification and appreciation of various styles in the use of language and made possible a more fully historical understanding of Hebrew. The historical-critical separation of sources has never gone without opposition, and many applications of it have been questioned by competent linguists; nevertheless, the main principles of it seem to be sound and
helpful, and the method has had great effect on the history of Hebrew linguistics. Modern grammars and dictionaries will often register phenomena as belonging to, or characteristic of, one or another of the recognized sources, such as the document J or P.

Second, the same period was one in which whole new languages were discovered, and these enriched knowledge of the linguistic environment of ancient Hebrew, while at the same time confirming the applicability of the comparative philological method and inviting its extension. Ancient Egyptian was deciphered early in the 19th century and, though not closely related to Hebrew, provided numerous points of contact, including among other things the means of correct identification of names and expressions of Egyptian origin in the Hebrew Bible, some of which had hitherto been explained as Hebrew and thereby confused our understanding of the latter. More immediate and important, Akkadian, the language of the Assyrians and Babylonians, was discovered in the second half of the century and it turned out to have remarkably close relationships with Hebrew; its verb tense system, for instance, served to suggest new approaches to the verb system of Hebrew. The discovery of Akkadian, not least because of the ancient provenance of this language, did much to shift the balance of Semitic comparative philology away from excessive reliance on sources such as Arabic and Syriac, which were then known mainly from materials of later date. Extensive fresh discoveries of inscriptions in Canaanite, Phoenician, Moabite, Aramaic, Punic, South Arabian, and other dialects were made, and it became possible to a much greater extent than previously to see Hebrew as one of a group of dialects; and, since the inscriptions had been unchanged since the time of their origin, they formed a valuable resource for comparison with texts such as those of biblical Hebrew, which had been handed down by a copying process over many centuries. Archaeological researches produced archaic inscriptions even in Hebrew itself. It now became normal to consider that the task of the Hebraist was no longer to study Hebrew in and of itself, but to reconstruct the historical path by which it had developed in the midst of this group of related dialects, of which increasingly complex evidence kept coming to the fore. This movement was still further accelerated in the 1930s, when Ugaritic, a language previously entirely unknown, was brought to light; it dated from the 14th century B.C.E. and had much in common with Hebrew.

Third, not only were other languages discovered, but great discoveries were made in the field of Hebrew itself. Particularly important was the study of biblical manuscripts with pointing different from the customary Tiberian system. These enabled a reconstruction to be made of Hebrew as it had been before the Tiberian pointing became authoritative. A number of scholars (particularly Paul Kahle and Alexander Sperber) held that the masoretes had made certain innovations in the grammar of Hebrew and that it was now possible to penetrate accurately, with proof, back to a pre-masoretic state. For this purpose assistance was drawn from Hebrew words transcribed into Greek or Latin in early sources. Recourse was also had to the Samaritan tradition of Hebrew, both spoken and written, which had been investigated notably by Zeev Ben-Hayyim, to provide another non-masoretic source. Further new texts were furnished by the Cairo Genizah since the end of the 19th century, including the recovered section of the Hebrew text of Ben Sira, previously known almost solely in Greek. The culmination of this current of discovery was the appearance after World War II of the Dead Sea Scrolls; these included Hebrew biblical texts many centuries older than those formerly known, as well as many new writings, previously quite unknown, which have greatly stimulated research into the state and history of Hebrew in the one or two centuries immediately before and after the beginning of the Common Era.

During the 19th century, along with changes in the social and educational position of the Jews, the currents of Jewish grammatical studies and of academic Hebrew studies, which had flowed somewhat apart, began to converge once again. The person who signalized this movement was Samuel David Luzzatto. Though distinguished Jewish thinkers such as Eliahu Gaon of Vilna and Moses Mendelsohn had written about the Hebrew language, their work had no great effect upon academic study. Luzzatto’s work, on the other hand, stands in the full critical, historical, and reasoned light of the best academic method of his time.

In the 20th century the convergence of Jewish and non-Jewish Hebrew studies was facilitated by the fact that non-Jewish studies became once again more humanistic and less definitely attached to theology.

Jewish scholarship was particularly important in the field of post-biblical Hebrew, which had tended to be somewhat neglected by Christian scholarship, especially in the more modern period (the earlier epoch of Christian Hebrew studies had seen some profound rabbinic scholarship, as with John Lightfoot in England, 1602–75). The historical emphasis of the Wissenschaft des Judentums movement promoted exact and discriminating scholarship. A subject of much interest was the linguistic situation in Palestine at the time of the origin of Christianity and the interrelation of Hebrew and Aramaic; names of note in this discussion are Gustav Dalman and Moses Hirsch Segal; the latter provided the standard grammar of mishnaic Hebrew (1927). The main effort of Hebrew linguistics had always been directed toward the language of the Bible; but a historical perspective made it desirable to attempt the description also of other stages of Hebrew, and this task was given actuality by the revival of Hebrew as a spoken and written language from the time of the Haskalah onward. The task of refashioning the language for modern needs involved considerable research into the resources of the past in order that these might be mobilized for the present; one outstanding monument of this effort is the Thesaurus totius hebræitatis (1908–59) initiated by Eliezer Ben-Yehuda.

In the mid-20th century the main current of biblical linguistics continued to be concerned with the assimilation of the material known from comparative philological methods.
Notable scholars working in this field were Naphtali Herz Tur-Sinai in Israel, Sir Godfrey Rolles Driver in Oxford and William Foxwell Albright in America. The emphasis on Ugaritic as a major source for the elucidation of Hebrew has been pushed to its extreme by Mitchell Dahood, but a more moderate position was taken by many other scholars, such as Umberto *Cassuto. New dictionaries, such as the third edition of Ludwig Koehler and Walter *Baumgartner's *Hebraisches und Aramaisches Lexikon (1967), endeavor to incorporate the results of this approach. No full synthesis of comparative Semitics has appeared to supersede that of Carl Brockelmann (1908–13), nor has a full comparative etymological dictionary of the Semitic languages been published; nor, for comprehensive and purely empirical presentation, has the revised work of Gesenius been outdated.

Another form of study which achieved some importance in the 20th century has been the attempt (anticipated to some extent by Herder) to trace connections between the linguistic phenomena of Hebrew, e.g., the tense system, or the construct state, or the relation between root and meaning, and characteristic aspects of the thought of the ancient Israelites. The validity of this method, and the extent to which it can be pressed, have been a subject of some controversy.

From about the 1940s onward the seemingly assured dominance of comparative-historical study has begun to be challenged by the newer methods of descriptive linguistics, interested not only in the historical development of items but in the description of systems, and based on the study of living and spoken languages. Some of the workers who developed these newer linguistics were also in part Hebraists, such as Edward *Sapir, Zellig Sabbetai *Harris and Noam *Chomsky. The approach of descriptive linguistics founded a ready application in the study of spoken Israeli Hebrew, as in Ḥayyim Rosen's *Ha-Ivrit Shellenu and A *Textbook of Israeli Hebrew. The interest in phonetics, which is part of the new descriptive approach, has had importance also for the historical linguistics of Hebrew, for it has been applied with profit to the detailed study of the speech habits of special Jewish communities such as the Yemenites, and this study influences in turn the understanding of the history of pronunciation and the systems of vocalization in ancient times, as has been shown by Shelomo Morag. It may be expected that the methods of descriptive linguistics will in the course of time exercise a wider influence on the study of Hebrew.

LION

LINOWITZ, SOL MYRON (1913–2005). U.S. ambassador, lawyer, and business executive. Linowitz, who was born in Trenton, New Jersey, graduated from Cornell University Law School in 1938. He had a private law practice in New York and served as assistant general counsel to the Office of Price Administration (1942). From 1944 to 1946 he served in the U.S. Navy. After the war, Linowitz resumed his legal practice and began an association with Xerox Corporation. Linowitz eventually was appointed board chairman and head of Xerox International, Inc. Throughout his association with Xerox, he consistently tried to establish the image of the company as one dedicated to public service as well as profits. He served as chairman of the State Department’s Advisory Committee on International Organizations, was a member of the Business Advisory Committee to the federal poverty program, and co-founded (with David Rockefeller) the International Executive Service Corps (IESC), a volunteer program that sends American executives to provide managerial and technical expertise to developing countries. Linowitz helped to establish Rochester’s anti-poverty agency after the 1964 riots by blacks there. President Johnson appointed Linowitz the U.S. representative to the Organization of American States (OAS) and the Inter-American Committee of the Alliance for Progress (1966–69). Linowitz also served as a trustee of the American Jewish Committee. In 1977 he helped negotiate the transfer of the Panama Canal to Panama. Following the 1978 Camp David accords, he served as President Jimmy Carter’s ambassador-at-large for Middle East peace negotiations (1979–81). In 1998, he was awarded the Presidential Medal of Freedom by President Bill Clinton. During his career, Linowitz also served as a director of Time Inc., Pan Am, and the Mutual Life Insurance Co. of New York; and was a partner and senior counsel with the international law firm of Coudert Brothers. Linowitz wrote *The Making of a Public Man, A Memoir* (1985) and *The Betrayed Profession: Lawyering in the 20th Century* (1994).

[Joachim O. Ronall / Ruth Beloff (2nd ed.])

LINZ, capital of Upper Austria. Jewish moneylenders are recorded in Linz in 1304; a Jewish settlement in the growing market town is probably a century older. In 1335 a synagogue is mentioned; two Jews were baptized a year earlier. Jews were accused of desecrating the *Host in 1318. Although the community was not harmed during the *Black Death persecutions of 1348, a local persecution occurred in 1371. In 1396 Duke Albert IV permitted Jews to conduct only fiscal transactions with the burglers; the decree was renewed in 1412. The Jews were expelled from Linz in 1421, and in 1426 the synagogue was turned into a church. Jews were permitted to attend the biannual markets in the town in 1494, and Jewish horse dealers and feather and wool merchants, mainly from Moravia, continued to trade at the fairs until their entry was forbidden at the end of the 17th century. Only in 1785 were the markets officially declared open and in 1824 the Jews opened their own prayer room. A cemetery was consecrated in 1863, when the modern community was established. In 1869 there were 391 Jews (1.3% of the total population) and 553 in 1880. A new synagogue was opened in 1877 by Rabbi Adolf Kurrein (1876–82), publicist and author. His son, Rabbi Viktor Kurrein (1923–38), wrote the history of the community.

In 1923 there were 1,238 Jews in Linz, 671 in 1934 (0.6%), and in 1938, before the *Anschluss*, 650. On Nov. 10, 1938, the synagogue was burned down by the SS; the 65 remaining Jews were arrested and ordered to leave within three days for Vienna. The Nazis claimed that the Jews must leave the town because it was the capital of the province of Hitler’s birth. Jewish shops were not looted because they had already been “Aryanized.” Shortly after the end of the war, 2,400 Jewish refugees were housed in the nearby Bindermichen camp. A new community was reorganized, which numbered 238 in 1949 and 145 in 1961. In October 1957, an antisemitic demonstration was sparked off by a performance of *The Diary of Anne Frank*. Protests against a ban on *shehitah* were lodged in 1958. A new synagogue was consecrated in 1968.

[Henry Wasserman]

LION. Called in the Talmud “the king of the beasts” (Hag. 13b), the lion has many Hebrew names: בָּשָׂם (aryeh or אריא) (ari), and קָּטָן (lavi) fem. נְקֵית (leviah), both of which are used for the lion in general, שֵׁלֶג (kefrir), usually a young lion, לַיִש (layish), mostly poetical, and according to some, “an old lion,” שַׁחַל (shakhal), general name for the lion in poetry, though like שַׁחַי (shahatz) perhaps the intention is any fierce animal, and גַּׁר (gur) almost always meaning “a lion’s whelp.” The first five are all mentioned together by Eliphaz the Temanite (Job 4:10–11), on which Rashi comments that ari is the large lion, shakhal the medium-sized one, and kefrir the small lion, while the first six are cited in Sanhedrin 95a. (Note, however, that...
Rashi in commenting on Ezekiel 19:5 says categorically that all references to kefr in the Bible refer to a grown mighty lion.) Similarly, Kimhi breaks the different terms for lion into categories of size in his comment to Judges 14:5. More likely, though, the different terms with the exception of gur, “cub” (Nah. 2:13) are synonyms employed by the biblical poets. In fact, lavi (= Akkadian lābā), shahal, and layish (= Akkadian nēšā; l/n interchange) are attested only in poetry. In the Bible there are more than 150 references to the lion, many of them descriptive, metaphorical, and allegorical. To the lion were compared the tribes of Judah (Gen. 49:9) and Dan (Deut. 33:22); Balaam said of the Israelites: “Behold a people that riseth up as a lioness (lavi), and as a lion (ari) doth he lift himself up” (Num. 23:24); the mother of the kings of Judah was compared to a lioness and her sons to lion (gereha) cubs (Ezek. 19:2–3). David, of whom it was said that his “heart is as the heart of a lion” (1 Sam. 17:10), declared in his lament over Saul and Jonathan that “they were swifter than eagles, they were stronger than lions” (ibid. 1:23). This combination of the lion, the king of the beasts, and the “eagle, the king of the birds (the biblical reference is to the *vulture), is very common in later Jewish art, particularly on the Holy Ark, and occurs in Ezekiel’s vision of the lion, the ox, the eagle, and the cherub (Ezek. 1:10; 10:14). In Solomon’s Temple there were carvings of “lions, oxen, and cherubim” (1 Kings 7:29), while a lion with eagle’s wings symbolized in the Book of Daniel (7:4) the kingdom of Babylon. The lion is mentioned several times together with the bear as the most powerful beasts of prey (Lam. 3:10; Prov. 28:15; 1 Sam. 17:34; et al.). When a lion attacks its prey there is no escape from it, being mentioned in many parables, as when Amos (3:12) declares that a shepherd can rescue out of its jaws no more than “two legs, or a piece of an ear.” Nor is a lion in the least frightened even when shepherds gather to chase an eat (Isa. 31:4). An encounter between a man and a lion is usually fatal to the former (1 Kings 13:24; 20:36), lions having killed new settlers in the cities of Samaria (11 Kings 17:25), and having claimed victims, according to Jeremiah (5:6), in the land of Judah. Only in exceptional instances was a lion slain in such a clash, as when encountering a man of great personal courage such as Samson (Judg. 14:6), David (1 Sam. 17:34), and Benaijah the son of Jehoiada (11 Sam. 23:20). Among the Samaria ivories of the ninth century B.C.E. are two representations of lions (image in IDB 3, 137). From the eighth century is a seal inscribed, “property of Shema, servant of Jeroboam,” with an engraving of a lion (Ahituv, 206).

From the Bible it is clear that lions did not permanently inhabit populated areas; their haunts were the mountains of Lebanon (Song 4:8), Bashan (Deut. 33:22), the thickets of the Jordan (Jer. 49:19), and the desert regions of the Negev (Isa. 30:6). From there they invaded populated areas, penetrating deeply and regularly, in particular at times of drought when wild animals, their usual prey, had decreased in number. Lions also multiplied when the country lay destroyed and derelict. In the neighborhood of Ereẓ Israel long- and short-maned lions were to be found. There are evidences that there were lions in the country in mishnaic and talmudic and even in crusader times (in the Negev). The last lions in the Middle East were destroyed in the 19th century.

In Folklore and Art

The lion figures prominently in folklore as a result of two main references to it in the Bible: the appellation of Judah as “a lion’s whelp” (Gen. 49:9; Dan is also so called in Deut. 33:22, but the lion is always associated with Judah) and as one of the figures in the divine chariot of Ezekiel (Ezek. 1:10). A secondary motif is connected with the statement of Judah b. Tema (Avot 5:20) “Be as strong as a leopard, light as an eagle, fleet as a hart, and brave as a lion to perform the will of thy Father who is in heaven.”

Based on the image of the Lion of Judah in Genesis, the name Aryeh (“lion”) became a common Jewish personal name mostly in all combinations with Judah and with Leib (Loeb), its German or Yiddish translation, thus giving the composite names Judah Aryeh, Judah Leib, and Aryeh Leib. The Judah mentioned in the verse, however, is associated not only with the son of Jacob of that name, but with the tribe, and particularly with the House of David (cf. Rashi ad loc.), and as a result the Lion of Judah became one of the most common of Jewish symbols. It is also one of the appellatives of the king of Ethiopia, who according to Ethiopian tradition is descended from Solomon and the Queen of Sheba. The rampant Lion of Judah is a favorite embellishment of the synagogue ark, the mantle covering the scroll of the Torah, etc. The Lion of the Divine Chariot is one of the four figures of Ezekiel’s merkavah (divine chariot) which consisted of a human being, a lion, an ox, and an eagle. Different opinions are expressed in the Talmud as to the permissibility of reproducing these figures, but the general consensus is that the only reproductions wholly forbidden are either the four together or the complete human form (see *Art). On the other hand, almost complete freedom was accorded in the reproduction of the lion, possibly both because of its national association as described above and because of the figures of lions upon the laver in Solomon’s Temple (1 Kings 7:29) and especially in the steps leading to his throne and on its sides (ibid. 10:20).

"Jacob b. Asher opens his Tur Orah Hayyim with the above-quoted passage of Judah b. Tema, and the four animals mentioned in it have often been made the subject of paintings. The word lion is often employed figuratively in a laudatory sense, mostly referring to an outstanding scholar. Thus Joshua b. Hananiah refused to controvert the ruling of Eliezer b. Hyrcanus after the latter’s death because “one does not answer a lion after its death” (Git. 84a). Hyya is called “the lion of the brotherhood” (Shab. 111a); a scholar, the son of a scholar, is called “a lion, son of a lion,” while one of no such distinguished parentage is called “the lion the son of a jackal” (BM 84b); and Simeon b. Lakish expressed his admiration for the learning of Kahana, who had come to Ereẓ Israel from Babylon, in the words “a lion has come up from Babylon” (BK 117a). In one
instance, however, it is used in a pejorative sense. Proselytes to Judaism who convert for selfish personal motives are called, in contradistinction to gerei zedek, righteous proselytes, “the converts of lions” (e.g., Kid. 75b), the allusion being to the Samaritans who adopted the worship of YHWH only because of their fear of lions (11 Kings 17:25–28).

LION, LEON M. (1879–1947), British actor-manager. Born in London, Lion was well known particularly for his productions of Galsworthy. He acted in many West End plays and went into management in 1918. Four years later he launched a Galsworthy series, with starting Justice and including Loyalties, plays which he frequently revived and in which he acted. He presented two Galsworthy plays in Paris, 1928, and between 1918 and 1939 staged 70 productions. He was author or part-author of 20 plays, and also appeared in a number of British films during the 1930s.

LION OF WRATH (Heb. נִצְבָּה חֲרֵדָה, kefr he-Haron), character mentioned in the Nahum and Hosea commentaries from Qumran Cave 4 (4Q Nahum). In the comment on Nahum 2:12ff., where Nineveh is described as “the den of the lions… the feeding-place of the young lions (kefririm),” to which the lion brought home his prey – “he filled his caves with prey and his dens with torn flesh,” the last words, says the Qumran commentator, refer to “the lion (kefr) of wrath, who smote with his mighty ones and the men of his counsel” and “took vengeance on the “Seekers after Smooth Things, in that he proceeded to hang them up alive [which was never done] in Israel before, for concerning one hung up alive on wood the Scripture says…” What the Scripture says is that he is an “af-front to God” (Deut. 21:23). But the Scripture envisages the hanging of the body of an executed criminal on a tree until sunset; the commentator on Nahum has in mind something much more atrocious – hanging men up alive, or crucifying them. That such a thing “was never done in Israel before” implies that the perpetrator was an Israelite – not that he was a gentle ruler mistreating Israelites thus, like Nebuchadnezzar (Lam. 5:12) or Antiochus IV (Jos., Ant. 12:256). If he was an Israelite, the first Israelite ruler to record having crucified his enemies is Alexander Yannai, who in 88 b.c.e., having defeated his rebellious subjects who enlisted the aid of Demetrius I (Eukairos) against him, made an example of 800 of their leaders by crucifying them in Jerusalem (Jos., Wars 1:97; Ant. 13:380). This identification is supported by the commentator’s reference in the same context to “[Deme]-trius, king of Javan, who sought to enter Jerusalem by the counsel of the Seekers after Smooth Things” – especially if the latter group should be identified with the Pharisees, whose sufferings at the hands of Yannai were long remembered in rabbinic tradition. Other identifications, however, have been suggested for the Lion of Wrath, ranging from Antiochus IV (preferred by H.H. Rowley) to John of Gischala (so C. Roth) and Simeon Bar Giora (so G.R. Driver).

[Lionel M. Lion]

LIOZNO (Pol. Lozniany), town in Vitebsk district, Belarus; under czarist rule it was included in the province (gubernia) of Mogilev. Jewish settlement in Liozno dates from the 18th century. The founder of Chabad Hasidism, R. *Shneur Zalman of Lyady, was born there in 1745. There were 82 Jewish poll-tax payers in the town in 1766. The community increased in the 19th century; in 1897 the community of Liozno numbered 1,665 (67.3% of the total population). In 1910 there were private Jewish schools for boys and girls. During the Soviet period the number of Jews dropped to 1,204 (46.3%) in 1926, and again to 711 (17.3%) in 1939. A Yiddish school functioned there. The Germans occupied Liozno on July 16, 1941. To the remaining 600 Jews were added refugees from Vitebsk, Minsk, Bobruisk, and Warsaw. On February 23, 1942, they were herded to the village of Adamenki and, over a period of three days, were murdered together with Jews from the environs, all together nearly 1,500 persons. No information is available on Jewish life in Liozno after World War II.

[Yehuda Slutsky / Shmuel Spector (2nd ed.)]

LIPCHITZ, JACQUES (Chaim Jacob; 1891–1973), U.S. sculptor. He was born in Druskieniki, Lithuania. He attended school in Bialystok and in 1909 went to Paris, where he adopted the name Jacques. There he studied and became a French citizen in 1923. In 1930 he had a large retrospective exhibition which gave him his international reputation. In 1940 the German advance compelled him to leave Paris and seek refuge in unoccupied France. In 1941 he went to the United States, and settled in Hastings-on-Hudson, New York.

Lipchitz was one of the foremost cubist sculptors – his first pure cubist sculpture is dated 1913. He was influenced by the painters Picasso and Braque, and by the visionary El Greco. He developed an interest in African wood carvings which he collected. During this early period, Lipchitz frequently worked in stone. These pieces, with their sharp edges, flat planes, and solid mass came very close to pure abstraction.

In the 1930s, Lipchitz abandoned cubism for a markedly baroque manner of expression. At the same time, he became interested in social and philosophical themes, as distinguished from the harlequins and dancers, bathers, and musicians he had fashioned in his youth. One of the most celebrated baroque pieces is based on the Prometheus myth. His first sketches, made about 1933, show Prometheus a triumphant figure, the guardian of the flame. The second Pro-
of his plays were Der neue Don Juan (written in 1880, published in 1894), Adam (1913), and Hippolytos (1913). Lipiner’s fame reached its peak while he was in his early twenties, but his verse later lost its popularity, though it often received mention in literary histories. He was a close friend of the composer Gustav Mahler.

LIPKANY (Rom. Lipcani), small town in N. Moldova, in the region of Bessarabia. Jews appeared there in the middle of the 17th century. There were 82 Jewish families in Lipkany (out of a total of 203) in 1817, 4,410 persons (63% of the total population) in 1897, and 4,693 in 1930 (79.8% of the total). They were the chief exporters of farm products from Bessarabia to Austria and Germany. During the first half of the 19th century the zaddik Meir of Peremyshlyany lived in the town for several years. The writers Judah Steinberg and Eliezer Steinberg were born there. In May 1936 the Cuza Fascist Party convened in Lipkany, but Jewish self-defense prevented attacks against Jews. In June 1940 the town was annexed to the Soviet Union, and included in the Moldavian S.S.R.

[Sol Liptzin]

Holocaust Period
On June 22, 1941, the Germans bombèd the town, and it was devastated. When the town was taken on July 8, 1941, by German-Romanian forces, they carried out a pogrom the same day in which many Jews were killed, and they robbed almost all houses. The survivors (about 4,000) were taken on July 18 to a forest near Vertyuzhany and from there were sent on a death march which took them to *Sekiryany, *Yedintsy, and back to Yedintsy; the old, the sick, and the children, who were unable to withstand the pace, were shot on the journey. From Yedintsy, the survivors were deported to *Transnistria, where most of them died. Only a few dozen Jewish families from Lipkany were saved by the arrival of the Soviet army. Almost all the young Jews from the town who joined the Soviet army at the beginning of the war were either killed or returned as invalids. One Jew from Lipkany, Abram Schneider, was decorated as a “Hero of the Soviet Union.” The few surviving families, who returned to Lipkany in 1944, left the town soon, immigrating to Palestine.

[Jean Ancel]

LIPKIN (Salanter), ISRAEL BEN ZE’EV WOLF (1810–1883), founder and spiritual father of the *Musar movement.
His father, author of the glosses *Ben Aryeh* on the Talmud and *rishonim*, served as rabbi in Goldingen, Latvia and Telz, Lithuania, and he was later appointed rabbi of Zhagare, where Israel was born. At the age of 12, Israel went to the yeshivah of Zevi Hirsch Broida in Salant, and his reputation there was such that his teacher referred to him as “the little ‘Alfas”; other great contemporary scholars applied similar laudatory appellations to him. His chance meeting with R. Zundel of Salant—a great scholar and an unusually humble and modest man—had a decisive influence on him. Powerfully impressed by Zundel’s personality, Israel attached himself to him, regarding him from then on as his principal teacher, and conducting himself according to Zundel’s ethical principles. He refused to accept rabbinical office, even that of Brest-Litovsk—the major community in Lithuania.

During his whole life, Lipkin sought the best way in which to influence the community. Deciding to become a preacher or a *mashgi‘ah* (“spiritual mentor”) in a yeshivah, he accepted the position of head of a yeshivah in Vilna, where he was quickly renowned for his profound acumen. He soon resigned this post, however, and established his own yeshivah in Vilna. When his fame spread he began to preach sermons giving expression to the doctrine of *musar*, a moral movement based on the study of traditional ethical literature. These sermons attracted huge audiences. He proceeded to found groups for the study of *musar* on the lines of various ethical works. With the consolidation of these groups he established a special institution called a Bet Musar, in which he delivered his *musar* discourses and these became the pattern for similar discourses delivered in all the yeshivot which adopted the teaching of *musar*. These discourses were never recorded apart from several individual ones published by his pupil Shneur Zalman Hirschovitz in *Even Yisrael* (1885).

During the cholera epidemic which swept Vilna in 1848, Lipkin was in the forefront of all the most dangerous relief activities. He gave instructions that every kind of work was to be done on the Sabbath by Jews and was not to be relegated to non-Jews. On the Day of Atonement during the epidemic he ordered the congregation to partake of food, and set a personal example by mounting the pulpit and publicly eating. This dramatic action made a powerful impression both in contemporary and in later literature. His name was put forward to head the rabbinical seminary of Vilna, founded in 1848, but he refused to accept despite the attractive terms offered and the government pressure that was brought to bear upon him. As a result of this pressure he left Vilna and went to Kovno, where he founded a Musar yeshivah, which expanded greatly, attaining a roll of 150 students, many of whom were to become outstanding Lithuanian rabbis. His most important activity during this period was the improvement of the living conditions of the yeshivah students. He abolished the custom of the students being given daily hospitality in private homes, arranged suitable accommodation for them, and insisted that they be properly and neatly dressed. He also taught deportment and aesthetics. The period of study in his yeshivah was highly valued by the students, who saw themselves under “a new heaven and a new earth and an individual superior to all” (*Tenu‘at ha-Musar*, p. 175). Lipkin obtained his livelihood from communal posts in Kovno. Opposition to his methods began during the period of his yeshivah in Kovno, and among his opponents were Joshua Hoeschel of Janow, Abraham Samuel of Rossiyeny, Mordecai Eliasberg of Bauska, and Isaiah of Salant.

In 1857, to the surprise of many, Lipkin moved to Germany—first to Halberstadt for medical attention and later to Koenigsberg, where he lectured to university students on Judaism. In 1860 he went to Memel near the German–Lithuanian border. There he published his periodical *Tevunah*, for the dissemination of Torah and *musar*, to which all the outstanding scholars of Lithuania and Galicia contributed; 12 numbers were published. In Memel he acquired German citizenship, adopted German dress, and even preached in German. He also mastered various secular subjects. He visited several German cities, including Tilsit, Berlin, Frankfurt, and Halberstadt. During this period he maintained contact with his pupils in Lithuania by correspondence. These letters constitute the main source for his system of *musar*. In 1877 he founded a *kolel* for young married students in Kovno; similar institutions were also set up in various towns. Lipkin’s pupils began to establish large yeshivot in Volozhin, Kelm, Telz, and Slobodka, in which *musar* teaching was predominant. In 1880 he went to France in order to disseminate Judaism. Although he suffered greatly there because of his straitened circumstances, he did not cease his activity. He stayed in Paris two years and succeeded in strengthening its Jewish institutions. From Paris he returned to Koenigsberg where he died.

In general Lipkin was revolutionary in his ideas. He proposed the compilation of an Aramaic–Hebrew dictionary for the better understanding of the Talmud, the translation of the Talmud into Hebrew, its printing in one volume, its translation into European languages, its teaching in universities, and the provision of religious books in Russian. Lipkin was also active in the communal and political spheres. He left no large works. He published an article in the *Ez Peri* (1881) and a number of articles from *Tevunah* were later collected in a special work called *Imrei Binah* (1878). His well-known *Iggeret ha-Musar* (“ethical letter”) was first published in Koenigsberg in 1858 and repeatedly republished. Twenty-two letters were collected by Isaac “Blaser, who published them under the title *Or Yisrael* (1900; English translation, 2004). A collection of his discourses recorded by pupils was published under the title *Even Yisrael* (1883); letters and collections appeared in various organs such as *Beit Yisrael*, *Hut ha-Meshullash*, etc. The letters of Lipkin, *Kitvei R. Israel Lipkin*, edited by M. Pacter, appeared in 1973. All these deal with his system of *musar* which spread throughout Lithuania and was adopted by all the yeshivot.

Lipkin was foremost an educator and ethicist, writing and teaching in response to the historical, social, and religious problems of his time. He was keenly aware of the changes going on all around him in the Jewish community, thus his
teachings and writings must be seen as reflecting his social and educational activity.

The central issue that concerned him was the gap between an individual’s professed beliefs and his actions. Searching for the causes of this phenomenon, Lipkin discovered that there was no direct relationship between a person’s piety and his knowledge of Torah. Knowledge attained through the standard yeshivah curriculum did not necessarily produce moral behavior, but knowledge of divine retribution, knowing that no one escapes the consequences of his actions, does affect behavior. This insight, coupled with another one, formed the basis for Lipkin’s *musar* campaign. The second insight relates to the difference between a person’s appetites and desires and knowledge. Contrary to one’s desires, which are innate in a person, knowledge is acquired. For this reason, attaining even the right knowledge is rarely enough to control one’s appetites. To solve this problem, Lipkin developed behavioral mechanisms, i.e., the habitual repetition of emotional, cognitive, and behavioral stimuli, “to fortify the intellectual fear of God that the latter eventually achieves the level of distinct instinct capable of combating less worthy desires or even uprooting them totally” (Ross, *Immanuel*, 1983/84, 70). Later on in his career, Lipkin proposed a different solution based on improving character traits, thus changing one’s personality. All of these teachings were Lipkin’s means to achieve a particular end: an improvement in piety and religious observance.

Lipkin dealt with a number of philosophical issues peripherally in his sermons and writings. These included the paradox of divine knowledge and free will, miracles vs. natural law, the relative ability or inability of the human intellect to grasp objective truth in general or Torah in particular, and the paradox of divine knowledge and free will, miracles vs. natural laws, i.e., the habitual repetition of emotional, cognitive, and behavioral stimuli, “to fortify the intellectual fear of God that the latter eventually achieves the level of distinct instinct capable of combating less worthy desires or even uprooting them totally.”

Among Lipkin’s sons were Yom Tov Lipman *Lipkin, a scientist with an international reputation; ArYeH Leib Horowitz, author of the *Hayyei AryeH* (1907) and rabbi of Choroszcz, Janow, and Brezhin; and Isaac Lipkin, rabbi of Janow, Korets, and Prosnitsa.

LIPKIN, YOM TOV LIPMAN (1845–1875), Russian mathematician, son of Israel Salanter (see Israel *Lipkin*). In his early youth Lipkin demonstrated great interest and promise in the exact sciences, studying higher mathematics on his own. Leaving his family for Koenigsberg, he was admitted to the university there. After finishing at the Berlin Gewerbe-Akademie, he was accepted at the University in Jena, where he presented his dissertation, “Ueber die Räumlichen Stromphöden,” in 1870. Moving to St. Petersburg, he demonstrated his mechanical device for changing linear motion into circular motion, which he had previously written about in *Mélanges mathématiques de l’Académie Impériale à St. Petersbourg* (1870). His kinematic system was included in many Russian and foreign textbooks.

BIBLIOGRAPHY: Slonimski, in: *Vestnik russkikh yevreyev*, nos. 17, 19 (1871); *Ha-Zefirah*, 22 (1874); 22, 24 (1875).

LIPKIN-SHAHAK, AMNON (1944– ), 15th chief of staff of the IDF (1995–98). Lipkin-Shahak was born in Tel Aviv. As a career officer he studied at the IDF Staff and Command College and the National Defense College. In the Six-Day War and Yom Kippur War he had commands in the paratroops. During his service he was twice awarded the Medal of Valor: in 1968 he commanded his troops under enemy fire and in 1973 in Lebanon he carried out his mission under enemy fire and with casualties. As deputy chief of staff he headed the Israeli military team to the negotiations with the Palestinians on the Gaza-Jericho Agreement. As chief of staff, he met with his Syrian counterpart to discuss security arrangements as part of the peace negotiations between the two countries. After his retirement from the IDF he joined the Center Party and was elected to the Knesset in 1999. As part of the coalition, he held the Ministry of Tourism and later of Transport. After the defeat of Ehud Barak in the 2001 election he resigned from the Knesset and became chairman of *Tahal.

BIBLIOGRAPHY: Slonimski, in: *Vestnik russkikh yevreyev*, nos. 17, 19 (1871); *Ha-Zefirah*, 22 (1874); 22, 24 (1875).

LIPMAN, EUGENE JAY (1919–1993), U.S. Reform rabbi. Lipman was born in Pittsburgh, Pennsylvania. A traditionalist and a Zionist, Lipman would have attended the Jewish Theological Seminary but an interview with its chancellor who asked him only about the nature of his religious observance, and nothing more, alienated him. He went instead to the Hebrew Union College where he was ordained in 1943 and served for a year at Temple Beth-El in Fort Worth, Texas. As a chaplain in the U.S. Army (1944–46, 1950–51) he was instrumental in aiding the flight of Jews from Eastern Europe through Czechoslo-
Lipman was director of the "Jewish Agricultural Society. In 1927 he was on the commission of experts surveying Palestine, and in 1929 he became a member of the Jewish Agency for Palestine.

[Samuel Aaron Miller]

LIPMAN, LEVI (Isaac Libman; first half of 18th century), merchant of Courland and financial agent for the imperial Russian court. Lipman's name is found in documents from the reigns of Peter II (1727–30) and Anna (1730–40), occasionally with the addition of the titles Ober-Hof-Kommissar and Kammeragent, as a purveyor of various goods and precious stones to the imperial court. His name is sometimes mentioned as a shtadlan active on behalf of the Jews. He was a favorite of Prince Dmitri Golitsyn and later of Count Biron, the "strong man" at Czarina Anna's court. When Biron was appointed duke of Courland in 1737, he entrusted Lipman with all the financial affairs of the duchy. He pursued his commerce in St. Petersburg and maintained his relations with the imperial court even after the fall of Biron. As he was the sole Jewish figure at the court of St. Petersburg, his contemporaries exaggerated the extent of his influence. (One ambassador wrote of him: "Lipman is the actual ruler of Russia." ) In fact, Lipman was merely one of the "Court Jews who were characteristic of that period in Europe.

[Yehuda Slutsky]

LIPMAN, VIVIAN DAVID (1921–1990), British administrator and historian. Born in London, Lipman served in the British army during World War II before obtaining his doctorate at Oxford University. He entered the British Civil Service in 1947 and worked as an administrator on housing, local government, and urban planning. From 1972 to 1978, he served as director of ancient monuments and historic buildings, which included responsibility for archaeology and the royal palaces and parks. In addition to publications on administrative history, notably Local Government Areas (1949), and the British architectural heritage, he wrote extensively on Anglo-Jewish history, such as Social History of the Jews in England (1954), A Century of Social Service (1959), The Jews of Medieval Norwich (1965), and his edited collection, Three Centuries of Anglo-Jewish History (1961). Lipman's survey of modern Anglo-Jewry, History of the Jews in Britain Since 1858 (1990), appeared posthumously. In his evolution as a historian, Lipman was influenced to a certain extent by the trend to see more antisemitism in British society than had been noted by previous historians, while providing a generally optimistic view. He served as president of the Jewish Historical Society of England and was an honorary research fellow of University College London and a fellow of the Society of Antiquaries. In collaboration with

vakia. Together with such rabbis as Abraham Klausner and Herbert Freidman, Lipman provided enormous support for the seemingly clandestine escape of Jews – Holocaust survivors – into the American and British sectors. He worked with the Russians to transfer the last survivors in Theresienstadt to the U.S. occupation zone. He organized transports of survivors from Prague through Pilsen to Italy, en route to Palestine. He returned as a civilian as liaison officer for the U.S. Army and the Jewish Agency for Palestine, working with the Haganah (1947–48). His role of rescue and his work with the Haganah used to irritate right-wing critics of his more dovish views on Israel in the 1980s, who could not challenge his commitment or match his service. From 1951 to 1961 he was director of the Commission on Social Action and the Commission on Synagogue Activities of the Union of American Hebrew Congregations, where he was instrumental in the establishment of the Religious Action Center in Washington, D.C., the arm of the Reform movement in the heart of the American capital where it represents Liberal Judaism and liberalism in the political and social fights of the day. Because of his service in Europe, Rabbi Leo Baeck entrusted the young rabbi with a Megillat Esther that had been read in Theresienstadt. In return he demanded that the megillah be kept in proper order so that it could be read in the synagoge each year and that the story of this megillah – the story of Purim and of Theresienstadt – be told. Lipman complied. Years later when he wanted to make the megillah available for display at the United States Holocaust Memorial Museum, it was for 364 days a year: once a year it had to be returned to a synagogue where it would be read.

From 1961 he was rabbi of Temple Sinai, Washington, D.C., which had been the home of activist liberal rabbis. Lipman was active in every branch of Reform Judaism and also served as president of the Central Conference of American Rabbis and president of the Washington, D.C. Interfaith Conference, the first interfaith group in the United States which joined Jews, Protestants, Catholics, and Muslims. He took pleasure in mentoring young rabbis without regard to their movement or religious affiliation. He wrote Justice and Judaism: The Work of Social Action (1956) and coedited A Tale of Ten Cities: The Triple Ghetto in American Religious Life (1962). A classic scholar, he also edited and translated The Mishnah: Oral Teachings of Judaism (1975).

[Michael Berenbaum (2nd ed.)]

LIPMAN, JACOB GOODALE (1874–1939), U.S. soil chemist and bacteriologist. Lipman was born in Friedrichstadt, Latvia. His parents were expelled from Moscow in 1888, and went to the U.S. In 1898 he joined the New Jersey State Agricultural Experimental Station and was its director from 1911. In 1910 he became professor of soil fertility and bacteriology at Rutgers and from 1913 to 1939 was professor of agriculture. Among the books he wrote were Bacteria in Relation to Country Life (1908) and A Laboratory Guide of Soil Bacteriology (1911, with P.E. Brown). He edited several journals including Soil Science which he founded in 1916.
his wife, Sonia, he also wrote on contemporary social trends in Anglo-Jewry.

**LIPMANN, FRITZ ALBERT** (1886–1960), U.S. biochemist and Nobel Prize winner. Lipman was born in Koenigsberg, Germany. From 1927 to 1931 he pursued research at the Kaiser Wilhelm Institute in Berlin and at Heidelberg. With the rise of the Nazi regime he left Germany and went to Denmark, working at the Biological Institute of the Carlsberg Foundation in Copenhagen from 1932 to 1939. He then immigrated to the United States and worked at Cornell University from 1939 to 1941, at the Massachusetts General Hospital from 1941 to 1947, and at the Harvard University Medical School, where he was professor of biological chemistry from 1949 to 1957. In 1957 he was appointed professor at the Rockefeller Institute for Medical Research in New York.

In 1953 Lipmann was awarded the Nobel Prize for medicine and physiology, which he shared with Hans *Krebs, for his discovery of coenzyme A and its importance for intermediary metabolism. This substance plays an important role in the "Krebs cycle" through which food is converted into carbon dioxide, water, and energy. Lipmann found that coenzyme A contains pantothenic acid, one of the vitamin B group. His hundreds of contributions to scientific journals include papers on metabolism, vitamin function, and cell structure.

[Samuel Aaron Miller]

**LIPMANN, OTTO** (1880–1933), German psychologist and expert in vocational guidance. Lipmann was one of the pioneers in Germany of psychological counseling for the selection of a profession. According to Lipmann, effective counseling came from a knowledge of the individual's characteristics and this determined the profession suitable for him. Lipmann suggested a method of examining the individual by means of tests and questionnaires, followed by an analysis of professions. Lipmann was the first psychologist to employ statistics in his work. He prepared several "psychograms" of professions such as telegraphist, typesetter, businessman, metal worker, academic worker, etc. Lipmann was the founder of the Institute for Applied Psychology in Berlin and editor (together with William Stern) of the *Zeitschrift fuer angewandte Psychologie*. His works include *Psychische Geschlechtsunterschiede* (2 vols., 1917, 1924), *Wirtschaftsprüfungspsychologie* (1918, 1921), and *Grundriss der Arbeitswissenschaft und Ergebnisse der arbeitswissenschaftlichen Statistik* (1926).

[Haim Orman]

**LIPNIK NAD BEČVOU** (Czech. Lipnik nad Bečvou; Ger. Leipnik), town in N.E. Moravia, Czech Republic. A synagogue is first mentioned there in 1540, though a Jewish settlement existed at least a century before. Most of Lipnik's Jews were engaged in textile production and in the import of livestock from Poland. In 1570 an economically injurious obligation to lend horses to the local gentry was abolished and the Jews' right of residence in perpetuity acknowledged in return for a payment. The community grew to 40 households in 1665. The rabbinate was founded in the late 16th century. Renowned rabbis included Moses Samson *Bacharach* (1632–44), who composed a *selihah* on the sack of the town by Swedish troops in 1643, Isaac *Eulentburg* (1652–57), and Isaiah b. Shabbetai Sheftel *Horowitz* (1658–73). Under the rabbinates of Baruch *Fraenkel-Teomim* (1802–28), Solomon *Quetsch* (1832–54), and Moses *Bloch* (1856–77), the yeshivah attracted pupils from all Europe. Rabbi F. Hillel (1892–1928) wrote the history of the community. In 1567 a third cemetery was opened (a fourth in 1883). The community was constituted as one of the political communities (see *Politische Gemeinde*) in 1850. Its population grew from 975 in 1794 to 1,259 in 1830, and 1,687 in 1857, but declined to 212 in 1921. In 1930 the community numbered 154 (2% of the total population). The community came to an end when its members were deported to the Nazi extermination camps in 1942. After World War II the congregation was renewed for a brief period. The synagogue equipment was sent to the Central Jewish Museum in Prague. The building was used from 1949 by the Hussite church. Lipnik was the birthplace of the industrialists David and Wilhelm *Gutmann, who established an institution for the poor in their mother's house in 1903.*

**LIPNO,** town in Warsaw district. Jews are first mentioned in Lipno in 1677. In 1736 the community paid a poll tax of 150 klo-ty. In 1808 there were 777 Jews (85% of the total population) in the town. Between 1824 and 1864 the authorities compelled the Jews to reside in a separate quarter. The Jewish population numbered 892 in 1827, increasing to 1,558 (40%) in 1857, and 2,079 (36%) in 1897. At that time more than 50% of the town's commerce was in Jewish hands. In 1921 there were 2,443 Jews (29%) in the town itself and 4,795 (5.2%) in the district. There were 102 Jewish industrial enterprises.

**Holocaust Period**

During World War II, Lipno belonged to Reichsgau Danzig-Westpreussen, included in the Reich by Hitler's decree of Oct. 26, 1939. Before the war, Lipno had about 1,300 Jews. When the war broke out many Jews fled to the east, mainly to the western towns of the General Government. The War-
saw ghettos in August 1940 had about 300 Jewish refugees from Lipno. By the end of December 1939, the town was declared *Judenrein.

LIPPE, KARPEL

LIPPOVETS, town in Vinnitsa district, Ukraine. Jews appeared there in 1747 after the community was completely destroyed during the *Chmielnicki massacres (1648–49). Reestablished, it increased from 1,802 in 1847 to 4,135 (47.6% of the total population) in 1897. Two Jewish state schools existed there in the beginning of the 20th century. Jews numbered 3,605 (41.7%) in 1926, dropping to 1,353 (52.6% of the total) in 1939. During the Soviet period a Yiddish school operated there as did a Jewish local council in the 1920s. A few dozen Jewish families were occupied in farming. The Germans took Lipovets on July 24, 1941, and on September 12 they killed 163 Jews, and in October another 70. The rest were probably murdered in the beginning of 1942.

[Yehuda Slutsky / Shmuel Spector (2nd ed.)]

LIPPE (Lippe-Detmold), former state in N.W. Germany. Jews are first mentioned in 1345 when they were ordered by Bernard v to bring their cases before his ducal court and not the Feme or private courts, an order which promised them greater security. The capital, Detmold, became the leading community after Jews were permitted to settle there in 1500. In 1583, 12 Lippe families moved to Altona. During the late 17th and 18th centuries, *Court Jews, who generally controlled the tobacco monopoly, exercised broad executive power over the Jews of Lippe, filled the office of rabbi, and were court financiers as well. Though no dynasty of Court Jews established itself, Joseph Isaac was the most prominent and powerful. In 1732 complaints were lodged against the growing number of Jews. Family *names were imposed on the 175 Jewish families in the county (27 in Detmold) in 1810. Civil rights were granted in 1858 and 1879. Twelve communities were included in the regional union of communities. The number of Jews in Lippe declined from 1,024 in 1885 to 900 in 1904, 780 in 1913, and 607 (0.32% of the total population) in 1928. Until 1742 services were held in a rented prayer room; after that a barn was converted into a synagogue, and a new building was not erected until 1904. Lippe had no rabbi after 1879. After the Nazi rise to power (1933), the Jewish population came to an end through emigration, persecution, and deportation. After 1945 a small Jewish community was founded in Detmold, which was later united with the community in Herford. In 1989 the Herford-Detmold Jewish community numbered 23 and about 100 in 2005. About 90% of the members were immigrants from the former Soviet Union.

The tiny neighboring principality of Schaumburg-Lippe was notable for its dynasty of Court Jews founded by Isaak Heine, who received a letter of protection in 1682. In 1705/6 he and his cousin, Behrends *Leffmann, successfully averted an expulsion order. His family continued to serve the rulers of the principality for three generations; most distinguished of his descendants were the financier Salomon *Heine and the poet Heinrich *Heine.

[Larissa Daemmig (2nd ed.)]

**LIPPE, KARPEL** (1830–1915), early member of Hovevei Zion and the Zionist movement. Born in Stanislav, Galicia, Lippe became a physician in Jassy, Romania. From 1865 he published many articles as well as pamphlets and books on science, defense of the rights of Romanian Jews, apologetics on Judaism, the Jewish religion and its attitude toward Christianity, etc. He also composed poetry, which he would sometimes read at gatherings instead of delivering a speech. When a society to settle in Ereẓ Israel was established in Romania, Lippe became its chairman (1880). From that time he was active in the *Hibbat Zion movement, especially on behalf of the settlements of *Zikhron Ya’aakov and *Rosh Pina- nah, which were established by Romanian Jews. He was a participant at the conference of Hovevei Zion in Kattowitz (1884). When Theodor *Herzl’s *Judenstaat appeared, Lippe wrote an article in the Berlin monthly Zion (1896) in which he rejected the idea of a Jewish state. Instead, he counseled the Jews to settle in Ereẓ Israel as Turkish citizens and strive for autonomy similar to that of the Austrian Empire in Galicia. Lippe nonetheless joined the new Zionist movement, was elected to the First Zionist Congress in Basle, and, being its senior delegate, delivered the opening speech. He considered himself one of the three initiators of the Zionist idea, together with Leon *Pinsker and Isaac *Ruef, and as such he published the book Meine 25-jahrige Zionistische Agitation (1902). He was elected chairman of the Jassy Conference of Romanian Zionists (1903). In 1911, Lippe returned to Galicia and settled in Przemysl, but with the outbreak of World War I he fled to Vienna, where he died. Among his works are Symptome der Anti-semitischen Geisteskrankheit (1887) and Zwei Vortrage uber Unsterblichkeit und Spiritismus (1907).

**BIBLIOGRAPHY:** I. Klausner, Hibbat Ziyyon be-Rumanyah (1958), index.

[Israel Klausner]
LIPPMANN, EDMUND OSKAR VON (1857–1940), German industrial chemist. He was born in Vienna and was director of sugar refineries in Duisburg (1881–86) and Halle (1890–1926). In 1926–32 he was honorary professor of chemical history in Halle. He wrote the standard books of his period on sugar, *Chemie der Zuckerarten* (1900), *Geschichte des Zuckers* (1890, 1902), and *Entwicklungen der deutschen Zuckerrindustrie von 1850–1900* (1900). He was a leading historian of chemistry, writing *Entstehung und Ausbreitung der Alchemie* (1919, 1931), *Geschichte der Ruebe als Kulturpflanze* (1925), *Geschichte der Naturwissenschaften* (two volumes, 1923), *Geschichte des Wismuts zwischen 1400 und 1800* (1930), and others.

**BIBLIOGRAPHY:** J.C. Poggendorff, *Biographisch-literarisches Handwoerterbuch der exakten Naturwissenschaften*, 7a (1959), 111. [Samuel Aaron Miller]

LIPPMANN, EDUARD (1842–1919), Austrian organic chemist. Born in Prague, Lippmann worked for a time with the French chemist, Charles Wurtz in Paris, and in 1868 became an instructor at the University of Vienna. In 1873 he went to teach at the Technische Hochschule at Brno, Moravia, but returned to Vienna in 1875 to become professor of chemistry at the university. In 1877 he was appointed professor of analytical chemistry at the Handelsakademie and from 1881 held the same position at the Technische Hochschule. Lippmann developed in 1886 what became the standard technique for determining carbon and hydrogen in organic compounds. Among the subjects dealt with in his numerous publications were benzyl alcohol, diethyltoluene, azobenzenes, antracene, and alkaloids.

**BIBLIOGRAPHY:** J.C. Poggendorff, *Biographisch-literarisches Handwoerterbuch der exakten Naturwissenschaften*, 4 (1904), s.v.; 5 (1926), s.v. [Samuel Aaron Miller]

LIPPMANN, GABRIEL (1845–1921), French physicist and Nobel Prize winner. Though born in Luxembourg, Lippmann spent most of his life in Paris. In his association with the *Annales de chimie et de physique*, for which he prepared summaries of the articles written in German, enabled him to keep abreast of innovations in electricity. After working in Heidelberg and under the brilliant H.L.F. von Helmholtz in Berlin, Lippmann was appointed professor of probability and mathematical physics at the Sorbonne (1883–86). From 1886 he was professor of experimental science and director of the Sorbonne’s research laboratories, a position which he held until his death. Lippmann was responsible for much basic work in classical physics. His early research at Heidelberg was concerned with the effects of electrical charges on surface tension leading to the development of the “capillary-electrometer.” In 1879 he presented before the Académie des Sciences, to which he was elected seven years later, his work dealing with the effective mass of a charged body, in which he claimed that the moment of inertia in a charged body was higher than that of an uncharged body. This conclusion is of fundamental importance in the study of the electron. He also devised various scientific instruments: in astronomy his outstanding contributions were the development of the coelostat, an instrument for obtaining a stationary image of the sky, and the uranograph, an instrument for obtaining a map of the sky with lines of longitude at equal time-intervals. He achieved fame in 1891 through his production of color photographs based on the phenomenon of interference, although the three-color system proposed by J.C. Maxwell was preferred. Lippmann was nevertheless awarded the Nobel Prize for physics for the results of this research. His most important works were his *Cours de thermodynamique* (1886) and *Cours d’acoustique et d’optique* (1888). Lippmann was elected president of the Académie des Sciences in 1912.

LIPPMANN, WALTER (1889–1974), U.S. journalist, whose writing exerted influence on public policy. Born in New York, Lippmann was for several years an assistant to the philosopher George Santayana. In 1914 he began his journalistic career as founder and associate editor of *New Republic*, a journal of liberal opinion. He left at the outbreak of World War I to serve as an assistant to Newton D. Baker, secretary of war in the Wilson administration, and later helped prepare data for the Peace Conference at Versailles. Lippmann in 1921 joined the staff of the *New York World*, a crusading newspaper noted for its attacks on corruption, poverty, and injustice. He served as editor from 1929 until the paper ceased publication two years later. He then wrote a column on public affairs for the *New York Herald-Tribune*, which was syndicated to more than 250 papers in 25 countries and made him widely known and respected. He was awarded two Pulitzer Prizes, in 1958 and 1962. His political philosophy, as expressed in his newspaper writing and nearly 30 books, showed a gradual modification from socialism to liberalism to independent conservatism. His volumes include *Preface to Politics* (1913), *Public Opinion* (1922), *The Phantom Public* (1925), *Preface to Morals* (1929), *Good Society* (1937), *Cold War* (1947), *Essays in the Public Philosophy* (1955), and *Drift and Mastery* (1961).

LIPPOLD (d. 1573). Court Jew to Joachim II (1535–71), elector of Brandenburg. When in 1556 he was appointed “supervisor” of Brandenburg Jewry and collector of all monies paid by it to the court for ten years, the elector called him “our beloved, faithful Lippold.” Nine years later he was elevated to the position of mintmaster, a post which involved clipping, devaluing, and reminting coins to the benefit of the elector. Lippold exploited Joachim’s insatiable passion for women,
alchemy, and money to attain a position of confidence and power. Ruthless and rapacious toward Jews and Christians alike, as private moneylender he charged an exorbitant interest rate (54%), borrowed large amounts with no intention of repaying them, and practiced embezzlement and extortion at will. Immediately after Joachim’s death (Jan. 2, 1571) disorders broke out in Berlin and Lippold was arrested. At his trial his crimes, real and alleged, were revealed; he was also accused of sorcery and of poisoning the elector. On Jan. 28, 1573, he was executed and quartered, after refusing baptism and withdrawing his confession. The Jews were expelled from Brandenburg soon after.

LIPSCHITZ, JACOB HA-LEVI (1838–1921), Hebrew writer and opponent of the Haskalah. Born in Vilkomir (Ukmerge), Lithuania, Lipschitz was the secretary, assistant, and representative on public affairs for R. Isaac Elhanan “Spektor from 1870 to 1896. He was one of the organizers of the fact-finding mission on the 1881–82 pogroms and persecutions of Russian Jewry which sent reports to the Jewish centers of Western Europe. He wrote sharply-worded articles (usually anonymous) against the Haskalah and its leaders, gradually becoming the leading Orthodox journalist and Orthodoxo’s spokesman in its polemics against the religious reforms proposed by the Hebrew writers M.L. “Lilienblum and J.L. “Gordon. He encouraged the publications of the religious press (e.g., Ha-Levanon, Ha-Kerem, Ha-Peles, Ha-Modi’a), to which he contributed regularly. He issued manifestos and lampoons against the Zionist movement from his office in Kovno (“the Black Office” to his opponents). His books include Divrei Shalom ve-Emet (1884), against the proposal to establish a rabbinical seminary in Russia, and a biography of Spektor (Toledot Yiẓhak, 1897; also in Yid. as Geon Yiẓhak, 1899). His Orthodox ideology is presented in Sefer Mahazikei ha-Dat (1903). His Zikhron Ya’akov (3 pts., 1924–30), which he wrote during his World War I exile in the Ukraine, contains historical notes and personal memories. It was published after his death by his son Nathan Nata Lipschitz and is an important source for the history of the Jews in Russia during the 19th century.

LIPSCHITZ, RUDOLF OTTO SIGISMUND (1832–1903), German mathematician. Born in Koenigsberg, he later taught in the secondary schools of Koenigsberg and Elbing. In 1857 he was appointed a lecturer at the University of Bonn and later became rector. Lipschitz’s work was greatly influenced by his teachers Peter Dirichlet (1805–1859) and G.F.B. Riemann. His contributions to mathematics and physical mathematics were mostly in the theory of numbers, the computation of variations, progressive series, and the theory of potential and analytic mechanics. With the French mathematician Augustin Louis Cauchy (1789–1857), he proved the theorem of prime importance in differential calculus and equations concerning the existing solutions to the equation \(dy/dx = f(x,y)\).

[LIPSCHITZ (Lipschuetz), SOLOMON BEN MOSES (1675–1758), German hazzan and writer. Born in Fuert, he was the son of a hazzan, Lipschitz practiced his profession as a hazzan in several communities, including Prague and Frankfurt, before settling in Metz in 1715. His book Teudat Shelomo (Offenbach, 1718) combines instructions and moral precepts for the hazzan with the writer’s personal reminiscences – both of them valuable historical evidence.

[LIPSCHITZ, SOLOMON ZALMAN (1765–1839), Polish rabbi, first chief rabbi of Warsaw, known as “Hemdait Shelomo” after his works of that name. Lipschitz, who was of a wealthy family whose members included the kabbalist Solomon Zalman Auerbach (17th century), was born in Poznan. Until he was 40 years old he lived and studied there, and therefore was also known as Solomon Zalman Posner. In 1804, after he had lost his fortune and his father-in-law was unable to continue to support him, he became rabbi of Nasielsk, where he also founded an important yeshivah. Lipschitz was unable to bear the atmosphere of Nasielsk, which was becoming increasingly hasidic. In 1806 he received a call to be rabbi of his home town, but he refused in order to protect his children from the influence of the Haskalah, which had spread from Germany. In 1819 he was elected rabbi of Praga (a suburb of Warsaw) where there was a large Jewish population. With the development of the Warsaw kehillah, he was appointed rabbi of the community (1821). There, too, he founded an important yeshivah. Among its students were many who later became Polish rabbis. As chief rabbi of Warsaw, he led the opposition to the Haskalah movement, the assimilationists, and the rabbinical seminary established there, which became a stronghold of assimilation under the direction of Anton *Eisenbaum. During the Polish insurrection against the czarist regime in 1831, Lipschitz opposed Jews joining the city guard as they would have been obliged to shave off their beards. He was in halakhic correspondence with many contemporary rabbis, including R. Akiva Eger, Moses Lorbeerbaum, R. Jacob of Lissa (Lesno), R. Meir Weyl of Berlin, R. Abraham Tiktin, and R. Aryeh Leib Zinz, and many rabbis turned to him with their halakhic problems. His responsa and decisions are cited in the halakhic works of many Polish rabbis. When he died, a month of mourning was proclaimed. A special announcement issued by the community forbade women to wear jewelry during that month. Lipschitz is the author of three works, all entitled Hemdait Shelomo: responsa (Warsaw, 1836); novelae on various tractates of the Talmud (3 pts., 1851–92); and...}
LIPSCHUETZ (Lipschitz, Lifschitz, Lifshys, Lipsyc, Lipschuetz), widely dispersed Jewish family, which provided a large number of rabbis and scholars. The name is probably an indication of their origin and points to either Loebeschuetz (Lubczyce; now Glubczyce) in Silesia, Liebschuetz in Thuringia, or to Liebschitz in Bohemia. The derivation from the feminine name Liebscha is not acceptable. According to M. *Brann (see bibl.), the first well-known bearers of this name were the 16th-century R. MOSES BEN ISAAC LIPSCHUETZ of Brzesc-Kujawski and Gdansk (Danzig), and ISAAC LIPSCHUETZ of Poznan. In the first half of the 17th century members of this family included R. BENJAMIN BEN RUSH, rabbi in Brest-Litovsk, son-in-law of R. Saul *Wahl and perhaps the son of the aforementioned R. Moses; R. ISRAEL MORDECAI BEN ELIJAH, who was one of those who approved in 1609 the Prague edition of R. Eliezer b. Nathan’s Even ha-Ezer (1610); R. HAYYIM BEN ISAAC, hazzan in Poznan, who published additions to a commentary on the *kinot by the haazzan Asher b. Joseph (Lublin, 1617); R. MOSES BEN NOAH ISAAC in Poznan; and R. Gedaliah b. Solomon *Lipschuetz from Lublin. In the second half of the 17th century R. ELIJAH lived in Brest-Litovsk, R. MOSES BEN ENOCH in Burgpreppach. From Gedaliah Lipschuetz (see Israel b. Eliezer *Lipschuetz and his son Gedaliah), who lived in Ostrava at the beginning of the 17th century, descended an unbroken line of learned rabbis right to modern times. Among the last members of this learned family were the Mishnah commentator R. Israel b. Gedaliah *Lipschuetz and his son R. Baruch Isaac *Lipschuetz.

LIPSCHUETZ, ELIEZER MEIR (1879–1946), Hebraist, religious educator, and historical writer in Erez Israel. Lipschuetz was born in Skole (Galicia). He was a businessman in Lemberg, but influenced by S. *Buber, he began studying medieval Jewish history and literature. Lipschuetz had early devoted himself to the revival of Hebrew, not only as a literary medium, but also and above all as a spoken language (in the Sephardi pronunciation). He attracted a circle of like-minded friends, such as Joseph Babad, A. *Barash, H. *Yalon, Mordecai Ben-Ezekiel, and, especially, S.Y. *Agnon. His wife, too, spoke Hebrew and his child was the first in Lvov to grow up with Hebrew as his mother tongue. In 1910 Lipschuetz began teaching Hebrew and Jewish history at the Ezra teacher’s seminary in Jerusalem. As the result of the Hebrew versus German conflict, he left to take up a post with the Hebrew Teachers Seminary. In 1917 he was expelled from Palestine by the Turks and found refuge in Berlin, where he continued studying and writing to Jewish scholars. In 1920 he returned to Palestine and the following year founded the Mizrachi Teachers’ Seminary, which he headed until his death. Lipschuetz worked actively in the religious education department of the Zionist Organization and was one of the architects of the Mizrahi school network. He was also an active member of the Va‘ad ha-Lashon, now the Academy of the Hebrew Language. In addition to Lipschuetz’ *Raschi (1912), a classic biography, he wrote a great number of essays on scholarly educational, literary, and linguistic subjects. Among these is one on S.Y. Agnon (1926), whose importance he was one of the first to recognize. A large part of his work was reissued in his collected writings, Ketavim (3 vols., 1947–57), but much remains in manuscript, including a voluminous correspondence.

LIPSCHEUTZ, GEDALIAH BEN SOLOMON ZALMAN (16th–17th century), Polish scholar, author, and Jerusalem emissary. Lipschuetz was a pupil of *Meir b. Gedaliah (the Maharam) of Lublin. In 1618 he emigrated from Poland to Erez Israel. On the way he stayed in Prague where he obtained from the local scholars, Solomon Luntschitz and Isaiah ha-Levi *Horowitz (the Shehah), commendations for his work Ez Shatul, a commentary on the Ikkarim of Joseph *Albo. That same year he proceeded to Venice, where he published that work, and where he also proofread the collection of responsa of his teacher Meir, which were published that year, with the title Masmir Eynei Ḥahamim. From there he continued to Erez Israel and settled in Jerusalem. He was there in 1626 during the oppression of the Jews of Jerusalem at the hands of the tyrannical governor Muhammad ibn Farukh. When Farukh was dismissed the following year, and the heads of the Jerusalem community sent emissaries to the Diaspora to solicit aid in reconstructing the community, Lipschuetz was sent to the Balkans. At the beginning of the summer of 1629 he was in Belgrade, where he endorsed a halakhic responsum of Judah Lerma (see the latter’s responsa Peletat bat Yehudah, no. 27, end).

LIPSCHEUTZ, ELIEZER BEN SOLOMON (d. 1826) eked out a meager living serving as rabbi to various smaller Jewish communities in East Prussia, among them Obryzcko and Chodziez (now in Poland). In 1809 he came into conflict with the local authorities when he opposed an edict forbidding the settlement of conflicts by recourse to Jewish courts. Gedalia was the author of Humei Mattina (Berlin, 1784) in six parts: comments on the Talmud and its main commentaries with special attention given to the tractates Nazir and Nedarin; an explanation of unusual words in the Talmud; novellae on *Asher b. Jehiel titled Ateret Rosh; notes on Isaac *Alfasi titled Ma’aseh Ilpas; Minei Targimon, comments on Targum Onkelos and Rashi’s Pentateuch commentary; *Meir *Kash-Sha’ashnah, comments on difficult passages in the Mishnah. In his approbation of this work the father mentions 17 works of his son as existing in manuscript form. Gedalia also wrote Regel Yesharah (Dyrenerfurth, 1777), containing a list of unusual words left unexplained by Rashi in his commentary on the Talmud, referring to other passages where an explanation is found; comments on the order Nezikin and the minor tractates of the Talmud; an excursus on talmudic weights and measures; and an elucidation of the geometrical matter in chapters three and five of the tractate Kilayim. The allegedly presumptuous tone of this work, combined with the conceit and contentious disposition of its author, led to its disparagement among the maskilim who coined the saying, “the author of the Regel Yesharah (‘Straight Foot’) is a twisted blockhead.”

[Jacob Haberman]

LIPSCHEUTZ, ARYEIH LEIB (d. c. 1849), talmid and hasidic rabbi. He was born in Jaroslaw and was the pupil of Aryeih Leib b. Joseph ha-Kohen *Heller, author of *Kezot ha-Hoshen, and of Jacob Isaac Horowitz of Lublin. Aryeih was the son-in-law of Moses *Teitelbaum, rabbi of Ujheły, and himself served as rabbi in several Galician communities. His last post was at Brigel, where he died. He is the author of two books of novellae, *Ari she-ba-Havurah (1852), on Ketubbot, and *Hiddushei Aryeih de-VeI-Ilay (1880), on *Kiddushin, *Yoma, *Menabot, *Kinnim, and *Niddah. In addition he published a book of responsa Aryeih de-Vei-Ilay (1874) on the four parts of the Shulhan Arukh.

LIPSCHEUTZ, ELIEZER BEN SOLOMON (d. 1750), rabbi and talmid. When he was over the age of 30, he became the rabbi of *Ostrowiec (Poland). There he had many pupils, but he left for Germany where he wandered from post to post because of differences with his communities. Through the influence of his wife’s uncle, Simeon Jolles, the leader of the community, he obtained a position in Cracow. There also he
made enemies and after Jolles' death he left Cracow. Finally he secured a position at Neuwied where he remained until his death. He published Heshiv R. Eliezer ve-Sīḥah la-Sadeh (Neuwied, 1749) in two volumes: (1) responsa with notes by his son Israel; and (2) (subtitled Dammesek Eliezer) novellae on Yoreh De'ah and Hoshen Mishpat. He carried on correspondence with noted authorities of the time. Another member of his family was R. Israel b. Gedaliah Lipschutz, the author of Tiferet Yisrael.

**LIPSCHUTZ, ISRAEL BEN GEDALIAH** (1782–1860), German rabbinic scholar. Lipschutz served as rabbi in the towns of Wronki (1821), Dessau and Colmar (1826–37), and Danzig (1837–60). His fame rests upon his commentary to the Mishnah, entitled Tiferet Yisrael, one of the finest of its class. In this work, he explains the laws of the Mishnah briefly, offers new interpretations to difficult passages, particularly in the orders of Zera'im, Kodashim, and Tohorot, and adds everywhere the halakhic ruling as decided on in the Shulhan Arukh and its commentaries. To each of the orders of Moed, Kodashim, and Tohorot, he prefaces general introductions comprising a methodic summation of all the principles of the order, after the manner of *Maimonides in his introduction to his commentary on the Mishnah. A considerable portion of the commentary is taken from that of his son, Baruch Isaac Lipschutz, as well as from Akiva Eger, Elijah b. Solomon (the Gaon of Vilna), and others. Tiferet Yisrael became the most widespread Mishnah commentary and is regarded as an invaluable adjunct to that of Obadiah *Bertino. Lipschutz's commentary to Zera'īm, Zera Emunah, and to Tohorot, Tā'am ve-Da'at, with a general preface entitled Ye-vakkesh Da'at, was published in Hanover (1830). His commentary to Nashim, Ḥosen Rav, was published later (Danzig, 1843). Appended to it was Avi Ezer, a work by Lipschutz's father on the Shulhan Arukh, Even ha-Ezer. The commentary to Mo'ed, Davar be-Itto (ibid., 1844), included an introduction dealing with topics relevant to the Sabbath and intercalations. Nezikin was published in Danzig in 1845, along with a treatise on immortality and the resurrection. Kodashim, under the title Hokhmah Elohim (Koenigsberg, 1850), includes laws of the order entitled Ḥomer ba-Kodesh at the beginning, and diagrams of the Temple and altar at the end. The commentary was republished in its entirety (Berlin, 1862) with additions by Lipschutz's son Baruch Isaac. Lipschutz also composed an extensive commentary to the order Tohorot, Ateret Tiferet (Vilna, 1887–95), in which he separated the plain interpretation from the pilpul, calling the former *Yakhim* and the latter *Bo'az,* and added a section giving the halakhic rulings, *Hilkheta Gevurta,* at the end of each chapter. In later editions of the Mishnah Tiferet Yisrael was similarly divided. He also published a brief commentary to the Mishnah called Zera Yisrael (Vilna, 1852), and his ethical will was published in Koenigsberg in 1861. His son mentions that Lipschutz left in manuscript sermons, notes on the Talmud, on Maimonides and on the Shulhan Arukh, and many responsa. He apparently also compiled Rakhei Avot, a commentary on Avot, and Megillat Setarim.

[Abraham David]

**LIPSCHUTZ, SHABBETAI BEN JACOB ISAAC** (1845–1929), rabbi, kabbalist, and author. Lipschutz was born in Rohatyn, Galicia, and from 1907 served as a rabbi in Beregszász (now Irsha, Sub-Carpathian Ruthenia, Ukraine). He wrote Berit Avot (also entitled Sharvit ha-Zahav he-Hadash), on the laws of circumcision (1898; with supplement, 1912); Pidyon Nefesh (also entitled Sha'arei Pedut), on the redemption of the firstborn (1899); Segullot Yisrael (also entitled Sefer ha-Hayyim) on healing by sympathetic treatment (1905); a second edition together with Sussman Sofer's Even Segullah (1908); notes on the Shemirat ha-Nefesh (1872) of Israel Matthais Auerbach (1901); Kol Todah, a commentary on the Book of Esther (1884 and 1888); Tiferet Yaakov, homilies on the Pentateuch (1912); Sha'arei Rahanim, a commentary on Ephraim Zalman Margaliot's Sha'arei Efrayim (1932); and Likkutei Shoshannim (also entitled Sefer ha-Eshel), on various halakhic matters (1949). A number of his works have remained unpublished.

**BIBLIOGRAPHY:** S.N. Gottlieb, Oholei Shen (1912), 212; A. Stern, Meliẓei Esh, 3 (1962), chapter Adar, 57b, no. 263.

[Samuel Abba Horodezky]

**LIPSCHUTZ, SOLOMON BEN MORDECAI** (d. 1736), Dutch rabbi. Born and educated in Lisse, Lipschutz was appointed rabbi of the Ashkenazi community in The Hague during the incumbency of David Nunes (c. 1700) as rabbi of the Sephardi community. About 1710 he was appointed rabbi of Rotterdam, remaining there until his death. His query in connection with the eruv of Rotterdam, based on the fact that the river could be regarded as its boundary, is published in Jacob *Poppers’* responsa Shav Yaakov (1702, pt. 1, no. 17). Having received conflicting rules from Ezekiel Katzenellenbogen and Jacob *Reischer, to whom he had first turned, he addressed himself to Jacob Poppers for a decision, and he appears to have written a book for which he obtained Poppers’ approbation. The large Boompjes synagogue in Rotterdam was built while he was rabbi. After his death Solomon was succeeded as rabbi of Rotterdam by his son JUDAH (d. 1754) whom Jonathan Eybeschuetz called “a righteous and upright man who increased peace in the world and was pleasing to his brethren.” Judah’s son Abraham (d. 1780) was also appointed a rabbi of Rotterdam, but his appointment stirred up a great controversy because two of the lay leaders were his relatives. The leaders of the community turned to Jonathan Eybeschuetz and David Berlin for a decision, and they decided in Abraham’s favor.
LIPSET, SEYMOUR MARTIN (1922– ), U.S. sociologist. Born in New York City, Lipset taught at Columbia University, the University of Toronto, and at Berkeley, California, before becoming professor in the department of social relations at Harvard University. He served as the Caroline S.G. Munro Professor of Political Science and Sociology at Stanford University (1975–90) and the George D. Markham Professor of Government and Sociology at Harvard (1965–75). He then became Hazel Professor of Public Policy at the Institute of Public Policy, George Mason University, and senior fellow at the Hoover Institute at Stanford University. He was also a senior scholar at the Progressive Policy Institute and the Woodrow Wilson Center for International Scholars.

Lipset is one of the foremost representatives of political sociology in the United States. He combines a "middle range" theoretical orientation with verification in research. In his major work, Union Democracy (with M.A. Trow and J.S. Coleman, 1956), he provides a negative proof for Roberto Michels’ contention that large-scale organizational structures make bureaucratic procedures inevitable: this rule does not apply to the American Typographical Union, which Lipset investigated, because of its relatively small size and the high educational standards of its members.

Lipset was president of the American Professors for Peace in the Middle East; chair of the National B’nai B’rith Hillel Commission and the Faculty Advisory Cabinet of the United Jewish Appeal; and co-chair of the Executive Committee of the International Center for Peace in the Middle East. He is the only person to have been president of both the American Political Science Association (1979–80) and the American Sociological Association (1992–93). He was a director of the U.S. Institute of Peace and was a member of the Board of Foreign Scholars, both presidential appointments. Lipset received the Leon Epstein Prize in Comparative Politics by the American Political Science Association; the Marshall Sklare Award for distinction in Jewish studies; and the Helen Din- nerman Prize by the World Association for Public Opinion Research.

LIPSHITZ, ISRAEL ("Lippy"); 1903–1980), South African sculptor. Born in Lithuania, Lipshitz was taken to South Africa in 1908, and, apart from a period of study in Paris, spent most of his life in Cape Town. He was regarded as a leader of the modern school in sculpture and, from 1950 to 1968, was associate professor at the Cape Town University’s School of Fine Art. "Lippy" Lipshitz (as he was widely known) worked in a variety of media, e.g., marble, bronze, stone, and wood. He drew many of his subjects from nature and from the Bible including Lot’s wife, Jacob wrestling with the angel, and a massive head of Moses, carved out of a fossilized tree trunk, acquired by the National Art Gallery in Salisbury, Rhodesia (now Harare, Zimbabwe). He died in Israel.

LIPSKY, ABRAHAM (1911– ), Belgian engineer. Born in Lodz to a Zionist family, Abraham Lipski settled in Belgium. A highly successful construction engineer, he specialized in techniques of "presolicitations" – a modern method in construction. In 1951 he won international renown with his invention of the "preflex" construction beam. In 1958 at the Brussels World Fair he acted as assistant general commissioner for the Israel pavilion. Among a vast variety of public and private constructions he erected are the Transport Pavilion at the 1958 Brussels Exhibition; wharf constructions at Ostend and Ghent; the Midi Tower in Brussels; the funicular railway in Haifa, the Carmelit; and the Shalom-Meyer Tower in Tel Aviv. He participated in the construction of the Lydda International Airport and the Tel Aviv bus station. Lipski devoted a great deal of time to Jewish affairs.

[Rose Bieber]

LIPSKY, LOUIS (1876–1963), U.S. Zionist leader, journalist, and author. Lipsky, who was born in Rochester, New York, and edited a weekly periodical Shofar there, was an active Zionist even before the opening of the First Zionist Congress (1897). In 1901 Lipsky founded The Maccabean (later The New Palestine) magazine in New York, the first English-language Zionist periodical in the U.S. Under Lipsky's editorship, the magazine often exercised a powerful influence on Zionist actions in the U.S. Lipsky also edited The American Hebrew (1900–14). Lipsky served first as secretary, then chairman of the executive committee of the Federation of American Zionists, which was replaced by the Zionist Organization of America (ZOA) in 1917. In the ensuing Brandeis-Weizmann rift over the financial support and control of Jewish Palestine, Lipsky backed Weizmann. Lipsky was ZOA president from 1922 to 1930, and then became president of the Eastern Life Insurance Company (1930–59).

Lipsky was a founder of the Keren Hayesod, the Jewish Agency, and the American and World Jewish congresses. In 1915 he had advocated the establishment of an American Jewish Congress, directly elected by American Jews, which would support the concept of a Jewish national home. In 1918 the first American Jewish Congress was elected. Lipsky subse-
LIPSON, EPHRAIM

(1888–1960), English economic historian. Born in Sheffield, and educated at Cambridge, Lipson was a reader in economic history at Oxford from 1921 to 1931. He was instrumental in founding the Economic History Society, and the Economic History Review, serving as editor until his resignation in 1934. His major works, some of which went through numerous editions, were Economic History of England (3 vols., 1915–31; 1959); Europe in the Nineteenth Century (1916, rev. ed. 1962); The History of the Woollen and Worsted Industries (1921); Europe 1914–1939 (1940); The Growth of English Society – A Short Economic History (1949). In A Planned Economy or Free Enterprise: The Lessons of History (1944), he pleaded for a policy aiming “to preserve best in our present economic system, the spirit of enterprise, and fuse it with the team spirit, so that self-interest was held in check by the ideal of public service and devotion to the Commonweal.” Lipson was left badly deformed by severe injuries in childhood; in adulthood, he was an extremely sensitive, solitary man. His failure, in 1931, to be appointed to the chair of economic history at Oxford (in part, it is said, because of unwise claims he made about himself in his application) left him permanently embittered. Lipson’s view that the industrial revolution did not mark a sharp break in Britain’s economic evolution was echoed by a number of more recent economic historians, and his contribution to the field seemed overdue for a reevaluation. His brother Daniel Lipson (1886–1965) was housemaster of the Jewish House at Cheltenham College, one of England’s leading boarding schools. He served as mayor of Cheltenham from 1935 to 1937 and was Independent member of Parliament for Cheltenham from 1937 to 1950. He was an opponent of Zionism and frequently expressed his anti-Zionist views in parliamentary debates.

[Moshe Gottlieb]

LIPSON, MORDEKHAI (1885–1958), Hebrew writer and folklorist. Born in Bialystok, he was ordained as a rabbi in 1903. After teaching for several years, he immigrated to the United States in 1913. There he wrote for the Hebrew and Yiddish press and edited the Hebrew weekly Ha-Ivri (1916–21). He founded and edited the New York Hebrew daily Hadoar (1921–23), which was the only modern Hebrew daily to appear in the U.S. When the newspaper was taken over by the Histradut Ivrit and turned into a weekly, Lipson served for a period as editor. He immigrated to Erez Israel in 1930 and edited the religious daily Ha-Zofeh from its inception, in 1937, until 1944. For more than a generation he collected Jewish folklore which appeared in Mi-Dor-Dor (3 vols., 1928–29); Anshei Mid-dot (5 vols., 1927–34), Midrash Zuta (1951), and Emshol Lekha Mashal (1956). He also translated many books from Hebrew to Yiddish and from Yiddish to Hebrew, including works by I.J. *Singer, I. Bashevis *Singer, and J. *Opatoshu.

[Getzel Kressel]

LIPSYTE, ROBERT MICHAEL (1938– ), U.S. sports journalist, columnist, novelist, and scriptwriter. Born in the Bronx to Sidney and Fanny, both teachers, Lipsyte grew up in Rego Park, Queens, and attended Forest Hills High School, but a Ford Foundation program allowed him to skip his senior year and enroll at Columbia University. He graduated in 1957 at the age of 19, and landed a job as a copy boy in the sports department of the New York Times. Lipsyte worked at the Times for 14 years – with a timeout to receive a master’s degree from the Columbia School of Journalism in 1959 – becoming a sports reporter at 21 and then a sports columnist for the paper in 1966. During that time he also co-authored Nigger (1964) with the controversial comic and activist Dick Gregory; The Masculine Mystique (1966); and published an edited collection of his columns, Assignment: Sports (1970). Lipsyte’s first and best-known novel for young people, The Contender (1967), won a children’s book award, and Lipsyte abandoned his journalism career in 1971 after 544 columns to concentrate on writing novels. Lipsyte also worked as a freelance writer, television scriptwriter, journalism professor (Fairleigh Dickenson and New York University), radio commentator (National Public Radio, 1976–82), and columnist for the New York Post (1977), was a television sports essayist for CBS Sunday Morning (1982) and stayed with that network until moving to NBC in 1986. After leaving NBC in 1988, he hosted The Eleventh Hour on PBS (1989), winning an Emmy Award in 1990 for On-Camera Achievement, and was author of a television documentary series about sports. Lipsyte returned to the New York Times to write a sports column in 1991. Among his 16 books are SportsWorld: An American Dreamland (1975), Free to Be Muhammad Ali (1978), Jim Thorpe: Twentieth-Cen-

[Eliz Wohlgelernter (2nd ed.)]

LIPTON, SEYMOUR (1903–1986), U.S. sculptor. Born in New York City, Lipton showed a predilection for art as a child. His parents, however, discouraged his ambitions and he received a D.D.S. degree from Columbia University in 1927. While practicing as a dentist, Lipton began carving stylized sculptures with Social Realist themes out of wood. He had a one-man show in 1938 and two years later started teaching sculpture at the New School for Social Research in New York (1940–65). By the mid-1940s Lipton was welding Surrealist-inspired forms out of lead, later using steel, and by 1955 Molnel metal. Lipton worked in stages, conceptualizing a sculpture on paper, making a maquette, and then fabricating the metal sculpture.

The events of World War II influenced Lipton's subject matter, which evolved from specific representational themes to more timeless abstract comments on the human condition. Figuration seemed inadequate to describe the devastation of war, and in 1942 he began to work abstractly in metals. Moby Dick #2 (1948, private collection), a bronze abstraction of Herman Melville's whale, appears fierce with spikes or possibly teeth projecting from rounded forms. Similar predatory imagery would recur at various times throughout Lipton's career. Around 1948 Lipton began exploring cage themes in works such as Imprisoned Figure (Museum of Modern Art, New York). Experiencing a sense of renewal with the war several years in the past, in the 1950s Lipton welded dynamic vertical or horizontal pieces exhibiting traces of organic life such as Moby Dick #2. In 1954, Yale University Art Gallery, New Haven, a bronze on steel sculpture from the "Bloom" series. His sculptures decorate several buildings in the United States, including the Philharmonic Hall, Lincoln Center, New York; Temple Israel, Tulsa, Oklahoma; and Temple Beth-El, Gary, Indiana.

[Samatha Baskind (2nd ed.)]

LIPTOVSKY MIKULAS (Slovak Liptovský Mikuláš; Hung. Liptószentmiklós), town in N. Slovakia, until 1998 Czechoslovak Republic, since 1993 Slovak Republic. Jews appeared for the first time in documentation related to Mikulas in the 17th century. The local legislation was emphatically anti-Jewish. Jewish merchants visited the region and developed business relations with the nobility. In 1720 Ephraim, a Jew from Holesov, negotiated Jewish settlement in Mikulas with Count Samuel Pongracz. The latter rented the Jews several of his houses in the main square, free of charge. In 1729 an independent community was founded. It purchased land for a cemetery, a synagogue, and space in the square for new houses. It founded a bet midrash, a mikveh, and a hevra kaddisha. In 1740, the congregation hired its first rabbi, who initiated a tal-mud torah and the expansion of the synagogue. His successor founded a yeshivah.

Intensely engaged in trade, the Jews exported wool, cheese, and leather. They also dealt in wood, noting the high quality of the forests. Wood and wood products have remained a characteristic part of the trade of Slovakian Jews.

Liptovský Mikuláš was divided into two parts: densely populated Vrbica, and the smaller Mikulas with a big concentration of Jews. In 1828 there were 801 Jews. In 1835, Izak Diner was elected president of the congregation, and in 1865 mayor of Mikulas. The first Jew in Hungary to be elected mayor of a city, he held the position until 1872.

The period of Rabbi Lob Kunitz established the basis for intellectual activity, for which Mikulas was named “the Jewish Athens.”

The dispute between Reform and Orthodox started early in Mikulas. While the majority of the members chose the Reform path, the Orthodox established their own congregation in 1864. They selected their own rabbi and founded their own elementary school with emphasis on Jewish studies. The two congregations fused in 1875.

In 1848–49, the Spring of Nations affected Mikulas Jewry. Many local Jews considered themselves Magyar patriots and enlisted in the army. In 1880 the Jewish population numbered 1,115.

In May 1919 the National Federation of Jews in Slovakia convened in Mikulas. The Zionist movement was active, and it included the sports organization Maccabi, founded in 1921; Hashomer-Kadima, the Zionist scouting movement; and the youth movement Gordonia Maccabi ha-Za'ir.

In 1939 Slovakia proclaimed independence, under the aegis of Nazi Germany. Although the new state immediately began to persecute the Jews, the Mikulas community did not feel particular pressure. The population behaved as it did in the past, until 1940 when the Aryanization – i.e., expropriation – of Jewish property began. Former neighbors turned hostile, deprived Jews of their property, income, and jobs, and pressed to evict them from their apartments. In 1942 the deportation of Jews to Poland began. About 885 Mikulas Jews were deported to Lublin and the Sobibor extermination camp. When deportations stopped temporarily in the fall of 1942, Slovak Jews,
as well as some others, escaped and crossed Slovakia’s border; Mikulas was among the small surviving communities that assisted the escapees. In the fall of 1944, when the Slovak anti-Nazi uprising began, several surviving Jews joined the forces, while others sought places to hide. The German army rounded up the surviving and hidden Jews; some were executed on the spot, others were deported to Poland.

About 20% of pre-war Jews managed to return to the town. In 1947 there were 394 Jews in Mikulas. Thirty-eight Jews participated in anti-Nazi resistance within Slovakia, in the Soviet Union, and in the west. In 1948–49, most of the Jews immigrated to Israel. The synagogue was turned into a warehouse, and the cemeteries were destroyed. In 1989 the synagogue underwent a thorough reconstruction, partially by young Jewish and Slovak volunteers. There was a plan to turn the synagogue into a memorial.

Simon Goldstein, a native of Mikulas and graduate of its schools, was the first Jewish lawyer in Hungary. Samuel *Fischer, another Mikulas native, founded the Fischer-Verlag publishing house in Berlin.

[Yesyahu Jelinek (2nd ed.)]

LIPTZIN, SOL (1901–1995), literary scholar and educator. Leaving his native Satinov, Russia, as a boy, Liptzin was raised in the U.S. He taught at City College, New York, where he became professor of German in 1948 and served as chairman of the department of Germanic and Slavonic languages (1943–58). His interest in the mutual interaction of 19th-century German and English literature finds reflection in works such as *Shelley in Germany* (1924), and *The English Legend of Heinrich Heine* (1954). He also wrote *Lyric Pioneers of Modern Germany* (1928), *Arthur Schnitzler* (1932), and *Richard Beer-Hofmann* (1936). Liptzin turned his attention to Yiddish literature in *Stories from Peretz* (1947), *Eliakum Zunser: Poet of His People* (1950), *The Flowering of Yiddish Literature* (1963), and *The Maturing of Yiddish Literature* (1970). His other works include *Germany’s Stepchildren* (1945), on German-Jewish writers; and *The Jew in American Literature* (1966). Active in Jewish affairs, he was honorary president of the Jewish Book Council of America and editor of the *Jewish Book Annual* (1953–56). Liptzin was a visiting professor at Yeshiva University (1929–40) and, after settling in Israel in 1962, at Tel Aviv University (1962–63) and the Haifa Technion (1962–66). He was the *Encyclopaedia Judaica* departmental editor for German literature.

LIPZIN, KENI (Sachar, Kreine Sonia; 1856–1918), Yiddish actress. Born in Russia, she made her debut in Abraham Gold-faden’s company. She joined Jacob P. *Adler’s London company in 1884, and married the theater manager, V. Lipzin. Later she married Michael Mintz, publisher of the *Jewish Daily Herald*. Jacob Gordin wrote *Mirele Efros* and adapted Grillparzer’s *Medea* for her. When a theater she ran faced bankruptcy, her husband committed suicide, but she continued to act and paid all her creditors. Jacob Gordin’s controversial play *Khaseye di Yesoyne*, about the miserable treatment of a poor relative by a rich family, was written in 1903 for Lipzin.

LISBON, capital of *Portugal.*

The Middle Ages

Jews were apparently settled in Lisbon in the 12th century, at the time of the conquest of the territory from the Moors and the establishment of the kingdom of Portugal by Affonso I (1139–85). For a period of two centuries they appear to have lived in tranquility, sharing the lot of their coreligionists in the rest of the country. Many Jews were prominent in court circles as tax farmers, physicians, or astronomers; the almoxarif Dom Joseph ibn Yahya, descendant of a family founded by a Jew who accompanied the first king on his conquest of the country, constructed a magnificent synagogue at his own expense in 1260. The great *esnoga* of Lisbon was built by the *Arraby Mór* Dom Judah son of Guedalya in 1306–7, according to the foundation stone that was discovered after the earthquake of 1755. This was the synagogue where Isaac Abrabanel and his family prayed. The synagogue was situated in *Vila Nova*, which was previously known as *Judaria Grande*. When the religious and political organization of the communities of Portugal was revised by Affonso II (1248–79), Lisbon became the official seat of the *arraby Mór*, or chief rabbi. The most important incumbent of this office was Dom Moses Navarro, physician to Pedro I (1357–67), who, with his wife, acquired a large landed property near Lisbon.

This initial period of prosperity came to an end in the reign of Ferdinand I (1367–83). When Lisbon was captured by the Castilian troops in 1373, the Jewish quarter was sacked and many Jews killed. After the king’s death, the Jews were considered by the populace to be at the root of the rapacious policies of the queen dowager Leonora – notwithstanding the fact that she had deposed the Jewish collector of taxes at Lisbon, as well as Dom Judah, the former royal treasurer. A popular revolt led to the accession to the throne of the master of Aviz, the first of a new dynasty. The feeling in Lisbon against the Jews became extreme, and the people wished to take violent steps to discover the treasures left by the late instrument of royal greed. An anti-Jewish reaction followed in the political sphere. Nevertheless, the new king (known as John I) did his best to protect the Jews against actual violence, though they were henceforth excluded from the positions of trust they had formerly occupied and were forced to make disproportionate contributions to the gift exacted by the city for presentation to the new king. Toward the close of his life, the latter became a little more tolerant. There was a reaction, however, under his...
son, Duarte (1433–38), who attempted to enforce the complete separation of Jews and Christians. This led to a protest by the community of Lisbon, and as a consequence the severity of the recent decree was mitigated (1436).

Persecution and Expulsion

Popular feeling, nevertheless, continued to be antagonistic. In 1455, the Cōrtes of Lisbon demanded restrictions against the Jews. The Portuguese sovereigns had not permitted the wave of rioting which swept through the Iberian Peninsula in 1391 to penetrate into their dominions. Nevertheless, as a result of some disorder in the fish market, there was a serious anti-Jewish outbreak in Lisbon toward the close of 1449 which led to many deaths, and another (in the course of which Isaac Abravanel’s library was destroyed) in 1482. Owing to the tolerant if grasping policy of John II, a number of the exiles from Spain were allowed to enter Lisbon after the expulsion of 1492. Their crowded living conditions led to an outbreak of the plague and the city council had them driven beyond the walls. Royal influence, however, secured the exemption from this decree of Samuel Nayas, the procurator of the Castilian Jews, and Samuel Judah, a prominent physician.

When in 1496/97 the Jews were to be expelled from Portugal, Lisbon alone was assigned to them as a port of embarkation. Assembling there from every part of the country, they were herded in turn into a palace known as Os Estãos, generally used for the reception of foreign ambassadors; here the atrocities of forced conversion were perpetrated. Some were killed, including well-known rabbis, such as Rabbi Shimon Maimi, originally from Segovia, who was killed in 1497. Thus, the community of Lisbon, with all the others of Portugal, was driven to embrace a titular Christianity. In the period immediately before and after the general expulsion, however, some individuals managed to escape. They probably contributed a majority of the members to the “Portuguese” synagogues in various places in the Turkish Empire, such as Smyrna (Izmir), while at Salonika and elsewhere they established separate congregations which long remained known by the name of “the kahal of Lisbon” or “kahal Portugal.”

Lisbon was the seat of the most tragic events in a 10. The visit of David Reuveni (c. 1525), and the open conversion to Judaism of Diogo Pires (subsequently known as Solomon Molcho), created a great stir amongst the Lisbon Conversos. They were foremost in attempting to combat the introduction of the Inquisition into Portugal, but their efforts were in vain. Lisbon itself became the seat of a tribunal of the Holy Office and on Sept. 20, 1540, the initial Portuguese auto-da-fé took place in the capital – the first of a long series which continued over more than two centuries. Throughout this period, the Lisbon tribunal was the most active in the whole country. Inquisitional martyrs who perished there included Luis Dias, “the Messiah of Setúbal,” together with his adherents, the pseudo-prophet Master Gabriel, and the mystical poet Gonçalo Eannes Bandarra, an “Old Christian” (1542 etc.); Frei Diogo da Assumpção (Aug. 3, 1603); António Homem, the Praeceptor Infelix, and others of his circle (May 5, 1624); Manuel Fernandes Villareal, the statesman and poet (Dec. 1, 1652); Isaac de Castro Tartas, with other Conversos captured in Brazil (Dec. 15, 1647); António Cabicho, with his clerk Manuel de Sandoval (Dec. 26, 1684); Miguel (Isaac) Henriques da Fonseca, with António de Aguiar (alias Aaron Cohen Faya), and Gaspar (Abraham) Lopez Pereira, all of whom were mourned by Amsterdam poets and preachers as martyrs (May 10, 1681).

At times during the Inquisition period, the New Christians as such suffered. Thus, for example, when in 1630 a thief occurred at the Church of Santa Engrácia at Lisbon, suspicion automatically fell on the New Christians. A youth named Simão Pires Solis was cruelly put to death; the streets of the capital were placarded with inflammatory notices; the preachers inveighed from the pulpits against the “Jews”; and 2,000 persons are said to have fled from Lisbon alone. Similarly, in 1671, when a common thief stole a consecrated pyx from the Church of Oriveillas at Lisbon, suspicion again fell on the Conversos and an edict was actually issued banishing them from the country (but not put into effect). From the accession of the House of Bragança in 1640 the power of the Portuguese Inquisition had been restrained in some measure, and its suspension by Pope Clement x in 1674 gave the New Christians some respite, but it proved little less terrible than before on its resumption in 1681. After the outbreak of the War of the Spanish Succession (1701–14), there seems to have been a recrudescence of inquisitional power, and, in the subsequent period, it became customary to send to Lisbon for punishment all those persons found guilty by the other tribunals of the realm. An auto-da-fé held at Lisbon in 1705 was the oc-
The Lisbon earthquake of 1755 allowed many Conversos, together with those incarcerated in the dungeons of the Inquisition, to escape, and prompted others to make their way to open communities overseas. After this, no further Judaisers suffered in the capital; the last victim of the Lisbon tribunal was Father Gabriel Malagrida – a Jesuit. The reforms of the Marquês de Pombal put an end to all juridical differences between Old Christians and New (1773), and the Conversos of Lisbon disappeared as a separate class, although there were many families who continued to preserve distinct traces of their Jewish origin.

The Renewed Community

The close association of Portugal with England, and the position of Lisbon as an intermediate port between Gibraltar and England, made it inevitable that a Jewish settlement would be established in the city as soon as Jews could land with safety. By the middle of the 18th century, some individuals had found their way there and began to practice Jewish rites privately, under the security of British protection. Most of them originated from Gibraltar, though there were some from North Africa and one or two families direct from England. In 1801, a small piece of ground was leased for use as a cemetery. The services rendered to the city by certain Jewish firms at the time of the famine of 1810 improved their status, and in 1813, under the auspices of a certain R. Abraham Dabolla, a congregation was formally founded. The condition of the Jews in Lisbon at this period is unsympathetically portrayed by George Borrow, in his classical *The Bible in Spain* (1843); while Israel Solomon, an early inhabitant, gives an intimate glimpse in his memoirs (F.I. Schechter in *AJHSP*, 25 (1917), 72–73). A little later in the century, two other synagogues (one of which is still in existence) were founded. In 1868, the community received official recognition for the first time. It was, however, recognized as a Jewish “colony,” not “community,” and the new synagogue (Shaare Tikvah) constructed in 1902 was not allowed to bear any external signs of being a place of worship. Complete equality was attained only with the revolution of 1910. Until the outbreak of World War I, the vast majority of the community was Sephardic, mostly from Gibraltar and North Africa, and many of them still retained their British citizenship. Subsequently, however, there was a very large Ashkenazi influx from Eastern Europe. During World War II, about 45,000 refugees from Nazi persecution arrived in Portugal, and passed mainly through Lisbon, on their way to the free world. In Lisbon they were assisted by a relief committee headed by M. Bensabat Amzalak and A.D. Esagny. The Jews of Lisbon numbered 400 in 1947, and 600 in 2005. In addition to the two synagogues, there was a cultural center and a home for the aged.

Scholars

In the Middle Ages, Lisbon did not play a very important part in Jewish scholarship. The most illustrious scholars associated with it are the *Ibn Yahya family. It was also the birthplace of Isaac Abrabanel, who did much of his literary work there, while Joseph *Vecinho, Abraham *Zacuto, and other notable scholars are associated with the city in the period after the expulsion from Spain. *Levi b. Habib also passed his early years in Lisbon. Many of the most illustrious Conversos who attained distinction in the communities of Amsterdam or elsewhere were also natives of Lisbon – men like Moses Gideon Abudiente, Zacutus *Lusitanus (Abraham Zacuto), Paul de Pina (Reuel *Jesurun), Abraham Farrar, Duarte Nunes da Costa, Duarte da Silva, and perhaps *Manasseh Ben Israel. The outstanding figure in the modern community of Lisbon was Moses Bensabat Amzalak, who was important in public, economic, and intellectual life, as well as being a prolific writer on Jewish subjects.

Hebrew Printing

A Hebrew printing press was active in Lisbon from 1489 to at least 1492 (see *Incunabula*) and was closely connected with that of *Hijar, Spain, from which it took over the excellent type, decorated borders, and initials. After 1491 a new type was used. The founder of the Lisbon press was the learned and wealthy Eliezer b. Jacob Toldedano (in whose house it operated), assisted by his son Zacheo, Judah Leon Gedaliah, Joseph Khallon, and Meir and David ibn *Yahya. Their first production was Nahmanides' *Pentateuch commentary* (1491); in the same year Eleazar Altansi brought out David Abudraham's prayer book. Other works printed in Lisbon are Joshua b. Joseph of Tlemcen's *Halikhot Olam* (1490); the Pentateuch with Onkelos and Rashi in 1491 (text with the vowel and cantillation signs); Isaiah and Jeremiah with David Kimhi's commentary (1492); Proverbs with David ibn Yahya's commentary *Kav ve-Naki* (1492); *Tir Orah Hayyim* (also 1492?), and Maimonides' *Hilkhot Shehithat*. No other productions have been preserved apart from a fragment from a Day of Atonement mahzor, which may have come from this press. On the expulsion from Portugal in 1497, the printers – taking their type, tools, and expertise with them – found refuge in *Constantinople, *Salonika, and *Fez where they continued to produce beautiful books.

LISHANSKY, BATYA (1900–1992), Israeli sculptor. Born in the Ukraine, Lishansky immigrated in 1910 to Erez Israel where she studied under Boris Schatz. Her work consisted mainly of small wood sculptures and later white marble cubist–like forms. From 1930 onward she produced a series of naturalist romantic profiles, and statues in stylized groups. Among her well-known works is a bust of her brother-in-law, I. *Ben–Zvi*. She was awarded the Israel Prize in 1986 for sculpture.

LISHANSKY, YOSEF (1890–1917), member of the clandestine intelligence organization *Nili* in Erez Israel. Lishansky was born in the district of Kiev, Ukraine. He was orphaned, taken to Erez Israel at the age of six, and raised by relatives living in Metullah. He joined the *Po’alei Zion Party, and for three years he worked as a watchman for *Ha-Shomer* in Galilee, but was not accepted as a member of the organization. At the end of 1915 he joined Nili. In January 1917 he and Avshalom *Feinberg* tried, on behalf of Nili, to cross the Sinai Desert to reach the British lines in Egypt. Feinberg was killed on route by Bedouins, but Lishansky, though wounded, reached Egypt. Upon his return to Erez Israel, he joined Sarah *Aaronsohn* in organizing the group's espionage work. When Nili was uncovered by the Turks, Lishansky sought refuge with former comrades in Ha-Shomer, who, however, decided that the safety and security of the Jewish population necessitated his death. Emissaries of Ha-Shomer set out to assassinate Lishansky, but succeeded only in wounding him, and he managed to escape. He tried to reach Egypt but was caught on the way and sentenced to death by the Turkish authorities in Damascus. He was hanged on Dec. 16, 1917, together with his Nili comrade Na’aman *Belkind*, and was buried beside him at Rishon le-Zion.

LISITZKY, EPHRAIM E. (1885–1962), U.S. Hebrew poet and educator. Born in Minsk, he immigrated to the United States at the age of 15. In 1918, after peregrinations which took him to Boston, New York, Central Canada, Buffalo, and Milwaukee, he finally settled in New Orleans, where he spent the rest of his life. He became principal of the city’s Hebrew School, one of the best in the United States.

Lisitzky was a prolific Hebrew poet. Though not marked by originality, he made lasting contributions to the thematic wealth of Hebrew literature. *Medurot Do‘akhot* (“Dying Camp-fires,” 1937), a story of two Indian tribes, is based on Indian legends and contains fine descriptions of the American landscape. It is written in the unrhymed trochaic tetrameter of *Hiawatha and Kalevala*. Out of black folktales and folk songs, sermons and spirituals, habits and customs, he composed *Be-Oholei Kush* (“In the Tents of Cush,” 1933). In his narrative poem *Ki-Tekoa Shofer* (1922) he contrasts the spiritual aridity of the small town American Jew with the deep religiosity of Eastern European Jewry (*Shirim* (1928), 241–80). His dramatic poem *Naftulei Elohim* (1934), despite some happy phrases, must be considered a failure, overburdened with the poet’s mythological inventions and with Jewish, Christian, Islamic, and Buddhist doctrine. Similarly unsuccessful is *Bi-Teim Shoa ham u-Meshoah* (1960), which deals with the European Holocaust. Lisitzky’s occasional articles on literature and educational matters in the Hebrew press were collected in his book, *Bi-Shevilei Hayyim ve-Sifrut* (1961). Lisitzky’s reputation will ultimately rest on his moving autobiography *Elleh Toledot Adam* (1949; *In the Grip of Cross-Currents*, 1959), his book of black poems, and his Indian epic.

LISMAN, HERMANN (1878–1943), German painter. Born in Munich, he studied in his native town and in Lausanne, and later went to Rome and to Paris (1904). Here he belonged to the group of artists that met regularly at the Café du Dôme. After serving in the German army in World War I he settled in Frankfurt, where many of his works were acquired by the local museum, and where for several years he taught aesthetics at the university. After the rise of Hitler he immigrated to France, residing in Tours. He was interned by the French at the outbreak of World War II as an enemy alien, but managed to escape to Montauban near Toulouse, in the unoccupied zone. However, in 1943 he was deported to his death in the extermination camp of Majdanek. His postimpressionist works, in the Städelisches Museum at Frankfurt and in the museum of Wuppertal, were confiscated by the Nazis and disappeared. Nevertheless, a memorial exhibition held by the Frankfurt Kunstverein in 1959 was able to assemble 132 of his works.

[Alfred Werner]

LISPECTOR, CLARICE (1925–1977), Brazilian author. Born in the Ukraine, she arrived in Brazil as a child. She is considered the most important Brazilian woman writer of the century. Her narrative achieves unexpected and disturbing perspectives by focusing on the internal life of characters (especially women) who are always in conflict with social and psychological conventions. Among her novels and col-
lections of short stories are *Perto do coração selvagem* (1944; *Near to the Wild Heart*, 1990); *Laços de família* (1960; *Family Ties*, 1972); *A maçã no escuro* (1961; *The Apple in the Dark*, 1967); *A paixão segundo G.H.* (1964; *The Passion According to G.H.*, 1988); *Água viva* (1973; *The Stream of Life*, 1989); *A hora da estrela* (1977; *The Hour of the Star*, 1992). She also wrote essays and stories for children. Though she identified herself as mainly Brazilian, criticism discusses the possible Jewish and biblical sources of her nonconformism, her belief in the power of words and her mystic overtones, and also her ironic attacks on the religious establishment. The name of the character Macabea (*A hora da estrela*), a socially deprived, powerless, and defeated young woman, seems deliberately chosen in contrast with tradition.

—Florinda F. Goldberg (2nd ed.)

**LISSA, ZOFIA** (1908–1980), musicologist. Born in Lvov, Zofia Lissa was cultural attaché at the Polish embassy in Moscow after World War II; she later joined the Polish Ministry of Art and Culture, and became professor of music at Warsaw University. Among her publications are *Zarys nauki o muzyce* (*"The Outlines of Musical Science,"* 1934, 1952); *Uwagi o metodzie marksystowskiej w muzykologii* (*"Remarks on the Marxist Method in Musicology,"* 1950); and *Historia muzyki rosyjskiej* (*"History of Russian Music,"* 1955).

**LISSAK, MOSHE** (1928– ), sociologist. Born in Tel Aviv, Lissak received his doctorate in sociology from the Hebrew University, where he became a professor of sociology in 1978. He did research and wrote on topics such as social and political history of the *yishuv*, society-army relations in Israel and in South East Asia, and on ethnic group relations in Israel. In 1992 he was awarded the Israel Prize for social sciences. Among his publications are *The Mass Immigration in the Fifties: The Failure of the Melting Pot Policy* (1978) and *Trouble in Utopia: The Overburdened Polity of Israel* (1989).

**LISSAUER, ERNST** (1882–1937), German poet and playwright. Born in Berlin, his earliest publications were two volumes of verse: *Der Acker* (1907) and *Der Strom* (1912). Lissauer is, however, remembered as the composer of the "Hymn of Hate" (*Hassgesang gegen England*, 1915), which German troops sang at the front during World War I. From 1924 he lived in Vienna and supported the German nationalists. He insisted that the Jews were not one people and that he, as a German Jew, had nothing in common with the Jews of Eastern Europe. Lissau er opposed Zionism and advocated complete assimilation. He wrote a number of plays including *Yorck* (1921), *Das Weib des Jephta* (1928), and *Luther und Thomas Muenzer* (1929).

—Sol Liptzin

**LISSER, JOSHUA FALK** (d. 1807), rabbi and talmudist. Joshua studied under Moses Zerah *Eidlitz of Prague. As dayyan* at Lassa he was involved in the decision to condemn and burn Naphtali Herz *Wessely's *Divrei Shalom ve-Emet*, which called on Jews to emancipate themselves. Lisser published *Binyan Yehoshuiah* (*Dhernfurth*, 1788), commentaries, including textual emendations, on the minor tractates *Aov de-Rabbi Nath an, Semaḥot, Derekh Erez Zuta*. The commentary on *Aov de-Rabbi Nath an* was reprinted in 1858–64 in *Zhitomir* and in Romm's Vilna editions of the Talmud. Bearing in mind the spirit of opposition to critical scholarship at the time, Lisser apologized in the preface of his commentary for his suggested textual emendations. In defense of his work he pointed to the precedents of Solomon *Luria and Samuel *Edels, who had also suggested variant readings in their commentaries.*

**BIBLIOGRAPHY:** L. Lewin, *Geschichte der Juden in Lissa* (1904), 271f.

**LISSERTKY, EL** (Lazar; 1890–1941), Russian painter. Born in Smolensk province, where his parents were hatters, he earned his living by giving drawing lessons. He was unable to enter the Academy of Art in St. Petersburg because the Jewish quota was filled. Instead he left for Germany, to study in Darmstadt. At the outbreak of World War I he returned to Russia. It was only after the 1917 Revolution that he could develop his original and versatile talent. When *Chagall was appointed director of the school of art at Vitebsk, Lissitzky joined him there as professor of architecture and graphic arts. In common with Chagall, he was deeply interested in Jewish folklore. Examples of this interest were his watercolor illustrations to the *Legend of Prague* by M. Broderzon, and his color lithograph illustrations to the *Had Gadya*. These were distinguished by the bright, childlike colors of folk art. He also collaborated in the production of Jewish children's books, developing new ideas for typography and layout. Strongly influenced by Casimir Malevich, leader of the Russian cubists, Lissitzky was a major force in a related movement, constructivism. In this movement, which believed that the purpose of art was not necessarily to beautify, he tried to integrate his aesthetic concepts into Marxist theory. In 1919
he painted his first “prouns,” a generic term he was to apply to his mature work, which is based on stereometric elements, fusing aspects of painting with architecture. In 1921 he was appointed professor at the Moscow Academy. However, angered by the government’s hostility to the new trends, he joined the artists who left Russia for countries more receptive to radical aesthetic ideas. He lived and worked in Germany, France, Holland, and Switzerland, and at one time collaborated with Ilya Ehrenburg in the publication of a constructivist magazine. In 1925 the progressive museum director Alexander Dorner commissioned Lissitzky to install a special gallery for the showing of abstract art in the Landesmuseum at Hanover. The room was later destroyed by the Nazis. Lissitzky maintained his links with the Soviet regime, and in 1928 returned to Russia. The government, however, employed him only to design pavilions at a number of international exhibitions abroad, and also the restaurant at the Soviet section of the 1939 New World’s Fair. He died of tuberculosis.

LIST, EMANUEL (1888–1967), bass. Born in Vienna, List joined the Volksoper in Vienna in 1922, the Berlin State Opera from 1923 to 1933 and toured in Europe, the United States, and Australia. In 1938, forced to leave Germany, he settled in the United States. His deep bass made him suitable for Wagner villains; therefore he sang leading Wagnerian roles at the Metropolitan Opera, New York. He also became known as a singer of German lieder. Among his famous roles are Pogner (Die Meistersinger), Hunding (Die Walküre), King Mark, Ramfis (Aida), and Landgrave (Tannhäuser). List recorded several of his Wagner roles, including Hunding on Bruno Walter’s famous 1935 recording of Die Walküre, Act 1.

LIST, GEORGE HAROLD (1912– ), ethnomusicologist, composer, and educator. Born in Tucson, Arizona, List earned a diploma in flute, Juilliard School of Music (1933); B.S. and M.A., Teachers College, Columbia University (1941 and 1945); and his Ph.D., Indiana University (1954). After performing as a flutist and teaching music in several public schools, he joined the faculty of Indiana University in 1954 where he became active in the interdisciplinary fields of ethnomusicology and folklore. There, he was appointed associate professor of folklore, retiring as professor in 1976. He also served as director of the Archives of Traditional Music (1954–76), director of the Inter-American Program in Ethnomusicology (1966–76), and editor of The Folklore and Folk Music Archivist (1958–68).

From 1960 through 1970 he recorded and researched the traditional music of the Hopi Indians of Northern Arizona, the inhabitants of the Caribbean Littoral of Colombia, and the Indians of the Andes and the Amazon region of Ecuador. He received fellowships from the National Endowment for the Humanities, Indiana Historical Society, American Philosophical Society, and a Fulbright research award. His writings include Music and Poetry in a Colombian Village (1983); Singing About It, Folksong in Southern Indiana (1991); Stability and Variation in Hopi Song (1993) as well as numerous theoretical studies (see Discourse… in the Bibliography). Among his compositions are Memoir and Scherzino for flute and piano (1951); Music For Children, eight pieces (1952); symphonic satire Marche O’Malley (1947); and a string quartet (1951).

LISTOPAD, FRANTIŠEK (originally Jiří Synek; 1921– ), Czech poet, author of fiction and essays. Born in Prague into an assimilated Jewish family, Listopad did not report for transport and from 1941 lived in the underground and took part in the resistance movement against the Nazis. After the war, he studied aesthetics and literature at Charles University in Prague and began to publish in many literary magazines. In 1947 he left for Paris; after 1948 he did not return to Czechoslovakia. In 1958 he moved to Portugal. His first collections of poems and a poem in prose “Little Loves” (1946) appeared in Czechoslovakia before 1947. Between 1947 and 1990, none of his work was allowed to be published in Czechoslovakia. Abroad, he issued collections of poems, such as Freedom and Other Fruit (1956) and Black White, I Don’t Know (1973). After 1990 his collections of verses Final rondu (1992), Far Near (1993), and Kyrie Eleison (1998) appeared in Czechoslovakia and the Czech Republic. Human existence is the topic of Listopad’s stories and lyrical prose, such as The Vicious Dog without a Garden (1996). The philosophical meditation of searching for one’s place in life is the topic of many of his essays. Listopad writes and publishes in Portuguese as well, and his prose has appeared in other countries.

LIT, U.S. family, prominent in Philadelphia, Pennsylvania, in the 19th-20th centuries. The Philadelphia department store operation known as Lit Brothers was first established in 1891 as a dress and millinery shop by RACHEL P. LIT (1858–1919; later Wedell, still later Arnold), who was soon thereafter joined by her brothers Colonel SAMUEL D. LIT (1859–1929) and JACOB D. LIT (1872–1950). Samuel’s only experience had been as an apprentice plumber and book salesman. However, he and Jacob brought tremendous energy and ambition to their task. The store expanded yearly, and by 1906 covered the entire city square on Market Street from Seventh to Eighth, where a new building was erected in 1907. Samuel served as a member of the Delaware River Bridge Commis-
sion and of the Board of City Trusts; he was also a member of the boards of Mikveh Israel Congregation and of the Jewish Hospital. Jacob was active in the leadership of the YMHA and was founder-president of the downtown Mt. Sinai Hospital (1900). In 1928 Lit’s was purchased by City Stores, in which Albert M. *Greenfield was the controlling figure. After World War II, the business expanded into suburban areas of Pennsylvania and New Jersey, and in 1962 absorbed the four branches of Snellenburg’s, thus becoming the largest department store chain in the Delaware Valley area. Rachel’s daughter Etta (d. 1953) was the wife of Jules E. *Mastbaum (1872–1926), motion picture exhibitor and executive who gave his magnificent collection of Rodin sculptures, drawings, and letters to the city, together with $1,000,000 for the erection of a museum to contain them, opened to the public as a landmark on the Benjamin Franklin Parkway in 1929. Another brother, Jonker Lit (1853–1919), had a daughter Juliet, who married J. David Stern (1886–1971), the publisher of *Philadelphia Record (1928–47), *Camden Courier-Post (1919–47), and *The New York Post (1933–39).

[Bertram Wallace Korn]

LITAUER, JAN JAKUB (1873–1949), Polish jurist. Litauer was professor of civil procedure at the University of Lodz (1945–47) and at the Polish Free College in Warsaw after 1949. He was a member of the committee for the codification of the law and one of the drafters of the Code of Civil Procedure. He was later a judge of the Supreme Court of Poland.

LITERATURE, JEWISH. Literature on Jewish themes and in languages regarded as Jewish has been written continuously for the past 3,000 years. What the term Jewish literature encompasses, however, demands definition, since Jews have lived in so many countries and have written in so many different languages and on such diverse themes. In this article it will be understood to include the following categories: (1) works written by Jews on Jewish themes in any language; (2) works of a literary character written by Jews in Hebrew or Yiddish or other recognized languages, whatever the theme; (3) literary works written by writers who were essentially Jewish writers, whatever the theme and whatever the language. This entry covers the subject up to the threshold of the modern period. The continuation will be found in other entries including *Hebrew Literature, Modern; *Yiddish Literature; *Ladino Literature.

This article is arranged according to the following outline:

EARLY BEGINNINGS TO THE MEDIEVAL PERIOD
BIBLICAL LITERATURE
The earliest, greatest, and most enduring Jewish literary works are the books of the Bible, known collectively in Hebrew as

Tanakh, made up of the initial letters of Torah ("Pentateuch"), Nevi’im ("Prophets"), and Ketuvim ("Hagiographa"). The Bible consists of either 25 or 39 books, depending on whether the 12 prophets are counted as one or 12 books and whether Samuel, Kings, and Chronicles are counted as one or two books each.

The Pentateuch comprises five volumes and offers an account of the creation of the world, the early history of mankind, the life and experience of the forefathers of the Jewish people, the experiences of Israel in Egypt, the Exodus, and the Jews’ wanderings in the desert for 40 years under the leadership of Moses. Extended sections are devoted to laws governing individual and social behavior, to ethical principles, to theological statements, and to details of ritual for priest and layman. The underlying theme is that God has entered into a covenant with the patriarchs and subsequently, in a revelation at Mount Sinai, with the Jewish people as a whole. The covenant demands that the people of Israel worship God exclusively and abide by the law as set forth in the Torah; God, in turn, undertakes to make them “His own peculiar treasure” among the nations and to give them the Land of Canaan. The Jews thus became a choosing and a chosen people.

The Nevi’im are subdivided into two sections: Early Prophets and Later Prophets. The Early Prophets are historical works, portraying the experiences of Israel when entering Canaan (Book of Joshua), a period of turmoil and settlement (Judges), a period of consolidation under the kings (Samuel and Kings), and the period of division of the land into two kingdoms down to the destruction of the Northern Kingdom by the Assyrians and the Southern Kingdom by the Babylonians (Kings). These books are selective history and reflect a point of view and philosophy of history which seems to be that of the prophets. The Latter Prophets include the three large books of the major prophets: Isaiah, Jeremiah, and Ezekiel, and the 12 books of the minor prophets (so named because of the brevity of the books). The themes which unite the books are that the prophets present revelations from God whose substance is that Israel has strayed from true worship, has departed from proper ethical behavior, both individually and socially, and that it is called upon to repent its ways. The penalty for obduracy will be the destruction of the polity. The hope is, however, offered that “a saved remnant” of righteous people will have the opportunity to renew and continue the covenant with God. This prophetic preaching seems to have been a continuous element in Jewish life from the time of Moses (13th century B.C.E.) to the time of Malachi (450 B.C.E.) and seems to have been the concern and responsibility of “schools of prophets” or of a prophetic party.

The Ketuvim comprise works as diverse as the lyrics of the Psalms, the searching dramatic exploration of suffering of the Book of Job, the skepticism of Ecclesiastes, the love poetry of the Song of Songs, the laments attributed to Jeremiah, and such historical works or semihistorical works as the Chronicles, Ezra, Nehemiah, Esther, Ruth, and the foreshadowing of an apocalyptic literature in the Book of Daniel.

The books of the Bible were written over a period extending from the 11th century B.C.E. (upon the basis of traditions perhaps several centuries older) to the third century B.C.E. Although the canon was substantially closed by 250 B.C.E., an argument as to the propriety of including the Song of Songs and Ecclesiastes in the Bible was apparently not settled until about the year 90 C.E. The authorship of the various books of the Bible is rarely clear. The talmudic assumption is that all the books were written under the influence of “the holy spirit” which means that they are attributed to figures who were the recipients of divine revelation. Thus where no author is indicated, as in the Book of Judges, the Talmud ascribes it to the prophetic figure Samuel, more or less a contemporary, and in the case of the Book of Kings makes the assumption that it was the work of Jeremiah. The major books of the Bible, in terms of their significance for Jewish life, are the Five Books of Moses. The traditional view, which is used as an underlying assumption by the Talmud, and subsequently by Jewish law, is that they were a direct revelation from God to Moses and that every word, therefore, has been given a special meaning. Biblical critical scholarship of the 19th and 20th centuries has assumed that the Pentateuch is the work of man and has proposed that its five books are an amalgam of several distinct and ancient versions which no longer exist and which are denominated as the J, E, and P documents. Presumably they were put together in one document by a redactor or a body of editors known as the sometime between the end of the seventh century B.C.E. and the middle of the fifth century B.C.E.

While the Bible is the only extant literature of the early centuries of Jewish existence, the Bible itself indicates that there were other works such as the “Book of the Wars of the Lord” (Num. 21:14) and the “Books of the Chronicles of the Kings of Judah and Israel” (11 Chron. 25:26; 28:26; 32:32). It is also probable that there were works of “false prophets,” writings of “false prophets,” and a great many lyrical poems, like the Book of Psalms and the Song of Songs, which have not survived (see *Bible; *Pentateuch; the individual books of the Bible; *Allegory; *Poetry, Biblical; *Fable; *Parable).

APOCRYPHAL WORKS

From the third century B.C.E. the literary creativity manifested in the Bible continued undiminished in works called *Apocrypha (Sefarim Ḥizōnim, meaning “excluded” or “hidden” works). These writings, usually of unknown authorship, included fictional and moralistic works (“Tobit”; didactic books (“Ben Sira or Ecclesiasticus); disguised historical allegories (the Book of *Judith); historical works (the Books of the *Maccabees); and apologetic works (1V *Maccabees). Some of them, such as the Addition to Esther, were designed as supplements to the Bible to fill in apparent lacunae in that text. Some were imitations of biblical patterns, or conceived as continuations of biblical traditions, like Ben Sira which is in the vein of the books of Proverbs and Ecclesiastes, and the recently discovered Dead Sea *Thanksgiving Psalms Scroll which is in the tradition of the biblical psalter. Some were already early Mi-
drashim, homiletic and moral extensions of biblical material, like the *Dead Sea Scrolls: the Genesis Apocryphon and the *Pesher Habakkuk which applies the prophetic statement of an earlier age to the Jewish-Roman confrontation of the first century B.C.E. and the first century C.E.

The extent of this literature is not known. The discovery of the Dead Sea Scrolls has made it clear that there were many works, perhaps sectarian books, which were not preserved as part of the literary and religious mainstream. Moreover, even the previously known works of the Apocrypha were excluded and hidden from Jewish literature, apparently in an attempt to prevent competition with the canon and to suppress dissident sectarian points of view. Consequently, most of them did not survive in their original language, whether Hebrew or Aramaic, but were preserved in Greek versions by Christians who invested them with semisacriety.

More striking than the literary quality of the works is the appearance of certain themes. The arguments about religious practices and philosophies and the emergence of new doctrines, such as immortality, resurrection, and Messianism are present in the Apocrypha. The confrontations of Jews with the Hellenistic world and the need to authenticate the Jewish tradition is reflected both in historical works and in apologetic books, like IV Maccabees and the Letter of *Aristeas. A nationalistic, revolutionary literature appears in the Dead Sea Scrolls, such as the War of the Children of Light against the Children of Darkness, and from the same source there are new indications of the stresses and strains within the Jewish community. It is a literature of dignity and beauty whose merit does not depend upon anything but its intrinsic quality (see *Apocrypha and Pseudepigrapha; *Dead Sea Scrolls; *Dead Sea Sect; *Hebrew Language of the Dead Sea Scrolls).

**APOCALYTIC LITERATURE**

During the period of the Apocrypha (c. 200 B.C.E. to about the end of the first century C.E.) another body of literature, apocalyptic works, also developed. Like the Apocrypha, they were set aside by later Jewish authorities and were preserved in the Christian tradition surviving either in Greek or Ethiopic revisions. Features common to these works were a claim to be revealed books and to reveal the future, and their pseudepigraphy, purporting to be the writings of ancient heroic or saintly figures. Clearly reactions to political events of the time as well as to theological problems, their essential themes were eschatological – the question of evil and of suffering, the vision of the Messiah, Messianic times, the Day of Judgment, and the vision of a new world. IV *Esdras, a national Job, was probably written right after the destruction of the Temple. The author’s solution to the tragedy of the Jewish people is to assert that while God’s will is inscrutable, His love for Israel is abiding. After evil has run its course, there will be a 400-year Messianic period to be followed by the Day of Judgment, the resurrection, and the creation of a new world. Similarly, the Testament of the Twelve Patriarchs hesitates between a Messiah out of the tribe of Levi and one from the tribe of Judah and presumably represents a reaction, first positive then negative, to the rule of John *Hyrcanus, the Hasmonean ruler.

Another characteristic of the apocalyptic books is their tendency to employ elaborate allegories and embellish the biblical stories with much legendary material designed to fill the lacunae in the biblical text. Mainly Pharisaic (although the Book of *Jubilees differs in places, particularly in calendar dating, from authoritative doctrine), these works often depict the Messiah as a supernatural being, and much is made of angels. The Book of *Enoch in particular, with its view of the Messiah as “the son of man,” its portrayal of fallen angels, and its vision of final judgment, foreshadowed much of Christian thinking.

Ten books are regarded as apocalyptic works, to which must be added some of the Dead Sea Scrolls, particularly the War of the Children of Light against the Children of Darkness, and the so-called *Zadokite fragments. It is probable that there were others as well and that they, and perhaps some of the known works, were of a sectarian character. The rabbinic attitude of the times led to their disappearance in their original languages of Hebrew and Aramaic. Some polemical works, however, such as the *Sibylline Oracles and the Assumption of *Moses were written in Greek in Alexandria, but have come down with many Christian interpolations. Thus the style of the apocalyptic books cannot really be gauged, but the sweep of imagination and the structure of several of them is of a very high order (see *Apocalypse; *Apocrypha and Pseudepigrapha; *Dead Sea Scrolls).

**HELENISTIC LITERATURE**

While some books, written originally in Greek and probably the works of the Alexandrian community, have already been referred to as apocryphal or apocalyptic literature, a large body of writings was the product of the several million Jews who between the third century B.C.E. and the first century C.E. took up their residence outside Erez Israel in lands dominated by Hellenistic culture. They produced a considerable and distinctive body of literature, much of which has been lost. The Bible was translated into Greek and upon these translations were written exegeses and interpretations, all of them designed to meet the needs of Jews in Hellenistic lands and to offer apologetics for the Jewish religion, which was under assault from within and from without. As an extension of these needs, Jewish philosophy developed with the aim of harmonizing Jewish and Hellenistic thought. At the same time, historical and belletristic works were composed both for the benefit of the Jewish population and for apologetic purposes. Thus a body of writings developed which was to be a prototype for an elaborate literature that would be produced whenever Judaism, in later centuries, came into contact with other dynamic civilizations. Simultaneously, in Palestine, a literature designed essentially for Jews free from the problems of acculturation and assimilation was being developed in Hebrew and Aramaic. Its objective was the explication of Judaism in religious, legal, and homiletic terms; it was also a prototype.
for the expansive Jewish literature of the ages (see “Hellenistic Jewish Literature,” “Apologetics”).

**Bible Translations**

**Greek**

Literary undertakings of Hellenistic Jewry started in the third century B.C.E. with the translation of the Bible into Greek (“Septuagint”). According to the Letter of Aristeas, which purports to be the account of the emissary of the king of Egypt, Ptolemy II Philadelphus (285–246 B.C.E.), to Eliezer, the high priest, Ptolemy commanded that 70 translators be engaged to render the Bible into Greek. The facts seem to be that the Bible translation was undertaken by savants of Egyptian Jewry to meet the needs of the Jewish population. The Septuagint, as the first translation of the Bible, had a significant effect and was employed as a pattern for subsequent translations. The Greek style is not distinguished since it relied heavily on Hebrew constructions. It was not a literal translation, however, since it incorporated commentary in the text, consciously attempting to harmonize biblical and Greek thought and to include halakhic and aggadic ideas which were current in Palestinian commentary. Some interesting features of the text are its deletion of all anthropomorphic expressions and the provision of many readings of the text which are different from the standard masoretic version. Whether this was because the translators worked with different texts is not clear, but the variants have provided fruitful interpretations of difficult biblical passages and material for speculation on how the biblical text developed.

Two other translations into Greek were undertaken in subsequent centuries because Palestinian rabbis deemed the Septuagint not to be altogether authentic and because it had become subject to interpolations and manipulations by Christians. At the behest of R. Eliezer b. Hycanus and R. Akiva, “Aquila, a Greek-speaking native of Pontus and a proselyte, undertook a new translation at the beginning of the second century C.E. The result was a literal translation, incorporating many of the rabbinic interpretations. It was widely used and approved, but has disappeared, and only fragments are retained in the writings of “Origen (185–254 C.E.), one of the Church Fathers. The translation of Theodotion (about 200 C.E.), another proselyte, has also been lost, except for his version of the Book of Daniel. It was however integrated by the Church into a revised version of the Septuagint (see “Bible, Translations”).

**Aramaic**

The translations of the Bible into Greek, undertaken in Alexandria, were paralleled in Palestine by translations (Targums) into Aramaic. Presumably, the same need for understanding the Hebrew text motivated the Aramaic translations, and in consequence, particularly in Babylonia, it became customary to read the Targum together with the original text. The standard Aramaic translation of the Pentateuch is Targum Onkelos which is printed in almost every edition of the Hebrew Bible. The Talmud ascribes it to a proselyte named Onkelos who worked under the direction of Joshua b. Hananiah and Eliezer b. Hycanus at Jabneh in the first third of the second century C.E. More probably, however, it was a standardization of translations which had continued for decades or even centuries. Like the Aquila translation, it gives a literal rendition of the text but adds halakhic interpretations and aggadic embellishments wherever they are deemed necessary to present the Bible in the best possible light. Anthropomorphisms are thus avoided and the biblical figure Rachel “takes” the teraphim rather than “steals” them (Gen. 31:19); the phrase “visiting the iniquity of the fathers upon the children” (Ex. 34:7) is rendered with the addition “when the children follow the sinful ways of their fathers.” Another translation called the Targum Yerushalmi (the Palestinian Targum), known also as Pseudo-Jonathan (probably due to an early printer’s error), is essentially a compilation of freely rendered passages of the Pentateuch rather than a translation. It bears the homolist stamp and is replete with midrashic, aggadic, and halakhic statements. From internal evidence it appears that it must have been finally re-dacted in the seventh century in Palestine, but that it contains layers of interpretations from centuries past.

The standard Aramaic translation of the Prophets, though ascribed by the Talmud to “Jonathan b. Uziel, a pupil of Hillel, was probably an ordering of earlier material rather than the work of one man. It resembles the Onkelos in phrasing but makes more frequent use of aggadic material. It is particularly important for exegesis because it deviates frequently from the masoretic text and agrees with the Septuagint and with other sources which are unknown.

The translations of the third section of the Bible, the Hagiographa, are of uncertain origin and authorship and are incomplete. Except for the translation of Proverbs, which is quite literal, they make extensive use of the aggadah. The books of Daniel, Ezra, and Nehemiah, which were partly written in Aramaic, were not translated (see “Bible, Translations”).

**Exegesis**

The great exegete of Hellenistic Jewry, “Philo of Alexandria (c. 30 B.C.E.—42 C.E.), sought to provide an interpretation of the Bible which would be acceptable in terms of Hellenistic thought. He wrote or began a commentary on the entire Pentateuch, but only parts of the commentary on Genesis and Exodus have survived (in an Armenian translation and a Latin translation). He also undertook an outline of Mosaic legislation which was supplemented by treatises on politics, on teaching virtue, and on the creation. A commentary on Genesis, his major exegetical work, consists of essays on various subjects such as the immutability of God and the value of sobriety. Philo’s approach to the Bible was allegorical. Thus he interprets “Adam, where are thou?” as Adam being the symbol of wicked man who hides from the voice of Reason. *Hametz* is a symbol of passion and *matzah* of purity of soul. Despite his allegorical view, he insisted that the laws be obeyed literally and his interpretations show an awareness of the halakhic
and aggadic interpretations which were current in Palestine (see *Bible, Exegesis).

PHILOSOPHY

Formal Jewish philosophy begins in the Hellenistic world as a result of the confrontation with another culture. Among the first philosophers is *Aristobulus (c. 150 B.C.E.) who sought to demonstrate the dependence of peripatetic philosophy upon Mosaic law. Philo, the major philosophic figure, exerted little direct influence upon Judaism, but much upon the history of philosophy and upon Christian thought. Concerned with the problem of the relation of a perfect God to an imperfect world, Philo proposed a series of intermediate causes, of which the main one is the Logos, described variously as the word of God, the supreme manifestation of divine activity, and as moral law. It is the chief medium through which God created the world. In Philo’s philosophy there is in man, as in the universe, a dualism between the soul and the body, the spiritual which is good and the material which is evil. The greatest good for man is contemplation, but the basis of practical ethics is duty, induced by education and habit (see Jewish *Philosophy).

HISTORICAL WORKS

Between 200 B.C.E. and 100 C.E. a considerable body of Jewish historical works was written, but after this 300-year period Jewish historiography lapsed for almost two millennia, not to be taken up again until the 19th century. There are records and fragments of the work of *Demetrius, an Alexandrian (early third century B.C.E.), on the kings of Judah, and of *Eupolemus (middle of the second century B.C.E.), a Palestinian, on the same subject. The Letter of Aristeas is the source of the familiar story about the Septuagint, although it was probably written between 200–100 B.C.E. Philo also wrote history, describing contemporary events, and several poets apparently took events in Jewish history as themes, the most notable being *Ezekiel, whose drama Exagoge (“The Exodus”) appeared about 250 B.C.E.

The most notable historian of the period was *Josephus whose major works, The Wars of the Jews (seven vols.), the Antiquities of the Jews (20 vols.), The Life, and Against Apion, were widely read and quoted throughout the ages. The books were at once a defense of the conduct of Josephus in the war against Rome (66–70 C.E.), a generally affirmative presentation of Judaism to the pagan world, and a defense of the doctrines of Judaism. One of the few Jewish sources for the postbiblical period, Josephus’ works incorporate a great deal of aggadic material, but fail to give a sufficient view of the spiritual life of Jewry at the time. Essentially a political history, the material on the Great Synagogue, the soferim, a group of scribes, and the nonpolitical talmudic sages is quite meager. His contemporary, *Justus of Tiberias, who wrote on the same themes, may have offered a different account, but his works were lost. The historical works of the period generally attempted to evolve a philosophy of Jewish history and through their apologetics show Judaism to be historically more significant and of a truer religious perception than the paganism which dominated the ancient world (see *Historiography).

HALAKHAH AND AGGADAH

The Bible, as the fundamental document of Judaism, became, in the course of time, the base of an inverted pyramid out of which a vast and varied literature developed that included law, theology, ethics, philosophy, poetry, and grammar. The most significant body of literature, extending over a period of 1,000 years (500 B.C.E.–500 C.E.), was a corpus of writing called *halakhah and *aggadah. Based on the Pentateuch, it was rooted in the tradition (set forth in the Mishnah, Avot 1:1) that Moses received not only a Written Law at Sinai but also an Oral Law which was transmitted to leading figures, including the prophets, of successive generations.

Save for stray references, there is no knowledge of the Oral Law during the First Temple period. Talmudic traditions, however, ascribe the beginning of great expansion in the Oral Law to Ezra (c. 450 B.C.E.), the soferim, and to the Great Synagogue. Employing the method of Midrash (from the root darash, to search out), they established the process of extending and detailing the law and set the pattern of finding biblical support for new practices and for some which had already become normative. Among their enactments were the public reading of the Torah with accompanying interpretation, the organization of the daily worship pattern, and the building of “fences” (cautionary rules and legislation) around the Torah.

A supreme court, the *Sanhedrin, headed by *zugot, pairs of scholars, continued the work of the soferim from about 200 B.C.E. The last pair, *Hillel and *Shammai (fl. 20 B.C.E.–20 C.E.) were two of the greatest figures in the development of the law. During this 200-year period religio-political parties developed in Palestine whose differences were partially based on the interpretation and application of Jewish law. The major parties, the *Pharisees and the *Sadducees, alternated in ascendancy, but dominance in the religious legal field ultimately fell to the Pharisees, while the Sadducees became the major force in civil affairs. When the Jews lost their independence, the sphere of the Pharisees ultimately became primary and the talmudic record of the period reflects their dominance. Nonetheless, there were different strands of thought within the Pharisaic movement and the leading figures, Hillel and Shammai, represent different emphases which were perpetuated by their disciples. On the whole, the school of Hillel tended to be broader and more lenient in its interpretation of the law than the school of Shammai which was more literal in the application of biblical texts. The convention of the Talmud ultimately became that the ruling of the school of Hillel (presumably the majority) was accepted as law.

Hillel formalized the development of the *Oral Law by establishing seven rules of interpretation of the Torah which he and others employed as a measuring rod for the halakhot or laws which were being developed. The effect of the method and the authority of figures like Hillel became evident with the acceptance of the Hillelite ruling of prosbul which, in re-
sponse to the economic needs of the time, enabled debtors and creditors to circumvent the explicit biblical law of the sabbatical year limitation on debts. His great disciple, *Johanan b. Zakkai, in the last decade of his life when the Temple was destroyed, initiated one of the great revolutions in Jewish history by transferring the seat of Jewish authority to Jabneh. He established there a Sanhedrin, which functioned like a senate, for Jews both inside and outside of Palestine. The need to define Jewish patterns anew led to a marked expansion of the Oral Law, which was accomplished by five generations of tannaim. Leading figures were Eliezer b. Hycanus and Joshua b. Hananiah in the first generation; their disciples Akiva and Ishmael; R. Akiva's disciples Meir, Judah, Simeon, and Yose b. Halalfa. The major personality of the fifth generation was Judah ha-Nasi (135–219).

Simultaneously with the growth of the halakhah, another oral tradition, that of aggadah (from hagged, to impart instruction), was developed. A vast body of literature, it may be grouped under two major headings: legendary-historical material and ethicoreligious literature.

The legendary-historical material has ancient origins and comprises stories and chronicles in which the lives of biblical figures and biblical episodes are elaborated and accounts of national and personal trials, crises, and salvations are given. It often suggests a kernel of historical fact. Much of this material made its way into the Apocrypha and into the Targums. But, there were, in addition, special collections of the early talmudic period: the *Megillat Tannit, organized around special days celebrated as minor feast days and special fast days; *Seder Olam ("The Order of the World"), a chronicle of events in Jewish history from creation to the time of Alexander, which both records and interprets events and is ascribed to Yose b. Halafka (middle of the second century).

The ethicoreligious aggadah concentrates on a philosophy of life and faith, with practical and metaphysical implications. Often cast in a semi-poetic form or in an aphoristic style, it includes fables and parables. Though some has been lost, much aggadah has been preserved in the Talmud and in the collections of Midrashim. Two of its finest works are Pirkei *Avot ("The Sayings of the Fathers"), a work of the Mishnah, and the *Avot de-Rabbi Nathan ("The Teachings of the Fathers According to the Collection of Rabbi Nathan"). Written in an aphoristic style, the works include much of the ethics and some of the theology of the talmudic sages. The aggadah generally employs the Bible as its frame of reference and represents the homiletic interpretations of preachers in the synagogue on Sabbath afternoons. They also resorted to *gematria (using the numerical value of the letters for interpretation) and other devices. Since they were the works of preachers, they responded to events of the time, to the mood of people, and to the need to communicate faith and values. Stories, parables, and epigrams are therefore characteristic forms employed in the literature.

The oral tradition in halakhah and in aggadah became too complex as the decades went by and the difficult circumstances in Palestine, with periodic revolutions and the disruption of academies, finally made it imperative that the material be reduced to writing. This process essentially, though not entirely, concentrated on the halakhic material which represents the actual laws by which life was governed.

**Halakhah**

The compilation of the oral halakhah resulted in three bodies of works: "motivated halakhot," the Mishnah, and the Tosefta.

"**MOTIVATED HALAKHOT.**" In “motivated halakhot” a rule of law was set forth together with the appropriate biblical verses and their interpretations. They include the *Mekhilta, organized around the Book of Exodus and attributed to R. Ishmael b. Elisha of the third generation of tannaim; the *Sifra, a collection based on Leviticus attributed to R. Judah of the fourth generation; and the *Sifrei material on the Books of Numbers and Deuteronomy, collected by R. Simeon of the same generation. In all probability these men were the original compilers and redactors, while the finished products were the work of later hands (see *Halakhah*).

**MISHNAH.** The greatest body of law, the Mishnah, is a compilation of "unmotivated halakhot," that is, material not related to a text. The work was begun in various academies, notably those of Akiva of the third generation, and of his disciple, Meir, in the second century c.e. Meir apparently developed a very complete work. The final redaction of the Mishnah however was by Judah ha-Nasi who was head of the court, the academy, and the Jewish civil government. He was a man of wide culture and organizing talent and while he based himself on the compilation of Meir, he studied in various academies and assembled different collections of mishnayot before he began his own work. In the Mishnah he redacted, which was the product of a collegium, the Oral Law was organized into six major orders (sedarim): (1) Zera'im ("seeds"), detailing agricultural laws and precepts connected with agriculture (e.g., berakhot, prayers, and blessings); (2) Mo'ed ("festival"), on the laws of holidays and the Sabbath; (3) Nashim ("women"), involving family law; (4) Nezikin ("damages"), including civil and criminal law, courts, and legal procedure; (5) Kodashim ("holy things"), dealing with sacrifices, the Temple service, and dietary laws; and (6) Tohorot ("purifications"), on ritual purity and impurity. The sedarim were divided into tractates (massekhot) of related materials; a total of 66 tractates were compiled. These were subdivided into chapters (perakim) which were divided into sections (mishnayot).

The Mishnah was designed to organize a body of scattered material, to set forth a code for practice and for judgment, and to provide a code for study. It was intended to be all-inclusive in the sense that it dealt even with matters which were no longer observed, such as the laws of sacrifice. Simultaneously, however, it was exclusive in that it set an order of importance and left out thousands of halakhot. It was decisive in that it made rulings on matters which had been in dispute. But
it was designed to promote development, as well, and therefore included minority opinions, and cited their proponents. While the Mishnah was essentially a legal document, it devoted a tractate (Pirkei Avot) to ethical statements and emphasized, in various tractates, certain dogmas, such as the unity of God, providence, reward and punishment in this world and the hereafter, freedom of will, the doctrine of the Messiah, and resurrection. Fundamental to its thinking was the notion that the Torah was revealed and every word of it was subject to interpretation; that the Oral Law was equally revealed and had been transmitted; that the Mishnah, which embodied it, therefore enjoyed authority; and that the sages had a right to interpret the law. The entire work, written in a direct and lucid Hebrew, was completed about 200 C.E. The Mishnah with later elaborations, the Gemara, represents hundreds of years of lawmaking and has been the decisive corpus of writings in Jewish life for almost two millennia (see “Mishnah”).

**The Tosefta (“Additions”).** This body of literature includes many of the halakhot omitted from the Mishnah, as well as elucidations of mishnaic statements and some aggadah. The work was begun by *H* iyya b. Abba and Oshaiah (Hoshaya) Rabbah, disciples of Judah ha-Nasi, but the final redaction probably took place about 500 C.E. (see “Tosefta”).

**Talmud.** The Mishnah had scarcely been completed when the process of expanding the Oral Law began. This activity resulted in a vast body of literature known as the Gemara (from the Aramaic gamar, to learn). The impetus came from the fact that the Mishnah was concise and, therefore, needed explanation; that there were thousands of halakhot, known as beraitot (baraita), which had not been included in either the Mishnah or the Tosefta and had to be reconciled with the Mishnah; and that new problems arose in daily living which demanded new solutions. These elements were particularly evident in Babylonia where the problem of maintaining Jewish law in the midst of a society governed by other laws was immediate. The classic formulation of R. *Samuel (Mar; 180–254)*, *dina de-malkhuta dina* (“the law of the land is law”) so far as nonreligious matters are concerned, is an attempt at dealing with the question. There were, however, many other problems and the need to deal with them, as well as the conviction that the Jew’s highest purpose was to study God’s law, produced an extensive body of debates, decisions, obiter dicta, and historical material.

Two Gemarot were formulated: a shorter work developed in Palestine and known as the Jerusalem Talmud; and a longer body of writing, the product of the Babylonian community where perhaps a million Jews lived and which was studied throughout the ages. These Gemarot together with the Mishnah are collectively known as the Talmud.

There are Gemarot for 39 mishnaic tractates in the Jerusalem Talmud and for 37 tractates in the Babylonian Talmud. Presumably, there must have been Gemarot for all of the 66 tractates of the Mishnah but some of them may have been lost and others, such as the tractates dealing with tohorot (laws of purity and impurity) and zera’im (agricultural laws, tithes, and sabbatical year), may have been discarded as no longer pertinent to post-Temple days. The missing Gemarot are not necessarily the same in the two Talmuds. Thus the Babylonian Talmud has Gemarot for the order of Kodashim (dealing with the Temple cult), while those of the Jerusalem Talmud, mentioned by early authorities, were lost. The Jerusalem Talmud has Gemarot to the ten tractates of the order of Zera’im, whose laws were observed in Palestine in post-Temple days, and there is only one such Gemara (Berakhot) in the Babylonian Talmud. The pattern of the text in both Talmuds is to record a Mishnah and to follow it with the Gemara discussion and debate. While the Mishnah bases itself upon the Bible, the Gemara bases itself upon the Mishnah as its authority, although in certain matters requiring clarification or in developing new halakhot it refers back to the Bible. The usual order of the text is to analyze the Mishnah and to broaden the debate by citing a baraita (an external halakhah not recorded in the Mishnah) which may then also be subject to analysis and to opposing statements. Connections are often loose because the oral tradition relied heavily upon memory. In consequence, while a series of unrelated statements of one man may be cited in full, probably only one of them is connected with the matter under discussion. This may expand into an explanation of the meaning of the other statements and their application which may prompt aggadic interpolations for several lines or pages. The halakhic theme is picked up once again, and usually, but not always, a halakhic decision is rendered. Both Talmuds contain much of aggadah: stories, philosophizing, proverbs, ethical maxims, historical information, medical and scientific observations, and practical advice for daily living. There is a certain amount of humor, considerable wit, and some sharp satirical comments. Approximately one third of the Babylonian Talmud and one sixth of the Palestinian Talmud are comprised of aggadah. The style of both Talmuds tends to be terse.

**Jerusalem Talmud.** The Jerusalem Talmud is the product of five generations of amoraim who conducted their studies at various academies. The major centers at first were Sepphoris, Galilee, the seat of the patriarchate, Judea, and later Tiberias, whither the patriarchate was transferred. Leading figures of the first generation were Hanina b. Hama, Yannai, Bar Kappra, Oshaiah Rabbah, and *Joshua b. Levi.* Johanan Nappaha and *Simeon b. Lakish were second generation notables in whose lifetime the academy at Tiberias became the major center, attracting students from Babylonia as well as from all over Palestine. This period represents the peak of creativity for the Jerusalem Talmud. The succeeding generations also produced men of note, among them Ammi, Assi, *Eleazar b. Pedat, Zeira,* and *Abbahu (of Caesarea) who was the acknowledged leader of Palestinian Jewry. He was a diplomat and a formidable controversialist in polemics with Christians.
By the beginning of the fourth century, the condition of Jews in Palestine had begun to deteriorate due to heavy taxes, a worsening of the economic situation, more frequent persecutions, and the hegemony of Christianity which had now been established by a decree of Constantine. The situation was not propitious to learning or to the maintenance of the academies and many scholars immigrated to Babylonia. The decision was therefore made to reduce to writing the oral debates and decisions of the past five generations. The redaction seems to have been undertaken by Yose b. Bun and to have been completed about 365 c.e.

The Jerusalem Talmud is only about one eighth the size of the Babylonian Talmud and its intellectual, dialectical, and logical quality is inferior. Its explanations of the Mishnah tend to be direct and terse but at times seem cryptic. This was partly because subjects which called for debate in Babylonia were self-evident in Palestine where the terrain and the conditions were better known, and partly because of indifferent editing. Subjects are often juxtaposed without any connection between them; halakhot are neither introduced nor elaborated; and only parts of quotations are given. Clearly, the redaction was undertaken by a community under stress which was losing its grasp and authority to the extent that it abandoned the fixing of the calendar by witnesses and resorted to mathematical calculation.

Babylonian Talmud. The Babylonian Talmud was composed under more felicitous conditions. The community enjoyed size and stability, academies like Nehardea and Sura, later Pumbedita and Mahoza, and an autonomous government under the leadership of the exarch. The foundations of the Babylonian Talmud were laid by *Rav who had studied with Judah ha-Nasi, and by Samuel (Mar). Rav was a specialist in religious law, an aggadist, and a liturgist of note, while Samuel, the major authority in civil law at the time, was also famed as an astronomer and physician. Their disciples included Rav *Huna and Rav *Judah b. Ezekiel, who founded the academy at Pumbedita and developed the dialectical method which won for the sages of Pumbedita the reputation that they could cause “an elephant to go through the eye of a needle.” Huna expanded the academy at Sura so that it had 800 students. Their successors, *Rabbah Nahamani and *Joseph b. Hiyya, developed their methods. Rabbah evolved the dialectical approach to a point where the subject matter of the Talmud increased to such an extent that in part it became independent of the Mishnah. Joseph excelled in accumulated knowledge, basing his teachings upon tradition, thus providing a rein to the exuberance of Rabbah. The fourth generation of scholars, in the first part of the fourth century, *Abbaye and *Rava, also expanded the subject matter and dialectical acuteness of talmudic study. The succeeding generations produced such notable figures as *Papa (b. Nahman) and *Nahman b. Isaac. It came to be clear, however, that the mass of material was too great for oral transmission and that systematization was needed. The redaction was undertaken by *Ashi (335–427), who became president of the academy of Sura at the age of 23, but a large group of scholars who met twice a year in Adar and in Elul, known as the kallah months, also engaged in the work, which lasted 30 years. At this time full academic sessions were held for the dispersed students who were often business and professional men and who otherwise pursued their studies at home. A tractate was edited at each session. After the edition was completed, all the tractates were revised, a process which apparently lasted another 30 years. Further editing and supplementation of the basic material was under the leadership of *Mar Bar Rav Ashi, *Meremar, and particularly *Ravina b. Huna who died in 499. In the following year (500) *Yose, his successor, declared the Talmud officially closed.

The Babylonian Talmud is much better edited than the Jerusalem Talmud. It was redacted over a period of 100 years, so that there was ample time for editing and revision. Logical connections are sought, quotations are complete, editorial explanations abound, and decisions on law are given. While the style is often verbose, the approach is subtle and highly dialectical. Material is analyzed minutely, hypotheses are offered and tested, and discussions are carried through. As in the Jerusalem Talmud, the language is Aramaic, but while the Palestinians employed the Western Aramaic dialect the Babylonians used Eastern Aramaic. In both there is an admixture of Hebrew, but the Babylonian text has a great deal more. The completed Talmud is more than a legal work; it reflects the Jewish view of God, man, and society; of theology and ethics; of Jewish values and of the way they were exemplified in daily life. While it is the work of many generations, it represents only the elite fraction of the population both in ability and in consideration for the people. The Talmud in its time elevated religious scholarship to the highest calling in Jewish life, and the long-term effects of this view have been evident ever since. For 15 centuries the Talmud has been the major concern of Jewish studies and the major guide to Jewish life. Judaism is far less the child of the Bible than that of the Talmud. If the Bible is the base of the Jewish structure, the Talmud is the house within which the Jews have dwelt (see *Talmud).

Aggadah
Midrashim. The same concern for preservation which led to the compilation of the Oral Law caused the aggadah to be organized and committed to writing. While much of it was contained in the Talmud, it was widely scattered and not suitably arranged for reference. Both the scholar and the ordinary Jew had a need for works in which the interpretations of the Bible would be arranged according to books, chapters, and verses. The scholars required it to facilitate finding and comparing interpretations; the laymen needed it because the aggadic statements were major formulations of Jewish ethics, theology, and values, but at the same time were light reading and provided assurances and comfort in the dark hours which Jews, particularly those in Palestine, were experiencing.

The midrashic literature was compiled in places as diverse as Palestine, Babylonia, and Italy, approximately between...
the sixth and twelfth centuries, although much of the material is of an earlier date. Written largely in Aramaic, though some of the compilations have a considerable admixture of Hebrew, it consists largely of homilies preached by rabbis in synagogues on Sabbaths and festivals and at study classes. Unlike modern preachers, they involved not only the Pentateuch and the books of the Prophets, but the Hagigata which was read in the synagogue on Saturday afternoons, the time when sermons were given. The Midrash does not contain complete sermons, but rather the core of ideas, insights, illustrations, and special interpretations upon which the sermon was based. The sermonic technique was to take a point of interest to the listener and to cast new light upon it or to relate it to other matters. The universal subjects of discourse were the Bible or Jewish observance and law. The sermon usually began by pointing out contradictions or similarities in widely scattered parts of the Bible or by raising a question of law, resolving it, and then proceeding to consider moral and religious aspects of the matter. Stories, poetic statements, parables, and epigrams were employed by gifted preachers (see *Aggadah, *Midrash).

**Midrash Rabbanah.** The first major compilation was the *Midrash Rabbanah* (“The Large Midrash”), so designated because of its length. It consists of Midrashim to each of the books of the Torah and to each of the five megillot. Internal evidence indicates that the earliest Midrash, *Genesis Rabbanah*, dates from the sixth century and the latest, *Numbers Rabbanah*, from the 12th. Most of them were composed in Palestine, although several seem to have been subjected to Babylonian re-editing. In many of the *Rabbah* Midrashim the homiletic commentary technique is used whereby a series of comments refer to a specific verse. *Leviticus Rabbanah, Numbers Rabbanah*, and *Deuteronomy Rabbanah*, however, use the sermon method. They select a verse or two from the Torah reading of the Sabbath, adduce various comments, skip the rest of the verses, and proceed to verses derived from the next Sabbath reading. The triennial cycle, customary in Palestine, is the Torah order followed.

**Tanhumah-Yelammedenu.** Another major midrashic compilation is the *Tanhumah-Yelammedenu* cycle on the Pentateuch of which three versions are extant, either in part or whole. The original version was probably compiled in Palestine in the sixth century; the other two also seem to be products of Palestine but are probably late ninth-century. It is possible, however, that they may be from Babylonia and southern Italy. The *Tanhumah* title is derived from Tanhumah b. Abba, a noted Palestinian aggadist of the fourth century who is frequently quoted. The title Yelammedenu ("let our master teach us") refers to a formula frequently employed in the book which involved the raising and answering of a halakhic question after which the discussion branched off into aggadah and commentary.

**Pesikta.** The midrashic cycle *Pesikta* (paska, “to divide”) has two versions: the *Pesikta de-Rav Kahana*, probably compiled in Palestine before the end of the seventh century, and the *Pesikta Rabbati*, which records the year 845 as the date of composition and in its use of Hebrew and of snatches of rhymed poetry gives evidence of having been influenced by the Palestinian Hebrew poetry school which began to flourish in the seventh century. The material consists of homilies on the Torah and prophetic readings for festivals and for special Sabbaths.

**Other Homiletic Midrashim.** In addition to these general compilations, there seem to have been in earlier times Midrashim on all the prophetic and hagiographic books, most of which have been lost. Extant are *Midrash Tehillim*, consisting of homilies; *Midrash Proverbs*, which is more in the nature of an aggadic commentary and is replete with parables, apothegms, and short homiletic interpretations; *Midrash Samuel*, a Midrash on Samuel 1 and 11, a collection of sermons involving references to one or two verses. All three works are of 10th- or 11th-century origin and were probably compiled in southern Italy.

The characteristic patterns of all the midrashic cycles is their focus, either by way of commentary or sermon, on biblical verses and their reflection of the thinking and experiences of many generations. They are interrelated in a peculiar sense; they plagiarized from one another, sometimes even to the extent of bodily lifting passages. The *Tanhumah* borrows from the Pesikta de-Rav Kahana and the Pesikta Rabbati from the *Tanhumah*; the later books of the Midrash Rabbah, on Exodus, Numbers, and Deuteronomy, borrow heavily from the *Tanhumah*. All of them derive a great deal of material from the scattered references in the Talmud (see *Homiletic Literature*; *Preaching*).

**Non-Homiletic Midrashim.** In addition to the homiletic Midrashim, there are midrashic works of another kind, e.g., the eighth-century Hebrew work *Pirkei de-Rabbi Eliezer*, in which biblical narratives serve to teach ethical and religious lessons on such themes as the Sabbath, reward and punishment, paradise and hell, and Messianic doctrine. It also discusses cosmogony, astronomy, and the calendar; abounds in legends and stories, many of them ancient and similar to stories in the Apocrypha; and is written in a poetic style. The resort to numbers as a form of organization is an interesting device and the use of numerical groups, especially of seven and ten, is common. It was probably written in Palestine. A book of a similar stamp, *Seder Eliyahu*, by Abba Elijah, a tenth-century Palestinian, is divided into two parts (Rabbah, large and Zuta, small) and includes a moral discourse on Torah, the love of Israel and of mankind, and the love of God. Written in Hebrew in a poetic style, it makes great use of stories and parables. Other midrashic compilations of the eighth, ninth, and tenth centuries, of undetermined authorship and provenance, are about Moses, Solomon, the Messiah, and paradise and hell. Later midrashic works rearranged traditional material and supplemented it. Such works were composed by *Moses ha-Darshan of Narbonne* and Rabbi Tobiah of Germany, both of the 11th century. A more significant work, *Yalkut Shimonai,
by Simeon Karo (13th century), drew heavily on the Talmud and on many midrashic compilations. Karo organized a compendium of aggadic statements and commentaries on all the 25 books of the Bible.

In a sense midrashic literature has never ended since homily, commentary, and elaboration on biblical themes continue to be creative activities. Jewish and Christian traditions have drawn heavily on the midrashic literature whose roots are in deep antiquity. The Midrash lent color and variety to Jewish tradition; concentrated on ethical and theological problems; recorded and interpreted difficult episodes of Jewish history; and enriched Jewish culture. It was particularly sustaining to the average Jew, man and woman alike, who was not at home in halakhic literature. He drew his philosophy and his sense of worth and purpose from the stories, parables, proverbs, and intuitive insights in which midrashic literature abounded.

**MEDIEVAL PERIOD (500–1750)**

A characteristic feature of Jewish history is that while Jews lacked stability and experienced declining fortunes in one land, they prospered or were tolerated in another. In consequence, there was always one major center, and usually two or three, where Jewish literary creativity continued unabated. In the 1200-year period which constitutes the Jewish Middle Ages, Babylonia, North Africa, Spain and Provence, the Franco-German area, and Italy were the major centers. There were intermittent periods of significant literary activity in Palestine and, after the expulsion of the Jews from Spain, in the Eastern Levant, including Palestine, Turkey, and Egypt, which became centers for a century or two. From the 16th century onward Germany declined for about two centuries while the Slavic countries rose to a prominence both in literary productivity and in Jewish population which they retained until the 20th century.

On the whole, Jewish productivity was greatest and most varied in lands which were part of the mainstream of history, and declined as it began to bypass those countries. The most notable examples are Babylonia and Spain at the height of Arab culture and the most marked exceptions are Slavic countries where the general cultural level was low, but where Jewish literary productivity, concentrating almost exclusively on rabbinics, was high. One important factor which should be noted is that contact between Jewish communities was considerable and that what was produced in one land had an effect upon Jewish literature in other countries. There seems, in the earlier period, to have been two particular streams of influence—one flowing from Palestine into Italy and then into the Franco-German area, and the other stemming from Babylon, flowing through North Africa into Spain.

In the Middle Ages, as in antiquity, Jewish literature constituted several layers. As the Bible was the basis for the Mishnah and the Mishnah for the Gemara, the total tradition was the basis for the literary labors of the Middle Ages, much of which concentrated on the explication of the Bible and the Oral Law through grammar, exegesis, commentary, philosophy, mysticism, and liturgical and didactic poetry. Secular poetry, prose, and science were ornaments of the religious tradition which by the Middle Ages had become complex and stratified. Fundamental to the literature was a belief in the revealed Torah, God's providence, the chosenness of Israel, the coming of the Messiah, and the restoration to the Land of Israel. These ideas were examined, but never seriously disputed until the modern era. They reflected a national characteristic, manifested both in law and literature, which called for life to be lived and coped with, no matter what the circumstances, and which assumed that the details of living, according to the Torah, could be spelled out. In the same spirit, the many kinot ("lamentations") written during the Middle Ages were rarely overwhelmingly pessimistic and despairing.

The literature will be organized here into categories of writing. Obviously, there were interrelationships and effects which, however, cannot be noted; only highlights can be mentioned. Thus grammatical writing influenced Bible exegesis and poetry; rabbinics influenced Bible exegesis; and the impact frequently was all the greater because many of the writers were versatile, writing in many fields. Thousands of works have been lost and thousands more cannot be mentioned. The literary productivity of a small group, highly literate and dedicated to study, was phenomenal.

The question of language also deserves attention. Jews wrote in many languages, but mostly in Hebrew, Aramaic, and toward the end of the period, in Yiddish and Ladino. Much, however, was written in Arabic, and some in other languages. This multiplicity of languages points to another feature of Jewish literary activity which cannot be dealt with here. Since Jews were dispersed through many countries, were multilingual, and moved from land to land, they performed a major function as cultural intermediaries, translating from one language to another and making the riches of one culture available to the other. A third linguistic feature of significance is that the Hebrew language after the talmudic era, when it lapsed as a literary language, suddenly came to life in the early Middle Ages, notably in Palestine and Spain. Most of the great works during the entire 1200-year period were written in Hebrew.

**GRAMMAR AND LEXICOGRAPHY**

The formulation of rules of grammar prompted by a need to study and understand the Bible was basic to the revival of Hebrew as a literary language. The renewed interest in Bible study due to a controversy with the Karaites, who rejected the Oral Law and insisted that the Bible alone was authoritative, was sparked by the realization that the rabbinic position had to be defended. Such an examination inevitably led to the formulation of rules of language. It was further motivated by the fact that the correct reading of the Bible, in its vowels, accents, and keri (the way a word was read), as against ketiv (the way a word was written), was an oral tradition and needed to be set down, since Jews were dispersed in many lands. Finally, Arabic culture, which stressed poetry, and consequently grammar, had a major impact in those centers of Jewish life—Babylon, Palestine, and Spain—which came under Arab rule.
The first philological effort was the *masorah, a collective work of many generations. While its origins date back to Ezra, significant masoretic activity began in the sixth century, continuing to the tenth, and was concentrated in Palestine and Babylonia. The work resulted in a definition of vowels, accents, kettiv, and keri. It noted all exceptions in spelling and peculiarities of words and orthography. Through the use of accents, correct relationship of words and thought were achieved and the chant for biblical reading was fixed. In effect, the relating of words was itself a form of biblical commentary. Ultimately, all the masoretic works were compiled by Jacob b. Hayyim, an Italian scholar, and printed in the *Bomberg edition of the Bible (1525). The notes which were designed to clarify the text and to prevent further errors were of three kinds: the masorah parva (“small”), printed in the outer margin; the masorah magna (“large”), printed in the inner margin, or above, or below the text; and the masorah finalis at the end of the text, which also included an alphabetical list of word peculiarities. Since the masorah is a collective undertaking, few of the scholars who worked on it are known. However, the Tiberian school, where the major work was done, recorded the names of Pinhas (eighth century) and Asher the elder (eighth century), the first of a family who for six generations labored on the masorah. Aaron *Ben-Asher (beginning of the tenth century) substantially brought the masoretic work to a close. Literary work on the masorah is found in Europe as late as the 12th century, and still later Elijah *Levita (1468–1549) published the Masoret ha-Masoret, in which he explained how to read and use the masoretic material.

The formal foundations of grammar and lexicography were laid in Babylon by *Saadia b. Joseph Gaon (tenth century) in Agron, a dictionary, and in Sefer ha-Lashon (“Book of the Language”), a work on grammar. His most notable successors were *Menahem b. Jacob ibn Saruq of Spain whose Hebrew work Mahberet (“Joined Words”) is a dictionary of biblical language and a grammar. Judah *Hayyuj (end of the tenth century), writing in Arabic, established the principle of the bilateral Hebrew root and Jonah *Ibn Janah almost completed the structure of Hebrew grammar in Book of Critique (in Arabic), in which he laid the groundwork of Hebrew syntax. A century later David *Kimhi of Provence rearranged and expanded Ibn Janah’s study in his Mikhlah (“Compendium”), a grammar and dictionary of roots. In the 14th century Joseph ibn *Kaspi of Provence attempted a logical structuring of words and grammar, a venture which was repeated more elaborately by Isaac Profiat *Duran (15th century), who in Ma‘asseh Efod (“The Work of the Ephod”) combined logical structure with an elaborate philosophy of language. The last major grammatical authority of the Middle Ages was Elijah Levita, whose Meturgeman (“The Interpreter”) is the first dictionary of the Targum (see *Hebrew Language).

**BIBLE EXEGESIS**

Simultaneously with literary creativity in grammar there was a development of biblical exegesis. The same scholars were often active in both fields. Four major methods of commentary were developed: peshat (“plain sense”), derash (“aggadic interpretation”), remez (“aggadic and philosophy”), and sod (“mystical interpretation”). Here, too, the versatile Saadiah b. Joseph Gaon laid the foundations with his translation of the Bible and his commentaries in Arabic in a work most of which has been lost. The greatest figure of the era, *Rashi, wrote a phrase-by-phrase commentary on almost the entire Bible which was a harmonious blend of peshat and derash. His commentary was popular for many generations so that Hummash (Pentateuch) and Rashi became almost synonymous. His major rival, Abraham *Ibn Ezra (12th century) of Spain, a poet, grammarian, and scientist who was a master of grammar and Hebrew, chose the path of peshat. His commentary is lucid although occasionally he permitted himself veiled allusions to doubts he entertained about the text. He commented on the entire Bible but only the works on the Pentateuch, Isaiah, and some of the Hagiographa have survived. Preeminent an intellectual’s commentator, Ibn Ezra was the subject of supercommentaries.

Another major commentator who is usually associated with the above-mentioned scholars is David Kimhi, who emphasized peshat, but also resorted to aggadic and philosophic interpretations in his commentaries on the prophets, Psalms, Genesis, and the Books of Chronicles.

While the above are the best exponents of the peshat and derash methods, they based themselves on precursors. There were also contemporaries who pursued the same paths, and successors who adopted their methods. Thus, Rashi’s grandson, R. *Samuel b. Meir, wrote extensive commentaries on the Bible in the peshat method. As mystical and philosophical tendencies were manifesting themselves in the Jewish world, the other two approaches (sod and remez) also began to be employed. Sod owed much to the rise of Kabbalah, of which the *Zohar (itself a sort of commentary on the Torah) was the outstanding work of the period. Meanwhile the approach and spirit of *Maimonides’ Guide of the Perplexed, which centered about the philosophic exposition of many biblical passages, gave impetus to remez. The major commentary in the mystical spirit was the work of *Naḥmanides (13th century), a major figure of Spanish Jewry. His commentary on the Pentateuch reflects the belief that the Torah is capable of yielding many meanings to the initiated, and he therefore offers multiple interpretations in the spirit of halakhah, peshat, and mysticism. His mysticism is, however, limited since he believed that mystical teachings in their full strength should be confined to an elect, and that the masses should be taught a Judaism based upon faith, piety, and reason. His younger contemporary, *Bahya b. Asher, took the mystical approach further in his commentaries, and *Jacob b. Asher, the noted codifier, utilized the techniques of gematria (devising meanings from the numerical value of the words) and notarikon (employing initial or final letters of words to discern hidden meanings).

The outstanding exponent of the philosophical school was *Levi b. Gershom of Provence. Commenting on all the
Bible except the Latter Prophets, he attempted to find speculative truths in it, to ascertain the principles of ethics, and to supply reasoned interpretations of biblical precepts. His commentary enjoyed a high repute among Jewish intellectuals. To a lesser degree, the commentaries of Joseph b. Abba Mari Kaspi employed the same approach and enjoyed a similar reputation.

The last great commentator of the period was the statesman and financier, Don Isaac *Abrabanel of Spain. At home in both Christian and Jewish exegesis and in general literature, he brought all of these into play in his commentaries, which covered the entire Bible. In his approach he first posed a series of questions arising out of the text and then proceeded to resolve them through the use of philosophy, theology, history, and modified mysticism. Apart from his singular method, he is noted for devoting considerable attention to the problems of political philosophy and historical chronology (see *Bible, Exegesis).

POETRY

The Arabic influence and the renaissance of the Hebrew language also led to a remarkable flourishing of Hebrew poetry in the Middle Ages. An equally important factor was the structuring of the prayer book and the liturgy (at that time still fluid) which occurred during these centuries, when thousands of poems which became part of the liturgy were being composed. In this field there was continuity rather than innovation, since the composition of liturgy had persisted throughout the talmudic period. However, the writing of secular poetry – love songs, wine songs, didactic poetry, epigrams, and the like – represented a new development whose immediate origins may be traced to Arabic influence and whose remote roots may be found in the poetry of the Bible.

The characteristic forms of medieval Hebrew poetry are partly influenced by the Bible, but more by Arabic literature and, at the end of the period in Italy, by European forms like the sonnet and the tercet. Biblical poetry, based on parallelism, had occasionally used both the alphabetical form and rhyme. Medieval Hebrew poetry, while using some parallelism, employed the alphabetical form (forward or backward), the acrostic, rhyme, and meter as its characteristic elements. Rhyme, both in poetry and prose, was relatively easy due to the Hebrew suffixes; thus variant and more complicated forms developed. Palestinian and West European poetry tended to use the simple rhyme, while Babylonian and notably the Spanish poetry used the two- and three-syllable rhyme. Masters of the language, the Hebrew poets prided themselves on the ability to use the same word, with different meanings, for rhyming. Meter, introduced by *Dunash b. Labrat (tenth century) and current mainly in Spain, was essentially spondaic and iambic, but was employed in complicated forms so that 19 (or according to some 52) different meters developed. Trick poetry was also composed, often of surprisingly high quality, such as the "Elef Alfin" of Abraham *Bedersi in which each word of a 1,000-word poem begins with the letter alef.

The major types in medieval Hebrew poetry, secular verse and piyyut, ranging from doggerel to moving lyrics and to long, beautiful philosophical poems, were frequently composed by the same poets. The combination, however, was largely confined to Spain, Provence, and Italy. The Palestinian and Franco-German poets were essentially paytanim and their poetry was generally inferior in quality to that of their Iberian coreligionists. Both secular and religious poetry drew extensively on the same sources and employed biblical and aggadic phrases allusively in order to display technical mastery.

The liturgical poems composed in Palestine in the seventh and eighth centuries mark the beginnings of medieval Hebrew poetry. Some were anonymous, like "All the World Shall Come to Serve Thee" of the Day of Atonement service, but most of them can be attributed to three poets, *Yose b. Yose, *Yannai, and Eleazar *Kallir (ha-Kallir). Their compositions are standard prayers in the High Holy Days mahzor and in the festival services. Yose is the author of the Avodah (a Temple service poem) recited on the Day of Atonement and Kallir wrote the Geshem ("Rain") prayer recited on Sukkot. The influence of Palestine was felt most notably in Italy (and from that country in the Franco-German area), which always followed of Palestinian developments and learning. In both areas there were families of paytanim who continued to compose piyyutim, selihot ("penitential verse"), and kinot in successive generations. Notable among them was the *Kalonymus family whose founder, *Meshullam, composed works in Italy and whose descendants moved to Germany at the end of the tenth century. In Germany Meshullam (c. 976), his son Kalonymus (c. 1000), the author of U-Netanneh Tokef, a prayer in the High Holy Days mahzor, the latter’s son, *Moses (c. 1020), and grandsons Kalonymus and Jekuthiel (c. 1050), were prolific in their writing of piyyutim. Other prominent poets in France and Germany were *Gershom b. Judah and *Ephraim of Bonn, the author of the Hymn of Unity. In later periods these countries produced hundreds of paytanim. Virtually every scholar tried his hand at this form of writing, including Solomon *Luria, Samuel *Edels, and Yom Tov Lipmann *Heller.

Spanish, Provençal, and later Italian poetry can claim many distinguished poets who wrote both religious and secular poems. They were men of varied accomplishments, very much at home in all the intellectual and social worlds of their time. The first major Hebrew poet of Spain, *Samuel ha-Nagid (11th century), vizier of Granada, a military commander and a talmudist, wrote extensively but his works have only recently become fully known. They include sacred poetry, reflections on war, love poems, wine songs, elegies, and three volumes of imitations of the books of Psalms, Proverbs, and Ecclesiastes. His younger contemporary, Solomon ibn *Gabirol, who died at an early age, is one of the outstanding figures of Hebrew poetry. Dexterous in the use of language and a master of every form of rhyme and meter, Gabirol wrote on all themes. His few surviving secular poems on nature, love, wine, and death are gems of their kind. His poetic genius found, however, full
expression in his religious poetry and in several long philosophical poems of which Keter Malkhut ("The Royal Crown") is his most consummate work. The poem masterfully integrates the poet's great philosophical and scientific knowledge to create a lofty ode to God.

Moses *Ibn Ezra covered the gamut of secular and religious poetry. Author of more than 6,000 verses, he wrote about "wine and the delights of men," "the world and its vicissitudes," and "poems in praise of the creator." Many of his verses are reminiscent of Omar Khayyam, although Ibn Ezra's range, his delicacy of fancy, and use of imagery exceed the poetic quality of the Persian poet. His masterpiece, Tarshish, composed of 1210 verses, shows a great variety in language and themes. His religious poems are at once philosophical and deeply moving.

The peak of Spanish poetry is found in the harmonious verse of *Judah Halevi. Rejoicing in life, love, and friends and passionate in his quest of God, Halevi wrote of God and man with equal felicity. Love of Zion, expressed in several poems whose theme is "I am a harp for thy [Zion's] songs," also characterizes the work of Halevi. These poems, as well as his religious verse, have been incorporated into the liturgy.

Another great Spanish poet, Abraham Ibn Ezra, wrote on a wide variety of subjects. His secular poetry, while embracing conventional themes, displayed a mastery of style, form, and language, and a great capacity for wit and satire, ranged from frequently against himself as against others. His religious poetry, however, is deeply fervent and moving, ranging from the lyrical to the philosophical. A restless traveler whose journeys took him to Babylonia and Persia, Ibn Ezra also roamed through the realms of the imagination. "The Letter of Hai ben Meliz" is an allegory in rhymed prose of a journey through three worlds.

The last major poet of Spain, Judah b. Solomon *Al-Harizi, the author of Tahkemoni ("Book of Wisdom"), wrote in maqāma form (rhymed prose) frequently interspersed with verse. The poems embraced devotional and love poetry, satire and narrative; some were riddles, others proverbs. The Tahkemoni, consisting of 50 chapters, each devoted to a different subject and treated in a variety of forms, displays remarkable linguistic skill, manipulation of biblical phrases to serve unusual ends, wit, and great literary variety.

While poetry continued to be written in Spain for another two centuries, the golden age had passed. The poets of southern Spain, like Meshullam *da Piera, engaged largely in polemical verse as part of the *Maimonidean controversy; others, like Abraham b. Samuel *Ibn Hasdai and Shem Tov b. Joseph *Falaquera, wrote didactic poetry. In northern Spain, Solomon da *Piera (14th century) made his mark primarily as a religious poet, although he composed secular poetry as well. Solomon *Bonafed (15th century) wrote secular poetry. In one of his poems lamenting the decline of poetry, he incidentally left a record of Hebrew literature of the 14th and 15th centuries. In Provence medieval Jewish literature was distinguished by the Bedersis: Abraham (13th century) and Jedaiah (14th century), his son.

The major center of Jewish poetry from the 13th century onward was Italy, where *Immanuel of Rome wrote his Mahbarot, following Al-Ḥarizi in the use of the maqāma form. Buoyant, gay, and sorrowing by turns, employing varied meters and diverse forms (including the sonnet), the Mahbarot touches on widely different subjects and satirizes and parodies other poets. Two unusual features are that his love songs are highly erotic, and that the last of the 28 chapters is an imitation of Dante's Divine Comedy. Immanuel of Rome had no immediate successors of distinction; Moses *Rieti (15th century), however, modeled his Heikhal on Immanuel's imitation of Dante. After a period of decline, Italian poetry revived with Leone *Modena (mid-17th century) and notably with the brothers Jacob and Emmanuel *Frances (17th century). While Jacob wrote excellent caustic polemic poetry directed against the Shabbatean movement, his brother composed religious and secular verse in various styles, including a substantial number of epigrams. With Moses *Zacuto (17th century) Italian medieval poetry came to an end. Although he introduced poetic drama into Hebrew literature, Zacuto was a poet rather than a dramatist: Yosod Olam ("Foundations of the World") and Tofteh Arukh ("Hell Prepared"), his two dramas, resemble the medieval miracle play in form and development of plot.

A brief period in the composition of poetry in Palestine developed under the influence of the kabbalists. Israel *Najara wrote a substantial body of religious poetry. Employing Turkish, Arabic, Greek, and Italian forms and meters, Najara's themes were God, Israel, and the redemption. Many of his works are essentially love poems to God and a considerable number were incorporated into the liturgy, including the Sabbath table hymn Yah Ribbon (see *Poetry, Medieval; *Prayer).

RABBINIC LITERATURE (500–1250)

The most voluminous body of writings in the medieval period was the legal rabbinic literature consisting of commentaries, codes, and responsa. The number of writers probably runs into the thousands. Beginning with the geonim in Babylonia, the activity extended into every country, embracing the Slavic states, which became the major centers toward the end of the period. Due to its scope and quantity, this literature will be divided into two chronological sections: 500–1250 and 1250–1750.

Commentary

The first activity took place in Babylonia where in the ninth century the gaon *Zemah composed an arukh ("A Prepared System") which was both a dictionary and a commentary on talmudic phrases and selected passages. Not long thereafter, Saadiah wrote brief commentaries (in Arabic), which have been lost, on several tractates. *Hai Gaon in his commentaries on large parts of the Talmud (not all are extant) explicated words and phrases and paraphrased passages in the Talmud. This pattern became the model for the commentaries of the
North African and Spanish schools which were in close contact with Babylonia.

In Babylonia, the talmudic tradition was kept alive in the very institutions where it had been nurtured and the need for commentary, therefore, was not great. However, in the newly developing centers, commentary was essential. Abraham *Ibn Daud associates the beginning of talmudic learning and academies outside Babylonia with four rabbis who set out from southern Italy, were captured, and ultimately dispersed to Cordova, Kairouan, and Alexandria. According to another tradition, at the end of the eighth or ninth century the Kalonymus family migrated to Mainz, in Germany, where an academy was founded. Whatever the case, by the tenth century talmudic learning was established in all these places.

From Babylonia, commentary activity passed first to Kairouan where R. *Hananel b. Hushiel (11th century), employing the method of Hai, commented on several sedarim of the Talmud. He was however more elaborate in his paraphrase, often compared the discussion on the same subject in the two Talmuds, and gave a pesak (“decision”) at the end of each discussion. His contemporary, *Nissim b. Jacob, pursued the same method in elucidating the Babylonian Talmud, but made more extensive comparisons with the Palestinian Talmud and tannaic Midrashim. Other distinguished 11th-century figures were Spanish Jewish scholars. Isaac b. Jacob *Alfasi, the most eminent among them, had emigrated to Spain from Fez in 1088. His great work, Halakhot, a compendium of the Talmud, is a combination of code and commentary; it became a basic text for talmudic studies and was the subject of numerous supercommentaries. His immediate disciple, Joseph ha-Levi *Ibn Migash, also employed the method of paraphrase in his commentaries on many tractates.

A new method was introduced by *Maimonides of whose commentaries on three talmudic sedarim only fragments have survived, but whose commentary (in Arabic) on the Mishnah is complete. Maimonides applied logic and systematization to the Mishnah, analyzing the principles of Oral Law, classifying the halakhot, offering logical sequence for the order of the Mishnah, and providing a historical survey. He was concerned with aiding the ordinary student and in consequence was at pains to indicate the law in each case and to incorporate the relevant material from the Gemara.

In the Franco-German region, commentary was developing along different lines. At the academy of Mainz, headed by *Gershom b. Judah, hundreds of students engaged in the study of the Talmud. They took notes (kunteresim) on the lectures delivered, and the Commentary of Rabbi Gershom is in fact a collection of several generations of such kunteresim based on the teachings of R. Gershom b. Judah or his disciples. The academy developed the Franco-German system of running commentary on words and phrases, a method for the training of scholars, in contrast to the Spanish method which sought general principles under which particulars were organized and were designed as a resource for students who only learned periodically. The most notable representative of the Franco-German method is Rashi whose commentary on almost all tractates appears side by side with the text in every major edition of the Talmud. It reflects his capacity for lucidity, brevity, penetration to the heart of a matter, and is a notable example of pedagogy. Several commentators, members of Rashi’s family, followed his method and rounded out his work. Among them were *Judah b. Nathan and Samuel b. Meir. Talmudic commentary in the Franco-German region however took a different turn in the commentaries known as the *tosafot (“additions”). The tosafist undertook to restore the Gemara method: he raised questions about the text and resolved them, following the order of the Gemara page by page. The tosafot, a product of several generations, appear side by side with the text in all the standard editions. The major scholars who initiated the method and are quoted frequently were *Meir b. Samuel of Ramerupt and his three sons Samuel, *Isaac, and particularly Jacob (Rabbenu *Tam). The next generation produced the great luminary *Isaac b. Samuel of Dampierre who is quoted almost as frequently as Jacob b. Meir. Under the leadership of figures like *Samson b. Abraham of Sens, *Moses b. Jacob of Coucy, and *Meir b. Baruch of Rothenburg, tosafist activity flourished until the beginning of the 14th century.

Simultaneously with Franco-German scholarship there was considerable talmudic activity in Italy where *Nathan b. Jehiel of Rome (11th century) wrote the *Arukh, a dictionary-encyclopedia of the Talmud which is the basis for all modern talmudic lexicography. Nathan explicated words and passages, quoted and cited authorities and comments which would otherwise have been lost, and in his explications and elucidations used comparative philology. Contemporaries and successors have imitated him and the tosafist school. A major figure of the next generation was *Isaiah b. Mali di Trani, the author of Tosafot Rid. In Provence, situated midway between the Spanish and Franco-German centers, academies also flourished and the methods of both northern and southern schools were employed. Zerahiah b. Isaac *Gerondi ha-Levi (12th century) in Sefer ha-Ma'or composed an analytical commentary on Alfasi which combined critical evaluations of earlier and contemporary commentaries with additions to Alfasi. *Abraham b. David of Posquières (12th century), the leader of the anti-Maimonides school, commented on several tractates of the Talmud and on the Sifra, and wrote a severe criticism on Maimonides’ code.

**Codes**

The need for codes arose out of the demands of life: the Jewish community was dispersed and thus lacked readily available authority; the law had also become increasingly complex and required codification. The first responsa were written in Babylonia and were often intended for far-flung Diaspora communities. *She'ilot* by R. *Aha (Ahai) Gaon of Shabha (eighth century) deals with the mitzvot as they are arranged in the Pentateuch and organizes the relevant talmudic material under those headings. It is assumed that the work, consisting of 171 discourses, originally dealt with the entire 613 com-
mandments. Rabbi Aḥa initiated the method of codification in which decisions and sources are given. Another method is that of *Yehudai Gaon, head of the academy of Sura (757–61), in whose *Halakhot Pesukot ("Halakhic Decisions") only decisions are handed down. The third major codification, the *Halakhot Gedolot ("Large Halakhot"), ascribed by some to Simeon Kayyara (eighth century), compiled and organized under single headings the scattered material in the Talmud on given mitzvot. The order of the talmudic tractates is followed, except for the laws relevant to the Temple, which are omitted, with the author modeling himself on the She'ilot and quoting extensively from the Talmud. During the following century, 'Amram b. Sheshna Gaon, adopting the method of Yehudai Gaon, wrote his Seder ("Ordering"), a code on the prayer book. Starting with general principles, Amram deduced subsidiary laws, which he subsequently divided into classes. Hai Gaon, the last gaon of Pumbedita, wrote a series of codes on civil law.

The great codes, however, were the products of other lands. Isaac b. Jacob Alfasi's *Halakhot, partly commentary but mainly code, is an abridgment and paraphrase of the Talmud section by section which adheres to the main line of discussion of the Mishnah and comes to a conclusion about the law. Alfasi thus provides a basis for decisions, but fails, as the Talmud does, to achieve an orderly systematic discussion of all aspects of a subject. Such a systematization is the work of Maimonides in his Mishneh Torah ("The Second Law"). The code brings the entire body of Jewish law into an orderly and systematic arrangement, including laws which were omitted by Alfasi and his predecessors. It sets forth divergent opinions, decides between them, and renders clear decisions. Maimonides' work encompasses the Talmud, the geonim, and the works of other scholars. He bases himself upon the 613 precepts, but organizes them according to his own system: God and man, the life of the individual, laws relating to the Land of Israel, and laws relating to society. While the work was widely accepted and remains one of the monuments of Jewish literature, it also evoked opposition from those who feared it would supplant the study of the Talmud. It has one grave drawback, however, in that it fails to indicate the sources for the rulings, and it was this deficiency, plus the fact that new problems constantly arose, which led to the development of other codes (see *Maimonidean Controversy).

The Franco-German school followed different criteria and did not attempt to formulate an overall code of the scope and system of that of Maimonides, but many less comprehensive codes were written. *Isaac b. Abba Mari of Marseilles (12th century) in Itter Soferim ("The Crowning of Scholars"), a code on civil law, marriage and divorce, and dietary laws, adopts the source method, including under each subject treated the relevant talmudic, geonic, and Alfasi discussions. Ha-Terumah ("The Heave-Offering") by *Baruch b. Isaac of Worms, dealing with dietary, Sabbath, and marriage laws, uses the code method; the work presents a selection of the best scholarship of his generation. More decisive was the *Mahzor Vitry of Simhah of Vitry. Organized around the liturgy and the religious cycle, it cites prayers and laws and is a major work in the history of liturgy, as well as a significant source for geonic and midrashic texts which have otherwise disappeared.

An effort on a broader scale was made by *Eliezer b. Samuel of Metz in Sefer Yere'im where he attempted a complete code; he organized the material along the lines of Maimonides but cited sources verbatim. A code distinctively Franco-German in tone is that of *Eleazar b. Judah of Worms, Roke'ah ("A Compound of Spices"), which deals with the entire body of religious laws. The work, a pure code, without quoting sources, is at the same time a compendium of customs and practices which reflect the daily life of the period. Its pervading spirit, neither intellectual nor purely legal, is one of deep medieval piety which mirrors the effect of the Kabbalah in daily life (see *Codification of Law).

Responsa

Huge and varied, responsa literature is usually precisely what the name implies, responses to legal questions which were asked by individuals and communities. It is rarely an organized or systematic body of scholarship. Many responsa were written but many were undoubtedly lost and others have never been printed. Only a small amount of this vast body of writings is extant. The importance of the responsa is not only legal, but historical. They constitute source material for virtually every phase of Jewish life, since the responsa often involved comment upon community conditions.

The gaonate in Babylonia, the recognized authority for world Jewry for several centuries, produced a vast body of responsa of which only a few hundred have survived. On the whole they are very brief and direct. Many of them standardized synagogue practices and worship throughout the Jewish world. The famous responsum of Amram Gaon to a Spanish community was of this order. Other major writers of responsa were *Sherira Gaon and Hai Gaon. In North Africa, Alfasi left a considerable collection of responsa in Arabic as did his Spanish student, Joseph ibn Migash, and Maimonides, who wrote in Arabic as well as in Hebrew. Mikhtav li-Yhudei Teiman ("Letter to the Jews of Yemen") is a famous example of Maimonides' responsa. In France, Rabbi *Gershom b. Judah and Rashi wrote numerous responsa, which were not collected, but are referred to and quoted by others, as are the responsa of Kalonymus and Meshullam. By the 12th century, responsa had become lengthy essays written in Hebrew and incorporating an analysis of relevant material. They also began to be preserved by the authors themselves. There are collections of Jacob b. Meir Tam and of Solomon b. Abraham *Adret (13th century) of Spain, who wrote approximately 7,000 responsa. Meir of Rothenburg (13th century) of Germany, Jacob b. Moses *Moellin (14th–15th century), and Israel *Isserlein (beginning of 15th century) of Vienna also wrote extensively. Moellin insisted that responsa, as case law, were more important than the codes. In the 14th and 15th centuries Joseph *Colon, the great writer of responsa of Italy, *Isaac b. Sheshet, and his younger

RABBINIC LITERATURE (1250–1750)

The second half of the Jewish Middle Ages was marked by a heightening of persecution, an increased physical, social, and intellectual isolation of the Jews in most countries, and a consequent turning inward to peculiarly Jewish studies. It was characterized too by the rise to eminence of new Jewish centers, most notably those in Eastern Europe and the Turkish Empire, embracing Palestine. The production of rabbinic literature was vast, numbering thousands of works. Only a few of the major efforts can be considered here and they will be discussed chronologically rather than by country. This approach may be adopted the more readily since by the end of the 15th century Spanish Jewry had disappeared or been dispersed and German Jewry had declined in creativity.

Commentary

The significant commentators of the 13th century were Spanish Jews. Nahmanides, a pupil of *Jonah b. Abraham Gerondi, adopted the French method and wrote extensive *novellae on three major orders of the Talmud, providing decisions as well as raising and resolving difficulties found in the Talmud. His disciple Solomon b. Abraham Adret wrote novellae on 16 tractates of the same three major orders of the Talmud, but was more analytical than his master and more given to straight commentary. He selects passages from virtually every page of the Talmud for his novellae. At the beginning of the 14th century *Asher b. Jehiel was the most eminent commentator. Originally from Germany, he became rabbi of Toledo in 1304 and enjoyed a reputation which brought students to his academy from all over Europe. Unconcerned with the sciences, opposed to philosophy, he concentrated his attention on the Talmud. His greatest achievement was a code, but he also wrote *tosafot (glosses and remarks), which are characterized by simplicity and logic, to 17 tractates and commentaries to several tractates of the Talmud and to several orders of the Mishnah. Other scholars of the period were Meir b. Todros ha-Levi *Abulafia of Toledo whose *Yad Ramah followed the old Spanish method of summary and comment, and Menahem b. Solomon *Meiri don Vidal of Provence, who wrote commentaries on all the tractates of the Talmud. Lucid and systematic in style, he adopted the approach of Maimonides. He introduced each section – whether tractate, chapter, or Mishnah – with a statement of its themes, and while his discussion centers on the Mishnah, he also gives the gist of the *Gemara and the decision.

In the 14th century, Rabbi *Yom Tov b. Abraham Ishbili, a disciple of Solomon b. Abraham Adret, continued the novellae method, writing on the three major orders of the Talmud. His contemporary, *Nissim b. Reuben Gerondi, a major force in Spanish Jewry, not only wrote novellae on the same orders but composed one of the two major commentaries on Alfasi. His student Joseph *Habiba completed the work on Alfasi and concentrated particularly on the classification of decisions, a practice which made him a favorite of later codifiers.

During the 15th century, a period of turmoil, significant scholarship declined but was again prominent in new centers in the 16th century. Obadiah of *Bertinoro, who had moved from Italy to Jerusalem, wrote his major exposition on the Mishnah, which is the standard commentary included in all editions. It discusses every order and does not only explain the words, but explicates entire passages, illuminating them with the discussions of the *Gemara. Another commentator of the East, Bezalel *Ashkenazi of Egypt, in *Shitah Mekubbez excerpted and arranged the interpretations of a large number of commentators on difficult passages of the Talmud. He employed *tosafot, Arabic commentaries, and commentators who were not well known and whose work would otherwise have been lost.

The 16th century also saw the rise of Poland as a major center of Jewish learning. The migration of German scholars to Poland initiated a period of activity which continued until the tragic end of Polish Jewry in the 20th century. In 1507 Jacob b. Joseph *Pollak, the most eminent of these scholars, headed the academy at Cracow where he continued his work for three decades. He developed the method of *hilluk in the study of Talmud, i.e., division and analysis. It consisted of taking an apparently unified talmudic subject, dissecting it into its component parts, drawing shades of distinction, and building up a new subject out of the newly defined parts. Pollak, however, left no books. His younger contemporary, Solomon b. Jehiel *Luria, the first important talmudic commentator of Poland, wrote *Yam Shel Shelomo which is essentially a code and partly a commentary, on seven tractates of the Talmud, presented in a plain, non-pilpulistic style. A second work, *Hokhat Shelomo, consists of glosses and comments on the entire Talmud, on Rashi, and on *tosafot. The great merit of the work is in its corrections of the texts, and it is considered so significant that the relevant comments are incorporated at the back of each talmudic tractate. The novellae of Meir b. Gedaliah *Lublin and Samuel Eliezer *Edels, two important scholars of the next generation, were essentially comments on Rashi and *tosafot rather than on the *Gemara. Those of Edels, more deeply penetrating, applied the tosafist method of posing challenges to the text in order to arrive at a new and more cogent answer.

Leading lights of the 17th century were Yom Tov Lipmann *Heller and Meir b. Jacob ha-Kohen *Schiff. Heller, in response to the need of Mishnah study groups, which had become common, and to what he felt were inadequacies in previous commentaries, composed a major commentary on the Mishnah, entitled *Tosafot Yom Tov (“The Glosses of Yom Tov”). Basing himself upon Obadiah of Bertinorò’s commentary, he expanded the material and introduced philosophic and ethical views. Schiff wrote extensive and very terse novellae on the entire Talmud with the intention of setting forth plain meaning, but only the comments on ten of the tractates remain, the others having been destroyed in a fire in 1711.
Peney Yehoshu’ah, an 18th-century collection of novellae to most of the Talmud by Jacob Joshua Falk, is distinguished by keen analysis and brilliance. The work has remained an accepted reference book for students of the Talmud. Ezekiel b. Judah Landau (18th century), whose major reputation is that of a writer of responsa, and who was considered the leading rabbinic authority of his time, also wrote a highly pilpulistic collection of novellae, Zelah (in Hebrew the initials of “Monument to a Living Soul”).

Codes
Works of codification exceeded books of commentary during this period. The code of Maimonides, since it lacked sources and was a specifically Sephardi work, did not end the process of code making. Codes continued to be written among Franco-German and Spanish Jews, and at the end of the period, among Jews in Poland. The form followed the pattern of the previous era: a compendium, a digest of the talmudic discussion, arrangement according to the precepts of the Torah, arrangements according to the order in the Pentateuch, and compilation of groups of kindred laws. In the Franco-German region the first great code of the period was Sefer Mitzvot Gadol (“The Large Book of Precepts,” also called Semag), by Moses b. Jacob of Coucy (13th century). Basing himself on the 613 precepts, which he divided into affirmative and negative precepts, Moses distinguishes six categories of laws and in giving both the law and the sources, relies not only on the Talmud, but on later authorities as well. He does not limit himself to legal matters only, but discusses beliefs and ethics and cites Jewish philosophers. The Hebrew style is clear and excellent, and is similar to that of Maimonides. The Semag was inevitably followed by the Semak (Sefer Mitzvot Katon, “The Small Book of Precepts”) by Isaac b. Joseph of Corbeil (late 13th century). The book, designed for the scholarly layman rather than the scholar, classifies Jewish law into seven categories, but is much more sparing in the citation of sources than the Semag. Two other distinguished codes of the 13th century were Or Zarua, by Isaac b. Moses of Vienna, and Mordekhai, by Mordecai b. Hillel ha-Kohen of Nuremberg. Or Zarua, a compendium rather than a code, cites sources copiously. It is intended for scholars, and is particularly useful because of its extensive resort to post-talmudic sources and decisions. Mordekhai is badly arranged and seems to be a source book for a code rather than the finished product. It comprehends, however, a great mass of material and cites many responsa on the subjects it treats. Both works were employed extensively by later codifiers as sources.

The 13th-century Italian school is represented by the Shibbolei Ha-Leket of Zedekiah b. Abraham Anav in which the author limits himself to the rituals and festivals. Employing the code method, he also presents a selection of material from other codes and responsa, including the opinions of Italian scholars. A digest of it, entitled Tanya, designed for popular use, was prepared by Jehiel b. Jekuthiel Anav.

The great codes of the period were composed by Spanish Jews. They tend to be more systematic, less rigorous in decision, and less guided by custom than the Franco-German works. Among the 13th-century codes were some small works by Nahmanides and the Torat ha-Bayit (“Household Laws”), by Solomon b. Abraham Adret, devoted to laws of the Jewish home. Adret, applying the same method, commented and interpreted extensively. He also wrote a résumé which appears in the margin of the book. Particularly noteworthy is the pedagogical work, Sefer ha-Hinnukh (“Book of Education”) attributed to Aaron ha-Levi of Barcelona which arranges the mitzvot according to the weekly portions of the Torah, discusses their origin, their ethical meaning, and their application. He does not quote sources, but indicates where they may be found. The book, written in excellent Hebrew, was and continues to be popular. The first major 13th-century code, Piskei ha-Rosh, the compendium of Asher b. Jehiel, a German-trained scholar who immigrated to Spain, bears the imprint of both the German and the Spanish schools. Its great value is that while it follows the Alfasi method of paraphrasing the Talmud section by section, it goes far beyond that. Alfasi relies on the Talmud, the geonom, and himself. Asher b. Jehiel brings to bear all the weight of preceding codes, commentaries, and responsa, with particular emphasis on the discussions of the Franco-German schools. Enjoying great authority, the decisions of the work are quoted in later codes and were used as a basis in Sefer ha-Turim (Tur) written by Jacob, Asher b. Jehiel’s son. Sefer ha-Turim takes the rulings of Asher b. Jehiel as a basis for an entire code of Jewish law, excluding those which ceased to operate with the destruction of the Temple. The title refers to the four rows (turim) on the breastplate of the high priest. Jacob b. Asher consequently divided his code into four sections: (1) Tur Orah Hayyim on daily religious conduct, the Sabbath, and the festivals; (2) Tur Yoreh De’ah on prohibited and permitted things, e.g., dietary laws, laws of purity, etc.; (5) Tur Even ha-Ezer on the laws of family relations; and (4) Tur Hoshen Mishpat on civil law. The code provides decisions without sources and includes Franco-German and Spanish views. Clear in content, style, decision, and authority, it was accepted as the authoritative code by a large segment of Jewry for several centuries. The attempt by Jeroham b. Meshullam of Provence, a pupil of Asher b. Jehiel, to codify Piskei ha-Rosh resulted in a pure code of all of Jewish law, except civil law, entitled Toledot Adam ve-Havvah. The work was well regarded, but did not win general acceptance.

The work which finally became the decisive code of Jewry was that of Joseph b. Ephraim Caro who was born in Spain and moved to Bulgaria, and ultimately to Safed. His great work, Beit Yosef, which Caro conceived of as a commentary to Sefer ha-Turim, was designed to include other opinions and to expand the source references in Sefer ha-Turim. It emerged, however, as an independent work which utilized the fourfold form of organization of Sefer ha-Turim. It traced the development of laws, cited various opinions and the reasons for them, and finally concluded with Caro’s decision. As a preparatory manual of study for the work, Caro composed the “Shulhan Arukh which is arranged in the same way, but generally gives
only one opinion and one decision and limits each paragraph to a specific point of law, a pattern which facilitates study and decision. In formulating decisions, Caro was guided by three earlier codes: Alfasi, Maimonides, and Asher b. Jehiel. His approach was to rely on any two opinions against the third. The code, essentially Sephardi in outlook, became the definitive code of Jewry and has remained so to the present day.

As it was written the Shulhan Arukh was not acceptable to Franco-German and Polish (Ashkenazi) Jewry. Solomon Luria protested against it, and a way of meeting this protest was devised by Moses b. Israel *Isserles. Apart from other works, Isserles undertook an addition to the Shulhan Arukh, Mappat ha-Shulhan, in which he set forth the Ashkenazi view and, in cases of controversy, rendered decisions according to that outlook. In addition, he noted customs prevalent among Ashkenazi Jewry, raising many of them to the status of law. On the whole, he was more rigorous than Caro. But there are instances where he is more lenient, notably in the case of hofed merubah, instances involving a considerable loss. It was the Caro-Isserles Shulhan Arukh which became the universal code.

While it was still struggling for universal acceptance, other codes were being formulated. The most important was Levush by Mordecai b. Abraham *Jaffe of Prague and Poland. He set out to create a code, midway between Beit Yosef, which he deemed too lengthy, and the Shulhan Arukh, which he thought too brief. His method was to state a decision and to give the history of the law. His decisions frequently differed from those of Caro and Isserles. For a time, it appeared that this work might supplant the Shulhan Arukh but in the end the Shulhan Arukh prevailed, both because of the errors in Levush and because of the power of the combined authority of Caro and Isserles.

Although a definitive code had finally been produced, it proved, like all the others, to be imperfect both in itself and because new situations continued to arise for decision and codification. The result was that an entire field of commentaries on the various codes arose of which 186 commentaries on the Maimonidean code alone have survived, and there were doubtless many more. The first important commentary on the Maimonidean code, that of Shem Tov b. Abraham *Ibn Gaon (14th century) of Spain, entitled Migdal Oz, sought to classify Maimonides' way of reasoning in the code. Don *Vidal Yom Tov of Tolosa, Spain, defended the Maimonidean system in his Maggid Mishneh as did Caro in his Kesef Mishneh. Sefer ha-Turim was equally the subject of commentaries, the best known (apart from Beit Yosef) being Darkhei Moshe ("The Ways of Moses") by Isserles, which was essentially a polemic against Caro and was the foundation of his later glosses to the Shulhan Arukh. The best commentaries on Sefer ha-Turim were those of Jacob Joshua Falk and Bayit Hadash by Joel *Sirkes. Falk added explanations, decisions, and sources to Sefer ha-Turim, while Sirkes sought to reestablish it as the decisive code in place of the Shulhan Arukh.

The Shulhan Arukh was also the subject of numerous commentaries which finally set the seal of authority upon it. David b. Samuel ha-Levi in Turei Zahav (abbr. as Taz and meaning "Golden Rows") defended the rulings of the Shulhan Arukh, quoted contrary opinions, and arrived at final decisions. Siftei Kohen (abbr. as Shakh and meaning "The Lips of the Priest") was similarly motivated; it explained the sources of the code and attempted to harmonize the differences between Caro and Isserles. Characterized by intellectual brilliance and logical acumen, these works became the standard commentaries on the Shulhan Arukh (see "Codification of Law").

**Responsa**

In the third major category of rabbinic literature of the period, responsa, there was remarkable productivity; the number of collections runs into several thousands, and thousands of others are still in manuscript. They were composed because life outstripped the codes and new problems arose which were either not properly dealt with in the codes or not included in them. Since the early Middle Ages every major rabbinic figure answered questions and the responsa, essentially essays in law, were collected either by himself or by others. These served as supplements to the codes and as bases for later codes.

Medieval responsa should be divided into two time periods: the 13th century to the end of the 15th, during which the rabbis responded to conditions in the Franco-German region and in Spain, and the 16th century through the 18th, when Jewish life was centered in the East, Germany, and Poland. Responsa reflect Jewish life of the times and thus differ greatly in content. The responsa from Spain and the East, where Jewish life was in greater contact with the surrounding world and enjoyed a larger measure of autonomy, testify to greater judicial authority, more severe punishments, better communal organization, and more cases dealing with moral behavior than other parts of the Jewish Diaspora. Spanish responsa also discussed questions of philosophy and theology, whereas the German-Polish questions centered mostly around law. The greater seclusion in Germany and Poland and the greater persecution are reflected in the frequent cases dealing with taxes, special levies, religious questions, cases of women whose husbands had disappeared (agunot), and the like (see "Responsa").

**Responsa (1250–1500)**. The most important collections of Spanish responsa are those of Solomon b. Abraham Adret and Asher b. Jehiel. Adret’s extant responsa number 3,000 of a possible original 7,000. Almost half of them deal with civil law and commercial affairs and thus reveal much about Jewish life in Spain. They reflect strong community organization, the power of leaders to fix prices, regulate promissory notes, and establish and prohibit study patterns. Philosophical and theological questions comprise another large section, including discussions on the relation between mitzvot and intention (kavanah). A third group deals with religious and family problems. Asher’s 1,500 responsa are concerned essentially with halakhah. They indicate that Jews had and exercised the power of
capital punishment, and that the community had great power to regulate economic, spiritual, and moral life. Two other collections of the period, those of Isaac b. Sheshet Peref (14th century), a Spaniard who ultimately became rabbi of Algiers, and his successor Simeon b. Zamah Duran, a mathematician and grammarian, reflect, apart from other matters, the turbulence of life in Spain at the end of the 14th century and the complicated problem of the Marranos. Duran also responded to many questions on mathematics and grammar.

The number of surviving collections of responsa from Germany (13th to 15th centuries) is not extensive but those that are extant are illuminating. Meir of Rothenburg wrote several thousand responsa on questions of lending with interest to gentiles, the duties and salaries of teachers, and the import and export business. Jacob Moellin left some 200 responsa on civil law and family life, and Jacob b. Judah *Weil, his disciple, deals extensively with community affairs. The responsa of Israel b. Pethahiah *Isserlein and Israel b. Hayyim *Bruna mirror the rigorous piety of medieval Germany, indicating the importance that customs assumed and their endorsement by the writers of responsa. During the same period Joseph Colon was writing responsa which reflect contemporaneous life in Italy. Among other things they point to the low scholarly level of the rabbinate in Italy, to the state of the medical profession among Jews, and to the fact that some physicians formed partnerships. The responsa of Judah b. Eliezer ha-Levi *Minz and Meir b. Isaac *Katzenellenbogen (16th century) broaden the picture of Italian Jewish life, indicating that the moral tone was rather lax in the upper stratum. The general tenor of the Italian responsa reflects, in contrast to Germany, a spirit of liberalism and a readiness to deal with problems arising out of the confrontation of Jews with the life of the general society.

RESPONSAS (1500–1750). With the expulsion from Spain a large part of Spanish Jewry migrated to the East where an indigenous Jewish community had continued to exist. As a result intellectual activity greatly increased. Even before the exile, R. Elijah b. Abraham *Mizrahi, a native of Constantinople and the chief rabbi of Turkey, had won a reputation as a major figure both in Jewish and secular learning. His responsa, reflecting Jewish life in Turkey, testify to the great autonomy enjoyed by the community. The rabbi was the recognized intermediary between the government and the community and the assessor of taxes for the Jews. Soon afterward David b. Solomon ibn Abi *Zimra, a native of Spain who had served as chief rabbi of Cairo for 40 years, became the leading Jewish authority in the East. His 3,000 responsa (of which 1,300 have been preserved) present a picture of life in Eastern lands. They indicate that polygamy was practiced, that the Jewish laws of emancipation regarding slaves were still in force, and that relations with Karaites were closer than they had been in earlier centuries, but had deteriorated since the time of Maimonides. Theological questions point to varied beliefs about dogma. Other important collections of the 15th and 16th centuries are those of Moses b. Isaac *Alashkar of Cairo, Jacob *Be-

rav, *Levi b. Habib, and Moses b. Joseph *Trani. The responsa of Trani have some particularly interesting comments about the role of Jews in the export trade and about a boycott organized by Turkish Jewish traders, at the instigation of Dona Gracia *Nasi, against the papal port of Ancona, Italy, as a reprisal against the pope for the burning at the stake of Marranos there (see *Responsa).

METHODOLOGY

A fourth area of rabbinic study, methodology, namely the rules of talmudic logic, the terms employed, and how decisions are made, which had scarcely been touched during the early Middle Ages, developed considerably in the 18th century. *Samson b. Isaac of Chinon (France) and *Jeshua b. Joseph ha-Levi of North Africa had dealt with the subject in the 14th and 15th centuries, respectively. The first major work on methodology, however, was Yad Malakhi, by *Malachi b. Jacob ha-Kohen (middle of the 18th century), which discusses 667 talmudic rules and terms, arranged in alphabetical order. Some sections are extended essays, such as the essay on the authenticity of halakhic statements which were transmitted by disciples in the name of their teachers. Another part of the book discusses the methods of the great codifiers. Isaac *Lampronti of Italy, in Páhah Yizḥak, the second major work of the period, has arranged all the subjects and terms treated in talmudic and rabbinic literature in alphabetical order. Included also are talmudic sources and the views of codifiers and writers of responsa.

Philosophy and Theology

While there was less Jewish philosophical than exegetical, halakhic, and poetic writing in the Middle Ages, it was nonetheless substantial and of high quality. As in the Hellenistic period, medieval Jewish philosophy was born out of confrontation with other cultures. By the eighth century, Aristotle and Plato had been translated into Arabic, and Islam was trying to reconcile religion and reason through the philosophy of Kalam (meaning “word”). Judaism was also experiencing internal problems: the Karaites rejected the Talmud, and *Hiwi al-Balkhi (late ninth century) represented a school of thought which violently attacked the Bible. Jewish philosophy, primarily theological, sought to defend Jewish religion against philosophical attack, and to found the principles of belief on a speculative basis. Scholarly writings thus were directed toward metaphysics and related fields and to a philosophical interpretation of the Bible. These literary activities were undergirded by writings and translations in logic, psychology, and the sciences. Jews also made a significant contribution in these disciplines and other spheres as cultural intermediaries between the Islamic and Christian worlds.

The earliest Jewish medieval philosophers (9th to 11th centuries) wrote in Arabic. David ibn Marwan *al-Mukammis of Babylon in *Book of Twenty Tractates advances proofs for the existence of God; Isaac b. Solomon *Israel of Kairouan, in Book of the Elements, sought to defend the doctrine
of creation against the theory of the eternity of matter. *Em-
munot ve-De'ot* ("Doctrines and Beliefs"), by Saadiah Gaon, attempts to prove the compatibility of revelation, Torah, and reason. Saadiah posited ten basic principles, founding them on a theory of knowledge through which he established the existence and nature of God, the need for revelation, and the reasons for revealed doctrines and *mitzvot*. In his ethics he advocated the middle road between the contending forces in human nature. With regard to the Jewish people, he asserted that it was a people only by reason of the Torah. After Saadiah, Spain became the center of Jewish philosophy where the first philosopher of note was the brilliant young poet Solomon ibn Gabirol, whose major philosophical work *Mekor Ḥayyim* (originally Arabic, Latin *Fons Vitae*, 1150) had until the 19th century been ascribed to an Arab named "Avicron." The book deviates from traditional medieval Jewish philosophy, being closer in tone to neoplatonism. It is a religious philosophical work concerned with personal salvation and with man's purpose and its thesis is that the human soul, which has been united with matter, seeks to return to its source through reason and contemplation. In this connection it discusses God, a theory of emanations, the world (composed of matter and form), and creation. *Mekor Ḥayyim*, which had a considerable effect in Christian circles, was rather less accepted among Jews, although Ibn Gabirol's thinking, often unattributed, was incorporated into Jewish mystical thought. About the same time, "Bahya b. Joseph ibn Paquda, in *Hovot ha-Levavot* ("The Duties of the Heart"), primarily ethical in content, and in *Torat ha-Nefesh* ("The Doctrine of the Soul"), a philosophical work, advanced the theory of design as a proof of God's existence. He proposed the doctrine of negative attributes of God and developed a theory of emanations.

The first philosophical book in Hebrew is *Abraham b. Ḥiyya's Haggay ha-Nefesh ha-Azuvah* ("Meditation of the Sad Soul") where he sets forth the theory that the world was first created in potentiality and then actualized by the word. The microcosm doctrine was propounded by "Joseph b. Zaddik (in his *Olam Katan*, "the Microcosm") - man is a microcosm and can know the world by knowing himself. With Judah Halevi the emphasis in Jewish philosophy shifted. His *Kuzari* is a philosophy of Judaism which seeks to prove that the truths of revealed religion are superior to those of reason and that God is best understood through Jewish history. It is also a philosophy of history whose theme is that Israel is the heart of the nations, endowed with a prophetic capacity, and that the Torah is the expression of the Will of God. Within the framework of Jewish and human endeavors, he assigns a central role to the Land of Israel. Literarily, the *Sefer ha-Kuzari* is distinctive in Jewish philosophy since it is composed as a dialogue and is founded on a historical event (the conversion of the Khazars to Judaism). Abraham Ibn Ezra, however, reverting to the more conventional approach, proposes that God's Will flashing through the upper, middle, and lower worlds is the staying power for everything and that spirituality is resident in everything in the universe. Abraham Ibn Daud (12th century) of Toledo also discusses familiar themes along Aristotelian lines, but pays great attention to the problem of free will and providence. Asserting that God knows man's options but not his choice, Ibn Daud discusses providence and suggests that there are gradations in providence which depend upon how earnestly a man strives for the knowledge of God.

The master work of Jewish philosophy, a synthesis of the Jewish philosophical process, is Moses Maimonides' *Guide of the Perplexed*, which was written in Arabic in 1190. Studied by Christians and Muslims, it had a deep effect on scholastic literature apart from its influence on all of Jewish thought. Maimonides, indicating that he is writing for those who know philosophy but are perplexed about contradictions between philosophy and religion, touches upon specific problems and often takes the biblical verse and expressions as his framework. Discussing anthropomorphism, he deals with proofs for the existence of God and with His attributes which, he asserts, can only be understood negatively. He rejects the doctrine of the eternity of matter as unproved and propounds the concept of *creatio ex nihilo*, in accordance with the Torah which he holds to be immutable. He contends that the Torah is designed to guide the body, the body politic, and the soul and to help a man endowed with sufficient contemplative capacity to achieve union with the active intellect in the universe and thus gain immortality. Other major themes in *Guide of the Perplexed* are Divine providence, which is presented as graduated according to man's capacity; evil, which is largely the work of man; and ethics, to which the Torah directs man.

The Maimonidean synthesis was almost immediately challenged in commentaries and in different systems as Jewish philosophy expanded its scope and embarked upon new ventures. Two main factors contributed to this development: (a) The major Arabic works in philosophy, translations and commentaries of the Greek philosophers, and original works of the Arabic philosophers, were translated into Hebrew along with the works of the Jewish philosophers. Thus *Plato*, *Ar-istotle*, *Al-Farabi*, *Avicenna*, *Al-Ghazali*, and *Averroes* became available to Hebrew readers in Christian Spain and Provence who did not know Arabic. Among the distinguished translators were Judah ibn *Tibbon* (12th century), his son Samuel, and his son Moses. Other translators were Jacob b. Abba Mari *Anatoli* (13th century), Jacob b. Machir *Tibbon* (13th century), and Kalonymus b. Kalonymus (14th century), all of Provence. In the same period the task of translating Latin philosophic works into Hebrew was also undertaken (see "Translators and Translations"). (b) A Hebrew philosophic terminology was created. The way was now open to Jews, whose major literary language was Hebrew and whose audience read Hebrew, to engage in philosophical writing.

Once the basic philosophical language was developed and works were translated into Hebrew, several new spheres were open to Jewish philosophy, one of which was commentary. Some scholars wrote commentaries on Arabic and Greek philosophers, among them: Levi b. Gershon (14th century), on Averroes; *Moses b. Joshua of Narbonne* on Averroes and...
A contemporary of Duran, Joseph *Albo of Spain, evolved a philosophical system which borrowed largely from Maimonides and Crescas, but added new ideas to the field of dogmatics. Albo, reacting to the strong pressure of Christianity upon the Jewish population, sought to standardize the prin-
ciples of Jewish religion, and to demonstrate that philosophy and religion go hand in hand. In *Ikkarim* ("Principles") he employs the same threefold classification of Jewish dogmas as Duran but takes the classification further. He defines God, revelation, and reward and punishment as universal characteristics of divine religion and distinguishes between a conventional religion rising out of social life and a divine religion which is revealed. He asserts that these three principles must be accepted on faith if necessary, although they can be buttressed by reason. What distinguishes an individual religion, however, is a series of secondary dogmas which must be justified by reason. Besides these, a Jew must accept another six doctrines which though obligatory are not principles: *創制 ex nihilo*, the *sui generis* nature of the prophecy of Moses, the immutability of the Torah, the capability of even one precept to perfect the human soul, resurrection, and the coming of the Messiah. The entire work is written in a lucid and popular style, and became a favorite Jewish work.

The last of the Spanish philosophers, Don Isaac Abrabanel, wrote a considerable number of philosophic works on specific topics. Widely read in Jewish, Arabic, and Christian philosophy, Abrabanel draws on his extensive and versatile knowledge to explicate and give a full view of the philosophic problems which he discusses. Following his exegetical method, Abrabanel in his philosophical works also poses a series of objections to a theory and then proceeds to answer them one by one. While he tends toward Maimonides’ philosophical view, he is even more traditional in his concept of Providence, rejecting the idea that Providence depends on the intelligence of man. He also repudiates the rational theories of prophecy and miracles, regarding prophecy as a direct influence from God, not dependent on intellectual excellence. *Dialoghi di Amore* (1535), a philosophic work by his son, Judah *Abrabanel, which is written in Italian and in dialogue form, alludes profusely to classical mythology. Renaissance in tone, its theme is outside the conventional stream of Jewish philosophy and centers mainly on the concept of love of God and how it affects the soul, and the concept of the beautiful. Love is the principle which permeates and unites the universe, extending from God through all creation and back to Him. The influence of the treatise was greater in general thought than in Jewish life since it discusses only few distinctly Jewish themes.

The severe criticism of the rationalistic tendency in the development of philosophy throughout the 13th, 14th, and 15th centuries elicited defenses by scholars who also partially shared the view that rationalism had gone too far. They asserted that philosophy and religion were separate domains and that while philosophic truths were worthy of study and were proper guides, the Torah pointed to still higher truths and ways of life. The notable proponents of this view were the 15th-century Spanish thinkers Abraham *Bibago b. Shem Tov and Joseph ibn Shem Tov*. The latter cautioned, however, that the basic principles of religion must agree with logical truth. In the interpretation of the Torah he distinguished between law, which he accepted, and opinion, which need not necessarily be accepted.

The last major philosophical figure of the Jewish Middle Ages was Baruch *Spinoza*. Though the *Ethics* belongs to the sphere of general rather than Jewish philosophy, it was clearly influenced by Jewish thought, most notably by Crescas, from whom Spinoza borrowed much. Spinoza’s pantheistic view, however, at odds with the Jewish philosophical approach, took him in different philosophical directions. Nevertheless *Tractatus-Theologicus-Politicus* is a distinctly Jewish work which examines the Old Testament critically and, in effect, initiates modern biblical criticism. Spinoza discusses exhaustively the election of Israel, prophecy, miracles, the dogmas of faith, the constitution of the Hebrew state, and the authority of the state in religious matters. His purpose was to defend freedom of thought against religious authority, thus establishing a distinction between religion and philosophical speculation. He contends that prophecy is characterized by imagination and not by speculation, and proceeds to work out the dogmas of universal religion, which very much resemble those of Crescas. Having distinguished between religion and philosophy, Spinoza proceeds to a discussion of the state, which he conceives as founded upon a social contract that protects the right of every man to freedom of thought. Since Spinoza is clearly fighting with the Jewish authorities and attempting to show that they are misrepresenting Judaism, the book is partly a polemic. A fundamental point developed in the work is that the scriptural laws were given for the Jewish body politic and lost their cogency, as did of course rabbinic law, after the destruction of the state. Even for the Jews only the moral laws remain binding. In this approach Spinoza foreshadows Reform Judaism (see *Philosophy*).

**Ethics**

The distinction between philosophy and ethics in the Jewish Middle Ages was not very clear, since both fields centered on religious premises and Torah and the application of these to life. Accordingly, most of the philosophical works also discussed ethics, or at least were ethical in their implications. Nonetheless, there was a considerable corpus of writings whose purpose was distinctly ethical. Most of them were essentially pietistic or, like the *Aggadah*, infused with the moral implications of biblical verses. Some of them, however, primarily works from Spain and Provence, presented formal ethical systems. Solomon ibn Gabirol’s *Tikkun Middot ha-Nefesh* ("Improvement of the Moral Qualities"), written in Arabic, was the first noteworthy effort in this field. Predicated on psychological and physiological bases rather than religious premises, Gabirol’s thesis conceives the soul as consisting of two parts: the higher, which strives for union with God, and the lower, the seat of the moral qualities of daily life. He proposed to teach the art of training and cultivating the soul. *Hovot ha-Levavot*, by Bahya ibn Paquda, a more important and accepted work, has as its central thesis man’s gratitude and relationship to God, which the author posits as the yardstick.
of moral behavior. After establishing a metaphysical foundation for his analysis in the first portal (section), Bahya devotes nine portals to such virtues as sympathy, action for its own sake, meekness, and the harmonization of reason and passion. Altogether different in tone is "Sefer Hasidim ("The Book of the Pious"), a 12th-century Franco-German work attributed to *Judah b. Samuel he-Hasid of Regensburg (c. 1200). Comprised of manuals on ethics and piety, it contains detailed instructions for daily living in the spirit of talmudic and aggadic literature. Its subjects range from worship to marital life, to treatment of servants, to table manners, and is abundantly illustrated with stories. Though marked by strong superstition, the work is imbued with a spirit of piety and ethical sensitivity. It enjoyed great popularity in its time and for many generations. An equally popular, though distinctly formal work, was the Shemoset Perakim ("Eight Chapters") of Maimonides which constituted the introduction to his commentary on Pirkei Avot. Writing as though he were “a doctor of the soul,” Maimonides suggests that there are good dispositions and bad ones, that man is a free agent and a tabula rasa, and that he can be educated to the good. He proposes “the middle way” as the norm of conduct.

By the 13th century, ethical literature began to proliferate, although formal, analytical systems were on the decline. Among the important books of the century were Sha'arei Teshuvah ("The Gates of Repentance") by *Jonah b. Abraham Gerondi and Kad ha-Kemah by Bahya b. Asher. Gerondi discusses the ways that arouse a man to repentance, the nature of repentance and forgiveness, and the obligatory precepts incumbent upon a Jew. He is particularly forceful in his demand for the observance of community enactments which, he says, are designed to strengthen the Jewish community and religion and to sanctify the name of God. Bahya, like Jonah, writing from a religious point of view, arranges his subject matter alphabetically and discusses a wide variety of themes. Among his observations is the view that Jews are dispersed so that they may fulfill the mission of living like a model nation and spreading the knowledge of the One God and His Providence. Once the mission is fulfilled redemption will come.

"Sefer ha-Yashar, an anonymous ethical work which was mistakenly attributed to Jacob b. Meir Tam and to Zerahiah ha-Yevani, is of the 14th century. The author saw the people of his time as being so engrossed in the pursuit of riches and pleasure that they needed to be redirected to the love of God and right conduct. Making an appeal both to reason and piety, he emphasizes, in the manner of Bahya, the awe of God, the wonder of the world, and the need to imitate God and thus fulfill the purpose of creation and of perfecting man. Less theoretical, and more given to the practical exposition of behavior, are the 14th-century work Menorat ha-Maor ("Candelabrum of Light") by Israel b. Joseph *Al-Nakawa of Spain, which concentrates on the meaning and application of specific mitzvot like loving-kindness and the Sabbath, and the anonymous 15th-century treatise Orha'at Zaddikim ("The Way of the Righteous"), stemming from Germany, which examines the art of training the soul to seek the good.

The major work of the period, also called Menorat ha-Maor, by Isaac *Aboab of Toledo, enjoyed great popularity. In contrast to contemporary trends, Aboab stressed the importance of the aggadah whose teachings were concerned with the education of the soul. The author, as stated in his preface, wrote the book with the explicit purpose of giving instruction to all in practical ethics. He bases his work on three principles set forth in Psalm 34:15: “Depart from evil, and do good; seek peace and pursue it,” which he divides into seven categories characterized as the seven nerot (lamps) that make up the “candelabrum of light.” Avoiding evil involves neither desiring nor speaking evil; doing good demands the observance of the mitzvot, the study of the Torah, and repentance; pursuing peace calls for love and meekness. Fusing philosophical speculation and mysticism, the book is an exposition of the meaning and application of these seven qualities. The text is richly interwoven with allegories and parables drawn from the aggadah which serve as illustrations to the author’s instruction. A spate of other books appeared in subsequent centuries. Among them were Reshit Hokhmah ("The Beginning of Wisdom") of Elijah b. Moses de *Vidas, written in a mystical spirit, and the many commentaries on Pirkei Avot which elaborated the ethical approach to life. Notable among the latter, in addition to the commentaries of Rashi, Maimonides, and Bertinoro, were those of Simeon Duran, Joseph b. Hayyim *Jabez, and Judah b. Samuel *Lerma.

A novel note in ethical works, heralding a new era, appeared about 1705 with Kav ha-Yashar ("The Measure of Righteousness") by Zevi Hirsch *Koidonover. Neither well ordered nor particularly distinguished, the work is important because it reflects the vigorous and mystical spirit of Polish Jewry, and was written both in Hebrew and in Yiddish (see 'Ethical Literature').

### Ethical Wills

A body of literature which had a great vogue during the entire Jewish Middle Ages, but most notably from the 11th century onward, is the corpus of documents known as “ethical wills.” This literature had its precursors in the Bible, the Apocrypha, and the Talmud, but it became common only in the Middle Ages. Ethical wills were written in the form of the communication of a father’s experience, insights, and mandates to his son and vary in length, some of them being as large as a small book. These works are important testimonies to the thinking and values of eminent men and reflect the life of different periods and places. One of the earliest extant wills, that of *Eliezer b. Isaac of Worms (11th century), examines the attitude of man to his fellow men, the fulfilling of mitzvot, the rules of hygiene, and the religious tone of life. Judah ibn Tibbon (12th century) in his “testament” urges the study of Torah and science, gives moral and scientific advice to his son, a physician, in the practice of medicine, and offers guid-
ance on how to treat one's wife, children, and books. Writing from Palestine to his oldest son, Naḥman, Naḥmanides advises him on the practice of ethical virtues, especially emphasizing humility so that "every man should seem in thine eyes as one greater than thyself" in some respect. He enjoins his younger son, Solomon, who held a position in the king's court, not to be ensnared by glamour, but to cling to Jewish practice and study and to purity of conduct.

The testament of Asher b. Jehiel addressed to his children is a long work divided into 155 sections and written in an epigrammatic style, stressing honesty and humility, and the giving of charity. His two sons *Judah and *Jacob b. Asher also left testaments. Judah's will, divided into three parts, relates episodes of his life, urges his son to study, enjoins the virtues of truthfulness and humility, and discusses financial matters. In the third section he outlines a scheme for distribution of charity, which constitutes valuable historical data; reckons his salary for 23 years as rabbi of Toledo and directs that as a return his library be dedicated to the use of students. He also incorporates a family agreement to observe the practice of tithe and charity. Suffused with profound piety, the testament of Jacob b. Asher urges love of God to the point of being ready to undergo martyrdom, enjoins against consulting fortunetellers, and advocates the diligent study of Talmud and the avoidance of casuistry. Sefer ha-Musar ("The Book of Morality"), by Joseph Kaspi, a short systematic work on proper behavior written in the form of a will, attempts to enjoin a combination of belief, piety, and ethical behavior based on rational principles. Kaspi discusses the fundamental principles of Judaism which every Jew must apprehend by means of proof and logical reasoning. He, therefore, sets a curriculum of study including Bible, Talmud, mathematics, ethics, law, physics, and logic, culminating with the study of philosophy and theology from the age of 20 on. The work concludes with a defense of the study of philosophy.

The testaments of the 14th and subsequent centuries were written by laymen rather than scholars. Thus *Eliezer b. Samuel ha-Levi (14th century) of Mainz urges his children to live in large Jewish communities so that their offspring may receive a proper Jewish education, warns against card playing and dances, and enjoins the giving of charity and the conduct of household affairs in an orderly manner. Another layman, Solomon Isaac of Provence, is much concerned with study and advises his son always to have a volume of Talmud open so that he might be moved to study.

After the 16th century, testaments are clearly influenced by kabbalistic thought. The most important wills written during the following centuries are by Abraham, Jacob, and Sheftel Horowitz, in the 17th century, and Moses Hasid, Alexander Sueskind, Joel b. Abraham Shemariah of Vilna, *Israel b. Eliezer the Ba'al Shem Tov, and *Elijah b. Solomon Zalman, the Gaon of Vilna, in the 18th century. Ethical will literature did not end with the 18th century, but continued to be written down to our own day and to be circulated within families (see Ethical *Wills).

Philosophical Exegesis

The extensive literature which attempted to harmonize philosophy and religion led to interpretations of the Bible that were extreme, to allegorical explanations, and to commentaries which were basically homiletic. While the approaches of Levi b. Gershom and Isaac Abrabanel were systematic, the works of other scholars were either loosely organized or concentrated on limited themes. The 13th-century work Yikkvau ha-Mayim, by Samuel ibn Tibbon of Provence, is a major example of this type of literature. Starting with the question of creation and committed to proving the truth of the Bible, Ibn Tibbon, with much ingenious philosophical explanation and a moderate use of allegory, discusses angels, Divine providence, and creation. Provence produced a school which interpreted the Bible allegorically, but unfortunately the works have been lost. There is, however, some knowledge of their exegetical explanation: Abraham and Sarah represent form and matter while Isaac and Rebekah stand for the active and passive intellect. The most important work of philosophical exegesis, Ake-dat Yizhak by Isaac b. Moses *Arama (15th century) of Spain, is a compilation of the author's sermons and philosophical discourses. Arama's avowed purpose is not only to explain words, a method which characterized most commentaries, but to elicit the full philosophical teachings of the Bible. In this, he claims to follow the approach of Christian preachers. Through his method, resembling that of Isaac Abrabanel – to pose a series of questions and to answer them – he discusses the soul, the symbolic meaning of paradise and the four rivers (Gen. 2:8–15), justice in the state, the Sabbath, and family life. The stories of the Bible are interpreted allegorically and the author refers extensively to Jewish literature and to general works on ethics, science, and politics to elucidate his arguments. Ake-dat Yizhak was widely influential and served as a source for generations of preachers (see *Bible, Exegesis).

Mystical Literature

Throughout the Middle Ages, particularly the later medieval period, rationalist philosophy was supplemented by a great body of mystical literature. Its origins, found in the Apocrypha, the Talmud, and the aggadah, center around the theophany (Ma'aseh Merkavah) in the first chapter of Ezekiel (see *Merkabah Mysticism). Initially regarded as secret doctrine, it was transmitted orally from one generation of initiates to the next. The first mystical books, pseudographically assigned to early tannaim such as R. Ishmael and R. Akiva, appear in the middle of the geonic period: Alef-Bet de-Rabbi Akiva, the Heikhalot texts, the Ma'aseh Bereshit literature, and the Book of Enoch. The first systematic mystical work, Sefer *Yezirah, was written in Hebrew by an unknown author (probably in Palestine between the second and sixth centuries). The great development of mystical literature began in the 13th century in the south of France and the north of Spain. By then the influence of mystical doctrines known as *Kabbalah ("tradition") had become apparent in exegetical and philosophical literature. One of the most influential personalities in its formative pe-
period was *Isaac the Blind (12th–13th century), the son of Abraham b. David of Posquieres. There are, however, indications of direct influences from both Babylonia and Palestine, especially on the circles of *Hasidei Ashkenaz. The kabbalistic works of Eleazar b. Judah of Worms express the group's teachings in this sphere. They are also reflected in Sefer Hasidim.

**PRE-ZOHR AND ZOHR LITERATURE.** The literature of the "speculative Kabbalah" (Kabbalah iyyunit), which arose in Spain and Provence, is distinguished by originality of thought, agadic style, and frequent pseudepigraphic ascriptions of the writings. In the nature of Midrashim, these works are written either in Hebrew or Aramaic or a combination of the two. The oldest kabbalistic text, the obscure Sefer ha-*Bahir*, is attributed to a second-century *tanna*, but it was probably edited in Provence in the 12th century. Other influential 12th-century works were the treatise Massekhet Azilut and the works of *Azriel of Gerona. Significant in the 13th century were the *Ma'arekhet ha-Elohist* and the central figure of ecstatic kabbalism, Abraham b. Samuel *Abulafia*, whose main works were written at the same time as the *Zohar.*

The latter, the most distinguished work of speculative, indeed theosophical, Kabbalah, the Zohar is written in Aramaic and attributed to Simeon b. Yohai of the second century; it is now taken to have been written by the Spanish kabbalist *Moses de Leon* (13th century). During the succeeding two centuries the Zohar gave rise to an extensive mystical literature including the works of Menahem b. Benjamin *Recanati* of Italy, Moses b. Isaac *Botarel*, Shem Tov b. Joseph *Ibn Shem Tov*, and Judah b. Jacob *Hayyat of Spain.*

The next great flowering in kabbalistic speculation centered around Safed in the 16th century, and especially Moses b. Jacob *Cordovero*, Isaac *Luria*, and Hayyim b. Joseph *Vital.* Luria's original and far-reaching conceptions, as presented by his disciples, reshaped kabbalistic thought and dominated it in subsequent centuries. Through Luria's essentially messianic doctrine, kabbalistic ideas acquired mass popularity.

The numerous kabbalistic works of the next two centuries, largely commentaries and compilations, though reflecting classical kabbalistic thinking and the Lurianic school, were original in thought. The most notable writers were Joseph Solomon *Delmedigo* and Isaiah b. Abraham ha-Levi *Horowitz.* The major work of the period, Isaiah Horowitz' Shenei Luhot ha-*Berit*, a combination of code and kabbalistic commentary on the Pentateuch, profoundly influenced religious life in Eastern Europe and introduced practices and prayers whose sole source and authority was the Kabbalah. Later kabbalistic writing is reflected in the Pithei Hohmah of Moses Hayyim *Luzzatto* and especially in the practices and writings of *Hasidism.* (For a full description see "Kabbalah. See also *Anthropomorphism, *Allegory, *Emanation, *Eschatology, *Immortality of the Soul, *Shekhinah.*)

**Prose Literature**

**HISTORY.** The dispersion of the Jews, a scarcity of reliable documents, and the fact that medieval scholars did not have a historical sense made the writing of Jewish history and geography difficult. The works of the period are often inaccurate and frequently credulous in their reliability on sources. Together with responsa, however, they provide sources for modern Jewish historical studies. Among the historical works of the early Middle Ages was the anonymous Seder Olam Zuta, a history of the Babylonian exilarchs from Zerubbabel down to the eighth century which emphasizes the Davidic line but ignores the most glorious exilarch of the seventh century, *Bustanai b. Haninai.* *Josippon* (tenth century), a widely read anonymous work, is a summary of Jewish history starting with Adam down to the destruction of the Temple. Relying primarily on Josephus, it also drew on non-Jewish sources and on Jewish legends. More factual contemporary accounts, emphasizing the history of the gaonate and the spiritual life of Babylonian Jewry, were provided by Saadiah Gaon (tenth century) and his contemporary *Nathan b. Isaac ha-Kohen* who depicts Babylonian life. An apparently authentic account of Jewry in southern Italy was provided by the family chronicle *Ahihamaz* (1054; *Ahimaaz b. Paltiel*) which testifies to the judicial autonomy enjoyed by Italian Jews and to the close relationship existing between southern Italy and Palestine over the centuries. The chronicles of Jews in France and Germany centering around the Crusades afford authentic and moving accounts of Jewish life in those areas; they include the works of Solomon b. Simeon and *Eliezer b. Nathan,* both of Mainz (about 1140), and that of Ephraim of Bonn (after 1196), Abraham ibn Daud's Sefer ha-Kabbalah ("Book of Tradition"), a work of broader scope, includes a history of the political parties in the second commonwealth, the talmudic tradition, the geonic period, and Jewish intellectual life in Spain. Ibn Daud based himself on known sources and sources unknown to-day with the avowed intent of showing the superiority of the *Rabbanites over the *Karaites.*

The historical works of the later Middle Ages are both far more numerous and more detailed than those of the earlier period. They also attempted to place Jewish history in the context of general history and were superior in orderly arrangement and, sometimes, in critical treatment of the material. They too, however, mixed fact and fancy and were parochial or tendentious in their themes and outlook. The works of the period included a considerable number of chronicles of communities, families, or specific events. Much of the writing, centering about the lives of Jewish heroes or about persecutions, was not history for its own sake, but served as a background to halakhic or aggadic works designed to show the continuity of Jewish tradition or to provide a history of scholarship. Social and economic histories were noticeably lacking. Among the chronological tradition were those of Menahem b. Solomon *Meiri of Provence* (1287), whose work takes the history of Jewish tradition up to his own time and is a source of information on scholarship in Provence and in the Franco-German area. A century later Isaac de Lattes of Provence wrote Sha'arei Ziyyon which takes Menahem Meiri's work as a source. The work of Joseph b. Zaddik on the Spanish Jewish community
provides full data about Spanish scholars up to 1487. *Abraham b. Solomon of Torrutiel in his Book of Tradition (1510) not only deals with scholarly accomplishment from the 12th century onward, but also describes the period of the expulsion from Spain. His eyewitness account of the expulsion is especially valuable as it is invective against the upper classes of Spanish Jewry and his accounts of the events after his exile. *Divrei Yosef (1673), by Joseph b. Isaac *Sambari of Egypt, discusses the Jews of the East. Emphasizing the history and life of Egyptian Jewry, the author also lists scholars in other Eastern cities and persecutions in the area. The book contains a wealth of data, including legends, not found in other sources.

Another type of historical literature dealt with the frequent persecutions of the period. Two major works were *Shevet Yehudah, by Solomon *Ibn Verga, written on the basis of the notes of his relative Judah, supplemented by the notes of his son Joseph; and *Emek ha-Bakha, by *Joseph ha-Kohen (16th century) of Italy. While Ibn Verga’s account of the persecutions is unsystematic and inaccurate, his eyewitness account of the Spanish expulsion, particularly the events following it, is both detailed and moving. He is particularly informative on the religious debates which took place in Spain in connection with which he relates the story of the three rings which Lessing also was to employ in his drama, Nathan der Weise. The material in *Emek ha-Bakha is much better arranged and goes up to 1575; it is particularly informative about contemporary Italian Jewish life. The book is also noteworthy because of its account of Joseph *Nasi and his attempt to rebuild Tiberias.

The major histories of tradition during the period, written in the vein of Ibn Daud, are combinations of chronologies and biographies which gained importance because they threw light on creative activities in different countries at successively later periods. The first such history, *Sefer Yuhasin (1505), by Abraham b. Samuel *Zacuto, begins with the men of the Great Synagogue and takes history down to the author’s own time. The work contains frequent and detailed citations and such interesting additional material as the diary of *Isaac b. Samuel of Acre about the authenticity of the Zohar. To place his writing in perspective, Zacuto devotes the last of his five sections to universal history. *Shalshelet ha-Kabbalah, by Gedaliah b. David ibn Yahya (16th century) of Italy and Turkey, is an encyclopedic mélange of the history of Jewish tradition. It is a series of essays on aspects of Jewish history and on subjects ranging from embryology to the history of persecution. Confusing fact and fancy, the work was nonetheless popular because it marshaled a host of legends about major Jewish historical personalities and because of its eclectic character, which afforded room for many historical oddities. *Zemah David, by David b. Solomon *Gans (16th century), on the other hand, is dry, factual, and well organized. Discussing both historical events and figures, he is particularly informative about Polish and German Jewish history and provides chronological tables and citations of sources which are still of value today. An equally systematic approach characterized David *Conforte’s Kore ha-Dorot (17th century), which is a history of Jewish scholars and scholarship from the period of the Talmud to the author’s own day and is especially informative about the tosafists and Eastern scholarship of the 16th and 17th centuries. Its value as a reference source is enhanced by the fact that the author made considerable use of responsa. The primary value of Seder ha-Dorot by Jehiel Heilprin (17th–18th century) is also as a technical reference source, particularly in the field of bibliography. The work is also exceptionally detailed in its treatment of talmudic figures. Thus in his discussion on Judah b. Iai, he lists almost 3,000 statements attributed to him. As in other books of the period, a critical approach to history is lacking, and thus while Heilprin adds to a knowledge of Jewish tradition, particularly in rabbinics, he mixes fact and legend uncritically in the biographies which are the warp and woof of the work.

Other noteworthy works dealing with literary history and bibliography of the period were those of Joseph Solomon *Delmedigo (17th century), Shabbetai b. Joseph *Bass (17th and 18th centuries), and Hayyim Joseph David *Azulai (18th century). In a letter in rhymed prose, *Iggeret Ahuz, Delmedigo reviewed medieval Jewish literary history, except for rabbinics. He discusses every field of literature and its principal figures. His style is epigrammatic and often mordantly witty, and he characterizes many of the personalities and books with a single phrase. Bass and Azulai did notable work in *bibliography; while Bass listed over 2,400 works in his Siftei Yeshenim, Azulai recorded 3,000 short biographies and bibliographical items. Almost all the historical works discussed above were also based on non-Jewish sources in an attempt to place Jewish history in historical perspective; they lacked, however, critical insight. The scholar who best combined general knowledge, a critical approach, and a historical sense with intensive Jewish knowledge was Azariah dei *Rossi (16th century) of Italy. In *Me'or Einayim he used the short essay form to analyze critically some aspects of Jewish history, literature, and institutions. Dealing with the chronology of the Second Temple period, he disputes both the Talmud and his predecessors and arrives at a new chronology. In his analysis of the aggadah he questions the method of the rabbis in arriving at religious and ethical truths. Discussing science in the Talmud, he indicates errors in view and knowledge and lays down the principle that rabbinic authority applies only to the areas of law and tradition. It is the first work of critical history and initially engendered much controversy because it was considered radical in its views.

During the 16th century Jewish scholars were beginning to turn their attention also to general history, with illuminating side references to Jewish history. Thus while *Seder Eliyahu Zuta (1523), by Elijah *Capsali of Crete, is essentially a work on the history of the Ottoman Empire, the author provides valuable data about the history of the Jews of Spain, Turkey, and Rhodes. Similarly, the history of the kings of France and the Ottoman Turks by Joseph ha-Kohen (16th century) contains much Jewish material, including an account of David Reuveni and Solomon Molcho (see *Historiography).
GEOGRAPHY AND TRAVEL. Current events, history, and legend fused in the literature of geography and travel of the 1,000-year period. A book which fired the Jewish imagination is the record of *Eldad ha-Dani who appeared in Kairouan in 890 with detailed accounts of independent Jewish kingdoms in East Africa, Arabia, Khazaria, and Persia, which he described as the *Ten Lost Tribes. Mingling fact and legend, he buttressed Jewish hopes and ego for many centuries. Equally bolstering was the correspondence between Hisdaï ibn Shaprut (tenth century), a leader of Spanish Jewry, and *Joseph, king of the *Khazars, about the conversion of the latter's ancestor to Judaism. The king's answer, with a document from the Cairo Genizah, provides a fascinating picture of a bypath of Jewish history and Jewish proselytizing efforts.

The great Jewish travel book of the Middle Ages is *Benjamin of Tudela's account of his travels, depicting life in Southern Europe and in the East (1159–73). An eyewitness account of the life in many lands, which the author supplemented with data on Slavic lands, Persia, and India, he portrays a vital Jewish life in many communities and a record of such oddities of history as the black Jews of Malabar and the false messiah, David Alroy. The accounts of Benjamin's near contemporary *Pethahiah of Regensburg which record his travels in Slavic lands, Babylon, and Palestine between the years 1175 to 1185 are less detailed and more credulous. He confirms Benjamin's observations, adds data, and notes the presence of a great number of Karaites in the Crimea.

From the 13th century onward there is a considerable body of literature devoted to trips to Palestine and to a description of communities visited en route. While many are merely descriptions of religious sites and legends centering about holy people and places, others contain illuminating bits of information. Thus Elleh ha-Massarot by Jacob of Paris records the anomaly that he was sent to Palestine to raise money for a yeshivah in Paris. Meanwhile, he gives an account of Jewish life in Damascus and Baghdad. *Estori ha-Parhi of Provence (14th century) has extensive topographical material on Palestine, and his contemporary, Isaac Hilo, provides an illuminating picture of Jewish life in Palestine. He notes that there are many scholars from France and Germany among the Jews of Haifa, that the Jews of Acre are quite rich, and that the Jews of Jaffa possess a fine library.

Of Jerusalem, he reports that there are but 70 families, all of them poor and ignorant, which is a completely different account from that of Hilo of 50 years earlier. Later works include Geliot Erez Yisrael (1624), by Gershon b. Eliæzer of Prague, a book replete with bizarre legends and wonder stories; several books by the Karaite *Samuel b. David (1642) of the Crimea who gives a glowing account of Karaite life in the East; Benjamin Yerusalmi (1786); and the itinerary of Simbah b. Joseph of Poland who reports that the Constantinople Jewish community would annually charter a boat for pilgrimage to Palestine for the High Holy Days. The most fascinating travel book of all is that of David Reuveni (16th century), who appeared in Italy in 1523 claiming to be the brother of King Joseph, ruler of a small Jewish kingdom in the Arabian desert, and sent to negotiate with the pope about waging war against the Muslims. Describing his travels to Alexandria and thence to Italy, much of the book is devoted to his reception by Jews and gentiles in Europe, to his extended negotiations with the pope and the king of Portugal, and to his contacts with the Marranos in Portugal. Reuveni made a considerable impression upon Jews and gentiles, but he was ultimately arrested by the authorities and the book ends in medias res (see *Travelers and Explorers).

BIOGRAPHIES AND AUTOBIOGRAPHIES. Reuveni's work could also be classified in the memoir genre which began to appear in the 17th century. An early example of this kind, Shivhei ha-Ari, composed by one of Luria's followers Solomon Shlumil of Dreznitz, is partly biographical, but primarily an account of the wonders performed by Isaac Luria. Sefer Hezyonot, by Luria's disciple, Hayyim Vital, is a similar mixture and centers about Vital himself, with some references to Luria.

There were, however, two autobiographies of distinction, one by Leone *Modena (16th–17th century) and the other by *Glueckel of Hameln (17th–18th century). Modena, who claimed 26 occupations, provides a fascinating account of his life, and, incidentally, of contemporary Italian Jewry. Writing in Hebrew, he indicates that he was instructed in Latin, in music, and in dancing. He wrote on many themes, served as rabbi, gambled unsuccessfully, engaged in polemics and in general, fit the picture of a Renaissance man. Glueckel's memoir is notable on several scores. It is one of the few works by a woman, was written in Yiddish, and presents a lively picture of the life of a well-to-do Jewish woman of the time and the community in which she lived. She tells of her childhood, the few years she studied in heder, her marriage, her widowhood, the education of her children, business practices, study patterns, and religious observance among Jews. She avows a philosophy of faith in God's providence, displays a rich knowledge of Judaism garnered from reading and listening, and sets the study of Torah as primary. She relates that she sent her children to yeshivot and then gave them in marriage. Her book is a rich portrayal of contemporary German-Jewish life and values (see *Biographies and Autobiographies).
FICTION. As the field of Jewish literature broadened it came to comprehend belles-lettres prose which included tales, fables, and didactic works in which the ethical content is combined with satire, humor, proverbs, and aphorisms for the sake of entertainment and aesthetic pleasure. While much of it was based on Arabic models, since the basic tales and proverbs tended to be universal, on which national or cultural forms were superimposed, there were also Jewish models taken from the Bible, the Apocrypha, and the aggadah. The bulk of these works, until the middle of the 14th century, were written in Spain and thereafter in Provence and Italy.

TALES. The earliest book of fables, Sefer ha-Ma'asiyot, by Nissim b. Jacob b. Nissim ibn 'Shahin of Kairouan, written in Arabic, was based largely on aggadic legends. The most notable early work, however, was the Hebrew book, Sefer Sha'ashu'im, by the physician Joseph *Ibn Zabara (12th century). A melange of folktales, epigrams, and short passages of philosophy and science, the story centers around Zabara's encounter with a stranger who proves to be a devil. In their travels, they debate with one another, tell stories, and compete with one another in the telling of proverbs and epigrams. Characterized by wit, humor, and satire, the style resembles that of the *maqama; it is, however, not poetic in form.

Another major work, Ben ha-Melekh ve-ha-Nazir, by Abraham b. Samuel ha-Levi *Ibn Hasdai, is a Hebrew adaptation of an Arabic version (which has been lost) of an Indian tale based on the life of Buddha, whose theme is the vanity of the world and the value of the ascetic life. The Indian tale had already been adapted in many European languages. Ibn Hasdai's treatment of the material is original, and many of the parables and the content of the last 11 chapters, which reflect the moral and psychological teachings of 12th-century philosophy, appear in no other version. Written in rhymed prose, interspersed with poetry, abundantly ornamented by proverbs and poetry, the book is the story of a prince who through the instruction of a hermit is converted to an ascetic life.

Meshal ha-Kadmoni (1281), by Isaac ibn 'Sahula, is another important work of the period. Based on aggadic stories but also including original tales, it is written in rhymed prose and embellished with puns and parodies based on biblical and aggadic expressions. The author indicates that his motive was to show Arabic-reading Jews that the Hebrew language was an equally suitable vehicle for entertainment. About the same time *Berechiah b. Natronai ha-Nakdan published his Mishlei Shu'alim ("Fox Fables"). Animal stories of this type were a familiar genre in medieval literature and much resemble Aesop's fables. The distinctive Hebraic character of Berechiah's version derives from the play of language. The animals converse in biblical Hebrew, interspersed with talmudic quotations, and readily resort to biblical puns and to parodies upon Jewish characters. A similar book which, however, was a direct translation from the Arabic, was the Iggeret Ba'alei Hayyim, by Kalonymus b. Kalonymus.

SATIRE AND HUMOR. The major medieval work of satire and humor, Al-Ḥarizi's Tabkemoni, was the precursor of a considerable body of literature of lesser worth, one of which is Sone Nashim ("Hater of Women," 1298) by Judah ibn Shabbetai of Spain. Its obvious theme is elaborated with parodies on the Bible, on the liturgy, and on the marriage contract. A rejoinder, much inferior in quality, was written almost a century later by Jedaija b. Abraham Bedersi (ha-Penini) under the title of Ohev Nashim ("Lover of Women").

The parodying of familiar literary forms, notably the Bible and the Talmud, centered about Purim which was an occasion for merrymaking and wine drinking. Of the large volume of literature written in this vein, the most representative are Massekhet Purim by the 14th-century *Kalonymus b. Kalonymus which parodies the talmudic style, and the rather more witty Megilat Setarim, by Levi b. Gershon, which celebrates wine and merrymaking. Similar works were composed in subsequent centuries, most of them centering about Purim, but a few parodying the Passover Haggadah. Kalonymus b. Kalonymus was also the author of the satirical and didactic work Even Bohan in which he portrays the Jews of Provence and characterizes their formal religiosity as devoid of spirit. He attacks the doctors and holds the upper classes up for ridicule. Other parts of the book, however, are dedicated to the theme of the vanity of the world and are in the form of fine parables.

Didactic Literature

Mivhar ha-Peninium, a book of proverbs culled from Arabic literature and intended to provide ethical instruction, attributed to Ibn Gabirol, is the precursor of a large body of ethical works, most of which were didactic, and of works in which ethical systems were formulated. What distinguished didactic from ethical works was essentially a form and a style which were light and popular rather than formal, since the intention of the author was to provide entertainment as well as instruction to his audience. Milhemet ha-Hokhmah ve-ha-Osher, by Judah ibn Shabbetai, claims that both wisdom and wealth must be pursued. Its form is that of a dialogue between contending parties before a court and its style involves the use of puns and parody. Ha-Mevakkesh (1264), by Shem Tov b. Joseph ibn Falaquera, is a more serious work in which the author discusses various professions and crafts, reviews philosophy, ethical theory, and poetry and concludes with a discussion on religion, science, and philosophy. The book, he asserts, is designed to instruct people in proper conduct and is written in dialogue form, with the morals being brought home in short poems and proverbs. The conclusion is that a true understanding of religion depends upon a knowledge of science and philosophy.

Behinat Olam, written in the earlier part of the 14th century by Jedaijah Bedersi (ha-Penini), is altogether more serious and is written in a poetical prose. Its themes are the pursuit of immortality and the cultivation of the soul toward that pursuit. Happiness, he asserts, resides in the observance of the Torah and in following the path of moderation in daily life.
Polemical and Apologetic Literature

From the 12th century onward, as a result of the confrontation of Judaism with Islam and Christianity, the literature of polemics and apologetics developed. Although having its roots in biblical and Hellenistic sources, this literature reached its zenith in the Middle Ages primarily in response to Christian attempts to proselytize Jews by force or persuasion, and to involve them in theological debates. The problem of confrontation was considerably less severe in Muslim countries where the central issues were usually biblical exegesis and articles of faith with which almost all medieval philosophers and theologians dealt, either in their major works or in separate treatises. In addition, within Judaism itself there was a tradition of polemical literature: between the Rabbanites and the Karaites, between philosophers and their critics, and between kabbalists and their opponents. Polemical efforts are, however, found as early as the ninth century in parts of David Ibn Marxân’s “Al-Mukammim” larger works, in which he attacks both Christianity and Islam. He scores the former for undermining pure monotheism and the latter on the grounds that the style of the Koran does not prove divine origin. In the tenth century Saa- diah Gaon took much the same line, questioning the validity of Christian and Muslim exegesis of the Bible and asserting the immutability of the Torah. Expressing his criticisms of the other faiths in the form of a debate with Christians and Muslims, Judah Halevi, in his Sefer ha-Kuzari (12th century), extensively elaborates the points of his Jewish polemical prede- cessors in accusing Christianity and Islam of retaining many elements of pagan idolatry. Maimonides, in his letter to the Jews of Yemen, defends Judaism and denies that there are biblical references presaging Muhammad.

The first polemical work as such, however, is Sefer ha- Berit by the 12th-century writer, Joseph *Kimḥi of Provence. Written in the form of a dialogue, the author presents a debate between a Jew and a Christian on such issues as the interpre- tations of biblical passages, original sin, the role of Jesus, and the traditional charges Christians had leveled against Jews, i.e., deicide and usury. Kimḥi’s arguments were the same as those which had been commonly adduced by Jews, namely, that the doctrine of original sin contradicts the biblical view, that the Jews did not kill Jesus, and that Christian biblical exegesis is mistaken. In addition, Kimḥi asserts that the Jews had an elevated moral sense and a decent communal life.

The talmudic debate held in 1240 before the king in Paris is recorded in Vikku’ah by one of the disputants, Rabbi *Jehiel b. Joseph of Paris. The rabbi defends the Talmud against the charge that it contains anti-Christian statements by claiming that the passages in question refer to an earlier Jesus and not the Jesus of the New Testament. Jehiel further contends that irrational statements in the Talmud and Midrash belong to the “aggadah,” which need not be accepted. Kol Nidrei and the laws relating to gentiles are also explained.

Another important disputation records Nahmanides’ debate with Pablo *Christiani at Barcelona in 1263. The polemical deals primarily with such questions as to whether the Messiah has come, whether the Messiah is divine or human, and whether Judaism is a just and true religion. Nahmanides, referring to the familiar biblical passages, asserts that “the suffer- ing servant” implies the Jewish people; he attacks the doc- trine of original sin and, in terms similar to those of Jehiel, describes the non-halakhic nature of the “aggadah.”

In the 14th century the increase of forced conversions and attacks on Judaism by apostates caused Solomon b. Abraham Adret to write a dialogue denouncing the dogmas of Islam and denying the divine origin of the Koran, while defending Jews from the charge of having eliminated references to Mu- hammad from the Bible. Vis-à-vis a Christian antagonist, Sol- omon repudiates the allegorical interpretations of the Bible, defends the immutability of the Torah, and explains certain talmudic passages.

More significant are Isaac Profiat Duran’s two polemical works, the ironic letter Al Tehi ka-Avetekha ("Be Not Like your Fathers"), and the lengthy Kelimmat ha-Goyim ("The Shame of the Gentiles"). The first is addressed to a Jew who, like Duran himself, was forcibly converted in 1391, and who reneged on an agreement with Duran to flee Spain and to abandon Chris- tianity. Heavily satirical, the letter urges the friend not to be like his fathers who believed in the pure unity of God, but to accept the notion of corporal embodiment. In the same ironic manner of apparent advocacy, Duran attacks many Christian doctrines. He continues his criticism in a more detailed and systematic way in his second work where literary and his- torical methods rather than irony are employed to establish his views. Hasdai Crescas composed a no less powerful po- lemic, Bittul Ikkarei ha-Noẓerim ("Refutation of the Dogmas of Christianity"), which elicited Christian replies.

A major polemical work which evoked considerable controversy and many Christian retorts is the comprehensive Sefer ha-Nizzazon by Yom Tov Lippman *Muelhausen (15th century) of Prague. The book is both an attack on Chris- tianity and a defense of Judaism and its dogmas. Lippman sharply refutes Christian interpretations of the Bible and the doctrines derived from them, and incidently provides many exegetical insights. His statement of Jewish dogmas is couched in philosophical terms. A contemporaneous work by Simeon b. Zemaḥ Duran, Keshet u-Magen, attacks both Islam and Christianity. In his criticism of Christianity, he makes the significant point that Paul’s abrogation of the law was not inten- ded for Jews, but only for gentiles in order to attract them to the new faith.

The debates of the 15th and the 16th centuries are more notable for their polemic nature than for any new insights. Thus contentiousness marked the debate, held at the invita- tion of the pope, at Tortosa, Spain, in which an apostate Jew argued with Joseph Albo, whose views are summarized in his Ikkarim, and with Don Vidal Benveniste, who headed a delegation of the leading Jewish scholars of Spain. Don Isaac Abrabanel dealt at length with Christian doctrines. In the lat- ter part of the 16th century, Joseph *Nasi, Duke of Naxos, and his brother, David, who was the business agent of a cardinal
of Crete, and Abraham ibn Migash, the physician of Sultan Suleiman, all wrote polemics against Christianity.

The 17th century saw the renewal of accusations against Jews by apostates and of proselytizing by Catholics and Protestants. These activities were condemned by Zalman Zevi Oppenhausen of Germany, Jacob of Venice, and Leone Modena. Public disputations were still being held as, for example, in Ferrara in 1617, which was recorded by an anonymous Jewish scholar in his book about the immutability of the Torah; and later in the century, Isaac Lupis participated in a debate in Marseilles. By the end of the century, however, the number of polemics against Christianity began to decrease. The only such production of note in the 18th century was Moses Men小狗's famous letter to Johann Casper Lavater.

[Meyer Waxman and Mordecai Waxman]

**Yiddish Literature**

Following the large-scale migration of Jews to German-speaking territories in the course of the late first millennium c.e. and adoption and adaptation of the local language (a process that had already characterized Jewish migrations in antiquity, e.g., in the development of Judeo-Persian, Judeo-Greek, and Judeo-Aramaic), there gradually developed a new Jewish language – Yiddish – distinct from its various components (Romance, Germanic, and Semitic at this stage) that became the vernacular of the Jewish communities and ultimately also a literary language that complemented Hebrew literature over the course of a millennium of Ashkenazi cultural history. By the 17th century that literature spanned essentially the same broad range of genres as did, for instance, English, French, and German literatures of the period. As was also the case with those literatures, in early Yiddish there were a great many translations from other languages.

The earliest textual evidence of the existence of Yiddish is found in Rashi's commentaries on the Bible and Talmud, which include some three dozen Yiddish glosses, indicating the relevance of the language for Rashi (who studied in yeshivot in the Rhineland) and his students. The glossing tradition developed over the course of several centuries from such sparse beginnings to include comprehensive glosses of most biblical books, entered interlinearly, marginally, as separate lists in order of the words' occurrence, and ultimately as separate alphabetically ordered works. Among the important works of early Yiddish lexicography are Anshel b. Eliakim ha-levi Zion's *Mirkeves Hamishno* ("The Second/Double Chariot," Cracow, 1534), a Hebrew-Yiddish biblical concordance and the first printed book substantially in Yiddish. Moses Sertels b. Is-sachar Halevi published a two-volume set of glossaries of the entire Bible: *Seyfer Lekah Tov* ("Good Doctrine," Prague, 1604) and *Seyfer Beeyr Moushe* ("The Well of Moses," Prague, 1605).

Not all glossaries focused on religious texts: both Nathan Nata b. Moses Hannover's *Sofo Bruro* (*Sofah Berurah*; "Pure Speech," Prague, 1660) and Elijah Bahr Levita (Elye Bokher)'s *Shmous Dvoriim* (*Shemot Devarim*; "The Names of Things," Isny, 1542) are quadrilingual glossaries arranged thematically.

While glossaries aid readers with "difficult" words, the earliest biblical translations into Yiddish (16th-century manuscripts) were so very literal as to be comprehensible only when read alongside the Hebrew original. The first printed Yiddish translations of the Pentateuch and *haftarot* appeared in 1544: one by Michael Adam (Constance), the other by Paulus Aemilius (Augsburg), both slavishly literal. The next stage arrived in Judah Leib *Bresch's* adaptation of those translations into a somewhat more idiomatic style, with an abridged version of Rashi's commentary (Cremona, 1560). Other books of the Bible followed in the ensuing decades, but they were all soon replaced by the *Tsenerene* (Hanau, 1622), probably the most read Yiddish book of all time and one of the most influential books in the history of Yiddish literature and indeed Ashkenazi culture. For four centuries it has been the Bible for Hebrew-less readers, male and female, and immediately became so popular that the Ashkenazi book market rejected the more idiomatic translations published in the ensuing decades (e.g., by Lekuthiel b. Isaac Blitz (Amsterdam, 1676–9) and Joseph b. Alexander Witzenhausen (Amsterdam, 1679)). Little is known of the book's author/translator, Jacob b. Isaac Ashkenazi of Janov. Probably written in the late 16th century, the earliest extant edition of 1622 was not the first edition; there have since been 210 further editions. The book is less a translation than a paraphrase with extensive incorporated commentary drawn from the learned Jewish tradition and rendered accessible to the broadest possible readership.

An innovative development in the literary treatment of biblical narrative was poetic adaptation with an admixture of midrashic material. Already in the earliest collection of Yiddish texts, the Cambridge *Genizah* codex of 1382 (from Cairo), half of the texts are related to this genre, especially the "Avrohom Ovinu" ("Abraham the Patriarch") and "Yousef Hatsadik" ("Joseph the Righteous"). The most famous examples of the genre are the *Mlokhim-bukh* ("The Book of Kings," Augsburg, 1543) and the *Shmuel-bukh* ("The Book of Samuel," Augsburg, 1544), whose authors demonstrate an intimate knowledge of both Jewish sacred and German heroic traditions; they share a four-line stanzaic form of two rhyming couplets (aabb). While the *Mlokhim-bukh* (2,262 stanzas) is the longest poem in early Yiddish, the *Shmuel-bukh* (1,792 stanzas), most likely composed in the late 15th century by Moushe Esmir Vearba, is one of the great narrative masterpieces of the tradition; it was sung to a melody that became famous and was used for many other Yiddish poems of the period.

The liturgy itself remained firmly in the linguistic realm of the sacred languages, Hebrew and Aramaic, and thus the Yiddish translations of the prayer book (complete by the 15th century) were not used in place of the standard prayers, but simply functioned to make them accessible to those who knew little Hebrew. Joseph b. Yakar's translation of the complete prayer book was the first to be printed (Ichenhausen, 1544). A number of important functions with respect to the liturgy were, however, fulfilled by Yiddish. Several texts from the Passover Haggadah, the hymn "Addir Hu/Almekhtiger Got"
Among the most important and influential genres in early Ashkenaz were those designed to teach proper daily conduct according to locally defined usage (minhagim, books of custom) and proper morals (muser). The earliest extant Yiddish examples of customals (ms. from 1503; printed book Venice, 1593), provided instructions for all aspects of conducting a proper Jewish life, e.g., how to kasher pots, how to conduct a circumcision, how to pray in the absence of a minyan. Manuals specifically for women, such as the Seyder Noshim (ms. 1504) and the rhymed Mitsvous Hanoshim (Women’s Laws,” Venice, 1552), were quite popular. The earliest Yiddish example of muser, the Seyfer Midos (“The Book of Virtues,” Isny, 1542), an adaptation of the anonymous Hebrew moralistic work, Orhot zadikim (“The Ways of the Righteous”), is dedicated to a woman, Morado of Ginzburg, identified as a doctor of medicine. Its discussions of vices and virtues are quite dense, abstract, and include little in the way of illustrative narratives, parables, and legends that later came to characterize this popular genre, as in the originally Yiddish composition Der Brant Shigl (“The Burning Mirror,” Cracow, 1602) by Moses Henochs Alshuler of Prague, who provided practical instruction in ritual hygiene, sexual matters, and rearing children. Rebecca “Tiktiner’s Meynike Rivko (“Nursemaid of Rebecca,” Prague 1609) provided detailed instruction specifically for women. The very popular Seyfer Lev Tov (“Book of the Good Heart,” Prague, 1620) by Isaac b. Eliakim of Posen, almost immediately replaced the Brant Shigl. Zevi-Hirsch Koydenover’s Seyfer Kav Hayosher (“Book of the Correct Measure,” Frankfurt am Main, 1705–6) offers rare insight into the spiritual crisis following the collapse of the messianic movement of Shaptsye Tsvish/”Shabbetai Zevi, here expressed through a drive toward reinstitution of traditional practices now imbued with Lurianic Kabbalah. The Seyfer Simhkas Hanevesh (“Joy of the Soul,” 2 vols., Frankfurt am Main, 1707; Fürth, 1727) provided the community with an abridged codification of Jewish law along with an annotated catalogue of the vices and virtues observed in Jewish communities; this is a prime example of the later form of the genre with its inclusion of poems and songs, including musical notation. Isaac Wetzlar’s Leis Briv (“Love Letters,” ms. 1749) combined the muser genre with a devotion to anti-elitist economic and educational reform that incidentally insists on equal education for girls.

One of the most remarkable of early Yiddish genres is the secular epic or romance. These adventure tales crisscrossed language and cultural boundaries so often in the course of the European Middle Ages that their precise origins are obscure. Even so, their obviously Christian character and orientation render them a curiosity in the early Yiddish canon. Already in the Genizah codex of 1382, however, the fragmentary Dukas Horant (“Duke Horant”), based on German material (although no German text on the subject is extant), narrates a typically adventurous bridal quest of a king. The *Vidvilt or Kenig Artis Houf (“Vidvilt” / “King Arthur’s Court,” 15th–16th century) is an adaptation of a 13th-century Middle High German Arthurian romance (Wigalois) concerning Sir Gawain and his son Vidvilt. The centerpieces of the genre, however, are the typically medieval Bovo d’Antona (1507; printed Isny, 1541), composed by Elijah Levi (Elye Bukher) on the basis of a Tuscan romance, and the Renaissance Pariz un Vienne (Verona, 1594), adapted probably by one of Levita’s students from another Italian romance. While Levi’s rather conventional romance was perennially popular in countless further adaptations (as the *Bove-bukh) over the course of several centuries, the consummately Italianate, humanistic Pariz un Vienne, a Yiddish counterpart of its contemporaries, Ariosto’s Orlando furioso or Shakespeare’s tragedies, apparently enjoyed little popularity. The quasissacral nature of this genre as it developed in northern Italy was also reflected in some aspects of the corpus of early Yiddish lyric and fable (see below).

Insofar as narrative prose per se existed in early Ashkenaz, it was initially at least a Hebrew genre, and thus Yiddish examples were most often translations, e.g., the 15th-century Ben Ha-Melekh ve-ha-Nazir (“The Prince and Monk”), a reflex of the Buddha legend that had descended through a long line of adaptations from its Pahlavi original; the popular qua-sihistorical work, Yousifen (Jossipon, tr. Michael Adam, Zurich, 1546); or the Hebrew masterpiece of renaissance sensibility, the Shevet Yehudah (“Sceptre of Judah,” Heb. 1554 (?), Yidd. tr. Cracow, 1591). It is not clear whether Yuspa Shamash’s Malasei Nisim (“Miracle Tales”) was written in Yiddish or in fact translated from a Hebrew original by his grandson Eliezer Liberman, who published it (Amsterdam, 1696).
preponderance of translation in this genre, there are genuine masterpieces among the original Yiddish compositions as well. The Maase Briyo veZimro ("Tale of Briyo and Zimro," ms. 1585) is a tale of international intrigue, averted cultural extinction, the hero’s journey to the Other World, and star-crossed young lovers. The centerpiece of the genre, the "Maase-bukh ("Mayse-Book / Book of Tales," Basel, 1602), compiled and adapted from the Talmud, Midrash, and various folktales sources in the late 16th century, includes 255 tales, designed to be a vernacular aggadah that would teach the common people ethical principles by means of pious tales (in pointed opposition to other allegedly immoral collections then in circulation, such as the *Ki-bukh; on which see below), as well as entertain. This book’s popularity and profound and perva-
sive influence on later Yiddish literature was surpassed only by the Tserenerene. The magnificently anomalous book written by Glikl has Leyb Pinkerle ("Glueckel of Hameln; untitled, composed 1691–1719; publ. 1898) is difficult to classify, since it combines attributes of the ethical instruction of muser, the pragmatic detail of minhogim, and the pious exum of mayse collections, along with aspects of autobiography. Glikl provides unsurpassed insight into the mind, passions, spirituality, and daily cares of an intelligent and capable Jewish bu-
sinesswoman of the period.

In addition to narrative texts, other Yiddish prose works abounded, e.g., instructional manuals in accounting and mathematics, geographical description, hygienic manuals, and the prolific genre of practical medicine (with an inevita-
able admixture of magical charms and potions). Perhaps most remarkably, in 1686–7, Yiddish added its own contribution to the century that witnessed the invention of European journal-

ism: the Dinstagishe/Fraytagishe Kurantrn, which appeared twice weekly in Amsterdam, reporting on political events from all over Europe, North Africa, and the Middle East, especially concerning the religious wars of Catholics and Protestants, Turkish incursions into the Balkans, weather catastrophes, and new inventions.

The origins of Jewish drama are obscure, but clearly con-

nected with *Purimshpil (Purim plays) as performed in private houses during that holiday. There are a few examples of early Purim poems, and Gumprekhst of Szczebrzeszyn (resident in Venice) narrates the Esther story in suggestively dramatic form and provides the first usage of the word purimshpil (ms. 1535). In 1598, a satirical Yiddish poem indicates that a (non-

extant) play called Shpil fun Toyb Teklayn… ("Play about Deaf Jake") was performed at Tannhausen. An anonymous Yiddish adaptation of a German Jonah play survives from c. 1600, the function of which in Jewish culture is not clear. The earliest complete Purim play extant is an "Akhashveyresh-shpil" from 1697, which was, as were the other earliest extant examples, a bawdy poetic burlesque based on the biblical Esther story, in which the character of Mordecai was conceived as a clownish buffoon whose humor was often quite vulgar. Within a few decades, however, Purim plays had changed radically from folksy chamber plays to elaborate costumed and quite serious Baroque musical dramas with orchestral accompaniment that in one case at least is styled “like an opera.” While branching out to include other subjects, such as Joseph and his brothers and David and Goliath, Yiddish drama was restricted to Purim plays until the advent of maskilic drama at the end of the 18th century.

An important genre of early Yiddish literature was the fable or moral tale, which appeared in a variety of forms. The earliest is a lion fable in the Genizah codex of 1382, where the aged tyrant is not healed by the other animals (as often is the tradition), but is the object of their vengeance. Anshel Levi’s Midrash le-Pirkey Ovovs ("Midrash on Pirkei Avot," ms. 1579), a recurring popular subject of Yiddish translation and commentary in the period, also includes a humorous fable of a conceited king whose singing reminds one of the braying of an ass. *Berechiah ha-Nakdan’s Mishlei Shu’alim ("Fox Fa-
bles," 12th century) was translated into Yiddish by Jacob Kop-
pelman (Freiburg, 1583). Fables are also integral features of the infamous Alfa-beta de Ben Sira ("Alphabet of Ben Sira," 16th–century ms.). The most important collection is the Ki-
bukh ("Book of Cows," Verona, 1595), which was castigated for its occasionally risqué morality in the prefaces of the Maase-bukh and Moses Wallich’s Seyfer Mesholim ("Book of Fables," Frankfurt am Main, 1697; a barely adapted reprint of the Ki-bukh), both of which claimed to replace it with tales of moral rectitude.

While early Yiddish literature does not present a well-
defined genre of lyric poetry, there are a number of cultur-
ally interesting examples of various lyric types. The earliest extant Yiddish poetic text is a blessing in couplet form found in the Worms Mahzor (1272). As already noted, there are im-
portant Passover hymns and the rhymed penitential prayers; one might also note the Torah songs, some composed by women. There are also reflective philosophical poems such as "Das Mensh Geglkhn" ("The Ages of Human Life Com-
pared," 1554) or Isaac Wallich’s memento mori poem "Vayl Ikh Itsundert an Mir Farshetey" ("For I Now Understand About Myself," c. 1700). Balancing such serious poems, whether reli-
gious or (quasi-) philosophical, however, there are also po-
ems of playful philosophical disputation, e.g., Zalmen Soyfer’s "Makhloukes Yain vchHamayim" ("Debate between Wine and Water," 1516); biting Venetian satire, such as Elye Boker’s "HaMavdil Lid" ("Ha-Mavdil Song," 1514); "Eyn Sheyn Nay Lid fun Dray Vayber" ("A Fine New Song of Three Wives," c. 1650) in which three married women spend their evenings drinking in pubs, with only a belated and half-hearted moralistic con-
clusion; "Pumay" (ca. 1600), a drinking song of yeshivah stu-
dents; and perhaps most surprisingly, a brief and hauntingly lyrical 14th-century love song written on the fly-leaf of a Rashi manuscript, "Vu Zol Ih Hint?" ("Whither Shall I Go?")

Beyond the strictly lyrical genre, Yiddish poetry, like other European literatures of the period, also included his-
torical narrative in poetic form, often with a specified mel-
dy, indicating that the compositions were commonly sung. These songs often commemorated recent events that affected
the Jewish community, such as Elhonen Hellen's Megillas Vintz ("The Vints Scroll"), on the *Fettmilch insurrection in Frankfurt am Main in 1614–16 (Amsterdam, 1648); the anonymous adaptation from German of a lament on the death of Emperor Ferdinand I v (Prague, 1654); Joseph b. Eliezer Lipman Ashkenazi's Kino al Gezyrous haKhelilous de'k'k Ukraine ("Lament on the Destruction of the Ukrainian Communities," Prague, 1648), on the Chmielnicki massacres; Jacob Tousk's (Taussig) Eyn Sheyn Nay Lid fun Meshiekh ("A Fine New Song about the Messiah," Amsterdam, 1666), the fervent expression of a pious believer's joy at Shabbetai Zevi's supposed fulfillment of messianic prophecy.

The cliché that Yiddish was no more than a "kitchen-language" and its literature in the early period no more than a primitive and embarrassing crutch for "pious women and ignorant men" (i.e., those who knew no Hebrew) has been so widespread over the course of the last half millennium that it has taken on mythic status, but like many myths, it lacks compelling evidence. While there is no doubt that much of early Yiddish devotional literature of the *muser genre had a primarily female audience, a significant number of *muser books directly addressed men. The obvious address of women is also the case, with some other qualifications, for the devotional prayers of the *ikhines and *sikhes types, and for the Yiddish Pirkey Ovov, and even that greatest bestseller of all time in early Yiddish, the Tserene, although its preface actually identifies men before women as its audience. But there were many genres of early Yiddish texts that were clearly not for women or unlettered men: biblical glosses and glossaries and biblical translations so literal that they are incomprehensible except when read in conjunction with the Hebrew text can only have been for the reader of the Hebrew text. The glosses in Rashi's texts indicate not only the existence of Yiddish at that early period, but also that it was one of the languages of Rashi's students, if not in fact one of the languages of his own teaching. Likewise not for women were the books that provide detailed practical information for traveling merchants on how to follow the commandments while on the road (e.g., Moses Cohen's Derekh Moushe, "The Path of Moses," Amsterdam, 1699), manuals detailing the method of Talmud study (ms. 1733), introductions to accounting (Arье Levi's Sefer Yedios Hakhezbn, "The Book of Computations," Amsterdam, 1699). Nor in fact are most of the other extant types of early Yiddish literature as outlined above inherently for women – in what sense is a poem about the Chmielnicki massacres, the Had Gadya, or the Amsterdam newspaper, for instance, "women's" literature? One must also keep in mind that the audience of "pious women and ignorant men" identified in the prefaces of many early Yiddish texts in fact constituted the vast majority of the Ashkenazi population, only a tiny minority of which knew more Hebrew than was required for prayer (and of course even that Hebrew-literate minority also knew Yiddish). The functional audience for early Yiddish literature thus comprised the entirety of Yiddish-speaking Jewry, female and non-Hebrew-literate male, but also including in particular the most literate members of the culture, i.e., the educated men who, with few exceptions, wrote, edited, published, distributed, sold, and indeed also bought and read early Yiddish books.

[Jerold C. Frakes (2nd ed.)]

**Ladino Literature**

The beginning of Ladino literature may be traced to the 13th century with the translation of the Bible into Ladino. These translations, however, were in Latin script and it is only after the expulsion of the Jews from Spain that Ladino translations of the Bible were written in Hebrew script and the language acquired a distinctly Jewish character (see *Bible, Translations, Ladino*). Another major literary activity in religious Ladino literature was the translation of exegetical and ethical works, moral handbooks, and prayer books. A number of original works were also produced such as *Almosninno's popular Il Regimiento de la Vida* (Saloniaka, 1654), an ethical treatise which included a long dissertation on dreams. Most of Almosninno's works, however, were in Hebrew, although his compilation of data on Constantinople in Ladino, which Jacob *Cansino of Oran later published in Spanish under the title Extremos y Grandezas de Constantinopla, is a major work in Spanish Jewish literature and a significant historical source.

By the end of the 17th century poetry, mystical writings, biblical exegesis, history, and ethics were written in Ladino. *Me-Am Lo'ez*, the monumental ethical-religious work of Ladino literature, is an elaborate encyclopedic commentary on the entire Bible which in 1730 was initiated by Jacob *Culi* who wrote the commentary on Genesis and a portion of Exodus. It is assumed that the subsequent commentaries are in part based on his manuscripts. The work, written in a popular style, was intended to make the Bible and Jewish learning readily understandable to the layman who no longer was able to use the Hebrew texts. Among original works of religious poetry in Ladino are Proverbios morales by Shem Tov (*San-tob) de Carrian (14th century) and the Poema de Josef, probably composed at the beginning of the 15th century, which is an adaptation of the story of Joseph and his brethren from the Midrash and Sefer ha-Yashar. The poem's strophic and metric form, influenced by the Hebrew *piyyut*, is also reminiscent of the cuaderna via literary structure which was developing at the time. Written also in Spanish in Arabic characters, the poem became an integral part of Spanish literature. The popular Ladino poem on the same subject, Coplas de Yosef ha-Zaddik, by Abraham de Toledo (1732), is known in two distinct versions: one written in Constantinople (1732) and the other in Belgrade (1861) which is based on the lost Salonika version (1755). The poem, consisting of 400 quatrains, was also sung on Purim. The *copla* genre which flourished in Ladino in the 19th century was mainly the poetic expression of minor works written for Purim (Coplas de Purim).

A distinctly secular mode of expression in Ladino literature is the romancero which formed part of the oral tradition of Jews in Spain. The Ladino romancero is largely a continuation and an adaptation of the Spanish romancero of
the Middle Ages and the Renaissance. The original romancero, a traditional Spanish ballad widely popular in the 14th and 15th centuries, was often sung. There are also many original romances and songs in Ladino or later composition. The different types of romanceros found in Spanish literature (historical, tragic, humorous, amorous, satirical) were also found in Ladino, to which have been added three specifically Jewish types: wedding songs, religious hymns, and laments.

Other secular literature in Ladino are adaptations and translations of plays and novels, mainly from French literature. This led to the writing of original plays and novels, most of which, however, are of an inferior quality. There is a rich Ladino folk literature but most of it has neither been collected nor studied.

**BIBLIOGRAPHY:** Waxman, Literature: see bibliographies at end of each volume; Winter and Wuen sche, Die juedische Literatur (1906); see also bibliographies for each recent entry in the encyclopaedia. ADD. BIBLIOGRAPHY: YIDDISH LITERATURE: J.C. Frakes (ed.), Early Yiddish Texts, 1100–1750 (2004); J. Baumgarten, Introduction to Old Yiddish Literature (2005).

**LITHUANIA** (Lithuanian Lietuva; Pol. Litwa; Rus. Litva; Heb. ליטא or שטייר; Yid. Lite יידעך), southernmost of Baltic states of N.E. Europe; from 1940 Lithuanian S.S.R. (for early period, see *Poland-Lithuania*). (See Map: Lithuanian Communities.) For the list of alternative names for Jewish communities in Lithuania see Table 1: List of Alternative Names for Jewish Communities in Lithuania. With the partition of Poland at the close of the 18th century the territories of Lithuania passed to Russia. Subsequently, for more than 120 years, Lithuania ceased to exist as a political or administrative unit. It was divided up into six or seven provinces in which the history of the Jews was similar to that of the Jews throughout *Russia*. Lithuanian Jewry nevertheless retained its specific character, and its influence on Russian Jewry – and on world Jewry in general – extended beyond the boundaries of historic Lithuania. Lithuanian Jewry was particularly oppressed during World War I. The attitude of the Russian military authorities toward the Jews was one of suspicion and hostility; rumors were spread that they were traitors, and the army therefore perpetrated pogroms against them. In the spring of 1915 expulsions of Jews from the provinces of *Suwalki, Kovno* (*Kaunas*), *Courland*, and *Grodno* began. During the fall of the same year, northern and western Lithuania were occupied by the German army. The population suffered from lack of food and unemployment. Limited aid arrived from the Jews of Germany and the United States and a rami fied Jewish assistance organization was set up. A network of Hebrew and Yiddish schools, including secondary schools, was established. After the end of World War I, a considerable number of refugees returned to their former places of residence. Lithuanian Jewry was henceforward divided among three states: independent Lithuania, Belorussian S.S.R. (see *Belorussia*), and Poland.

**Character and Influence on the Diaspora**

The notion of "Lithuanian" (*Litvak* in Yiddish) to be found in speech, folklore, and Jewish literature in all its languages applies to the Jewish community which developed within the boundaries of historic Lithuania, the region which formed part of the greater Polish kingdom during the 16th to 18th centuries. From the close of the 18th century until World War I this area came under the rule of czarist Russia and included the provinces of Kovno, *Vilna, Grodno*, and northern Suwalki, which were essentially of Lithuanian-Polish character, and of *Vitebsk*, *Minsk*, and *Gomel*, which were Belorussian-Russian in character. A distinction is sometimes made between Lithuanian Jews in a restricted sense (from the provinces of Vilna, Kovno, and the northern parts of the provinces of Suwalki and Grodno) and the Belorussian Jews ("province of Russia"). At the close of the 19th century, about 1,500,000 Jews lived in this region; they constituted more than one-eighth of the total population. The Jews were mainly concentrated in the towns and villages, where in the main they were in the majority. There were more than 300 communities in Lithuania with more than 1,000 persons, including 12 large communities each numbering more than 20,000 persons: Vilna, Minsk, *Bialystok, Vitebsk, Dvinsk* (*Daugavpils*), *Brest-Litovsk, Kovno, Grodno, Mogilev, *Pinsk, Bobruisk*, and *Gomel*; but even the smaller settlements with only some dozens of Jewish families had a vibrant and full Jewish life.

Both economic and historical factors were responsible for the unique character of Lithuanian Jewry. Lithuania was a poor country, and the mass of its inhabitants, consisting of Lithuanian and Belorussian peasants, formed a low social stratum whose national culture was undeveloped. The Jews who had contacts with them as contractors, merchants, shopkeepers, innkeepers, craftsmen, etc., regarded themselves as their superiors in every respect. Lithuanian Jewry was relatively less affected by the *Chmielnicki massacres* that devastated the Jews of the Ukraine in 1648–49, and those perpetrated by the *Haidamacks during the 18th century*. Even when the wave of pogroms swept Russia during the last decades of czarist rule, there were only isolated manifestations of anti-Jewish violence in Lithuania (Gomel, Bialystok). These circumstances gave the Lithuanian Jews a feeling of stability and security, as a result of which they developed no desire to adopt the language and culture of the surrounding peoples.

The Jews of Lithuania maintained their own way of life. They spoke a special dialect of Yiddish – Lithuanian Yiddish – which differed from the Yiddish spoken in Poland and Volhynia mainly in the pronunciation of the vowels (and in certain districts in the pronunciation of the ו (shin) as ס (sin) or כ (samekh)). The world outlook and way of life of Lithuanian Jewry were based on the Written Law and the Oral Law. The Shulhan Arukh and its commentaries guided them in their everyday life. Torah learning flourished among wide circles, and love of Torah and esteem for its study was widespread among the masses of Jews. The Jews who lived in the region bordering Lithuania, the "Poles" in the west and the "Volhyn-
Map showing Jewish communities in Independent Lithuania and in the Vilna region ceded to Lithuania in October 1939.

LITHUANIA
ians” in the south, associated specific characteristics with the Lithuanian Jews: a certain emotional dryness, the superiority of the intellect over emotion, mental alertness, sharp-wittedness, and pungency. Their piety was also questioned (hence the popular derogatory appellation for the Lithuanian Jews, “tselem-kop”). It was also a feature of Lithuanian Jewry that Hasidism did not strike roots in northern Lithuania, while in the provinces of Belorussia it assumed a different nature and continued existence of the nation in its traditional form and content – the Chabad trend – from the original Hasidism of Ukraine and Poland (see below). Lithuanian Jews were considered the “prototype” of the “Mitnaggedim.

Spiritual Trends and Leaders

Until the 16th century the Jews of Lithuania were on the outer fringe of European Jewry. During the 16th and 17th centuries, they were influenced by Polish Jewry, and adopted its organizational methods (Lithuanian Council; see “Councils of the Lands”), its educational system, and its mode of learning. The first prominent rabbis who were called upon to officiate in the large Lithuanian communities, such as Mordecai b. Abraham *Jaffe, author of the Levushim, and Joel *Sirkes, author of Bayit Hadash (the “Bab”), came from outside Lithuania. Solomon b. Jehiel *Luria (the Maharshel), who was of Lithuanian origin and promoted Torah learning there for a number of years, acquired most of his education and was mainly active beyond the borders of that country. It was only during the 17th century that leading Torah scholars emerged from the yeshivot of Lithuania. Among them were the commentators on the Shulhan Arukh, *Shabbetai b. Meir ha-Kohen (the Shakh), and Moses b. Naphtali Hirsch *Rivkes, author of Be'er ha-Golah.

However, the personality which symbolized the supremacy of Torah learning within Lithuanian Jewry and determined its character for several generations was that of the Gaon of Vilna, *Elijah b. Solomon Zalman, who lived during the second half of the 18th century. He established his own method of study. Its main features were abstention from casuistic methods, close examination of the talmudic text and accuracy in its interpretation, a comprehensive knowledge of all the sources, and the study of grammar and the sciences which were essential for profound understanding of the teachings of the Torah.

R. Elijah appeared on the Lithuanian scene when winds of change were beginning to blow across that country. In the south, Ḥasidism blazed a trail, and the disciples of *Dov Baer the Maggid of Mezhirech arrived in *Shklov, Vitebsk, Vilna, and other communities, winning over a large following. From the West came the ideas of the *Haskalah; these at first were moderate in character and sought to adapt themselves to the old school (like the scholars of Shklov, R. Baruch b. Jacob *Schick, or Phinehas Elijah *Hurwitz, author of Sefer ha-Berit), but their revolutionary nature was rapidly revealed. R. Elijah’s circle of disciples consolidated against these new forces; they regarded Torah study as a guarantee for the continued existence of the nation in its traditional form and converted religious learning into a popular movement, in which the great central yeshivot played a leading role. The first of these was the yeshivah established by Hayyim *Volozhiner in 1803 in the townlet of Volozhin. In its wake, both large and small yeshivot were founded in many towns and villages, as well as kolelim and kibbutzim (“groups”) for young men and perushim (“abstinents”), whose students prepared themselves for the rabbinate through self-instruction (the kibbutz of Eisskes (Eishishok), near Vilna, was well known). During the 19th century, large yeshivot were established in *Mir, *Telsiai, *Slobodka (near Kovno), and other townlets. The personality of *Israel Meir ha-Kohen (the Ḥaẓof Hayyim) left its imprint on his yeshivah in the little town of Radun, where Torah learning was combined with the study of musar (ethical literature). An attempt to adapt these studies to the spirit of the modern era was made by Isaac Jacob *Reines, a founder of the *Mizrachi organization, who in 1904 established a yeshivah in *Lida where secular studies were taught and modern Hebrew literature was studied.

During the middle of the 19th century, the *Musar movement emerged from within the ranks of Orthodox Jewry. Initiated by R. Israel (Salanter) *Lipkin, it endeavored to strengthen traditional Judaism against the dangers of the
modern era by fostering the study of ethics. The “Musarniks” established several yeshivot (Keneset Yisrael in Slobodka; the yeshivah of “Novogrudok where an extremist, fanatical, and ascetic wing of the movement emerged). Their attempt to introduce this trend into other yeshivot gave rise to sharp polemics from their opponents, who feared that the study of musar would result in a neglect of Torah study.

The yeshivot of Lithuania attracted young men throughout Russia. They trained rabbis and religious communal workers for Jewish communities all over the world. Many who later abandoned traditional Judaism, including H.N. *Bialik and M.J. *Berdyczewski, were also educated in them. Over the last century, the rabbis of Lithuania became known throughout the Jewish world. They included Isaac Elhanan *Spektor of Kovno, Joseph Baer *Soloveitchik of Brest, Joseph *Rozin and *Meir Simḥah ha-Kohen of Dvinsk, Hāyim Ozer *Grodzinski of Vilna, Jerohman Judah Leib *Perelmann (“Ha-Gadol mi-Minsk”), Isser Zelman *Meltzer of Slutsk, Abraham Isaac *Karelitza (the Hazon Ish), and many others.

Hasidism did not spread through Lithuania to the same extent as in the other parts of Eastern Europe. Only one branch, Chabad Hasidism, struck roots in Belorussia. The descendants and disciples of its leader, *Shneur Zalman of Lyady, scattered in many towns and townlets and formed an energetic organization of Hasidism whose influence spread beyond the borders of Lithuania. Their headquarters were in the townlet of “Lubavich. This trend in Hasidism was of a scholarly, philosophical nature. It considered Torah study to be one of the fundamentals of Hasidism, to be combined with the study of ethical and ḥasidic works. At the close of the 19th century, the Chabad movement established its own network of yeshivot (Tomekhei Temimim). A more popular branch of Ḥasidism which developed in the region situated between Lithuania and Volhynia was centered around the zaddikim of the *Karlin-–Stolin dynasty.

An important cultural factor in Lithuania from the close of the 18th century was the Hebrew press. The first printing presses were founded in Shklov (1783) and Grodno (1788). During the 19th century Vilna became one of the world’s leading centers for the printing of Hebrew books (of the “Romm family and other presses). It was here that the famous Vilna Talmud was printed, as well as a multitude of religious and ethical works, and Haskalah and popular literature in Hebrew and Yiddish.

Although Lithuania played an important role in the preservation of traditional Judaism, it also contributed largely to the movements which shook the Jewish world in recent generations and brought many changes in it. These were Haskalah, the Zionist movement, and the Jewish Socialist movement.

Haskalah
From neighboring Prussia Haskalah penetrated Lithuania, first to the small border towns and the cities of Vilna and Minsk, and from there to other localities. In Lithuania Haskalah assumed a particular character. The manifestations of national disavowal and “assimilation to other cultures which left their imprint on Haskalah in Western Europe, as well as in Poland and southern Russia, were absent in Lithuania. Circles of maskilim who adhered to their people and its language were formed. A Hebrew literature which spread Haskalah and its ideas developed. This literature was not confined to Jewish studies (Wissenschaft) but encompassed every aspect of life. Its exponents were poets such as Abraham Dov (Adam ha-Kohen) *Lebensohn, and J.L. *Gordon, novelists such as Abraham *Mapu and Perez *Smolenskin, publicists and critics such as A.U. *Kovner, A.J. *Paperna, M.L. *Lilienblum, and J.M. *Pines, scholars in Jewish studies (Joshua *Steinberg, E. *Zweifel), authors of popular works on general history and geography (M.A. *Guenzburg; K. *Schulman), and natural sciences (H.S. *Slonimski, Zevi *Rabinowitz, and S.J. *Abramovitch, known as Mendele Mokher Seferim). The maskilim assisted the Russian government in its efforts to spread Russian culture among the Jews and cooperated with it in the establishment of a network of Jewish state schools, at the center of which stood the government rabbinical seminary of Vilna. They laid the foundations of both the Russian-Jewish literature (L. *Levanda) and modern Yiddish literature (I.M. *Dick, *Shomer (N.M. Shaikevich), J. *Dineson, and Mendele Mokher Seferim). They also paved the way for the “Hibbat Zion and Zionism on the hand and the Jewish Socialist movement on the other.

Hibbat Zion and Zionism
Lithuania was a fertile ground for the development of Hibbat Zion and Zionism. The Jews of Lithuania had been attached to Erez Israel by powerful ties since the immigration there of the Hasidim and the disciples of the Gaon of Vilna from the end of the 18th century. Natives of Lithuania such as D. *Gordon, in the periodical Ha-Maggid, P. Smolenskin, in Ha-Shahar, J.M. Pines, and E. *Ben-Yehuda had already discussed Jewish nationalism and settlement in Erez Israel in the 1870s. With the inception of Hibbat Zion, the movement spread to many towns and townlets, one of its centers being Bialystok, the residence of Samuel *Mohilewer, one of the leaders of the movement. Natives of Lithuania were among the most prominent propagators of the Hibbat Zion ideology throughout Russia and beyond (S.P. *Rabinowitz, Hermann *Schapira, etc.). In 1902 the second convention of Russian Zionists was held in Minsk. This was the only Zionist convention to be held openly and attended by the public in the czarist period. From 1905 to 1912 the center of Russian Zionism was Vilna. The Zionists headed the movement for the revival of the Hebrew language and the establishment of modern Hebrew schools (heder metukkam, “reformed heder”). The first Diaspora institution for the training of Hebrew teachers was opened in 1908 in Grodno (“the Grodno courses”). The development of Hebrew literature in Lithuania and the activities of Hebrew authors and poets such as Z. *Shneour, Yaakov *Cahan, and I.D. *Berkowitz were closely connected with Zionism.
Jewish Socialist Movement
Lithuania was the cradle of the Jewish Socialist movement. It was characteristic that the Jews of Lithuania found it necessary to publish a Socialist literature, at first in Hebrew (A.S. *Liebermann and his colleagues) and later in Yiddish. The background to this was the existence of the many thousands of poor and oppressed Jewish workers and craftsmen who did not know Russian or Polish; the *maskilim and Socialists were therefore compelled to address them in their own language. From the close of the 19th century, there rapidly developed an ideology in which revolutionary Socialism was allied to fragmentary and propitiatory nationalist formulae which in practice called for the fostering of a secular literature in Yiddish (Yiddishism) and Jewish cultural autonomy, centered on a secular community organization and Jewish schools giving instruction in the language of the masses (Ch. *Zhitlowsky). In order to mobilize the Jewish workers for revolutionary activities the *Bund was organized. The Bund rapidly extended its activities into Poland and Ukraine but its influence was essentially felt in Lithuania. Its emissaries gained adherents among the poverty-stricken Jews of the towns and townlets, and created a sense of self-confidence in the Jewish apprentices and workers and mobilized them into the service of the revolution. The Bund played a major role in the destruction of traditional Judaism and in opposition to Hebrew culture and Zionism.

The influence of Lithuanian Jewry on Russian and world Jewry gained in impetus from the middle of the 19th century. The Lithuanian yeshivot attracted students from every part of Russia, as well as from abroad. Religious and secular books from Vilna were sold throughout the Diaspora. Rabbis of Lithuanian origin served many of the world’s communities and Lithuanian melamedim (teachers of elementary religious studies) were recognized as capable teachers in Poland and southern Russia.

One of the causes of the spread of Lithuanian influence was the dire poverty in the country, which led to a constant stream of emigration toward southern Russia and Poland and later to the countries of Western Europe and America. Wherever the Lithuanian Jews arrived, they brought with them their spiritual heritage and learning and thus contributed toward strengthening traditional Judaism and the forging of closer links among the Jewish people and its culture. They were also prominent among the Jewish populations of St. Petersburg and Moscow. Large numbers settled in Warsaw and Lodz. They streamed to America and formed a special concentration in South Africa. They also made an extensive contribution to the modern development of Erez Israel.

Lithuanian Jewry was severely affected by World War I and the revolutions and border changes which ensued, bringing dissolution and economic and spiritual chaos. When the Jews were expelled from Kovno province, many communal leaders and activists there left for the interior of Russia, where they continued their activities. Once the regimes and their borders had consolidated, Lithuanian Jewry found itself divided among states: independent Lithuania, Belorussian S.S.R., and Poland.

In Belorussian S.S.R.
There were some 400,000 Jews living in Belorussian S.S.R. between the two world wars. The authorities adopted a policy of systematic repression of traditional Judaism, the Hebrew language and culture, and the Zionist movement, assisted in this by the *Yevesektsiya. During the 1920s, the elements remaining faithful to Judaism still carried on a difficult struggle and maintained clandestine yeshivot and hadarim, Zionist youth movements and *Hehalutz organizations. The Jewish Communists endeavored to provide a substitute for Jewish culture. In Belorussia there even existed a trend among the Yevesektsiya which attempted to consolidate the national position of the Jews in this region by promoting Yiddish schools, Jewish publishing houses and newspapers, and the establishment of a higher institute for Jewish studies in Minsk which engaged in research on the history of the Jews in Lithuania, their dialect, and their popular culture. These experiments flickered out and were liquidated during the 1930s because the authorities did not support them and the Jewish masses were indifferent to them.

In Poland
After World War I the majority of the former Lithuanian Jews came within the boundaries of newly independent Poland on the border strip extending from the north of Vilna to the Polesye marshes. They continued to develop independent cultural activities in every sphere. Yeshivot flourished in this region (among them, the great yeshivah of Mir with its hundreds of students, and those of Radun, *Slonim, *Lomza, *Kletsk, etc.). Hebrew schools, including secondary schools and excellent training colleges for teachers, founded by the *Tarbut organization were concentrated there. The network of Yiddish schools of the Central Yiddish School Organization (CYSHO) was also developed in this area, and in 1925 the Institute for Jewish Research (Yiddisher Visenshaftlicher Institut, *YIVO) was founded in Vilna. It became a world center for research into the Yiddish language and the history of the Jews and their culture in Eastern Europe. The Vilna theatrical company (Di Vilner Trupe) was established and a Yiddish press and literature flourished (the Yung Vilner group of poets included Chaim *Grade and A. *Suzkever). The Zionist and pioneer youth movements expanded in this region. When both independent and Polish Lithuania were annexed by Russia in 1939–40, the Jewish institutions were rapidly liquidated. The German invasion of June 1941 brought the physical annihilation of Lithuanian Jewry.

[Yehuda Slutsky]

In Independent Lithuania
About a year before the end of World War I, on Sept. 18–23, 1917, precisely two years after the capture of Vilna by the Germans, the Lithuanians were given permission by the German occupation force to hold a congress in Vilna to consider the future political fate of Lithuania. The congress put forward the
demand for an independent Lithuanian state within its ethnographic boundaries with Vilna as the capital. The Vilna congress also elected a national council, Lietuvos Taryba, which on Feb. 16, 1918, proclaimed Lithuania an independent state. The Germans maintained their occupation of Lithuania until the end of 1918.

**Population.** According to the census held on Sept. 17, 1923, the Jewish population numbered 153,743 (7.5% of the total), and was the largest national minority (see Table 2: Jewish Population of Lithuania – Sept. 17, 1923 Census). They formed just under one-third of the total population of the larger towns, 28.7% of the small-town population, and only 0.5% of the village inhabitants. In the following five towns the census showed the Jewish population to be: In *Memel* (Klaipeda), which with its district belonged to Lithuania from 1923 to 1939 as an autonomous region, there were 2,470 Jews in 1929. Their number in the Memel region rose as a result of migration from other parts of Lithuania. At the beginning of 1939, shortly before the seizure of Memel by Germany, the territory had about 9,000 Jewish inhabitants. Statistics of 1937 show 157,527 Jews (75,538 males, 81,989 females; or 98% of the total) as having declared their nationality as Jewish, an indicator of the strength of Jewish consciousness among the Jews of Lithuania and the slight influence of assimilation.

Jews mainly spoke Yiddish among themselves, but a number of the professional intelligentsia used Russian. Although in time practically all Jews were able to speak Lithuanian, this did not become their regular spoken language.

**Economic Position.** The agrarian reforms which the Lithuanian constituent assembly adopted in 1922 also affected the few Jewish owners of farms of over 80 hectares in extent. The Lithuanian government, however, did little to satisfy the claims of Jews who had any rights to the ownership of land. The agrarian reforms only partly satisfied the land hunger of the poor peasants, and in addition to emigration abroad there was also a considerable migration from the rural districts to the towns. This general process of urbanization came into conflict with the long-established economy of the Jewish inhabitants of the town and shtetl. In this growing economic competition, the administration of the young Lithuanian republic actively took the part of the Lithuanians. To develop agrarian economy, the government assisted in the formation of cooperatives, which accumulated control of the entire export trade, including the trade in agricultural products. Thus many Jews were deprived of their livelihood.

In 1923 there were 25,132 Jews engaged in trade and credit banking, 18,107 in industry and crafts, 4,996 in agriculture, 4,180 in the liberal professions, and 2,348 in transport. Jewish commerce was largely concentrated in small trade, while industry and crafts were mainly carried on in small factories or workshops.

During the early years of Lithuanian national independence the Jews had a predominant part in the export-import trade. However, shortly before World War II Jewish participation in the export trade amounted to only 20%, and in the import trade to 40%. In 1923 there were nearly 14,000 Jewish shops and 2,160 non-Jewish shops; in 1936 the respective numbers were approximately 12,000 and 10,200. The majority of Jewish shops were small-scale establishments. Jewish traders were unable to compete with the Lithuanian cooperatives, which enjoyed great privileges especially in the respect of taxation. They increased rapidly and, between 1919 and 1925, the number of such competitive enterprises ranged against Jewish trade doubled in number.

About one-third of the Jews earned their livelihood in crafts. There were Jews also in the professions, but their numbers continually decreased, and their places were taken by Lithuanians. At the beginning of 1931 there were 88 Jewish cooperative people's banks having more than 20,000 members and functioning in conjunction with an association of Jewish people's banks. The Jewish people's banks owned a portion of the working capital of the central bank for the support of Jewish cooperatives.

**Emigration.** Both open and unofficial measures aiming at ousting Jews from their economic positions led many Jews to emigrate. Between 1928 and 1939, 13,898 Jews emigrated from Lithuania, of whom 4,860 (35%) went to South Africa; 3,541 (25.5%) to Palestine; 2,548 (18.3%) to Latin America; 1,499 (10.8%) to the United States; 648 (4.6%) to Canada; and 602 (5.8%) elsewhere. It is estimated that between 1923 and 1927 at least 6,000 to 7,000 Jews emigrated from Lithuania, and between 1919 and 1941, 9,241 Lithuanian Jews immigrated to Palestine (3.07% of all those who settled there in that period).

**Jewish Autonomy.** In the early period of the republic, Lithuanian policy was concerned that Jewish influence in Lithuania and abroad, especially in the United States, should be exercised for the benefit of their country. In the first Lithuanian cabinet formed in Vilna, there were three Jews, J. Wygodsky (minister for Jewish affairs), Shimshon Rosenbaum (deputy foreign minister), and N. Rachmilewitz (deputy minister of commerce). At the end of 1918 the Germans evacuated Lithuania, and in January it was occupied by the Bolsheviks. The Lithuanian government then moved from Vilna to Kaunas (Kovno). Wygodsky remained in Vilna, which in 1920 was captured by the Poles under General L. Zeligowski, and the city and district of Vilna became a part of Poland. The other two members of the cabinet accompanied the government to Kaunas, and in 1919 Wygodsky was replaced as minister of
Jewish affairs by the Kaunas communal leader and Zionist Max *Soloveichik (Soliel).

On Aug. 5, 1919, the Lithuanian delegation to the Peace Conference at Versailles sent to the "Comité des Délégations Juives en Paris a letter in which the Lithuanian government guaranteed to the Jews of Lithuania the "right of national-cultural autonomy." This official declaration made possible the rise and development in Lithuania of institutions of Jewish national autonomy. As a result there arose a widespread system of legally recognized *communities (kehillot). On Jan. 5, 1920, the first communal conference was held in Kaunas with the participation of 141 delegates. A Jewish National Council was appointed and given the task, in conjunction with the Ministry of Jewish Affairs, of administering the Jewish autonomous institutions. Shimshon Rosenbaum was elected head of the Jewish National Council. The minister for Jewish affairs received directives from the National Council and was responsible to it. The National Council conducted widely ramified activity in all areas of Jewish life. During the early years of its existence it was much occupied with assistance to the Jewish war refugees who had returned from Russia, and also with helping immigrants. It obtained financial means from the American Jewish *Joint Distribution Committee and other Jewish aid organizations.

A statute concerning the communities was promulgated in March 1920 and recognized the community (kehilla) as a regular, obligatory, public, authorized institution, competent to impose taxes and issue regulations in order to meet the budgets for religious affairs, charity, social aid, educational institutions, and the like. The community was also responsible for the registration of Jewish births. The community administration, the community council, was elected on democratic principles. Every citizen whose documents showed him to be a Jew was automatically a member of the community. Only by conversion to another religion or on proof that his document was invalid, could anyone cease to be a member of the kehillah. The second communal congress, which opened in Kaunas on Feb. 14, 1922, was attended by 130 delegates representing all the Jewish communities in the towns and small towns in Lithuania. One of the focal problems of the congress was the question of the Jewish educational system, especially in respect of the school curriculum and the right of the pupils' parents to determine the ideological spirit of the school.

On the admission of Lithuania into the League of Nations, the Lithuanian government, in May 1922, signed a declaration that Lithuania would fulfill all obligations regarding her national minorities as formulated in the agreement concerning *minority rights in the newly established states. On Aug. 1, 1922, the Lithuanian Constituent Assembly accepted the constitution which ensured national rights to the larger national minorities in the country. The years 1919 to 1922 were the golden age of Jewish national autonomy in Lithuania, when the political and citizenship rights of the Jews were recognized and confirmed. The end of 1922 and the start of 1923 saw the beginning of the erosion of Jewish autonomy.

The reactionary clerical groups then standing at the helm of state launched a campaign, at first covertly and later openly, against Jewish autonomy and Jewish interests in general. There were many reasons for this new course taken by the Lithuanians with respect to their Jewish fellow citizens. Once the Lithuanian republic had found its feet, the Lithuanians no longer felt that they needed the help of Jews either at home or abroad. When the Constituent Assembly, in dealing with the draft constitution, removed the clauses relating to ministries for the affairs of the national minorities and the right of the minorities to use their mother tongue for public matters, the minister for Jewish affairs, M. Soloveichik, resigned from the cabinet. His portfolio was then held for a short time by Julius (Judah) *Brutzkus.

On Nov. 20, 1923, the Jewish National Assembly opened in Kaunas, consisting of delegates elected by the Jewish population by democratic proportional voting. The composition of the newly elected National Council was: General Zionists 11; *Mizrachi 10; *Ze'irei Zion (Hitahdut) 6; Zionist-Socialist 5; Craftsmen 4; *Po'alei Zion Left 2; *Folkspartei 2. The *Agudat Israel groups in general boycotted the elections. In dealing with the national budget for the year 1924, the Lithuanian parliament struck out the provisions for the Ministry of Jewish Affairs. In protest, Rosenbaum resigned from his portfolio in February 1924. The new cabinet, formed in April 1924, included no minister for Jewish affairs. The National Council continued in existence for a short time but when it met for a special session on Sept. 17, 1924, it was dispersed by the police, and subsequently ceased to exist. The democratically organized kehillot were also later dissolved. The government passed a new law for the kehillot, depriving them of their Jewish-national content. The Jews then boycotted the elections to these kehillot and they were not constituted. Later, as a result of the efforts of the Jewish parliamentary faction, two bodies were formed with limited functions: Ezra (for social aid) and Adass Yisroel (for religious needs). All that remained as remnants of autonomy were the Jewish people's banks and the Hebrew-Yiddish school system.

**Education.** The educational system set up in independent Lithuania was one of the most important achievements of the Jewish national autonomy. Teachers in the Jewish elementary schools who had teaching certificates approved by the ministry of education received their salaries from state funds in common with non-Jewish teachers in the general state schools. The running expenses of the schools were met by city government institutions. The three school systems comprised *Tarbut which was Zionist-orientated; “Yiddishist” schools for the Socialist trend; and Yavneh, the religious traditional schools. The language of instruction was Hebrew in the Tarbut schools, Yiddish in the Yiddishist schools, and Hebrew, and to some extent also Yiddish in the Yavneh schools. Each school system was supported by its own political-ideological groups. The Tarbut schools were in the front rank of Jewish schools in Lithuania. Because of the large number of its He-
brew schools of all grades, Lithuania acquired its reputation among Jews as the "second Erez Israel." There were 46 Tarbut elementary schools in 1922, 72 in 1924, and 84 in 1932. The Agudat Israel and Mizrahi groups confined their interest to the Yavneh schools. There were also badarim, talmud torah institutions, and yeshivot. Apart from the celebrated yeshivot in Slobodka and in Telz there were large yeshivot also in *Pan-eweys (Ponovezh), *Kelme (Kelmy), and other communities. The Culture League (Kultur-Lige), founded in 1919, also had its schools, where at first the moderate Yiddishist elements were represented but later the Communists set the tone. These schools ignored Hebrew and introduced the phonetic spelling of Yiddish. The Culture League was closed down by the government in 1924, and some of its institutions (elementary schools, evening schools, and libraries) were abolished. Those that survived had no formal central management. However, an illegal organization of Yiddishist schools was maintained in Kaunas. In 1926 the Folkspartei created a Jewish educational association, and some of the Yiddishist schools were under its supervision.

The number of Hebrew and Yiddish elementary schools in Lithuania reached 108 in 1936, having 13,607 pupils and 329 teachers. There were in addition Hebrew and Yiddish kindergartens. In the school year 1935/36, there were 60 secondary schools, of which 28 were state schools and 32 private. Among the latter there were 14 Jewish secondary schools. Jewish pupils in the Jewish and non-Jewish secondary schools amounted to 18.9% of the total school attendance. There were also Hebrew and Yiddish preschool schools which provided the first four grades of the secondary school course. The Jewish secondary and pre-secondary schools had to be largely maintained by the parents; the Ministry of Education reduced its subsidy to the Jewish educational institutions year by year. The medium of instruction in the Hebrew secondary schools was Hebrew in all eight grades. There were two secondary schools giving instruction in Yiddish, the Vilkomir (*Ukmerge) Reali school, and the Kaunas Commercial School.

Kaunas University in 1922 had a student body of 1,168, including “free auditors” or occasional students, among them 368 Jews (31.5%). In 1935 the student body (including occasional students) numbered 3,334, among them 591 Jews (16.4%). A *numerus clausus was unofficially introduced in the medical faculty in the course of time, and in 1936 not a single Jewish medical student gained admittance. Because of the difficulties facing Jews trying to qualify in law, and the deterioration of prospects in the liberal professions generally, the proportion of Jewish students in the other faculties also fell sharply. Among the 411 professors, lecturers, and other members of the teaching staff of Kaunas University, there were no more than six Jews. The chair of Semitic studies was held by Hayyim Nachman *Shapira.

Political position. During the democratic period of the independent Lithuanian republic (1919–26) there were four parliamentary elections. The constituent assembly (May 1920–November 1922) included six Jewish deputies, S. Rosenbaum, M. Soloveichik (both Zionists), N. Rachmilewitz, Rabbi A. Popiel (Abdut, i.e., *Agudat Israel), and N. Friedman and E. Finkelstein (both advocates and non-party democrats). N. Friedman was succeeded on his death by S. Landau. There was Jewish representation in parliamentary committees, and in the praesidium, and the Jews played their part in drawing up the basic citizenship laws of the young Lithuanian state. Their main task, however, was to safeguard the interests of the Jewish national minority. The Jewish parliamentary faction maintained close contact with the Jewish National Council.

On the basis of the election results for the first parliament (which sat from November 1922 to March 1923) the Jews were entitled to six seats, but because of a deliberately false interpretation of the election law, only three Jewish seats were recognized. The same happened with the Polish representation. The Jewish and Polish deputies, together with the other opposition members, thereupon expressed “no confidence” in the newly established government. The first parliament was accordingly dissolved. In the elections for the second parliament (which sat from May 1923 to May 1926), the Jews and other national minorities formed a nationalities bloc, and seven Jewish deputies were elected: M. Wolf, J. *Robinson, S. Rosenbaum, all Zionists; I. Brudny (Zeirei-Zion, World Union), L. Garfunkel (d. 1976) (Zeirei-Zion, Hitahadut), E. Finkelstein (Folkspartei), and Rabbi Joseph *Kahaneman. For various reasons there were subsequent changes in the Jewish representation. The last democratically elected parliament lasted in all just over half a year, and the coup d’état of Dec. 17, 1926 put an end to democracy in Lithuania. Power then fell into the hands of the extremist nationals (Tautininkai) who introduced an authoritarian regime. The parliament was dissolved in April 1927, and a temporary constitution was promulgated in May 1928, abolishing the most important democratic principles of the previous constitution.

The social and economic contrasts existing between the Lithuanians and Jews influenced their relationship and aggravated antisemitism. Economic antisemitism found its most conspicuous expression in the organization of Lithuanian traders and workers known as the Verslininkai (“skilled workers”). The organization was formed in 1930 and its slogan was “Lithuania for Lithuanians.” Its attitude toward the Jews became increasingly aggressive, and although there were no pogroms in Lithuania as in Poland and Romania, antisemitic demonstrations occurred from time to time. The Jewish press played a great part in the struggle of the Jewish population for national political rights. Lithuanian Jewry, though small in number, published a number of newspapers and periodicals which helped to form Jewish public opinion both at home and abroad.

Soviet Rule in Lithuania, 1940–41

The U.S.S.R.-German Pact of Aug. 23, 1939, brought Soviet dominance to the Baltic area. On Oct. 10, 1939, the U.S.S.R. and Lithuania concluded an agreement in Moscow for “the
transfer of Vilna and the Vilna province to the Lithuanian Republic and mutual assistance between the Soviet Union and Lithuania," which came into effect on the following day. With the incorporation of Vilna, the Jewish community of Lithuania grew by about 100,000. Previously the 160,000 Lithuanian Jews constituted 7% of the population, but with the annexed portions they totaled more than a quarter of a million, about 10% of the total population of the enlarged country. The number of Jewish refugees from Poland grew considerably (to 14,000–15,000) in the following months. About 10,000 stayed in Vilna and the rest in Kovno (Kaunas) and other places. About 5,000 refugees managed to emigrate from Lithuania. The Lithuanian Jews made every effort to assist refugees. On June 15, 1940, Soviet troops crossed the Lithuanian border and a “people’s government” was established on June 17, which included two Jews, L. Kogan, minister of health, and H. Alperovitch, minister of commerce. On July 14, “elections” to the People’s Sejm (“parliament”) took place. Five Jews were among the deputies elected. On August 3 the Supreme Soviet acceded to the Sejm’s “request” to become the 16th Soviet Republic. Shortly afterward, the provisional Lithuanian government was replaced by a soviet of people’s commissars. All industrial and commercial enterprises, private capital, and larger dwelling houses were nationalized, and a new agrarian reform carried out. All social groups and organizations, general as well as Jewish, had to cease their activities, with the exception of those belonging to the Communists (who had been illegal until the Russian invasion), and the press (again excepting the Communist newspapers) was closed down. A wave of arrests swept over the country. At the same time a considerable number of Soviet officials entered Lithuania. Many of the former owners of the nationalized houses, firms, and factories were forced to settle in the provinces. The effect of the introduction of Soviet rule upon the Jewish population was particularly strong. The new Communist regime was in urgent need of experience and abilities possessed by the Jewish intelligentsia, so that Jews were given prominent positions in the economic, legal, and administrative apparatus. At the same time, although nationalization of all important branches of the economy applied equally to all citizens, irrespective of their ethnic origin, large segments of the Jewish population were affected with special harshness. A total of 986 industrial enterprises were nationalized, of which about 560 (57%) belonged to Jews; of 1,593 commercial firms nationalized, no less than 1,320 (83%) were owned by Jews. Jews were also strongly hit by the nationalization of houses and bank accounts.

The phase before the German attack on Lithuania was marked by deportations to Siberia. In the spring of 1941 the Soviet security services compiled lists of “counter-revolutionary elements” and submitted secret reports on those listed, which also included Jews in the following categories: leaders and journalists of various Zionist political groups; leaders of the Bund and Bundist journalists; leaders of Jewish military and “fascist” formations – e.g., of the Jewish veterans of Lithuania’s war of independence, of the Jewish war veterans, of Betar, the “Revisionists, and their affiliated bodies.

In mid-June 1941, one week before the German-Soviet war, many people, including Jews, were hastily deported as politically unreliable to Siberia and other parts of Soviet Asia. They were interned in forced labor camps and set to work in coal mines, wood cutting, and other heavy labor. Some of those deported were tried for “crimes” committed prior to the Soviet occupation. Although large numbers of Jews were also among the deportees, Lithuanian antisemites alleged that the deportations were the result of Jewish revenge on the local non-Jewish majority, carried out by “Jewish” security officers in charge of the deportations.

German Occupation, 1941–44
The entire country was occupied by the Germans within one week, so that only a handful of Jews managed to escape into the Soviet interior. Lithuania, called Generalbezirk Litauen, was included in the administrative province of the Reichs Kommissariat Ostland which also included the other Baltic republics, Estonia, Latvia, and also Belorussia. Hinrich Lohse was appointed Reich Commissar of Ostland, with headquarters in Riga. The Generalbezirk consisted of three districts: the Šiauliai (Shavli) district, the Kaunas (Kovno) district, and the Vilna district. Adrian von Renteln, the commissioner general for Lithuania, had his seat in Kaunas (called Kauen by the Nazis). The Germans also established a local administration, composed of pro-Hitler elements. Lithuanian “councilors general” (a sort of minister) were appointed, headed by Petras Kubiliūnas, a former general in the Lithuanian army.

On Aug. 13, 1941, Lohse issued secret “provisional regulations” to the general commissioners of Ostland specifying how to deal with Jews pending the application of the “final solution” of the “Jewish question” in Ostland. These orders applied to all the Jews in Ostland – former citizens of Germany, Czechoslovakia, Poland, the Baltic states, and other parts of the Soviet Union. There were special instructions for the treatment of foreign Jews and persons of mixed parentage. The commissioners general were required to register all the Jews under their regional jurisdiction and to issue compulsory orders to them to wear two yellow badges (one on the chest and one on the back). Jews were prohibited from moving from their house or place of residence without permission from the district or city commissioner; using the sidewalks; using public transportation; residing in spas; visiting parks and playgrounds, theaters, cinemas, libraries, museums, or schools; owning cars or radios. Ritual slaughter was also prohibited. Jewish doctors were permitted to treat only Jewish patients; pharmacies owned by Jews were turned over to Aryans; Jews were not permitted to function as veterinarians, lawyers, notaries, bank officials, or commercial agents, nor could they deal in real estate or freight forwarding. All Jewish property was confiscated. Persons holding Jewish property had to report to the German administration which dealt with its confiscation. Only the bare necessities of furni-
ture, clothing, and linen were left in Jewish possession, and an allowance of no more than 20 pfennig (about $0.05) per day per person was permitted to the Jews. Finally, the regulations provided for the concentration of the Jews in ghettos, where food and other necessities were supplied to them only insofar as no shortage resulted for supplying the general population. Inside the ghettos, the Jews were permitted "autonomy" in their affairs, subject to the supervision of the regional commissioner, and had their own Ordnungsdienst ("police force"). The ghettos were sealed off from the outside world and put under the guard of auxiliary police recruited from among the local population. Able-bodied Jews were put on forced labor, inside or outside the ghetto. Private persons or enterprises utilizing Jews in forced labor paid the regional commissioner directly. The commissars general were authorized to issue orders based on these regulations.

**Einsatzgruppen.** The Einsatzgruppen (Action Units) played a major role in the destruction of the Jews in the occupied eastern territories, including Lithuania. Einsatzgruppe A was attached to the Northern German army and operated in the Baltic states and Leningrad area. Details of the murder of the Jews in Lithuania are contained in some of the 195 Einsatzgruppen reports regularly submitted to the "RSHA (Reichssicherheitshauptamt) in Berlin from the end of June 1941 to April 24, 1942. The following is an extract of these reports:

...a detachment of Einsatzkommando 3, assisted by a Lithuanian Kommando, has carried out actions in the following towns: Raseiniai, Rokiskis, Zarasai, Birzai, and Prienai. These executions bring the total number to date of persons liquidated by Einsatzkommando 3 (with the assistance of Lithuanian partisans) to 46,692... (Report No. 88, Sept. 19, 1941).

Important data on the extermination of Lithuanian Jewry is contained in a report by SS-Brigadefuehrer Stahlecker, commander of Einsatzgruppe A. The report, covering the activities of his group on the northern Russian front and in the occupied Baltic states, dates from the beginning of the war against Russia until Oct. 15, 1941. On June 23, 1941, Einsatzgruppe A joined the German forces on the northern Russian front. By June 25 Stahlecker, with a detachment of the Einsatzgruppe, reached Kovno, which was taken by the Germans the previous day. The following is an extract from his report:

...In the very first hours after the entry of German troops, local antisemitic forces were organized, despite the considerable difficulties involved, to carry out pogroms against the Jews. The security police received appropriate orders and were in fact prepared to solve the Jewish problem by all available means and with utmost severity. It seemed desirable, however, that at least in the beginning, the extraordinarily harsh measures [to be employed] should not be recognized for what they were, for that would have caused concern even in German circles. On the surface the impression had to be created that it was the local population which had initiated the anti-Jewish measures as a spontaneous reaction to their oppression by the Jews for many years and to the Communist terror to which they had been exposed in the recent past.

...Partisan groups formed in Lithuania and established immediate contact with the German troops taking over the city. Unreliable elements among the partisans were weeded out, and an auxiliary unit of 300 men was formed under the command of Klimaitis, a Lithuanian journalist. As the pacification program progressed, this partisan group extended its activities from Kovno to other parts of Lithuania. The group very meticulously fulfilled its tasks, especially in the preparation and carrying out of large-scale liquidations.

...As the Baltic population had suffered from the Jews and the Communists during the Bolshevik occupation, it was to be expected that they would take their own measures against those of their [Jewish and Communist] enemies remaining in their midst. It was the task of the German security police to ensure the speedy completion of this goal. Furthermore, evidence had to be created in order to prove, at a later stage, that it was the local population which had squared their own accounts with the Jews and the Communists. The orders given by the German sources had to be concealed...

In Lithuania the initiative was taken by the Lithuanian partisans. On the night of June 25–26, the partisans in Kovno, under the command of Klimaitis, staged a pogrom in which 1,500 Jews were killed. Several synagogues were burned down or otherwise destroyed and a Jewish neighborhood of 60 houses went up in flames. The next night, an additional 2,300 Jews were rendered harmless in the same manner. Kovno has served as a model for similar actions in other parts of Lithuania...

...Pogroms, however, could not provide a complete solution to the Jewish problem in Ostland. Large-scale executions have therefore been carried out all over the country, in which the local auxiliary police was also used; they cooperated without a hitch....

...Simultaneously with the executions ghettos had to be established. There were 30,000 Jews in Kovno. After the first pogroms and killings, a Jewish committee was formed, mainly to organize the transfer to the ghetto... In the establishment of the ghettos the security police were in charge of police matters, while the newly established ghetto administration [the Judenrat] was responsible for the provision of forced labor, food supplies, etc.

Appendix No. 8 of Stahlecker’s report is contained in Table 3: Jews Killed in Lithuania, giving the number killed by Einsatzgruppe A in Lithuania (up to the end of October 1941).

A map drawn up by Einsatzgruppe A to show the number of Jews killed in the Baltic states up to the end of December 1941, indicates that 136,421 Jews were murdered by that date in Lithuania (excluding Vilna), with 16,000 Jews remaining in the Kovno ghetto and 4,500 in the Siauliai ghetto. A com-
parison of these figures with the Stahlecker report reveals that in this area alone, 56,110 Jews were killed in the last two months of 1941.

DESTRUCTION OF JEWISH COMMUNITIES IN THE PROVINCES. Most of the Jewish communities in the provinces were totally destroyed in the period from August to September 1941. Many communities were wiped out by sudden attack, not a single person surviving to tell the story of their martyrdom. The sparse material available conspicuously points to the active participation of Lithuanians from all walks of life, side by side with the Germans in the slaughter. Most of the Lithuanians who took part in the murder of Jews fled to Germany in the summer of 1944, when the Soviet army liberated Lithuania. After the war they were classified as Displaced Persons and were aided as Nazi victims.

At the first conference of liberated Lithuanian Jews in Germany, held in Munich in April 1947, a resolution was adopted on the "Guilt of the Lithuanian People in the Extermination of Jewish Jewry."

HELP FROM NON-JEWS. There were among the Lithuanians a few individuals who in the face of the Nazis extended a helping hand to the Jews, despite the mortal danger to which they thus exposed themselves. In Kovno, those who helped the Jews included E. Kutorgienė, P. Mažylis, the writer Sofija Čiurlionienė, the priest Paukštys, the nun Ona Brokaitytė, and the opera singer Kipras Petrukas. In Vilna, Ona Simaitė was of the greatest help, while in Šiauliai the daughter of the lawyer Venčauskas, the poet Jankus, the priest Lapis, and former mayor Saneckis were among those who distinguished themselves in aiding the Jews.

War Crimes Trials
On Dec. 20, 1944, the Soviet press published the "Declaration of the Special Government Commission Charged with the Inquiry into Crimes Committed by the German-Fascist Aggressors in the Lithuanian Soviet Socialist Republic." This lengthy document also includes a report on the mass murders committed at Ponary, near Vilna, and at the Ninth Fort near Kovno. In its final chapter the declaration lists a substantial number of Nazi war criminals responsible for the murders carried out in Lithuania during the German occupation. The list includes Von Renteln, commissioner general for Lithuania; Wysocki, chief of police in Lithuania; Fuchs, chief of the security police and the SD; Ditfurt, commandant of Vilna; Weiss, chief of the Vilna prisons; Kramer, city commissioner for Kovno; Lentzen, Kovno regional commissioner; Gewecke, Šiauliai regional commissioner; Buenger, Gestapo chief in Kovno; Goecke, commandant of the Kovno concentration camp (formed of remnants of the ghetto; in the fall of 1943 the Kovno ghetto was turned into a concentration camp). Lithuanians who collaborated with the occupying power are not listed at all.

In addition to the major Nazi war criminals who were tried by the International Military Tribunal in Nuremberg and the Einsatzgruppen commanders tried by the U.S. Military Court at Nuremberg (case no. 9), a number of Nazi criminals who had had a hand in the destruction of Lithuanian Jewry were tried by the U.S. Military Courts at Dachau and elsewhere. After the war, some trials also took place in Soviet Lithuania. On the whole, however, only a small number of the criminals were brought to account, as most of them succeeded in evading trial. Notable among the trials was the trial at Ulm, Germany (April 28–September 1958) against a group of Einsatzgruppen who in 1941 murdered 5,500 Jews in various places near the German border. The accused were sentenced to various terms of imprisonment.

Liberation
Lithuania was liberated by the Soviet army in the summer of 1944 (Vilna on July 13, Šiauliai on July 27, Kovno on August 1). The Jewish survivors consisted of several hundred Jewish partisan fighters, and a few families and children who had been hidden by gentiles. Jewish refugees who at the beginning of the war escaped to Soviet Asia also began to make their way back.

At the beginning of 1945, when Soviet troops liberated the Stutthof concentration camp, several hundred Jewish women from Lithuania were listed among the survivors, and when Dachau was liberated by the Americans, some Lithuanian Jewish men were found alive there. Both the women and the men had been deported from Lithuania in the summer of 1944, 80 of whom found their death in German concentration camps.

Some of the survivors returned to Lithuania, but the majority stayed in the *Displaced Persons (DP) camps established after the war in Germany, Austria, and Italy. Later, they were joined by other Lithuanian Jews who had escaped from Soviet Lithuania via the Jewish underground escape route (see *Berihah). When the DP camps were dissolved, the Lithuanian Jews settled in Israel, the United States, and other countries overseas together with other Jewish DPs.

After the War
The 1959 Soviet census report indicated the Jewish population of Lithuania at 24,672 (11,478 men and 13,194 women), constituting less than 1% of the total population (2,880,000). Of these, 16,354 Jews lived in Vilna, 4,792 in Kovno, and the rest in other urban areas. At the time the census was taken, 17,025 declared Yiddish as their native tongue (the highest percentage in all the areas where the census was taken), 6,912 Russian, 640 Lithuanian, and 95 specified other languages. In the academic year 1960/61 there were 413 Jewish students at institutions of higher learning (1.67% of the total Jewish population of Lithuania). Lithuania was one of the centers from which pressure came to establish a revival of Jewish cultural life after the war. The Soviet authorities eventually agreed to establish an amateur Yiddish theater group there.

For details on Jewish life in the postwar period see *Vilna, *Kaunas.

[Joseph Gar]
Later Developments

Lithuania seceded from the U.S.S.R. in August 1991. In 1979 the republic’s Jewish population was recorded at 14,700 and in 1989 as 12,400. In 1988–89 the Jewish birthrate was 7.5 per 1,000 and mortality rate was 17.8 per 1,000.

In 1989, 780 Jews (743 of them from the capital Vilnius (Vilna)) emigrated. Immigration to Israel amounted to 2,962 (2,355 from Vilnius) in 1990 and to 1,103 in 1991.

There was no state antisemitism in Lithuania. In 1990 Emanuel Zingeris, an activist of the Lithuanian national front Sajudis and now co-chairman of the Jewish Culture Association of Lithuania, was elected as a deputy to the Supreme Soviet of Lithuania. The other co-chairman was Lithuanian-Jewish writer Grigorii Kanovich (who writes in Russian, but whose basic theme is Jewish life, particularly of the past, in his region). A Jewish museum has been opened in Vilnius and a monthly newspaper, Litovskii Ierusalim (“Jerusalem of Lithuania”), appears in Yiddish, Russian, Lithuanian, and English. September 23, the day the Vilna ghetto was destroyed, has been set aside to commemorate the mass murder of the Jews of Lithuania. A memorial complex, where annual public meetings are held, has been built at the site of mass executions at Ponary. A Jewish guide to Vilnius has been published. In November 1991 a Council of Jewish Communities of Lithuania was established. Due to the small number of Jews remaining in the country the majority of the numerous Jewish organizations registered in Lithuania have no more than a few members and scarcely function, and according to one local activist, “There are no Jews, there are just Jewish representatives.”

On June 1, 1992, an air route was opened between Vilnius and Israel.

By the early 21st century just 3,500 remained. Efforts were being made to strengthen the Jewish community structure, with Chabad and other parties active.

In 1918, 128 ENCYCLOPAEDIA JUDAICA, Second Edition, Volume 13

[Michael Beizer]

Litvin, town in Vinnitsa district, Ukraine. In 1578 the king of Poland, Stephen Bathory, permitted the owner of the estate of Litin to establish a town on his land and to hold two annual fairs which “all the citizens of the land, Christians, Jews, and merchants from foreign countries,” would be permitted to attend. In 1616 there were 88 houses in the town; 12 belonged to Jews. In 1765 there were 481 Jews; in 1847, 1,804; and in 1897, 3,874 (41% of the total population). Schools for Jewish boys and girls existed there in 1910. On May 14, 1919, a Ukrainian gang conducted pogroms in Litin and 180 Jews were killed and Jewish property looted. Other riots were in late May and July of that year. A Yiddish school operated in Litin from 1919 to 1920, and a Jewish woman headed the town council for many years. In 1926, 2,487 Jews lived in the town (30% of the total); by 1939 the number had dropped to 1,410 (27.8% of the total). The Germans occupied Litin on July 17, 1941. They executed 56 young Jews on August 20, and on December 19 they
murdered 1,800 Jews. In a labor camp in town the Germans kept a couple of hundred skilled artisans who were killed off gradually in mid-1942, the last dozen being murdered that fall. About 1,000 Jews from Bukovina, who were deported there, were also murdered. All together 3,353 were killed according to Soviet sources.

LITINSKI, GENRIKH ILYICH (1901–1985), Russian composer and teacher. Born in the Ukraine, Litinski studied composition at the Moscow Conservatory with Glier and graduated in 1928. He taught there from 1928 to 1943, becoming a professor in 1933. In 1947 he joined the faculty of Gnesin Teachers Institute of Music, Moscow, and held a professorship at Kazan Conservatory from 1949 to 1964. Litinski organized musical activities in various Asian republics of the Soviet Union, and explored the folklore of the Yakut people in Siberia, which he utilized in his works. His compositions include operas, ballets, symphonies, 12-string quartets, and a string octet. Among his theoretical works are Polifonicheskaya kompozitsia (“Polyphonic Composition,” Moscow, 1951), Sovetskoe polifonicheskoe iskusstvo (“Soviet Polyphonic Art”), Parts 1–3 (Moscow, 1952–54), Zadachi po polifonii dlya kompozitorov (“Polyphonic Exercises for the Composers”), Parts 1–3, (Moscow, 1965–67), and Obrazovanie imitatsiy stroogo pis’ma (“Forming of Imitations in Counterpoint,” Moscow, 1971).

[Marina Rizarev (2nd ed.)]

LITMAN, SAMUEL (1910– ), U.S. electrical engineer. Born in Boston, Litman was on the faculty at the University of South Carolina from 1940, and professor of electrical engineering from 1962. He wrote, with T.F. Ball, Laboratory Experiments in Direct and Alternating Currents (1940), and became an expert on information theory.

LITOMERICE (Czech. Litoměrice; Ger. Leitmeritz), town in N. Bohemia, Czech Republic. Jews are mentioned in the town’s founding charter (1057) as salt merchants, thus making Litomerice the first town in Bohemia, after Prague, in which Jews are mentioned. There was a Jewish quarter in 1411. In 1514 the city council protected its “poor Jewish artisans” against financial demands of outside lords, and in 1529 the Bohemian royal authorities demanded that the town mayor provide proper protection for the Jews. Ferdinand I canceled a permit allowing free trade in wine in 1540, and in the following year, after a massacre, the Jews were expelled. The town was granted the privilege de non tolerandis Judaeis in 1546; the synagogue was turned into a hospital (a Hebrew inscription on the building was preserved). In 1584 Jews were permitted to attend fairs. Six Jewish families settled in Litomerice in 1851. In 1867 there were 100 Jews. The community was constituted in 1875 and a synagogue was dedicated in 1883. There were 616 Jews in 1921. Between the two world wars there was a training center for settlement in Erez Israel at the Litomerice agricultural school. The Zionist politician Emil Margulies lived in the town. In 1930 the community numbered 425 (2.3% of the total population), of whom 143 declared their nationality as Jewish. At the time of the Sudeten crisis (1938) nearly all of the community left the town, the few men who remained being deported to concentration camps.

During the war a branch of the Flossenburg concentration camp and a crematorium were set up in Litomerice. After World War II staff members of the Terezin (Theresienstadt) concentration camp and prison, German and Jewish, were tried in Litomerice. The records are deposited in the local court.

A Jewish community also existed in LOVOSICE (Lobozitz) on the opposite bank of the Elbe. According to tradition the community was founded by the Jews who had been expelled from Litomerice in 1541. The first documentary evidence on the community is from 1704. There were 17 Jewish houses there in the 18th century. The Hoenigsberg family lived in the town for some time. Lovosice Jews developed the business of shipping products to Germany on the Elbe, dealing in the production of chocolate. There were 201 persons in the community in 1930. At the time of the Sudeten crisis nearly all the community left the town. The few remaining males were sent to concentration camps.

LITTAUER, LUCIUS NATHAN (1889–1944), U.S. industrialist, congressman, and philanthropist. Littauer was born in Gloversville, New York, the son of an immigrant from Breslau, Prussia. Upon his graduation from Harvard College in 1878 Littauer entered his father’s glove factory. He assumed directorship of the company in 1883, and under him it became the largest manufacturing enterprise of its kind in the country. An entrepreneur, he founded and participated in many other business enterprises, including public utilities, banking, textiles, and transportation.

Litauer became active in Republican politics and served in the U.S. House of Representatives from 1896 to 1907, representing predominantly non-Jewish upstate constituencies. An intimate friend and close political adviser of President Theodore Roosevelt, he was a leading member of the important House Appropriations Committee. From 1912 to 1914 he served as a member of the Board of Regents of the University of the City of New York. During the remainder of his life, Litauer devoted himself to the management of his widespread business interests, and, above all, to an increasing range of philanthropic activities. His initial gift in 1894 for the Nathan Littauer Hospital in Gloversville was followed by many substantial contributions for the building and support of numerous institutions in the area, including the Jew-
lish Community Center. A statue of him was erected in Gloyvessville in 1929.

His donations helped social welfare, health, recreation, education, and the financial support of needy students aspiring to higher education. He contributed extensively to medical care and research, aiding medical schools and hospitals in New York City, Albany, Paris, and Breslau, where he endowed the Nathan Littauer Stiftung at its Jewish Hospital. At the New York University College of Medicine he endowed a professorship of psychiatry; he also gave a building to the National Hospital for Speech Disorders. In 1937 he made a large gift to the New School of Social Research, New York, for the support of its newly established University in Exile, where many distinguished refugee Jewish intellectuals and scholars found a haven to continue their teaching and research. An abiding interest in public affairs motivated his largest single gift: the erection and endowment at Harvard of the Littauer Center of Public Administration, and the establishment of the Graduate School of Public Administration. The Lucius N. Littauer Foundation, established in 1929, gives grants to a wide variety of causes, including the advancement of Jewish studies and Jewish learning.

Throughout his life, Littauer remained a faithful Jew in the Reform tradition. While in Congress, he advocated legislation to liberalize the immigration laws in order to help the victims of religious persecution in Eastern Europe. He firmly believed in the role of Jewish culture in U.S. intellectual life and supported the *Menorah Journal* and the Menorah movement. In 1925 Littauer endowed the Nathan Littauer professorship of Hebrew literature and philosophy at Harvard – the first of its kind in the U.S. – later augmented by other gifts to Harvard for publications, fellowships, and the acquisition of collections of rare Hebraica and Judaica. He contributed to the Central Conference of American Rabbis for scholarly studies. In 1938 he founded the Institute of Social and Religious Studies at the Jewish Theological Seminary of America. At New York University he initiated the endowment of a chair in Jewish and Hebrew studies. Littauer received a variety of awards and honors for his philanthropic and public activities.

**LITTMAN, JOSEPH AARON** (1898–1953). British property tycoon. One of the earliest and most successful of England’s well-known property magnates, Joe Littman was born in Russia, lived in New York, and moved to London in the 1920s. He began purchasing properties in the 1930s, specializing in high street retailers in suburban London. Littman pioneered the so-called sale and leaseback agreement, under which a financial institution would buy a site and lease it back to him on very long (sometimes 999-year) leaseholds, he in turn subletting it to shops on short leases. Both he and the financial institution, usually a building society, thus benefited, meanwhile eliminating much of the red tape notorious in British real estate. Littman concentrated on already existing properties rather than on building new ones and, after 1945, moved heavily into blue chip retail investment in London’s West End, especially Oxford Street. When Littman died of lung cancer at the age of 55, he left a fortune of £3.3 million, a fabulous sum given Britain’s very high rates of taxation. Many other successful British property developers imitated his methods.

His son Louis (Thomas Sidney) Littman (1925–1987), a Cambridge-educated solicitor and farmer, was the founder of the well-known Littman Library of Jewish Civilization, which he began in 1965 in memory of his father. It has published many scholarly works and studies on Jewish history, religion, and culture.

[William D. Rubenstein (2nd ed.)]

**LITTMAN, SOL** (1920—), Canadian journalist and community activist. Littman was born in Toronto, Ontario, to East European immigrant parents. He earned a B.A. in sociology from the University of Toronto in 1946, an M.A. in sociology and anthropology from the University of Wisconsin in 1950, and a degree in social work from the University of Toronto in 1952. Littman had multiple careers. In 1945 he joined the staff of the Anti-Defamation League of B’nai B’rith (ADL) in the United States and for 13 years was involved in tracking right-wing and antisemitic groups and exposing discrimination in housing, employment, and social organizations. In 1968 Littman returned to Toronto to head ADL in Canada, later renamed the League for Human Rights. He spearheaded the organization’s campaign against antisemitism and social discrimination.

In 1971 Littman turned to journalism, first as editor for two years of the *Canadian Jewish News* and writing a bi-weekly column on the arts for the *Toronto Star*. In 1973 he moved to the Canadian Broadcasting Corporation as a news documentarian and in 1976 he joined the editorial staff of the *Toronto Star*, where he often wrote editorials on social issues. Taking early retirement to write, in 1982 he published *War Criminal on Trial*, the story of Helmut Rauca, the first Canadian deported from Canada to stand trial for war crimes. From 1985 to 1999 Littman was Canadian representative of the Simon Wiesenthal Center and pressured the Canadian government on the prosecution of Nazi war criminals who entered Canada after World War II. In large part through his efforts, in 1985 the government of Brian Mulroney established the Deschênes Commission of Inquiry on War Criminals in Canada.

In 2003 Littman published his second book, *Pure Soldiers or Sinister Legion*, about the Ukrainian Waffen-SS division, many of whose members were allowed to resettle in Canada after World War II.

[Harold Troper (2nd ed.)]
LITURGY.

Liturgy has conventionally been understood as the words that Jews recite in public worship. While written words are almost all that remains from earlier times, the study of liturgy today understands that the ways that these words are performed shapes their meanings profoundly. To the extent possible, then, the study of liturgical words must be combined with the study of all elements of their settings: of the gestures, postures, and intonations (musical or otherwise) accompanying them; of the physical setting where they are recited, usually the synagogue, and its ornamentation; of ritual objects accompanying them; and of the matrix of halakhah, custom, and theology that shapes their composition and recitation. Thus, liturgy in the Jerusalem Temple was primarily nonverbal, but filled with the ritual actions of sacrifice. Liturgy in synagogues has always been dominated by words, but not exclusively so. Liturgy in two synagogues might include very similar texts but look and sound entirely different, or express two very different sorts of spirituality. In addition, the synagogue is not the only locus of rabbinic liturgy; a prayer quorum can gather anywhere. Moreover, the individual, with or without the quorum, remains obligated to pray. Rituals based in the home, around meals, or formulated over a cup of wine (as in circumcision and marriage) are also integral elements of Jewish liturgy. (For studies that pursue some of these directions, see Ehrlich; Langer, To Worship…; Langer and Fine.)

BIBLICAL PERIOD

While the Jerusalem Temples stood, formal public worship of God occurred there, through the sacrifices and their accompanying rituals. Individuals also offered occasional *prayer, often freely composed as spontaneous reactions to personal events or experiences. The Hebrew Bible records the short prayers of Moses (Num. 12:13), Jethro (Ex. 18:10), and Hannah (1 Sam. 1:11), and the extended prayer of Solomon at the inauguration of the First Temple (1 Kings 8:15ff., 23ff.). The only formal prayers in the Bible are the confessions to be recited when the sacrifices participated in the ritual by prostrating themselves (Tam. 7:3; cf. Ber. 11b) and at appropriate pauses, probably chanting such responses as “O give thanks unto the Lord, for He is good” (Ps. 136:1). This ceremony might have been one of the sources out of which rabbinic liturgy later developed.

The synagogue, the Greco–Roman association in its Judean form, the frequent fasts prescribed in times of drought for which a special liturgy was recorded in the Mishnah (Ta‘an. 2:1–5; see *Fasting and Fast Days), and the ma‘amadot institution (Ta‘an. 2:7; 4:1–4) were elements of the world from which rabbinic liturgy emerged. The synagogue developed as a place for the regular ritual reading and exposition of Torah. Judean civic associations, perhaps known as havurot, provided a forum for communal meals, ritual, and study. The ma‘amad consisted of representatives of the people, some of whom were present at the sacrifices and the rest assembled at home, both conducting prayers four times a day – *Shaharit, *Musaf, *Minah, and *Ne‘ilat She‘arim (see *Ne‘ilah, *Mishmarot, and *Ma‘amadot). The hours later fixed for the Shaharit, Minah, and Arvīl prayers were in accordance with the times (of prayer of the members of the ma‘amadot and thus) of the sacrifices as well as in accordance with the practices of pious individuals who fixed their prayer schedule according to the position of the sun (TJ, Ber. 4:1, 7b; Ber. 26b). The sectarian community at Qumran similarly gathered twice daily for formal prayers as well as communal meals. All these prayer gatherings correspond in timing to Temple sacrifices.

TALMUDIC PERIOD

Tannaitic texts record the basic outlines of rabbinic liturgy. Although amoraim attribute the composition of many of these prayers to the men of the *Great Synagogue (Ber. 33a), contemporary scholars debate how much, if any, of rabbinic liturgy predates the destruction of the Second Temple. The Mishnah also knows the obligation derived from the Pentateuch, to recite the *Shema twice daily with its benedictions (three in the morning and four in the evening); the daily *Amidah, known as Tefillah, comprising 18 benedictions (Ber. 4:3) on weekdays (but shortened on other days) and recited three times daily (four times on holidays); and the reading of *Torah on Sabbaths, Mondays, and Thursdays. Rabbinic meal rituals, with blessings before eating and an extended *Grace after Meals following, complete with invocations that reflect an association-like setting, also appear in the Mishnah (Ber. ch. 6–7).

The concept of *benedictions, i.e., berakhot, as the fundamental building block of prayer is already evident in Qumran literature and is presupposed by the rabbis, but with many variants. The amoraim demanded a single statutory formulation, Barukh Attah Adonai (“Blessed are You, Eternal”). In addition, the rabbis incorporated many Temple rituals, like the *priestly benediction, *shofar, * lulav, and *hallel into appropriate points in their liturgies. (See the individual entries on all these prayers for their descriptions and histories.)

No rabbinic prayers were written down until much later. Contemporary scholars debate to what extent the rabbinic liturgical system achieved its form during the Second Temple period or under Rabban *Gamaliel in response to the destruction of the Temple. It is also unclear to what extent prayer texts were fixed or flexible within these accepted structures and how broadly rabbinic prayers were known among the Jews of the Land of Israel and even more so in the Diaspora. It is only around the fourth century that synagogue architecture
in Israel begins regularly to reflect the physical orientation of rabbinic worship, especially the Amidah, towards Jerusalem. By that point, rabbinic prayer had become a function of the public synagogue, complete with a *shelihah zibbur whose public recitation of the prayers enabled those incapable of praying properly on their own to fulfill their obligations to participate by listening and responding *amen. There are ample indications that women attended the synagogue. However, there is no direct evidence for an architecturally separate women's section until the High Middle Ages.

At the very least, an accepted literary norm developed to the effect that the ideal language for prayer would be Hebrew (although other languages were acceptable for many prayers; Sot. 7:1, 32b-33a; Ber. 13a, etc.), and that this Hebrew would adhere to but not duplicate biblical language. By the end of the talmudic period, general consensus existed as to the basic formulation of most prayers, though significant regional variations remained. Whether these variations arose as devolution from an original fixed composition or from gradual evolution towards this consensus is unclear. No manuscripts of Hebrew prayers exist from this period, and the few Greek manuscripts suggest only a vague adherence to rabbinic norms (Van der Horst, Langer, "Did…"). The Talmud preserves a few discussions of disputed prayer texts, and these decisions became normative in later generations as the Talmud itself became normative. However, the lack of early talmudic manuscripts also calls the historicity of many of these texts into question.

Around this core of statutory prayers, other elements seem to have emerged, probably in the amoraic period. These include the recitation of psalms and psalm-like passages, known as *pesukei de-zimra, prior to the prayers themselves, in order to set an appropriate mood (Ber. 5:1), and the recitation of individual prayers after the Amidah. These latter prayers began as private supplications, including personal requests (known as devarim; Tos. to Ber. 3:10, also called tikhinnah or tahannahim), but were gradually formalized (see Tahanan). In contrast to the statutory prayers, both of these elements include extensive recitation of biblical texts as well as new compositions composed of concatenations of complete biblical verses. These elements took radically different forms in the Land of Israel and in Babylonia, as the findings of the Cairo *Genizah attest (Fleischer, Eretz-Israel…), but their direct reliance on biblical language suggests that they had emerged before the *Karaites’ insistence on purely biblical prayer became an issue.

Perhaps as early as the tannaitic period, traditions of *piyyut (liturgical poetry) emerged in the Land of Israel as elaborations upon the statutory prayers (some simpler exemplars became part of this liturgy). By at least the late amoraic period, *hazzanim produced and performed poetic versions of entire liturgical elements, especially on Sabbaths and holidays, replacing the statutory language with compositions relevant to the day and its Torah reading. This poetry was mostly in Hebrew, continuing the tradition of allusive references to biblical passages, and soon extending its content to include midrashic elements. Piyyut flourished mainly in the Land of Israel; Babylonian rabbis resisted its adoption until well into the geonic period. The universal triumph of the Babylonian rabbinic insistence on precise recitation of the statutory prayers, as well as on an annual cycle of Torah readings, left little room for the rich tradition of poetry from the west which had been written for a *triennial cycle; it remained unknown until the discovery of the Cairo Genihaz.

**GEONIC PERIOD**

By early geonic times, two different rabbinic rites had already developed: the Palestinian and the Babylonian. We know little about the nature of Jewish prayer in the rest of the Diaspora, except where the correspondence of specific communities with the geonim has been preserved. In all cases, by the end of this period, their prayers largely conformed to Babylonian rabbinic norms. Contemporaneous Babylonian *responsa show great concern with universally establishing correct prayer texts according to their own customs and, concurrently, with the rejection of “deviant” customs which can often be identified as Palestinian or, later, Karaita. (Hoffman, Canonization…).

The old Palestinian rite, which flourished until the 12th century c.e. at least, became known in modern times only after the discovery of the Cairo Genihaz. The first Palestinian liturgical texts were published by S. Schechter, in JQR, 10 (1898), 654–9. A bibliography of the numerous subsequent publications may be found in Y. Luger, The Weekday Amidah …; of particular importance is E. Fleischer, Eretz-Isra….

While there are considerable differences between the Palestinian usage and the other known rites, the discovered texts do not always show whether they were intended for private or public prayer. Among the characteristics peculiar to the Palestinian rite are the *triennial cycle of the Torah reading; the ending Zur Yisrael ve-Go‘ado for the ge’ullah benediction after the Shema (morning and evening); different texts for several benedictions including the *Birkat ha-Torah; a totally different recension of the 18 (not 19) benedictions of the Amidah in which the (otherwise also known) benedictions Elohe David u-voneh Yerushalayim, she-Otekha be-yir’ah nāvov, ha-tov lekha lehodot, oseh ha-shalom occur; an elaborate and complex ritual preceding the statutory prayers on the Sabbath which combines a version of pesukei de-zimra with a procession with the Torah and a recitation of the Ten Commandments (tefillat ha-shir); a special benediction before the Shema, Asher kiddeshanu be-mitzvotav ve-zivvamu al mitzvat ker’īt Shaena; and the addition of Yāa‘el ve-Yavo to the Musaf Amidah. Scattered elements of the Palestinian rite made their way into the various medieval European rites, especially those associated with the recitation of piyyutim. However, there is no discernable pattern of regular influence that suggests direct and sole dependence.

The old Babylonian rite is mainly known from geonic treatises and from Cairo Genihaz fragments; the oldest treatise – which is also the oldest preserved complete prayer book – is the ninth-century Seder R. Amram Gaon of *Am-
ram bar Sheshna (ed. by E.D. Goldschmidt, 1971), comprised of the texts of the prayers together with respective halakhic prescriptions. Both Amram and his near contemporary "Na-
tronai b. Hila'i in his responsion concerning the 100 benefic-
ditions (L. Ginzberg, Geonica, 2 (1909), 114 ff.) answered queries from Spanish Jews asking how to pray. This suggests the pos-
sibility that Jews in Spain were only then beginning to accept rabbinic liturgical requirements. The majority of medieval prayer books follow the organization of the Seder Rav Amram Gaon, including, frequently, its combination of prayer texts with the pertinent halakhic prescriptions. Unfortunately, its many copyists did not preserve Amram's original prayer texts, often substituting their own. Today's prayer books still follow his order of the prayers.

The seder was followed (a century later) by the Siddur Rav of "Saadiah (Gaon) b. Joseph with prescriptions in Arab-
ic (ed. by I. Davidson, S. Assaf, and B.I. Joel (1941)) which, despite some influences of Palestinian usage, is a good ex-
ample of geonic prayer books. However, Saadiah's organiza-
tion was more suitable for study than for synagogue use, and it had no impact outside the Arabic-speaking world. Saadiah also includes significantly more piyyutim, including some of his own composition, indicating their increasing acceptance in Babylonia.

POST-GEONIC RITES
All the various medieval rites of Jewish liturgy developed from the Babylonian rite with varying influences from the Palestin-
ian rite as well as what may be some remnants of local customs which are impossible to document. Although it is customary to divide the rites according to strict geographical boundaries, examination of the manuscript evidence suggests that this is useful mostly as a heuristic device, and actual local customs shaded one into the next, much as do linguistic dialects. Lay-
ered onto this were various halakhic and mystical concerns about precise language and performance of the prayers (in-
cluding, especially, music) that further shaped the actual litur-
gical experience. Jewish mobility, voluntary and involuntary, also contributed to mixings of these rites. The rites evolved internally over time, especially but not exclusively around the edges of the statutory prayers.

Conventionally, scholars have constructed relationships among the rites mainly by the collections of piyyutim they adopted, dividing the rites into two groups: the Palestin-
ian (comprising Italy, the Balkans, and the Franco-German countries) and the Babylonian (comprising the Spanish and Yemenite rites). However, this Eurocentric division ignores most of the rites driven out of existence after the expulsion of the Jews from Spain and presumes that all communities pre-
served their traditions of piyyut as carefully as did Ashkenaz.
It also ignores the fact that the statutory prayers of all these rites are fundamentally Babylonian.

Until Iberian Jews began fleeing Spain, beginning in 1391 but especially after 1492, Jews who moved to a new area generally adopted the local custom, thus preserving the local and regional nature of Jewish rites. Mass immigration, how-
ever, created communities of Spanish Jews who considered their customs superior to those of the natives. With this, and in accord with kabbalistic teachings that one's prayers would only reach heaven if offered in the words appropriate to one's ancestral lineage, Jewish rites ceased to be regional. Print-
ing of large numbers of identical prayer books also led to a loss of differentiations among local rites and the loss entirely of rites in which printers were not interested. As a result, the modern world is dominated by two rites: the Ashkenazi and the Sephardi (with identifiable subgroups), accompa-
nied by a few surviving regional rites, most notably those of Italy and Yemen. None of these survive solely in their places of origin.

The most significant formative forces on the medieval rites were the continuing integration of Babylonian halakhic norms and the various schools of Jewish mystic thought. Li-
тургical halakhah continued to develop, as part of the larger processes of halakhic development, during this period. The parameters of correct prayer, as outlined in the Seder Rav Amram Gaon, Halakhot Gedolot, and Masekhet Soferim par-
ticularly received authoritative definition in the various me-
dieval codes and related works. A significant number of these works, like the Sefer Hamanhig of "Abraham ben Nathan ha-
Yarhi (ed. Raphael, 1978), also contain valuable descriptions of actual regional practices in the course of their discussions of halakhic questions. The "Hasidei Ashkenaz were deeply in-
terested in liturgy and in correctly reciting and understand-
ing liturgical texts. Their traditions and commentaries, such as the Perushei Siddur ha-Tefillah la-Roke'ah of "Eleazar ben Judah of Worms (ed. Herschler, 1992), the Siddur Rabbenu Shelomo / Siddur Hasdei Ashkenaz (ed. Herschler, 1972), or the piyyut commentary, Arugat ha-Bosem of "Abraham ben Azriel (ed. E.E. Urbach, 1939–63), impacted subsequent un-
derstandings of the liturgy. Kabbalists were also interested in and concerned about liturgy, but most texts remain in manu-
script. An exception is the 16th-century Sefer Tolatot Yaakov of Meir ibn Gabbai (Jerusalem, 1967). (For some studies of the impact of Kabbalah on liturgy, see Hallamish.)

Description and identification of the medieval, pre-expul-
sion rites is still in its infancy. The work was begun by D. Goldschmidt in a series of articles describing individual manuscripts, collected posthumously in his On Jewish Lit-
urgy. Since then, the addition of thousands of liturgical manu-
scripts to the collection of the Institute for Microfilmed Hebrew Manuscripts at the Jewish National and University Library in Jerusalem, the development of scholarly ability to manipulate data by computer, and advances in codicology have made detailed study of the medieval rites in their bewil-
dering variety feasible and a desideratum. S. Reif provides an analytic summary in his Judaism and Hebrew Prayer (1993), Ch. 6, “Authorities, Rites, and Texts in the Middle Ages.” In the meantime, the descriptions that follow present the salient features and editions of these rites as they have evolved over the past millennium.
Ashkenazi Rites

We begin, somewhat arbitrarily, with the Ashkenazi rites. These consist of three main subrites: of Northern France (Zor- fat), of the Rhineland (Ashkenaz proper), and of the lands to the east of the Rhine (originally called the Canaanite rite, later the Polish rite). All are well established already in the earliest preserved manuscripts from the 12th and 13th centuries as well as in the literature of a slightly earlier time. The rite of Northern France largely ceased to exist with the persecutions and expulsions of the French Jews during the 14th century, but the other two persist today.

French Rite. The *Mahzor Vitry, composed by Rashi’s student, R. Simhah of Vitry, and presenting his teacher’s lore, is one of the earliest exemplars of the Northern French rite. The edition published by S. Hurwitz (1923), based on a late manuscript with many interpolations from the 13th-14th centuries, has now been replaced by the critical edition of Aryeh Goldschmidt (2004). Goldschmidt argues that the Siddur Rashī (ed. S. Buber and J. Freimann (1910–11)) is really a version of this work. The 13th-century Sefer ha-Mahkim and Siddur Toreyes record that the French rite differs from the Ashkenazi rite only in certain additional piyyutim, a kerovah for the second day of Rosh Ha-Shanah, and some mārīvim. However, manuscript evidence and the arguments of the Hasidei Ashkenaz suggest some more subtle differences in precise language, too.

Until the 1290 expulsion, English Jews also followed the ritual of Northern France. A complete siddur with a few piyyutim is contained in Ez Hayyim (printed in the edition of Sir Israel *Brodie, 1 (1962), 63–138), by R. Jacob Ḥazzan of London. Part of this rite also remained in use in three communities in Piedmont (northern Italy), Asti, Fossano, and Moncalvo (known as D’BK, AFM), until modern times. These communities had accepted the Ashkenazi rite upon their establishment in Italy, but on the High Holy Days continued to recite the piyyutim of the French mahzor from handwritten copies. The community of Asti continued to hold High Holiday services in accordance with its ritual until about 1965. The mahzor of these communities is described by D. Goldschmidt in On Jewish Liturgy, 80–121; and a list of the piyyutim is given by I. Markon, in: Jewish Studies … G.A. Kohut (1935), Heb. pt., 89–101.

The whole material of High Holidays piyyutim of the French mahzor found in manuscript is included in the Mahzor la-Ya-mim ha-Noraim, ed. D. Goldschmidt, Jerusalem, 1970.

Rhineland and Canaanite/Polish Rites. The Rhine-
land, or pure, Ashkenazi rite, originally used by the German or German-speaking Jews, was the most widely followed and its siddur and mahzor have been printed since the 16th cen-
tury. Only fragments of the Palestinian texts (e.g., Zur Yisrael or the short Emet ve-Yazir in connection with piyyutim) have been retained. The mahzor contains yozerot for the special *Sabbaths and all festivals, kerovot for the Four Parashiyot, Shabbat ha-Gadol, all the festivals, Purim (in some communi-
ties also for Hanukkah), and the Ninth of Av; and a large collection of selihot and kinot. Most of the piyyutim are by Palestinian or German authors. The rite is now followed in Germany (from the Elbe River westward, where post-Holo-
cast communities retain authentic rites), Switzerland, Hol-
land, Belgium, northern France, and in a number of commu-
nities of Northern Italy.

From the earliest documented exemplars, a slightly dif-
f erent rite was common in communities to the east, known originally as Canaanites (an epithet for “slaves,” i.e., the pagan Slavs). This branch eventually comprised the eastern part of Germany, Poland, Lithuania, Bohemia, Moravia, Hungary, the rest of Austria, all of Russia, Romania, and the rest of the Balkan countries, and later included also the Ashkenazi Jewish communities of Denmark, England, America, and Pales-
tine. Differences between the two branches – the Western, called Minhag Rainus (“Rhone usage”) in the Middle Ages; and the Eastern, called Minhag Oystraikh or Minhag Polin (“Austrian or Bohemian usage”), today generally known as Minhag Polin – are hardly noticeable in the regular prayers; the main variances are in some special piyyutim and in the more elaborate opening to the Torah ritual. Different editions of Minhag Ashkenaz (Western) and Minhag Polin (Eastern) were published from the 16th century onward. The *selihot point to local differences. Thirteen different rites have been printed (see the Seder ha-Selihot edition of D. Goldschmidt (1965), introd. 7).

A major contribution of the medieval Ashkenazi rites to the greater Jewish world was the development and regularization of memorial liturgies, ranging from the regular recitation of Kaddish during the year following a parent’s death, to the annual recitation of Kaddish on the anniversary of a relative’s death, to the recitation of *Yizkor four times a year during the pilgrimage festivals and Yom Kippur. Many of these rituals developed in parallel to Christian interest in cults of the dead. They emerged in Ashkenaz in the aftermath of the destruc-
tion of Rhineland communities during the First and Second Crusades. Some Ashkenazi communities included a memo-
rial element in most Sabbath services with the recitation of the prayer “Av ha-Rahamim,” while others recited it only on the Sabbath preceding *Shavuot (the anniversary of the First Crusade) and the Sabbath preceding the Ninth of Av. It is also in this context that Alenei became part of the daily liturgy and not simply a part of the High Holy Day Musaf services.

Until the 18th century this rite was generally followed by all Ashkenazi Jews, but since the rise of Ḥasidism, the rite of Isaac Luria (Nusah ha-Ari) was accepted in hasidic communi-
ties. Though retaining some of the Ashkenazi usage (e.g., the tahananim, the Kedushah for the Shaharit of Sabbath, Grace after Meals), Nusah ha-Ari borrows significant elements from the Sephardi rite (see below) and is therefore popularly called Nusah Sefarad. The piyyutim used by the hasidic communities are, however, according to the Ashkenazi (Polish) rite. Through the negligence of printers, the texts of this rite were badly emended and never really standardized. The special edi-
tions for the “Chabad Ḥasidim (after the revision of R. *Sh-
neur Zalman of Lyady) are explicitly marked Nusah ha-Ari.
Romanian (Romaniot) Rite

The Romanian (Greek) rite was followed by the Jewish communities of the Byzantine Empire. In use in Greece, the Balkans, and in European Turkey, at least until the end of the 16th century (manuscript evidence suggests that the *piyyutim, at least, continued to be recited even later in some communities), it was superseded by the Sephardi rite. Four editions of Mahzor Romania appeared in the 16th century, and many more of smaller prayer books (*sidurim) of the rite. Distinctive features of the rite are *Hodu before Barukh she-Amar; in the *Kaddish, the addition Ve-Yazmah purkaneh vi-karav Meshiḥeh u-farek ameh be-raḥmateh; several elaborations of the weekday Amidah; Le-Dor va-Dor for the third benediction of the Amidah (instead of Atah Kadosh); the short Emet ve-Yaẓẓiv on the Sabbath; Keter for the Kedushah in Musaf. Mahzor Romania contains a large collection of *piyyutim for Shaharit *petiḥah, *reshut, Kaddish, *Barekhut, *yozer, ofan, zu-lat, mi-khamokha; Ma'arivim for every festival (including the Day of Atonement); *kerovot for fast days, Purim, the Day of Atonement, Rosh Ha-Shanah (in Mss. also for the other holidays and Hanukkah); and a large collection of *seliḥot and *ki-not. Differences in the manuscripts and the printed editions show that the rite was edited in its final form at a comparatively late date. (For a description of this rite see: Zunn, Ritus, 79ff., and D. Goldschmidt, On Jewish History: A Literary History (1998), ch. 4–6, and his references to his publications on the *piyyut texts.)

The ritual of the Jews of Corfu (their mahzor was never printed) is almost identical with the Romaniot rite. The rite of the Jews of Kaffa (Feodosiya) and Karasubazar (Belogorsk) in the Crimea has, despite many elaborations of the texts, all the distinctive features of the Mahzor Romania. While their siddur was printed twice (last edition Kala, 1735), their mahzor was never printed. I. Markon (in: Festschrift … A. Harkavy (1908), 449–69) lists 315 *piyyutim from their mahzor.

Roman (Italian) Rite

The Roman (Italian) rite, also called Minḥag ha-Loʿazim, is in use today in Rome, in the interior of Italy, in a few communities in Salonic and Constantinople, and also in the Italian synagogue in Jerusalem. Peculiar to this rite are Leʾeṭila Leʾeṭila in the usual Kaddish; Keter in all Kedushot; different wording to the Amidah; different tahananim (ve-Ha Ṭaḥanum is missing); a special *piyyutic version of the Arvit for Friday evening (Asher Killaḥ Maʿassav) and its Amidah (U-me-Ahavat-kha); kerovot for the Day of Atonement and all the fast days, but not for Rosh Ha-Shanah or other festivals. A number of *piyyutim had already been removed from the mahzor before the invention of printing. Many manuscripts and editions of this rite continue the model of the Seder Rav Amram Gaon of interspersing prayers with halakhic instructions.

The first edition of this rite was that of Soncino, printed at Casal Maggiore, 1485–86. An introduction to this mahzor was published by S.D. Luzzatto (1856), entitled Mavo le-Mahzor Bei-nei Roma (new edition, with supplement by D. Goldschmidt and a bibliography of the printed mahzor and siddur by J.J. Cohen, Tel Aviv, 1966).

Sephardi (Spanish) Rites

Originally dominant in the Iberian Peninsula, the Sephardi rites spread, after the Jewish expulsion, to North Africa, Italy, and, through all the countries of the east as far as India, superseding the fixed prayers of the local rites and often their traditions of *piyyut as well. Former *Conversos brought the rite, in a slightly different form, to Holland, some communities in Germany (e.g., Altona, Vienna), England, and eventually North and South America.

In the process of the expulsion, almost all the local rites of the Iberian Peninsula lost their identities. The Catalan and Aragonese rites were preserved only in Saloniki, where they were printed several times (first editions: Catalan (Salonika, 1627), Aragonese (Salonika, 1629)); for the Catalan and Aragonese Jews who settled there (D. Goldschmidt, On Jewish Prayer, 272–88). All surviving rites are versions of the Castillian rite.

The Sephardi rite differs from the Ashkenazi by putting *Hodu before Barukh she-Amar; inserting Ve-Yazmah Purkaneh in the Kaddish; introducing the Kedushah with *Nakdshah and Keter; different versions of the ninth benediction of the Amidah for summer and winter; minor differences in the general wording of the Amidah; and sometimes the formula Le-Moshe Zivvita (instead of Tikkantata) for the Sabbath Musaf. The collection of verses accompanying the movements of Torah from and to the ark are almost completely different. Although early Sephardi rites were rich in *piyyutim, they had almost all been deleted or moved to the periphery of the service in Castile by the time of David ben Joseph *Abudarham (see his commentary to the Yom Kippur *piyyutim, Tashlam Abudarahm, ed. by L. Prins (1900)). From the 16th century, it became common to print this rite according to the kabbalistic traditions of the Ari. From the 18th century, most Sephardi communities removed *piyyut entirely (Langer, To Worship God Properly..., 172–82).

North African Rites

There is very little evidence preserved for the original rites of the North African communities. Almost all manuscripts and printed editions reflect the rite of the Sephardi émigrés. An important exception is the siddur of Solomon b. Nathan of Sijilmassa (North Africa, 12th century; tr., ed. S. Haggai, 1995). E. Hazan, Hebrew Poetry… provides a comprehensive survey of the poetry characterizing these rites, before and after the arrival of the Sephardi refugees.

Provençal Rite

The Provençal rite (southern France) is nearly identical with the Sephardi rite, especially that of neighboring Catalonia, and was followed by the communities of Avignon, Carpentras, L’Isle sur la Sorgue, and Cavaillon until the 19th century. The text shows some additions due to the influence of the rite of northern France, e.g., the three Kedushot begin with Nekaddesh, Naʿarīzakh, Keter; in all the Ami-
dot, Shalom Rav is used instead of Sim Shalom. The mahzor of Avignon was printed in Amsterdam (4 vols., 1765 ff.; a detailed description of it was given by Zunz, in Allgemeine Zeitung des Judentums, ii (1838)–IV (1840)). The mahzor of Carpentras, which abbreviated almost all the piyyutim, was printed in Amsterdam (1739–62, 4 vols.). The mahzorim of L’Isle and Cavillon, preserved only in manuscript, contain numerous piyyutim for festivals and Sabbaths, but only kerovot for the fast days, Rosh Ha-Shanah, the Day of Atonement, and the prayers of dew and rain. These kerovot were recited after the Amidah in accordance with the practice of the North African communities. A siddur with selected piyyutim for these communities was edited by M. Milhaud (Rituel des Prières en Hébreu à l’Usage des Israélites de l’Ancien Comtat, 2 vols., 1855).

**Yemenite Rite**

Minhag Teiman, the rite of the Jews of Yemen, follows the Seder Tefillah of Maimonides which is based on the siddur of Saadiah Gaon, but shows the influence of Sephardi elements (see L. Goldschmidt, in Y.M.H.S., 7 (1958), 188). A small number of piyyutim such as Avodah, hoshanot, and selihot are taken from the Sephardi prayer book. The Yemenite liturgy was first printed in Jerusalem (2 vols., 1894), entitled bible, from which a handwritten (mimeographed) edition elaborated with many piyyutim was edited by J.S. Hobareh (1964 (Heb.)).

**Eastern Rites**

The Sephardi refugees imposed their rite on all the communities of the east, making the original rites there too difficult to retrieve and study. Among the best documented are the liturgy of the Persian Jews (published by Shlomoh Tal, The Persian Jewish Prayer Book (Heb., 1980)) and the rite of the Jews of Aleppo (Mahzor Aram-Zova, printed in Venice, 1523–27), whose High Holy Days prayers, very similar to those of the Persian prayer book, were also influenced by the Romanian and Roman rites. There are a number of manuscripts extant that apparently hail from this general region, but we have no way of identifying their provenance at this time. All later prayer books conform to the Sephardi rites. [Ernst Daniel Goldschmidt / Ruth Langer (2nd ed.)]

**The Modern Period**

The economics of printing required mass production of single prayer books to meet the needs of multiple communities, meaning that local preferences for specific piyyutim, variants of individual words or phrases, and all the variety that accompanied a world in which prayer books were produced one at a time, were overridden. In addition, kabbalistic concerns led to many innovative additions and changes to the printed liturgies as well as a belief that only “correct” prayer was efficacious. Particularly in Poland, these changes combined with the prevalence of outright errors in the printed prayer books, inspired prominent rabbis, beginning in the 17th century, to establish the correct texts of the prayers. Important examples range from the 1657 Siddur of R. Shabbetai Sofer of Przemysl (ed. Yitzchok Satz (Baltimore, 1987)) commissioned by the Polish Jewish Council, to the labors of scholars like Wolf *Heidenheim (Sefer Kerovot, 9 vols., 1800–2) and Seligman *Baer (Seder Avodat Yisrael, 1868) in Germany, and Samuel David *Luzzatto (Mahzor ... ke-Minhag Benei Roma, 1853–6) in Italy (Reif, Judaism and Hebrew Prayer, ch. 7–8). With the development of modern academic approaches to Jewish studies, the questions have shifted to those of retrieval of original and earlier forms of prayers and a recognition that “correctness” is not so easily defined. Moreover, the migrations of Jews caused by the Holocaust and the expulsions of Jews from Arab lands has created another leveling of regional rites as liturgical scholars have endeavored to create Israeli prayer books that might be used by all Israelis according to the major rites (like the Siddur and Mahzor Rinat Yisrael, ed. Sh. Tal).

Prayer book manuscripts, because of the labor and expensive materials involved, tended to be as concise as possible, rarely repeating prayers from one service to the next and frequently omitting all instructions on how to perform the liturgies. With the development of printing and more inexpensive book production, and increasing expectations that every worshiper would use a prayer book, the prayer book gradually became a more “user-friendly” text, repeating prayers at appropriate intervals and including instructions, frequently in the vernacular. The contemporary liturgical texts published by ArtScroll and used widely in Orthodox congregations in the Diaspora represent the extreme expression of this phenomenon, giving instructions for every customary gesture. This represents a flattening of variety not only within the text itself, but also in its actual performance.

Another element that greatly shaped prayer books in the early centuries of printing was the introduction of kabbalistic elements. These included both instructions on how to recite and meditate on the prayers, corrections to existing prayer elements according to the customs of Isaac *Luria, and additional kavanot (texts expressing the mystical intention of the prayer). Often, additional prayers were added to the printed prayer book intended for private recitation, both on a daily basis and also for specific occasions and personal needs.

In this context, collections of prayers specifically for women (in Yiddish, called *tkhines) begin to appear in Ashkenaz and in Italy (in Hebrew). Some speculate that in Ashkenaz, they originated with the convention of having one woman lead prayers for the women’s section, where women often could neither see nor hear the men. Although some of these prayers are clearly written by women, most are unattributed and many may have been written by men. Their language shows influences of Lurianic Kabbalah, suggesting that the printed texts themselves are early modern, but they may well have developed from earlier orally transmitted materials. If similar oral women’s traditions existed in other communities, they were never written down. These prayers accompany the dramatic moments of synagogue liturgy, like the blowing of the shofar or the blessing of the New Month, but they also accompany moments in women’s lives outside the synagogue, through both the life cycle and the annual cycle. The collec-
tions all provide prayers for the three mitzvot specially commanded for women: taking *hallah, going to the *mikveh after menstruation (*niddah), and lighting *candles before the Sabbath and festivals (C. Weissler, Voices of the Matriarchs ...). In the 19th and 20th centuries, some of these Yiddish prayers were translated, not only into modern vernaculars but also to accord with modern sensibilities. The best known of these collections was Fanny Neuda’s Stunden der Andacht (in English translation, Hours of Devotion). In recent years, many collections have been republished, sometimes in modern Hebrew versions.

19th Century Developments
While synagogue architecture and musical styles were consistently influenced by those of the surrounding cultures, pressures to conform liturgically became more intense and more deliberate as Jews approached emancipation in Western Europe. Acculturated Jews were very conscious of the fact that their liturgical modes were among the elements that marked them as different. If they desired to be considered as citizens of their countries of residence whose religion was Judaism, then the public statement of that Judaism needed to be one of which they could be proud. Reforms of the liturgy began as aesthetic reforms in the quality of musical production and in decorum. Improved decorum did not challenge halakhic norms but did lead to more formal seating patterns for prayers and more regular preaching, increasingly in the vernacular. Musical reforms, in contrast, led to halakhically problematic demands for inclusion in prayer of an *organ and mixed choir.

Reform liturgy had its first formal expression in the prayer book of the *Hamburg Temple, published in 1819. This prayer book, and those that followed it in Western Europe and eventually in the United States, not only provided translations of the prayers into the Western vernacular (itself not a new phenomenon) but considered these translations to be its primary prayer texts. Vernacular prayer itself pushed the reformers to create more radical liturgical changes. The act of translation created a confrontation with the theological statements of the received liturgy and with concepts that, once removed from their poetic Hebrew phraseology, became starkly troublesome when stated in a language that everyone understood well. Certain concepts, especially those driven by Kabbalah, but also prayers for the restoration of sacrifices, did not fit with the rationalist turn of the age and the reformers’ sense of modernity; others, like prayers for the restoration of Zion, seemed inappropriate to Jews who considered their true homes to be their countries of residence; yet others were offensive to Jews’ gentile neighbors. These concerns, combined with desires to shorten the service as well as leave room for a substantial sermon and enhanced music, led to radical changes in the prayers themselves. Reform prayer books, of which hundreds were produced, increasingly removed or revised theologically difficult passages and shortened the entire liturgy significantly. At its most extreme, in the late 19th and early 20th centuries, some prayer books retained only superficial similarities to the traditional liturgy, including only a few key sentences of Hebrew prayer and few hints of the service’s traditional patterns. Halakhah was simply not a consideration and was often deliberately disregarded as appropriate only to another age. Reform synagogues and their services blended well with the Protestant liturgies of the Jews’ neighbors, with vernacular prayers, short Scripture readings (with translation, or only in the vernacular for the *haftarah, which was often declaimed, not chanted), extended sermons, and hymnals filled with vernacular songs designed for organ and choir (and not a cantor). Some of these hymns were adapted from Christian church music. As rabbis became liturgical officiants, like Christian clergy, congregants arrived on time, sat quietly in forward-facing pews, and left elevated by the awesome grandeur of the service. (See J.J. Petuchowski, Prayerbook Reform in Europe: The Liturgy of European Liberal and Reform Judaism (1968) and E.L. Friedland, “Were Our Mouths Filled With Song?: Studies in Liberal Jewish Liturgy (1997).)

Such changes elicited objections and responses from the traditional world in Europe, especially in urban areas and in the west. On the one hand, Reform demands for decorum and for greater attention to the liturgy were deemed appropriate. In traditional synagogues, liturgical music was increased and enhanced, although performed by cantors with all-male choirs, and without instrumental music on Sabbaths and holidays. But traditional Jews understood the received prayers as halakhically mandated and immutable. Increasingly, they published prayer books with vernacular translations, intended to edify those less literate in Hebrew but not to serve as performed liturgical texts. As a result, these translations frequently lack literary finesse and are sometimes even incomprehensible. The greatest impact of Reform on the traditional liturgical world was a renewed questioning of the validity and necessity of the Ashkenazi traditions of *piyyut. Many communities, over the course of the 19th century, ceased to recite most festival poetry, retaining only the *piyyut of the High Holy Days and a few liturgical poems linked to the liturgical announcements of the prayers for rain and dew at Sukkot and Passover.

20th Century Developments
As they achieved a degree of maturity, the various West European and North American non-Orthodox movements sought to define themselves by creating standardized liturgies. How this process worked varied from country to country, depending on the organizational structures of the communities. In North America, liturgies tended to be standardized by each movement across the United States and Canada. In Germany, on the other hand, prayer books were largely produced for specific regional communities. Over the course of the 20th century, although movements never required adherence to their liturgies, these prayer books became elements of the movements’ self-definition, reflecting the theology of the movement. Examples of such prayer book series from North America include the Reform movement’s Union Prayer Book (published by the Central Conference of American Rabbis),

Liturgy

with major editions in 1895, 1921 (revised), 1947 (newly revised), 1975 (the New Union Prayer Book, retitled Gates of Prayer for weekdays, Sabbaths, and holidays, Gates of Repentance (1978) for the High Holy Days), and with numerous versions for specific occasions and revisions. At the beginning of the 21st century, a new prayer book, Mishkan Tefillah, was in production. Publications of prayer books commissioned by the Conservative Movement’s United Synagogue began with the 1927 Festival Prayer Book. Most Conservative congregations adopted the Sabbath and festival prayer book edited by Morris *Silverman (1946) and then those edited by Jules Harlow for the Rabbinical Assembly (Mahzor, 1972, Siddur Sim Shalom, 1985, both with subsequent revisions). The Reconstructionist Movement originally used the liturgies of Mordecai *Kaplan (Siddur, 1945, High Holiday Prayer Book, 1948), now replaced by the Kol Hameshaham series, edited by David Teutsch (1991–98 and ongoing). (See Caplan, From Ideology to Liturgy.) Similar series have been published by the Liberal and Reform movements in Great Britain. The Progressive and Masorati movements in Israel have also published their own liturgies in recent decades. All these movements also published corresponding haggadot, rabbin’s manuals, and other home and life cycle liturgies, all of which have undergone continuing revisions over the years.

The differences among these series reflect these movements’ differing understandings of the appropriate balance between innovation and tradition. While the Conservative prayer books increasingly include new materials, these are generally found on the periphery of the required prayers, and almost all changes to the central prayers have some historical precedent. The Reconstructionist prayers retain tradition except where such prayers contradict the movement’s ideology. Hence, concepts like chosenness disappear entirely. The Reform prayer books reflect a growing acceptance of tradition and of Hebrew prayer, but never as a binding category; translations are often highly interpretative and reflect the concerns of the times.

Several elements characterize all these liturgies at the beginning of the 21st century, including those produced for the Orthodox world. Vernacular translations in the English-speaking world have moved from a deliberately archaic Elizabethan English to a contemporary form of the language, thus lessening the formality and “otherness” of the English prayers. Accompanying this is an increasing sensitivity to the layout of the prayer book and its visual dimension. Poetry is often printed as such. Typefaces and arrangements of type are designed to ease reading. Many encourage meditation on the prayers by generous “white space,” others by providing rich commentary. Some of these commentaries are produced as study texts, not for active synagogue use. (See Harlow, Or Hadash on Sim Shalom; or Hoffman’s series, Minhag Ami, My People’s Prayer Book.)

By the 1970s and 1980s, all segments of Judaism had responded liturgically to the Holocaust and the existence of the State of Israel. The latter reality, particularly, transformed Reform traditions of rejection of a Jewish homeland and prayers for return to it. While Reform liturgies still exclude prayers for the restoration of the Temple and its sacrificial worship, references to Israel and its welfare now hold a valued place. Conservative and Reconstructionist liturgies never sidelined Israel, but they address sacrifices only as a past form of worship and do not pray for their restoration. Liturgies published in Israel, and many published elsewhere as well, including many Orthodox prayer books, incorporated the Israeli Chief Rabbinate’s “Prayer for the Well-Being of the State of Israel,” instead of or in addition to the traditional prayer for the government. Many also incorporate prayers for Israeli soldiers and liturgies for Israeli Independence Day and the anniversary of Jerusalem’s reunification. The effect of a revitalized Jewish life in Israel on the non-Orthodox liturgies appears also in their selections of songs, in the increased use of Hebrew (especially in the Reform movement where it had almost disappeared), and in the melodies used for traditional prayers. Liturgical assimilation to the surrounding culture is now less evident, replaced by a conscious striving for authentic Jewish culture. The reintegration of hasidic or hasidic-like music, especially that influenced by Shlomo *Carlebach, speaks to a search for spiritually enriching worship across the spectrum of Jewish practices.

The effect of the Holocaust on Jewish liturgies, beyond its erasure of many local practices throughout Europe, has been less marked. Memorial prayers now regularly include prayers for the victims of Nazism; kinot (poetry of lamentation) on the Holocaust have been added to the Ninth of Av’s liturgy. But consensus about an appropriate liturgical religious commemoration, as opposed to communal or secular observance of *Holocaust Remembrance Day, has yet to emerge.

The other major revolution to affect the liturgy in the second half of the 20th century, especially in non-Orthodox circles, was the feminist movement. Beginning in the 1970s, prayer book editors began to remove gendered references to the congregation of worshippers from the vernacular translations. By the 1980s and 1990s, gendered references to God also increasingly disappeared. This included not only a transformation of pronouns, but also the search for new names for God that would not have exclusively masculine referents. Although the process began with the vernacular prayers, this endeavor also extended to Hebrew names for God and to alternative blessing formulae that would better express feminist prayers. See, for example, M. *Falk’s The Book of Blessings: New Jewish Prayers for Daily Life, the Sabbath, and the New Moon Festival (1996), which also includes exclusively women’s voices in the nontraditional poetry of the services. While this prayer book has only superficial similarities to a traditional *siddur, the ideals it embodies have affected subsequent non-Orthodox liturgical publications. All the American movements and their Israeli and European counterparts now include the matriarchs in the first blessing of the Amidah and other liturgical references to the ancestors (in the 1998 Conservative Sim Shalom, this is an option). Many include references to Miriam as well...
as Moses in the Ge'ulah benediction’s allusions to the parting of the Red Sea. Women are present explicitly in these prayer books in a way unprecedented in Jewish history.

This transformation of the prayers grew from the transformation of women’s roles in the synagogue itself. The non-Orthodox movements had abandoned the *mehizah and the prohibition on women’s participation in choirs, but they had retained the traditional practice of reserving active leadership roles and honors for men. Egalitarianism achieved its first steps with the public celebration of bat mitzvah ceremonies during regular synagogue services. Regina *Jonas was privately ordained in 1935 in Germany, but she never took on liturgical roles. The most public role of modern liberal rabbis is precisely to lead services. Egalitarianism achieved its symbolic victory with the ordination of the first American woman rabbi by the Reform movement, Sally *Priesand, in 1972, followed by the Reconstructionist and Conservative movements and their counterparts in Europe and Israel. Ordination of women as cantors also followed in short order in these movements. Necessary to this process in the halakhically guided Conservative movement was a series of decisions by the Rabbinical Assembly that, at the discretion of individual congregations, women may be called to the Torah (1955), included in the *minyan (1973), and lead public prayer (1974). Full participation by lay women in the community became increasingly common in the wake of these changes at the leadership levels. This includes greater women’s participation on synagogue boards and other decision-making bodies.

In some corners of the Orthodox world, there have also been some subtle transformations in women’s liturgical expression. Increased women’s leadership has led to increased female commitments to regular prayer and hence to an increased presence in the synagogue, which historically provided many more seats for men than for women. It is increasingly common for Orthodox women to recite *Kaddish for deceased relatives. Some communities have begun women’s *tefillah groups, where women gather, in the synagogue or outside it, for regular prayer and often also Torah reading, but without prayers requiring a minyan of men. Some synagogues allow women to give sermons. In the early years of the 21st century, a new phenomenon has developed of synagogues that maintain separate seating but allow women to lead prayers not requiring a minyan and to read from and be called to the Torah.

[Bibl. Langer (2nd ed.).]

**LITVAK, (Michael) ANATOLE (1902–1974), U.S. film producer and director.** Born in Kiev, Litvak attended a Russian dramatic school until the age of 16, and then worked in Soviet film studios. After leaving the U.S.S.R. in 1924, he directed films in Europe and the United States in French, German, and English. His European films included Dolly macht Karriere (1930), L’Equipage (1935), and Mayerling (1936), a film that earned him international renown. In 1936 he was invited to work in Hollywood, where he began to make films for RKO and Warner Brothers. When the United States entered World War II, Litvak joined the U.S. Army, worked with director Frank Capra on the “Why We Fight” series, and was put in charge of the combat photography during the Normandy invasion.

Litvak’s major American films, many of which he also produced, are The Woman I Love (1937), Tovarich (1937), The Sisters (1938), Confessions of a Nazi Spy (1939), All This, and Heaven Too (1940), Blues in the Night (1941), The Snake Pit (Oscar nomination for Best Picture and Best Director, 1949), Sorry, Wrong Number (1948), Decision before Dawn (Oscar nomination for Best Picture, 1951), Act of Love (1954), The Deep Blue Sea (1955), Anastasia (1956), The Journey (1958), Goodbye Again (1961), Five Miles to Midnight (1962), The Night of the Generals (1967), and The Lady in the Car with Glasses and a Gun (1970).

[Ruth Beloff (2nd ed.).]

**LITVAKOV, MOSES (Moyshe; 1875–1937), Yiddish writer and editor.** Litvakov was born in Cherkassy, Ukraine. At the age of 17 he abandoned talmudic studies for secular learning, attending the Sorbonne (1902–5). At first he drifted from Ahad Ha-Am Zionism to Socialist Zionism and wrote in Russian, Hebrew, and Yiddish on social and literary problems. After the revolution of 1905 he was a member of the central committee of the territorialist Socialist-Zionist (SS) Party, and...
edited its various periodicals in Vilna. Litvakov also published the pamphlet Der Zionismus un di Ugande Frage ("Zionism and the Uganda Question," 1905).

After 1917 he contributed to Yiddish journals in Kiev. In 1919 he joined the Communist Party, and in 1921 he assumed a leading role in Moscow’s *Yevsektsiya and editorship of *Emes, the central Soviet Yiddish daily. In its columns he demanded the uprooting of Jewish religious observances and national aspirations, attempting to place Yiddish literature at the service of the regime. Nevertheless, in his critical articles and as professor of Yiddish literature and Jewish history in the Jewish section of the Moscow Pedagogical Institute, he was often unable to avoid touching on the Jewish past. His essay collection, *In Umru ("In Anxiety," vol. 1, 1918; vol. 2, 1926), dwelt on the cultural tradition which Jewish proletarian writers in the Soviet Union inherited from prerevolutionary writers, such as M. *Rosenfeld, A. *Reisen, *Sholem Aleichem, and I.L. *Peretz, insisting on the hegemony of the new Soviet Yiddish literature. Litvakov also published a booklet on the Yiddish Chamber Theater in Moscow (1924). With Esther *Frumkin he edited a Yiddish translation of Lenin's selected writings in eight volumes. In the ideological polemic among Yiddish writers, he was attacked for remnants of Jewish separatism and chauvinism, allegedly found in his essays. Outmaneuvering efforts to purge him through self-accusations in 1931–32, he continued editing *Emes until the major purges of 1937, when he was arrested as an enemy of the people, brought to Minsk, and executed in December 1937.

[Sol Liptzin]

**LITVIN, A.** (pseudonym of *Shmuel Hurwitz; 1862–1943*), Yiddish journalist, poet, editor, and folklorist. Born in Minsk, he was self-educated. Believing in “redemption through physical labor,” he tried to earn a living as street paver, carpenter, and typesetter, while contributing articles on miscellaneous subjects to Russian, Hebrew, and Yiddish periodicals. In 1901 he immigrated to the U.S., where he worked in a shoe factory and wrote for Yiddish journals. During the 1905 Revolution, he returned to Russia, edited the Vilna monthly *Lebn un Visnshaft* (1909–12), and published studies on *Shomer* (1910) and I.M. *Dik* (1911). Returning to New York in 1914, he wrote for radical and Labor Zionist organs, as well as for the dailies, the *Forverts* and *Morgn-Zhurnal*. During travels through the Polish, Lithuanian, and Galician Jewish communities (1905–14) he accumulated vast material on Yiddish folklore, folk characters, and half-forgotten villages, part of which he utilized in his main work *Yidishe Neshomes* ("Jewish Souls," 6 vols., 1916–17), a panorama of exotic, picturesque Jewish life in preceding generations. Selections from these volumes were translated into Hebrew by A. *Kariv and published in 1943. The greater part of Litvin’s collection of Yiddish folk songs, folktales, and folk humor was deposited in the archives of *YIVO in New York and forms a rich source for scholarly research.

[Sol Liptzin]

**LITVINE, M.** (pseudonym of *Mordkhe Boyarin; 1906–1993*), Yiddish essayist and translator. Born in Shavl (Siauliai), Lithuania, Litvine spent his early childhood in nearby Kovno (Kaunas). Following the expulsion of Jews from the border region, during World War I he lived in Slaviansk, where he attended a Russian secondary school. Modern literature, which he read in Russian and German as well as in Hebrew and Yiddish translation, was the focus of his interests. After returning to Kovno in 1921 he attended the local Jewish-Russian secondary school, after which he studied economics, philosophy, and art history at the university in Berlin, where he imbibed the city’s rich cosmopolitan cultural life. He was also attracted to the hiking and camping activities of the German ”Wandervogel" youth movement. In 1933 he returned home for compulsory service in the Lithuanian army, returning to Berlin in 1934. His anti-Nazi activities brought about his arrest and sentencing to 15 years’ imprisonment (1935), but he was released in 1938 after the intervention of Lithuanian officials. After a short stay in Kovno he left for Paris in 1939 with a student visa. After the German invasion, he departed for the “Free Zone” to study at the University of Montpellier. In June 1942 he went into hiding in a small village and eventually joined a group of the French Resistance. After the war he settled in Paris. Because of his generous personality, fascinating lectures, and writings, he became over the decades one of the most esteemed and beloved intellectual figures of the Yiddish cultural scene in Paris and other Jewish centers. In 1944–58, he was on the staff of the Communist daily *Naye Presse*, writing mostly literary and theater criticism. In 1953–56 he edited the literary quarterly *Parizer Tsaytshrift*, where some of his translations and essays appeared. Beginning in the 1960s Litvine dedicated himself almost completely to literature, harmoniously combining extensive analysis of contemporary Yiddish poets with intense research about and practice of poetic translation. His brilliant analytical and synthetic intelligence, his vast erudition in various fields of literary aesthetics, as well as his literary talent and mastery of the Yiddish language are displayed in the outstanding quality of his published works.

His most important essays, about I. *Manger, Ch. *Grade, A. *Sutzkever, and other major Yiddish poets, appeared in *Di Goldene Keyt* and other Yiddish publications. His most exceptional contribution to Yiddish literature is his *Frantsezytshe Poezye: Ibersetzungen un Komentarn* ("French Poetry: Translations and Comments," 2 vols., 1968, 1986). A collection of his translations from French, Russian, and German poetry, *Fun

[Marc Miller]

**LITVINOV, EMANUEL** (1915– ), English poet. A Londoner by birth and upbringing, Litvinov served in the army during World War II. Apart from his journalism (as editor of the periodical *Jews in Eastern Europe*), Litvinov wrote poems, some of which were collected in two volumes, *The Untried Soldier* (1942) and *A Crown for Cain* (1948), and a novel, *The Lost Europeans* (1959). His work was largely concerned with the problems of the Diaspora Jew, mostly because he was influenced by the vigorous Jewish culture of London’s East End and the antisemitism of the British Fascists in the thirties, and was deeply affected by the Holocaust and its aftermath. Litvinoff’s most significant poem is, perhaps, "To T.S. Eliot," a protest against Eliot’s occasionally sneering attitude toward Jews and a passionate self-identification of himself with the dead of Treblinka. In *The Lost Europeans*, Litvinoff describes the experience of a Jew in postwar Berlin, and in his second novel, *The Man Next Door* (1968), the workings of an antisemite’s mind.

In the late 1960s he resigned his position on the *Guardian* newspaper in protest at its anti-Israel stance. His later books include an autobiographical work, *Journey Through a Small Planet: Jewish Childhood in East London* (1997), and works of fiction. His brother, BARNET (1917–1996), journalist and Zionist worker, wrote a biography of David Ben-Gurion, *Ben Gurion of Israel* (1954); *Road to Jerusalem* (1965), on the development of the Zionist movement; *A Peculiar People* (1969), about contemporary Jewish communities; *The Burning Bush: Antisemitism and World History* (1988); and other works.

[Jon Silkin]

**LITVINOV, MAXIM MAXIMOVICh** (Wallach, Meir-Henokh Moiseevitch; 1867–1951), Russian revolutionary and Soviet diplomat. Born in Bialystok, Litvinov joined the illegal Social-Democratic Party in 1899 and was arrested and exiled. In 1902 he escaped to Switzerland and in 1903, after having joined the Bolshevik faction, he returned clandestinely to Russia and took part in the 1905 Revolution. He collaborated with Maxim Gorki on the newspaper *Novaya Zhizn* ("The New Life"). After the failure of the revolution he fled from Russia and lived in France and England. While in England he became closely associated with *Lenin and was instrumental in various underground operations of the Bolsheviks, including the smuggling of arms to the Caucasus. In London Litvinov married Ivy Low, niece of the English historian Sir Sidney *Low. Following the October Revolution in 1917 Litvinov was made Soviet diplomatic agent to Britain, but he was detained by the British government and exchanged for Bruce Lockhart, the British diplomatic agent in Soviet Russia. In 1921 he became deputy commissar for foreign affairs under Chicherin, and from 1930 until 1939 he was commissar for foreign affairs of the Soviet Union, concentrating in the field of Soviet diplomacy, particularly with the West. In 1919 he negotiated the first peace treaty of Soviet Russia (with Estonia), took part in the International conference in Genoa in 1922, which resulted in the Rapallo Treaty with Germany, and headed the Soviet delegation to the subsequent conference at The Hague and the disarmament conference in Geneva (1927). He was active in the USSR’s joining of the League of Nations and represented it there in 1934–38. In 1933, at Franklin D. *Roosevelt’s invitation, he personally conducted the negotiations for the establishment of American-Soviet diplomatic relations. In the period of Moscow’s anti-Nazi policy (1934–39), Litvinov became the chief Soviet spokesman at the League of Nations where he demanded the establishment of a collective security system. However, in May 1939, when *Stalin decided to reverse his policy and to effect a rapprochement with Hitler at the expense of the West, Litvinov, being a Jew and known as a protagonist of a pro-Western orientation, was replaced by Stalin’s closest collaborator, V.M. Molotov; in February 1941 he was even dropped from the party’s central committee. Following the German invasion of the Soviet Union, in June 1941, Litvinov was appointed Soviet ambassador to the United States, where he remained until 1943. He was reappointed assistant commissar for foreign affairs for a short period in 1946, but retired soon afterwards. His publications include *The Bolshevik Revolution, its Rise and Meaning* (1918) and *Against Aggression, Speeches by Maxim Litvinov* (1939). Litvinov was never self-conscious about being a Jew. He became a lonely, forgotten figure in the last years of his life when Stalin’s antisemitic campaign was in full swing.

[Binyamin Eliav]

**LITVINOVSKY, PINCHAS** (1894–1985), Israeli painter. Born in Novo-Georgiyevsk, Russia, to a religious family of merchants, Litvinovsky studied art at the Academy of Art in Odessa on a scholarship. As a student he visited the Bezalel exhibition in Odessa and met Boris *Schatz, the founder of the Bezalel School of Arts and Crafts. Schatz persuaded the young, talented student to study art in Jerusalem at Bezalel. Litvinovsky stayed in Jerusalem for a brief period, then he traveled to Petrograd to study there at the local Academy of Art. In 1919 Litvinovsky and his wife, Liza, immigrated to Ereẓ Israel, mainly because of the pogroms brought on by the Bolshevik Revolution. After a short stay in Jerusalem, they moved to Bitanyah in Galilee, but Litvinovsky continued to work in Jerusalem. Litvinovsky participated in the famous exhibitions in the Tower of David in Jerusalem and in the Modern Artists’ Exhibition at the Ohel Theater in Tel Aviv.
Though he spent most of his time in Jerusalem, he often traveled to Europe and United States. In 1980 he was awarded the Israel Prize.

Litvinovskiy was among those artists who sought a unique Israeli style of painting. He was known for his portraits, though he did most of them to earn a living. In his other paintings he dealt with local types (Selling Chickens, 1920s, Israel Museum), animals, and landscapes. His style was almost abstract and was characterized by colorful intensity. It had a dual aspect, embracing on the one hand sensual-erotic paintings and, the other, hundreds of portraits of rabbis from the 19th century to his own time. The inability to decide between the earthly-institutional and the spiritual-heavenly carried over into his style and was reflected in several ways, including the depiction of a complex relationship between man and beast.

Picasso, among others, inspired Litvinovskiy. Bodies were roughly delineated but this did not prevent the display of typical signs and collage effects revealing such influences.

[Ronit Steinberg (2nd ed.)]

LITWACK, HARRY ("Chief"; 1907–1999), U.S. men's college basketball coach; member of Basketball Hall of Fame. Litwack was born in Galicia, Austria, to Jacob, a shoemaker, and Rachel, the sixth of seven children in a Yiddish-speaking family. Litwack's father immigrated to the U.S. in 1910, and saved up money to send for Litwack and his family two years later. After graduating from South Philadelphia High School in 1925, Litwack began a 48-year association with Temple University, beginning as an undergraduate when he played on the varsity and was captain and team MVP in 1927–28 and 1928–29. After graduating in 1930, Litwack began his coaching career at Gratz High School (1930–31), and then became head coach of the freshman team at Temple, leading them to a 181–32 record over the next 16 years, with no losing seasons. At the same time, Litwack was playing pro basketball with Eddie "Gottlieb's all-Jewish Philadelphia Sphas, from 1930 to 1936. Litwack also served during this time as assistant coach for the Temple varsity, which in 1938 won the inaugural National Invitational Tournament, the first-ever postseason college basketball tournament. Litwack was named Temple's head coach in 1947, and held the position until 1973, finishing with a record of 373–193 and only one losing season. He led the team to 13 postseason tournaments, winning the NIT in 1969, and coming in third in the NCAA tournament in 1956 and 1958. In 43 years coaching at Temple, Litwack was thrown out of a game by a referee only once. Litwack also served briefly as assistant coach for the Philadelphia Warriors (1948–51). He is credited with creating the box-and-one zone defense, which revolutionized the college game and made it necessary to develop new methods of coaching and playing, but Litwack maintained that he did not invent it; he just refined it. He was coach of the U.S. Maccabiah team in 1957, and was elected to the Basketball Hall of Fame in 1975.

[LITWAK, A. (pseudonym of Hayyim Yankel Helfand: 1874–1932), popular publicist and propagandist of the "Bund. Born in Lithuania, he studied in yeshivot there. In 1894 he joined Social Democratic circles in Vilna, taking a leading part in the "Jargon Committees" for publishing and circulating popular educational and informational literature in Yiddish. Exiled to Siberia for revolutionary activities, on his return in 1904 he became active in the Bund in Vilna and Warsaw, and from 1910 a member of its central committee. A prolific and sharp-edged writer and lively speaker, Litwak was warmly attached to Jewish folk culture and way of life, and became known as the "talmed hakham of the Bund." He was a leader of the "hard" group in the Bund which stood out for preserving its independence from the Russian Social Democratic Party in 1906, and later criticized the doctrine of national neutralism put forward by Vladimir "Medem. For two years Litwak stayed in Vienna, and in 1915 went to the United States. Returning to revolutionary Russia in July 1917 he became a leader of the anti-Bolshevist faction in the Bund, and after its split, a leader of the "Social Democratic" Bund. After trying to settle down in Poland, where he moved in 1921, he proceeded to the United States (1926). There he was active in the "Jewish Socialist Farband, edited its organ Veker, and promoted secular education in Yiddish. He met with difficulties in his attempts to associate himself with the American Jewish Labor Movement.

[Moshe Mishkinsky]

LIUZZI, family of Italian soldiers. GUIDO LIUZZI (1866–1941) was born at Reggio Emilia. He graduated from the Military Academy of Modena. He took part as a junior officer in the Italo-Turkish War of 1911–1912. At the beginning of World War 1, in 1915, Liuuzzi was a colonel on the General Staff. He was appointed brigadier general in 1917. Subsequently he was chief of the Service Corps of the Armies of the Grappa in 1918. After the war he directed the War Academy from 1919 until 1925. During World War 1 he was decorated with the Great Cross of the Order of Saints Maurizio and Lazzaro (Italy), and Croix de Guerre (France). In 1925–26 he commanded the Trento and Padova Divisions. Between 1928 and 1932 he commanded the First Army Corps at Udine. He left the army in 1932 and in 1934 he was elected president of the Jewish community of Turin. In 1938 he denounced the duplicity of both Mussolini and the king of Italy, who legislated the racial laws in 1938.

GIORGIO LIUZZI (1895–1983), son of Guido. He was born at Vercelli in 1895 and joined the Italian Army in 1915 at the beginning of World War 1. In 1917, he was promoted to captain for exceptional merit. Giorgio Liuuzzi was twice wounded during World War 1, on Mount Zebio (June 10, 1917) and on the Bainsizza (Aug. 25, 1917). He was also decorated with the silver military medal (Middle Esonzo), and twice with the bronze medal on Mount Zebio and Piave Val Cordevole.
In 1938 Giorgio Liuzzi had the rank of colonel. In the same year, however, like all the other Jewish officers, he was dismissed from the army following Mussolini’s racial laws. In 1943 he was arrested by the Germans and put in a concentration camp in the Marche. He escaped together with his brother Ferruccio and with his cousin Max Eckhart. In January 1944 Giorgio, together with his companions, arrived in Rome, where he put himself at the disposal of the underground C.I.L. (Comitato Italiano di Liberazione) that directed the partisan war against the Nazis. When Rome was liberated by the Allies, Giorgio Liuzzi was reintegrated in the Italian Army, and soon thereafter he was appointed chief of staff of the “A” group of the General Staff of the Italian Army. In February 1945 he was appointed brigadier general with duties at Headquarters.

In 1948 Giorgio Liuzzi received the onerous task of reorganizing and commanding the Ariete Armored Division. In 1953 he was promoted to the rank of general, commander of Army Corps. From 1954 until 1959 he was the chief of staff of the Italian Army. General Liuzzi was a staunch supporter of Israel. As chief of staff he sold to Israel, in 1953 and in 1955, Spitfire and Mustang planes of the Italian Air Force, which were the mainstay of the IAF in the Sinai Campaign in 1956.

LIUZZI, FERNANDO (1884–1940), musicologist and composer. Born in Senigallia, Liuzzi studied composition and conducting in Italy and Germany. He taught composition at the major Italian conservatories and musicology at the universities of Florence, Perugia, and Rome. Liuzzi composed several stage works, some modernized versions of medieval and Renaissance musical dramas, violin works, and songs. His research was in the fields of aesthetics and the history of Italian music, and his major work is La lauda e i primordi della melodia italiana (“The Lauda and the Origins of the Italian Melodic Style,” 1935).

LIVERIGHT, HORACE BRISBIN (1886–1933), U.S. publisher and theatrical producer. Liveright was born in Osceola Mills, Pennsylvania. He worked briefly in Philadelphia in a broker’s office and as a margin clerk, and then turned to selling bonds, which he did with great flair. In 1911 he established a paper-manufacturing company, and in 1917 he joined Charles Boni to form the publishing house Boni & Liveright. They published the Modern Library, which reproduced classics and near-classics, from 1918 to 1925, when it was sold to Bennett Cerf, their editor. The Boni & Liveright list also included such political radicals as Max Eastman, Michael Gold, and John Reed. When Boni left the firm after a few years, Liveright added many U.S. authors to the list, including such luminaries of American letters as Theodore Dreiser, Sherwood Anderson, Ernest Hemingway, William Faulkner, Hart Crane, Eugene O’Neill, E.E. Cummings, Ezra Pound, T.S. Eliot (Boni & Liveright first published The Waste Land in 1922), Lewis Mumford, and Conrad Aiken, as well as famous European writers. Liveright sold these distinguished authors’ works with flamboyant publicity and for about ten years the publishing company was a stupendous success. A leading opponent of pornography laws, he successfully set out to defeat a “clean books” bill before the New York State legislature which would have prohibited many publications (1924). As a theatrical producer and president of Stonelea Players, Liveright produced Hamlet in Modern Clothes (1925); a dramatization (1926) of Dreiser’s An American Tragedy which was a big success; and Dracula (1927), among other plays. After the successful bustle of the 1920s, Liveright, who was maneuvered out of the publishing firm in 1930, spent his last three years in penury and isolation. Noel Coward’s The Scoundrel, turned into a movie by Ben Hecht and Charles MacArthur in 1935, was partly based on Liveright’s life and character.

BIBLIOGRAPHY: W. Gilmér, Horace Liveright, Publisher of the Twenties (1970); W.D. Frank, Time Exposures (1926), 111–7.

LIVERPOOL, seaport in N.W. England. It seems probable that Jews settled there before 1750, since in 1752 there was a “Synagogue Court” off Stanley Street and a Jewish place of worship, as the 1753 Liverpool Memorandum Book confirms. The site of this early synagogue and a picture of its facade have also been discovered in a map of Liverpool dated 1765. John Wesley refers to the excellent relations which the local Jews enjoyed with their Christian neighbors (Journal, entry of April 14, 1755). About 20 Jews are listed in the Liverpool Directory for 1790, some of whom bear names that inspired the unsubstantiated theory that the original community was Sephardi. They were mostly peddlers and traders catering to the seafaring population and included Benjamin Goetz (or Yates), a seal-engraver described as the “Jews’ High Priest” (hazzan?).

The “Old” Hebrew Congregation was organized, or reorganized, at Turton Court in 1780. Its first cemetery was acquired nine years later and its Yiddish regulations drawn up in 1799. The first synagogue, built on a site in Seel Street donated by the Liverpool Corporation, was consecrated in 1808. The congregation’s present handsome building on Princes Road was constructed in 1874. In the early 19th century the congregation’s preacher was Tobias Goodman, whose sermons are thought to have been the first delivered in English at a synagogue in the British Isles. Internal conflicts led to a secession in 1838, and to the subsequent establishment of a rival congregation at Hope Place. By about 1860, Liverpool’s Jewish community, then numbering around 3,000, was second in size to London’s. Toward the end of the 19th century, Russian and Polish refugees reached Liverpool on their way to America; a number remained to modify the character of Liverpool Jewry. A Levantine Sephardi community also existed between 1892 and 1914, and a small Liberal synagogue was established in 1928. A Liverpool and District Rabbinate was set up in 1904, its first two incumbents being Samuel Jacob Rabinowitz, an
early Zionist leader, and Isser Yehudah *Unterman, later chief rabbi of Israel. Other communal institutions include a pioneer Jewish welfare board (founded 1875), a philanthropic society (1811), a yeshivah (1915), and Hebrew-endowed schools (1840). During the first quarter of the 20th century British Jewry’s first Hebrew day school flourished in Liverpool under the direction of Jacob Samuel *Fox. In 1971 there were in Liverpool nine congregations serving an estimated Jewish population of 7500 (1% of the total). Some 700 Jewish children received their education at the King David schools.

Charles Mozley became the city’s first Jewish mayor in 1863, and there were subsequently four other Jewish lord mayors. Important civic and other dignities were filled by the *Benas and *Cohen families and by Lord *Cohen of Birkenhead. Isaiah *Raffalovich and Izak *Goller were other prominent figures in latter-day communal history. The monthly Liverpool Jewish Gazette (1947– ) mirrored the local scene, while the Zionist Central Council (1898) and the Merseyside Jewish Representative Council (1944) coordinated the community’s activities. In the mid-1990s, the Jewish population numbered approximately 4,000. The 2001 British census recorded 2,698 declared Jews in Liverpool. At the outset of the 21st century, the city had four Orthodox and a Progressive synagogue, and a range of Jewish institutions.

LIVESTOCK, TRADE IN. The laws of ritual slaughter (*shehitah) made it necessary for Jews to buy cattle for their own consumption. In Muslim countries the gentile population bought meat from Jewish butchers. In Christian countries many charters granted to the Jews contained articles regulating the slaughter of livestock by Jews as well as the right to sell meat to non-Jews. This was necessary because the surplus, ritually unclean, parts of animals had to be sold to the Christian populace, to the great resentment of the guild of Christian butchers. Churchmen also were indentigent that Jews sold to Christians meat that they considered unfit to eat according to the law. Protests by butchers against the irregular sale of meat by Jews were common occurrences in most medieval cities, often resulting in limitations in Jewish trade which had been beneficial both to Jews and to most Christians. Trade in livestock became much more intensive following the expulsions of the 15th and 16th centuries, which had resulted in a considerable section of Central European Jewry adopting a rural mode of life. Henceforth their main occupations were as *peddlers, traders, brokers in agricultural products, and livestock traders. Many villages were composed largely of traders in cattle, goats, and horses. For example, in Eichstetten, Baden, four-fifths of the 68 Jewish families were livestock traders in the 19th century. In *Poland-Lithuania Jews traded in cattle on a larger scale. Herds of cattle, often numbering thousands of heads, were driven for sale to the west. In the *Arenda system the Jewish lessee would obtain both ritually clean and unclean animals. The problems arising from the maintenance and sale of the latter are dealt with in much of the halakhic literature of the 17th and 18th centuries.

Jewish participation in the livestock trade was a mainstay of the activity of military *contractors. Supplies from Poland-Lithuania helped boost this trade among German and Austrian Jews. Herds of draft oxen, cattle for meat, and horses for the cavalry were supplied by Samuel *Oppenheimer and Samson *Wertheimer of Vienna and many other *Court Jews. In Poland the *Nachmanovich family specialized in supplying large quantities of horses to the armies. The thousands of beasts necessary were amassed through a system of contractors and subcontractors, reaching down to the petty rural livestock trader. Isaac, son of Daniel *Itzig, became bankrupt in 1795 when he did not receive payment from *Cerber for delivering 8,835 out of 10,000 horses contracted for. The livestock trade was a predominantly Jewish occupation in Bohemia-Moravia, Hungary, and Eastern Europe. The familiar presence of the Jewish livestock trader made him a common figure in local folksongs; a Westphalian example goes:

Jew Itzig bought a cow
and a calf as well;
Itzig Jew didn’t notice, the calf was mo’bers.

The use of a Hebrew word (mo’bers-me’ubberet, “pregnant”) is typical, for the professional livestock traders’ language in most of Europe was full of Hebrew and Yiddish expressions. The vocabulary of non-Jewish livestock traders in Holland after World War II consisted of about 90% corrupted Hebrew and Yiddish words. Jewish horse traders developed a secret trade dialect which non-Jewish horse traders first tried to understand and then eventually adopted for their own mercantile purposes.

Cattle was not only bought and sold but was also raised for meat and dairy products by Jews living in villages. The problem of the *firstborn animal was solved in *Hesse and neighboring regions in a unique manner: ritually pure calves and kids were sent to graze in the *Frankfurt on the Main cemetery and on their eventual death, of old age, were buried wrapped in a white sheet. These animals were butchered by Vincent *Fettmilch’s mob and saved during the 1711 fire. This custom, mentioned by Ludwig *Boerne, was also followed in various communities in Eastern Europe.

In Switzerland, from which the Jews had been expelled in the 15th and 16th centuries and finally in 1622, Jewish livestock traders were nevertheless present throughout the country. Pacific Switzerland attracted the Jewish horse traders supplying the armies of neighboring states. The various cantons were forced to accept and encourage their presence, or to suffer stagnation in the livestock trade. Attempts were made to differentiate between the needed livestock buyers and un-
wanted traders and peddlers. The few Jewish communities that existed in Switzerland in the 18th and early 19th centuries subsisted primarily from livestock trading. In Endingen, of 144 heads of families, 48 were engaged in livestock trading and 5 were butchers. In relatively isolated Endingen and Lengnau a special horse traders’ language persisted into the 20th century without passing through a process of de-Hebraization and Germanization.

When in 1689 the *Nuremberg council wanted to prohibit all trade between Jews and Christians, the Christian butchers protested and the council was forced to make an exception for the livestock trade. As against 1,590 transactions in cattle conducted by Jews between 1784 and 1806 in Winterborn (in the “Palatinate”), only 82 were conducted by Christians. This predominance in rural markets had its anti-Jewish ramifications. Jewish livestock traders were frequently accused of trickery, primarily of *usury and exploitation, for the animals were generally bought and sold on credit. Accusations against Jewish livestock traders were particularly common in Alsace-Lorraine, Bavaria, Hesse, and Eastern Europe. Through channeling the resentment of the farmers in backward rural Hesse against Jewish livestock traders, Otto Boeckel was elected to the Reichstag. This type of antisemitic agitation was later adopted by the Nazis, particularly by the party’s agricultural experts. Immediately after the Nazi seizure of power concerted steps were taken to break the Jews’ dominant position in livestock markets, both on the local, regional, and national levels. Traditional markets were boycotted and special judenfreie ones were established, where farmers were urged to bring their livestock. Eventually, heavy pressure, both public and legal, had to be exerted in order to induce the farmers to sever their ties with Jewish traders. The campaign was intensified in the middle and late 1930s. On Jan. 26, 1937, only pure-blooded Germans were permitted to deal in livestock, and on Nov. 12, 1938, after the *Kristallnacht, Jews were totally forbidden to attend markets and fairs.

Goats and cattle were raised on a small scale by many Jewish households; in the *shetel the owner of a few cows or goats supplied kosher milk and dairy products. Tales of such men were common in folklore and literature, the most famous being Tevyeh the milkman by *Shalom Aleichem.

**LIVNAT, LIMOR** (1950– ), Israeli politician, Knesset member from the end of the Twelfth Knesset. Livnat was born in Haifa, to a mother who was a singer and a father who had been a member of Lehi. She served in the IDF as an education and welfare sergeant, and then studied general literature at Tel Aviv University, where in 1972 she served as deputy chairman of the Students Association, being the first woman to serve in this post. While a student she became politically active in the Likud and in the Movement for Greater Israel. After leaving the university she worked in an advertising company, as a budget manager, and a toy distributor. In 1977 Livnat was elected chairperson of the Young Likud staff. In the elections to the Eleventh Knesset in 1984 she served as spokesperson of the Likud election staff. In 1989 she edited the magazines *Bein ha-Shurut* (“Between the Lines”) and *Moked Erez Yisrael* (“Focus on Erez Israel”) published by the Likud. From 1991 and until she entered the Knesset in April 1992 Livnat served as chairperson of the board of directors of the Construction Center.

Toward the end of the Twelfth Knesset she entered the Knesset for the Likud, replacing a Knesset member who resigned. In the Thirteenth Knesset she served as chairperson of the Committee for the Advancement of the Status of Women as well as of the Parliamentary Committee of Inquiry on the Murder of Women by their Spouses. In the primaries for the elections of a new Likud chairman in 1993 she supportedNetanyahu and remained close to him until after he became prime minister. Livnat was head of the Likud information staff for the elections to the Fourteenth Knesset in 1996. After the Likud victory in these elections, she was appointed minister of communications, in which capacity she acted to open the communications branch to competition, working to open the market for international phone calls to competition and getting Israel to join the agreements of the World Trade Organization on communications issues. She also initiated the “Bezek Law,” which enabled the publication of tenders for designated cable TV channels.

At the Likud Conference held in November 1997, Livnat led a move to remove Binyamin *Netanyahu from the party leadership. Following the Likud’s defeat in the elections to the Fifteenth Knesset she supported Ariel *Sharon in the contest for the Likud leadership. In the Fifteenth Knesset she was a member of the Knesset Finance Committee, Education, Culture, and Sports Committee, and the Committee for the Advancement of the Status of Women. When Sharon was elected prime minister in 2001 Livnat was appointed minister of education, culture, and sport, retaining the position in the Sixteenth Knesset. As minister of education she has had to contend with a deepening crisis in the education system, which resulted in falling scholastic standards and growing violence by pupils. She tried to introduce a system under which all schools receiving government financial support, including
schools from the *haredi* independent system, must teach a certain core program. However, due to political circumstances, the *haredi* schools were released from this requirement. In 2004 Livnat appointed the Dovrat Committee that proposed far-reaching reforms in the education system, including the cancelation of the middle schools, a five-day school week in return for a long school day, an increase in teachers’ salaries hand in hand with longer teaching hours, and the laying off of close to 20,000 teachers. Livnat wholeheartedly supported these recommendations, which, after certain modifications, resulting from opposition by the various teachers’ organizations, were partially implemented in the 2005–6 school year.

Livnat strongly objected to Sharon's Gaza disengagement plan but refrained from voting against it in the Knesset, and she did not resign from the government before it was implemented, as Netanyahu had done.

She is a member of the Women’s Network and the management of Shorashim.

[Livni, Hillel](#)

**LIVNI, HILLEL** (Slavko Weiss; 1906–1994), Zionist leader. Born and educated in Croatia, he lived in Zagreb, where he became a Jewish youth organizer and instructor. He was among the sponsors of a scouting group called Kibbutz ha-Zofim, with headquarters in Zagreb and chapters in several towns with Jewish populations. He also worked within the Federation of Jewish Youth Organizations, promoting the halutzic (*aliyah* preparation) trends and was instrumental in the integration of Ha-Zofim into the Ha-Shomer ha-Za’ir world movement. This movement was officially founded in Slavonski Brod in 1931, rapidly spreading across the country and becoming the largest body of organized Jewish youngsters in Yugoslavia. Livni was among the planners of seminars, summer camps, mountaineering units, and educational programs aiming at preparing future members of kibbutzim, having himself been among the founders of kibbutz Sha’ar ha-Amakim in the Haifa Bay area in the early 1930s. After his *aliyah* he was twice sent back to Yugoslavia as an emissary of his movement. In 1939, he participated as a delegate at the 21st Zionist Congress in Geneva.

In his kibbutz Livni performed various managerial duties. He also took part in the work of the Historical Commission of the Hitahdut (Association of Immigrants from Yugoslavia), assisting in research and editing.

As an ardent philatelist, he accumulated an impressive collection. Shortly before his death he sold it, thus enabling the erection of a memorial monument in his kibbutz for Holocaust victims who were relatives of members of Sha’ar ha-Amakim.

[Livni, Tzipi](#)

**LIVNI, TZIPÍ** (1958– ), Israeli politician. Livni was born in Tel Aviv. Her father, Eitan Livni, was a member of Ezél (*Irgun Ze’evi Le‘ummi*) and a member of the Knesset. A lieutenant in the IDF, she subsequently served in the Mossad and received a law degree from Bar-Ilan University, entering private practice and specializing in commercial and constitutional law before being elected to the Knesset in 1999 as a Likud MK. Previously she had served as director-general of the Government Companies Authority, overseeing the process of privatization. In the Knesset she was a member of the Constitution, Law and Justice Committee, and the Committee for the Advancement of the Status of Women. In 2001–2, she served as minister of regional cooperation, minister without portfolio, and minister of agriculture. In February 2003, she was appointed minister of immigrant absorption, also becoming minister of housing and construction. In December 2004 she was appointed minister of justice and, in January 2006, minister of foreign affairs by Acting Prime Minister Ehud *Olmert*, after leaving the Likud with Ariel *Sharon* when he founded the Kadimah Party. A staunch supporter of Sharon’s political positions, including the withdrawal from the Gaza Strip in summer 2005, Livni proved to be a forthright and engaging spokesman for government policy, perceived by the public as a cut above the professional politician. The American press, too, was charmed by her during her visit to the U.S. in February 2006 for talks with Secretary of State Condoleezza Rice and an unscheduled meeting with President Bush, already billing her as the next Golda Meir.

**LIVSHITS, BENEDIKT KONSTANTINOVICH** (1886 [1887, New Style]–1939?), Russian poet. Born in Odessa, Livshits finished the Duc de Richelieu Gymnasium in 1905 and obtained a law degree from Kiev University in 1912. His early poetry (first published in *Antologiya sovremennoy poezi*, 1909) was inspired by classical antiquity and the French *poètes maudits* (especially Rimbaud, Corbière, and Laforgue). In 1910, Livshits began to contribute to *Apollon*, the influential St. Petersburg art journal; in 1911, he published his first book of verse, *Fleyta Marsiya* (“The Flute of Marsyas”). In 1912, under the influence of D. Burlyuk, Livshits left the *Apollon* group and joined the Futurist circle known as Hylaea, becoming one of its most prominent theoreticians. His poetry and manifestos appeared in the Futurist miscellanies *Sadok sudey* (“A Trap for Judges”), *Poshchechina obshchestvennomu vkusu* (“A Slap in the Face of Public Taste”), *Dokhlaya luna* (“The Croaked Moon”), etc. In 1914, Livshits published another collection of verse, *Volchye solntse* (“The Sun of the Wolves”). After Marinetti’s visit to Russia, Livshits initiated an all-out attack against European Futurism. The French version of his manifesto “We and the West” was published by Apollinaire in *Mercure de France* (CVIII, Apr. 16, 1914). Hylaea began to disintegrate at about this time, however, and Livshits left the Futurist movement. His later poems represent a refined synthesis of Hylaean Cubo-Futurism and “Mandelstham’s Acmeism. The poems of *Iz topi blat* (“Out of the Swamp,” 1922) and *Patom* (1926) are complex riddles, the solution of which demands great literary and historical erudition. In 1928, Livshits published a retrospective collection of his poetry, *Krotonsksy polden* (“The Crotonian Noon”). His memoir *Polutoraglazy strelets* (“The
One-and-a-Half-Eyed Archer,” (1933) is outstanding both as a work of art and a historical document. Livshits also excelled as a translator, producing the most faithful and artistically satisfying Russian poetic translations of modern French verse (*Ot romantikov do surrealistov*, 1934). In 1938, he was arrested in connection with the so-called “translators’ case” and died, according to official Soviet data, in May 1939.

As a rule, Livshits avoided Jewish themes in his poetry for fear of “cultural inbreeding”: in a 1920 poem he spoke of the Jewish heritage in his blood as “the tender duty of the vivant,” fulfilling which the “family-loving Hebrew possessed his brother’s widow, mixing his blood with that of his brother” (cf. O. Mandelshtam’s poem “Return to the Incestuous Bosom”). His other publications include Gileya (1931); Frantsuzskiye liriki xix–xx vv. (1937); U nochnoego okna (1970). Some of his poems have been translated into English in V. Markov, ed., *Modern Russian Poetry: An Anthology* (1967; Eng. tr. by M. Sparks).

*LIVY* (*Titus Livius; 59 B.C.E.–17 C.E.*), Roman historian who mentioned Jews at least twice in his writings. He records that until the capture of the Temple in Jerusalem by Pompey (63 B.C.E.), the sanctuary had never been violated (Epitome, book 102). Livy’s history is cited by Josephus (Ant., 14:68) as testimony to the heroic conduct of the priests, who even during the siege and capture of Jerusalem continued to offer the daily sacrifices.

**LIWERANT SZCLAR, DANIEL** (1945– ), Mexican community leader and activist in international Jewish organizations. Born in Mexico City where he studied in the Tarbut Jewish school and in a national high school, he was an active member of the Hanoar Hatzioni youth movement. Liwerant continued his studies at the Hebrew University of Jerusalem, where he graduated in law.

Back in Mexico Liwerant’s professional work was concentrated in the area of construction and real estate in which he founded and directed several companies. From the mid-1980s he served as vice president of the administrative council of Israel Investment Corporation which promoted investments in different areas of Israel’s economy. From 1986 he was president of the board of Keren Fomento Atzmaut, México-Israel.

Liwerant focused his activities on the promotion of Diaspora-Israel relations. He presided over Keren Hayesod, México (1990–94) and the World Board of Keren Hayesod (1997–2001). From 1995 he was an executive member of the board of trustees of Keren Hayesod, and of the board of governors and the Executive of the Jewish Agency. He was a member of the Joint Authority of Jewish-Zionist Education (1993–2003) and co-chairman of its Aliyah and Absorption Committee.

Liwerant was also active in Jewish education in Mexico, where he was a member of Reshut Hashinuch (Education Authority; 1993–97) and a member of the board of Universidad Hebraica (from 2000). He supported the Taglit-Birthright program in Mexico and was a member of its international consulting council.

Liwerant received many awards including an honorary doctorate from the Hebrew University of Jerusalem (1997). His wife, JUDIT BOKSER DE LIWERANT, is a recognized scholar in political science and a researcher of the Jewish community in Mexico. She is director of the Post-Graduate Program of the Universidad Nacional Autónoma de México UNAM and a member of the Mexican Academy of Science. She was also very active in the development and improvement of Jewish educational and cultural enterprises.

[Margalit Bejarano (2nd ed.)]

**LIZARD** (Heb. זָרֵד), reptile included among the eight creeping things that are prohibited as food and whose dead body defiles anything with which it comes into contact (Lev. 11:30–39). Talmudic literature states that its tail moves convulsively when cut off (Oho. 1:6), that in intense heat it remains immovable, stirring only when water is poured over it (Pes. 88b). Both features are characteristic of various species of lizard, but the reference is apparently mainly to those belonging to the family Lacertidae, of which four genera (that include ten species) are to be found in Israel. Of the *Lacerta*, the most common are the brown lizard (*Lacerta laevis*) and the great green lizard (*Lacerta viridis*) which is the largest and most beautiful of this family, is commonly found in the mountainous regions, and feeds on insects. The dab lizard, which belongs to another family, is apparently to be identified with the עַבְדִּי (Avedi), likewise included among the unclean creeping things (see *Tortoise*).

**LJUBLJANA** (Ger. Laibach), capital of Slovenia; until 1918 in Krain, Austria. Individual Jews are mentioned in Ljubljana during the 12th century, and the repair of a synagogue is attested in 1217. A “Jewish Road” and a “Jewish Street” are remains of the former Jewish quarter. The Jews of Ljubljana were merchants, moneylenders, and artisans, and were allowed to own real estate. During the Middle Ages they were from time to time accused of child murder, well poisoning, etc. They were not expelled together with the rest of the Jews from Carinthia and Styria in 1496; in 1513, however, Emperor Maximilian gave in to the burgurers’ claims and forbade the Jews to engage in commerce, and in 1515 expelled them from Ljubljana. Under Leopold II in 1672 the whole of Krain was forbidden to Jews. Later Joseph II allowed them to visit the fairs.
During the Napoleonic Kingdom of Illyria, Abraham Heimann from Bavaria settled in Ljubljana with two relatives under protection of the French governor and opened an official money changer’s office. When Ljubljana reverted to Austria in 1814, the emperor confirmed Heimann’s right of residence, but he had to fight with the municipal authorities until the 1848 Revolution. After the “emancipation in 1867 Jews again settled in Ljubljana, and by 1910 there were 116 of them, but without an organized community. They were attached to the community of Graz in Austria until 1918, and after Slovenia became a part of the new Yugoslav kingdom, they were attached to the Zagreb community. Only one extended Jewish family remained there when the Germans took the town and handed it over to the Italians in 1941. A memorial to the Jewish victims of the Holocaust was erected after World War II. The Ljubljana community, founded after World War II, had 84 members in 1969. In the 1990s the renewed community took on the name “Judovska skupnost,” ailing itself of the services of a visiting rabbi from Trieste. Members used prayer books in the Slovenian language and even the Haggadah could be read in a Slovenian version.

**LLERENA,** city in W. Spain, near the Andalusian border. Jews lived in Llerena throughout the 13th–15th centuries, up to the expulsion in 1492. In 1391, it was the only community that was attacked in the region of Extremadura. In 1474 the annual tax paid by the community amounted to 3,500 maravedis. It increased to 35,820 maravedis in 1491, probably because Jews recently expelled from Andalusia had settled in the city. A Jew of Llerena, Gabriel-Israel, served as interpreter to Ferdinand and Isabella during the war with Granada, and won the king’s esteem. There were also Conversos living in Llerena. Toward the end of the 16th century a permanent tribunal of the Inquisition was established there which became one of the most active in Spain. David “Reuveni was imprisoned in the inquisitional dungeons in Llerena from 1532, and from 1651 onward a large group of fugitives from Badajoz was tried by the Llerena tribunal with tragic results. As late as 1652 six fugitive Judaiizers were burned in effigy, at an auto-da-fé in Llerena, together with the bones of a woman who had died in prison.

[Haim Beinart]

**“LLOYD GEORGE, DAVID** (Earl Lloyd-George; 1863–1945). British prime minister (1916–22) under whose government the *Balfour Declaration was approved. Lloyd George first came into contact with the Zionist movement in 1903, when the firm of solicitors for whom he worked prepared, at the request of Leopold *Greenberg, a draft connected with the *Uganda Scheme. After Britain’s declaration of war on Turkey in November 1914, he told Herbert *Samuel that he “was very keen to see a Jewish State established in Palestine,” so that when he first met Chaim *Weizmann in December 1914, he was already in a receptive mood toward Zionism. Lloyd George, the Welshman, was drawn toward Zionism both by his religious upbringing (“I was taught far more about the history of the Jews than about the history of my own people,” he wrote) and by his belief that “it is the small nations that have been chosen for great things.”

Although sentiment played no small part in Lloyd George’s approach, on strictly rational grounds he was determined to make Palestine British, at a time when the Zionists regarded British administration of the country as vital to their aims. Before Sir Mark Sykes left for Egypt in April 1917 to become *Allenby’s political adviser, Lloyd George impressed upon him three main points: (1) Palestine was to be under British rule; (2) no pledges should be given to the Arabs concerning Palestine; (3) nothing should be done to prejudice the Zionist aspirations with regard to Palestine. In the cabinet, Lloyd George enthusiastically supported the pro-Zionist Balfour Declaration, viewing it as a step toward the possible establishment of a Jewish state. A few days before the issue of the declaration, he told Weizmann: “I know that with the issue of this Declaration I shall please one group [i.e., the Zionists] and displease another [i.e., the assimilationists]. I have decided to please your group because you stand for a great idea.” He also brought about ratification of the Balfour Declaration at the *San Remo Conference and its inclusion in the *Mandate for Palestine.

Lloyd George appointed Herbert Samuel as the first high commissioner for Palestine and fought vehemently against the Passfield White Paper of 1930 (see *White Papers). In his testimony before the Royal Commission for Palestine in 1937 he said: “… it was contemplated [in 1917] that when the time arrived for according representative institutions for Palestine, if the Jews had meanwhile responded to the opportunity afforded them and had become a definite majority of the inhabitants, then Palestine would thus become a Jewish commonwealth.” He told the Royal Commission that halting Jewish immigration to Palestine would be “a fraud.” He took the same firm stand against the anti-Zionist White Paper of 1939. An entire chapter on Palestine is included in his Memoirs of the Peace Conference (2 (1939), 721–74). Lloyd George’s pro-Zionist, philo-semitic career was one of the high points of his cabinet and displease another [i.e., the assimilationists]. I have decided to please your group because you stand for a great idea.” He also brought about ratification of the Balfour Declaration at the *San Remo Conference and its inclusion in the *Mandate for Palestine.

**Loans (Milveh bi-Shetar)**

A loan established orally is distinguished from one established in writing in two main respects: (1) in the former case the borrower's plea that he has repaid the loan is believed, whereas in the latter case such a plea by the borrower is not believed when the bond of indebtedness is in the lender's possession; (2) in the case of a loan in writing, the creditor has the right to levy on the debtor's *neḥasim meshu'badim* ("alienated and encumbered" assets, see *Lien; Obligation, Law of*), a right not available to him in the case of an oral loan. The term *milveh be-al peh* is apparently a post-talmudic creation, although the distinction between the two forms of loan was recognized as early as tannaitic times (Gulak, loc. cit.; Her-zen, Institut 1 (1936), 352).

**Mitzvah of Lending**

The precept of lending to the poor of Israel is based on Exodus 22:24: "If thou lend money to any of my people that is poor by thee" (see Mekh., Mishpatim, s. 19), and is included in the enumeration of the *mitzvot* (Sefer ha-Mitzvot, Assayin no. 197; Semag, Assayin no. 93; Sefer ha-Ḥinnukh no. 66). Some scholars derived this precept from other biblical passages (She'illoth no. 114; Sanak no. 248). The lender, if he apprehends that he may not be repaid, may make his loan conditional on the receipt of a *pledge from the borrower* (Tos. to B.M. 82b; Ahavat Ḥesed, 1:13). The merit of fulfilling this precept was lavishly extolled by the scholars — even beyond the act of *charity* (Shab. 63a). The duty was held to cover also a loan to a rich man in his hour of need (Sh. Ar., ḤM 97:1; Sanm, thereto, n. 1), but some scholars restricted its application to the case of a poor man only (Even ha-Ezer, Malveh ve-Loveh 1:1). In certain circumstances a person is prohibited from lending money to another. This is so if there are no witnesses to a loan (B.M. 75b), lest the borrower be tempted to deny his indebtedness or the lender forget that he gave the loan; it nevertheless became customary for a loan, even an oral one, to be given in the absence of witnesses, and the *abaronim* sought to explain the custom and reconcile it with the talmudic *halakah* (Pilpula Ḥarifitah to B.M. 75b; Resp. Ben Yehudah, 1:153). Similarly prohibited is a loan given to a poor man for the repayment of another debt, since — but for such loan — the creditor might come to his relief on account of his poverty (Tos. to Hagg. 5a).

**Nature of the Repayment Obligation**

The nature of the borrower's obligation to repay the loan was a matter of dispute among the amoraim. R. Papa took the view that the duty of repayment was no more than a *mitzvah* — just as it was a *mitzvah* for the lender to give a loan — whereas R. Huna b. Joshua held that repayment was a legal duty (Ket. 86a; B.B. 174a; Nov. Ritta, Kid. 13b; Resp. Mabit, vol. 1, no. 51; Semag, Assayin 93). It seems that, alongside the legal duty, R. Huna recognized also the existence of a religious duty to repay the debt (Resp. Ribash 484; M. Elon (see bibl.), 26f. and n. 44, 45; for an opinion that the duty was a *mitzvah* only, see Nov. Ramban B.B. 173b). Some scholars held this *mitzvah* to be of Pentateuchal origin (Ribah, loc. cit.; Mabit, loc. cit., Resp. Pithei Ḥeshuvah, ḤM 97, n. 4), while others interpreted R. Papa's statement as relating only to an oral loan (Rashbam B.B. 174a). A borrower who fails to repay the loan is described as *rash* ("wicked"; Ps. 37:21; Semag, Assayin no. 93; see also *Contract; Obligation, Law of*).

**Halva’ah and She’elah**

She’elah (loan for use and return) relates to "utensils" (*kelim*), and halva’ah (loan for consumption) to money or "produce" (*perot*). Utensils are things which are not counted by weight and measure, nor exchangeable one for the other; things which are counted and exchanged in this way are "produce" (Gulak, Yesodei, vol. 1, p. 95; vol. 2, pp. 20, 171). The shoel (borrower for use and return) must return the subject matter of the loan in specie, whereas the *loveh* need not do so. Unless otherwise stipulated, a loan is for consumption, and the borrower will only be liable for payment of the equivalent in produce or other property (see also *Shomerim*).

**Establishment of Loan**

A loan transaction is concluded upon handing over of the money (or "produce") to the borrower. In post-talmudic times the opinion was advanced that a contract of loan might be established upon performance of a formal *kinyan* alone (see *Acquisition*), without handing over of the money, and that thereupon the borrower would become obliged to repay the money (Ṭur, ḤM 39:19 and Beit Yosef ad loc.); however, this opinion was not accepted by scholars (Beit Yosef loc. cit.; ḤM 89:37). Once the money of the loan has been given to the borrower, the lender will no longer have any right to retract and demand its return, even if it is still intact in specie (Bah, ḤM 39:19; Siftei Kohan, ḤM 39, n. 49). Where the lender has undertaken to give a loan and the borrower has already written a deed on the former's instruction, some scholars hold that, as long as the money has not yet passed to the borrower, the lender remains free to retract from the loan (Resp. Rashba,
Repayment Date

When Specified. If a specified date was stipulated between the parties, the lender may not reclaim the loan prior to that date (Mak. 38b; Yad, Malveh 135). Some scholars maintain that the lender – even in circumstances where he has reason to fear the borrower’s imminent departure abroad, or is aware that the latter may be squandering his assets and therefore become unable to repay the debt on the due date – is not entitled to anticipate the day of repayment (Teshuvat ha-Ge’onim no. 45; Sefer ha-Terumot 16:3; Tur, h M 73); other scholars invest the court with discretion in the matter and the power to order distrainment of the property in the borrower’s possession (Resp. Rif. no. 113; Resp. Rashba, vol. 1, no. 1111). It was held that the court might do this only if the borrower is squandering his assets, otherwise – even though his financial position may be steadily deteriorating for other reasons – the court will not have the power to intervene prior to the due date of repayment (Yam shel Shelomo BK 1:20; Siftei Kohem hM 73, no. 34. see also below; *Execution (Civil)).

When Unspecified. A loan for an unspecified period is given for 30 days (Yad, Malveh 135), and may not be reclaimed within this period. If it is customary in a locality to retain a loan of unspecified duration for a longer or a shorter period, that custom is followed (Sh. Ar., hM 73:1, SmD and Siftei Kohem ad loc.). Some scholars expressed the opinion that in this matter even the gentile custom is followed (SmD, loc. cit.) – but others disputed this (Siftei Kohem, loc. cit., n. 1 and 39).

Further Differences. (1) In the case of a loan for a specified period, the borrower’s plea that he has made repayment within the term of the loan is not believed, since “a person is not likely to make payment before the due date” (BB 54a), whereas in the case of a loan for an unspecified period the borrower’s plea that he has paid within the 30 days as required is believed (Tos. to BB 54a). This distinction has been justified by the scholars on many grounds. Some hold that in the case of a specified repayment date, the borrower, for no particular reason, knows that he will have no money available until the due date, but not so in the case of an unspecified repayment date (Resp. Rosh, 76:3); others hold that when no date is specified, the borrower will feel ashamed if he should have money before the end of the 30 days and fail to make repayment – hence it is presumed that he will repay the loan, even within the said period, if he has the money (Shitah Mekubbez, BB 54a); yet another view is that, in the case of an unspecified repayment date, the borrower is liable for repayment of the loan before expiry of the 30 days – save that he cannot be obliged by the court to make payment before then – hence he is likely to repay earlier if he has the money (Devar Avraham, vol. 1, no. 32). A minority opinion holds that, in the case of a loan for an unspecified period, the borrower is not likely to anticipate payment, and his plea to this effect is not to be believed (Nov. Ramban BB 40a).

(2) Apparently even those who adhere to the opinion that the property of a borrower – even when it is being squandered by him – cannot be distrained until due date of payment of the loan agree with all other scholars that, as regards a loan for an unspecified period, the court may distrain the property in the debtor’s possession even before expiry of the 30 days (Keneset ha-Gedolah, hM 73; Beit Yosef 20b).

Anticipation of Payment by the Borrower. Since determination of the repayment date is for the borrower’s benefit (Ran to Kol. 81a, s.v. vegarsinan), it is permissible for him to repay the loan before the due date, regardless of the lender’s wishes (Ran, loc. cit.). He may not, however, anticipate payment without the lender’s consent when there is a substantial apprehension of an imminent and official change in currency values (Sefer ha-Terumot 3012; see also below).

Acceptance of Payment

Payment made to the lender against the latter’s will is a valid payment; if the latter refuses to accept the money and the borrower throws it to him, he will be discharged (Sefer ha-Terumot 301; Tos. to Git. 154). However, when the lender is prepared to accept payment, the borrower must make the payment into his hands and may not throw it to him (Git. 78b; Yad, Malveh 161). Payment to the lender’s wife is held by some scholars to discharge the borrower, provided that she is accustomed to transacting her husband’s business (see Husband and *Wife; Resp. Maharam of Rothenburg, ed. Prague, no. 225; Rema, hM 120:2), but other scholars dispute that this is a valid discharge (Yam shel Shelomo BK 9:39).

Place of Payment

The lender may claim repayment at any place, even in the wilderness (BK 118a; Sh. Ar., hM 74:1). Upon due date the borrower may obligate the lender to accept payment at any settled place (yishuv), even if this is not the place where the loan was transacted, nor the place of residence of the lender or borrower (Sefer ha-Terumot, 301; Sh. Ar., loc. cit.). If the loan was transacted in the wilderness, the borrower may obligate the lender to accept payment there (Rema hM 74:1).

Method and Means of Payment

A debt not yet due may be repaid little by little (BM 77b; Mordekhai BM no. 352; Ittur, vol. 1, pt. 2, s.v. iska); according to some scholars payment in this manner, although initially forbidden, is valid in retrospect (Bedek ha-Bayit hM 74; Siftei Kohem hM 74, n. 17). After due date the lender may, in the opinion of all scholars, refuse to accept payment in the said manner (Mordekhai, loc. cit.). The borrower must repay in money, and, if he has none, in land. The lender may refuse to accept the land and offer to wait until the borrower has money – even if this is after the due date (Resp. Rosh, 80:9; Sh. Ar., hM 74:6, 101:4). If the borrower has no money, the
lender may not instruct him to sell his assets in order to receive money for them, but must either take the assets as payment or wait until the borrower has money (Tos. to BK 9a). If payment in money entails a loss for the borrower, he may repay the loan in land (Tos. Ket. 92a and Ran ad loc.). If the borrower has money, land, and chattels, and wishes to pay in money, while the lender asks for land or chattels, some scholars hold the law to favor the lender and others the borrower (Sefer ha-Terumot 4:2; see also *Execution (Civil)).

Fluctuation in Currency Values
In case of official withdrawal and replacement of the existing currency, the position is as follows: If the new currency is of the same kind, the borrower pays in the currency in circulation at the time of payment (BK 97). If, however, the withdrawn currency is circulating in another country on the same terms as it formerly did in the country of its withdrawal, the lender – if he has the means of reaching such a country and there is no particular difficulty in transferring the old currency – will be obliged to accept the withdrawn currency in payment (BK 97; Sh. Ar., H 74:7). If as a result of a change in the value of the currency there is a reduction in the price index of the commodities (“produce”), the borrower pays in accordance with the new currency value and deducts for himself the excess (BK 97b, 98a); if the reduction in prices result from factors unconnected with a currency revaluation, the borrower pays in the stipulated currency, without any deduction (Sh. Ar., YD 165). The view that the rules stated with reference to a currency revaluation must also be extended, by analogy, to the case of a currency devaluation (Aferet Zahar no. 165) was accepted as halakhah (Piskei ha-Rosh, BK 9:12; Hikrei Lev, Mahadura Bafra, H 9) in preference to a contrary opinion (Piskei ha-Rosh, loc. cit.; Resp. Rashba, vol. 3, no. 34).

In many Jewish communities *takkanot were enacted which were aimed at reaching a compromise in disputes between parties relating to the manner of debt-payment in case of a change in currency values, and a decisive majority of the posekim inclined toward adjudging and compromising between the parties in terms of these takkanot (see Kahana, bibl.; *Takkanot ha-Kahal).

Plea of Repayment (Parati; “I have repaid”)
An oral loan is repayable without witnesses; a loan in writing, before witnesses. In a claim for repayment of an oral loan, the borrower’s plea that he has already made repayment is believed (Sh. Ar., H 70:1); such a plea is regarded as a general denial of the claim, and on taking a solemn oath (shevu’at hesset) – the borrower is exempted (Sh. Ar., H 70:1). Where there is a bond of indebtedness, the borrower’s plea that he has made repayment is not believed, and the lender – on swearing an oath that he has not been repaid – proceeds to recover the debt (ibid.). (As regards the borrower’s plea of payment prior to the due date, see above.) As a means of protecting the lender against such a possible plea of repayment, it became customary to stipulate, at the time of the loan, that credence be given to the lender upon his denial of a repayment plea by the borrower – such stipulation availing to dismiss the latter plea (Sh. Ar., H 71:1). For the similar protection of the lender, the practice was adopted of stipulating at the time of the loan that it be repayable only before witnesses – the borrower’s plea of repayment being thus deprived of credibility unless attested by witnesses (ibid., 70:3). In the latter case it still remained possible for the borrower to plead that he had repaid the debt before witnesses A and B, who had since gone abroad, and – upon making a solemn oath – become exempted; to forestall this possibility the practice was adopted of stipulating, “You shall not repay me except before witnesses so and so, or before the court” – thus precluding the borrower from pleading that he made repayment before some other witnesses (ibid., 70:4).

Multiple Loans
If a lender has given the same borrower two separate loans and the latter seeks to repay on account of one of them, the lender may appropriate the payment toward whichever loan he pleases, without any right on the borrower’s part to protest or maintain that he intended otherwise (Tur., H 83:2 and Beit Yosef ad loc.; Sefer ha-Terumot 20:2). This rule only applies when both loans have already fallen due for payment (Sefer ha-Terumot, loc. cit.); if one loan has fallen due but not the other, the payment is deemed to have been made on account of the former (Resp. Radbaz, 1252 (181)); if neither has fallen due, the law is apparently the same as for two loans already due (Radbaz, loc. cit.; Kezot ha-Hoshen 83, n. 1).

Conversion into Loan of Other Contractual Obligation
At times the practice was adopted, for various reasons, of converting an obligation originating from a transaction other than loan into an obligation of loan. This practice is referred to as zekifat hov be-milveh and was adopted – for instance in the case of a purchaser indebted to the seller for the purchase price – because of the restricted number of pleas possible against a claim for a loan-debt as compared to a claim for a debt originating from the sale of goods (H 77b; H 190:10). Zekifat hov takes place in one of the following ways: (1) by the writing of a special bond of indebtedness for an already existing debt; (2) by the stipulation of a date for the repayment of an existing debt; and (3) by the gradual accumulation of a debt, for instance by purchase on credit from a shop. In this way the original obligation is largely – or even entirely – extinguished and converted into a new obligation. From the time of such zekifat the debt is an obligation of loan only, the new obligation retaining none of the legal characteristics of the old (Gulak, Yesodei, vol. 2, pp. 116–8).

Minor as Party to a Loan
By pentateuchal law, a minor has no legal capacity to lend. As long as the subject matter of such a loan is still intact (in specie), it must be returned by the borrower; hence in case of loss resulting from *ones (force majeure) the borrower is exempt from liability, as the property is deemed to be in its owner’s possession for purposes of loss arising from ones. The rab-
bisset enacted that a loan given by a minor should be valid, the borrower being liable also for loss resulting from ones (Gulak, Yesodei, vol. 1, p. 40). A minor who has borrowed is exempt from returning the loan, even after reaching his majority. According to some scholars, a minor who has borrowed for his own maintenance can be recovered from even during his minority (Gulak, loc. cit.; see also Legal Capacity).

Measures to Prevent “Bolting the Door” to Borrowers
Hillel the Elder instituted a “Prosbul designed to overcome reluctance to lend to a borrower at the approach of the shemittah (sabbatical) year (Shev. 10:3; Rashi Git. 37a; see also *Takkanot). Although according to pentateuchal law the need for derishah and halakah (examination of witnesses) extends also to civil law (dinei mamnot) matters, the scholars enacted for the obviation of this procedure in the latter cases, so as not to bolt the door before borrowers (Sanh. 34a; see also *Practice and Procedure; *Witness). Despite an opinion upholding the need, by the pentateuchal law, for three expert judges in matters of hoda’ot (“acknowledgments”) and loans, the scholars enacted for the competence of a court of three laymen, lest the door be bolted before borrowers, for fear that no expert judges may be found to enforce the law (ibid.; see also *Bet Din). The scholars enacted that in certain circumstances the judges, if they erred, were not to be exempted from liability, in order not to discourage people from lending to others (ibid.).

According to pentateuchal law, the creditor recovers the debt out of the zibburit (“worst land”) of the debtor, but the scholars enacted that he might do so from the beinonit (“medium land”), for the reason mentioned above (Git. 50a; see also *Execution (Civil)). According to those who held that the doctrine of shi’bud nekhasim was non-pentateuchal, the scholars enacted for a lender on a bond to recover from the debtor’s nekhasim meshu’badim (“encumbered and alienated property”; see *Lien; BB 175b).

The Community as a Debtor
The Responsa literature relates to the mode of conduct in cases where the community had taken a loan for its various affairs, and it has to settle the debt. Rabbi Shlomo b. Aderet (Rashba) was asked about a case in which community members were taxed in order to return the loan – whether taxation should be made according to the financial status of the community member at the time of taking the loan or according to the time of its discharge. Rashba ruled that legally this loan should be regarded as a loan taken by partners, and the burden of repayment is in the same proportion as when the loan was taken; therefore community members should be taxed according to their status at the time when the loan was taken. Nevertheless, the community has the authority to enact that participation of each member should be made according to the time of repayment, because a loan taken by the community could be regarded differently from an ordinary loan – “they are unlike debtors who take the loan directly for themselves, but like debtors for the community chest.” Nevertheless, Rashba negates the possibility of obliging recent citizens of the community, who were not members of the community when the loan had been taken, because it is like a retroactive obligation which is not equitable (Resp. Rashba, 1, no.777; 3, no.412; see *Takkanot ha-Kahal). For the present discussion, see also *Legal Person.

LOANZ, ELIJAH BEN MOSES (1564–1616), one of the outstanding kabbalists of Germany in the late 16th and early 17th centuries. Born in Frankfurt on the Main, he was a grandson of *Joseph Joselmann b. Gershom of Rosheim. His teachers included Akiva Frankfurter, Jacob Guenzburg of Friedberg, *Judah Loew b. Bezalel of Prague, and *Menahem Mendel b. Isaac of Cracow. Serving as rabbi in *Fulda, *Hanau, *Friedberg, and *Worms successively, he was also rosh yeshivah, preacher, and haazzan in Worms for a time. Because he was well known as a writer of kabbalistic amulets and incantations, early in his career he acquired the cognomen Elijah Bâl Shem. Only one of his books, Rimnat Dodim, a kabbalistic commentary on the Song of Songs, was printed during his lifetime (Basle, 1608). Other published works include Mikhhol Yofi, a commentary on Ecclesiastes (Amsterdam, 1695). He was the author of occasional liturgical poetry and his secular poem, Vikku’ah Yavin im ha-Mayim, was translated into German. Among his works still in manuscript (Oxford Bodleian Library) are an incomplete commentary on Midrash Genesis Rabbah; Maqaléi Zedek, a supercommentary on *Babha b. Asher’s commentary on the Pentateuch; Adderet Eliyahu, a commentary on the Zohar; Zafenat Pa’neah on Tikkunei Zohar; and a commentary on Babha ibn Pakuda’s Hovat ha-Levatov. Some of his kabbalistic amulets and formulae are included in the collections Toledot Adam (Zolkiew, 1720) and Mifalot Elohim (ibid., 1727). Loanz also prepared for press a number of halakhic works, notably Darkhei Moshe by Moses Isserles. He exchanged learned correspondence with the Christian Hebraist, Johannes *Buxtorf.

[Theodore Friedman]

LOBATO (Cohen Lobato), Marrano family prominent in Amsterdam, Hamburg, and London. Of especial importance were the following: ABRAHAM COHEN LOBATO, Portuguese Marrano born in Lisbon where he was known as Diego Gomez Lobato. In 1599, when his kinsman, Paul de Pina (alias Reuel *Jesurun) set out for Rome with the intention of becoming a monk, Lobato wrote to Elijah Montalto at Leghorn, who dissuaded him from his plan. Lobato subsequently went with De Pina to Brazil. On their return to Europe, they both settled as professing Jews in Amsterdam. Abraham Cohen Lobato is not to be confused with another person of the same name (perhaps his grandson) who died in Hamburg in 1665. The name Reuel (Reuel) remained common among his descendants. REHUEL COHEN LOBATO, probably his son, and father of Isaac Cohen, was cotranslator, with Moses *Belmonte, of Avot, published in Spanish in Amsterdam (1644). ISAAC COHEN LOBATO filled the role of "Mount Zion" in the original presentation of Reuel Jesurun's "Dialogue of the Seven Mountains" in 1624, and was one of the founders of the society Sha'arei Zedek in Amsterdam in 1678. REHUEL LOBATO (1797–1866), a Dutch mathematician, was author of scientific and statistical works.

[Cecil Roth]

LOCKER, BERL (1887–1972), Labor Zionist leader. Locker was born in Kriewiec, Galicia, and from 1902 he began to contribute to the Lemberg Labor Zionist newspaper, Der Yidisher Arbeter, of which he later became editor. He organized the *Po’alei Zion party in the Austrian Empire before World War I. During the war Locker spent some time in the United States and from 1916 ran the world office of Po’alei Zion at The Hague. At the world conference of Po’alei Zion in Vienna (1920) he supported the split that brought about the separation of the pro-Communist wing and headed the World Union of Po’alei Zion (*"right wing"). He was a member of the Zionist and Jewish Agency Executives in London from 1931 to 1936, when he settled in Palestine. Locker was a member of the *Histadrut Executive from 1936 to 1938, and from 1938 headed the political bureau of the Jewish Agency in London during the period of the struggle against the policy embodied in the White Paper of 1939 and for Jewish statehood. He tried to effect a rapprochement with the British government, particularly after the Labour Party took office in 1945.

From the establishment of the State of Israel (1948) until 1956, Locker served as chairman of the Jewish Agency Executive in Jerusalem. He was a member of the Third Knesset on the *Mapai list. Locker wrote many articles and pamphlets in Yiddish, German, Hebrew, and English. For the most part, he devoted himself to Zionist propaganda in England, and during the yishuv's struggle in Palestine he published the pamphlet, A Stiff-Necked People – Palestine in Jewish History (1946; the American edition is called Covenant Everlasting, 1947). A Hebrew translation and selections of his articles were published in Be-Heveli Kiyyum u-Tekumah (1963). Among the various newspapers and publications of the Labor Zionists, he edited a selection of Ber *Borochov's work in Yiddish (1928). He also wrote Mi-Kitov ad Yerushalayim (1970).

LOCKER, MALKE (1887–1990), Yiddish poet and essayist. Born in Kuty, Galicia, into a well-to-do family, her education included, besides Yiddish, Hebrew, and Polish, several European languages. She married the Labor Zionist leader Berl *Locker, and because of her husband's activities lived in various countries. She was most attracted by romantic and symbolist poetry. She published lyrics in the Yiddish press from 1929 as well as in book form: Velt un Mensh (“World and Person,” 1931), Du (“You,” 1932), Shtet (“Cities,” 1942), Di Velt is on a Hitfer (“The World is Without Guardian,” 1947), and Yerushalayim (1967), as well as translations from Rainer Maria Rilke's works (1967), and biographies of Arthur Rimbaud (1950), Charles Baudelaire (1970), and Paul Verlaine (1976) which were translated into Hebrew and French, as was her book of Yiddish essays on German, English, and French romantic writers, Romantiker (1958).

[Sol Liptzin]

LOCKSPEISER, SIR BEN (1891–1990), British engineer and civil servant. The son of a London diamond merchant, Ben (“Benny” was his official given name) Lockspeiser was educated at Cambridge and served in World War I. Most of his career was spent as an aeronautical engineer at the Royal Aircraft Establishment at Farnborough, Hampshire, where he contributed significantly to the development of many technical innovations in aircraft design, especially wing de-icers. From 1939, he worked in the British government's Air Defence Department, becoming director-general in 1945 and, in 1946, chief scientist at the Ministry of Supply.

Lockspeiser was among the most influential scientific civil servants in modern British history and was in part responsible for producing the first electronic computers, for building the Jodrell Bank radio telescope, and for creating CERN (the European Council for Nuclear Research). He was knighted in 1946 and retired in 1956. Lockspeiser later served as head of the technical advisory board of the Israeli government.

[William D. Rubinstein (2nd ed.)]
LOCUS (Heb. לְכָי, arbeh), one of the four insects which, having “jointed legs above their feet, wherewith to leap upon the earth,” are permitted as food (Lev. 11:21–22). The locust was one of the ten plagues of Egypt (Ex. 10:4–19). The reference is to the Sudanese locust, Schistocerca gregaria, a pest that reached Erez Israel in large numbers every few years causing havoc to agriculture. The Bible and talmudic literature describe the plague of locusts as one of the worst visitations to come upon the country. Its gravity and extent varied from time to time, one of the severest plagues having taken place in the days of the prophet Joel who devoted most of his prophecy to it. His precise descriptions of the locusts’ development, sweep, and damage were confirmed in the extremely serious plague of locusts that visited Erez Israel in 1915 when the crops were entirely destroyed in most parts of the country.

During the plague the locust undergoes various metamorphoses from the larva to the fully-grown, the stages of its development being given in Joel (2:23) in the expressions לְכָי (arbeh), יֶלֶק (yelek), חָסִיל (hasil), and גָּזָם (gazam), the last of these being the fully grown male or female. After being fertilized, the female lays a cluster of eggs in a hole which it makes in the ground. From the eggs, dark wingless larvae, the size of tiny ants, are hatched, these being the yelek, a word apparently connected with פֶּלַק, “to lap,” “lick up.” Eating the tender vegetation of the field, the yelek grows rapidly, and since (as with all insects) its epidermis does not become bigger, it sheds it at various stages of its growth, during which it changes the color of its skin. The next stage, during which its skin is pink, is the hasil, which word, from the root חָסָל, refers to its total destruction of the vegetation of the field, for at this stage it consumes enormous quantities; hence hasil is used as a synonym for arbeh. Thus in Solomon’s prayer at the dedication of the Temple he declared that during a plague of arbeh hasil people would come there to pray for its riddance (1 Kings 8:37; cf. Ps. 78:46). It now casts its skin twice, grows short wings, and becomes the gazam. At this juncture, when no more vegetation is left in the field, it “cuts off” (this being the meaning of גָּזָם) and chews the bark of trees with its powerful jaws; as Joel (1:7) says: “he hath made it (the fig-tree) clean bare… the branches thereof are made white”; and Amos (4:9): it devours “your gardens and your vineyards and your fig-trees and your olive-trees.”

Finally, after casting a further epidermis, it becomes the fully grown, long-winged arbeh, the yellow-colored female which is fit to lay its eggs. This cycle of the locust’s development extends from spring until June when the swarms of locusts return to their place of origin or are blown by the wind to the Mediterranean or Dead Sea (Joel 2:20).

Joel refers to the locust as “the northern one,” which is seemingly strange since it comes from the south. But in contemporary times (especially in 1915) it was found that swarms of locusts reach Jerusalem from the north. The means of fighting an invading swarm of locusts were very limited. While attempts were made to drive them away by making a noise (Job 39:20), reliance was chiefly placed on the mercy of the Lord by praying and proclaiming a fast and a solemn assembly (Joel 2:5). In talmudic literature, locusts are included among the disasters for which the alarm of the ram’s horn (shofar) was sounded and a public fast held (Taan. 3:5). A plague of locusts brought famine in its wake, sometimes even in the following years by reason of the damage done to fruit trees. Having no other source of food, the people collected the locusts, dried and preserved them as food. The Mishnah cites divergent views on whether the blessing “by whose word all things exist” is to be said when eating locusts (in the Mishnah מסמך (govai), in the Bible יָבוֹא (govai); Nah. 3:17), one view being that since it is “in the nature of a curse, no blessing is said over it” (Ber. 6:3). In ancient times however they were regarded as a frugal meal and especially associated with asceticism, as when John the Baptist ate only “locusts and wild honey” (Matt. 3:4; Mark 1:6). Some Yemenite Jews still eat fried locusts. In recent years swarms of locusts have at times visited countries neighboring on Israel, frequently originating in Africa and the Arabian peninsula, but modern methods have succeeded in destroying them in time by spraying from the air or by poison on the ground.

[Note: The entry as written is a mix of Hebrew and Aramaic, with occasional English words for clarity.]

LO-DEBAR (Heb. לְדוֹבָר,לא וּלְדוֹבָר, לְדוֹבָר), city on the border of Gad in the northern part of Gilead (Josh. 13:26; Lidbir). Mephibosheth son of Jonathan lived there when Saul’s family fled to Gilead after the disastrous battle at Mt. Gilboa (11 Sam. 9:4ff.). Lo-Debar apparently fell into the hands of the Arameans during their wars with Israel and was recovered by Jeroboam (cf. Amos 6:13 where the name is translated as “a thing of nought”). The ancient name may be preserved in Umm el-Dabr in the eastern Jordan Valley 10 mi. (16 km.) south of the Sea of Galilee.

[Michael Avi-Yonah]

LODÈVE, town in the department of Hérault, S. France. In 1092, Bernard 111, bishop of Lodève, renewed the ancient canonical prohibition on mixed marriages. The Jewish community of Lodève, which a medieval document describes as having been flourishing and with many scholars (although no works from them have been preserved), appears to have dwindled away from the end of the 13th century; Jews originally from Lodève are subsequently found in Montpellier and later in Perpignan. During the 18th century, Jews from Avignon traded in Lodève. In June 1941, about 100 Jews were living there, according to the census of Jews carried out at that time. There is a Rue des Juifs in Lodève, and in the vicinity a grotto known as Pons des Jésaious (“Well of the Jews”).

[Bernhard Blumenkranz]

LODI, town in N. Italy, in the former duchy of Milan. Jewish moneylenders were possibly invited to Lod in about 1420. In 1541 the Jews of Lod and of other cities of the duchy obtained the protection of Pope *Paul II against the anti-Jewish preachings of the friars. Copies of the Talmud were burnt by order of the Inquisition in Lod in 1559, and in 1597 other works were destroyed. The Jews were expelled from the duchy in 1597, and after the expulsion the Jews were allowed by the authorities to settle in the city only for a short period for professional reasons, with the exception of the Vitali family, bankers who resided permanently in Lod until the end of the 18th century.

[Federica Francesconi (2nd ed.)]

“LODS, ADOLPHE” (1867–1948), French Protestant Bible scholar and historian. Lods was born in Courbevoie, near Paris. He served for a time as a pastor in Paris. After lecturing on Hebrew at the Faculté Théologique of Paris, in 1906 he began teaching Hebrew language and literature at the Sorbonne. He was elected to the Académie des Inscriptions in 1935. Lods published a study of Proverbs, L’Eclésiaste et la philosophie grecque (1890); an edition of the book of Enoch from Greek fragments with variants from the Ethiopian text, translation, and notes, Le livre d’Hénoch (1892); and his major study, La croyance à la vie future et le culte des morts dans l’antiquité Israelite (2 vols., 1906). After the publication of Jean Astruc and la critique biblique au 18ième siècle (1924), Lods concentrated on more general studies, including *Israel, des origines au 8iéme siècle (1930; English trans. Israel from the Beginning to the Middle of the Eighth Century by S.H. Hooke, 1932) and its continuation Des Prophètes à Jésus (1935; English trans. of the first part, by S.H. Hooke, Prophets and the Rise of Judaism, 1937); La religion d’Israel (1939; Spanish trans. by A. Spivak, 1940); and Histoire de la littérature hébraïque et juive (1949; C.E.). Lods published one of the earliest studies comparing Israelite prophecy with the related phenomenon in ancient *Mari in Syria of the second millennium B.C.E. He loved mountain climbing and was an accomplished watercolor painter.

LODZ (Yid. Lodskh; Ger. Litzmanstadt), city in central Poland, center of the textile industry. In 1793 there were 11 Jews in Lodz; by 1809 (when the city was under Prussian rule) the number had risen to 98. A community was organized at that time and a wooden synagogue erected which was renovated in subsequent years. After 1820 (under Russian rule) Lodz became an important industrial center and consequently the Jewish population increased rapidly, until the community became the second largest in independent Poland. (See Table: Jewish Population in Lodz.)

Wishing to develop the textile industry in Lodz, the Russian government invited German weavers to settle on very favorable terms. To avert the possibility of Jewish competition, the Germans insisted that the same limitations on Jewish settlement as applied in *Zgierz should prevail in Lodz. According to these restrictions, Jews were not allowed to settle and acquire real property, nor were they allowed to sell liquor; only those who had previously kept inns were allowed to continue to do so without a special permit. However, the Jews were largely successful in preventing the Zgierz limitations from being applied. When the local authorities planned the town, they set aside the two streets near the market, Walburska and Nadrzeczna, for the Jews. In 1825 they declared that as from July 1, 1827, Jews would be permitted to acquire building sites, to build, and to live on the southern side of the Podr Backa and Walburska streets and the market only. The only Jews allowed to settle outside this quarter were those

who established factories employing Jewish workers, wholesale merchants, members of the liberal professions who built houses, and two families who each possessed 20,000 zlotys. All Jews granted exceptional residence rights had to know Polish, French, or German, and their children over the age of seven had to attend general schools along with non-Jewish children. They were also forbidden to wear the traditional Jewish dress. For a time the authorities continued to harass even those Jews who fulfilled all these conditions. Anxious to eliminate competition from the growing number of Jewish weavers, the German textile workers pressed for the expulsion of the Jews. From 1832 Samuel Ezekiel Salzmann led the battle to extend the rights of Jewish settlement. As the number of Jews continued to grow he built many houses to alleviate the overcrowding and rising rents in the Jewish quarter.

In 1848 the czar abolished the limitations on Jewish settlement in Polish cities. By decrees of 1861 and 1862 the concept of a specific Jewish quarter in Lodz was finally abolished. Jews settled throughout the city, although many of them continued to be concentrated in the former Jewish quarter, the “Altstadt.” A synagogue was erected on Wilki Street, outside the old quarter. Large numbers of Jewish craftsmen, peddlers, and factory workers were concentrated in the suburb of Balut (Baluty). This settlement began early in the 19th century, when Balut was still a separate village and Isaac Blauwatt and Isaac Birnzwieg leased lands from its owner to sublet to Jews. Although no industrial enterprises were established in Balut itself, many Jewish weavers who worked for the large enterprises on a contractual basis lived there. Until 1916 Balut was officially a village outside the Lodz municipality, and hygienic conditions were consequently poor. Conditions remained the same when it was incorporated into the municipality. With rising unemployment and worsening conditions for handloom weavers, life in Balut steadily deteriorated in the interwar period.

Throughout the 19th century and up to 1939 Jews were active in much of the trade in Lodz, especially in supplying raw materials for the textile industry. Wholesale and retail traders, agents, and brokers formed over one third of the Jewish earners in Lodz. In the 20th century Jews entered industry on a considerable scale; by 1914, 175 factories (33.3% of the total) were owned by Jews; 150 of these were textile mills. Jews also owned 18,954 small workshops (27.7%); 18,476 of them textile enterprises. Of the 27,385 Jewish workers (32.9% of the labor force), 26,845 were employed in textile industries. Thus the majority of Jewish enterprise and workers was employed in the small workshops of the Jewish textile industry. Jewish mills produced mainly cotton although there were some woolen and linen mills. The most prominent industrialists were Poznański, Hayyim Jacob Wiślicki, Asher Cohen (Oskar Kohn), the brothers Ettingon, Jacob Kastenberg, and Tuvia Bialer.

Lodz was badly destroyed during World War I when the German residents collaborated with the German invaders. With the break-up of czarist Russia and the creation of independent Poland, the large Russian market was lost and consequently new markets were needed. The Polish government did not grant Jewish industry financial aid for reconstruction. In the early 1920s the anti-Jewish fiscal policies of Polish Finance Minister W. Grabski further hindered the recovery of Jewish industry. Those firms which managed to recover were again hit by the world crisis of 1929. During the 1930s, anti-Jewish economic policies were intensified throughout Poland. Jewish workers were squeezed out of industry, even the enterprises owned by Jews. Every growth in the scale of a plant or increasing mechanization meant that Jewish workers were likely to lose their jobs, both because Polish workers were opposed to their employment and because anti-Jewish government policy encouraged this opposition. Between the wars, ready-made tailoring in Lodz was almost entirely in Jewish hands. Jews were also engaged in building and related trades such as paving, making steps, and carpentry, working on a contractual basis. Polish anti-Jewish policy attempted to replace Jewish weavers by Polish craftsmen. In 1910 the First Union of Jewish Craftsmen was organized, also including large-scale Jewish industrialists, on the initiative of the Jewish Bank for Mutual Assistance. In 1912 it was renamed the Union of Industrialists. Craftsmen and middle-range industrialists joined its ranks. After World War I a union of craftsmen and industrialists was organized as was a union of Jewish merchants in 1925. Small tradesmen and retailers had their own unions. In 1926 a union of both Jewish and non-Jewish traders and retailers was formed; however, the non-Jews soon left it. The Jews formed their unions in collaboration with *Ort. The *Bund, the *Po’alei Zion, and the Polish Socialist Party (the *PPS) competed in organizing trade unions among the Jewish laborers in Lodz. In 1901, at a funeral of one of its members, the Bund held a demonstration in which 2,000 persons participated. During the revolution of 1905, the Bund was very active in Lodz. At the end of 1903, a Jewish section of the *PPS was organized in the city on the initiative of the famous Polish leader Józef *Piłsudski. Jewish craftsmen in Lodz, as elsewhere in Poland, were faced in 1927 with a law which demanded examinations for craftsmen and a diploma awarded by a union of artisans.

Social Life and Culture

The official enactments against and intrusions into Jewish communal institutions from the 1820s (see *Russia, *Poland, *Community, *kazyonny ravvis) had little effect in Lodz. The community maintained its autonomy in difficult circumstances. With the official recognition of Jewish communal autonomy in independent Poland the first democratic elections for the community council of Lodz were held in 1924; seven of the members were Hasidim of *Aleksandrow, six Zionists and *Mizrachi, three Bund, 11 *Agudat Israel, one *Po’alei Agudat Israel, two representing the craftsmen, two left Po’alei Zion, one *Folkspartei, and one each from two Communist lists. The first chairman was the Zionist Dr. Uri Rosenblatt. In 1931 the authorities dissolved the community council and announced new elections. The results were: one Po’alei Agudat Israel, four
Zionists, 12 Agudat Israel, two Hasidim of Aleksandrow, one Folkspartei, one representing the small tradesmen, and one each of the four leftist lists. Leib Minzberg of Agudat Israel was elected chairman, a position he occupied until the Holocaust. The community maintained a kosher slaughterhouse, a *mikveh, and a *talmud torah for the poor, and collaborated with *Torah and other charitable organizations. The most prominent was Gemilut Hasidim (Pol. Dobroczynność), founded in 1899 by Jewish philanthropists such as Israel Poznański as a roof organization for many charitable societies. Rabbis of Lodz included Mendel Wolf ha-Kohen Jerozolimski (1825–32) and Ezekiel Nomberg (1832–56), a *Kotsk Hasid who was opposed by many in the community. (His great-grandson was the Yiddish writer Hirsch David Nomberg.) With the growth of Jewish Lodz, the rabbinical seat gained in importance. After a heated election campaign, Moses Lipshitz, also a Kotsk Hasid, was chosen in 1857. He was followed by the famous Lithuanian rabbi, Elijah Häyyim Meisel (1873–1912), who enhanced the stature of the office by becoming the recognized leader of the Jews of Lodz. His successor was Eliezer Leib Treistman, a Gur Hasid, and former rabbi of Radom. After Treistman’s death in 1920, because of disagreement between the parties, no other community rabbi was elected. Last of the Reform synagogue preachers and rabbis was Markus (Mordecai) *Braude, the founder of the Hebrew schools network (see below).

*B’nai B’rith established a lodge in Lodz in 1912 which supported the Ort vocational school, the orphanage, and various cultural institutions. A bikkur holim organization was founded in 1881; in 1908 it was incorporated into the Dobroczynność. Between the two world wars, the convalescent home for sufferers from pulmonary diseases was particularly well known. There was also a Linat ha-Zedek society which visited Jewish patients in Lodz hospitals. In the course of its activities they were extended; between the two world wars it established a hospital for children and a Linat ha-Zedek pharmacy which was subsidized by the municipality of Lodz and the Jewish community. The synagogues organized societies for the relief of the sick and other charitable organizations, such as the Malbish Arumim which provided clothing for poor children. It subsequently undertook a variety of services: legal aid, the organization of cooperatives, and medical assistance. In the interwar period, there were soup kitchens for the needy which also distributed free meals to school children.

Jewish education in Lodz shared in the development and crises of the traditional Orthodox Jewish education system in modern times (and see *Heder, *Yeshivah). There were many yeshivot; some, e.g., Beth Israel of the Aleksandrow Hasidim and the Lithuanian-style Torat Hesed, were influential. The talmud torah founded by R. Elijah Häyyim Meisel in 1873 provided education for children of elementary school age. Some subjects were taught in Polish and some in Hebrew. A diversified network of educational institutions, from kindergarten to secondary school, existed in Lodz. A “reformed” heder (known as the Jaroczyński School after the philanthropist of this name) was founded in 1890 and included secular subjects in its curriculum. The first Jewish gymnasium in Russia was established in Lodz by Markus (Mordecai) Braude in 1912. In accordance with the requirements of Russian law, it was named after a private person, Dr. D.B. Rabinovich. In it too some subjects were taught in Polish and some in Hebrew. Another secondary school was headed by Itzhak *Katzenelson, the noted Hebrew poet who perished in the Holocaust. In 1918 the first Yiddish school was established, named after B. Borochov. The Jaroczyński talmud torah was converted into a vocational school in 1921 and in 1927 it became a secondary vocational school for the study of mechanics, electricity, and weaving. A *Beth Jacob school for girls was founded in 1924.

Although Lodz was not a leading Jewish cultural center, there was considerable creativity in the city. The Hebrew authors and poets, Itzhak Katzenelson, David *Frischman, and Jacob *Cohen lived and worked in Lodz, as did the scholars J.N. *Simchoni, Philip *Friedman, Aryeh *Tartakower, and Häyyim Isaac *Bunin. Yiddish authors and poets included Israel Uger, the editor of the newspaper Lodzsher Togblat, J.I. *Trunk, H.L. *Fox, and Häyyim Krol. Most famous of the many Jewish musicians were Chemjo *Vinaver, the conductor, and the composer I. Goldstein. Jewish drama companies were formed at the close of the 19th century, and from among these emerged the theater known as the "Great Theater," where the famous Yiddish actors, Julius Adler and Zaslavski, appeared. There were also well-known satirical theaters, directed by the Yiddish poet Moshe *Broderzon and actor Shimon *Dzigan. Many Zionist societies were organized in Lodz soon after the First Zionist Congress of 1897, such as the Ohel Ya’akov, Ateret Zion, and Tikvat Zion, structured around synagogues. During World War I, Agudat Israel, whose main supporters were the Hasidim of Gur, engaged in numerous activities. The Zionist organizations were active in the propagation of the Hebrew language and Hebrew culture, initiated and organized by the historian J.N. Simchoni. The Hebrew cultural activities operated within the framework of the literary-musical society, Ha-Zamir, founded in 1899. It maintained a choir, a dramatic circle, and a library, and in 1915 formed a philharmonic orchestra. The D.B. Borochov Library was established by Po’alei Zion in 1914 and the Bund established the Grosser Library, named after the Bundist leader by the same name. Jewish newspapers included the Zionist Lodzsher Togblat (1908), Lodzsher Morgnblat (1912), Lodzsher Folksblat (1915), Nayer Folksblat (1923), and other periodicals in Yiddish and Hebrew.

Until the Nazis began to disseminate antisemitic propaganda among the German minority in Lodz (from the mid-1930s) the antisemitic movement in the city followed the customary Polish pattern (see *Endecja, *Rozwój); from April 1933 there were many cases of murderous attacks on Jews. In May 1934 and in September 1935 Jews were wounded or killed in organized attacks. The antisemitic parties gained an overwhelming majority in the municipal elections of 1934 after conducting an election campaign on the platform of purging the town of Jews. Their rule was short-lived, for in the
elections of 1936 the Polish and Jewish Socialist parties won a majority. Under different pretexts controllers and officials were introduced by the Polish authorities into the factories of Cohen, Ettingon, Poznański, and others. Rich Jews were arrested in 1938 and imprisoned in the camp of *Bereza-Kartuska. Guards were placed outside Jewish shops in order to prevent non-Jewish customers from entering them. In vain, the town’s Socialist administration tried to prevent the growth of antisemitism and the accompanying agitation.

[Shimshon Leib Kirshenboim]

Holocaust Period

At the outbreak of World War II, Lodz had 233,000 Jews, about one-third of the city’s population. As soon as the war broke out many Jewish inhabitants, including the social and cultural elite, the youth, and wealthier circles, left Lodz out of fear of persecution. Their exodus continued up to May 1940. They sought refuge in Warsaw and other towns in the General Government (see *Poland, Holocaust) and many escaped to the territories occupied by the U.S.S.R. The German army entered Lodz on Sept. 8, 1939. In October–November 1939 Lodz was annexed to the Reich as part of Warthegau (Wartheland), and given a German name, Litzmannstadt. The Jewish community council, now understaffed, reinstated its activities a few days after the capitulation (Sept. 12, 1939). The council mainly extended assistance, as it did formerly, to the ever-increasing number of impoverished Jews, to refugees from the vicinity, to the sick, and to victims of Nazi terror. In October 1939 the Germans disbanded the council and appointed its former vice chairman, Chaim Mordecai *Rumkowski, as *Judenältester. He formed an advisory but short-lived body, “Beirat,” of 31 Jewish personalities. On Nov. 11, 1939, the Nazis deported the Beirat members to the nearby Radogoszcz camp (Radegast). After some time another purely formal body was set up, completely subordinate to *Gestapo orders and to the *Judenältester. The brutal liquidation of the first Beirat was an indication of further acts of terror to come that November, when the Nazis burned down the great synagogue and publicly hanged two Poles and a Jew.

In December 1939 the Germans evicted many Jews living along the central streets of the town to settle Volksdeutsche in their place. On December 12–14 the authorities deported a few thousand Lodz Jews to the General Government, after which a mass “spontaneous” exodus of Jews occurred as a result of the fear of deportation. In January 1940 the Jews were segregated into the Old City and Bałuty quarter, the area of the future ghetto, officially founded by a police order on Feb. 8, 1940. The ghetto (less than 2 sq. mi.; 4 sq. km.) generally lacked sewage disposal and its houses were fit for demolishing. To speed up confinement of the Jews into the ghetto, the Nazis organized a pogrom on March 1, 1940, known as “bloody Thursday,” during which many Jews were murdered. Thousands of Jews were then driven into the ghetto without being permitted to take their property with them. On April 30, 1940, the ghetto was closed off. Its small area contained the 164,000 Jews still living in Lodz, for between Sept. 1, 1939, and May 1, 1940, 70,000 Jews had left the city. The ghetto was separated from the rest of the city by barbed wire, wooden fences, and a chain of “Schupo” (Schutzpolizei) outposts. The Jewish administrative body and the German ghetto council (Ghettoverwaltung) headed by Hans Biebow communicated with each other at the so-called Bałuty market, where some German and the central Jewish offices were located. The ghetto was crossed by two thoroughfares which did not, however, belong to the ghetto area. These streets divided the ghetto into three parts connected to one another by several gates (for traffic) and three bridges (for pedestrians). The isolation of the ghetto was strengthened by the fact that it was deliberately surrounded by a German population according to the “Germanization policy.”

Up to October 1940 the local German authorities counted on the deportation of the ghetto inmates to “reserves” in the Lublin District or to Madagascar (see *Madagascar Plan). But German plans changed and the Lodz ghetto remained. The ghetto inhabitants were subjected to starvation, alleviated in part by the smuggling of foodstuffs (1940–41), but smuggling activities were vigorously combated by the ghetto branch office of the German Kriminalpolizei. The little food supplied by the authorities was rationed out on even lower standards than those applied in Nazi prisons. Apart from this a large quantity of the foodstuffs arrived in spoiled condition. In 1940 the majority of the ghetto population was left with no means of subsistence. Hunger demonstrations and riots resulted in the early fall. The economic situation of the inmates improved a little after some time, when a ghetto factory network was organized to produce goods, mainly for the Wehrmacht. In August 1942 there were 91 factories with 77,982 employees. Many of the workers earned too little to be able to buy even the inadequate food rations allotted to them, and working conditions were unbearable. Apart from starvation and exhaustion, the population underwent roundups for the forced labor camp at Warthegau. In 1940–44 the Germans sent 15,000 Jews from the population according to the “Germanization policy.”

Up to October 1940 the local German authorities counted on the deportation of the ghetto inmates to “reserves” in the Lublin District or to Madagascar (see *Madagascar Plan). But German plans changed and the Lodz ghetto remained. The ghetto inhabitants were subjected to starvation, alleviated in part by the smuggling of foodstuffs (1940–41), but smuggling activities were vigorously combated by the ghetto branch office of the German Kriminalpolizei. The little food supplied by the authorities was rationed out on even lower standards than those applied in Nazi prisons. Apart from this a large quantity of the foodstuffs arrived in spoiled condition. In 1940 the majority of the ghetto population was left with no means of subsistence. Hunger demonstrations and riots resulted in the early fall. The economic situation of the inmates improved a little after some time, when a ghetto factory network was organized to produce goods, mainly for the Wehrmacht. In August 1942 there were 91 factories with 77,982 employees. Many of the workers earned too little to be able to buy even the inadequate food rations allotted to them, and working conditions were unbearable. Apart from starvation and exhaustion, the population underwent roundups for the forced labor camp at Warthegau. In 1940–44 the Germans sent 15,000 Jews from the ghetto to labor camps, but only very few ever returned, and they arrived back in a state of exhaustion. The branch office of the ghetto Kriminalpolizei carried out extensive robbery of the remaining Jewish possessions. It terrorized the ghetto inmates with house searches, requisition, and torture to uncover any hidden property. The extremely crowded living quarters, combined with bad hygienic conditions, starvation, and overwork, caused epidemics of dysentery, typhus, and typhoid fever, but mortality was due mostly to tuberculosis, the death rate for which was 26 times higher than it had been among Lodz Jews in 1936. The overall average death rate per month reached 7.23 per 1,000, whereas in 1938 it had been 0.91 per 1,000, i.e., the rate increased eightfold since prewar time.

In these appalling conditions, Rumkowski tried to organize the life of the Jewish community. He created a widespread network of Jewish self-administration, which included departments that provided for the needs of the population as far as possible (the former Jewish social institutions having been liquidated by the Nazis), and other departments...
that fulfilled German orders, some sections performing both tasks. From 1940 to September 1942, the health department of the ghetto ran five to seven hospitals, five pharmacies, and several special infirmaries. The education department ran 45 primary religious and secular schools, two high schools, and one vocational school. The food supply department organized public kitchens in factories, offices, and schools. Apart from the general food control system (ration cards), an additional ration system was introduced for various categories of people (for those engaged in hard labor, excrement carriers, police and firemen, physicians, pharmacists, persons in leading positions, the sick, and confined women). The department for social welfare handed out regular small pittances for the unemployed and for those with meager income. There were two old age homes, a home for invalids, and a home for the chronically ill; however, conditions in these homes were extremely bad and the death rate very high. An orphanage and a children’s camp were organized for 1,500 children as well as a morning camp for the summer period.

The agricultural department allotted small garden plots to the population. The factories, called Arbeitsressorte, exploited Jewish labor, but on the other hand gave the employees certain wages and additional food rations. The statistics department gathered – for the needs of the ghetto and the Germans – data on all branches of life in the ghetto. The archives department collected valuable documents and kept daily chronicles of ghetto life. (The majority of these documents found their way to the “Jewish Historical Institute in Warsaw.) The rabbinate oversaw the semi-legal religious life of the ghetto up to September 1942. On the other hand a department known as the Arbeitsamt (Arbeitseinsatz) supplied the Germans with Jewish manpower for the forced labor camps, and a special “purchasing department” bought Jewish property at the lowest prices and handed it over to the Ghettoverwaltung. These sales enabled the Jewish authorities to obtain the means for the purchase of foodstuffs for the ghetto (the Germans supplied food only in exchange for real goods, i.e., Jewish labor or Jewish property), and therefore the Jews found such sales were preferable to the outright requisitions made by the Kriminalpolizei. The Jewish police (Ordnungsdienst) administered order in the ghetto, but also took part in deportations and roundups of Jews for forced labor camps. A special police group (Sonderabteilung) under the orders of the Kriminalpolizei confiscated Jewish property. Its commander, David Gertler, and later M. Kligier, took orders from the Gestapo. A court and prison functioned. The latter was the collection point for those sent on forced labor or to extermination camps. Persons who returned from labor camps or who were held by the Gestapo were kept in the ghetto prison.

Several political and social groups (e.g., some Zionist organizations, WIZO, Bund, the communist “Trade Union Left,” the organization of ex-combatants and invalids) held secret meetings, taught and provided self-education, organized demonstrations against the Judenältester Rumkowski (1940) and strikes in factories, engaged in production sabotage, and listened in to the radio. Certain parties (Bund, Po’alei Zion), with Rumkowski’s approval, ran their own “kitchens” (1940–41) where they fed their members and held cultural gatherings. During the mass deportations these organizations engaged in saving their active members. The He-Halutz (“pioneer”) youth groups, in the spring of 1940, organized a hakshurah (Zionist pioneer training program) on the outskirts of the ghetto (Marysin). The hakshurah served different organizations and had 1,040 members, including non-Zionists such as members of the Bund and Agudah. Apart from farm work, the youth held cultural activities and provided self-education. In September 1940 several Zionist groups formed the Hazit Dor Benei Midbar, which continued its activities in the ghetto even after the liquidation of the hakshurah in mid-1941.

The German authorities gave orders which imposed the sequence of events to come in Lodz ghetto. They allowed a period of relative autonomy (May 1940–September 1942) but ended it with a wave of mass deportations to the extermination camp at *Chelmno on the Ner. During January–April 1942 the Germans deported more than 44,000 Jews. In May 1942, 11,000 Jews originally from Prague, Vienna, Luxembourg, and various cities from the “Old Reich” were rounded up and deported for extermination. These Jews (20,000), mostly elderly and sick, had been taken in the fall of 1941 to Lodz ghetto, where they lingered on in terrible conditions, were crowded into unheated, mass quarters, and endured more severe hunger than the local population. By 1942, 5,000 among them died of typhus and starvation. After their deportation, the notorious “Gehsperre” Aktion was carried out to exterminate 16,000 Lodz Jews, including children up to ten years old, persons above 60, and the sick and emaciated. With this mass murder action, the population decreased from 162,681 in January 1942 to 89,446 on October 1, 1942, i.e., by nearly half. This decrease was in fact greater because 15,500 refugees from the liquidated provisional ghettos had been brought to Lodz ghetto in spring/summer 1942.

After the mass liquidation campaign the Germans transformed the ghetto de facto into a labor camp. There followed the reduction and liquidation of the Jewish administrative bodies which had served the needs of the population, e.g., health, food supply, welfare, education, and records departments, and the rabbinate. The orphanages, old-age homes, the majority of the hospitals, schools, and children’s homes no longer existed. The number of factories increased to 119 (August 1943) and employed 90% of the population. Children from the age of eight worked in these factories. The Germans held control over all internal matters in the ghetto, such as food supply (additional rations), and they limited Rumkowski’s power to allow Kligier, chief of the Sonderabteilung, and Jakubowicz, chief of the Arbeitsressorte (factories), more sway.

Under these conditions the ghetto lingered on until its final liquidation in June–August 1944. By Sept. 1, 1944, the whole population, 76,701 (June 1, 1944 registration), was deported to Auschwitz. By January 1945, only an Aufraumungskommando (800 Jews) remained in the ghetto joined by some
Jews who were hiding in the area of the former ghetto. They were liberated when the Soviet army arrived on Jan. 19, 1945.

[Danuta Dombrowska]

Contemporary Period

When the Soviet army entered Lodz only 870 Jewish survivors were left in the city. Nevertheless, within the next two years Lodz became the largest reconstructed Jewish community in Poland. More than 50,000 Jews settled there by the end of 1946, of whom the overwhelming majority had survived the Holocaust period in the Soviet Union. A number of Jewish institutions began to function, including the Central Jewish Historical Commission, a Jewish theater, editorial staffs of a number of Jewish (Yiddish, Hebrew, and Polish-language) papers. Zionist organizations conducted intensive activity, with the support of the majority of Jews. A number of “kibbutzim” (homes for Jewish youth who prepared themselves for aliyah) were established. All these activities were stopped in 1950, when the Sovietization of Poland was completed. More than one-half of the city’s Jewish population left Poland during 1946–50. After the second wave of aliyah to Israel during 1956–57, only a few thousand Jews remained. A club of the government-sponsored Jewish Cultural Society and a Jewish public school continued to function until 1968–69, when almost all remaining Jews left Poland. By the turn of the century only a few hundred Jews lived in Lodz.

[Stefan Krakowski]

LOEB, ISIDORE (1839–1892), French rabbi and scholar. Loeb, who was the son of a rabbi in Soultzmatz, Alsace, studied at the Ecole Rabbinique of Metz (which was later transferred to Paris). After tutoring in Bayonne and Paris, he became rabbi at Saint-Etienne (1865). In 1869 Loeb was appointed secretary of the Alliance Israélite Universelle in Paris, a post he held until his death. As a result of his initiative, the Alliance increased its network of schools in Mediterranean countries and the Balkans and intervened in international conferences on behalf of oppressed Jewish minorities (cf. his *La situation des Israélites en Turquie, en Serbie et en Roumanie* (1877), and *Les Juifs de Russie* (1891)). The Alliance bulletins became, under his editorship, a main source of information to all those who were engaged in the fight for Jewish emancipation. Loeb founded and developed the library of the Alliance. From 1878 he taught Jewish history at the Ecole Rabbinique. Loeb’s scholarly work covered biblical and talmudic literature, medieval historiography, and the history of the Jews in France and Spain. His articles appeared in various journals including the short-lived *Revue Israélite*, which he edited from 1870 to 1872. He was also publication manager of the *Revue des Études Juives*, to which he contributed some 50 articles, and wrote for the *Grande Encyclopédie* (articles on Judaism from A to C). He prepared a French edition of the *mahzor* (1869), and wrote mathematical works including *Tables du Calendrier* (1886). He also wrote *La Littérature des Pauvres dans la Bible* (REJ, 20 (1890); 21 (1890); 23 (1891); 24 (1892), which also appeared separately in 1892). Loeb contended that certain biblical books contain several passages (on whose dating scholars disagree), expressing the idealization of poverty and suffering. This Renan-inspired view has been discussed. A collection of his sermons was published in 1864.

LOEB, JACQUES (1859–1924), U.S. physiological chemist. Born near Strasbourg, Alsace, into a family of Portuguese and Italian origin, Loeb studied medicine. He immigrated to the U.S. and became professor of physiology at the University of California (1902–10), and then head of the division of general physiology at the Rockefeller Institute for Medical Research in New York (1910–24). He founded and edited the *Journal of General Physiology* from 1918. A brilliant experimentalist, he was a pioneer in explaining vital processes on a basis of physical chemistry. Some of his special fields of work were the physiology of the brain, tropism, antagonistic salt action, the duration of life, and colloidal behavior. He wrote *The Organization as a Whole* (1916), *Regeneration from a Physico-chemical Viewpoint* (1924), and *Proteins and the Theory of Colloidal Behaviour* (1924).

LOEB, JAMES (1867–1933), U.S. banker, philanthropist, and translator. Loeb, who was born in New York, joined his father’s well-known banking firm of Kuhn, Loeb & Co. in 1888. He left the firm in 1901 and in 1912 established his residence in Murnau, Germany. The institutions which Loeb founded and endowed include the Institute of Musical Art in New York, later a part of the Juilliard Musical Foundation; the Deutsche Forsch-
unsamstalt fuer Psychiatrie in Munich, for research into the various causes of mental disorders; and the famed Loeb Classical Library (1912), consisting of classic Greek and Latin works in the original, faced by English translations. Among the works which Loeb translated into English were Maurice Croiset's *Arístophanes et les partis a Athènes*; Phillipe Ernest Legrand's *Daos*; and Auguste Couat's study of Alexandrian poetry. He was also a competent cellist.

**BIBLIOGRAPHY:** *Festschrift fuer James Loeb...* (1930).

**LOEB, LEO** (1869–1959), pathologist and pioneer in cancer research. Loeb, who was born in Mayen, Germany, immigrated to the United States in 1900 and held a variety of academic and research posts until 1910, when he settled in St. Louis, Missouri. From 1915 to 1937 he was professor of pathology at St. Louis' Washington University. Loeb made significant contributions to cancer research. In a series of experiments on rats and mice, he and his co-workers found that the growth energy of cancer cells may be experimentally decreased and increased. They also showed that hormones may induce cancer in a mouse's mammary gland, vagina, and cervix. They studied growth and retardation factors influencing the thyroid gland. Loeb's papers included studies of blood coagulation and thrombosis, pathology of the circulatory organs, kidneys, and stomach, experimental cell fibrin tissue, old age, and the analysis of cell death. Leo Loeb was the brother of the physiologist and biologist Jacques *Loeb.

[Suessmann Muntner]

**LOEB, MORRIS** (1863–1912), U.S. physical chemist and philanthropist; brother of James *Loeb*. Loeb was born in Cincinnati, Ohio. In 1891 he became professor of chemistry at New York University, and was also attached to Clark University. In 1910 he resigned his chair to devote himself to research and his public activities. His main fields of research were on osmotic pressure, electrolysis, and the molecular weight of iodine. He was chairman of the New York section of the American Chemical Society and president of the Chemists' Club of New York City. His public and philanthropic work was carried out against the background of the intensive immigration of Jews into the United States at the time. He was director of the Jewish Agricultural and Industrial Aid Society and he created a Jewish Agricultural Experimental Station in New Jersey. He was president of the Hebrew Technical Institute, trustee of the Jewish Theological Seminary of America, and founder of the American Jewish Committee and of the Educational Alliance.

[Samuel Aaron Miller]

**LOEBEL, ISRAEL** (late 18th century), preacher and *dayyan*, opponent of Hasidism. He was probably born in Slutsk, or at least lived there in his childhood, was preacher in Mogilev, and in 1787 was appointed permanent preacher and *dayyan* in Novogrudok. While he was still in Mogilev, his opposition to the Hasidim grew as a result of his brother’s joining their ranks. When *Elijah b. Solomon, the Vilna Gaon*, issued a proclamation against the Hasidim in 1797, Loebel obtained from R. Saadiah, an emissary and disciple of the Gaon, a letter of recommendation authorizing him to preach against the sect wherever possible, and approval for the publication of his books. He was likewise granted the approval of the *parnasim* of the Slutsk community, and at the gathering of the leaders of the Lithuanian communities at Zelva he was evidently authorized to travel throughout Poland and beyond, in order to disseminate anti-Hasidic propaganda. His two booklets against Hasidism, *Sefer Vikku’ah* and *Kivrot ha-Tiavah*, were printed in Warsaw in 1798; the latter is no longer extant. In his preachings in the communities of east Galicia, Loebel conducted anti-Hasidic propaganda. According to his own testimony, Loebel was granted an audience with Emperor Francis II at Vienna in early 1799, as a result of which public meetings of Hasidim were prohibited in all the provinces of Poland which had then come under Austrian rule. There is, however, no historical evidence for this.

*Sefer Vikku’ah* describes a disputation between a Hasid and a *mitnagged*. The author compared the Hasidim with heretical sects that had arisen within Judaism throughout its history. He denied the Hasidic principle that considers prayer more important than Torah study and the Hasidic emphasis on joy as a basic element in prayer; and objected to such Hasidic customs as the acceptance of the Sephardi prayer rite and not observing the fixed times of prayer. He likewise attacked the Hasidic leaders, claiming that they were ignoramuses whose every command was obeyed, who exploited the masses and enjoyed a rich life at their expense, and who deduced them with the belief that the *zaddik* atoned for their sins. *Sefer Vikku’ah* and its author became the target of attacks by the Hasidim, who prepared to reply with a pamphlet entitled *Mul Maggid Peti* (*Against the Foolish Preacher*), though it is not clear if this was in fact printed. They bought up practically the whole edition of *Sefer Vikku’ah* and tried to destroy it “by tearing up the book and trampling on it as on mud in the streets.” In the 1820s the Hebrew writer Joseph *Perl* made an unsuccessful attempt to reprint the book.

Loebel also wrote a booklet in German, *Glaubwuerdige Nachricht von einer neuen und zahlreichen Secte unter den Juden, die sich Chassidim nennt...* (Frankfurt on the Oder, 1799). Though the original is not extant, it has been preserved in a reprint in the journal *Sulamith*, 2 (Dessau, 1807), 308–33. His homiletic works are *Ozer Yisrael* (Shklov, 1786), printed anonymously; *Tukkanat ha-Mo’adim* (before 1787); *Iggera de-Hespeda* (possibly unpublished; the last two works are not extant); *Middot Hasidut*; and *Tiavat Zaddikim* (both Warsaw, 1798); the latter, which is ambiguous in the original, includes a chapter against Hasidism. His *Even Boḥan* (Frankfurt on the Oder, 1799) is a polemic against the *maskilim*. 

**BIBLIOGRAPHY:** Festschrift fuer James Loeb... (1930).
LOEBL, EUGEN (1907–1987), Czechoslovak economist and politician. Loeb was born in Holíč, Slovakia, into a wealthy Jewish family. In 1934 he became a member of the Communist Party. In March 1939, when the Germans invaded Czechoslovakia, Loeb fled to England, where he served as economic consultant to Jan Masaryk, the foreign minister of the Czechoslovak government-in-exile. After World War II, he became a departmental head in the Ministry of Foreign Trade and a leading member of the Communist Party’s economic council. In 1947 he headed the Czechoslovak mission to Moscow, which negotiated the first postwar political and economic agreement with the U.S.S.R., and in the following year, after the Communist seizure of power, became first deputy in the ministry of foreign trade. Loeb supported Czechoslovakia’s acceptance of the American Marshall Aid Plan and also initiated the Czechoslovak-Israel transfer agreement. In November 1949 Loeb was arrested and put on trial together with Rudolf "Slansky. Under duress he confessed his guilt and in 1952 he was sentenced to life imprisonment. In 1963 he was rehabilitated and appointed director of the state bank in Bratislava. From 1965 onward, he campaigned for the implementation of economic reforms and the democratization of the Czechoslovak Communist regime. Following the Soviet invasion of Czechoslovakia in 1968, Loeb moved first to Israel, and from there overseas, trying his luck in Canada and the United States. In Canada he joined the World Slovak Congress, an organization of Slovak exiles, mostly former supporters of the wartime Slovak state. In this organization he was elected vice president. In the United States he worked as an economist. His writings include Geistige Arbeit – die wahre Quelle des Reichtums (1966), Hinter den Kulissen des Slansky Prozesses (1968), an account of the Slansky trial, and Stalinism in Prague (1969).

[Esther (Zweig) Liebes]}

LOEB-LEOPOLD CASE, U.S. murder case in 1924 which involved one of the most sensational crimes of the century. Richard Loeb (1905–1936), 18, a graduate of the University of Michigan, and Nathan Freundenthal Leopold (1904–1971), 19, a graduate of the University of Chicago, the well-educated sons of wealthy Chicago Jewish families, attempted, as they said at their trial, to perpetrate the perfect crime, when they kidnapped and killed a 14-year-old neighbor, Bobby Franks. After a thorough investigation and a highly publicized trial, in which the famous attorney Clarence Darrow represented the young men, they were sentenced to life imprisonment plus 99 years, the court recommending that they never be released. In jail the young men developed a correspondence school in which many subjects were taught to the inmates of 19 penitentiaries. In 1936 Leopold was murdered by an inmate. Leopold worked ceaselessly at his prison activities. Possessing a remarkably high IQ, he was a participant in the famous wartime malaria experiments and mastered 27 languages. His book, Life Plus 99 Years (1958), tells the story of his imprisonment. For a period of years there were unsuccessful efforts to release him. In 1957 Attorney Elmer Gertz took over the case and the parole board finally paroled Leopold in 1958 to Puerto Rico, where he worked at the Castaner General Hospital. Leopold earned a master’s degree, taught at the University of Puerto Rico, and published a book on birds. The case was described by Meyer *Levin’s novel Compulsion (1956; which Leopold characterized as unwarranted invasion of his privacy).

[Elmer Gertz]

LOEVELSTEIN, FEDOR (1901–1947), French painter. Born in Vienna, of Czech parents, he settled in Paris in 1923. The bulk of his work was lost in 1940. Shortly before his death, his surviving work – fewer than 40 oils and watercolors – was exhibited at a Paris gallery. His work is characterized by strong intellectual discipline as well as great inventiveness. His idiom is abstract and his work has a dreamlike but firmly controlled quality.

LOEW, ELEAZAR (1758–1837), rabbi in Poland and Hungary. Loew was born in Wodzislaw (Poland) and when only 17 years of age was appointed dayyan in his native city. At the age of 20 he was appointed rabbi of Pilica (Poland) and in 1800, on the recommendation of Mordecai *Banet, became rabbi of Trest (Triesch). Subsequently he held positions as district rabbi of *Pilsen (1812–15), rosh yeshivah of Trest (1815–20), rabbi of Liptovsky Mikuláš, Slovakia (1821–30), and finally, from 1830 until his death rabbi of Santo (Abaujszanto), Hungary. Loew played a vigorous part in the fight against religious reform, and was an active opponent of Aaron *Chorin. Loew is best known for his many scholarly works in all areas of halakhah, which are written with a rational approach, avoiding casuistry, and for his critical commentaries to early works.
Among his halakhic works are *Shemen Roke'ah*, 3 volumes of responsa (1788–1902), and under the same title novellae to the tractates *Berakhot*, *Pesahim*, *Bezah* (Prague, 1812); *Torat Hesed*, on talmudic methodology (Vienna, 1800); *Shaarei Hokhmah*, on various halakhic topics (Prague, 1807); *Zer Zavah*, annotations to *Hai Gaon’s Ha-Mikkah ve-ha-Mimkar* (Venna, 1800); *Shaarei Deah*, on the Shulhan Arukh, Yoreh Deah, pts. 1 and 2 (1821–28); and *Zikron Aharon*, on hazakah (“legal presumption”; 1834). His homiletic works include *Sama de-Hayyei* (Warsaw, 1796), *Yavin Shemu'ah* (Prague, 1814), and *Minhat Erev* (1911).

[Encyclopaedia Hebrew]
he was severely attacked by the Orthodox, who disapproved of his having studied at the Protestant High School and even produced false witnesses that Loew was not ritually observant. During the Hungarian revolution of 1848–49 he served as a chaplain in the army of the Hungarian revolutionaries, spurring them on with inflammatory speeches. Because of his patriotic stand, he was arrested in 1849 and served three months in jail.

From 1850 until his death Loew served as the rabbi of Szeged. Loew was in favor of Reform but insisted that reforms be instituted within the framework of the rabbinic tradition. His viewpoint made it possible for him to participate in the rabbinical conferences in Breslau in 1845 and Leipzig in 1870. He also wrote a biography of Aaron Chorin, who had approached the cause of Reform in the same spirit. Though he did not participate in the Hungarian Jewish congress of 1868, which had been called to draw up the constitution of Hungarian Jewry and at which Hungarian Jewry was divided into two camps – Reform and Orthodox – he expressed his views on the issues in his Die Juedischen Wirren in Ungarn (1868). The medieval form of the Jewish oath was abolished in Hungary on the basis of a lecture he delivered at the Hungarian Academy of Sciences, A zsidó eská (1868). He was first to suggest a Hungarian translation of the Bible for Jews, and published the Book of Joel in the translation of I. Bleuer (in Magyar Zsinagoga, 1, 1847). Loew served as the editor of the periodical Ben-Chananja from 1858 to 1867; He was the first to deal with the history of Hungarian Jewry; among his works are “Schicksale und Bestrebungen der Juden in Ungarn” and “Kalender und Jahrbuch fuer Israeliten” both in Jahrbuch des deutschen Elementes in Ungarn (1846/7) and Zur neueren Geschichte der Juden in Ungarn (1874). He contributed such pioneering works in the study of Jewish antiquities and folklore as Ha-Mafte’ah (1855), Beitraege zur juedischen Alterthums-kunde, 1: Graphische Requisiten und Erzeugnisse bei den Juden (2 vols., 1870–71), and Lebensalter in der juedischen Literatur (1875). His collected writings were edited by his son and successor, Immanuel *Loew, under the title Gesammelte Schriften (5 vols. 1889–1900).

[Alexander Scheiber]

LOEW, MARCUS (1870–1927), U.S. motion picture executive. Born in New York, Loew rose to a powerful position in the American film industry. He began his career in motion pictures by setting up penny arcades in New York City. Loew expanded these electric vaudeville machine parlors to other major U.S. cities and upped the penny ante equipment to nickelodeons, which showed films for five cents. He also began to purchase theaters and convert them into vaudeville–film houses. The idea of combining vaudeville with films proved so lucrative that in 1921 he opened the Loew's State Theater on Broadway with a seating capacity of 3,200. In 1919 he bought Metro Pictures, Inc., and in 1924 acquired Goldwyn Pictures. To eliminate the cost of renting films, Loew came up with the idea of producing films for use in his own theaters. With the appointment of Louis B. Mayer as vice president of the film company, the Metro–Goldwyn–Mayer (MGM) film studio was formed, with Loew's Inc. gaining controlling interest. By 1927 Loew had a chain of 144 deluxe theaters across the country, including several in Canada. At his death, Loew was president of Metro–Goldwyn–Mayer film studios of Hollywood and of Loew's Inc., one of the largest cinema chains in the United States.

Ruth Beloff (2nd ed.)]

LOEW, MORITZ (1841–1900), German astronomer. Born in Mako, Hungary, Loew joined the University Observatory at Leipzig. He was appointed head of the department in the Prussian Geodetic Institute of Berlin, and later professor. He wrote on the elements of planets and comets; studies on the theory of the transit instrument in the first vertical; and on astronomical-geodetical determinations of geographic positions.

[Arthur Beer]

LOEW-BEER, family of textile manufacturers in *Brno (Brno), Czechoslovakia. Three cousins, who originated from *Boskovice, began their career in the *textile industry as wool buyers for the Brno textile factories. In the 1840s various members of the family opened independent spinning-mills. One firm, founded by Aaron and Jacob (d. 1866) in 1853, employed 1,200 workers. Another firm was set up by Moses and later directed by Max Loew-Beer (1829–1887), who also established sugar refineries. The firm founded by Samuel (d. 1884) was later directed by Ignaz Loew-Beer. Other members of the family founded textile firms at the end of the 19th century. The whole family was active in Jewish and public life. A soup kitchen founded by Jonas Loew-Beer for World War I refugees was taken over by the community in 1924. The various firms remained in existence until the German occupation in 1939.

[Meir Lamed]

LOEWES, FREDERICK (1904–1988), composer. Born in Vienna, Loewe studied piano with Busoni and d’Albert in Berlin and then began his career as a concert pianist. He went to the United States in 1924, where he soon began composing songs and musical comedies. Loewe’s first Broadway shows were not very successful, but his fortunes changed when he met the librettist Alan Jay *Lerner in 1942. Together they wrote
some of the most sophisticated theater music of the 20th century. Their first real hit was *Brigadoon* (1947), followed by *Paint Your Wagon* (1951), *My Fair Lady* (1956) based on Bernard Shaw's *Pygmalion*, and the film score for *Gigi* (1958), which won nine Academy Awards. Their final collaboration was the musical *Camelot* (1960). Loewe's music springs from the European operetta tradition, adapted to appeal to an American audience, and he accommodated his musical style to the characters and the location of the story of each play.

[Naama Ramot (2nd ed.)]

**LOEWE, FRITZ PHILIPP** (1895–1974) meteorologist. Loewe was born in Berlin and studied law in Grenoble (1913) before World War I service in the German army for which he was awarded the Iron Cross, First Class. After the war he studied physics and geography and became fascinated by flight, meteorology, and mountaineering. He gained his Ph.D. in geography (1923) while working as a scientific assistant at the Potsdam Meteorological Observatory (1922–25). As first head of the Research Flight of the Prussian Meteorological Service based at the Lindenberg Observatory near Berlin (1925–29), he made some 500 flights to heights of 6,000 meters without supplementary oxygen for meteorological research. During this period he took part in the Meteor expedition to the Atlantic Ocean (1925) and studied cosmic radiation in the Swiss Alps. Loewe joined Alfred Wegener's first expedition to Greenland (1929) and the later expedition (1930–31) to “Eismitte” on the center of the Greenland icecap, the first party to spend the winter in this region. Loewe was one of the first scientists to measure the thickness of the ice using seismic waves created by explosions. However, his toes had to be amputated because of frostbite, and Wegener perished on the return journey. Loewe returned to Germany to recuperate but was interned by the Nazis in a concentration camp before he was allowed to leave for England. He joined the staff of the Scott Polar Institute in Cambridge as a research guest in polar meteorology (1934–37). Loewe was appointed reader at the University of Melbourne where he established and directed Australia's first meteorological department (1937–59), founded because of widespread concerns about aeronautical safety. He joined the French Antarctic expedition of Commandant Charcot to Port-Martin in Adélie Land (1951–52), where their hut was destroyed by fire during the winter. Loewe never retired and continued his research and teaching after he ceased to head the department in 1959. He regularly visited the Institute of Polar Studies (now the Byrd Polar Research Institute) in Columbus, Ohio, as Professorial Research Fellow. On behalf of UNESCO he set up a meteorology training school in Pakistan, where he also carried out Himalayan glaciology surveys. He published some 150 scientific papers in his field but the conservatism of the physics professors in Melbourne prevented Loewe from becoming a professor. He was a popular and distinguished teacher who trained the first generation of Australian meteorologists when weather forecasting became crucial for military purposes in World War II. In Australia he raised material and political support for Jewish victims of the Nazis. He died in Melbourne while still at work.

[Michael Denman (2nd ed.)]

**LOEWE, HERBERT MARTIN JAMES** (1882–1940), English Orientalist. Loewe was born in London, the grandson of...
LOEWE, JOEL (Bril; 1762–1802), Hebrew writer, grammarian, and biblical exegete in the Moses *Mendelssohn circle in Berlin. Born in Berlin, Loewe studied under Isaac *Satanow and soon joined Mendelssohn’s enlightenment movement. Together with Aharon *Wolfssohn, he edited *Ha-Méassef (1784–97), and was a frequent contributor to it. He signed his Hebrew works BRIL (Ben R. Yehudah Leib Loewe). Mendelssohn helped him obtain a position as tutor in David *Friedlaender’s household. In 1791, he was appointed principal of the Wilhelms-Schule in Breslau, serving in this capacity until his death.

Loewe’s major contribution is his introduction and commentary to Mendelssohn’s German translation of Psalms (1785–88), which includes a study on the structure and style of Hebrew poetry and on the history of ancient Jewish music. He wrote *Amnudet Lashon, an attempt at a scientific grammar of biblical Hebrew of which only the first part was published (Berlin, 1794). He took an active part in Mendelssohn’s Bible translation project, writing, in addition to his work on Psalms, commentaries to Ecclesiastes, Jonah, and with Wolfssohn, the Song of Songs. Loewe was the first Haskalah writer to publish original epigrams in the style of the Book of Proverbs, and was the first to translate the Passover Haggadah into German.

**Bibliography:** P. Sandler, Ha-Bé’ur la-Torah shel Moshe Mendelssohn ve-Nigun, Hithavvuto ve-Hashpa’ato (1940), index; Fuenn, Kneset, 433f.; Lachower, Sifrut, 1 (1961), 79f., 146; Zeitlin, Bibliotheca, 215; Waxman, Literature, 3 (1960), 127.

**LOEWE, LOUIS (Ha-Levi, Eliezer; 1809–1888), Orientalist.** Loewe was born in Zuelz, Germany, and studied at the yeshivot of Lissa and Pressburg; later he specialized in Oriental languages at the universities of Vienna and Berlin. In 1833 he moved to London. At the suggestion of the scholarly Duke of Sussex (son of King George 111) and of several leading French and English Orientalists, Loewe decided in 1837 to undertake an expedition to Egypt, in preparation for which he had mastered Egyptology and the Nubian and Ethiopic languages. On this journey he deciphered various inscriptions on the banks of the Nile, at Thebes, Alexandria, Cairo, and elsewhere.

From Egypt he proceeded to Palestine, but had the misfortune to arrive there during the revolt of the Druze; when he was in Safed they robbed him and destroyed 13 of his notebooks, already prepared for publication. He stayed in Shechem for a short time, studying Samaritan customs and literature. In Damascus he acquired a valuable collection of rare ancient coins. In Constantinople he studied the customs of the Karaite community and acquired many rare books and manuscripts of this sect. His impressions of his visit to Palestine were published in a series of letters in the German-Jewish weekly Allgemeine Zeitung des Judenthums for the year 1839 (in an abridged Hebrew translation by M.A. Guenzburg in his Devir, vol. 1, 1844).

From 1839, he accompanied Montefiore on all his journeys as his interpreter and secretary in Oriental languages, including Hebrew, and was Montefiore’s devoted assistant in all his public activities. At the time of the Damascus Affair (1840) he accompanied Montefiore, Adolphe Crémieux, and Salomon Munk who went to Egypt and Turkey in an effort to intervene on behalf of the Jews. His command of Arabic enabled him to suggest a change in the wording of Muhammad Ali’s firman, which resulted in the substitution of the term “honorable acquittal” for “pardon” (with its implication of guilt). Loewe accompanied Montefiore on visits to Russia in 1846 and 1872 and also on five trips to Palestine.

On his return to London in 1839 the Duke of Sussex offered him the post of director of the Oriental section of his extensive library, a position which he held for about 15 years. From 1856 to 1858 he was principal of *Jews’ College in London. At Brighton in 1861 he established a school for Jewish boys, many of whom came from abroad. From 1869 to 1888 he was principal of Ohel Moshe vi-Yhudit, a theological seminary founded in 1869 by Moses Montefiore at Ramsgate.

Loewe edited the Diaries of Sir Moses and Lady Montefiore (2 vols., 1890). His other works include The Origin of the Egyptian Language (1837); an English translation of and lengthy introduction to Eves Damim by I.B. Levinsohn (No Blood, 1841); an English translation of Ha-Kuzari ha-Sheni o Matteh Dan by David Nieto (1842); and A Dictionary of the Circassian Language (1854).
**LOEWENSTAMM**

**ADD. BIBLIOGRAPHY:** *ODNB* online. [Gedalyah Elkoshi]

**LOEWE, LUDWIG** (1837–1886) and **ISIDOR** (1848–1910), German industrialists. They were born in Heiligenstadt, Thuringia, sons of an indigent teacher. Ludwig Loewe founded in 1869 his first factory, L. Loewe & Co. Commanditsgesellschaft, and became a wealthy machinery merchant in Berlin. In 1860 he was elected to the city council, in 1876 to the Prussian Landtag, and in 1878 to the Reichstag; he was first associated with the Fortschriftpartei and later with the Deutsch-Freisinnige Partei. In 1870 Ludwig visited the United States and studied modern American business and mass production methods. By introducing these into his sewing machine factory he set a pattern which led to a vast improvement in German industrial techniques. In 1872 he began to manufacture rifles for the German army and later exported them on a large scale.

Isidor Loewe joined his brother’s firm in 1875 and became its general director in 1886. After Ludwig’s death he effected a merger with the Mauser factory in order to fulfill orders for over a million rifles for Prussia and Turkey. In 1892 the antisemitic Hermann *Ahwardt* wrote several scurrilous pamphlets on “Jew rifles” as a symbol of a “Jewish world conspiracy,” accusing Loewe of being a traitor to Germany by using such poor materials that the rifles were a greater hazard to the user than to his enemy. Ahwardt was charged with libel and sentenced to a term of imprisonment. Further mergers resulted in 1896 in the formation of the Deutsche Waffen-und Munitionsfabrik A.G., with the largest rifle factory in the world. In 1892, together with an American company, Isidor Loewe established a firm which built electric streetcars for German and Belgian cities. He also made automobiles and began to manufacture aircraft.

[Samuel Aaron Miller / Bjoern Siegel (2nd ed.)]

**LOEWE, VICTOR** (1871–1933), German historian and archivist. Born in Laurahuette, Silesia, Loewe became keeper of the State Archive at Breslau. Loewes' historical contributions include studies on German and Prussian administrative history of the 17th and 18th centuries. Much of his work was devoted to German historical bibliography, both national and regional. Among his numerous books are *Buecherkunde der deutschen Geschichte* (1903, 1913); *Deutsche Geschichte* (1931); and *Das deutsche Archivwesen – Seine Geschichte und Organisation* (1921).

**LOEWENSON, JEAN** (Hans; Lavi; Yohanan; 1898–1966), Israel author and journalist. Born in Toruń, Poland, Loewenson was taken to Switzerland in 1907. After working as a newspaper correspondent in Paris and Geneva, he settled in Jerusalem in 1934. From 1936 he was correspondent for Ha-Has, and then for Agence France-Presse until 1949. Later he worked for the French publications department of the Jewish Agency. Loewenson's literary quality shows best in his translations from German into French. His knowledge of Hebrew and of Jewish philosophy enabled him to produce outstanding versions of works by Martin *Buber and *Gershom Scholem*. Loewenson's original poetical and philosophical prose works include *Variations sur le destin* (1944), *Femmes en Israël* (1950), *Virtualités* (1961), and *Pièces pour une armature* (1966).

[Moshe Catane]

**LOEWENSTAMM,** 18th-century family of Dutch rabbis. **ARYEH LOEB BEN SAUL LOEWENSTAMM** (1690–1755) was born in Cracow, where his father saul had been rabbi; in 1707 saul was appointed Ashkenazi rabbi of Amsterdam in succession to Moses Judah b. Kalonymus kohen (known as Leib Harif), but he died in Glogau on the way to take up his position. That same year Aryeh Loeb married Miriam, the oldest daughter of Zevi Hirsch Ashkenazi (the Hakham Zevi), then rabbi of Altona, Hamburg, and Wandsbeck. He accompanied his father-in-law to Amsterdam but later went to Poland, where he was appointed rabbi of Dukla and subsequently of Tarnopol (1720). This appointment was obtained by the intervention of the government, influenced by Loewenstamm's relatives, to have the incumbent deposed so that he could be appointed. As a result, his appointment was not received favorably by the community, and he himself was deposed shortly thereafter. He served as rabbi of Rzeszow (1724–28) and then of Glogau (1734–39), where he was involved in the dispute with regard to Moses Hajyym "Luzzatto, against whom he issued a ban in 1735, at the request of the rabbi of Venice. In 1740 he was appointed rabbi of Amsterdam, where he remained for the rest of his life.

Loewenstamm left no works. Some of his responses, novellae, and notes, however, are to be found in the responses of his father-in-law (no.76); in Mordecai of Dusseldorf's *Ma'amar Mordekhai* (Bruenn, 1790; nos. 62, 63); in David Meldola's *Divrei David* (Amsterdam, 1753; nos. 10, 53, 81); and in his son Saul's *Binyan Ari'el* (see below). In 1711 he published, together with Shemariah b. Jacob of Grodno, a second edition of the responsa of Moses Isserles, to which he added a *kunteres aharon*. He is also mentioned in the *takkanot* and minutes of the "Council of Four Lands. He took an active part in the Emden-Eybeschuetz controversy. Naturally siding with his brother-in-law, Jacob *Emden (the son of Ashkenazi), he was unsparing in his language against Eybeschuetz (see J. Emden, *Sefat Emet* (1876), 16).

Loewenstamm had two sons: one, known as Hirschel b. Aryeh Loeb *Levin, was rabbi of Berlin. The other, saul (1717–1790), born in Rzeszow, succeeded his father as rabbi
of Amsterdam, having previously served as rabbi of Lakacz, Hungary, and Dubno, Lithuania. In Amsterdam he devoted himself to the yeshivah established by his father, H.J.D. Azulai, who met him in Amsterdam, refers to him in glowing terms. In 1754 he participated in the session of the Council of Four Lands in Jaroslaw. Saul Loewenstamm's most famous work is his Binyan Ari'el (Amsterdam, 1778), which is divided into three parts: on the Pentateuch, on the Five Scrolls, and comments on various talmudic passages. His glosses to tractate Niddah were published in the Amsterdam edition of the Talmud (1765). Saul was succeeded as rabbi of Amsterdam by his son Jacob Moses (1747–1815), previously rabbi in Filehne (Poznania) and Cleves. When the "progressive" congregation Adat Yeshurun appointed as their rabbi Aaron Moses Isaac Graanboom, a proselyte whose father was also a proselyte, Loewenstamm debarred him from the rabbinate because of his association with Reform tendencies. Jacob's son, Jehiel Aryeh Loeb (d. 1807) was appointed rabbi of Leeuwarden, and died in his father's lifetime.

[Edwin Emanuel Gutmann]

---

**LOEWENSTEIN, KURT** (1902–1973), Zionist journalist and essayist. Born in Danzig, he studied law and economics at Breslau and Berlin universities and played a leading role in the German pre-Zionist youth movement Jung-Juedischer Wanderbund. Later he was closely associated with the Zionistische Vereinigung fuer Deutschland, serving as secretary for the Rhineland-Westphalia district; he contributed to Die Juedische Rundschau of Berlin, joining the editorial board in August 1933. In the following years he devoted much attention to youth education and vocational training of halutzim. He succeeded Robert Wetlitz as the editor-in-chief of Die Juedische Rundschau before its final closure by the Nazi authorities in November 1938, but edited the only Jewish newspaper after 1938, Juedisches Nachrichtenblatt. In 1939, after a couple of journeys for the Palaestina-Amt 1935–36, Loewenstein settled in Erez Israel, where he worked for various organizations of Jewish immigrants from Central Europe. In 1960, he became deputy editor-in-chief of MB (Mitteilungsblatt), the weekly of the organization of Jewish immigrants from Central Europe. Many of his articles were highly critical of official policy.

Loewenstein's analytical gifts also found expression in a number of major essays, some of which appeared in the Bulletin of the Leo Baeck Institute.

**ADD. BIBLIOGRAPHY:** Biographisches Handbuch der deutschsprachigen Emigration nach 1933, vol. 1 (1999), 456.

[Michael Loewenstein]
LOEWENSTEIN, LEOPOLD (1843–1924), German rabbi and historian. Loewenstein, who was born in Gailingen, south Baden, studied at the University of Würzburg and with Ezriel *Hildesheimer in Eisenstadt. He served as district rabbi in Gailingen (1872–87) and then in Baden (1887–1924). He made important contributions to the study of German-Jewish history in his Geschichte der Juden am Bodensee (1879), Geschichte der Juden in der Kurförder (1885), Geschichte der Juden von der babylonischen Gefangenschaft bis zur Gegenwart (1904), Familie Aboab (1905), and Zur Geschichte der Juden in Fuerth (3 vols., 1909–13; repr. 1967), among other works. From 1899 to 1904 he edited the Blätter fuer jüdische Geschichte und Literatur, a monthly supplement to the Orthodox Jewish newspaper published in Mainz, Der Israelit.

BIBLIOGRAPHY: ZHB, 22 (1919), 71–76, bibl.; Winingor, Biog. [Michael A. Meyer]

LOEWENSTEIN (Von Opoka), NATHAN (1859–1929), lawyer and political leader, born in Bucovice, Moravia. Loewenstein was the son of the preacher of Lemberg, Bernhard *Loewenstein. He became leader of the assimilators of Galicia, and editor of the Polish nationalist-oriented weekly Ojczyzna. Between 1881 and 1886 he was a member of the community council, the municipality of Lemberg, and the Galician Sejm (parliament). From 1907 he was a deputy to the Austrian parliament as a member of the “Polish club.” In 1906 he conducted an inquiry into the living conditions of the Jews of Galicia which served as the basis for his speech in the Galician Sejm (1907) on the gravity of the economic situation. During the parliamentary elections of 1911 there were bloody clashes in Drohobycz between his supporters and Zionist opponents over the question of his candidacy; the army intervened, and a number of Jews were killed. Loewenstein withdrew his candidacy, but after a few months he ran again and was reelected, retaining his seat until World War I. With the creation of independent Poland, he was automatically given a seat in the Polish Sejm, as deputy of the region where elections could not be held since there was a military and political struggle between the Poles and Ukrainians over the control of eastern Galicia. In the first Sejm he was prominent for his conservative approach as a landowner and an assimilator, ignoring the Jewish deputies’ campaign on behalf of the needy Jewish population. Having lost public support, he retired from political life after the elections of 1922. Loewenstein gained note at the Steiger trial (1924–25) for his brilliant speeches in defense of the accused and his resolute struggle against the authorities, who introduced false evidence into their indictment. Loewenstein wrote a book on the Steiger affair, O sprawe Steigers, which was published in 1926.

BIBLIOGRAPHY: Almanach Żydowski (1937). [Moshe Landau]

LOEWENSTEIN, RUDOLPH MAURICE (1898–1976), psychoanalyst and psychoanalytic theoretician. Loewenstein, who was born in Lodz, Poland, worked in Berlin from 1923 to 1925, and in Paris from 1925 until the outbreak of World War II, when he served with distinction in the French army. In France, in 1926, along with Marie Bonaparte and René Laforgue, he was one of the major founders of the Société psychanalytique de Paris. As one of the SAP’s main teachers, he trained some of the people who would later be regarded as the second generation of leading French psychologists, such as Daniel Lagache and Jacques Lacan.

Loewenstein settled in the United States in 1943. Together with Heinz *Hartmann and Ernst *Kris, Loewenstein staked out important aspects of psychoanalytic theory as professed by *Freud, and developed them further, particularly in the field of ego psychology. In 1951 Loewenstein published, in French and English, Christians and Jews: a Psychoanalytic Study. In this he traced the historical and cultural roots of antisemitism. He viewed Christians and Jews as a mutually interdependent pair and suggested that the impossibly difficult ethic of the Christian religion may make the use of the Jew as a scapegoat a necessity for the Christian. Loewenstein collaborated with Princess Marie Bonaparte in translating some of Freud’s works into French, and edited a series of psychoanalytic essays, Drives, Affects and Behavior, published in the princess’s honor in 1953. He was an early co-editor of the annual Psychoanalytic Study of the Child, and served as president of both the New York Psychoanalytic Society and the American Psychoanalytic Association. Practice and Precept in Psychoanalytic Technique: Selected Papers of Rudolph M. Loewenstein was published in 1982.

BIBLIOGRAPHY: A. Grinstein, Index of Psychoanalytic Writings 3 (1958), s.v. [Ruth Beloff (2nd ed.)]

LOEWENSTEIN-STRASHUNSKY, JOEL DAVID (1816–1850), hazzan. Born in Lemberg, he was the son of the hazzan of Vilna, Zevi Hirsh Loewenstein. At an early age, he became known for his fine voice and his mastery of the violin. After the death of his father in 1830, the 15-year-old lad succeeded him as hazzan and became known as “Der Vilner Balabesl” (the Little Householder of Vilna). After 1839 he began studying with the composer Moniuszko. In 1842, Loewenstein was invited to Warsaw where he gave recitals accompanied by a chorus and orchestra, which deeply impressed his audience comprised of the town’s aristocratic and wealthy classes. The passage from the narrow ghetto world to a cosmopolitan atmosphere produced a mental shock on Loewenstein. Legend attributes it to a tragic infatuation with a Polish woman singer. He went into “voluntary exile” and for several years wandered through the communities of Central Europe, appearing in synagogues only on rare occasions. His life became the subject of legends and literary works including Mark Orenstein’s Der Vilner Balabesl (Yid., 1908), and J.J. Wohl’s La-Menazzējah bi-Neginot (in Ahīṣaṣaf, 1899, 177–97). Several of his prayer melodies have been preserved; Ve-Havi’a le-Shalom, for example, was published by A. Nadel in Ost und West (5 (1905), 103–6).

[Hebrew Encyclopaedia]

**LOEWENTHAL, EDUARD** (1836–1917), German political theorist. Born in Ernbsch, Prussia, Loewenthal advocated a new religion based on scientific truth and rejecting metaphysical concepts. He expounded his ideas in System und Geschichte des Naturalismus (1861, 1897); System and History of Nature, 1882) which achieved considerable popularity. He founded the Cogitant religious society to propagate his views in 1865 and in 1869 formed the European Union, a pan-European society dedicated to the abolition of war. Following the outbreak of the Franco-Prussian War in 1870, Loewenthal was forced to leave Prussia but he returned in the following year to reorganize the European Union with a program of a world court and the compulsory arbitration of disputes. In 1874 he was forced to leave Prussia for a second time but continued to preach his pacifist philosophy abroad. He was nominated for the Nobel Peace Prize toward the end of his life but, to his chagrin, was not given the award.

**BIBLIOGRAPHY:** E. Loewenthal, Mein Lebenswerk... (1910); Wininger, Blog, a (1925) s.v., includes bibliography; E), s.v., includes bibliography.

**LOEWENTHAL, JOHANN JAKOB** (1810–1876), Hungarian chess master. Loewenthal found refuge in England after the abortive 1848 Hungarian revolution. He was recognized as a leading player as a result of his play in 1851 in a very strong London tournament won by Anderssen. He was successful in match play and wrote prolifically in the chess press.

**LOEWENTHAL, ZDENKO** (1914– ), Yugoslav editor and historian of medicine. Born in Grabovac, Yugoslavia, Loewenthal directed the State Publishing House for Medical Literature, and from 1959 was lecturer in the History of Medicine at the Belgrade Medical Faculty. Loewenthal also headed the historical department of the Yugoslav Jewish Federation. He edited Crimes of the Fascist Invaders Against the Yugoslav Jews and Jewish Almanac, 1954–1964. He was the Encyclopaedia Judaica departmental editor for Balkan literature.

**LOEWI, OTTO** (1873–1961), pharmacologist and Nobel laureate in physiology and medicine. Loewi was born in Frankfurt on the Main but became a U.S. citizen in 1946. He graduated in medicine at the University of Strasbourg (then in Germany). After initial appointments in the universities of Marburg and Vienna he became professor of pharmacology at the University of Graz, Austria (1909–38). After the German invasion he was imprisoned, deprived of his possessions (including his Nobel Prize money), and allowed to leave. After working in Brussels and Oxford (1939–40), he was appointed research professor at New York University College of Medicine. Loewi's initial contributions concerned carbohydrate and nitrogen metabolism but his main research interest was in the sympathetic nervous system. He proved that nerve impulses in the parasympathetic nervous system are transmitted by acetylcholine and, with his collaborators, he established that nerve impulses in the sympathetic nervous system in general are mediated through chemical transmission. He was awarded the Nobel Prize (jointly with Sir Henry Dale) in 1936 for this work. His honors included foreign membership in the Royal Society (London). The Austrian government issued a stamp to commemorate the centenary of his birth.

[Michael Denman (2nd ed.)]

**LOEWINGER, DAVID SAMUEL** (1904– ), Hungarian bibliographical and talmudic scholar and bibliographer. Loewinger was born in Debrecen, Hungary. While still a student he published with D. Friedmann the Alphabet of Ben Sira (1926) from a manuscript and Darkhei ha-Nikkud ve-ha-Neguinot (1929, 1969), ascribed to Moses ha-Nakdan. He also contributed the commentary on Habbakuk to A. Kahana's edition of the Bible (1930). From 1931 he lectured at the Budapest rabbinical seminary on Bible and Talmud and became its director in 1942. After World War II he was responsible for the reconstruction of the seminary and the resumption of its scholarly activities. In the prewar years Loewinger was one of the editors of Ha-Soker (1933–40) and *Magyar Zsidó Szemle and also edited a number of jubilee volumes, e.g., on S. *Hevesi (Emlékny., Heb. and. Heb., 1934), E. Mahler (Dissertationes in honorem Dr. E. Mahler, 1937), M. Guttmann (Jewish Studies in Memory of M. Guttmann, 1946), and I. Goldziher (J. Goldziher Memorial Volume 1, 1948). In Germania profétája (“The Prophet of Germany,” 1947) Loewinger attempted to trace Germany's Nazi antisemitic ideology to F. Nietzsche. With A. *Scheiber he published Ginzei Kaufmann (Genizah Publications in Memory of D. Kaufmann, 1949).

After immigrating to Israel in 1950, Loewinger became the scientific secretary and then director of the Institute of Microfilms of Hebrew Manuscripts at the National and University Library in Jerusalem. He was also associated with various projects relating to the Bible text. He specialized in the problems of Bible manuscripts, particularly of the famous Bible codex Keter Aram Zowa (“Aleppo Codex”; in Textus, 1 (1960), 59–111). With others he prepared several manuscript catalogs, which were published by the Institute, including the catalog of the Hebrew manuscripts in the Vatican library (list of photocopies in the Institute, part 3: Hebrew Manuscripts in the Vatican, Jerusalem, 1968, Heb.). With B.D. Weinryb he published Catalogue of the Hebrew Manuscripts in the Library of the Juedisch-Theologisches Seminar in Breslau (1965).

**LOEWINSOHN-LESSING, FRANZ YULYEVICH** (1861–1939), Russian geologist, pioneer of magmatic petrology. Loewinson-Lessing occupied the chair of geology, petrology, and mineralogy first at the University of Dorpat (now Tartu), Estonia, and from 1902 until his retirement in 1930, at the Poly-
technic Institute of St. Petersburg (Leningrad). In 1925 he was elected a member of the Soviet Academy of Sciences, where he was appointed director of the newly established Petrographical Institute. As early as 1897, in a paper presented to the international geological congress held in St. Petersburg, Loewinson-Lessing introduced a chemical classification of igneous rocks. This was followed by shorter papers on petrochemistry, in which he discussed the role of assimilation in the origin of magmatic rocks and applied the “phase rule” of physical chemistry to substantiate his synthetic-liquidation theory of differentiation. In his later years he also dealt with the physical properties of rocks and the tectonic movements of igneous masses. The two books on petrography which he published in 1923, Uspekhi petrografii v Rossii (“Advances in Petrography in Russia”) and Voedenie v geologii (“Introduction to Geology”), became standard textbooks in the U.S.S.R.

[Leo Picard]

**LOEWISOHN, SOLOMON** (1789–1821), Hebrew writer. Born in Mor, Hungary, he received a Jewish education but at the same time studied secular subjects in a Capuchin monastery. With the aid of his relative Solomon Rosenthal, a wealthy scholar, he studied in Prague at a yeshivah and at the university. In 1811 and 1812 he published two grammatical studies that were collected and annotated by A.B. Lebensohn and J. Behak under the title *Mekhorei Lashon* (1849). He wrote his first important poem, an elegy on the death of his friend Baruch *Jeiteles, in 1814.

In Prague Loewisohn eked out a meager living by giving private lessons. But the five years between 1815 and 1820 were the most productive and the most “affluent” years of his life. He became proofreader and counselor of Anton von *Schmid. After 1820, he became mentally ill. Insanity led to his untimely death. He published his chief work in 1816, *Melizat Yeḥurun*, the first aesthetic interpretation of the Bible in the Hebrew language. It discusses in detail various poetic devices including allegory, irony, metaphor, and hyperbole. The work is prefaced by a remarkable hymn to beauty and poetry. Loewisohn allotted 27 pages of his book to an analysis of the Song of Songs which he regarded as a love song of King Solomon. Loewisohn also used non-biblical passages to illustrate figures of speech. In the chapter on apostrophe he quoted from the second part of King *Henry IV* (Act 3, Scene 1) – the first translation of Shakespeare into Hebrew. In 1819 he published *Mekhorei Arez*, the first Hebrew geographical handbook for the biblical period. It utilized Josephus, Eusebius, Pliny, and Strabo. Translated into German two years after its publication, the book served as a handbook for generations of readers, developed a geographical terminology, and pioneered the way for utilization of rabbinic sources.

Loewisohn had also a keen interest in Jewish liturgy. He annotated and translated the *kinot* and also annotated the *Shir ha-Yihud* (“Hymn of Unity”) and wrote a preface on the value of prayer for the *siddur* of Judah Leib *Ben Zeev (1816). Loewisohn also wrote in German and published several articles in the periodical *Sulamith*, and a history of the Jews, *Vorlesungen uber die neuere Geschichte der Juden* (“Lectures on Recent Jewish History,” 1820) which was praised by H. *Graetz.

[Eisig Silberschlag]

**LOEWITH, KARL** (1897–1973), German philosopher of Jewish origin. His teachers were E. *Husserl, M. “Geiger, and M. Heidegger in philosophy, and H. Spemann in biology. From 1928 he was privatdozent at Marburg University; from 1934 to 1936 a Rockefeller fellow at Rome; then professor at Sendai, Japan; from 1941 at the Hartford Theological Seminary; from 1949 at the New School for Social Research, New York; from 1952 at Heidelberg, Germany. Loewith’s philosophy has its main non-contemporary sources in Hegel and in the development of thought after Hegel, which was one of the main subjects of his studies. His thinking shows the influence of Nietzsche and of Heidegger, whose existentialist-historicist ontology was later heavily criticized by Loewith. He tries to move back from modern thought with its anthropocentrism – through its Christian (biblical-Augustinian) origins – toward a predominantly Aristotelian horizon of thought: the horizon of a pure theory being knowledge for knowledge’s sake – theory of nature (including human nature) and of the “cosmos” in its eternal being and becoming. Thus searching for the lost way of a really cosmological – and in Kantian language, “dogmatical” – philosophy, Loewith confronts the Greek logos of the cosmos with modern thinking in two papers presented in 1960 and 1964 to the Heidelberg Academy; and he further expanded this search in his book on metaphysics from Descartes to Nietzsche, the last chapter of which deals with Spinoza’s “Deus sive natura.” Loewith’s books include *Das Individuum in der Rolle des Mitmenschen* (1928); *Kierkegaard und Nietzsche* (1936); *Nietzsches Philosophie der ewigen Wiederkehr des Gleichen* (1935); *Jacob Burckhardt (1956); Von Hegel zu Nietzsche* (1941; *From Hegel to Nietzsche, 1964); *Meaning in History* (1949), later published in German as Weltgeschichte und Heilsgeschehen (1953); *Heidegger, Denker in duerftiger Zeit* (1953); *Wissen, Glaube und Skepsis* (1956); *Gesammelte Abhandlungen zur Kritik der geschichtlichen Existenz* (1960); *Vortrage und Abhandlungen zur Kritik der christlichen Ueberlieferung* (1966); *Nature, History and Existentialism* (1966), a collection of Loewith’s essays; *Gott, Mensch und Welt in der Metaphysik von Descartes bis zu Nietzsche* (1967); *Philosophie der Vernunft und Religion der Offenbarung in H. Cohens Religionsphilosophie* (Sitzungsberichte der Heidelberger Akademie der Wissenschaften, 1968).
LOEWY, EMMANUEL (1875–1933), Austrian classical archeologist. Loewy was born in Vienna and then traveled extensively in Greece and Asia Minor. In 1882 he took part in the excavations of a Lycian burial site, the “Heroon” of Gjöllabjarg-Trysa, in which important Greek reliefs from the late fifth century B.C.E. were found. In 1887 he began his academic career as a lecturer in Vienna, becoming a professor in Rome in 1889. He returned to Vienna after World War I and was a professor of classical archaeology. His early writings on the history of ancient Greek artists were influenced by the philology-oriented Seminary in Vienna. His later activity was influenced by contemporary art historiographers of the Vienna School such as F. Wickhoff and A. Riegl; in place of philologico-anticlarian interpretation of ancient works of art, this school put form and style analysis, together with a reevaluation of pre- and post-classical style periods. Loewy contributed essentially to the comprehension of the then underestimated archaic art of Greece with his Naturwiedergabe and Typenwanderung. Loewy considered the archaic style not as a preliminary to the classical period, but as an artistic creation, complete in itself. Apart from numerous scholarly works, Loewy reached a wide general public with his popular scientific works Die Griechische Plastik (2 vols., 1911, 1924) and Polygnot, ein Buch von griechischer Malerei (2 vols., 1929). His works include Inschriften griechischer Bildhauer (1885); Naturwiedergabe in der alten griechischen Kunst (1900; Eng., 1907); Typenwanderung (Yearbook of the Austrian Archeological Institute, 12 (1909), 14 (1911)); and Neuausschische Kunst (1922).

LOEWY, ISAAC (1793–1847), industrialist; founder of the town of Ujpest. Born in Nagy-Surány (now Surány), Hungary, Loewy studied at the yeshivah of Pressburg. He also learned his father’s trade, that of tanner, and with his brothers Joachim and Bernát took over the family business in 1823. When in the early 1830s he tried to establish his workshop in Pest, the town council and guilds refused to admit him. At about that time some uncultivated lands to the north of the town were being parceled out for sale by the proprietor, Count István Károlyi; Loewy, his family, and his workmen settled on them. The terms of the sale stipulated that there would be no religious discrimination in the new settlement and that the traditional craft guilds would not be established there. By 1834 Loewy’s new factory had started production, and the first residential building was erected in 1835. Several wealthy Jews of Pest followed Loewy, building rows of houses on the new settlement. In 1839 and 1840 a synagogue and school were built. In 1840 the settlement was officially declared a borough, with the name Ujpest (“New Pest”). This was mainly due to the efforts of Loewy, who was elected the first president of the town council of the new town. He also suggested the development of a port on the Danube at Ujpest. After his death a street in Ujpest was named after him.

LOEWY, JACOB EZEKIEL BEN JOSEPH (1814–1864), rabbi and author. Born in Hotzenplotz, Moravia, Loewy went at the age of nine to study with Baruch Téomim Fraenkel in Leipnik. After Fraenkel’s death in 1827, he studied at various yeshivot including those of Benjamin Wolf in Tepelstein and Jacob Meshullam “Ornstein in Lemberg; he spent one year in Berlin where his studies included secular learning. After his marriage he engaged in business, studying in his spare time. In 1846 he was appointed rabbi of Wadowice, his seat being in Oswiecim (Auschwitz). In 1854 he accepted the position of rabbi in Beuthen where he died. Among his works are Tisposelet Lulyaniit (1839) attacking the Ma’amor ha-Tiglhat (1835) of Isaac Samuel ‘Reggio who had permitted the cutting of the beard during the intermediate days of a festival; and Bikkoret ha-Talmud (“Kritisich-talmudisches Lexicon,” vol. 1, Vienna, 1863). The latter purports to be a critical encyclopedia on the Oral Law and tradition, alphabetically arranged. The volume covers articles under the letter alef. In conformity with his conservative approach, Loewy attempted in his work to harmonize scientific criticism with tradition. In the article on marriage (pp. 155–65) he strongly attacks the extreme reform views of *Holdheim in his Ma’amor ha-Ishut and their qualified approval by Reggio. His halakhic work, Shorsheti Halakhah, remains in manuscript. He also published a series of studies in Ha-Maggid, Ha-Meliz, and other periodicals.

BIBLIOGRAPHY: Fuenn, Keneset, 552.

LOEWY, MAURICE (1833–1907), astronomer. Loewy was born in Pressburg (Bratislava), where he trained in the local observatory. In 1861 Loewy was appointed assistant astronomer of the Paris observatory and astronomer in 1864. After the death of Amédée E.B. Mouchez in 1892, he was put in charge of the great international enterprise of the photographic “Carte du Ciel,” and later became director of the observatory. He devised several new observational methods. His particular interest was the moon, and together with his collaborator, P.H. Puisieux, he produced a large photographic atlas, which has remained a masterpiece. He was a pioneer in astronomical photography, and the inventor of the “elbow” telescope. He received many honors including the Gold Medal of the Royal Astronomical Society in London.

LOGGEM, MANUEL VAN (1916–1998), Dutch author and critic. Van Loggem worked as a theater critic for several pa-
pers, as a psychotherapist, and as a graphologist. He is mainly known as the author of numerous dramas and television plays in which the characters are drawn with great psychological skill. His plays include the prizewinning *De Chinese fluit-speler* ("The Chinese Flutist," 1947) and *Jeugdproces* ("Youth Trial," 1962), which was translated into many languages. His plays for television include *Een zon op Hiroshima* ("A Sun over Hiroshima," 1962). Van Loggem also wrote novels and short stories, some of them on Jewish themes. Van Loggem's novel *Mozes, de wording van een volk* (1947) describes the genesis of the Jewish people. His short story "Deze plek komt me bekend voor," from the collection *Het tijdperk der zeren* ("The Age of Memorials," 1968) introduces the figure of the "Wandering Jew after Israel's capture of the Western Wall in Jerusalem in June 1967. His theoretical and critical prose includes *Oorsprong en noodzaak* ("Origin and Necessity," 1951), and *Inleiding tot het toneel* ("Introduction to the Theater," 1951). Van Loggem also wrote thrillers and science fiction.

[Gerda Alster-Thau / Hilde Pach (2nd ed.)]

**LOGIC** (מלאתא התנינא טיח כוונא בדויה), the study of the principles governing correct reasoning and demonstration. The term logic, according to Maimonides, is used in three senses: to refer to the rational faculty, the intelligible in the mind, and the verbal expression of this mental content. In its second sense, logic is also called inner speech, and in its third, outer speech. Since logic is concerned with verbal formulation as well as mental content, grammar often forms a part of logical writings. Shem Tov ibn *Falaquera, for example, prefaced his Reshit Hokhmah with an account of the origin of language, its nature, and its parts. As Maimonides had done in the introduction to the *Guide of the Perplexed*, Falaquera classifies terms into distinct terms, synonyms, and homonyms, a classification which was very important in the medieval philosophical exegesis of the Bible.

The two mental acts which are basic to logic are conception and judgment. The former is involved in the apprehension of the essence of things, the latter, in deciding whether propositions are true or false.

Maimonides does not consider logic a part of philosophy proper as the Stoics did, but follows the Peripatetics in viewing it as the instrument and auxiliary of all the other sciences.

Although some of the methods of biblical exegesis and legal interpretation (middot) employed by the rabbis of the talmudic period rest upon the rules of logic (see "Hermeneutics), it is doubtful that the rabbis had a formal knowledge of the subject. However, beginning with Saadiah, who refers to Aristotle's categories, proving that they are not applicable to God (Emunot ve-De'ot, 2:8), Jewish thinkers have been acquainted with the *Organon* – the title traditionally given to the body of Aristotle's logical treatises which formed the basis of logic as propounded by the logicians of Islam. During the Islamic period, few works on logic were written by Jews. While Isaac *Israel and Joseph ibn Zaddik appear to have written works on logic, the first extant work on logic written by a Jew is Maimonides' *Maqāla fi-Šinâ‘at al-Mantiq* (ed. by M. Efros in: *PAAJR*, 8 (1937/38), 34–65). It was only when the setting of Jewish philosophy shifted to Christian countries and Arabic ceased to be the language of the Jews that logical works were translated into Hebrew and a greater number of Hebrew works on logic were written by Jews.

In the *Maqāla fi-Šinâ‘at al-Mantiq* Maimonides offers concise exposition of the 175 most important logical, physical, metaphysical, and ethical terms used in the discussion of logical theory. The popularity of this treatise is attested by the fact that it was translated into Hebrew three times, under the title *Millot ha-Higgayon or Shemot ha-Higgayon*: once in a florid style by *Ahitub, a physician in Palermo in the 13th century; again, by Joseph ben Joshua ibn Vivas (of Lorca) in the 14th century; and by Moses b. Samuel ibn *Tibbon (all three translations appear in: *PAAJR*, 8 (1937/38), 23–129). This last translation was by far the most popular and has gone through many editions. Maimonides’ work served not only as a handbook of logic, but, until comparatively recent times, also as an introduction to general philosophy. Of the commentaries written on it, those of Mordecai b. Eliezer *Comtino and Moses *Mendelssohn may be singled out.

While there is little information on the logical authorities used by the Jews up until the middle of the 12th century, it is known that by this time al-Fārābī was the acknowledged authority on logic. Maimonides, in a famous letter to Samuel ibn Tibbon, the Hebrew translator of his *Guide, advises him to study logic only from the works of al-Fārābī, and, as M. Tucker has shown, Maimonides in his *Maqāla fi-Šinâ‘at al-Mantiq* relied heavily on four works by al-Fārābī. During the first half of the 13th century, *Averroes too came to be regarded as an authority on logic, soon superseding al-Fārābī. Thus, Judah ben Samuel ibn *Abbas, in his *Yair Nativ, suggested that in order to learn the principles of logic, a student should read the works of al-Fārābī or Averroes.

While it appears that there were no translations into Hebrew of any of the books comprising the *Organon*, all the commentaries of al-Fārābī and Averroes were translated and annotated. Jacob b. Machir translated *Averroes' Epitome of the Organon*, and Jacob *Anatoli, Averroes' middle commentaries, which he completed in 1232. *Kalonymus b. Kalonymus and Moses b. Samuel ibn Tibbon were among some of the others who undertook to translate the logical writings of al-Fārābī and Averroes. Anatoli’s translation of the middle commentaries was utilized by Joseph *Kaspi in his compendium of logic, entitled *Zeror ha-Kesef.*

The Jews were also familiar with the logical writings of Avicenna. Their knowledge of Avicenna's writings did not come from translations of Avicennian works, but rather through the logical portions of al-*Ghazâli’s “Intentions of the Philosophers* (Maqâṣid al-Falsâfiyya). In addition to the Islamic tradition, a work by a Christian scholar, Peter of Spain's *Sum-
**LOGOS**

*Logos*, a Greek word meaning "speech," "organization," "rational order," "rational relationship," or "rational expression," is common in Greek philosophical writings. As the word of God in all its manifestations, it appears in Jewish and Christian theological texts in Greek from the Hellenistic period. Aristobulus of Paneas, Wisdom of *Solomon*, and *Philo* are the Jewish sources, and the Gospel of John, the earliest representative of the Christian ones. The later history of the term belongs to Christian theology, where, following John, logos is the Son, or the preexistent Messiah. Logos as an independent entity appeared in Jewish literature suddenly in the writings of Philo. Because of the connection between Philo's use of the term and the Johannine innovation, according to which logos is an intermediary between God and the world, scholars sought parallels elsewhere in Jewish writings, both for the word of God as a distinct concept and for its appearance as a divine intermediary. The *memra* ("word") of the Lord, one of the terms used to paraphrase the name of the Lord in the Targums, has been mistakenly viewed as such a parallel.

**Greek Philosophy**

Among early Greek philosophers Heraclitus (fifth century B.C.E.) considered logos as (1) the order in the universe, (2) the organizing force that originates and maintains that order, and (3) human apprehension and reasoned expression of it. All these things for him are one and the same, and are, it seems, to be identified with heat. Plato used the term primarily for logical discussion. However, in *Epinomis* (986c4), a dialogue probably not written by Plato himself, logos is identified with the intelligence that governs and imposes rational structure in the world; in the Sixth Letter (323dzf.), whose authenticity is also disputed, the son of the true god is identified as "the divine governor and origin of all things present and future," which may point to some notion of the logos as an intermediary between true reality and the world in Greek sources. In Stoic thought logos again has the threefold role of (1) being responsible for fashioning things, (2) accounting for the disposition of things (and so for the rational faculty in man), and (3) expressing reality in language.

**BIBLE**

The Word of God (devar Adonai) appears in the Bible as divine teaching, i.e., the medium of revelation and guidance (Gen. 15:11; I Sam. 3:21; Isa. 55:10–11; Ezek. and Zech. passim), the instrument of creation (Ps. 33:6; Gen. 1, though the technical term is not used), and the instrument that controls nature (Ps. 107:20; 147:7,8). This usage parallels in some ways the threefold, normative Greek philosophical identification of logos, except that the biblical emphasis is on moral, instead of natural, philosophy. The Word of the Lord is identified directly with Torah in Psalms 119 (passim), and the attributes of the Word or Torah (Ps. 89; 119) are ascribed to Wisdom in the first nine chapters of Proverbs. Indeed, Torah and Wisdom are identified in the apocryphal books Ben Sira (2:41–21, 22ff.) and Wisdom of *Solomon* (6:18ff.) in all the same aspects.

**Jewish Hellenistic Literature**

Aristobulus (fl. 160 B.C.E.) speaks of the voice of the Lord as the natural law, according to which the universe functions (Eusebius, *Praeparatio Evangelica*, 13:12). Thus, a rapprochement of the Jewish and Greek notions has occurred. In *Wisdom of *Solomon* (7:17–21) also, Wisdom teaches natural philosophy to man. In the same work logos personifies divine Mercy (Wisdom 16:12), and slays the first-born of Egypt. In the *Haggadah* of Passover the Messenger (sometimes identified with logos by modern scholars), who was excluded from any role in the Exodus, may, if that passage is early and if it is a polemic against Wisdom of Solomon, point to an early popular hypostatization of logos; but the bulk of the evidence is opposed to such an early personification. The author of Wisdom of Solomon seems to distinguish between sophia ("wisdom") and logos, as two aspects of God's word, the former being human thoughts and actions in consonance with reality, and the latter, God's speech seen as a messenger, or angel. In addition, the former teaches natural philosophy, not logos.

**Philo**

Logos is central to Philo's thought. It is the chief power of God; it unites His strength and His goodness, and hence it is the rational term which connects opposites, another meaning of the Greek word. In this function, logos brings God to man and man to God. It is the representative of the Governor to His subjects; and its position is intermediate between created things and the uncreated (Her. 205). Logos is a copy (Gr. *eikon*) of God (1 Sam. 8:1, etc.) through which the world was made (*ibid.*, I I L 96, etc.), and human intelligence is a copy of it (Her. 230, Fug. 68, Op. 69). Philo applies the term logos, or the holy logos, to Scripture itself, i.e., the Law (1V Quaes-
tiones et Solutiones in Genesin, 140; 1 Som. 229). It is not a person, according to Philo, nor is it an intermediary between God and man, although it is identified with the biblical angel of the Lord (Mig. 174, etc.). Rather, it is sometimes the same as wisdom (I L.A. 65, etc.), because it is the most inclusive expression of the thoughts and ideas of God, which in turn are identified with the Law, or the Torah, with the pattern of all creation, and with the law that directs and maintains all things. Philo's identification of logos with Wisdom and Torah parallels the identification of Torah and Wisdom and the Word of God in rabbinic literature, and conforms to the roles assigned to each in Scripture and rabbinic sources.

**Gospel of John**

The prologue to the Gospel of John follows biblical and apocryphal sources in portraying the preexistent logos dwelling on earth; but the presentation of logos as an independent agent, and furthermore, as the preexistent messiah is a radical innovation. Apparently, Philo did not think of either notion (I Som. 228f. is not evident that such a belief existed earlier). Rabbinic and Christian Gnostic speculations, all of later date than John, do, however, understand logos as a second god. Some accounts of *Gnosticism*, whose doctrine implies a logos-hypothesis, would even date gnostic sources before John. Among the rabbis a belief in a "second God," or divine intermediary, is represented in the heretical views of *Elisha b. Avuyah* (cf. also *Metatron*). His views seem related to speculations about Creation, in which the voice, or Word, of the Lord on the waters (Ps. 29:3 and Gen. 1) and the revelation on Sinai (Ex. 20) are hypostatized. All this, however, is later than the use of the Greek word "logos" in Philo and in the fourth Gospel.

The *memra* of the Targums, whether it is used in an attempt to express the otherness of God, to avoid anthropomorphisms, or for some other reason, was not thought of as an intermediary between man and God, was certainly not personified in rabbinic thought, and was not identified with Torah regularly. In later rabbinic writing *ha-dibbur* ("the speech") is used to refer to God, but that phenomenon seems unrelated to the Jewish-Hellenistic logos.

[Daniel E. Gershenson]

**LOHAMEI HERUT ISRAEL** (Lehi, or "Stern Group"), armed underground organization in Palestine founded by Avraham *Stern*. In June 1940, after the *Irgun Zevai Le'ummi* (IzL) decided on a truce of underground armed activities during World War II, the Stern group broke away from IzL. At first it called itself *Irgun Zevai Le'ummi* be-Israel and declared a continuation of war against the British, opposed the voluntary enlistment of Jews into the British army, and even attempted to contact representatives of the Axis. This attitude gained it the reputation of a "fifth column" in official circles, and the British Palestine police and secret service were mobilized against it. During January and February 1942 the clashes between members of the Stern group and the British military and civil authorities reached their peak, and the British forces reacted by arresting and killing leading Stern group members. On Feb. 12, 1942, Avraham Stern himself was caught in his hiding place and was killed on the spot by British police officers. Considerably weakened, the group was on the verge of complete disintegration when some of its detainees managed to escape from prison and regrouped their forces. They then gave themselves the new name of Lohamei Herut Israel. In early 1944 Lehi resumed its operations under a triumvirate leadership (Yizhak Shamir, Nathan *Yellin-Mor*, and Israel Eldad-Scheib), continuing them with short interruptions until the end of the Mandate in 1948. Members of the group were ordered to be continually armed. Those who were caught admitted in court to being its members, refused to recognize the court's authority, and made political statements. In November 1944 two Lehi members, Eliahu Ḥakim and Eliahu Bet-Zuri, assassinated Lord Moyne, British minister of state for the Middle East, in Cairo. They were caught, tried, and hanged in Cairo in March 1945. In July 1945 Lehi and IzL agreed to cooperate in their struggle against the British, and in November 1945 Lehi joined the Haganah and IzL in the Hebrew Resistance Movement (Heb. Tenu'at ha-Meri ha-Ivri), which Pasha al-Jazzār at the end of the 18th century to lead the *Kabri* spring waters to Acre. Farming at Lohamei ha-Gettaot included dairy cattle in partnership with kibbutz *Mayan Barukh*, poultry, avocado plantations, fishery, and field crops in partnership with the kibbutzim kibbutz *Adamit* and kibbutz *Shomrat*. The kibbutz ran a factory producing condensers and other electronic equipment and operated guest rooms and a restaurant. However, its main source of livelihood was the Tivall food company, which produced cholesterol-free products in partnership with the Osem company. The Ghetto Fighters' House in memory of Yitzhak *Katznelson*, the Holocaust Museum, and an educational center named after Janusz *Korczak* are located in Lohamei ha-Gettaot. The kibbutz also published a research bulletin, *Yedi'ot*. At the close of the 1960s the population of Lohamei ha-Gettaot numbered 341, in the mid-1990s, it was approximately 530, while at the end of 2002 it declined somewhat to 480.

[Effraim Orni / Shaked Gilboa (2nd ed.)]

**LOHAMEI HA-GETTA’OT** (Heb. לוחמי הגדאות, “The Ghetto Fighters”), kibbutz in the northern Coastal Plain of Israel, 3 mi. (5 km.) N. of Acre, affiliated with Ha-Kibbutz ha-Me‘uhad. Lohamei ha-Getta’ot was founded in 1949 as one of the first villages to be erected in the framework of the comprehensive settlement scheme for Acre Plain and Western Galilee, by a group from Poland composed of survivors of the resistance against the Nazis in Polish and Lithuanian ghettos, among them Itzhak (Antek) *Zuckerman* and Ziviah *Lubetkin*. The kibbutz is located near an aqueduct built by Ahmād
LOISY, ALFRED FIRMIN (1826–1904), Italian rabbi and university professor. Born in Ambrières (Haute-Marne), Loisy was ordained as a Catholic priest in 1879. He studied at the Institut Catholique de Paris, where he later lectured in Hebrew and exegesis. He was dismissed in 1893 on the order of the pope for the publication of his article “La Question biblique et l’inspiration des Ecritures,” which took a view opposed to the traditional teaching of the Church. His special approach to biblical research and interpretation aroused the suspicion of the Catholic Church authorities, who also condemned his essay La religion d’Israël (1900; The Religion of Israel, 1910). In 1902 he published L’Evangile et l’Église (1902; The Gospel and the Church, 1903) which, though intended as a Catholic answer to the work of Adolph von Harnack, was unacceptable to the Church. The work was favorably received throughout Europe, but was placed on the Church Index of forbidden books. From 1901 onward he taught the history of the Christian religion at the Ecole des Hautes Études Pratiques. Loisy’s polemics with the Church attracted considerable attention in Europe, especially after he was excommunicated in 1908. From 1909 to 1932 he was professor of Church history at the Collège de France.

Loisy is considered the leading exponent of biblical “modernism” and of the critical approach in the study of the New Testament and the problems of the Christian faith. He denied the supernatural inspiration of the Bible and based his research on a critical study of the sources and philological analysis. After World War I he became active in a new field of religious meditation, which paved the way for a progressive and humanistic sociology of religion. The majority of his works were banned by the papal orders of 1932 and 1938. Loisy founded and directed the bimonthly Revue de l’enseignement biblique until 1894, and from 1896 to 1922 edited the Revue d’histoire et de littérature religieuse. The most important of his works are Histoire du Canon de l’Ancien Testament (1890); Les Evangiles synoptiques (2 vols., 1907–08); Les origines du Nouveau Testament (1936; The Origins of the New Testament, 1950); and Les mystères païens et le mystère chrétien (1919, 1930).

Heiber, Der Vater des Katholischen Modernismus: A. Loisy (1947); A. Moulin, La question biblique au xix siècle (1902); A. Détréze, L’Abbé Loisy... (1909), includes bibliography.

[Zevi Baras]

LOLLI, EUDE (1826–1904), Italian rabbi and university professor. Lølli was born in Gorizia. He was the son of Samuel Vita Lølli, and thus first cousin of Samuel David “Luzzatto” (Shadal). He was educated at the lyceum of Gorizia. From 1845 to 1846 he attended the Rabbinical College of Padua, graduating in 1854. In 1865, upon the death of his cousin and mentor, Samuel David Luzzatto, he was appointed professor at the Rabbinical College of Padua, thus taking the chair of Shadal. Eude held the appointment until the institution was finally closed in 1871. In the last six years of its existence Lølli and Lelio Della Torre were the only teachers there. In 1869 he was elected chief rabbi of Padua, and in 1877 he became lecturer in, and in 1886 professor of, Hebrew and Chaldaic at the University of Padua. Lølli wrote the Dizionario del Linguaggio Ebraico-Rabbinitico (Padua, 1869); Prelezione ad un Corso di Lingua Ebraica e Caldaica (1877); and Corso di Grammatica della Lingua Ebraica (1878). He also contributed a large sec-
tion to S.D. Luzzatto’s *La Sacra Bibbia Volgarizzata* (1872).

Lolli was a supporter of Zionism, both cultural and political. However he stressed in his writings that Zionism was a solution only for those Jews who lived in countries where they were persecuted, and not for Jews living in Western Europe, such as Italy’s Jewry.

DAVID LOLLI (1825–1884), brother of Eude, was an Italian physician and patriot. He was born in Gorizia; he studied medicine at Padua and Vienna. At the outbreak of the Italian war for liberation against Hapsburg Austria in 1848, he abandoned his studies and hastened to join the University of Padua’s Artillery Battalion. Lolli took part in the unsuccessful attempt to hold Vicenza, and then joined the garrison guarding Venice against the Austrian army. When cholera broke out in the besieged city, Lolli was also stricken. On his recovery he returned to his native city, Gorizia, but subsequently established himself as a physician at Trieste. He continued to agitate for the independence of Italy and, consequently, often incurred great danger. Thus in 1859 he joined the Sardinian army that was fighting against the Austrians as an army doctor, although he was an Austrian subject.

Lolli wrote much on various medical subjects such as psychology and magnetism as well as on patriotic themes. He published the monographs *Sul Magnetismo Animale, Pubblicato Nell’ Occasione di Conseguire la Laurea* (Padua, 1850); *Sulla Migliore, Due Parole di Occasione* (Trieste, 1857); *Sii Forte e Sarai Libero (Seneca)*; *Sii Libero e Sarai Forte* (Milan, 1860, published anonymously for political reasons); *I Numi* (Milan, 1866), a symbolic story, published under the pseudonym “Aldo Apocalissio”; *Sul Cholera* (Trieste, 1866); and *L’Amore dal Lato Fisiologico, Filosofico, e Sociale* (Milan, 1883).

LOM, HERBERT (1917– ), actor. Born in Prague, Lom was trained in London and made his first British picture in 1940, *Mein Kampf – My Crimes*. He became known for his earthy characterizations and made his first West End appearance in 1951 in *The Seventh Veil*. His most notable success was as the king in *The King and I* (1953). Lom had a long career as a Hollywood supporting actor, in such films as *War and Peace* (1956), *Spartacus* (1960), *El Cid* (1961), *The Lady Vanishes* (1979), *Ten Little Indians* (1989), and *The Pope Must Die* (1991). Probably his most famous role was as the long-suffering Superintendent Dreyfus in the *Pink Panther* films. He also starred in successful television series. [Jonathan Licht]

LOBARDY, region of N. Italy; the political and physical borders, in which *Mantua also would be included, have not always coincided. References to Jews in Lombardy (*Milan* date to the fourth century; subsequently there is only slight evidence down to the very end of the 12th century, when Jews are found engaged in moneylending. In 1225 the Jews were expelled from *Pavia and *Cremona; in 1278 they began to be harassed by the conversionist sermons of the *Dominicans. Before the end of the 13th century, Jews of German origin arrived in Lombardy and engaged in moneylending, mainly settling in Cremona as the Jews were expelled from Milan in 1320. In the 14th century and during the first decades of the 15th, small communities were constituted in *Pavia, *Vicenza, and *Como. In general, however, the Jewish population in the region remained small. Although Jews were accorded favorable treatment by the Visconti and Sforza dukes of Milan, the populace in general remained hostile.

The Cremona community remained important in the 16th century; its talmudic academy and printing establishment were famous. Further groups of Jews were by now settled in *Alessandria* and *Lodi*. In 1452, Pope Nicholas V authorized Duke Francesco Sforza to maintain their existing privileges on condition that the restrictive ecclesiastical regulations were strictly enforced. However, the Jews were compelled to maintain loan banks in every town in Lombardy, even where they incurred losses, and to pay the government an exceptionally heavy annual tax. Even after the duchy of Milan passed under Spanish rule in 1535, the Jews there continued to have their residential permit renewed about every ten years, although they were not permitted to reside permanently in Milan itself. In 1565, Philip II of Spain decided to expel the Jews from the duchy. After lengthy negotiations in Madrid, permission was given for them to remain until 1597, when the 900 Jewish residents had to leave. Two families were allowed to remain in each of the three towns of Cremona, Lodi, and Alessandria. In the course of time, the Jews disappeared from the first two, but in Alessandria the Jewish population had increased to 230 by 1684. After Lombardy passed to Austria in 1713 a few Jews again settled in the region. Their number increased after 1800, and reached 500 by the middle of the 19th century, mainly concentrated in Milan.

After the incorporation of Lombardy in the Kingdom of Italy in 1859–61, and the commercial and industrial transformation of the region which followed, there was a considerable increase in the Jewish population. Former members of now disintegrating small Italian communities, as well as industrialists from Germany and Austria, settled in Lombardy. In the middle of the present century, there was Jewish immigration from Germany and after 1947 from Libya, Egypt, and Iraq. The Jewish population numbered 3,500 in 1901 (almost all living in Milan), and 11,000 in 1938, reduced during
the Holocaust. Milan maintained a population of 6,500 into the 21st century.

**LOMBROSO, CESARE** (1835–1909), Italian physician and criminologist. Born in Verona, Lombroso studied at Pavia, Padua, and Vienna. Lombroso took degrees in medicine and surgery in 1858. After his military service as a surgeon in the Italian army, he worked as a doctor at Pavia, Pesaro, and Reggio Emilia. Lombroso then taught legal medicine and public hygiene at the Turin University. He was appointed professor of psychiatry in 1896, and in 1906, professor of criminal anthropology.

While at the University of Vienna he studied psychology and psychiatry, as well as the anatomy and physiology of the brain. For 30 years he advocated his revolutionary theories of criminology.

Lombroso began his studies during his four years of army service. He made systematic measurements of physical differences among soldiers from various regions of Italy, including soldiers from the newly annexed territories of Southern Italy (formerly the Kingdom of Naples), and of differences between well-disciplined and aggressive or criminal soldiers.

Lombroso's theories were much influenced by French positivism and by Darwinian evolutionary theories. In his research on criminality Lombroso concluded that certain innate physical characteristics are connected with social behavior. His conception of the “born criminal” resulted from his observations, physical measurement, and comparisons of mentally ill and sane people, and of criminals and law-abiding citizens. All men, including the “born criminal,” are born with certain faculties, both mental and physical, which decisively influence their behavior. Lombroso published his theory, asserting that the “true criminal” was atavistic, in his controversial *L’Uomo delinquente* (“The Criminal Man,” 1876). It was in 1876 that Lombroso became professor of legal medicine and public hygiene at Turin University, which appointed him professor of psychiatry in 1896, and ten years later created a chair in criminal anthropology for him.

While Lombroso gradually came to admit the existence of acquired criminogenic factors, pathological or environmental, he continued to claim that the true criminal was a subspecies of man of an atavistic origin. In his later period he gave more attention to environmental factors as causes of crime, and developed an inclusive typology of the various forms of crime which recognized that a great deal of criminality is not organic or endogenous but a product of diverse exogenous and environmental factors. In the field of penology Lombroso supported such reformist ideas as the compensation of the victims of crime from the prison work of the malefactor. Despite his views on inherited delinquency he was against capital punishment, favoring the rehabilitation of the criminal by a “symbiosis” with his society, whereby the latter would make constructive use of the evildoer and his work potential.

Although the idea of the “born criminal” is no longer accepted, Lombroso remains an important figure in the history of the behavioral sciences. Scholars honor him as a pioneer, and even his critics credit him with shifting the emphasis in criminology from the crime itself to the criminal and his origins.

Lombroso's studies also covered other fields. Thus he wrote “The Man of Genius/The Gifted Man,” published in 1888. In this work of scholarship Lombroso considered another type of deviant, the “genius.”

A friend of Max *Nordau* he had an interest in Zionism and espoused this doctrine in 1900. In 1894, he published a monograph on antisemitism in which he analyzed the manifestations of atavism in antisemites and their folly. Lombroso thus stressed the anthropological degeneration of the antisemite, as in the criminal.

Lombroso published a considerable number of books and articles of which only a few have been translated. His only important book translated into English is *Crime, Its Causes and Conditions* (1911).

[Zvi Hermon and Ellen Friedman / Samuele Rocca (2nd ed.)]

**LOMZA** (Pol. Łomża; Rus. Lomzha; Yid. Lomzhe), Białystok district. In 1556 the Jews were compelled to leave after the privilege *de non tolerandis Judaeis* was granted to the town, giving it the right to exclude Jews. They did not return there until after the Congress of Vienna (1815). Once their presence was authorized, the number of Jews increased, to 737 in 1826, 2,574 in 1852, 9,244 (54.8% of the total population) in 1897, and 11,088 in 1915 (including 1,500 refugees from the surrounding towns). Their numbers later declined to 9,131 (70.8%) in 1929, and 8,912 (56.7%) in 1931. During the 19th century they were integrated in the life of the country and took an active part in the Polish uprising of 1863. They played a major role in the economic life of Lomza, owned factories, and were the leading wholesalers in the grain and timber trades. Between the two world wars, Jews played an important part in the municipal administration. In the municipal elections of 1919, and again in 1926, they won half the seats. After this, however, as a result of the Polish policy of restricting Jewish influence in the town, the number of seats allocated to the Jews was limited. In 1921 there were 498 Jewish workshops in Lomza, 295 of them with salaried employees. During this period the Jews engaged in various crafts, but they were ousted from these by the an-
tisemitic measures introduced by the Polish government. As a result of the economic crisis and the anti-Jewish *boycott imposed by the antisemitic trade unions and parties, the Jews were greatly impoverished, and many left Lomza. The community administration, which maintained social and educational institutions, was unstable after World War I. Following the elections to the community administration in 1939, inter-party dissensions brought its activities to a complete standstill, and the government subsequently appointed an official commissioner to take charge of its affairs.

Educational institutions, such as the *talmudei torah and the *hadarim, had already been established in Lomza during the 19th century. In independent Poland, pressure was exerted on the Jews to send their children to the Polish government schools. A Jewish-Polish secondary school had already been established in 1916. The Great Yeshivah, founded in 1883 by R. Eliezer Szuiaicz, was transferred to Erez Israel (Petaḥ Tikvah) in 1926, where it became known as Yeshivat Lomza. Jewish parties active in Lomza included *Agudat Israel, the *Bund, and the Zionist organizations. These published regular and occasional periodicals, including the *Lomzher Shitme, Lomzher Veker, and Lomzher Lebn in Yiddish and others in Polish. The Great Bet Ha-Midrash was erected during the early 1840s and the Great Synagogue in 1880. The last rabbis of Lomza were Aaron Bakst and Moses Shatzkes.

[Shimshon Leib Kirshenboim]

**Holocaust Period**

On the outbreak of World War II there were about 11,000 Jews in Lomza. In September 1939 the Red Army entered the city. With the outbreak of the German-Soviet war, the Germans occupied the town on June 24, 1941, and established a ghetto on Aug. 12, 1941. On September 17 a large-scale *Aktion took place and 3,000 Jews were killed. On Nov. 2, 1942, the deportations to *Zambrow camp began, and between Jan. 14 and Jan. 18, 1943 the inmates of Zambrow camp were deported to *Auschwitz. Thousands of Jews were brought out of the city and killed in the woods of Gaczyn near Lomza. After the war, the Jewish community of Lomza was not reconstituted. Organizations of former residents of Lomza are active in Israel, France, Australia, and the United States.

**BIBLIOGRAPHY:** Sefer Zikkaron le-Kehillat Lomza (1952).

**LONDON**, capital of *England and seat of what has always been the largest Jewish community in the country.

**Medieval Period**

There is no reliable evidence for the presence of Jews in London until after the close of the Saxon period. After the Norman Conquest of 1066, a few Jews, attracted by the economic opportunities that now offered themselves, came over from the adjacent areas of the continent (in the first instance presumably from the duchy of Normandy, including *Rouen) and established themselves in London. The earliest recorded mention of the London community dates from the reign of William Rufus (1087–1100), who appears to have favored the Jews to some extent. In his reign, a religious *disputation took place at Westminster between the abbot and a Jew from Mainz who did business with the abbey. A Jewish quarter (*vicus Judaeorum) is first mentioned in the *Terrier of St. Paul’s (c. 1128). In 1130 the Jews of London were accused of killing a sick man – possibly some sort of *blood libel – and were forced to pay the then enormous fine of £2,000. Intellectual life in the period was sufficiently flourishing to attract a visit from Abraham *Ibn Ezra, who wrote his *Iggeret ha-Shabbat and his Yesod Mora in London in 1158. Until 1177 the relative importance of the community was so great that its cemetery served the whole of Anglo-Jewry.

During the reign of Henry II (1154–89), the community flourished and was augmented by fresh arrivals from abroad. The anti-Jewish riots which broke out at the coronation of Richard I (Sept. 3, 1189) began at Westminster and soon spread to London, where the Jewish quarter was set afire and 30 persons died – including the tosafist R. *Jacob of Orleans. The community soon recovered, however, and in 1194 contributed approximately one quarter to the levy raised by the Jews of the country toward the king’s ransom. The reorganization which was then undertaken by the Ordinance of the Jewry confirmed London as the administrative center for the communities of the country. The first *archpresbyter of the Jews of England under the new system was Jacob of London. Anti-Jewish feeling again manifested itself in London during the reign of John (1199–1216) who rebuked the mayor on that account. The baronial opposition, both in his reign and in that of his son Henry III (1216–72), considered the Jews, not without justification, to be royal financial instruments and maltreated them accordingly. There was a baronial attack on London Jewry in 1215.

During the period of maladministration under Henry III, the Jews of London, with those of the rest of the country, were oppressed and mulcted of enormous sums. The climax came in 1244 when it was alleged that some gashes found on the body of a dead child constituted Hebrew characters and the Jews were accused of ritual murder. This resulted in a savage punitive levy on the Jews of the realm to the amount of 60,000 marks. On the outbreak of the Barons’ War (1263–65), they suffered greatly at the hands of the insurgents under Simon de Montfort. During Easter week 1263, as the result of a trivial dispute between a Jew and a citizen concerning interest on a debt, the Jewry was sacked and several of its inhabitants killed. Later, on hearing a report that the Jews had manufactured Greek fire for the royal troops, Simon de Montfort returned to London and put the Jewry systematically to the sword. In 1266, another attack was made by the so-called “disinherited knights” on the remnants of the community, who sought refuge in the Tower of London.

The Jews of London profited from the period of pacification which followed the war. Edward I’s *Statutum de Judaismo of 1275, however, which prohibited Jewish moneylending, inevitably drove some into dishonest ways of making a living. In 1278 a number of London Jews were included in the 680 from
all over the country who were imprisoned in the Tower of London on the charge of clipping the coinage. Nearly 300 are said to have been hanged (though this figure has been doubted). In the meantime, theological odium against the London Jews had been increasing. In 1322 Henry 111 confiscated their principal synagogue on the pretext that the chanting could be heard in a neighboring church. In the same year he founded the London *Domus Conversorum to encourage conversions. A further ritual murder accusation was followed by a civic order restricting the Jews henceforth to houses in the Jewry (1281). In 1283 the bishop of London ordered all the synagogues in his diocese to be closed, only one being subsequently reopened. Finally, in 1290, the Jews were expelled from England and the London community ceased to exist.

The number of Jews in London in the Middle Ages probably did not exceed 500, though contemporary Jewish writers speak of 2,000 households. The original Jewish quarter, which contained a number of strong stone houses, was situated in and near what is still known as the Old Jewry. In the 12th century, the Jews began to give up their houses here and to move a little distance westward, where the Church of St. Laurence Jewry commemorates their residence. The cemetery was in what is now known as Jewin Street and the surrounding area. Prominent medieval London scholars included Joseph b. Jacob, known as "Rubi Gotse" (fl. 1130–60), the host of Abraham Ibn Ezra and the outstanding English Jew of his day, Jacob b. Judah, of London (late 13th century), author of Ez Hayim, R. Moses of London (d. 1268), grammarian and halakhist, and his son the illustrious Elijah Menahem of London (d. 1284), who also enjoyed considerable repute as a physician.

**Middle Period**

The Domus Conversorum, established by Henry 111 in 1232, housed nearly 100 converts at the period of the expulsion, and never remained entirely empty in subsequent years. There was a constant, though slender, stream to London of poor foreign Jews who qualified for emoluments by the formal adoption of Christianity. In addition, a few isolated Jews visited London without being baptized: for example, the physicians Elias b. Sabbebai (Sabot) of Bologna, who came in 1410 with ten followers to attend Henry IV, and Master Samson de Mirabeau who attended the wife of Richard Whittington, mayor of London, in 1409. After the expulsions from Spain and Portugal, a few Marrano refugees settled in London. At the close of the reign of Henry VIII, the crypto-Jewish community comprised some 37 householders, and religious services were held in the house of one Alves Lopes to whom newly arrived fugitives would come for assistance and advice. In 1542, the group was disturbed in consequence of disclosures made during proceedings against Marrano fugitives on the continent. It was largely dispersed as a result of the Catholic reaction in the reign of Mary. Under Elizabeth, however, it attained again significant proportions. One of its leading members was Roderigo Lope, the queen's physician. When an envoy of Alvaro Mendes (Solomon Abenaes), duke of Mytilene, was in London on an official mission in 1592, services were held at his house. Toward the end of the century, the importance of the secret community diminished, and in 1609 the Portuguese merchants living in London, who were suspected of Judaizing, were again expelled.

**Resettlement Period**

Nevertheless, when in 1632 the Marrano community of Rouen was temporarily broken up, some fugitives, the most important being Antonio Fernandez Carvajal, found a home in London. Other Marrano settlers went directly from Spain and Portugal. Thus, when Manasseh Ben Israel went to England in 1655, there was already established a secret community numbering several families. Though the Whitehall Conference convened by Oliver Cromwell in December 1655 proved abortive, they were emboldened to begin organizing their religious life on a more formal basis. A petition was presented to Cromwell asking for protection (March 1656). A house was rented and adapted for use as a synagogue in the following December. A few months later, a piece of ground was acquired for use as a cemetery. After Cromwell's death various attempts were made to procure the suppression of the community. Charles II, however, intervened in its favor, and it henceforth enjoyed de facto recognition. The original synagogue, in Creechurch Lane, was enlarged and remodeled in 1674, and in 1701 a new place of worship in Bevis Marks — still one of the architectural monuments of the city — was erected.

As its spiritual leaders, the newly established community appointed a succession of foreign scholars. They were Jacob Sasportas (1664–65), who fled because of the great plague of London, in which several members of his flock perished, Joshua da Silva (1670–79), Jacob Abendana (1681–85), Solomon Aylion (1689–1701), and David Nieto (1701–28). The congregation was continually reinforced by fresh Marrano refugees from Spain and Portugal. After the accession of William of Orange (1689), there was a considerable influx of Spanish and Portuguese Jews from Holland. The majority of the communal magnates at this time were brokers, importers, and wholesale merchants, with a sprinkling of physicians. In the course of the reorganization of the Royal Exchange in 1697, it was arranged to admit 12 Jews — the so-called "Jew brokers" — who remained a feature of the City of London until the beginning of the 19th century. In order to secure the favor of the lord mayor, a purse containing 50 guineas was presented to him each year on a valuable piece of plate by the elders of the congregation.

Meanwhile, the original Sephardi settlers had been followed by Ashkenazim who arrived for the most part via Amsterdam or Hamburg. They organized their own congregation around 1690, and in 1696 a burial ground for their use was purchased by the wealthy Benjamin Levy. The first rabbi of the congregation, Judah Loeb b. Ephraim Anschel ha-Kohen, subsequently of Rotterdam, left as a result of internal dissensions. His place was taken, first by R. Aaron b.
Moses the Scribe, of Dublin, and then by R. Uri Phoebus b. Naphtali Hirsch, known as Aaron "Hart. The latter's brother, Moses Hart, was the maecenas of the community. In 1722 he reconstructed the synagogue in Duke's Place. Further enlargement and reconstruction took place in 1766 and in 1790. In 1766 a secession had taken place in the Ashkenazi community, headed by Mordecai b. Moses of Hamburg, called Marcus Moses (a son-in-law of Glueckel von Hameln). This led to the organization of a rival body, which constructed its own synagogue (known as the Hambo' Synagogue) in 1726. The historic synagogue organization of the metropolis was completed in 1761, when another rival body, still called the New Synagogue, came into existence.

The primacy of the parent body (by now known as the Great Synagogue) was, however, generally recognized – not only by the other Ashkenazi communities in London, but also by those which had by now sprung up elsewhere in the country. R. Aaron Hart was followed in the rabbinate by R. Hirschell "Levin, known in England as Hart Lyon (1758–64), R. David Tevele "Schiff (1765–91), R. Moses Myers (who also officiated at the New Synagogue (1792–1802)), and R. Solomon "Hirschell, son of Hart Lyon (1802–42), who was the first formally recognized chief rabbi of the Ashkenazi communities of the whole of England. The Ashkenazim were by now the most numerous and influential element in the London Jewish population. The lower classes, however, mainly peddlers and dealers in old clothes, who were mostly recently arrived immigrants, were not greatly esteemed. P. Colquhoun, in his Treatise on the Police of the Metropolis (1800), asserted that they were responsible for a disproportionate amount of petty crime.

The 19th century was a period of expansion and reorganization. The first synagogue outside the City (later the Western Synagogue) had been organized in Westminster around 1761. The Borough Synagogue, on the south side of the river, owed its origin to a minyan begun about the middle of the 18th century. The board for shehitah, in which Sephardim and Ashkenazim cooperated, was organized through the advocacy of Baron Lyon de Symons in 1792–1804.

As early as 1760, the Sephardi community admitted representatives of the Ashkenazim to their committee of deputados, which was appointed from time to time to represent the community vis-à-vis the government. This ultimately developed into the "Board of Deputies of British Jews, on which, until 1838, only the London communities were represented. The old talmud torah of the Ashkenazi community, established in 1732 and placed on a broader basis in 1788, was reorganized in 1817 as the Jews' Free School, originally intended to meet the menace presented by the schools which were now being set up for Jewish children by Christian conversionists; this developed in due course into one of the largest schools in Europe. The struggle for Jewish "emancipation in England centered in London. In 1831 Jews were admitted to the freedom of the city, and hence to the privilege of carrying on retail trade, from which they had hitherto been barred. In 1835, David "Salomons was elected a sheriff of the city, the first Jew to attain that distinction. In 1847 he was the first Jewish alderman, and in 1855 the first Jewish lord mayor of London. From 1830 the City of London had shown sympathy with Parliamentary emancipation of the Jews, and its persistence in electing Baron Lionel de "Rothschild, notwithstanding the fact that he could not take his seat because of the form of the statutory oath, was in a large measure responsible for the admission of the Jews to Parliament in 1858.

The growing Anglicization of London Jewry hastened the reorganization of the community. A Reform congregation was established, nearer the fashionable centers of population in 1840. To meet this challenge, both the Sephardi and the Ashkenazi congregations established branch synagogues in the West End. Nathan Marcus "Adler, appointed in 1844, initiated a new period in the history of the Chief Rabbinate. Under his auspices, a modern theological seminary, *Jews' College, was founded in 1855, and a model charitable organization, the Board of Guardians for the Relief of the Jewish Poor, was established in 1859. In 1870 a union of the principal Ashkenazi congregations of the metropolis was formed under the title, the "United Synagogue." Newer congregations in other parts of the metropolis later attached themselves to this organization, which is now perhaps the largest and the best organized of its kind in the world.

With the mass emigration from Russia which started after 1881, there was a great influx especially to London, and the population rose in the course of the next quarter of a century from some 47,000 to approximately 150,000, of whom about 100,000 lived in the East End. Thus, alongside the more or less "native" community, a new, essentially foreign, community grew up. A majority of the newcomers was absorbed by the tailoring, shoemaking, and cabinetmaking industries. Fresh charities were created to meet their requirements. A Yiddish press and an active trade union movement came into being. Numerous minor synagogues, with their related institutions, were created. In 1887 Sir Samuel Montagu (later Lord Swaythling) created the Federation of Synagogues to coordinate their religious activities. The strike of 10,000 Jewish tailors in London in 1889, lasting for six weeks, attracted great attention and ended the period of the unmitigated exploitation of the Jewish immigrants. The Royal Commission on Alien Immigration, as well as the various inquiries into slum life, dealt to a large extent with the conditions of the new Jewish life which had sprung up in the East End of London, and was arousing some antagonisms. The Aliens Act of 1905 stemmed the tide of immigration, though it continued in modified form until the outbreak of World War I in 1914. The Jew of the East End, as he became more well-to-do, tended to move away to the newer suburbs, particularly in the northeast (Stamford Hill) and northwest (Golders Green), where important congregations sprang up. The progress of the Reform movement, indeed, was comparatively slow, though the radical Liberal Jewish Synagogue, which grew out of the Jewish Religious Union (1902), was established in 1910.
The period between the two wars witnessed a considerable economic and geographical expansion of London Jewry, as it attained a greater degree of well-being, extended its interests, and hastened the movement from the traditional center of the East End into the northern suburbs. At the same time, there was some degree of organizational consolidation. The United Synagogue, in particular, extended its activities. A communal center for the major London Jewish institutions and a Jewish museum were established at Woburn House in the Bloomsbury area. The beginning of the persecutions in Germany in 1933 brought about a considerable influx of refugees who did a good deal to stimulate certain aspects of London Jewish life and to consolidate the organization of the extreme Orthodox wing.

Antisemitic movements were active during the 1930s, notably Sir Oswald Mosley’s British Union of Fascists. The “Blackshirt” march through London’s East End in October 1936 provoked massive disorders which led to the Public Order Act banning the political use of uniforms. The Mosleyites’ march left a deep impression on the consciousness of London Jewry.

[Cecil Roth]

Postwar Period

Demography. Between the two world wars, London Jewry experienced its first substantial population shift from the East End, a trend heightened during World War II, when, due to long periods of enemy bombing and extensive damage to the inner districts of London, Jews (together with the rest of the population) moved in large numbers to less vulnerable areas further from the center. With a rise in the standard of living in Britain, considerable urban renewal and suburban development took place.

During the 1950s and 1960s, Jews, who by this time had generally risen rapidly on the socioeconomic scale, settled in ever-increasing numbers in suburban areas, particularly in the north and northwest of London. It has been estimated that the East End, which at the beginning of the 20th century contained about 125,000 Jews and in 1929 still had some 85,000 Jews, was left with no more than 30,000 Jews within a few years after World War II. The northwest London area alone was said to have contained some 85,000 Jews by 1950. The vast majority of Jews always lived to the north of the Thames, and by the end of the 1960s they were spread along and below a suburban arc stretching from Wembley, Harrow, Stanmore, and Edgware in the west through Finchley and Palmers Green in the north to Ilford in the east. Below this arc were heavy concentrations of Jews in what may be termed “gilded ghettos,” such as Golders Green, or semi-decaying “zones of transition,” such as Stamford Hill, where newer non-Jewish immigrants settled in the 1960s in increasing numbers. The total Jewish population of Greater London in 1970 was estimated at 280,000. (For figures for the mid-1990s, see below.)

The pattern of settlement and the movement of London Jewry were of particular importance for their effect on Jewish identification. Evidence suggests that throughout the 20th century, the directions of the major shifts were strongly influenced by developments in transport facilities vis-à-vis the place of work, that is the industrial and commercial areas in the city. The fanning out of the transport system and the improvement in highways, however, made incursions into the traditional pattern of settlement symbolized by the Jewish district. Whereas some of the new suburbs were still thickly inhabited by Jews – Edgware with 10,000 Jews representing 40% of the local population was a case in point – in 1970 there were larger numbers of Jews living in a more scattered fashion away from Jewish districts and throughout the Home Counties in and around Greater London. Not only was the lack of proximity to Jewish centers and the negative effects of living in predominantly non-Jewish areas bound to affect the identification of such Jews, but the problem also arose of how to cater to this more fluid and spread-out Jewish population from the organizational point of view.

Organizations. Most observers of Anglo-Jewish life highlighted the fact that the community was over-organized, a situation that led to duplication, inefficiency, and waste. The organizational aspect of communal life came to the fore even more starkly in the case of London Jewry, first because it contained the headquarters of many organizations catering to Anglo-Jewry as a whole (e.g., Board of Deputies of British Jews, Anglo-Jewish Association, Association of Jewish Ex-Service Men, National Union of Hebrew Teachers, Jewish Initiation Society, Central British Fund for Jewish Relief, and so on), and secondly because the problems of organizational efficiency were greater in a large community, particularly one which had become more scattered. The latter point may best be illustrated by the fields of religious and educational organization. The closing of some synagogues in the older areas of London in the late 1960s, as the branches of the United Synagogue in Dalston and Bayswater, was more than compensated by the construction of new synagogues in the many areas where Jews settled in the postwar period and more recent years. A proliferation of synagogues was further brought about by the fact that all the main synagogal bodies representing the various streams had their own building programs. Thus, most of the 200 synagogues in London belonged to the five major synagogal organizations. A somewhat similar situation obtained for day schools, which were in the hands of the London Board of Jewish Religious Education, the Zionist Federation, the Jewish Secondary Schools Movement, Yesodei Hatorah Schools, and the Lubavitch Foundation, plus a number of independent schools.

By contrast, there was greater efficiency and centralization in London in the sphere of welfare work. The London Jewish Welfare Board, which operated 19 homes for the aged and a host of other services for the needy, was the largest Jewish welfare institution in the country. London also had numerous societies concerned with the amelioration of physical and mental handicaps, e.g., the Jewish Blind Society, the
Jewish Deaf Association, schools for the mentally retarded and handicapped children, and Jewish hospitals. The various charitable institutions, friendly societies, and professional associations added further to the well-being of London Jews. The younger generation of the community was well provided for by the large number of youth clubs and societies, including some famous ones such as the Jewish Lads’ Brigade (founded in 1895), the Brady Club (1896), and the Bernhard Baron Settlement (1914). The renewal and improvement of premises in the form of Jewish youth centers, however, progressed slowly. The large number of Jewish students in London, for instance, was provided by B’nai B’rith with a new and much enlarged Hillel House only in 1970. Finally, London Jewry had a whole array of Zionist organizations and a large number of bodies supporting Israel institutions (in 1970 there were 65 such organizations in London, most with branches in provincial communities).

**CULTURE AND RELIGIOUS LIFE.** The leading part played by London Jewry in English Jewish life was particularly apparent in the cultural sphere. The largest number of publications on Jewish themes – newspapers, magazines, journals, or books – emanated from London, which also had ten libraries and museums with Jewish collections open to the public. The permanent residence of the chief rabbi engaged by the United Synagogue, the largest synagogal body in the country with a membership of 40,000 and 80 synagogues, further added to London’s leading position. These factors generally had the effect of centralizing the administration of communal affairs. Thus, the Chief Rabbinate and its bet din tended to administer the religious life of large sections of provincial Jewry through other bettei din and rabbis. The two leading bodies dealing with religious education, the London Board of Jewish Education and the Central Council for Jewish Religious Education dealing with the provinces, both operated from London. The pattern was similar in the political and philanthropic spheres. However, after World War II, and particularly in the 1960s, there was a growing trend toward decentralization. For example, the second largest synagogal body, the Federation of Synagogues, with 17,000 members in some 50 branches, as well as the smaller religious groups, i.e., the Union of Orthodox Hebrew Congregations, the Reform and Liberal movements, and the Sephardim, set up independent bettei din. Growing decentralization was also manifest in other fields, including Jewish education, despite efforts, mainly from the center, to maintain some overall organizational unity in the Jewish community of Britain.

London’s position appeared even less formidable when a number of other important facts were taken into account. Although strict Orthodoxy made important strides there, particularly through the growing strength of the hasidic groups in the Stamford Hill area, the largest and most successful yeshivah was in the small provincial community of Gateshead in the northeast corner of England. As for Jewish day schools, Manchester undoubtedly took the leading position. However, when London Jewry was set in the proper perspective in relation to the rest of Britain’s Jewish community, it became clear that it was a very strong force not only in that community but in world Jewry.

**Later Developments**

Since the readmission of 1656 London has been the home of the largest Jewish community in Britain. In keeping with general demographic trends, the size and spread of London Jewry has changed since the 1970s. In terms of displacement London Jewry now constitutes “selected communities” as opposed to being a single entity. Greater London has expanded to include parts of Hertfordshire, Surrey, and Essex. Jewish migration within the capital has followed that expansion, in many instances crossing the green belt. There are now burgeoning communities in Radlett, Kingston, and Buckhurst Hill, districts which only 50 years ago had little or no Jewish presence. Within this area the largest concentration is located in the northwest London borough of Barnet. The second largest community is congregated to the east of London, in the borough of Redbridge. The Jewish community of Redbridge has access to London’s only non-synagogue-based Jewish center.

Since 1970 London Jewry has expanded geographically but decreased numerically. The downward trend has been consistent since 1975, at which time the Jewish population numbered 221,000; by 1988 that figure had been reduced to 210,000, and by 2002 to 195,000. Overall the Jewish population of Britain fell from an all-time high of 420,000 in 1950 to 300,000 in 2002. The decline is attributable to a combination of factors: an excess of deaths over births, general social erosion as a result of increasing intermarriage, social and geographic movements away from community, and emigration.

During the 1990s London saw a continuation of the trend away from Jewish traditional central Orthodox synagogue membership toward both Progressive Judaism on the left and Ultra-Orthodox on the right. Mainstream Orthodoxy also lost members to the Masorti movement which was established in 1985 by Rabbi Louis Jacobs. There were six Masorti synagogues within the Greater London area.

Map of London showing shift of Jewish population according to establishment of Hebrew congregations.
The London Jewish community is still served by a broad range of welfare organizations though recently there has been a movement toward rationalization following the amalgamation of the Jewish Blind Society and the Jewish Welfare Board, plus a number of other small societies, into Jewish Care. This organization provides daily for over 5,000 needy individuals and their families. Plans are also in the pipeline to merge the capital's two major Jewish child care institutions, Norwood and Ravenswood. London's expanding elderly community is provided for by a number of residential homes which offer both independent and full-care facilities. One of the largest is Nightingale House (Home for Aged Jews) in southwest London, which accommodates over 400 residents.

[Anne J. Kershen]

Hebrew Printing

Some Hebrew printing on wood blocks appeared in works printed in London from 1524, when a few isolated words and phrases figured in R. *Wakefield's Oratio de utilitate... trium linguarum. Movable Hebrew type was apparently first used in 1565 in W. Musculus' Common Places of Christian Religion, and consecutive Hebrew printing (a 14-line "sonnet") appeared in 1588 in a single-sheet broadside of poems in various languages by Theodore Beza celebrating the defeat of the Spanish Armada. In the 17th century a few books mainly or partly in Hebrew were published by Christian Hebraists, such as a Hebrew text of Psalms (1643), a vocalized text of Avot (1651), and Bryan *Walton's Polyglot Bible (1653–57). Communal controversies in the early 18th century produced the first Hebrew publications printed for (though not by) Jews, particularly the dispute that raged around haham David *Nieto's disputed Orthodoxy (1705) and a dispute concerning a divorce two years later (Aaron Hart's crudely produced Urim ve-Tummim, 1707). In 1714–15, some works by Moses Hagiz and Joseph *Ergas aimed against the Shabbateans appeared in London, presumably because of the unfavorable atmosphere in Amsterdam; and in the same year Nieto's classical Mattheh Dav was brought out by Thomas Lifte's printing house in three editions – in Spanish alone, Spanish and Hebrew, and Hebrew alone. Thereafter there was a long hiatus in London Hebrew printing, though Ephraim *Luzzatto's poems Elleh Benei ha-Nē'urim appeared there in 1766 with a reprint in 1768. In 1770, printing by and for Jews at last began, possibly in consequence of the removal of some trade restriction. A consortium of Jewish printers from Amsterdam (who, however, failed after a few years) set up a printing house which produced ambitious editions of the Jewish liturgy (3 vols., 1770; other eds., 1771, 1785) and many other works. Simultaneously, A. *Alexander began his printing activity which was continued by his son Levi (mainly liturgical works) well into the 19th century. Other printers, Jewish and non-Jewish, appeared in the following years. In 1820 J. Wertheimer set up his Hebrew press, which was active for over a century, subsequently under the name of Williams, Lea, and Company. With the increase in the London Jewish population, especially after the emigration from Eastern Europe from the 1880s onward, Jewish printers and printing in London proliferated, though learned works were mainly produced at the presses of the universities of Oxford and Cambridge.

[Cecil Roth]

LONDON, ARTUR (1915–1986), Czechoslovak statesman and Communist leader. He was born in Ostrava. In 1937 he went to Spain and joined the Communists within the International Brigade fighting in the Spanish Civil War. After the defeat of the Republican cause, London lived in France. Following the fall of France in 1940, he was arrested by the Nazis and deported to Buchenwald. London returned to France in 1945 where he represented the Czechoslovak information board. He was a prominent figure in the Czech Communist Party and following the Communist coup d'état of 1948 he was recalled to Prague to become a member of the central committee of the Communist Party. In the same year he became deputy minister of foreign affairs and as director of the ministry was responsible for the appointment of the diplomatic service. In 1951 London was arrested and charged with being a Zionist and a Trotskyite. He was one of the accused at the *Slansky Trial and in 1952 was sentenced to life imprisonment. He was released in 1955, however, and was later rehabilitated, becoming a member of the editorial staff of the monthly Mezinárodní Politika. In 1963 he left Czechoslovakia to join his family in France and in 1969 published his book L'Aveu – Dans l'engrenage du procès de Prague (ed. Gallimard), an account of the Slansky Trial, which was made into a film in 1970.

[Erich Kulka]

LONDON, FRITZ (1900–1954), German theoretical physicist. London was born in Breslau, and was at the University of Berlin until driven out by the Nazis. In 1927, together with

[184]
Walter Heitler of Zurich, he wrote a basic paper for physicists and chemists, on the homopolar chemical bond, interpreting valency in terms of electronic spin. This was followed by studies of activation energy, the tetravalency of carbon, and van der Waals forces. From 1933 to 1936 he worked in a laboratory in Oxford mainly on superconductivity at temperatures near absolute zero, and from then until 1939 he was director of research at the College de France in Paris. From 1939 he was professor at Duke University (Durham, North Carolina), first of theoretical chemistry, and finally of physical chemistry.

[Samuel Aaron Miller]

**LONDON (Burnstein, Burnsun), GEORGE** (1920–1985), bass-baritone singer. Born in Montreal, London studied in Los Angeles where his first professional appearance, as Dr. Grenvil in *La Traviata*, was at the Hollywood Bowl (1941). Forced to support himself by performing light music and appearing in operetta, he began an international career with his debut at the Vienna State Opera in 1949. Thereafter he became world-renowned for his performances in operas by Wagner (at many Bayreuth seasons between 1951 and 1964) but his repertoire included also Don Giovanni, Gounod’s Mélîsthuîphélès, the multiple villains in *Les contes d’Hoffmann*, the Dutchman, Scarpia, Mandryka (which he recorded impressively under “Solti”), and the title role in Menotti’s *Le dernier sauvage*. He was the first non-Russian to sing the title role in *Boris Godunov* at the Bolshoi, Moscow, in 1960; and he was awarded the title of Rammerschaenger by the Austrian government in 1954. In later years (from 1968) he concentrated on opera house administration, and was appointed artistic administrator of the John F. Kennedy Center, Washington (1968), and general director of the Los Angeles Music Center Opera Association (1971). In his prime, London had few equals as a Wagnerian Heldenbariton of power and majesty.

[Max Loppert / Israel Stein (2nd ed.)]

**LONDON, JACOB BEN MOSES JUDAH** (first half of 18th century), rabbi and scholar. Born in Wesel, Germany, Jacob was taken to London as a child, when his father was appointed cantor there. There are those, however, who maintain he was born in London. When his father died, Jacob settled in Frankfurt, where he attended the yeshivah of Samuel Schotten. After the fire in the Frankfurt Jewish quarter in 1711, London moved to Leszno, Poland, where he became cantor and director of the Jewish school. For several years he lived in Prague, holding the post of inspector of the Talmud Torah schools, but he returned to Leszno in 1728. For the next six years he was engaged in writing an allegorical work, *Histvoirut Melakah ha-Negev im Melekh ha-Zafo* (Amsterdam, 1732), describing the struggle between the evil and the good inclination. He later traveled to Italy, where he published *Meginnei Shelomo* (Venice, 1741) by *Joshua Heschel b. Joseph of Cracow and Shivah Einayim* (Leghorn, 1745), which consisted of halakhic writings by *Naḥmanides, Isaac *Alfasi, Isaac *Aboab, Judah de Leon, Isaac *Ibn Ghayyat*, and Abraham Bulat. While on a journey to Piedmont, London was suspected of espionage on account of the Hebrew manuscripts that he had in his possession. In his introduction to *Meginnei Shelomo*, London mentions that he wrote a halakhic work entitled *Pegiât Yaâakov*, which is no longer extant. He also wrote *EZ Hâyîm*, a two-part work on moral precepts that was never published.

**BIBLIOGRAPHY:** Steinschneider, Cat Bod, 1230; Ghirondi-Neppi, 124; Landshuth, Ammudei, 108; Fuen, Keneset, 553; Zunz, Lit Poesie, 450; Carmoly, in: *Revue Orientale*, 2 (1842), 334; L. Lewin, *Geschichte der Juden in Lissa* (1904), 289ff.

[Samuel Abba Horodezky]

**LONDON, MEYER** (1871–1926), U.S. lawyer and Socialist leader. London was born in Gora Kalvaria, Poland, and followed his father to New York City in 1891. He was immediately drawn into radical politics, in large measure because of his father’s involvement with anarchist and Socialist groups. Initially an adherent of the Socialist Labor Party, he joined the opposition to its leader, Daniel *De Leon, in 1897, and ultimately became a member of the Socialist Party of America.

London had a significant influence on the needle trades unions of New York City in their formative period prior to World War I. Admitted to the bar in 1898, he served as legal counsel for a multitude of unions and union members. London was intensely pragmatic in labor matters, and despite his Socialist ideology, he helped to formulate the Protocol of 1910, which attempted to establish collective bargaining and arbitration in the women’s cloak trade. London resisted the argument of some Socialists that such agreements substituted mutuality of interest for class struggle. He favored unemployment insurance, the abolition of child labor, and other social-reform legislation designed to improve the conditions of life and labor for the worker.

In 1914, after repeated attempts at elective office, London won election to the House of Representatives as a Socialist from a largely immigrant Jewish district on the Lower East Side in New York City; he was reelected in 1916 and 1920. Although he was a moderate Socialist, he endured the full brunt of bitter anti-Socialist attacks.

As a congressman he was active and argued strongly for reform. He voted against restrictive immigration and the Fordney tariff and actively supported nationalization of the coal industry. One bill of his became law: an act protecting the employees of bankrupt firms.

Although he strongly opposed American entrance into World War I and fought efforts to curb the civil liberties of opponents of the war, London refused to resist all wartime activities without qualification. This position alienated him from many of his friends and associates in American radicalism. He also had little sympathy for Zionism, believing that the emancipation of the Jew had to be accomplished not through
nationalism but by uplifting the working class. London died as the result of a car accident.

[Irwin Yellowitz]

**LONDON, SOLOMON ZALMAN BEN MOSES RAPEL** (1661–1748), author, translator, and bookseller. London was born in Nowogrudok (Lithuania). Between 1709 and 1735 he published and sold books in Amsterdam, London, and Frankfurt on the Main. He is best known for *Kohelet Shelomo* (1722), a devotional handbook which included occasional and domestic prayers and benedictions together with ritual laws and instructions both in Hebrew and Yiddish. It became popular in Western Europe and was reprinted many times, including later editions in which the Yiddish was replaced by German (cf. the Ger. ed. of 1919 (?) and that by A. Sulzbach, 1908). *Kohelet Shelomo* also contains a Passover Haggadah with Leone de Modena’s commentary *Zeli Esh*. This Haggadah also appeared separately (1733) and was reprinted several times. *Hinnukh Katan*, a small Hebrew-Yiddish vocabulary, was added to some of the editions. London’s *Zokher ha-Berit* (1714), which followed the same lines, detailed the ceremonies and laws of circumcision and redemption of the firstborn, with Yiddish translation. He also published a *siddur*, according to the German-Polish rite, under the title *Tikkun Shelomo* (1712, 1733² often reprinted), with Yiddish text added; it included the *Tikkunei Shabbat* of Isaac Luria. London prepared a number of ethical and halakhic compendia by various authors, providing a Yiddish translation. These included such works as *Orhot Zaddikim* (author unknown, 1735); *Jonah Gerondi’s* (13th century) *Iggeret ha-Teshuvah* (1742); and *Isaac b. Eliezer’s* (15th century) *Sefer ha-Gan* (1747).

**LONG BEACH,** U.S. city in California, located south of Los Angeles along the Pacific Coast (on the Los Angeles and Orange County border). The first Jewish family came to Long Beach in 1898 and since then the community has grown and prospered, reaching a population of 18,000 in 2001. In 1898 Samuel Heller visited the city, liked its potential, and stayed to engage in real estate development. When the city introduced a municipal produce market in 1913, a number of Jewish produce men moved to Long Beach to operate stalls. By 1915 the population included 25 Jewish families. The first permanent Jewish organization was established after World War I with the chartering of B’nai Brith Lodge 870 with 33 members. In 1922 the Community Building Association was established. It was dissolved in 1923 and reconstituted as a Reform congregation, Temple Israel, with Julius Liebert as its first full-time rabbi. In 1924 Temple Sinai (Conservative) was established with Lazar Friedland as its rabbi. Rabbis of Temple Israel included Harvey Franklin (1930), Elliot Graftman (1938), and Wolli Kaefler (1955). Temple Sinai had Jacob Friedman (1929), Shalom Ravetch (1935), and Sidney Guthman (1959). Jewish Welfare Fund campaigns began in 1929. In 1945 a Jewish Federation was established. A Jewish community center was organized in 1948; its first center building was dedicated in 1960. In 1952, with 6,300 Jews in the rapidly growing city, a second Conservative congregation was formed with Maurice Schwartz as rabbi, followed in 1962 by Rabbi Joseph Miller.

In 1960, when the first Jewish Community Center was dedicated, Long Beach was a quiet, conservative, small city and Orange County was a vast, fragile orange grove. Today, Long Beach/West Orange County is an exciting 21st-century city with a World Trade Center, prominent hotels, and a revitalized downtown with a fine Cultural Arts Center and a convention center. International jazz concerts and local arts festivals have replaced the annual Iowa picnic and the Pike amusement park (Long Beach was once dubbed “Iowa by the sea”). Once rural, West Orange County now contains impressive suburban neighborhoods and pre-eminent commercial centers. At the edge of the Pacific Rim, Long Beach/West Orange County has become an exciting place to live and the changes have also affected the Jewish community. Increasing numbers of professionals and corporate executives with their families are moving there. At both ends of the age continuum the population is growing. Recognizing the need to meet the growing needs of the Jewish community, a campaign to build a new Jewish Community Campus was launched in the 1990s and on March 20, 1999, the Federation’s Harry and Jeanette Weinberg Jewish Community Campus was dedicated. The over 80,000-square-foot Campus is home to the Barbara and Ray Alpert Jewish Community Center, Jewish Federation of Greater Long Beach & West Orange County, Jewish Family and Children’s Service, Jewish Federation Foundation, and Hillel. The Hebrew Academy, also served by the Jewish Federation, is located in the Westminster/Huntington Beach area.

The Campus contains a beautiful Early Childhood Education Wing, gym, pool, state of the art health and fitness center, library, cafe, dance studio, auditorium, gift shop, art gallery, and meeting and office space that is available to the entire community. The estimated Jewish population is approximately 20–25 thousand persons. They reside in the Greater Long Beach area (out of a total population of approximately 500,000), which includes the neighboring communities of Rossmoor, Los Alamitos, Seal Beach, and Lakewood.

Jewish communal life in the Greater Long Beach area is thriving and consists of congregations of all denominations. Current congregations include P’nai Or (Renewal); Temple Israel, Temple Beth David, and Temple Ner Tamid (Reform); Temple Beth Shalom, Temple Beth Zion-Sinaï, and Congregation Sholom of Leisure World (Conservative); Congregation Lubavitch, Chabad of Cypress, Ahavas Yisraël, and Shul by the Shore (Orthodox); and Adat Chaverim (Traditional). The synagogues and agencies have formed a Kehilllah Leadership Council, under the auspices of Federation, and meet ev-
ery other month to discuss common issues and work together to build a vibrant, cohesive Jewish community.

[Sharon Kenigsberg (2nd ed.)]

LONGO, SAADIAH (first half of 16th century), poet. Born in Turkey, Saadiyah lived in Salonika, where he was a member of the Hakhmei ha-Shir ("scholars of poetry"), a group of poets supported by Gedaliah ibn Yahya, a wealthy Salonikan. In addition to his Shivrei Luhot (Salonika, 1594), consisting of poems of elegy and lament, he composed poems of friendship and jest in the spirit of his age. He also wrote poems of "beliefs," a type of poem which commences in a serious vein and then goes on to deal with the self-evident; they are banal and lack originality. Poems of this kind were composed in a spirit of rivalry by the poets of the group, who disagreed on the method of composition and the use of poetic conventions. The poets sharply criticized each other's work, and their criticism sometimes degenerated into personal attack. Longo's disputant in these poems was Jacob Tarfon, a local contemporary.

[Abraham Meir Habermann]

LONS-LE-SAUNIER, capital of the department of Jura, in "Franche-Comté, E. France. A vicus Judeorum ("Jewish quarter") is mentioned in Lons in 1220; the establishment of the community therefore preceded this date. The Rue des Juifs (later the Rue de la Comédie and Rue de la Barerne) is mentioned down to the 14th century. The Jews of Lons owned a cemetery, but there is no record of a synagogue. During the 14th century, Jews from Lons are found in numerous other localities of Franche-Comté. During World War II, a large number of Jews from Alsace and Lorraine who took refuge in Lons established a community numbering approximately 1,300 members. Lons also became the seat of a regional rabbinate. There was no organized community in Lons by the 1960s.

[Bernhard Blumenkranz]

LONZANO, ABRAHAM BEN RAPHAEL DE (late 17th–early 18th century), kabbalist and Hebrew grammarian. It seems that he was a descendant of the renowned kabbalist Menahem de *Lonzano. Abraham became well known through his Kinyan Avraham (Zolkiew, 1723) on Hebrew grammar, from which it appears that he came from Zakhthos (Zante), one of the Greek isles. Following the attacks of the local inhabitants against the Jews, many troubles befell him and he began to wander from country to country. He studied at the yeshivah Ez Ḥayyim in Amsterdam. At a later date, he appears to have been in Prague where he was persecuted by the scholars of the yeshivah because he criticized them sharply for studying Torah without a knowledge of the Hebrew language. He wrote a declaration against Nehemiah Hiyya *Ḥayon in Genoa in 1715 (published in Sefunot; see bibliography). He was in Lemberg in about 1723. In one of his poems, which appeared in his book, he angrily attacked those who regard themselves as poets without having any knowledge of even the form and arrangement of a poem. He also wrote Hamishah Kinyanim (unpublished), a commentary to the Sefer Yeẓirah. He subsequently converted to Christianity in the Prussian town of Idstein and adopted the name Wilhelm Heinrich Neumann.

[Abraham David]

LONZANO, MENAHEM BEN JUDAH DE (1550–before 1624), linguist, poet, and kabbalist. Little is known about his life, but it is assumed that he was born in Constantinople. At the age of 25 he immigrated to *Jerusalem and later moved to *Safed. Forty years later, he went to *Turkey and to *Italy, and in 1618 he returned to Jerusalem.

Lonzano was best known for Shetey Yadot (Venice, 1618), which is divided into two sections (Yad Ani and Yad ha-Melekh). The first contains his original writings and the second the midrashic literature which he intended to edit. Each section is called yad ("hand") and has five ezbaʿot ("fingers"). Yad Ani includes the following: (1) Or Torah (also separately, Amsterdam, 1659), notes on the masorah ("text") of the Torah according to the weekly portions, comparing the printed Venice editions with important manuscripts which he knew. Because his work relates only to the Torah, it became second in importance to Minḥat Shai, by his contemporary Solomon *Norzi, which treats the entire Scripture. Despite this fact Lonzano’s work was reprinted in many editions with additions and interpretations. (2) Maʿārikh (also separately, Leipzig, 1853), additions to the talmudic dictionary He-Arukh by *Nathan b. Jehiel of Rome. The work is based on his knowledge of Greek and Arabic and other languages (Turkish and Persian) used by his Jewish contemporaries. (3) Avodat haMikdash (also separately, Constantinople, 1572), prayers for the order of worship in the Temple, with additions according to "the wisdom of the Zohar." (4) Derekh Ḥayyim (also separately, Constantinople, 1573), moralistic poetry. From Yad ha-Melekh, he only managed to publish the first section, Aggadatay de-Bereshit, which was reprinted many times. He intended to conclude the publication of Midrash Agur, which had begun to appear in Safed in 1587, and also planned to publish other important Midrashim according to manuscripts which he himself discovered, but this material has been lost.

Lonzano’s other works treat Lurianic Kabbalah and aroused bitter opposition: (1) Omer Man, a commentary on the Idr ha Zuta and the Sifra de-Ẓeni’uta (Vilna, 1885); (2) Imrei Emet, a critique of Luria’s interpretation of Sifra de-Ẓeni’uta.
and repudiations of Hayyim *Vital. According to Lonzano, Luria wrote his commentary before he received divine inspiration and “if he could, he would have changed or hidden this work” (Ms. British Museum 9167). Other works planned by Lonzano were hidden and only parts of them were preserved in manuscripts or published posthumously. They include (1) a commentary on the Zohar (fragment, in manuscript); (2) comments on Tikkunei Zohar (Ms.); (3) Haggahot le-Zohar Hadash (Venice, 1643); (4) Haggahot le-Talmud Yerushalmi (Warsaw, 1737); (5) Adi Zehav, annotations on the book Ha-Levushim by Mordecai Jaffe; (6) comments on the prayer book (lost). Lonzano’s originality caused him to suffer from the attacks of his opponents. In this matter his dispute with Gedaliah “Cordovero is of interest, but its background is still not clear. He was a thorough scholar. In search of manuscripts he made several trips abroad where he met with many scholars. As a poet, Lonzano was involved in a quarrel with Israel *Najara whom he criticized because of his use of erotic language and words such as “adulterers say to one another” (Shetey Yadot, 142) to describe the relationship between Israel and God.

[David Samuel Loewinger]

LOOKSTEIN, HASKEL (1932– ), U.S. rabbi, educator, and activist. Lookstein served in rabbinical capacities at Congregation Kehilath Jeshurun in New York City immediately following his ordination from Yeshiva University in 1958. He served initially as an assistant under his father Rabbi Joseph H. *Lookstein. He was the third member of his family to lead this congregation, following his maternal great-grandfather Rabbi Moses S. *Margolies (the Ramaz) and his father. Commonly referred to as R. H. Lookstein, Congregation Kehilath Jeshurun grew under his leadership to a membership of over one thousand families.

In 1966, Lookstein also succeeded his father as the principal of Ramaz School, an Orthodox Jewish day school. Following the tradition established by his father and fostered by his own rebbe, Rabbi Joseph B. Solevitchik, Lookstein maintained Ramaz School as a leader in Jewish education, with a co-educational curriculum in which class offerings for over 1,100 young girls and boys were totally equal. In addition, under his leadership the Ramaz School sustained a student body that achieved the highest level of general education, combined and infused with both the education and the enthusiasm of a vibrant religious Zionist commitment. All of this Lookstein fostered while insisting that the students synthesize their studies and academic achievements with an unflinching commitment to menschlichkeit.

Lookstein was one of the most vigorous supporters and leaders of religious Zionism in America. He worked to encourage travel to Israel, Jewish education in Israel, aliyah, investment, and support for the Government of Israel—regardless of what the political leadership might be at any particular time.

Lookstein was one of the leading, early voices fighting and speaking out on behalf of the plight of Soviet Jewry. He traveled frequently to meet with Soviet refuseniks and encouraged his congregants and students to do so as well. He marched, demonstrated, was arrested, and spoke out on behalf of Russian Jews. By example and through persuasion, in this initiative as well as on behalf of Operation Moses, UJA, and Israel Bonds, Lookstein moved his community and the school to take a prominent role financially on behalf of the needs of the Jewish people.

Lookstein was a leading voice in the American Orthodox community to maintaining relations with all the other Jewish denominations. He was president of the Synagogue Council of America; served as vice president of the Beth Din of America and as a member of the board of directors of the JDC Board; and was a head of the national UJA Rabbinic Cabinet.

Lookstein graduated from Ramaz School, received his B.A. from Columbia College in 1953, his rabbinic ordination from Yeshiva University in 1958, and his Ph.D. in Modern Jewish History from Yeshiva in 1979. Lookstein was named the Joseph H. Lookstein Professor of Homiletics at Yeshiva University. His dissertation, “Were We Our Brothers’ Keepers? The Public Response of American Jews to the Holocaust 1938–1944,” appeared in 1985, and he published extensively in the U.S. and throughout the world.

[Gilbert N. Kahn (2nd ed.)]

LOOKSTEIN, JOSEPH HYMAN (1902–1979), U.S. rabbi and educator. Lookstein was born in Russia and immigrated to the United States as a child. In 1923 he became assistant rabbi to Rabbi Moses S. *Margolies (known as the “Ramaz”) at Congregation Kehilath Jeshurun in New York City. In 1926 he married the Ramaz’s granddaughter, and in 1936 he became the congregation’s rabbi upon the passing of Rabbi Margolies. Lookstein would transform the pulpit into one of the most exciting and powerful voices in the entire American rabbinate.

Lookstein was ordained at the Rabbi Isaac Elchanan Theological Seminary in 1926. In 1929 he helped found the Hebrew Teachers Training School for girls and served as its principal for ten years; in 1937 Lookstein founded the Ramaz School on the Upper East Side of New York and in the heart of the state’s German-American community in Yorkville. The school became part of a two-pronged force to challenge and to change Modern Orthodoxy. It was dedicated to educating young American children to be committed and knowledgeable Jews, while at the same time sustaining the finest in Western democratic values. Integrating a deep and abiding sense of Zionist spirit and identification with Palestine and then the State of Israel, Rabbi Lookstein presided as principal of Ramaz for over 30 years. The school has continued to be the premiere “modern” Orthodox Jewish day school in the world.
In 1958, Lookstein became acting president and chancellor of Israel’s Bar-Ilan University. Lookstein had previously taught at Yeshiva University, where he had been a professor of sociology, homiletics, and practical rabbinics since 1931. While maintaining his fierce allegiance to Orthodoxy, Lookstein also maintained deep and sincere relationships with all the religious denominations and their leaders. Throughout his career, he translated this commitment into service and leadership on interdenominational committees and organizations. He kept the Ramaz School firmly in the Orthodox camp, but equally fiercely as a modern Orthodox institution where boys and girls studied together and had well-rounded activities, including mixed dancing.

He was chairman of the Jewish Welfare Board’s Chaplaincy Commission (1954–57), president of the Rabbinical Council of America (1941–43), the New York Board of Rabbis, the Synagogue Council of America (1976), and the UJA Rabbinical Advisory Council (1978). Despite growing up as an Agudist, Lookstein was guided by Rabbi Margolies into actively supporting the Mizrahi movement. He served as Chairman of the Palestine Commission of the American Jewish Conference and as a consultant to the U.S. delegation to the 1945 San Francisco Conference. His philosophy of the integration of Judaism with the best of Western culture was expressed in the schools he founded and in his articles and books, which include Judaism in Theory and Practice (1931), Sources of Courage (1943), and Faith and Destiny of Man (1967). Lookstein served as rabbi with his son and successor, Rabbi HASKEL "Lookstein, thus keeping the leadership of his flagship congregation within one family for more than a century.

[Louis Bernstein / Gilbert N. Kahn (2nd ed.)]

**LOPES**, English family whose assimilated descendants attained distinction in English life. **MANASSEH LOPES** (early 18th century), a prominent broker, made a fortune by speculation on false reports of Queen Anne’s death. **MANASSEH MASSEH** (Massey) LOPES (1755–1831) was born in Jamaica, the son of the West Indian merchant **MORDECHAI RODRIGUES LOPES** (d. 1796). He converted to Christianity in 1802, becoming a member of parliament in that year, and was created a baronet in 1805. He was heavily fined and imprisoned in 1819 for corruption in a parliamentary election but was nevertheless later returned for Westbury. He resigned in 1829 in favor of Sir Robert Peel. Subsequently, he was recorder of Westbury. Lopes was among the earliest Jewish estate owners in England, spending over £100,000 on lands in Mairstow, Devon, and Plymouth. **SIR RALPH LOPES** (formerly Raphael Ralph Franco; 1788–1854), a descendant on the male side of the Leghorn *Franco family, succeeded his uncle, Manasseh Masseh Lopes, in the baronetcy. **SIR LOPES MASSEY LOPES** (1818–1908), eldest son of Ralph Lopes, was a civil lord of the Admiralty from 1874 to 1880 in Disraeli’s government. **SIR HENRY CHARLES LOPES** (Baron Ludlow; 1828–1899), third son of Ralph Lopes, was a lord justice of the Court of Appeal 1885–1897. The head of the family held the title of Baron Ro-

[Cecil Roth]

**LOPEZ, AARON** (1731–1782), American merchant-shipper. Born in Portugal, Lopez went in 1752 to Newport, Rhode Island, where, renouncing his Marrano past, he remarried his wife Abigail in a Jewish ceremony, underwent circumcision, and in time became a leader of the Yeshuat Israel Congregation. Lopez’ ties to the well-established “Gomez and Rivera families and the British America’s economic boom during the French and Indian War assured him the credit he needed to expand his business beyond Rhode Island. [Stanley F. Chyet]

**LOPEZ, ROBERT SABATINO** (1910–1986), U.S. medieval historian, son of Sabatino *Lopez. Born in Genoa, Italy, Lopez began his teaching career at the teachers’ colleges of Ca-

**BIBLIOGRAPHY:** Stiles, with a “demonstration of universal sorrow.”

[Lois Bernstein / Gilbert N. Kahn (2nd ed.)]
Lopez, Roderigo (1525–1594), Portuguese Marrano physician. After graduating at Salamanca, he settled in London early in the reign of Queen Elizabeth. He became a member of the College of Physicians and was the first house physician at St. Bartholomew’s Hospital. Subsequently, he was appointed physician to the earl of Leicester and in 1586 to Queen Elizabeth. He was connected by marriage with Alvaro Mendes (Solomon ‘Abenaes), duke of Mytilene, the adviser of the Turkish sultan. Lopez worked closely with the earl of Essex, the Queen’s favorite, and participated in an intrigue to secure English intervention on behalf of Dom ‘Antonio, pretender to the throne of Portugal. Later, he broke with Dom Antonio and began to work for an understanding with Spain. The Spanish court secretly negotiated with him and offered a heavy bribe if he would murder the pretender. Early in 1594 he was arrested and accused of plotting to poison Elizabeth, was found guilty, and executed at Tyburn (June 7, 1594). There is little doubt that he was innocent, though his aims and methods were not above suspicion. The case attracted much attention, and it is generally believed that Lopez was the prototype of Shylock in Shakespeare’s Merchant of Venice.

Lopez, Sabatino (1867–1951), Italian playwright, critic and novelist. Born in Leghorn, Lopez spent some years as a teacher before devoting himself to the theater and dramatic criticism. A playwright of Italy’s realistic school, he wrote about 70 plays, including such successful comedies as La buona figliola (1909), La nostra pelle (1912), Il brutto e le belle (pub. 1913), Parodi e C. (1925), and La Signora Rosa (1928). Faithful to Italian theatrical tradition, Lopez was essentially an actor’s writer, and his plays are full of scintillating dialogue. In the earlier ones, where the emphasis is on drama, he relied on French realistic fiction and Italian verismo; his mature works incline to satire and ironic, though superficial, criticism of late 19th-century bourgeois morals, the irony and comedy skillfully balanced by humane sentimentality. Lopez also wrote some plays in collaboration with other writers, a book of memoirs, S’io rinascessi (1940), and stories of stage life, Le Loro Maest (1920). Between 1911 and 1919 he directed the Italian writers’ guild. Lopez took an active part in Jewish communal life and was for many years the chairman of the Zionist Organization in Milan. The historian Robert Sabatino *Lopez was his son. Another son was Guido Lopez (1924– ), journalist and author. He was editor of the literary section of the weekly Epoca and wrote the novels Il Campo (1948) and La prova del nove (1953) and a popular guidebook to Milan, Milano in mano (1965). He also published several documents relating to his father’s literary activity.

Lopez Rosa, Marrano family, members of which suffered at the hands of the Inquisition; possibly to be identified with the family of the same name who had a printing establishment in Lisbon in the middle of the 17th century. The following are noteworthy: Moses (Duarte) Lopez Rosa (second half of 17th century), a native of Beja, Portugal, Marrano physician and poet. In maturity he immigrated, first to Rome and then to Amsterdam, where he openly embraced Judaism. He became “arbiter” of the Academia de los Floridos, founded by the Baron de *Belmonte in 1685. A facile poet, he composed complimentary verses in honor of the English and Portuguese sovereigns and other prominent personalities. He is not to be confused with another Duarte Lopez Rosa of Beja, likewise a physician, reconciled by the Inquisition in 1723. Simon Lopez Rosa (alias Abraham Farrar, “the elder,” first half of the 17th century), a Marrano physician, was an early warden of the Beth Jacob community in Amsterdam. In common with some of his contemporaries, he was critical of the authority of the rabbis; and it was in consequence of a dispute in the congregation, occasioned by an episode in which he figured, that the Beth Israel synagogue was established. Appeal was made to R. Joel *Sirkes of Brest-Litovsk, who recommended that he should be excommunicated; a similar case, in which his cousin Dr. David Farrar was implicated, led to an appeal to the rabbinate of Salonika and to Leone *Modena in Venice. Lopez Rosa was among the Marranos judaizing in Amsterdam who were denounced to the Lisbon Inquisition in 1617.

Lopian, Eliah (1876–1970), rabbi, educator, and exponent of musar. Born near Grajewo, Poland, Lopian studied at Lomza and at Kelme, where he came under the influence of Simhah Zissel *Broida. Broida’s doctrine of musar, which emphasized the need for constant soul-searching and moral scrutiny, left a deep impression on Lopian. In Kelme he founded
a yeshivah which he headed until he received an invitation in 1926 to teach at the Etz Chaim Yeshivah in London. He served there both as mashgi'ah (moral tutor) and, for a short time, as principal, until his retirement in 1950. During his years in England, he was instrumental in training many English rabbis. Lopian immigrated to Israel at the age of 74, but even then spent the last 20 years of his life as mashgi'ah of the Keneset Hizkyyahu Yeshivah at Kefar Ha'asidim. Although he never published any works, Lopian was renowned both as an orator of considerable power, and the greatest exponent of the old musar school. Of his nine sons three were heads of yeshivot: Ḥayyim Shemuel Lopian (1909– ) at Sunderland, author of Ravḥa de-Shematetah; Lieb Lopian (1910–1979) at Gateshead; Eliezer Lopian (1911– ) at Torat Emet Yeshivah, London; as were two of his sons-in-law: Leib Gurwicz (1906– ) at Gateshead, and Kalman Pinski at the Kamenitz yeshivah in Jerusalem.

[Alan Untermann]

LOPOLIANSKY, URI (1951– ). first *haredi mayor of Jerusalem. Lopoliansky was born in Haifa. He served in the IDF as a medic, worked as a teacher, and studied public administration. In 1976 he established Yad Sarah—a nonprofit association that lends medical equipment to the disabled and ailing—and serves as its chairman. The association operates with 6,000 volunteers in 96 branches throughout Israel. For this project he won many prizes and awards, including the Israel Prize.

Lopoliansky was first elected as a member of the Jerusalem Municipal Council in 1989. He was deputy mayor of Jerusalem in 1993–2003 under Ehud *Olmert, and head of the Planning and Construction Department in the municipality. As deputy mayor he supported Olmert's policy of expanding the boundaries of the city eastwards, in order to maintain the demographic balance in favor of the Jewish population. After Olmert was reelected to the Knesset in January 2003 Lopoliansky became acting mayor, until the new municipal elections that were held in June. In this period he canceled the traditional reception held annually on Independence Day in front of the Tower of David Museum, which used to be attended by diplomats, Arab mukhtars, clergy, IDF officers, and citizens, though he attended other Independence Day celebrations. After being elected mayor of Jerusalem, beating the secular independent candidate Nir Barkat thanks to numerous secular votes that he received, he established a haredi-right-wing coalition, even though he tried to bring Shinui and Meretz into his coalition but failed. He objected to opening the Temple Mount to prayer for Jews for halakhic reasons and supported surrounding Jerusalem with a barrier that will separate the city from the surrounding Arab areas, for security reasons. At the same time he favored improving the services given to the Arab inhabitants of the city. Lopoliansky walked a tightrope on issues to which he had objections in principle, such as meetings with Reform leaders, or the holding of gay processions in the city (Lopoliansky condemned the event, but did not prevent it). At the same time he went out of his way to discourage violent haredi protests.

Lopoliansky was also a member of the national Council for Planning and Construction, and a member of the National Center for the Development of Holy Sites.

[Susan Hattis Rolef (2nd ed.)]

LOBEERBAUM, JACOB BEN JACOB MOSES OF LISIA (c. 1760–1832), Polish rabbi and halakhist. His father, the rabbi of Zborow, died before Lorbeerbaum was born and his relative, Joseph *Téomim, brought him up. After his marriage he settled in Stanislaw and engaged in business, but devoted most of his time to study. He frequently attended the lectures of Meshullam *Igra. When after a few years his business failed, he accepted the rabbinate of Monasterzy ska where he founded a yeshivah. He was later appointed rabbi of Kalisz where he wrote most of his books and with exceptional humility published anonymously his work on parts of Shulhan Arukh, Yoreh De'ah: Havvat Da'at, a name by which he himself became known in scholarly circles when his authorship came to light. This work was accepted in the rabbinic world as a compendium of practical halakhah, and won him the reputation of an outstanding posek. In 1809 he was invited to become rabbi of Lissa, long a center of Torah in Poland. Lorbeerbaum enlarged the yeshivah, to which hundreds of students streamed, among them many who later became great scholars and pioneers of the Hibbat Zion movement such as Elijah *Gutmacher, Zevi Hirsch *Kalischer, and Shraga Feivel *Danziger. Many of Jacob's contemporaries turned to him with their problems. During his time the war between the reformers and the rabbis flared up, and Lorbeerbaum, together with Akiva *Eger and Moses *Sofer, unleashed a vehement attack against the maskilim and the reformers. In Lissa, however, as in other towns of Great Poland that came under Prussian rule after the partition of Poland, the influence of the Berlin reformers grew continually stronger. The schism between Lorbeerbaum and a large section of the community eventually became so great that in 1822 he decided to leave Lissa and return to Kalisz. There he devoted his time to study, rejecting all offers of rabbinic posts from large and ancient communities such as Lublin. In 1830 he quarreled with a powerful member of the community who denounced him to the government, compelling him to leave Kalisz. On the way to Budapest, where he had been invited to become av bet din, he passed through the regional town of Stryj and was persuaded to remain there.

The following of his works have been published: Havvat Da'at (Lemberg, 1799); Ma'asheh Nissim (Zolkiew, 1801), on the Passover Haggadah; Makor Hayyim (ibid., 1807), novellae and expositions of the laws of Passover in the Shulhan Arukh together with the glosses of *David b. Samuel ha-Levi and Abraham Abele *Gombiner on the Orah Hayyim and novellae to tractate Keritot; Netivot ha-Mishpat (ibid., 1809–16), on Hoshen Mishpat; Torat Gittin (Frankfurt on the Oder, 1813), the laws of divorce and novellae on tractate Gittin; Beit Yaakov (Hr-
bieszow, 1823), expositions on Even ha-Ezer; Kehillat Yaakov (1831), on Even ha-Ezer and some sections of Orah Hayyim; Derekh ha-Hayyim, an anthology of liturgical laws for the whole year, first published with the prayer book (1828) and then separately (1860 or 1870); Nahalat Yaakov (1849), expositions of the Pentateuch; Emet le-Yaakov (1865), expositions of talmudic aggadot; Imrei Yasher, commentaries on the five meglilot, each published at a different place and time; his ethical will (1875); and Millei de-Aggadeta (1904), sermons and responsa.

[Éphraim Kupfer]

**LORGE, IRVING** (1905–1961), U.S. educator. Born in New York, Lorge joined the Institute of Educational Research, Teachers College, Columbia University, as a research assistant in 1927, working closely with Professor Edward L. Thorndike. In 1946 he became professor of education and executive officer of the Institute of Psychological Research. Lorge pioneered in research in mental measurement and the capacity for human learning. His major work was on the nature of giftedness, the formulation of indexes of readability and of word frequency, the assessment of intellectual functioning of elderly adults, and the measurement of intelligence in young children. Some of the leading American psychologists and educators of the mid-20th century received their research training under him. During World War II, Lorge was special consultant to the secretary of war, the chief of the Corps of Engineers, and the Army Specialized Training Division. From 1944 to 1948 he was expert consultant to the adjutant general’s office. His research for the armed forces brought radical changes in the service methods of teaching illiterates. Lorge’s many publications include The Lorge-Thorndike Intelligence Tests (1954); A Semantic Count of English Words (1958); and in collaboration with J. Tuckman, Retirement and the Industrial Workes: Prospect and Reality (1953).

[Abraham J. Tannenbaum]

**LORIA, ACHILLE** (1857–1932), Italian economist and sociologist. Loria, a native of Mantua, was a professor at the universities of Siena, Padua, and Turin. He considered man’s relationship to the amount of available free land to be a vital factor in the history of mankind, holding that the relative scarcity of free land condemned men to subjugation and exploitation by land owners. His deterministic economic theory of history reflects the influence of many 19th-century schools of thought, including those of Karl Marx and Herbert Spencer. He seems also to have been influenced by the Irish land-reform debate.

Loria’s voluminous writings include Analisi della proprietà capitalista (1889), Verso la giustizia sociale (1914–20), and Ricordi di uno studente settuagenario (1927). He was regarded by his contemporaries as one of the foremost scholars of his time, and his appointment to the Italian Senate in 1919 was only one of the many honors conferred on him. His stress on the importance of free land in the history of the United States had considerable influence on such economic interpreters of U.S. history as Charles Beard and Frederic Jackson Turner.

[Joachim O. Ronall]

**LORJE, CHAIM** (1821–1878), founder of the first society for the settlement of Erez Israel (Kolonisations-Verein fuer Palastina). Born in Frankfurt on the Oder, Lorje was an educator there and headed a children’s boarding school. In 1864 he moved to Berlin where he lived until his death. He considered himself a descendant of the Safed kabbalist Isaac *Luria; he had a tendency toward mysticism throughout his life and this was probably the source of his initiative to establish the first society for the agricultural settlement of Erez Israel in Frankfurt on the Oder (1860). Opposition from the old yishuv immediately arose against the scheme for they feared that Lorje’s society would divert part of the halukkah funds from abroad. On the other hand, the early harbingers of the Zionist idea, namely Z. *Kalischer, Y. *Alkalai, M. *Hess, David *Gordon, and others, joined Lorje. The society also published Kalischer’s programmatic book Derishat Zyyon (1862). At the close of the book is an appendix by Lorje on the society and its rules.

The center of the society was then moved to Berlin. At first it was successful and collected substantial funds; however, Lorje’s egocentrism and aggressive tone toward his adversaries brought about the gradual weakening of the society until it ceased to exist in 1864. When other societies were established afterward, Lorje’s group was honored as the direct and indirect inspiration for these societies and the Hibbat Zion movement in the West.

**LORKI** (i.e., of Lorca), **JOSHUA** (d. c. 1419), physician and writer who converted to Christianity and became an implacable enemy of Judaism. His father was Joseph Abenvives (or Ibn Vives) of Lorca, near Murcia in Spain. In his youth Lorki apparently studied in Alcañiz under Solomon ha-Levi (*Pablo de Santa María), and was greatly influenced by his teacher’s conversion. Deeply impressed by the letter sent by Pablo to R. Joseph *Orabuena concerning the fulfillment of the messianic prophecies through Jesus, Lorki wrote to Pablo disclosing his own doubts in the Jewish faith and analyzing the causes of Pablo’s conversion. Lorki nevertheless remained in the fold of Judaism until 1412, when he became converted under the influence of the Dominican preacher Vicente *Ferrer. On baptism, Lorki assumed the name Hieronymus de Sancta
Fide (or Gerónimo de Santa Fé). Immediately after his conversion, Lorki conceived the idea of convening a disputation with the leading Jews of Alcañiz. He submitted his proposal to the antipope “Benedict XIII,” whose personal physician he became. Benedict recommended that the disputation should be held at *Tortosa, and that the foremost Jews of Aragon should take part in it. During the disputation Lorki treated his former coreligionists with contempt and threatened them with punishment by the Inquisition. The Jews referred to him as “Megaddaṭ” (“The Blasphemer”), a combination of the initials of Maestre Gerónimo de [Santa] Fé. After the disputation, Lorki traveled widely, trying everywhere to win Jews to Christianity.

Probably when still a Jew, Lorki wrote a book in Arabic on plants and herbs and their therapeutic qualities at the request of Don Benveniste de la *Cavallería. It was translated into Hebrew by Don Vidal Joseph, son of Benveniste (*Gerem ha-Ma'ilot, Vienna Ms. 154). After his conversion, Lorki wrote two polemics against Judaism: *Contra perfidiam Judaeorum, in which he cites aggadic passages allegedly attesting to the coming of Jesus, and *De Judaicis erroribus ex Talmud (Augsburg, c. 1468; Zurich, 1552; later Hamburg, n.d.; both in Bibliotheca Maxima Veterum Patrum, vol. 3, Frankfurt, 1602), under the name *Hebraeomastix. Both works were written around the time of the Tortosa Disputation in 1413–14 and were used during the debates. Many days were spent in Tortosa arguing about the advent of the messiah, which is the topic of the first work. The second work deals with the Talmud, the main source of the Jews’ errors.

One of Lorki’s sons, PEDRO DE SANTA FÉ, was a favorite of Queen María, the wife of Alfonso V of *Aragon. Another descendant, FRANCISCO DE SANTA FÉ, filled various important public offices. At the end of 1485 Francisco was accused of being implicated in the murder of Pedro de *Arbues, the inquisitor of Saragossa, and arrested. He committed suicide in the prison of the Inquisition. His body was burned and its ashes thrown into the Ebro River.

[Haim Beinart]

LORM, HIERONYMUS (pseudonym of Heinrich Landesmann; 1821–1902), Austrian poet and novelist. The son of a prosperous Moravian merchant, Lorm was born in Nikolsburg and raised in Vienna. He studied music until he lost his hearing at the age of 15. Shortly afterward his sight began to fail and he eventually became totally blind. Throughout the 1840s, Lorm wrote liberal lyrics and articles, using various pseudonyms in order to avoid political persecution. Moving first to Leipzig and then to Berlin, he became the literary correspondent of the influential periodical *Die Grenzbote, but returned to Vienna in 1848. Here he befriended the young composer Anton *Rubinstein and the novelist Berthold *Auerbach. Auerbach, who married Hieronymus’ sister, inspired the character of the young Jewish intellectual in *Gabriel Solmar, Lorm’s most popular novel, which originally appeared in 1855 as *Ein Zoegling des Jahres 1848. Gabriel Solmar tells of a Jew’s disillusionment with the panacea of general emancipation and of his return to his own people though not to religious Orthodoxy. It also deals with the political intrigues of the revolutionary period. Other novels of Jewish interest are *Am Kamin (2 vols., 1857), *Todte Schuld (1878), *Der Ehrliche Name: Aus den Memorien einer Wiener Judein (1880), and *Ausserhalb der Gesellschaft (1881). Since Lorm could communicate only by a touch system, he gradually reconciled himself to a life devoted solely to literary pursuits. He wrote several volumes of short stories, and some touching poems deeply influenced by Nicolaus Lenau’s *Welterschmerz. His last volume of poems, *Nachsommer, appeared in 1896 and was filled with pessimism. The publication of his *Philosophisch-kritische Streifzüge (1873) gained him an honorary doctorate from the University of Leipzig. From 1873 to 1892 Lorm lived in Dresden, where he worked as a journalist and published a dozen novels, the best known of which was *Die schoene Wienerin (1886). He moved to Brunn in 1892 and from then until his death devoted himself to philosophical writing, including his main work in this field, *Der grundlose Optimismus (1894).

[Sol Liptzin]

LORRAINE (Hebr. לוריין), region in E. France, formerly Lotharingia. Although the region of Mainz-Speyer did not form part of Lotharingia, the Hebrew sources use *Gedolei Lotar to denote not only *Gershom b. Judah, who was born either in Metz or Mainz, but also apparently his disciples in these two towns and the tosafists of Speyer as well as those of Metz, Toul, and Verdun. The Jews are only mentioned in the duchy proper from the time of Simon II (1176–1205), who is said to have expelled them. There is evidence for the presence of the Jews in *Trier from as early as the fourth century and in *Metz, *Toul, and Verdun in the Carolingian period. At the beginning of the 11th century, a group of Jews was driven out of Saint-Dié on the pretext that one of them had practiced sorcery. In 1286 Duke Ferri III (1251–1304) permitted a number of them to live in Lorraine (in exchange for a quitrent of pepper) and to acquire a cemetery in Laxon, near Nancy, to serve the whole of the duchy. In charters granted to towns in the duchy (e.g., Neuchâtel, Sierck) he stipulated the right to admit Jews. In
Sarreguemines, Duke Raoul took three Jews under his protection in 1336, and acquired some land from another in Lorraine-devant-Nancy, while many Jews who had been expelled from France settled in neighboring Barrois.

From that date the Jews seem to have disappeared from the duchy, probably as a result of the “Black Death, but Lorraine appears to have admitted some of the refugees from France at the end of the 14th century (according to Joseph ha-Kohen, Emek ha-Bakha, ed. Vienna (1852), 74). In about 1455 Duke John II (1453–70) sold to many Jewish families the right to reside in the market towns of *Nancy, Neufchâteau, Pont-à-Mousson, *Lunéville, Rosières-aux-Salines, and Sarreguemines. Duke René II (1473–1508), however, confiscated their belongings and expelled these families in 1477 as a way of “giving thanks to God” for his victory over Charles the Bold in the same year. In theory this expulsion decree remained in force until the 18th century, but from as early as the 16th century the duke, his officers, and his vassals turned a blind eye to the arrival of a few isolated individuals, as well as attracting the financier Maggino Gabrieli to Nancy in 1597 and authorizing a large group to reside in Saint-Hippolyte, on the Alsatian slope of the Vosges. Jews are also mentioned in various villages, especially of German-speaking northern Lorraine: first in Vaudrevange, Sierck, *Morhange, Vaucoujoncourt, and Faulqueumont in about 1600; then in “Boulay, Dieuze, Frauenberg, Sarreguemines, and Puttelange under French rule (1633–97); and finally during the reign of Leopold I (1658–1705), to whom the territory was restored by the Treaty of Ryswick in 1697.

As he was in debt to the Jewish bankers of Metz, Leopold even authorized some of them, including Samuel *Lévy and Moses Alcan, to settle in Nancy, entrusting the former with the administration of his finances (1715). After Lévy’s downfall Leopold turned against the Jews: his decree of August 1720 subjected the movements of foreign Jews to strict control and that of April 1721 expelled all those who had arrived in the duchy after 1680. A list of the 74 families authorized to remain was published. They were spread out in small groups (with the exception of 19 families in Boulay) in 24 localities, mostly in German-speaking Lorraine. All formed a single community with one officer, Moses Alcan of Nancy, and a central synagogue in Boulay. In 1733 their number was increased to 180 families and the officers, then three in number, were charged with raising an annual tax of 100,000 livres. The Jews of Lorraine were authorized to appoint a rabbi by Stanislaus 1, duke of Lorraine and Bar (1736–66), but it was not until 1785 and 1788 that those of Lunéville and Nancy were able to open synagogues and cemeteries. Stanislaus interpreted liberally the restricted number of 180 families. A decree of 1753 shows that Jews had then settled in 28 new localities, including Lunéville, Etain, and Bar; those exceeding the official quota were granted special authorizations or, after the reunion of the territory with France (1766), were naturalized. In 1789 there were about 500 Jewish families in Lorraine, 90 of them in Nancy, where bankers, army purveyors, and merchants were able to develop the cloth trade and to establish industries; one member of the Cerfber family even acquired the seigniory of Tomblaine. During the preparation of the Estates-General (1788–89) most of the memoranda of complaints ("cahiers de doléances") from *Alsace and Lorraine were bitterly anti-Jewish. From many villages of Lorraine came such suggestions as that the Jews should be forced to engage in manual labor, that usury should be forbidden, and even that the Jews should be totally expelled from France.

In 1789 Berr Isaac *Berr led a delegation of the Jews of Lorraine, Metz, and Alsace to the National Assembly and published two pamphlets calling for the emancipation of the Jews. After the dissolution of the single community of the Jews of Lorraine (1790) and the constitution of independent communities in Lunéville, Sarreguemines, Lixheim, etc., the two *consistories of Metz and Nancy, with 6,300 and 4,200 Jews respectively, included most of the Jews of Lorraine (1808). The number of rabbis increased and synagogues were also established in *Phalsbourg, Sarreguemines, Verdun, Epinal, and Toul. After 1871 many Jewish refugees from Alsace and Moselle settled in that part of Lorraine which remained French after the Franco-German War. The department of Vosges, which by then had 2,500 Jews, was incorporated in a new consistory formed in *Vesoul (subsequently transferred to Besançon). In the remainder of French Lorraine, the number of Jews rose to between 7,000 and 8,000 in 1900, 4,000 of whom lived in Nancy. In the part of Moselle annexed by Germany after 1871 there were 7,015 Jews in 1900 (in comparison with 8,571 in 1870). The Jews who remained in this department left many of the villages for Metz or the newly industrialized regions, where they were joined by immigrants from the rest of Germany and Eastern Europe. After Alsace-Lorraine had been ceded to France by the Treaty of Versailles (1919) more immigrants came to the region. The Jewish population of Lorraine was greatly reduced by assimilation and the massive deportations of World War II, especially in the south, although it was slightly augmented by the arrival of some 200 families from North Africa after 1962. In 1970 rabbis were to be found in Metz, Nancy, and Sarreguemines only: other communities numbering more than 100 persons were in Thionville, Lunéville, Forbach, Epinal, Sarrebourg, and Saint-Avold.

[Gilbert Cahen]

LORRE, PETER (Laszlo Lowenstein; 1904–1964), film actor. Born in Roszahely, Hungary, Lorre joined a German theatrical troupe at 17 and for a time worked with the German dramatist Bertolt Brecht. In 1931 his performance as the psychopathic killer in Fritz Lang’s film M made him famous. Lorre, a thickset man who could look both amiable and sinister, went to London for Alfred Hitchcock’s The Man Who Knew Too Much (1934) and then to Hollywood. Among his more than 80...

With his distinctive accent and menacing voice, Lorre carved out a second career for himself as a radio actor, specializing in thrillers and mysteries.

[Ruth Beloff (2nd ed.)]

**LORTEL, LUCILLE** (1900–1999), U.S. theatrical producer. Born in New York, the daughter of Harry and Anna Wadler, she was tutored at home. She attended Adelphi College briefly and studied at the American Academy of Dramatic Arts. She took the name Lorre, an alliterative concoction, for the stage. She made her Broadway debut in 1931 in a bit part in the Theatre Guild production of George Bernard Shaw’s *Caesar and Cleopatra*. She appeared in several plays over the years, but after her marriage in 1931 to Louis Schweitzer, a chemical engineer who made a fortune manufacturing cigarette paper, her acting career became sporadic. Instead, in 1947, she started the White Barn Theater, an experimental outpost free from commercial pressures, in Westport, Conn., on the family summer estate, and Lorrelt provided room and board for the actors. She built a permanent stage, brought in new and innovative troups, established an apprentice school, and offered playwrights, actors, designers, composers, and directors a chance to spread their wings. Lorrelt mothered performers like Eva Marie Saint, Geoffrey Holder, and Zero Mostel, and presented plays by Samuel Beckett, Edward Albee, Eugene Ionesco, and Sean O’Casey. In 1955 her husband gave her a Manhattan theater, now known as the Lucille Lorrelt Theater, as a wedding anniversary gift. The first production at the house, then called the Theater de Lys, was *Marc Blitzstein’s* adaptation of Bertolt Brecht’s and Kurt Weill’s *Threepenny Opera*. It caused such a sensation that the production ran for seven years and put Off Broadway theater on the map. As an indication of her cutting-edge career, she brought Jean Genet to the attention of American audiences with a production of *The Balcony*, which she coproduced in 1960. She also oversaw the first American production of a play by Athol Fugard, the South African playwright. She earned the unofficial title Queen of Off Broadway by producing or coproducing some 500 plays. Several were moved to larger houses on Broadway. Lorrelt received virtually every theatrical award and honor. In addition, the first theater chair to be named for a woman bears her name, the Lucille Lorrelt Distinguished Professorial Chair in Theater at the City University of New York. She established the Lucille Lorrelt Fund for New Drama at Yale University to support the production of new plays at the Yale Repertory Theater and the Lucille Lorrelt Fellowship in Playwriting at Brown University. She also donated money for the annual Drama Circle awards and made sizable contributions to dance and music groups.

[Stewart Kampel (2nd ed.)]

**LOS ANGELES,** city in S. California with approximately 4,000,000 inhabitants occupying 469 square miles of territory; the third most populous city in the U.S. and the largest city in area in the world. Los Angeles County is the home of some 552,000 (2003) Jews, second only to New York City.

**Beginnings**
The origins of the city go back to the early Spanish colonization of California. Los Angeles was formally dedicated as a pueblo on Sept. 4, 1781, with 44 inhabitants. The town grew slowly to 1,100 inhabitants by 1840. A year later the first party of pioneers traveled overland to Los Angeles from the Middle West of the U.S. With them was Jacob Frankfort, the first Jewish resident of Los Angeles. The accession of California to the U.S. in 1850 as an aftermath of the Mexican War and the discovery of gold brought a surge of Jews from Western Europe and the Eastern U.S. to seek a quick fortune. The majority did not engage in gold mining but opened stores in the small towns and mining camps of northern California. The prosperity filtered down to the rancho country of southern California and to the small town of Los Angeles, which was its marketing and commercial center. A Los Angeles census of 1850 revealed a total of 1,610 inhabitants of which eight are recognizably Jewish: Morris Michaels, aged 19, Portland, Oregon; Abraham Jacobi, 25, Poland; Morris L. Goodman, 24, Germany; Philip Sichel, 28, Germany; Augustine Wasserman, 24, Germany; Felix Bachman, 28, Germany; Joseph Plumer, 24, Germany; and Jacob Frankfort, 40, Germany; all were unmarried and merchants, except for Frankfort who was a tailor. The Jewish population, in the wake of economic expansion, increased rapidly. Jews came from San Francisco and the East and directly from Germany and promptly set up businesses, or, procuring carts and wagons, began to trade with the prosperous Spanish rancheros. Jewish services probably began on the High Holidays in 1851 and were more formally established with the arrival of Joseph Newmark (1799–1881) in 1854. Rabbincally trained and traditionally oriented, he was the patriarch of the Jewish community until his death. Services were held in various rented and borrowed places until the first synagogue was built in 1873 at 273 N. Fort Street (now Broadway). The first visit of the artist S.N. Carvalho, in 1854, directly stimulated the founding of the Hebrew Benevolent Society of Los Angeles. Carvalho influenced his host, Samuel Labatt, to establish a philanthropic society and a Jewish cemetery. Thirty charter members elected S.K. Labatt as president; Charles Schachno, vice president; Jacob Elias, secretary and treasurer; and S. Lazard and H. Goldberg, trustees. This was the first social welfare...
organization in Los Angeles. A year later the society procured land from the City Council in Chavez Ravine for the Jewish cemetery, which served until 1900. In addition to furthering their economic interests and the "holy cause of benevolence," the Jewish merchants during these early years were also active in such civic affairs as the founding of the Masonic order, the first Library Association, the Odd Fellows order, the German Turnverein, and as elected members of the City Council and County Board of Supervisors. Jews participated freely in every facet of social and economic as well as communal life. From 1850 until 1880 one or two Jews continuously served as elected officials. In 1873 they took the initiative in organizing the first Chamber of Commerce. Jewish business, concentrating on wholesale and retail merchandising, was among the largest in town. In 1865 I.W. Hellman (1843–1920) ventured into the banking business to become ultimately the leading banker in Los Angeles and among the dominant financial powers in the state. By the 1890s I.W. Hellman and Henry Huntington became the two financial giants of southern California. In 1861 Beth El, a congregation of Polish Jews, was formed. It soon was replaced by the German Congregation B'nai Brith, which invited the Orthodox Rabbi A.W. Edelman (1832–1907), a Hebrew school-teacher in San Francisco, to become its first rabbi. Congregation B'nai Brith's first officers were Joseph Newmark, president; Wolf Kalisher, vice president; M. Behrend, secretary; and Elias Levinthal, Sidore Cohen, and Louis Levy, trustees. It functioned as a traditional congregation until the middle 1880s, when it began moving to an unequivocal Reform position. Ephraim Schreiber of Denver became the rabbi from 1884 to 1889; Abraham Blum, 1889–95; M.G. Solomon, 1895; and Sigmund Hecht, 1900–19. The position of the Jewish community in Los Angeles was expressed by an editorial in the local Daily News in 1873, which summed up the prevailing attitude toward the Jewish population: "We commend them for their commercial integrity and their studied isolation from prevalent vices of gambling and inebriation. We commend them for their general business and personal probity... they are among our best citizens and the city suffers nothing in their hands...." The population of Los Angeles rose sharply during the 1880s with the arrival of the transcontinental railroad service and following a concerted program of promotion by the Chamber of Commerce. The population, only 11,000 in 1880, multiplied fivefold in a few years during a land boom of vast proportions. With the arrival of large numbers of Middle Westerners the easygoing, socially integrated society began to change. Jewish social life became more ingrown. Jews established separate social outlets including a Young Men's Hebrew Association for the young and the Concordia Club for the card-playing parents. Jews lost their places in the Blue Book, the local social register, which in 1890 listed 44 Jews, 22 in 1921, and in recent years, no discernible Jews.

Population Growth and Communal Development
At the beginning of the 20th century large numbers of East European Jews began to migrate to Los Angeles to begin in their turn the ascent to prestige, status, and security. Their movement to Los Angeles was aided by the Industrial Removal Office in New York, which sent them as part of a grand dispersal design. Approximately 2,000 Jews went to Los Angeles through this source of assistance, and subsequently brought their families. In 1900 the Los Angeles population was 102,000 and the Jews numbered 2,500. Twenty years later the Jews constituted 40,000 out of 576,000, and by 1930 the Jews numbered 70,000 out of 1,200,000. The rapid increase of population created for the first time recognizably Jewish neighborhoods. By 1920 the three major areas of Jewish concentration were Temple Street, Boyle Heights, and the Central Avenue district. The early Jewish community organizations, Congregation B'nai Brith, B'nai Brith Lodge No. 224, which had been established in 1874, the Ladies Hebrew Benevolent Society established in 1870, and the Hebrew Benevolent Society were by this time insufficient to meet the needs of a new era. The high percentage of Jews coming west for their health made the establishment of medical institutions the first order of communal business. In 1902 the private home of Kaspase Cohn was donated to become the Kaspase Cohn Hospital. A few years later, the hospital was forced to move outside the city when the treatment of tuberculosis, its main business, was declared illegal within the city limits. In 1911 the Jewish Consumptive Relief Association was established and began to build a sanatorium at Duarte for consumptives who came to seek relief; this evolved into today's City of Hope Medical Center. For the elderly people the Hebrew Sheltering Home was established, to become the Jewish Home for the Aged. In 1910 B'nai Brith was the moving force for the establishment of the Hebrew Orphans Home, whose name ultimately became Vista Del Mar. In 1912 the Federation of Jewish Charities was established to unite all fundraising for Jewish institutions. The Kaspase Cohn Hospital gradually transformed itself into a general hospital. It gradually altered its character as a charity hospital and began to charge patients. In 1926 it moved to facilities on Fountain Street near Vermont Avenue, and was renamed the Cedars of Lebanon Hospital. The first meeting of the Federation of Jewish Charities was held in 1912 with Ben R. Meyer, the son-in-law of Kaspase Cohn, as president, and included Dr. David W. Edelman, son of Rabbi Edelman and the president of the Reform congregation; Louis M. Cole, son-in-law of I.W. Hellman; M.N. Newmark and Isaac Norton, members of pioneer families; and S.G. Marshut of B'nai Brith, the founder of the Orphans Home. They typified the local Jewish leadership, to whom philanthropy was central in Jewish community life. The first decade of the 20th century was marked by a transition from charity aid to social welfare. During World War I overseas needs began to assume a large role in the philanthropy of the Jewish community. In 1934 the United Jewish Community was organized alongside the United Jewish Welfare Fund and the United Community Committee, which was established to fight antisemitism. The new leaders were mostly lawyers and not men of inherited wealth. Men like Lester W. Roth, Harry A. Holzer, Benjamin J. Scheinman, and Mendel B. Sil-
berberg succeeded the Newmarks and the Hellmans. In 1937 the United Jewish Community was incorporated as the Los Angeles Jewish Community Council, with the United Jewish Welfare Fund as its fund-raising arm. The United Community Council became the Community Relations Committee of the Jewish Community Council. The Federation of Jewish Charities continued as a separate entity until 1959, when a merger was effected between the Jewish Community Council with its pro-Israel interest and overseas concerns, and its orientation toward Jewish education, and the Federation of Jewish Welfare organizations typifying the earlier Jewish community, with its primary concern for local philanthropies. A few years later the Cedars of Lebanon Hospital and Sinai Hospital, which was established during the 1920s by the Eastern European community, also merged.

Religious Developments

In the early 1900s Congregation B'nai B'rith, which had served the entire community since 1861, was joined by the first Orthodox congregation, Beth Israel or the "Olive Street Schul." In 1906 Congregation Sinai, the first Conservative congregation, was organized, and built its first edifice three years later. Isadore Meyers was rabbi and his successors included Rudolph Farber, David Liknaitz, Moses Rosenthal, and Jacob Kohn. The congregation grew and moved in 1930 to an imposing edifice at 4th and New Hampshire streets. Two rabbis and two congregations towered over the religious life in Los Angeles Jewry until World War II. Wilshire Boulevard Temple was founded in 1860. It was classical Reform, with a magnificent structure erected in the 1920s on Wilshire Boulevard representing the affluence of its membership, including many of the movie colony. It was the "established" congregation of the Jewish community. Hushed worship, the garments of the minister, the mixed choir, the centrality of the sermon, and the absence of bar mitzvah, all marked the Reform temple. Its rabbi was Edgar F. Magnin (1890–1984). Under his influence membership rose from 300 to 2,000, to become reputedly the largest congregation in the United States. In 1930 Dr. Jacob Kohn (1881–1968) arrived at Congregation Sinai. He became renowned for his liberal forthrightness, philosophical depth, and Jewish scholarship. Rabbi Osher Zilberstein of the Breed Street Shul (1891–1973) was the preeminent Orthodox rabbi of his generation. At the end of World War II 150,000 Jews lived in Greater Los Angeles, an increase of 20,000 since the war began.

The major growth of the Jewish population in Los Angeles began after 1945 when thousands of war veterans and others moved West with their families. The city's population multiplied and the Jewish community grew apace. By 1948 the Jewish population was a quarter of a million, representing an increase of 2,000 people a month as Jews moved West in one of the great migrations in Jewish history. The Middle West was the major area of origin; perhaps 38% of the Jewry in Los Angeles in 1951 were from the Chicago area. In 1951 it was estimated that 330,000 Jews lived in Los Angeles. Dozens of suburban communities founded during this period were swiftly absorbed in the spreading Los Angeles metropolis. By 1965 the Jewish population of Los Angeles had reached half a million and the community had become one of the largest centers of Jewish population.

The vast increase in Jewish population resulted in a proliferation of congregations, synagogues, and religious functionaries. The national movement of the religious denominations "discovered" Los Angeles as the United Synagogue established its Pacific Southwest Region, the Union of American Hebrew Congregations established its Southern Pacific Region, and rabbis by the dozen wended their way West. By 1968 there were 150 congregations and even more rabbis in Los Angeles. The largest congregations were Wilshire Blvd. Temple, Temple Israel of Hollywood, Temple Emanuel, Temple Beth Hillel, and Temple Isaiah (Reform); Temple Beth Am, Valley Jewish Community Center, Sinai Temple, Hollywood Temple Beth El, and Valley Beth Sholom (Conservative); and Beth Jacob and Shaarei Tefillah (Orthodox).

All three branches of Judaism established schools of higher Jewish learning after 1945. The Jewish Theological Seminary established the University of Judaism, which in turn developed a Hebrew Teachers' College, a School of the Fine Arts, the Graduate School, and an extensive program of adult Jewish studies. Hebrew Union College similarly developed a branch in Los Angeles with a rabbinical preparatory school, cantors' training school, and a Sunday school teachers program.

Yeshiva University established a branch specializing in teacher training and adult education. All three institutions had extensive programs of public education and public lectures and exercised a maturing effect on the growing Los Angeles Jewish community. Brandeis Camp Institute, near the city, with a college camp, children's camp, and weekend cultural retreats exerted a cultural influence on the Jewish community; other summer camps were educational influences for children. The Bureau of Jewish Education did much to raise the level of teaching and encouraged and subsidized Hebrew secondary schools. By 1968 the Los Angeles Hebrew High School, the largest, had more than 500 students.

The community centers were organized under the Jewish Centers Association, founded in 1943. By 1968 there were the following neighborhood centers: The Olympic Jewish Center and the Valley Cities Jewish Center, the Los Feliz Jewish Center and the Bay Cities Jewish Center, the West Valley Jewish Center and the North Valley Jewish Center, all under professional direction. The directors of the Jewish Centers Association since the Second World War were Meyer E. Fichman, Bertram H. Gold, who later became the long-time head of the American Jewish Committee, and Charles Mesnick.

Los Angeles has been the capital of the movie industry. The development of films moved from New York to Los Angeles beginning in 1912. Film distributors or exhibitors like Marcus Loew, Adolph Zukor, William Fox, Carl Laemmle, Louis B. Mayer, of whom had started in the clothing business,
came to the suburb of Hollywood to make films. By 1925 the Hollywood movie colony was famous throughout the world. The advent of talking pictures was sparked by the Warner Brothers, Albert, Jack, Sam, and Harry, who produced *The Jazz Singer*, a film about a Jewish cantor's son who was reticent to uphold the tradition of his ancestors and wanted to be a singer. It starred Al Jolson, the son of a Washington, d.c., cantor who did not go into his father's profession. This ushered in a new era in the movies. In 1930 three of the eight major production companies were partly owned by Jews, and 53 of 85 production executives were Jewish. When television production established itself in Hollywood from 1950, Jews were again a considerable proportion of the writers and producers in the industry. The biggest Jewish business in town, however, was not entertainment but construction and financing. Many Jews were involved in one or another aspect of real estate, financing, and other elements of the building trade. They built some of the large suburban areas and tract cities such as Lakewood, La Mirada, Panorama City, and Santa Susanna.

Jews, too, were strongly represented in the research, electronic, aircraft, and educational institutions that dotted southern California. The University of California at Los Angeles, for instance, which reputedly had only one Jewish professor in the 1930s, had over 400 Jewish scholars on its faculty 30 years later. As elsewhere, Jews founded thriving practices in medicine, law, and accounting, and were heavily concentrated in furniture, food, sportswear, and retail merchandising. By 1968 Jewish mobility had brought an end to the formerly Jewish Boyle Heights, Adams Street, Temple Street, Wilshire District, and other areas of Jewish concentration. Jews settled in the western and newer sections of sprawling Los Angeles – Westwood, Santa Monica, and Beverly Hills. In the San Fernando Valley 100,000 Jews resided in communities from North Hollywood westward to the city limits. Other Jewish communities had been established in the San Gabriel Valley, while thousands moved to Orange County.

### 1970–2005

Swift currents of change that swept over the Jewish community during the 1970s and 1980s profoundly affected Jewish life in Los Angeles. In summary they were (1) the drastically reshaped demographics of a city which at a mind-boggling pace underwent an immigrant-driven transformation into America's first Third World city. This ethnic revolution had powerful Jewish consequences including the need for reexamination of Jewish self-identity; (2) profound internal religious changes, marked by significant movement toward increased adherence to historical traditions, alongside equally striking departures from traditional views and practices; (3) the assumption by the Los Angeles Jewish Federation of responsibilities and objectives commensurate with newly perceived qualitative needs of the world's second largest Jewish community (after New York).

#### The Demographic Revolution in Los Angeles

California in the 1980s grew by six million people, the biggest human surge in any state in U.S. history, with estimates of an additional million immigrants by the end of the century. One third of the new arrivals settled in Southern California, increasing its population to 14.5 million. Greater Los Angeles had abruptly become the largest metropolitan center in the country. It also had ceased to be a European outpost and was now a multi-racial world nation. Some 75% of the immigrants were Hispanic, Asian, and black. By the end of the 1980s, 51% of Los Angeles residents were Hispanic or nonwhite. Between 1980 and 1998, the Latino population of the United States doubled to 30 million, establishing Hispanics as the single largest minority community in the country. By 2003, 38 percent of L.A.'s population identified itself as Hispanic, resulting in portentous shifts in the city's political, economic, and cultural tectonics. The renaming of Brooklyn Avenue in the pre-war Jewish stronghold of Boyle Heights to Avenida Cesar Chavez in 1995 was one early indication of this demographic change. The election in 2005 of Antonio Villaraigosa, the city's first Hispanic mayor in over a century, signified a demographic sea change, although the vagaries of identity politics did not solely determine the outcome of this contest.

The city's Asian community, largely Chinese and Japanese, who in the 19th century had been viewed as ignorant, laboring class "coolies," had begun immigrating to the West Coast as colonizers of the Pacific Rim. Many were well educated, with massive investments in corporations and real estate. Others from Korea, Philippines, Vietnam, and dozens of other countries seemingly overnight established and built retail businesses, bought homes, and transformed neighborhoods. As examples, Monterey Park, a former Jewish enclave, became the Western world's first Chinese suburban city. Elite San Marino, which once staunchly restricted Jews, became 46% Asian. Congregation Jueda in the midst of the Jewish Fairfax area was transformed in 1975 into a robust Korean Presbyterian church. California State University, Los Angeles, in 1989 had the following student profile: of 20,000 students, 30% were Latino, 11.5% Asian, 11.5% black, and 30% white. The vice president for academic affairs of the state college system announced that: "Cal State-L.A. is probably close in its student body representation to what any university campus in California, public or private, is going to look like in the early 21st century." These demographic estimates were inescapably destined to be among the powerful determinants of the character of Jewish life in the coming century.

#### The Jewish Population of Los Angeles

By 1989, Los Angeles Jewry was stable after a period of rapid growth. Another 90,000 Jews had settled in neighboring Orange County. The Greater Los Angeles Jewish community was now numerically larger than the Jewish population of any country other than the United States, Israel, and the Soviet Union. Some of the population increase represented the sunbelt-driven migration from the East and Middle West to Florida and the West Coast. A substantial portion of the new immigrants came from Israel (probably 50,000, although estimates ranged as
high as 200,000. The Los Angeles Jewish Population Survey found that there were 14,170 Israeli-born Jews in L.A. but 52,400 who self-identified as Israeli, those who were born elsewhere but grew up in Israel). The Hebrew-speaking newcomers settled in the Fairfax area, a traditional gateway for Jewish immigrants boasting the city’s largest population, in North Hollywood and, once they had established themselves financially, in Encino/Tarzana and the Conejo Valley, adjoining the western San Fernando Valley, with over 40,000 Jews, one of the fastest-growing communities in the country. This influx engendered anxiety within the established community, which at least initially regarded the “yored” (Hebrew pejorative for émigré, meaning one who descended, left Israel) presence as an embarrassing and unfortunate abnegation of Zionism. Unlike other Jewish immigrant populations, resident Israelis were “transnational”: although they might well remain in the U.S. indefinitely, they thought of themselves as Israeli citizens fully intending to end their collective sojourn in the Land of Promise for a return to the Promised Land. This state of “living on one’s suitcases” rendered their commitment to local Jewish continuity naturally suspect. Differences in language, style, comportment, and patterns of communal affiliation also contributed to estrangement. Relations improved shortly after the Gulf War, when Israeli Prime Minister Yitzhak Rabin, who had once denigrated the émigré community as the “fallout of weaklings,” retracted his characterization and expressed gratitude to the Los Angeles Israeli community for its ongoing solidarity. American Jews, meanwhile, began to view immigrant Hebrew-speakers not so much as the spiritually fallen and psychologically ambivalent (if not thoroughly tormented by desertion-induced guilt), but as a valuable transfusion of Jewish authenticity and vitality. Jewish institutions, most notably the Jewish Federation Council, the city’s Jewish community centers, and some synagogues, launched efforts to absorb Israeli families, some providing organizational venues in which they could express their cultural and linguistic proclivities. Increasingly, Israeli Angelinos themselves realized they were likely to remain for the long run, and would do well to address the problematic inherent in transmitting their national, linguistic, and cultural identity to children raised and acculturated in the U.S. Hebrew speaking, Israel-centered scouting movements, after-school programming, and adult cultural activities thrived as a result. In 1996, community-minded Israelis formed the Council of Israeli Organizations, an arm of a non-profit umbrella organization called the Promoting Israel Education and Culture Fund. Originally tasked with organizing the city’s annual Israeli Independence Day Festival, which draws tens of thousands of Los Angeles-based Israelis, it reconstituted in 2001 as the Council of Israeli Community, with an agenda of fostering pro-Israeli rallies and more effective ties to the media and with other ethnic groups.

In 1991 2,900 Jews from the Soviet Union came to Los Angeles. By 1997, the numbers of Russian Jews arriving went to well below 1,000. Jews from the former Soviet Union were estimated at 24,500 according to the 1997 LAJPS, making this the third or fourth largest concentration after New York, San Francisco, and Chicago. Their presence in West Hollywood earned the neighborhood the nickname “Little Odessa.” The Iranian Jewish presence is believed to number 18,000, the largest such concentration in the U.S. The Persian community, which has almost exclusively settled in the city’s wealthy West Side and San Fernando Valley, is religiously, socially, and culturally distinct. Many have brought with them the skills of merchants. Others live in more humble circumstances, with trouble adjusting to their adopted country. Shops with Farsi and English signs dot the West Side. Their supermarkets and shops have the feel of Teheran. Eighty percent of the Iranian refugees coming to the U.S. resettled in L.A. and they transplanted to L.A. much of the leadership of the Tehran Jewish community including the chief rabbi and Iranian Federation.

In addition, there are sizeable contingents from South Africa (the bulk of whom settled in Orange County and San Diego), Central Asia, South America, Australia, and Mexico. Like their Israeli counterparts, these immigrants have provided unique challenges to the Los Angeles Jewish community in matters of integration and acculturation. In contrast, a small but not insignificant community of Canadian Jews, most having arrived since the election of the separatist Parti Quebecois provincial government in 1976, many also highly trained professionals in pursuit of the material advantages offered by the American Dream, has blended into the existing community with such consummate ease as to render them nearly invisible.

Comprising half the Jews in California and perhaps as many as one in ten of the American Jewish population, Jewish Angelinos continue to enjoy pride of place in the finest sections of the city, including Beverly Hills, Bel Air, Westwood, the San Fernando Valley, Santa Monica, and Pacific Palisades. The Fairfax area continued to contain the largest single concentration of Jews in the city; Encino/Tarzana are a very close second. However, by 2005 the Fairfax area’s Jewish ambience came under siege, in part due to the influx of other ethnicities and also because various Jewish storefronts found themselves having to move out due to exorbitant rents due to the development of a new shopping mall, The Grove, in the heart of the old Jewish neighborhood. In terms of Jewish ambience and vitality, the area has long been supplanted by Pico-Robertson and La Brea/Beverly – which is home to the more Orthodox community and has created the largest Jewish day school, Toras Emes, and numerous kotelim – some three miles to the southeast, which has emerged as the city’s primary bastion of Orthodox Jewry. Synagogues, large and small, are found on Pico and Olympic Blvds. Elegant kosher restaurants and Judaica shops are also to be found along with fast food places, only distinguishable because of their kashrut certificate.

North Hollywood/Valley Village is a second Orthodox area, which also has many synagogues, restaurants, shops, etc.

Since the 1970s, Jewish Angelinos have played a major role in the political life of the community: the City Council,
Board of Supervisors, State Legislature, and the House of Congress. In addition the Jewish community could count on the non-Jewish congressmen and senators to vote with friendly sensitivity on matters of Jewish interest. They were conspicuous in the cultural, philanthropic, and economic life of the city. Indeed, they were the most cohesive, best-organized white body in the city with ties to the instruments of civic power.

These new realities contrasted sharply with the years from 1990 to 1960, when no Jew was elected to the City Council or the Board of Supervisors or to represent California in Sacramento or Washington. Nor were Jews considered worthy to be mentioned in the society pages of the Los Angeles Times or in the published social register. Their new status now meant that the organized Jewish community was, as a minority, enjoined to protect and advance its own interests but equally responsible, as a principal member of the white establishment, to seek the peace of the city, recognizing, to paraphrase Jeremiah, that only in its welfare, would they be at peace. This double identity was bound to create ambivalence and tension in the Jewish community in the years ahead. The Waxman-Berman machine, led by two veteran Jewish Congressmen Henry Waxman and Howard Berman, drew Jewish support for political campaigns. Zev Yaroslavsky made a seamless move from Jewish leadership to county commissioner. Three members of the City Council were Jewish in 2005 including an African American Jew by choice and the son of an Italian father and a Jewish mother. National leadership of AIPAC has come from Los Angeles including Edward Sanders in the 1970s; he later served as the Jewish liaison for President Jimmy Carter. Lawrence and Barbara Weinberg played a unique role from Los Angeles in the expansion of AIPAC and Barbara, known as Barbie, in the establishment of the Washington Institute for Near East Policy.

A major implication for the local Jewish community, which became crucial by the turn of the 21st century, was that Los Angeles had become a multi-racial metropolis with ethnic ties to every race and region in the world. The Jewish community, representing some 15 percent of L.A. voters, had thrust upon it a double identity. It had the obligation to assert itself and protect its rights. But in a situation without precedent, it came to be seen by many ethnic groups, including its former allies in the African-American community and by the newly assertive Latino bloc it had hitherto overlooked, as an integral representative of the white establishment. While Jews and Hispanics shared some communal interests, such as quality schools, safe neighborhoods, economic development, and civil equality, they have parted on various religious and educational issues, and have clashed in the political arenas. Characteristically, Jewish liberals have proved vulnerable to charges within some Latino quarters that they are integrally right-leaning whites unsympathetic to Latino aspirations. This vulnerability, the result of demographic pressures, a discernible shift by Jews to the political right and, especially in the aftermath of the 1992 Los Angeles riots, growing insularity and wariness, portends a decline in Jewish political power. Valley Jews tend to be middle class, ethnically diverse, somewhat conservative yet still supportive of public schools. Despite their predilection for progressive politics, West Side Jews remain staunch members of the city’s power elites, and retreated from the public school system during the late 1970s, when school busing generated “White Flight.” The defeat, in 2002, of efforts by the San Fernando Valley to secede from the Los Angeles municipality helped forestall the dramatic dissipation of Jewish clout.

The arrival of the Hispanic population, coupled with the withdrawal of Jewish stores and landlords from African-American neighborhoods, tended to dilute Black-Jewish tensions in the political arena.

The Religious Community

Judaism in Los Angeles was decisively shaped by a number of rabbis of varying denominations who were drawn westward by personal visions of what they might accomplish in a city largely unbefallen to Eastern power structures and patterns of organization. In a community capable of providing considerable human and physical resources if properly motivated, these rabbis created an opportunity to concentrate their energies as religious leaders along lines of personal interests and concerns. They became what might be termed rabbi-institution builders, rabbi-communal leaders, rabbi-social activists, rabbi-educators, and rabbi-visionsaries. The following is a sampling of the impact on Judaism in Los Angeles by a few of the over 200 Los Angeles area rabbis.

Rabbi-institution builders. The Orthodox leaders in Los Angeles before World War II had such little faith in their own future that their leading synagogue was called “the modern synagogue,” and their significant events were given enhanced status by the participation of a local Reform rabbi or his president. The resurgence of Orthodoxy in post-war Los Angeles was fueled by some determined rabbis, who were confident that American Jews, however acculturated, would be receptive to a return to authentic tradition if it were attractively clothed in American values, if it secured serious media attention, and if it could be identified as the natural heir to the Jewish heart.

The most significant of centrist Orthodox synagogues, the Beth Jacob Congregation, was led by Rabbi Simon Dolgin who arrived in 1938 and relocated Beth Jacob from West Adams to Beverly Hills in the 1950s. He also established the Hillel School and had a distinguished career before moving to Israel in the early 1970s. He was one of the very few rabbis who moved to Israel, neither at the beginning nor at the end but at the prime of his American career, where he became director general of the Ministry of Religion and a rabbi in Ramat Eshkol.

Rabbi Marvin Hier moved into Los Angeles from Vancouver in 1977, intending to establish a yeshivah, but ultimately founded the Simon Wiesenthal Center, which became the Los Angeles community’s first national and international Jewish organization. Rabbi Hier came to Los Angeles just as what Jonathan Woocher termed “the Judaism of sacred survival” was...
coming to the fore, when the remembrance of the Holocaust and the protection of the State of Israel were central to Jewish identity. Taking the name of the world famous Nazi hunter, but running the organization in almost complete independence from Simon Wiesenthal, Rabbi Hier propelled the Holocaust center onto the world stage to stake out an independent claim as an activist leader in the fight against antisemitism. In 1993, the center opened its landmark 160,000-square-foot Museum of Tolerance, a $50 million high-tech exploration of racism, prejudice, antisemitism, and genocide (including the Turkish depiction of the Armenians and that of vast segments of Cambodian people by their own government), and broke ground in 2004 on a no less controversial sister institution, slated to cost $200 million, in Jerusalem.

When Rabbi Hier came, lay leaders of the Rambam School approached him to take charge of the school. It reopened as Yeshiva University Los Angeles (YULA) and the school grew significantly. In 2002, Hier moved the YULA contingent that had shared the Wiesenthal Center's original building on Pico Boulevard into a new $12.6 million facility and a second school for girls on Robertson Blvd. Hier himself has been alternately criticized and credited for commanding the bread-and-butter issues of longer-established organizations. There is little doubt, however, in his ability to interject himself as a key player on the world stage and in his cultivation of prominent state legislators (Governor Arnold Schwarzenegger once called the diminutive Hier “my hero”). He developed a broad based membership organization, mirroring the tactics used by political organizers so successfully, and he presents a self-confident, right-of-center American Orthodoxy. Taking seriously the organization's mission of tolerance, he has kept the Wiesenthal Center and its Museum of Tolerance open to all groups. For example, it hosted a 1997 exhibition on Jackie Robinson's integration of baseball. Much to the chagrin of Federation leadership, who have not fared well in the entertainment community, he has navigated Hollywood celebrity and mastered documentary film-making (the center has won several Academy Awards for Holocaust-related films produced by his in-house film unit). Hier is an unflaging Jewish juggernaut, feared, respected, and taken quite seriously. He is also a well-established spokesman on Jewish issues. Unlike many professionals who need clearance from his highness, a counseling center for battered women, and two drug treatment centers financed substantially by federal grants. Woven into the program were public relations sorties, featuring Judaism in the streets such as mitzvah mobles, and Hanukkah lighting celebrations in shopping malls and city halls. The annual climax was a hyperkinetic telethon in which movie and television personalities vied for the mitzvah of raising five million dollars a year for their particularist form of Hasidic Judaism. The death of Schneersohn in June 1994 split the Chabad movement between those who believe he had been and continued (despite his manifest physical demise) to be the long-awaited Messiah, and those who preferred to avoid unambiguous pronouncements as to his exalted status. However problematic theologically (the Rebbe's cult of personality, which he did little to contain during his latter years, sometimes skirted the Christological), such speculation has done little to daunt Chabad's outward expansion. The organization continues to inject itself into some of the least hospitable communities imaginable, which in Southern California include such hedonistic fleshpots as Malibu, Pacific Palisades, and Santa Monica, Huntington Beach, Irvine, and Yorba Linda. There are now 79 Chabad centers statewide, and despite occasional setbacks and resistance, no lessening in zeal for achieving a hasidic version of Manifest Destiny. Indeed, Chabad's high birthing rate and unceasing generation of successive waves of energized, inner-directed missionary cadres suggests that growth and expansion have become vital organizational imperatives, perhaps even linchpins of continued survival.

Los Angeles has two Holocaust Museums and a Memorial. In addition to the Simon Wiesenthal Center, the Los Angeles Holocaust Museum was established by the Federation and influential survivors as the Martyrs Memorial Museum, and after a 1994 earthquake forced the Federation to renovate its building, the Museum never returned. It has been independent since 2004. A Memorial of Six Pillars has been built in Pan Pacific Park adjacent to the Fairfax neighborhood. It is the site of the annual community Yom Hashoah observance. The Wiesenthal Center hosts its own. There are significant Holocaust education programs also at the Survivors of the Shoah Visual History Foundation, which in 2006 became part of the University of Southern California, at UCLA, and at the University of Judaism in addition to neighboring universities in Los Angeles suburbs such as Chapman University and Claremont-Mckenna College.

Rabbi Baruch Shlomo Cunin came to Los Angeles in the 1960s as the Rebbe's (Menachem Mendel *Schneersohn) emissary. His predecessor came in the 1950s, but did not last long. In subsequent years, Cunin became a major religious force in the state with an operating budget of $15 million from 50,000 contributors and was supported by a rabbinic staff of 106 impassioned young graduates of their yeshiva in Crown Heights, Brooklyn. He established and controlled an imposing and growing array of synagogues, day schools, adult Torah study centers, and social projects such as a shelter for the homeless, a counseling center for battered women, and two drug treatment centers financed substantially by federal grants. Woven into the program were public relations sorties, featuring Judaism in the streets such as mitzvah mobles, and Hanukkah lighting celebrations in shopping malls and city halls. The annual climax was a hyperkinetic telethon in which movie and television personalities vied for the mitzvah of raising five million dollars a year for their particularist form of Hasidic Judaism. The death of Schneersohn in June 1994 split the Chabad movement between those who believe he had been and continued (despite his manifest physical demise) to be the long-awaited Messiah, and those who preferred to avoid unambiguous pronouncements as to his exalted status. However problematic theologically (the Rebbe's cult of personality, which he did little to contain during his latter years, sometimes skirted the Christological), such speculation has done little to daunt Chabad's outward expansion. The organization continues to inject itself into some of the least hospitable communities imaginable, which in Southern California include such hedonistic fleshpots as Malibu, Pacific Palisades, and Santa Monica, Huntington Beach, Irvine, and Yorba Linda. There are now 79 Chabad centers statewide, and despite occasional setbacks and resistance, no lessening in zeal for achieving a hasidic version of Manifest Destiny. Indeed, Chabad's high birthing rate and unceasing generation of successive waves of energized, inner-directed missionary cadres suggests that growth and expansion have become vital organizational imperatives, perhaps even linchpins of continued survival.

The official Jewish establishment, acutely conscious of the strategic necessity of maintaining the historic separation of church and state, was likewise periodically constrained to
remain mute and resigned while Chabad aggressively broke down barriers between religion and the state in its public square religious practices, and while the Wiesenthal Center was prevailing on the California Legislature to contribute five million dollars to the Center’s projected Museum of Tolerance. These rabbinical leaders, some of them affiliated with or coming out of the Ba’al Teshuvah movement, represented a new meld: totally Orthodox, totally American, rightward-leaning, willing to explore commonalities with similarly disposed Christian groups, technologically advanced, and with their work largely financed by non-Orthodox supporters.

Rabbi Nahum Braverman came to Los Angeles in the mid-1980s to establish a western outpost of *Aish Hatorah, a Jerusalem yeshivah located near the Western Wall and founded by an American rabbi, Noah Weinberg. In a few short years he created an outreach program of one-to-one Torah learning. He established a chain of study sessions in private offices and conference rooms and began the process of organizing Aish Hatorah synagogues. The students were prominent business and community leaders as well as film and TV industry celebrities. The program created a non-Hasidic network of intellectual B’aluvi teshuvah (newly Orthodox), sympathetic to “authentic” Judaism and often prepared to support it, even though not necessarily embodying it in their lifestyles. Aish has proved especially popular among young singles, who attend Shabbat services, Shabbat dinners at the homes of local congregationalists, post-dinner lectures, and occasional “speed-dating” evenings.

Rabbi Daniel Lapin arrived from South Africa in 1977. Although only a young man he was already an engineer, physicist, airplane pilot, sailor, and Orthodox rabbi. Together with Michael Medved, bestselling writer, movie critic on public TV and, subsequently, radio talk-show host, they took over a minuscule store front synagogue on the Venice beach, operated by and for a few remaining elderly Jews, and established the Pacific Jewish Center. It was an unusually strict Orthodox synagogue in which financial participation was voluntary, participation in Torah study compulsory, and outdoors adventuring a mitzvah. At first the members were overwhelmingly single; in time they married, moved into the neighborhood to be within walking distance of the synagogue, and so created a living and learning community, which former and disaffected members described as “cultlike.” The congregation split in the early 1990s, ostensibly after a spat involving a decision to move the center’s day school out of the area. Lapin subsequently left a truncated congregation to the administration of his brother, David, and to his longtime assistant, Rabbi Avi Pogrow. Lapin and Medved moved to the Seattle suburb of Mercer Island, where, as talk-show radio hosts, they established a small group dedicated to forging a pan-Jewish coalition with fundamentalist Christians, and to weaning American Jews from their Liberal affectations. Medved generated particular consternation within Jewish circles for his own impassioned defense of actor/director Mel Gibson, whose blockbuster film The Passion of the Christ was widely perceived as an antisemitic assault and reaffirmation of pre-Vatican II charges of deicide. In 2003, David Lapin left for Washington, D.C., leaving Medved to the ministrations of Ben Geiger, a graduate of an ultra-Orthodox rabbinical school in Baltimore and the center’s first full-time rabbi. Lapin accepted support from many sources included the Orthodox Jewish Washington lobbyist Jack Abramov.

On March 1, 2005 (20 Adar 5765), 2,000 men gathered in the new Walt Disney Concert Hall to celebrate the Siyum ha-Shas, the seven-year cycle of studying a page of the Talmud each day, every day, which enables the devout and the persistent to complete the entire Talmud. If one panned the crowd in Los Angeles, one would have seen physicians and lawyers, accountants, real-estate investors, jewelers and professional men, as well as Jews from all walks of life, a cross section of Jewish life in Los Angeles. Even a few of the men – very few – earned their living in the entertainment industry. Many had come to Los Angeles only in the past three decades and all were comfortable in calling Los Angeles their home. Many, but not all, were raised in Orthodox homes. Others were the results of the success of the various outreach programs in attracting Jews to turn toward tradition.

While one would not ordinarily associate Los Angeles with the ultra-Orthodox community, there are some 5,000 families who constitute that community. They live in different neighborhoods on the West Side of Los Angeles, Hancock Park with its large and sprawling houses, Fairfax, the traditional Jewish neighborhood, Pico-Robertson with its large Orthodox community, and even Beverly Hills and Westwood. They live in North Hollywood and the Valley. They have established large schools for every segment of the community. Yeshiva Ray Isaacson/Toras Emes Academy is the largest day school in Los Angeles with 1,100 students, directed by Rabbi Yakov Kraus for more than three decades. Or Elyahu Academy is another significant school. The Yeshiva Gedolah, the high school, occupies a prominent former Seventh Days Adventist Church on Olympic Blvd. in Hancock Park. Students can continue in the Kolel of Los Angeles. The Cheder of Los Angeles is for Hasidic students who can go on to the Hasidic kotel. The Beis Yaakov School is a high school for some 375 girls. Rabbi Avraham Teichman heads Agudat Israel on the West Coast. Dr. Irving Lebovics, a prominent dentist, is the leading lay leader of the Agudah on the West Coast. Rabbi Gerson Bess is regarded as the most prominent of the halakhic authorities.

In the Valley, the most prominent Orthodox synagogue is Shaarey Zedek, led by Rabbi Aron Tendler, the son of Yeshiva University’s Rabbi Moshe Tendler. Emek Hebrew Academy is the home of more than 700 students. Valley Torah Center, headed by Rabbi Avrohom Stulberger, serves some 300 students.

During the 1970s reform rabbi Isaiah Zeldin, who had come to Los Angeles to represent the Union of American Hebrew Congregations and subsequently became rabbi of Temple Emanuel in Beverly Hills, left his congregation and founded...
the Stephen S. Wise Temple in the sparsely settled Mulholland Drive area of western Los Angeles, which soon became the epicenter of the community strategically situated between the Valley and the West Side. In the course of 15 years, the congregation grew in numbers and in program to become one of America’s largest, with a membership of 3,000 families, with an annual budget in excess of $11 million, and a physical plant of monumental proportions. Its campus on ten acres of land was sui generis: a total of 1,300 students in its school system, ranging from pre-school to an elementary day school through grade six, an all-day junior high school, and since 1992, an 18,000 square-foot, $33 million high school replete with an impressive library and resource center; its parenting center; its faculty with four rabbis at the helm assisted by a staff of 250 permanent personnel; and imposing facilities that included an immense special parking structure, Olympic swimming facilities, and a variety of specially designed and constructed recreational areas. The schools, which provide at least an hour of conversational Hebrew daily and are quite Israel-centered in terms of curriculum, have received Tel Aviv University’s 2003 Constantiner Award for Jewish Education, the 1990 biannual Zalman Shazar Prize from the Jerusalem-based Shazar Center for Jewish History, and its director, the 1990 Milken Family Foundation’s Jewish Educator’s Award.

Conservative rabbi Harold *Schulweis moved to the Encino area of the San Fernando Valley from Oakland. With a rare combination of philosophical profundity and Jewish social engineering genius, he established a series of programs which stamped his congregation as a creative center of Jewish life: a havurah program in which the bulk of the members participated; a para-professional counseling center whose first lay counselors were volunteers from the board of directors who studied and trained for several years for this opportunity to serve; a para-rabbinic training program in which the synagogue leadership similarly learned to become rabbinic aides qualified to meet with members and teach them how to be Jews at home as well as in the synagogue; an outreach program which accepted the inevitability of an increasing proportion of interfaith marriages in our open society and chose to deal with it on the basis of inclusivity rather than a posture of exclusivity; and an assistant rabbi, engaged by the congregation after her ordination in 1990, who was herself a Jew by choice. Most of these and other innovative experiments were emulated nationwide. In 1994, Schulweis called on his congregation to accept Jewish homosexuals and lesbians as equal and accepted members of the community. Some years later, he bucked longstanding Jewish tradition by launching an effort aimed at urging Gentiles not necessarily involved with Jewish life-partners to consider conversion to Judaism. It was Jewish outreach to the unchurched. Most recently, he initiated Jewish World Watch, an effort to inspire Jews to emulate Righteous Gentiles by intervening on behalf of distressed or physically threatened populations abroad. The organization has been active in generating assistance on behalf of populations in the Sudan and Darfur. In 2004, the 80-year-old Schulweis stepped down as senior rabbi, turning his pulpit over graciously to longtime colleague and friend Rabbi Edward Feinstein.

Rabbi-Community Builders. Some of the city’s rabbis transcended their responsibilities to their synagogue by sharing their energies with the larger Jewish community. Rabbi Jacob *Pressman arrived in Los Angeles in 1946 to assist Rabbi Jacob Kohn at Sinai Temple. A few years later he left to join a small congregation, which grew to become Temple Beth Am, one of the large and influential Los Angeles synagogues. He helped establish Akiba Academy, one of the first day schools in the Los Angeles Conservative community and initiated Herzl School, the community’s first non-Orthodox day school. At Beth Am, he created a K-8 day school that was named in his honor as the Rabbi Jacob Pressman Academy. Simultaneously he became a central figure in the building of Jewish institutions in the city. He was a key figure in the organization of the University of Judaism in 1947 and served as its volunteer founding registrar. He was one of the founders of Camp Ramah and the Los Angeles Hebrew High School, and helped start the Beverly Hills Maple Counseling Center as well as the forerunner of the Brandeis-Bardin Institute, in Simi Valley. He established the synagogue Israel Bond Appeal program and headed the synagogue division of Los Angeles Israel Bonds. He was chairman of the Los Angeles Board of Rabbis as well as of the Western States region of the Rabbinical Assembly. When Jews were threatening to leave the Mid-Wilshire neighborhood after the L.A. riots in the 1970s, Pressman went door-to-door to sign up 150 families and pledged that the synagogue would remain in the neighborhood if they would pledge to stay; as a result, the Carthay Circle and South Carthay neighborhood, once threatened, is now a thriving Jewish community composed of traditional Conservative Jews who walk to synagogue and walk their children to the Pressman Academy. At Beth Am, he permitted and enabled the creation of religious alternatives for more traditional Jews; the egalitarian Library Minyan is without a formal rabbi but is the religious home of many rabbis and scholars at the University of Judaism, Hebrew Union College, ucla, usc, and UC Northridge as well as rabbinical students at UJ and HUC. One holiday morning there were more than 75 rabbis, spouses of rabbis, and children of rabbis in attendance, a rarity for Conservative synagogues. Beth Am is now a Syna-plex, offering multiple services: meditative services, family services, a Neshama Minyan with the melodies of Shlomo *Carlebach on Friday evening, as well as a mainstream Con- servative service. Ten of Pressman’s students became rabbis, including his successor Rabbi Joel Rembaum. Well into his eighties, Pressman is a master preacher, talented musician, and raconteur.

In 1997, after a period of changing leadership Rabbi David Wolpe took over as Sinai’s senior rabbi. He introduced a single service called Friday Night Live that brings single Jews to synagogue for an exciting musical service. A captivating speaker, he ignites his audience.
Rabbi Maurice Lamm replaced Rabbi Dolgin at Beth Jacob Congregation in 1971. Under Lamm, the congregation became more observant as Orthodoxy become more observant. His congregants, who once rode to the synagogue, began walking if possible. Upon his retirement, Rabbi Abner Weiss, from South Africa, became spiritual leader of the congregation. He was also the representative of moderate Orthodoxy in Los Angeles communal, religious, and educational circles. Rabbi Weiss also took pride in the “upstairs minyan” in which younger members were given an opportunity to take charge of their own Sabbath service as a popular alternative to the more staid and formal sanctuary service. A psychologist who incorporated Kabbalah into his practice, Weiss departed for England in 2002; since that time, Rabbi Steven Weil has served as senior rabbi of Beth Jacob. Young Israel of Century City, initially a “break away” from Beth Jacob, was, by 2005, a well-established congregation of 400 members led, since 1986, by Rabbi Elazar Muskin. A few blocks away from Beth Jacob and Young Israel, in the Pico-Robinson area, B’nai David Judea Congregation, headed by Rabbi Yosef Kanefsky as by Daniel Landes before him, championed a progressive Orthodoxy, including greater opportunity for women’s involvement in synagogue rituals.

Rabbi Harvey Fields, longtime senior rabbi of the venerable Wilshire Temple, the first and still arguably the largest Jewish congregation in Los Angeles, led his congregation in new directions. He became chairman of the Middle East Commission of the Jewish Federation Council. A congregation which historically had rejected many traditions now settled into a life style which was comfortable with Hebrew instruction, bar mitzvah, bat mitzvah, and a shofar. Under Fields’ stewardship, music became a fixture of services, and a full-time cantor began to lead services in 1999. Despite the move toward more traditional forms of observance, Fields maintained his focus on issues pertaining to social justice and interfaith dialogue. He was instrumental, for instance, in the creation of Hopenet, a network of religious institutions in the Mid-Wilshire corridor that feeds about 200 people every Sunday out of the temple, and provides affordable housing, clothing, and furnishings. Fields stepped down in June 2003, handing over the reins he held for 21 years to Rabbi Steven Leder.

Rabbi Laura Geller is the senior rabbi of one of Los Angeles’ most prominent Reform congregations. Temple Emanuel has a day school and innovative religious services including a Sabbath morning service that attracts many HUC faculty members. By the size and the prestige of her congregation and by her own stature, she is the most prominent of the first generation of women rabbis in the United States.

**Rabbi-Social Activists.** A number of rabbis, mostly in the Reform movement, became leaders in movements dealing with peace, poverty, racial harmony, and AIDS. Rabbi Leonard Beerman established a congregation in the spirit and name of Leo Baeck, which over the years fostered an environment that made involvement in human concerns a normal congregational function. As one example among many, Rabbi Beerman led his congregation to join forces with the All Saints Episcopal Church in Pasadena to establish a professionally run Interfaith Center to Reverse the Arms Race. For years they supported and maintained a peace movement, which gave serious attention to the world’s ultimate long-term threat. When world events signaled a suspension of the arms race, both congregations shifted their energies to establishing a shelter for the homeless in downtown Los Angeles. Beerman retired in 1986, leaving the congregation to Rabbi Sanford Ragins, who would serve as senior rabbi for 18 years while maintaining an academic career teaching history and homiletics at HUC-JIR and at Occidental College, in Eagle Rock. Ragins welcomed intermarried, interracial, and gay and lesbian families into the communal fold and championed the peace camp in Israel and labor and interfaith cooperation in the U.S. He served as chair for the Central Conference of American Rabbis’ Committee on Ethics, which investigates allegations of wrongful behavior by Reform rabbis, and taught German divinity students in Germany about Judaism. Ragins helmed his congregation until 2002, when Rabbi Kenneth Chasen, a former TV music supervisor and soundtrack composer who became a rabbi in 1998, took over as senior rabbi. Chasen’s task at the 650-family-strong temple was to nurture its traditional ties to broad, generally liberal causes, while also serving young, sometimes apolitical, families seeking innovative, home-centered synagogue life.

Rabbi Alfred *Wolf, a long time associate of Rabbi Magnin at Wilshire Temple, set himself to bridge the gulf between the faiths. In 1975 he knit together the Roman Catholic Archdiocese of Los Angeles with the Southern California Board of Rabbis and the American Jewish Committee. Together they established the Los Angeles Roman Catholic/Jewish Respect Life Committee which annually issued pastoral statements on subjects like “reflections on abortion and related issues,” “caring for the dying person,” “the single parent family,” “nuclear reality,” and “a covenant of care.” He was one of the architects of the Southern California Interreligious Council for rabbis, ministers, and priests, which met regularly with Muslim, Buddhist, Sikh, and Bahai leaders. He also presided over the County Commission on Human Relations. When Pope John Paul II came to Los Angeles on a formal visit in 1989, Rabbi Wolf was chosen on behalf of the rabbinate to speak to him and he said, “we urge you, as we urge all our friends, to assist us in the continuing struggle against antisemitism – and in securing peace in Israel – including full diplomatic relations with the Vatican.” Rabbi Wolf, upon retirement after 36 years of active service, became director of the newly established “Skirball Institute on American Values. He died in 2004 at 88.

Rabbi Gary Greenbaum of the American Jewish Committee took over the chairmanship of the Police Commission at a time when police actions were dividing the Los Angeles community and alienating its African-American citizens. He wisely walked the minefield with skill, determination, and integrity.
Rabbi Allen Freehling of University Synagogue was deeply immersed in social action issues. He received the Los Angeles social responsibility award from the Los Angeles Urban League, and the National Council of Christians and Jews honored him with the Humanitarian Responsibility Award. He was on the Los Angeles Commission to draft an ethics code for Los Angeles city government. He received the National Friendship Award by the parents and friends of lesbians and gays in 1989. When the AIDS epidemic began to spread, Rabbi Freehling became Los Angeles' heroic voice on behalf of Jewish religious action for AIDS victims. He was the citywide chairman of the Committee for AIDS, the founding chairperson of the County Commission on AIDS, and the founding chair of the AIDS Interfaith Council of Southern California. In 1998, Freehling led an interfaith pilgrimage to the Vatican to discuss Jewish history and antisemitism with Pope John Paul II. After the 9/11 attacks on the World Trade Center and other American targets, Freehling expended fresh energies reaching out to local Muslims and rejecting attempts to characterize them as monolithic apologists for terror. Freehling retired in 2003, after 30 years as senior rabbi, leaving his 900-family-strong congregation to Rabbi Morley Feinstein. Upon his departure, he announced his intent to engage in community building in the areas of human rights and civil liberties.

Los Angeles is also the home of several new age religious leaders and charismatic rabbis. Some are local figures with a local following and others are national and indeed international figures. Among the most prominent is Philip *Berg, who was influenced by an Israeli kabbalist by the name of Yehuda Brandwein. Rav Brandwein died in 1969. Beginning in Tel Aviv during the 1970s and expanding, after the Internet boom of the 1990s, to Los Angeles, Berg succeeded in popularizing Kabbalah and attracting media celebrities such as Madonna to his cause. Berg is at the helm of 50 centers claiming hundreds of thousands of paying adherents who help generate millions a year in revenue. The Kabbalah Centre directs its teachings to Jews and non-Jews alike. It has generated a "buzz" to borrow the term common in the entertainment community.

RABBI-EDUCATORS. In immediate post-World War II Los Angeles, there was no learning beyond bar mitzvah instruction and no employed Jewish scholars other than Dr. Samuel Dinin, who died in 2005 at the age of 103, then head of the Bureau of Jewish Education, and Rabbi Jacob Kohn (d. 1968) at Sinai Temple. Forty years later, the *University of Judaism required choice Mulholland area site. When it opened later in the decade, Herscher left Hebrew Union College to head the Skirball Museum was transferred from Cincinnati to Los Angeles expanding considerably the educational and cultural horizons of the school. It now increasingly regarded itself, except for its rabbinical department, as an institution for the entire Jewish community. When Gottschalk moved to Cincinnati to become fifth president of *HUC, Uri D. Herscher became executive vice president of the Hebrew Union College-JIR world-wide and dean of the local school. He took the lead in conceptualizing and implementing a plan to build an imposing *HUC Skirball Cultural Center and eventually established it as a separate, independent institution. David Ellenson, a long-time faculty member of the L.A. School, became the seventh president of HUC. In the 1990s, the school, began ordaining rabbis, who no longer went to Cincinnati or New York to complete their training.

By 1990, the concept, the new campus, and the funds were securely in hand. The renowned Israeli architect Moshe Safdie was commissioned to design a cultural center on an acquired choice Mulholland area site. When it opened later in the decade, Herscher left Hebrew Union College to head the Skirball Cultural Center, which established itself as an independent, thriving cultural center.

The fruitful relationship between *HUC and USC reflected a growing, if unexpected rapprochement between the former WASP bastion and the Los Angeles Jewish community, which had long regarded the campus as a conservative Anglo-American redoubt inherently inhospitable to Jewish students and faculty. Although the university has often sought to downplay this aspect of its history, there was some merit in these percep-
Joseph Widney, in 1907 articulated a vision of Los Angeles (with USC at its forefront) as the world capital of Aryan supremacy. Rufus B. von Kleinsmid, USC's president from 1922 to 1946, and chancellor until his death in 1964, was widely rumored to have been a Nazi sympathizer. Various deans, including those of the medical and dental schools, alternately discriminated vigorously against Jewish enrollment (the Law and Medical schools were rumored to permit only one Jewish student a year during von Kleinsmid's tenure) or, in one episode involving the School of Dentistry in 1972, found themselves besieged by alumni charging pro-Jewish favoritism. In 1978, the university sparked another furor when it announced plans to accept a million dollars from Saudi Arabia for the King Faisal Chair of Islamic and Arab Studies (the plan, which entailed Saudi involvement in faculty appointments, was shelved after concerted protest from local Jewish organizations). In 1986, a campus fraternity was suspended for chanting anti-Jewish remarks outside the residency of a Jewish fraternity on Greek Row.

Today, however, some 11 percent of the student body (at 3,000 students, greater than every school in the California State University and University of California system, apart from UC Berkeley and Cal State Northridge) and a third of the faculty are Jewish. This is the result of ongoing, even unique, attempts by USC to escape its checkered past (and not incidentally, to attract Jewish financial support). By the turn of the 21st century, USC and HUC had jointly established the Casden Institute for the Study of the Jewish Role in American Life. This is reputedly the first academic research center on the West Coast to concentrate on contemporary issues in Jewish life, most notably the role that the American Jewish community has played in the development of the United States in general and the American West in particular. At the turn of the century, USC became the only university in the country, for instance, to hire a full-time Jewish student recruiter. At this juncture, the dean of religious life and the chairman of the board of trustees are Jewish. In October 2005, USC agreed to host Stephen Spielberg's Survivors of the Shoah Visual History Foundation, becoming the repository for 52,000 videotaped testimonies of Holocaust survivors and witnesses. Amassed since 1994, the archive is now the largest digital library in the world, containing testimonies from 56 countries in 32 languages and totaling 117,000 viewing hours. It is interesting to note that USC’s vaunted film school did not accept the youthful Spielberg into its filmmaking program. The university subsequently awarded him an honorary doctorate and an appointment to its board of trustees.

UCLA remains the largest college campus in Los Angeles. It hosts about 4,000 students who identify themselves as Jewish. The largest Jewish group at UCLA is Hillel, which offers a range of student activity from Shabbat services to political advocacy and social action. Chabad has been active there for decades, and built one of its earliest local Chabad houses near the off-campus residences in Westwood. In 2000, the university launched its UCLA Center for Jewish Studies, an initially modest program intended, eventually, to offer graduate degrees locally and doctorates throughout the University of California system. In 2005, the center joined the Autry National Center in a new research program to explore the Jewish place in the city’s cultural mosaic. By 2007, the university expects to put an Israel studies program in place under the direction of UCLA political scientist Steven Spiegel, one of the field’s eminent figures. The university has experienced considerable volatility between advocates and critics of Israel, and Jewish students there often feel they are on the front lines of confrontation with some Muslim and African-American students. Thanks largely to the efforts of long-time Hillel director Chaim Seidler-Feller, however, the campus has also seen the emergence of coalitions and joint programs involving moderate Jews, Muslims, and Arabs. The Jewish studies program, founded by noted Hebraist Arnold Band, thrives. There is a chair in Holocaust studies sponsored by the 1939 club. Its current incumbent is Saul Friedländer who won the prestigious MacArthur Foundation’s “genius award.” Historian David Myers is among its faculty.

Jewish studies at California State University, Northridge (CSUN) enjoy a lengthy pedigree, dating back to 1969. In 2002, some 4,000 of the school’s 31,000 students were estimated to be Jewish, and 400 students were registered in 14 different Jewish studies courses each semester. Jody Myers heads the program. In 2005, the Jewish Studies Interdisciplinary Program at CSUN offered 27 courses for students majoring or performing minors in Jewish studies. Jewish studies majors are also available at Cal State Long Beach.

The University of Judaism was founded in 1947 by the Jewish Theological Seminary in response to a visionary concept by Mordecai M. *Kaplan. He proposed to establish a Jewish institution with the academic rigor of a general university but devoted to specialized research, training, and education for Judaism defined as a civilization. It came into being just as Los Angeles was becoming a major center of Jewish life, second only to New York. At the same time, the Los Angeles Bureau of Jewish Education was prodding the seminary to provide them with a school that could qualify prospective teachers who would be needed for the city’s growing Jewish school system. Additionally, the university planners saw the mission of the university as providing adult education, stimulating Jewish artistic expression, and offering continuing education to the young rabbis now flocking westward. JTS Vice Chancellor Simon Greenberg volunteered to act as founding director, and Samuel Dinin as founding dean on behalf of the Bureau. David Lieber came to the University of Judaism in 1956 as dean of students, and in 1962 became president. Early on he formulated educational and management principles that guided him through the decades of university growth: uncompromising academic excellence; partnership with scholars and
The school embarked upon a major program of expansion and diversification. The Hebrew teachers college was replaced by a master's program in Jewish education that qualified teachers to serve as administrators and educators; the courses for rabbis were replaced by a graduate school in Judaica for prospective rabbis who studied for two years at the UJ then spent a year in Israel and completed their training at the seminary in New York. A masters of business administration program was established under the direction of Dr. Judith Glass, whose purpose was to train future executives for Jewish and for not-for-profit secular institutions. Undergraduate students were grounded in both the Hebrew and Western civilizations, with majors in a wide array of disciplines and qualified for graduate work in universities of their choice. The university's continuing education program grew to become the largest of its kind in the United States. Its annual catalogue of more than 50 pages described dozens of courses; an annual lecture series of six lectures held in five communities attracted a yearly audience of 25,000–40,000 persons; its elder hostel program was considered to be the most popular in the country. A vigorous arts program attested to the continuing concentration on the arts as being integral to Jewish education. Two new policy institutes were established in the late 1980s. The Wilsenstein Institute was an activist think tank that researched and recommended public policy on vital Jewish issues. In its first two years of existence, conferences on public policy were held in subjects relating to Jewish identity, crime and punishment, and Soviet Jews in their homeland, and Jews and other ethnicities in America. The Whizin Institute researched and experimented with new directions for the Jewish family, the synagogue, and the Jewish community. In the early 21st century, it added two small think tanks on Holocaust and contemporary Israeli studies.

By the 1990s, both the University of Judaism and the Hebrew Union College were thriving institutions with differing but also overlapping types of leadership and goals, which were beginning to establish modes of cooperation.

Robert *Wexler, a protégé of David Lieber, became president in 1992 and under his leadership he shaped UJ as a non-denominational institution serving all Jews, which increases its attraction to some, but diminishes the enthusiasm of stalwarts of the Conservative movement. A noteworthy recent example of this commitment was Yesod, an intensive two-year biblical and Jewish studies program established in partnership with ten local Conservative, Reform, and Reconstructionist synagogues. The university believes that charges against UJ for abandoning the Conservative movement are misplaced, and that apart from its rabbinical program and its involvement with Camp Ramah, it had always envisioned its mission as non-denominational. It also houses a mikveh used by non-Orthodox rabbis for conversion.

More than a half-century after its birth, the university has clearly set itself apart from the Jewish Theological Seminary of America (JTS) in New York City, the Conservative movement's preeminent entity for ordaining rabbis. In 1996 the University of Judaism received an endowment of more than $22 million dollars anonymously from a prominent Los Angeles Jewish family for the creation of its own rabbinical school, which is named the Ziegler School of rabbinic Studies. Instead of celebrating its creation and the expansion of opportunities for would-be Conservative rabbis, JTS Chancellor Ismar *Shorsch forced a confrontation, which he lost, and the Seminary and UJ parted ways. UJ ordainees are automatically accepted into the Rabbinical Assembly and they are competing successfully with Seminary graduates for the same jobs. JTS lost its monopoly on Conservative ordination. Ziegler students are perhaps less academically rigorous, especially when judged by the standards of Wissenschaft, but their spirituality is deepened and their training is wholesome and they are equipped to meet the religious needs of their congregants.

Created by Los Angeles-based rabbis in 2000, the Academy for Jewish Religion, California (AJR/CA) began with the intent of revitalizing Judaism. The Academy is non-denominational and deems itself pluralistic. In the fall of 2003, it enrolled 55 students. In 2005, it graduated five rabbis, two of them also cantors. Indeed, the academy hosts the only cantorial school west of the Hudson. The academy launched an innovative Jewish Chaplaincy Program to provide a vital and much-needed Jewish presence at hospitals, secular schools, police, fire and health departments, senior citizen centers, and other communal institutions.

**Jewish Education**

In many areas of Los Angeles, the Jewish community has opted out of the public school system. The result has been a boon to Jewish day school education. There are now 10,000 students enrolled in Jewish day schools. For many non-Orthodox the debate is not between public education and private education but between a Jewish day school education and private school. Nine synagogues – five Reform: Emanuel, Wilshire Blvd., Stephen Wise, Temple Israel of Hollywood, and Beth Hillel; and four Conservative: Valley Beth Shalom and Adat Ariel in the Valley, Sinai/Akiba and Pressman Academy on the West Side – have day schools that are affiliated with the congregations and such an affiliation is central to the future of the congregations. There are two liberal high schools, the Milken School and the New Jewish Community high school both established by Dr. Bruce Powell. Orthodox schools, large and small, proliferate, among the 37 Jewish day schools of Los Angeles. **YULA has**
a high school for boys and one for girls. The girls’ school became an independent school in Summer 2005, and it is expected that the boys’ school will also become independent from Wiesenthal by summer 2006. Shalhevet is a progressive Orthodox high school modeled after the teachings of Harvard psychologist Lawrence Kohlberg, in which students participate in the governance of the school and, like Ramaz in New York, male and female students study together. It defines the liberal reaches of modern Orthodoxy. It was envisioned, established, and headed by Dr. Jerry Friedman who himself is a Harvard graduate and a prominent philanthropist.

The Jewish Federation Council

The Federation of Jewish Welfare Organizations was established in 1912 to serve as the disbursement, coordinating, and lobbying body for the 12 Jewish recipient agencies of the Los Angeles Community Chest. In addition the Federation took responsibility for raising modest sums for supplementary assistance. Under this arrangement only local Jewish needs were served. In 1929, responding to appeals from European and Palestine Jewry, and to local needs not supported by the Federation, a separate funding mechanism was established – the United Jewish Welfare Fund. Its first campaign year produced $93,000. By 1933, it became increasingly evident that there was need for a representative body that would be empowered to unite the Jewish community, including newer arrivals, around local concerns not addressed by the Federation or the Welfare Fund, such as Jewish education, youth organization, kashrut supervision, and newly formed synagogues. In response an umbrella body called the United Jewish Community was founded which in 1936 comprised 92 constituent organizations, congregations, and societies. In 1937, the United Jewish Community and the United Jewish Welfare Fund merged into a new body called the Jewish Community Council, which a few years later was given the authority to allocate the monies raised by the United Jewish Welfare Fund. There was a Federation and a Council. The Council became increasingly pre-eminent as it attracted the new leadership in the growing Jewish community, while the Federation remained the bastion of the traditional and largely German-Jewish émigré leadership; 156 of the 350 eligible Jewish organizations joined the Council. The new Jewish immigrants now arriving from the East Coast in increasing numbers tended to be politically liberal, equal-rights oriented, and devoted to Zionism and overseas needs. This contrasted strongly with the Federation of Jewish Welfare Organizations, which was conservative, local-needs oriented, and lukewarm to Zionism. The spectacular increase in fundraising from $2,750,000 in 1945 to $10 million in 1948, and from 33 to 58 thousand contributors, convinced the Federation leadership that their future was dismal, especially since Community Chest support, their major source of Jewish institutional income, was increasingly inadequate and increased public Jewish support was essential. The Federation and the Council negotiated for three years; the result was the Jewish Federation Council (JFC). In the decades ahead the Federation Council moved to become not only the spokesman but also the driving force behind Jewish community growth and development. It continued to expand its sense of community responsibility. Its goals originally were quantitative and defensive: raising more money from each contributor and from more contributors; dealing with emergencies that upset Jewish unity and harmony and so affect fundraising; and helping to maintain good relations in the community at large. In the wake of the Yom Kippur War, the Federation leadership began to consider the responsibilities of the Federation as potentially transcending practical needs. The Federation was already deeply involved in Jewish education. Its Bureau of Jewish Education guided, supported, subvented, and served as chief advocate for Jewish schools. Since its organization in 1937, it had striven to establish and raise standards, attract and increase financial support, and help to create a teaching profession. Under the initiative of Emil Jacoby, its director from 1983 to 1993, a number of programs were established which sought to raise the level and standards and effectiveness of Jewish education. However some thought more could be done to establish Federation responsibility for the welfare of Judaism as well as of Jews. Sensitive to the danger of crossing the line between religious autonomy and Federation responsibility, they suggested that the Los Angeles Federation formally accept responsibility for a community stake in what they termed “the quality of Jewish life.” This was to be a revolutionary departure. Until now Jewish communities were divided into “organized” and “religious.” Jewish organizational life mandated mutual independence between “church” and “state.” In 1973 a Committee on Jewish Life was established by the JFC with the avowed goals of reducing tensions and adding to the potential cooperation between the communal and the congregational sectors of Jewish life. A year later the committee made its report and recommendations; as a result, in the fall of 1974, the Council of Jewish Life was established to implement the report. Its mandate at the time was to improve relationships between synagogues and the JFC; develop an outreach program to the unaffiliated including promotion of synagogue affiliation; and support of existing adult education programs. In succeeding years the Council of Jewish Life expanded its program, which aimed at “raising the quality of Jewish life.” It established a number of commissions, which undertook projects with cultural, educational, and religious goals. It established a commission on synagogue affairs which organized synagogue councils in outlying areas, developed a task force on synagogue finance and administration, and circulated widely a letter written by the president of the JFC to welfare fund contributors describing the synagogue as “an indispensable link for the preservation and transmission of an authentic Jewish way of life” and urging affiliation with a synagogue. Nine hundred responses were received in response to this unprecedented appeal by a Jewish community organization, which openly committed itself to the synagogue as essential to the creative survival of Jewish life in America. Over the years the council established commissions that operated in areas considered significant. In
1988, they were adult Jewish education, the arts in Jewish life, the disabled, the Israelis, outreach to intermarried, outreach to singles, spirituality, synagogue funding. The Council, with funding from the Jewish Community Foundation, appropriated approximately $100,000 a year for support of synagogue proposals that were innovative. The grants were awarded by the committee on synagogue funding on a three-year basis. Grant requests by the end of the 1990s increasingly dealt with outreach concerns such as reaching the unaffiliated, the singles, the intermarried, and the disaffected. With the advent of the 21st century, however, the future of Jewish federations in general and L.A.’s in particular appeared to be both bleak and beyond the ability of commissioned studies and valiant slogans about the need for greater inclusion to easily reinvigorate. The bottom line is that its campaigns have not grown significantly while Jewish life has found other sources of Jewish support. The problem is not Jewish life in Los Angeles, which is thriving, but Jewish organizations formed in an earlier generation and enjoying less enthusiastic support from the younger generations.

In many respects, Los Angeles had become an innovative cauldron of new Jewish activity and organization entirely unhehlden to the East Coast, which in turn persisted in regarding itself as the sole arbiter of Jewish power in America and of national communal decision-making. It was this perceptual dichotomy, in fact, that resulted in several East-West spats that incensed the Los Angeles community. The first involved the Los Angeles regional chapter of the American Jewish Congress, which split from the national organization in 1999, reconstituting as the independent Progressive Jewish Alliance. Even more troubling was the impromptu dismissal, in 2002, of the Anti-Defamation League’s regional director of 27 years’ standing, David Lehrer, by the ADL’s national director, Abraham Foxman. The latter’s decision to terminate Lehrer without stated cause was taken as an affront to the entire community, not least of all by the ADL’s regional board, which had achieved major strides in fundraising under Lehrer’s stewardship, and resented being treated as a mere branch office. Lehrer was replaced by Amanda Susskind, a local attorney with a background in public policy.

Working against the community was the discovery that the Jewish population nationally was in decline. The Jewish population of Los Angeles has remained fairly constant from 1979 through today, despite significant immigration. The birthrate is extremely low. Affiliation rates, as in so many western communities, remain lower than those in the east. With intermarriage increasingly normative and the graying of the Jewish population proceeding farther apace than in many other ethnic communities, Jewish communal life and involvement inevitably became the purview of an increasingly smaller and self-limiting segment of the Jewish public. Secularization and assimilation occurred in parallel with fragmentation caused by a proliferation of new Jewish organizations and institutions; each determined to secure its share of an ever-diminishing pie. With Jews increasingly preferring to give to non-Jewish causes, federations became more dependent on a coterie of “big givers” for continued sustenance. In Los Angeles, attention to the needs and interests of this select, self-appointed, and sometimes self-serving few resulted not only in greater tensions between lay and professional leadership but in widespread malaise and alienation within the greater Jewish community.

**Jewish Journalism Comes of Age in L.A.**

The *Jewish Journal* is the flagship newspaper of the Los Angeles community. Prior to the *Jewish Journal*’s appearance in 1986, Los Angeles had been served by three publications: the *Jewish Community Bulletin*, which had been the Federation’s biweekly house organ, *Heritage*, a somewhat parochial, Israel-centered weekly established by Herb Brin in 1954, and the *B’nai Brith Messenger*, aimed at the Orthodox community (the Israeli community, meanwhile, had its own Hebrew-language papers, notably *Israel Shelanu, Shalom L.A.*, and local supplements of the Israeli dailies *Yedioth Aharonoth* and *Maariv*). The *Jewish Journal* was the brainchild of a group of “Benefactors” who had long lamented the community’s lack of a first-class Jewish paper. Armed with its forerunner’s 75,000-strong subscription list and with an assertion of editorial independence, the paper initially exhibited scant awareness of the scope of Jewish life in Los Angeles. The paper made some headway broadening its coverage during the 1990s, most notably through the efforts of the late Marlene Adler Marks and the late David Margolis, writers with profound roots and sincere interest in hitherto ignored, misunderstood, or otherwise denigrated segments of the community. It also stepped up its Israel coverage. It was only with the appointment of local journalist Rob Eshman as editor, however, that the *Journal* was finally able to more fully and inclusively reflect L.A. Jewry’s diverse, variegated, and sometimes contentious character. Like many Jewish newspapers, its critics contend that it plays it too safe.

**The Rise and Fall and Rise of the JCCs**

One of the earliest and most important points of entry into organized communal life in Los Angeles was the Jewish community center, the first of which, the Modern Hebrew School and Social Center, later renamed Soto-Michigan, came into being in Boyle Heights in 1924. A number of other centers followed, including one on West Adams, on Beverly-Fairfax, at City Terrace, and at Hollywood-Los Feliz. Initially underfunded and underused, these and subsequently created JCCs were placed under the aegis of a centralized organization, the Jewish Centers Association (JCA), in 1943. Subvented by the Los Angeles Jewish Federation Council, the JCA alternately bristled under the Federation’s pecuniary oversight while holding tightly to the reins of individual centers that generated funds locally and often resented turning these resources and control over their own programming to the JCA. In 1952, the JCA flouted local opposition by closing the more ardently Zionist and overtly Jewish Menorah Center and merging it with the more intercultural Soto-Michigan Center. Declines in the Jewish population of the city’s Eastside, and political
pressure against Soto-Michigan's ostensibly radical leadership, resulted in its closure soon after, and that of the West Adams center as well. As Jews moved into the city's western reaches and into the San Fernando Valley to the north, new Jewish community centers cropped up in their midst, ultimately resulting in a network of seven JCCs and a residential camp, three (Valley Cities, North Valley, and West Valley) in the San Fernando Valley alone. A joint JCA-Federation study conducted in the early 1970s resulted in the withdrawal of funding in 1976 for the Hollywood-Los Feliz JCC and for the Israel Levin Senior Adult Center (later the subject of "Number Our Days," the Academy Award-winning documentary based on the work of the late Barbara Myerhoff). Community protests outside Federation headquarters at 6505 Wilshire Boulevard resulted in their reinstatement.

The JCCs continued to muddle along, under-funded and undervalued, yet providing scarce services to segments of the community not quite established financially or sufficiently rooted in Jewish life to join synagogues, yet interested in childcare, programs for the elderly, scouting facilities for the children of Israelis, Jewish day camps, and other programs. Indeed, the Jewish pre-school program at Valley Cities JCC in Sherman Oaks developed under Bea Chankin Weisberg into one of the crown jewels of early childhood education in Los Angeles. During the 1990s, the JCCs spiraled downward. Their programs and membership dropped dramatically despite steep cuts in Federation funding, from 25 percent to 30 percent of their budgets to 13 percent. The North Valley JCC in Granada Hills, meanwhile, had its mettle severely tested in 1999, after a shooting spree by white supremacist Buford Furrow on the camp children that wounded several children and camp counselors and killed a mailman several miles away. The center lost little time resuming operations and regaining its footing and the community's confidence. Bailed out with Federation loans on several occasions, the parent organization, the Jewish Community Center of Los Angeles, finally collapsed, ostensibly due to mismanagement, in 2001. Several of the city's prized JCCs, valued more for their property than the services they provided, found themselves dragged onto the chopping block. The Bay Cities center in Santa Monica and the North Valley Center were ultimately sold, and the Conejo Valley Center closed up shop. The Westside and West Hills centers, both situated in extremely affluent neighborhoods, became independent. Their respective communities, meanwhile, rescued the centers in Silverlake and Sherman Oaks, at the last moment, although their continued existence is deemed tenuous. It is remarkable that in a city as affluent and as athletically and culturally oriented as Los Angeles, Jewish Community Centers are not thriving and came perilously close to extinction.

**A Bounty of Innovative Institutions**

Renowned (or notorious) as a capital of glitz and ostentation as well as of homelessness and hunger, in 1985, Los Angeles became home to an innovative response to the excess and overindulgence of some of its wealthier segments with the creation of Mazon. A non-profit, grassroots agency created in the aftermath of an Ethiopian famine, Mazon (Hebrew for "Sustenance") provides millions of dollars to over 300 hunger-relief agencies, including emergency food providers, food banks, multi-service organizations, and advocacy groups that seek long-term solutions to the hunger problem. Over $3 million are now culled annually from Jewish families and organizations as a self-imposed three percent tax on catered events. Founded by Leonard Fein, Mazon cites as inspiration the Torah's demands for justice and the rabbinc tradition of forbidding the commencement of life-cycle celebrations until the community's poor and hungry have been seated and fed. Since 1986, Mazon has provided more than $31 million to the hungry in the United States, in Israel, and in developing countries around the world.

Another noteworthy local innovation is Beit T'Shuvah (Heb. "House of Repentance"), a recovery and reintegration center that seeks to integrate Jewish spirituality with the 12 steps of Alcoholics Anonymous and with traditional psychotherapy. With a campus in West Los Angeles, Beit T'Shuvah provides therapeutic in- and outpatient accommodations to alcoholics, substance abusers, and discharged prisoners. Beit T'Shuvah began as an outgrowth of a non-profit organization called the Jewish Committee for Personal Service (JCPS). That organization came into being in 1921 to provide social services to Jews in California mental hospitals and prisons. Forty years later, a donation from a JCPS client led to the establishment of the Gateways Hospital and Mental Health Center, which subsequently incorporated JCPS as one of its programs. Harriet Rossetto, who joined the staff of JCPS in 1984, discerned in an article by Dr. Abraham Twerski on Judaism and the Twelve Steps a possible antidote both to the recidivism of many of her patients and to the Jewish community's apparent lack of concern and support (many Jews erroneously believing that Jews as a rule did not suffer addictions). In 1987, with a grant from FEMA and a loan from the Jewish Community Foundation, Gateways Hospital bought an old house at 216 South Lake Street in Los Angeles and opened the doors of Beit T'Shuvah. The original mission was to provide transitional living and reentry services to Jewish men being released from jails and prisons. The program has expanded its attentions in recent years to Jews struggling with addictive behaviors. A capital campaign raised five million dollars toward the purchase and renovation of a new facility, which opened in 1999. Two years later, Beit T'Shuvah gained its independence from Gateways Hospital, becoming a constituent agency of the Los Angeles Jewish Federation. Its spiritual leader is himself a Baal Teshu'vah and UJ ordainee Rabbi Mark Borowitz, who returned to tradition after his own incarceration.

Justice may be a Jewish imperative, but its pursuit in 21st-century America can be prohibitively expensive and beyond the grasp of most consumers, Jews and non-Jews alike. Enter Bet Tzedek (Heb. "House of Justice"), a five-day-a-week...
storefront community law office that dispenses free legal assistance to more than 10,000 Angelinos out of its Fairfax neighborhood headquarters, an office in North Hollywood, and 30 senior centers throughout the Greater Los Angeles region. With a staff of 55 and over 400 volunteers, the organization, founded in 1974, serves all eligible needy residents of Los Angeles County, Jewish or otherwise. Bei Tzedek has been instrumental in fighting consumer fraud; in protecting employee rights; in assisting health-care providers and non-paid caregivers; in securing government benefits for eligible recipients; in combating slumlords and protecting tenants from unscrupulous landlords; in expanding elder law protection, and even in securing Holocaust reparations – they were the key organization to impact the way reparations are handled by the Claims Conference.

In 1982, Lowell and Michael Milken established the Milken Family Foundation. Active in education, medical research, and Jewish culture, the foundation has made noteworthy attempts to support and honor outstanding teachers locally and nationally, to foster school reform, and to generate enthusiasm for education as a lifelong process. The Milkens were also instrumental in founding the Milken Community High School, the crown jewel of the Stephen S. Wise Jewish school system.

In 2003, the foundation released the first of 90 projected compact disk recordings of Jewish music, under the aegis of the Milken Archives of American Jewish Music in New York City, established in 1990 to generate a $17 million compilation of over 600 pieces of Jewish music culled from over 350 years of American musical history. Of these, no less than 500 are new recordings of lost or never-preserved music, commissioned from orchestras, choirs, and soloists in 15 cities in the U.S. and Europe. These include Sephardic liturgies from the American Colonial period; recordings of complete Orthodox, Conservative, and Reform services; Klezmer-influenced concert works; ecstatic Hasidic music; Yiddish theater work with reconstructed orchestrations; and works commemorating or otherwise influenced by the Holocaust and the founding of the State of Israel. Distributed under the Noxos recording label, initial offerings included works by Kurt Weill, Mario Castelnuovo-Tedesco, David Krakauer, and Alberto Mizrahi, and orchestras led by such eminent conductors as Gerald Schwarz. The archive’s artistic director is Neil W. Levin, of the Jewish Theological Seminary.

Jewish life – religious and secular, cultural and intellectual – thrives in Los Angeles, a city with intense affiliations and also a high rate of non-affiliation. The challenge of the early 21st century is how to preserve the intense core of Jewish life while attracting to that core those with but the most marginal of Jewish affiliations. It is not a problem unique to Los Angeles, but one acute in Los Angeles.

[Max Vorspan / Sheldon Teitelbaum (2nd ed.)]

LOSICE (Pol. Losice; Rus. Lositsy; Yid. Loshhits), town in Lublin province, E. Poland. Jews probably settled in Losice at the end of the 17th century. At the beginning of the 18th century the townsmen complained to the king about competition from Jewish craftsmen. A synagogue was erected in the 18th century against an annual payment of 200 zlotys. In 1765 there were 389 Jewish poll-tax payers in Losice and the vicinity. The community numbered 654 (42% of the total population) in 1827 and 917 (54%) in 1857. From then on its numbers increased considerably due to the horse markets in the town, in which large numbers of Jewish dealers took part. The Jewish population numbered 2,396 (71%) in 1897 and 2,708 (70%) in 1921. Before the outbreak of World War II there were about 2,900 Jews in Losice. The community was liquidated on Aug. 22, 1942, when the Jews were deported to *Treblinka camp.

[Encyclopaedia Judaica (Germany)]

LOSICE (Czech Lôsice; Ger. Loschitz), village in N.W. central Moravia, until 1992 Czechoslovak Republic and thereafter Czech Republic. Jewish settlement is first mentioned in Losice in 1544. Another record, from 1630, mentions that there were 21 houses of Jewish ownership; only ten were inhabited after the Thirty Years’ War (1650). A large number of Losice Jews attended the Leipzig fairs in the 18th century. The community increased after the mid-17th century, when Jews were expelled from Ukraine and lower Austria. In Losice there were 80 Jewish families (358 persons); 17 houses are recorded in 1727. In 1798 the number of families allotted to Losice was 71 (see *Familants Law). Before that time, Jewish houses had stood very close to the Catholic Church; but in 1727 the Jews were forced to move to other places, where they formed a ghetto. Their number declined sharply after the emancipation allowed the Jews freedom of movement. The number fell from 438 in 1848 to 284 in 1869, and to 115 in 1900.

In 1921 there were 2,708 Jews. In 1928 most of the Jewish quarter was destroyed by fire. In 1930, 55 Jews were left in the town. By 1938 six families remained. They were all deported during the Holocaust; 11 returned from the Nazi concentration camps. The synagogue was destroyed on November 11,
1938. The religious community was not revived after World War II.

The synagogue, probably from 1805, was used until the Nazi occupation; subsequently it was used as a storehouse. In 1966–80 it housed a municipal museum with an exhibition of the history of the Jewish community. Later, it served as an art and music school.

[Meir Lamed / Yeshayahu Jelinek (2nd ed.)]

LOST PROPERTY (Heb. avedah u-mez'iah; lit. “lost and found”).

The Basis of the Law

Lost property, called avedah, is property which has passed out of its owner’s possession and whose whereabouts are unknown to him. Both criteria must exist together for the property to be designated as an avedah (Rashi and Tos. to BM 30b, and see 31a). The Pentateuch enjoins that an avedah be returned to its rightful owner (Deut. 22:1–4). When the owner has clearly despaired of finding an avedah and of having it restored to his possession (see *Ye'ishah) his ownership in it ceases, and the finder is not obliged to return it but may retain it for himself (BM 21b). Even in the absence of the owner’s ye’ishah, the same consequence follows if there is no possibility of the avedah being restored to him (Tos. to BM 22b; Ran, Nov. Hul. 38b). The laws of avedah u-mez’iah comprise two categories:

1. laws forming part of property law, namely the determination of what constitutes an avedah and the point at which ownership thereof ceases so as to enable the property to be acquired by the finder (zehkiyyah); and

2. laws circumscribing the mitzvah of restoring the lost property, i.e., laws not appertaining to property law, since the finder who fails to return an avedah and who leaves it where it was found, transgresses the law but is not obliged to compensate the owner. However, the finder who takes an avedah and appropriates it for himself is considered a thief (BM 26b).

Avedah with Retention of Ownership

In accordance with the above definition, it may be noted that, for instance, an animal grazing on public land without the knowledge of the owner, and where it is not kept from getting lost, is considered an avedah, although not if it is grazing on a path when he is aware of its presence there (Ravad, in: Asheri BM 2:26). Similarly, a garment lying in a public thoroughfare is an avedah, but not one lying behind a fence (BM 31a). Nor would a vessel that is covered, even though found in a refuse heap, be deemed an avedah (BM 25b).

Restoration

The fact that an article has been lost does not in itself involve loss of ownership. Accordingly, a person who comes across property that appears to be lost is duty bound to take it into his custody and care until it can be restored to its owner. In certain circumstances, however, the finder is exempt from this duty. Thus a kohen is prohibited from entering a cemetery and therefore cannot be responsible for an avedah which he has seen there (BM 32a). Similarly a person is also exempt if he would not normally take the object, even if it were his own, such as an elderly person for whom such an action would be considered undignified (BM 30a). Furthermore, the finder of property which is of negligible value (i.e., less than a prutah; BM 27a), or a finder who would be involved in expense in restoring the property to its rightful owner (BM 30b), are also exempt. All other finders of lost property, however, must take charge thereof and seek out the owner, to whom it must be returned. Some scholars are of the opinion that the finder’s degree of responsibility for an avedah – as long as it is in his care – must be the same as that of an unpaid bailee, while others equate the standard of care required to that of a paid bailee (BM 29a; see *Bailment). In the case of an animal, if the expense of its upkeep should prove to be too high to make its return to the owner worthwhile, the finder may sell the animal after a certain period, but has to account for the proceeds to the owner (BM 28b). Inanimate property may not be used by the finder except to prevent its deterioration (BM 29b).

When the owner’s identity is unknown to the finder, he must bring the avedah to the notice of the public, i.e., by announcing it. If the claimant owner offers notable identification marks (*simanim), the property is returned to him, but if he is suspected of being an impostor he must also produce evidence of his ownership (BM 28b). Before the destruction of the Temple, the announcement was made from a stone platform in Jerusalem, during the three festivals when the people were gathered there. In later times the announcement was made in the synagogues, and it was also enacted that, in places where the secular authorities expropriated all lost property, it would suffice if a finder made the matter known to his neighbors and acquaintances only (BM 28b). If no claimant responds to the announcement, the finder must retain the avedah, in trust for the owner, indefinitely (Sh. Ar., hM 267:15).

The mitzvah to restore lost articles to their owners is not limited to physical objects that are found, but it is extended to include the wider concept of preventing loss to one’s fellow. Thus, if a man sees water flooding a neighbor’s field and he is able to stop it, he has a duty to do so; or if he sees an animal destroying a vineyard he has a duty to drive it away (BM 31a). Furthermore, this wider concept even extends to the person of an individual, so that if anyone finds that another has lost his way, it is a mitzvah to set him right or to guide him as may be necessary (BK 81b).

Related to the mitzvah of returning an avedah is that of “loading and unloading” (*perikah u-te’inah), which also involves saving one’s neighbor from suffering losses. A person is required to come to the aid of a neighbor in the unloading and reloading of a heavily laden beast of burden (Ex. 23:5; Deut. 22:4; BM 32a–33a). In view of their common halakhic source, the laws of loading and unloading and of returning lost prop-
Avedah with Loss of Ownership

When the owner despairs of having lost property restored to him, his ownership thereof ceases (see ‘Ye’ush) and title to the property vests in the finder. Ye’ush may be inferred from speech or conduct, or may be assumed from the circumstances in which the lost property is found. For instance, an avedah which has no identification marks, or which is found in a public thoroughfare, or which appears to have been lost a long time before – factors which make it impossible for the property to be returned – are instances in which ye’ush would be inferred. Often it is doubtful whether under certain circumstances the owner is presumed to have despaired, and the sages disagree as to whether the finder has to restore the lost property or acquires ownership in it; e.g., where the lost property has identification marks but they are liable to be erased by being trodden upon, or when the property has marks which were not made intentionally, or whether the place in which the property was found can be an identification mark (BM 23a).

A second category of lost property which becomes ownershipless, and may therefore be appropriated by the finder, is that of avedah mi-da’at (“intentional loss”), i.e., when it appears from the circumstances that the property has been intentionally abandoned or thrown away by its owner and that he no longer desires it, e.g., scattered fruit on a threshing floor, figs which have dropped from a tree alongside a road, open jars of wine or oil left in a public place (BM 21a, 23b). Finally, lost property which can no longer be restored to its owner ceases to be owned by him and belongs to the finder, even if in the absence of the owner’s ye’ush. Thus an avedah carried away by the river is lost to the owner and “to the whole world,” even if the owner is unaware of his loss and even if he does not despair (Tos. to BM 22b). Some scholars nevertheless establish the owner’s ye’ush in these circumstances, on ground they justify the above rules (TJ, BM 21; 8b; Maim. Yad, Gezelah va-Avedah, 11:10). Similarly, geese and fowl which escaped from their owner and can no longer be restored to him belong to the finder (Ran on Rif Hul. ch. Shillulah ha-Ken, introd.).

In talmudic times it was already customary, as a matter of equitable law, to return certain classes of lost property, even if ownership thereof had already ceased, as in the case of an avedah dropped in a public thoroughfare (BM 24b). In post-talmudic times the communities of Europe adopted the practice of returning property carried away by a flood or similarly “lost to the world,” either in terms of rabbinical enactments (“takkanot”) or in accordance with the principle of “dina demalkhuta dina” (Mordecai, BM no. 257; Rema, HМ 259:7; see also “Shomerim”.

The laws of the State of Israel require all lost property to be handed over to the police, but the finder may claim it for himself if after a certain period the owner is not found.

The Commandment to Return Lost Property and the Law in the State of Israel

(a) Section 2 of the Restoration of Lost Property Law, 5733 – 1973 obligates a person who finds and takes any lost property to return it to its owner or to report the find to the police. However, the Law imposes no obligation to take the lost object ab initio. By contrast, Jewish Law imposes a religious-ethical obligation upon a person seeing a lost article or aware of its existence to take it, with the object of returning it to its rightful owner (Sh. Ar., HМ 259:1). The obligation not to ignore a lost object led the Sages to develop precise definitions of the concept of lost property, so as to enable the finder of a lost object to ascertain when an obligation to return exists, when it is forbidden for him to take the object so that he will not be considered a thief or spoiler, and when he is entitled to take the object for himself.

(b) Both Jewish Law and Israeli Law recognize the finder’s ability to acquire ownership of a lost object. However, the methods of acquisition in Israeli Law and in Jewish Law differ in a number of respects. Jewish Law recognizes the concept of “resignation” and rules that, if we may presume that the owner despaired of recovering his lost object before the finder took it, the finder is entitled to keep the object for himself (Sh. Ar., HМ 259:3); however, if the lost object was taken before the owner reached this stage of resignation, the finder can never acquire it (Sh. Ar., ibid.). Israeli Law adopted the Jewish legal concept of “resignation” and even determined that the finder becomes the new owner of the object when “the owner shall be deemed to have given up the property” (section 4 of the Law). However, the Law also defines “resignation” as occurring only after four months have elapsed from the date of the find. Moreover, even in the case of property of negligible value, in which the Law recognizes the possibility of immediate resignation by the owner, the Law makes no distinction between whether the finder took the object before or after the owner abandoned hope of its return.

(c) A person who takes a lost object and fails to fulfill the obligations imposed on him by the Law is liable to the penalties prescribed in section 9 of the Law; if he retains the property for himself he commits theft (section 383(c) of the Israeli Penal Code, 5737 – 1977). Jewish Law also regards a person who keeps an object found by him, without returning it to its owner, as a thief.

(d) Conceptually speaking, the duty to return lost property is given extremely wide interpretation in Jewish Law and includes the obligation to prevent others from loss. Any act of deliverance is regarded as the restoration of something lost. It was thus that the Sages explained the verse: “and so shall you do with any lost object of your brother” (see BM 31a; Maim. Yad, Gezelah va-Avedah 11:20). Various concepts are mentioned in this regard, e.g. “lost property” (saving land from floods), “lost person” (saving a person’s life and bodily integrity; see BK 81b), and even “lost spirit” (saving a person from transgressing; see Minhah Hинukh 239:4). It is thus apparent that the duty of restoration applies to all types of property.
or interests of others which are endangered. By contrast, the Israeli legislator preferred the practical distinction between restoring a lost object and saving another person from loss – the latter including any activity for the preservation of another person’s interest. The return of lost property is regulated by the Restoration of Lost Property Law (and the definition of lost property was thus limited to movable property, concerning which an act of restoration may be performed), while activities performed to preserve another person’s interest are regulated by section 5 of the Unjust Enrichment Law, 5739 – 1979.

**Case Law of the Israeli Supreme Court – Lost Property Found in Another Person’s Domain**

In the “Hendeles” judgment (CA 546/78 Kupat Am Bank Ltd. v. Hendeles et al., PD 34(3) 57), the Israeli Supreme Court addressed the question of lost property found by one of the bank’s customers on the floor of the bank’s safe deposit room. The issue in these proceedings was whether this place, being open to the public, was considered “another person’s domain” for purposes of section 3 of the Law, which states that “[a] person who finds lost property in another person’s domain shall report the find to such other person and deliver up the property to him at his request” and adds that “[i]f the other person takes over the lost property, he shall be regarded as the finder.”

Justice Barak sought to ascertain the primary purpose of the Law and reached the conclusion that the main purpose of the Law is to restore lost property to its rightful owner, and it therefore follows that the word “domain” should be construed in a manner that increases the chances of the original owner to retrieve his property. To this end, an examination needs to be made, on a case by case basis, as to whether this goal will be realized by leaving the object in the place it was found. If we reach the conclusion that it is better for the original owner if the object remains in the place where it is found, this consideration alone suffices to enable the place to come within the definition of “another person’s domain,” because by so doing the finder will become obligated to transfer the object to the owner of the “domain.” To quote Justice Barak:

> It appears to me that in considering whether a lost article was found in another person’s domain, there is no room to have recourse to the question of whether that other person is regarded in the eyes of the law as the holder of the lost property even prior to its discovery by the finder... This approach – who was the first holder – does not appear to be relevant to the main goals of the Restoration of Lost Property Law. If indeed the primary interest of the Law is the restoration of lost property to its rightful owner, and if in order to realize this interest... it is fitting for the lost property to be delivered to the owner of the place, the original finder is obligated to do so, whether he is the first holder of the property, or whether it is possible to regard – according to this or any other doctrine of the laws of possession – the owner of the place as the first holder.

Justice Barak notes two factors, on whose basis it may be decided whether the lost article should be left in its place:

First, it is natural that the owner of the lost property will return to the place at which the object was lost. His reasonable expectation is that, if the object is found at that place, and if at that place there is a person whose connections to the place are such that he can be expected to guard it, he will be able to receive it there and will not need to search after the finder...

Secondly, there is a high probability that the owner of the place where the lost property is found, by virtue of his links to the place, will guard the lost object for its owner to a greater extent than a random finder.

Since the bank is the “natural address” to which the owner of the lost property is liable to return when he recalls where the object was lost, the bank should be classified as a separate “domain” for the application of the provisions of section 3, and the finder is obligated to deliver to the bank the lost article that he found. If the owner of the lost object is not ascertained within four months, the owner of the “domain” – the bank – will take possession of the object, even if in terms of the laws of ownership, the original finder should become the owner.

Justice Elon, in the minority, disagreed with the opinion of his colleague and wrote: “Section 2 only applies in unusual cases – generally speaking, in the case of an article which is found in the thoroughfare of a city.” By contrast, with respect to an article found in a place which is traversed freely by thousands and even tens of thousands of people, such as the main entrance hall of a bank, in department stores and in various types of supermarkets, on buses and other modes of transport, in government offices and public institutions etc. – the manner of restoration follows the provisions of section 3 of the Law. In this way, section 3 becomes the main provision of the Law (p. 72).

He repeats and summarizes his criticism against Justice Barak in the further hearing that took place in the case (FH 13/80, Hendeles et al. v. Kupat Am Bank, PD 35(2), 785) in the following language:

> According to his construction (that of Justice Barak), the provisions of section 3 form the main rule of the Law, whilst the provisions of section 2 are the exception. This conclusion, it seems to me, is at odds with the plain meaning of the Law, nor in my opinion does it conform with the object of the Law. It does not advance the Law’s declared object of effecting and assuring the restoration of lost property to its owner, and the conclusion that follows, viz. that if the owner is not found after four months the property passes into the ownership of the bank and is not handed over to the immediate finder, fails to pass the test of reason and justice (p. 795).

According to Justice Elon:

Since doubt has arisen over the correct interpretation of section 3 of the Law and the meaning of the phrase “another person’s domain,” and this doubt cannot be resolved by the terms and content of the Law itself, it is only right and proper to turn to the Jewish legal system to find in its provisions a way to solve the problem. This is certainly true when it is apparent that the Restoration of Lost Property Law of the Knesset and the Jewish Law relating to the restoration of lost property have a common central object – to restore lost property to its rightful owner.

In this light, Justice Elon presents the position of Jewish Law in relation to the case in question, viz. that a bank’s safe de-
posit room, being a private domain that is open to the public, over which in practice the owners have no control, is not defined, for the purposes of the lost property laws, as “another person’s domain,” because it comes within the definition of a “courtyard that is not guarded,” while only a “guarded courtyard” can effect an acquisition on a person’s behalf.

The majority of the Court did not agree with the words of Justice Elon, and even in the further hearing the majority ruled in accordance with the opinion of Justice Barak. However, it is interesting to note that Justice Elon’s critical words did not fall on deaf ears, because in a memorandum for the draft Civil Law (the codification of civil legislation in the State of Israel) which was disseminated in 2004, a proposal was made to amend section 3 and to add to it the following provision: “The Court is entitled to determine that the rights in a lost article shall be divided between the finder and the domain owner in equal shares, save where it deems it appropriate to determine a different proportion” (section 800(b) of the draft).

[Michael Wygoda (2nd ed.)]

**LOT** (Heb. לוֹט), son of Haran, grandson of Terah, and nephew of *Abraham* (Gen. 11:27). Upon Haran’s death in Ur, Terah took Lot with him when, with Abraham and Sarah, he left the city for the land of Canaan. After Terah’s death in Haran (11:32), Abraham accepted Lot into the fold of his family in accordance with his patriarchal responsibility to the son of his deceased brother (12:4). Lot accompanied Abraham in his journeys from Haran to Canaan, from Canaan to Egypt, and from Egypt back to Canaan (12:5; 13:1). Abraham and Lot then passed through the Negev into the Benjamite hill country seeking pasture for their livestock which had multiplied in Egypt (12:16; 13:2). A personal quarrel then broke out between their respective shepherds, for “the land would not support them staying together” (13:6). In order to avoid strife, particularly between “kinsmen,” Abraham suggested to Lot that they part company. He gave his nephew first choice of the land, whereupon Lot chose the fertile Jordan plain, and settled near Sodom (13:8–12). The biblical narrative tacitly contrasts Abraham’s benevolence with Lot’s self-interest, and points out that Lot chose to reside with the people of Sodom who “were very wicked sinners against the Lord” (13:13). Abraham continued to show concern for Lot even after their separation. When Lot and his property were captured by *Chedorlaomer and his allies*, Abraham pursued them, rescued Lot, and brought him back safely to Sodom (14:1–16).

Parallels have been pointed out between Noah’s position in the *Flood story* and that of Lot in Sodom’s destruction (19:1–29). In both cases, God’s natural, destructive forces act against man because of his wickedness, and both narratives emphasize God’s choice in saving the one worthy person of that generation. Lot’s righteousness is not mentioned but his hospitality forms a clear contrast to the perversions and wickedness of the people of Sodom (19:2–10). Lot carried his hospitality so far in protecting his visitors, that when the Sodomites demanded to “become intimate” with them he offered his virgin daughters in their place (19:8). Lot is rescued from Sodom for the sake of Abraham (19:29), but his personal merit is implied in the contrast with his sons-in-law who frivolously disbelieved in the destruction of Sodom (19:14), and with his wife who, disobeying orders, looked back, only to become a pillar of salt (19:17, 26).

After the destruction of Sodom and Gomorrah, Lot, who had found protection in Zoar, took to the hills and lived in a cave with his two daughters (19:23, 30). Here, the girls, believing all other males to have become extinct, got their father drunk and without his knowledge committed incest with him (19:31–35). As a result, Lot’s older daughter became the mother of *Moab and his younger daughter the mother of Ben-Ammi* (19:36–38). The name “sons of Lot” (Deut. 2:9, 19; Ps. 83:9) in biblical reference to Moab and Ammon is probably based on this etiological story.

It has been argued that the narrative of Lot and his daughters may be an indication of retributive punishment of Lot for offering his daughters to the Sodomites in place of his visitors. Just as he had allowed the claims of courtesy to transcend morality, so his daughters permitted their concern for the propagation of the species to outweigh the laws of incest. Yet, although offensive as Lot’s offer may be to modern readers, the fact is that fathers had disposition over their daughters to the extent that they could even sell them into slavery (Ex. 21:7; according to rabbinic law a father could marry his daughter to a man who is disfigured and has boils; see Ket. 9b). In addition, the narrator does not condemn the actions of the women but informs us twice (Gen. 19:32, 34) that the daughters of Lot were motivated by the desire to preserve the human species, using the same phrase “to keep seed alive” that he uses for YHWH’s words to Noah in Genesis 7:3 in the command to bring the animals onboard the ark. In other words, Lot’s two daughters acted much in the manner of Tamar, who continued the family line by soliciting sexual intercourse from her father-in-law, which likewise violates the rules of incest (Lev. 18:15, 20:12), and which act is praised by the author of Ruth 4:12. (See also the rabbinic evaluation below.)

The present form of the Lot narrative leaves an unmistakable impression of Israelite ascendency over Ammon and Moab: Haran, Lot’s father and the grandfather of Ammon and Moab, was the youngest of Terah’s sons, while Abraham was the oldest; Lot was continually in need of Abraham’s protection and help; the incestuous union between Lot and his daughters disgraces their offspring, the Ammonites and Moabites.

The Dead Sea Scroll’s Genesis Apocryphon (20–21), written in Aramaic, embroiders the scriptural narrative. According
to this source, Lot not only accompanied Abraham to Egypt but also functioned there as spokesman to Pharaoh’s agent. He acquired great possessions, obtained a wife, and built himself a house in Sodom.

**In the Aggadah**
The rabbis often represent Lot in an unfavorable light although in some sources he is praised for his virtues, the word *zaddik* of Genesis 18:23 being applied to him. When, however, he separated himself from Abraham, he at the same time separated himself from God (Gen. R. 41:5–7). He chose to settle in Sodom because of his lustful desires (*ibid.*). There he became a usurer (51:6). He was appointed head of the local tribunal (50:3), according to some, because he was the worst of all the five judges there (Tanh. B. Va-Yera 21). Although Lot owed his deliverance from Sodom to Abraham’s intercession (Mid. Hag. to Gen. 13:11), it was also his reward for not having betrayed Abraham in Egypt when he said that Sarah was his sister (Gen. R. 51:6). A greater reward, however, is that the Messiah will be descended from him through Ruth the Moabitite and Naamah the Ammonite (see Gen. R. 51:8 and Naz. 23b–24a). Lot had learned the virtue of hospitality from Abraham and invited the angels to his home although in Sodom this was punishable by death (*Pârê 25*). As a reward for this act, Israel was forbidden to wage war against his descendants (Yalkut 2 (1877), 782 on Is. 15). The whole night Lot pleaded in favor of Sodom (Lev. R. 23:9). Only the two unmarried daughters of Lot followed him when he left the city (Gen. R. 51:9). Lot is condemned for the negligence which caused him to sleep with his two daughters (Gen. 19:30–38). Although he was not aware of what he was doing he allowed himself to become inebriated again after he had found out what had happened to him with his elder daughter. However, his daughters’ intention was honorable (Hor. 10b).

**ISLAM.** Lūt (Lot) accompanied Abraham when he left Aram-Naharaim (Sura 25:25), but Muhammad has set aside an important place for him in his prophecies because he regards him to have been, like himself, a prophet sent to rebuke the wicked (22:43; 26:160; 37:133). The name of Sodom, however, is not mentioned in the Koran. It appears that the positive importance for him in his prophecies because he regards him to have been, like himself, a prophet sent to rebuke the wicked (22:43; 26:160; 37:133). The name of Sodom, however, is not mentioned in the Koran. It appears that the positive appreciation. Muhammad’s attitude toward the wife of Lot is negative (66:11). The later descriptions found in the works of Tabari, Tha’labi, and al-Kisâ‘i show an extensive familiarity with the events of Lot’s life. They particularly deal at length with the description of the wickedness of Lot’s wife, who reported the good deeds of her husband to the men of Sodom. The influence of the Jewish Midrash (Gen. R. 51:5) is obvious. Islamic legend, however, also influenced subsequent Jewish aggadot.

For Lot in the arts see *Sodom and Gomorrah*.

**LOTAN, GIORA** (Georg Lubinski, 1902–1974), Israel social welfare expert. Born in Berlin, Lotan practiced as a lawyer. From 1933 to 1938 he headed the division of vocational training for youth and adults in the Organization of German Jewry, wrote many articles on social welfare in Germany, and was co-editor of a journal on social welfare. Immigrating to Erez Israel in 1938, he succeeded Henrietta *Szold as director of the social welfare department of the *Va’ad Le’ummi*. During World War II Lotan established and directed the Committee for the Welfare of the Families of Jewish Soldiers and carried out a similar assignment during the War of Independence. In 1948 he was a member of the Government of Israel Social Insurance planning committee. He was the first director general of the National Insurance Institute (1954–69). From 1959 to 1961 he also served as the director general of the Ministry of Social Welfare and later, director general of the Ministry of Labor. Lotan wrote many articles and published a study of social insurance in Israel (*National Insurance in Israel*, 1969).

*Jacob Neusner*

**ЛОТХАР, ЭРНСТ** (pseudonym of Ernst Lothar Mueller; 1890–1974), Austrian novelist, author, and stage director. Lothar was born in Bruenn and after studying law entered the Austrian civil service and became state attorney and counselor at the Ministry of Trade. After World War I Lothar was the theater critic of the Viennese *Neue Freie Presse* and in 1935 he succeeded Max Reinhardt as director of Vienna’s “Theater in der Josefstadt.” He also staged a number of plays at the Salzburg festivals. Although he converted to Catholicism and was at pains to sever all connections with Judaism and the Jewish community, Lothar was forced in 1938 to resign his post and leave Austria. He eventually immigrated to the U.S. and became professor of comparative literature at Colorado College. In 1946 he returned to Vienna as theater and music officer in the U.S. army of occupation. He later again became a stage director in Vienna. Lothar was a prolific and versatile writer. His works include the novels *Der Feldherr* (1918), *Der Heilser* (1929; *The Clairvoyant*, 1931), and a trilogy entitled *Macht weber alle Menschen* (1921–25). His most famous work in this genre, *Der Engel mit der Posaune* (1945, and frequently republished), was first published in English as *The Angel with the Trumpet* (1944); it deals with the problem of the Jewish wife in several genera-
tions of a non-Jewish family. *Unter anderer Sonne* (1943) was an American best seller. Lothar's autobiography, *Das Wunder des Ueberlebens* (1960), deals largely with his years in exile.

[Samuel L. Sumberg]

**LOTTHAR, RUDOLF** (pseudonym of **Rudolf Spitzer**; 1865–1943). Austrian playwright and journalist. Lothar, a native of Budapest, became a contributor to the Viennese *Neue Freie Presse*. He wrote many dramas and comedies, some in verse. Erotic in content, they reveal clever psychological insight. The most popular were *Koenig Harlekin* (1900), *Casanovas Sohn* (1920), and *Der Werwolf* (1921). Lothar also wrote operas and the libretto for D’Albert’s *Tiefland* (1926). A travel book, *Zwischen drei Welten* (1926), includes an account of his trip to Palestine and a study of Jewish culture.

[Samuel L. Sumberg]

**LOTMAN, YURI MIKHAILOVICH** (1922– ), literary scholar and cultural anthropologist. Lotman was born in Petrograd into an assimilated Jewish family, and studied in the philological faculty of Leningrad University from 1939 to 1950, except for the years 1940–46 when he was in the Red Army, mainly at the front. From 1950 to 1954 Lotman worked at Tartu Teachers’ Institute in Estonia, and from 1954 was at Tartu University where from 1960 to 1977 he was head of the Chair of Russian Literature. His main works are concerned with the history of Russian literature and social thought from the end of the 18th to the early 19th century, the theory of literature, cultural history, and semiotics. Basing himself on the work of the “formalist school,” Lotman developed a methodology of analyzing the internal structure of poetic texts, applying quantitative methods of research to the semantics of verbal art. He developed ways of studying the links between the author, the structure, and addressees of artistic works, thus emerging as one of the first theoreticians of structuralism in literary study. His major works *Lektisi po struktural'nomu poetike* (“Lectures on Structural Poetics,” 1964); *Struktura khudozhestvennogo teksta* (“The Structure of the Artistic Text,” 1970); *Analiz poeticheskogo teksta* (“Analysis of the Poetic Text,” 1972); *Semiotika izo i problemy kinoestetiki* (“Semiotics of Cinema and Problems of Cinema Aesthetics,” 1973, etc.) established principles of structural-semantic research in the fields of literature and art. Many scholars, including Roman Jakobson, took part in the Summer School for Modeling Systems which he organized in Tartu in 1964, 1966, 1968, and 1970. In 1964, Lotman inaugurated the publication of the series *Trudy po znakovym sistemam* (“Works on Signal Systems”).

His sister, *Lidiya Mikhaylovna Lotman* (1917– ), was also a literary scholar, who wrote on general problems of Russian literature of the 19th century. Her monograph *Realizm ruskokoy literatury 60–y godov 19 v.* (“Realism of Russian Literature of the 60s of the 19th Century,” 1974) is characterized by a complex elaboration of literary-historical and theoretical issues.

[Mark Kipnis / *The Shorter Jewish Encyclopedia in Russian*]

**LOTS.**

**Biblical Data**

The Bible records the practice of casting lots as a means of arriving at decisions on a variety of matters. These may be grouped into two main categories: (a) the selection of one or more members from a group; (b) the division of goods among members of a group. To the first category belong the election of a king (1 Sam. 10:20, 21); the election of cult functionaries (1 Chron. 24–26); the selection of the “scapegoat” for the atonement ritual (Lev. 16:8–10); the selection of residents for Jerusalem (Neh. 11:1); the allocation of responsibility for supplying the wood for the altar (Neh. 10:35); the identification of a party guilty of some sacrilege (Josh. 7:10–26); 1 Sam. 14:41ff.; cf. Jonah 1:7); the assignment of a tribe as the first wave of troops in a military campaign (Judg. 20:18; cf. 20:9); the selection of a date for some future action (Esth. 3:7; 9:24; note the use of Akk. *pūru, “lot,”* glossed by Heb. *goral, “lot,”* and the survival of the former in the name of the festival Purim).

The second category involves the distribution of goods, usually booty (Isa. 17:14; Nah. 3:10; Ps. 22:19) or conquered ter-
ritory. The latter instance accounts for most biblical references to the casting of lots. The division of one's land and its reapportionment to others by lot is cited as a divine punishment in Isaiah 34:17; Joel 4:3, and Obadiah 11. The apportionment of Canaanite territory by lot among the Israelites is related in Numbers 26:52–56; 33:54; 34:13; 36:2, and Joshua 14–19; 21:4–12 (the apportionment of levitical cities, cf. 1 Chron. 6:39 ff.). Distribution of land by the casting of lots is paralleled in both ancient Mesopotamian legal documents and the customs of Palestinian Arabs. Although the Bible provides few details concerning the procedure adopted in the casting of lots, evidence can be supplied from several outside sources (see below; in Talmud and Midrash). It would seem that various objects might serve as lots, the most common ones being of wood and stone (cf. the element giš "wood") in the Sumerian giš.ŠUB.BA ("lot") and the determinative NA' ("stone") describing a lot. A die said to have been cast by the Assyrian official Jahali in 833 B.C.E. in the ceremonial selection of the annual eponym is in the form of an inscribed terra-cotta cube (see Hallo). For Hittite resort to the lots, see Kitz.

The technique of casting lots involved throwing lots to the ground and interpreting the results on the basis of a prearranged understanding. The element of "throwing" is also evident in the above-mentioned Sumerian term giš.ŠUB.BA, "wood which is cast." So, too, the verbs regularly employed with "lot" in both Akkadian and Hebrew denote "to throw, cast down." In the Iliad (3:314 ff.) there is preserved a rather detailed description of the procedure: the lots are placed in a helmet and shaken to the ground, the shaker averting his eyes by looking backward. The determination in such cases was based on whose lot fell to the ground first (cf., e.g., Josh. 21:10), each lot having been previously marked to identify its owner (cf. the inscribed names on the lot of the Assyrian eponym and the inscribed shards at Masada). This method is most appropriate in contests, and might be applied to any problem where a choice between participating parties or defined options was involved. In more complex cases, such as the division of land, the area is measured off and the options for partition decided upon (cf., e.g., Josh. 18:4–6), it being understood that specific parcels of land correspond to the lots thrown. It is in this way that words denoting "lot" come to denote that which is decided by the casting of a lot, e.g., a parcel of land, an assigned function, or, more generally, one's destiny.

The biblical notion that the divine will is reflected in the fall of the lots is most clearly expressed in Proverbs 16:33: "The lot is cast from (one's) bosom, but all of its decisions (derive) from the Lord." Divine guidance is also implied by the fact that the lots were cast "before the Lord" (Josh. 18:6; 19:51). Further, the sacral usage of the *Urim and Thummim would also seem to stress the role of lots as a divine means of communication (cf., e.g., 1 Sam. 14:41, 42). So, too, in Isaiah 34:17 it is the Deity who actually casts the lot determining the inherited portion. The same concept, identically expressed, is attested at Qumran (see the restoration of 1QS 4:26 in J. Licht's Megillat ha-Serakhim (1965), 105). In sharp contrast to this notion is the ancient Mesopotamian idea that the gods, as well as humans, are subject to the fall of the lots.

[Murray Lichtenstein]

**In the Second Temple Period**

The lot was extensively used during the Second Temple period, and particularly in the Temple itself in order to determine the allocation of duties among the priests. No biblical sanction, however, seems to have been sought for this practice, and, as the following passage shows, it was an arrangement of expediency arrived at through experience. "Originally whoever wished to clear the ashes from the altar did so. If they were many they used to run up the ramp and he that came first within four cubits secured the privilege... It once happened that both reached the decisive point simultaneously; and one of them pushed the other, and he fell and broke his leg. When the bet din saw that danger was involved they ordained that (the privilege of) clearing the altar should be done only by casting lots" (Yoma 2:1-2). The Mishnah goes on to detail the other three lots which were cast for the Temple service. The first covered 13 tasks connected with the sacrifice, from the actual slaughter of the animal to the bringing of the wine oblation, the second for offering the incense, and the third the carrying of the members of the sacrificial animal from the ramp to the altar (ibid. 3–4). The order to cast the lots was given by the overseer (ibid. 4; Tam. 1:2). The Talmud discusses whether or not the priests wore their sacred garments while casting the lots (Yoma 24b). According to the Tosefta (Tan. 2:1) the extension of the priestly watches (see *Mishmarot and Ma'amadot) from the four which returned to Zion (Neh. 9:5; 11:10) to the 24 in the Second Temple was also decided by lot.

Whereas there is nothing in the Bible regarding the manner in which the lots were cast (see above) the Talmud gives details. The uren (Heb. kalpe; Gr. κάλπη) in which the lots were placed for choosing the scapegoat was originally of boxwood (eshkerou), but Ben Gamala made one of gold (Yoma 3:9). The uren was shaken and the two lots were taken, one in each hand. If the one bearing the inscription "For the Lord" came up in the right hand, it was regarded as a good omen (4:1). The lot could be made of any material, e.g., olive wood, walnut wood, or boxwood (Yoma 37a). According to the Jerusalem Talmud (Yoma 4:1, 41b), they were made of black and white pebbles. The above, however, refers to the biblically ordained throwing of lots for the scapegoat. For other lotteries it would appear that pieces of paper, or shards, such as those found at Masada (see below), were used. They are referred to as *piktakot (Gr. πρώτοιοι).

The term "lot" at Qumran is used for both the heavenly lottery or allotment, which is already apportioned by God (e.g., 1QS 2:2), as well as the paraphernalia used for a lottery on earth for casting lots. At Qumran when the lot was cast under the supervision of a priest, its outcome was considered to be predetermined by divine appointment. CD 14:3–8 with 4Q279 5:2–6 indicates that the term "lot" was also used for each of the four categories of membership within the community: Priests,
Levites, Israelites, and Proselytes. Order within those categories was determined by pedigree, spirit, and casting lots. In this one’s “lot” may be understood as one’s divinely appointed station or position (e.g., 1QS 1:10; 2:23). The War Scroll (1QM) also utilizes the term for categories of angels. Similarly, but antithetically, the community’s enemies were said to be of the “lot of Belial” (1QS 2:5; 1QM 15).

It is therefore not surprising that lots should be found during the excavations of Khirbet Qumran. Their form, however, differed from those found at Masada. The lots were smoothed balls of clay measuring 25 ± 5 mm in diameter with partially pierced holes arranged over the surface ranging in numerical value from 1 to 27. At least 59 lots were discovered at Qumran during the course of R. de Vaux’s excavations. De Vaux recorded these according to item and locus number as “boulee piercée incompletes” and noted the size and number of holes on each. De Vaux, without understanding the actual use and significance of the items, chose to provide the simplest description of them (as he also did in the case of the sundial which he listed as “disque de calcaire” (KQ909)). The PAM photographs of seven of these have been published in The Dead Sea Scrolls on Microfiche.

Josephus gives a number of historical incidents in which choice was made by lot. According to his own, suspect, account, he saved himself from death at Jotapata by arranging that the last ten leaders of the besieged city, of whom he was one, should cast lots, the second one to draw the lot putting to death the previous one, and so on, the last one left having to immolate himself. When he was left with the last other survivor, he persuaded him to abandon the plan (Wars, 3:387–91). A similar system was employed for the suicide of the last ten defenders of Masada. Ten were chosen by lot to be the executioners of the defenders, and then the ten drew lots among themselves to determine who should slay the remaining nine, the last then committing suicide (ibid., 7:396 ff.). A series of ostraca bearing the names of men found at Masada have been connected by Yadin with this episode. Josephus also states that the Zealots, during the last days of the Temple, in order to mock at the aristocratic families from whom the high priest was usually selected, elected “Phinehas b. Samuel by lot (ibid., 4:155).

In the New Testament Zechariah (the father of John the Baptist) was chosen by lot (kleros) to offer the incense in the Temple (Luke 1:8–9). The disciples of Jesus determined who would replace Judas Iscariot by casting lots (Acts 1:26). The term is also used for “lot of the saints” (Acts 26:18; 1 Pet. 5:3) which may be applied to categories of angels (Col. 1:12). “Lot” can also mean “appointed position” in Acts 1:17 and 8:21. The term was also used in the Gospels for the casting of dice by Roman soldiers who competed for Jesus’ garments (Matt. 27:35; Mark 15:24; Luke 23:34; John 19:24).

The aggadah extends the use of the lot to many instances of biblical history. The fact that although Eldad and Medad were “of them that were recorded” but they remained in the camp (Num. 11:26) is explained by stating that Moses chose the 70 elders mentioned in the context by placing 72 slips in an urn; on 70 of them the word “elder” was written, while two were blank, and six were selected from each tribe (Sanh. 174). A similar lot was drawn to select the 22,000 firstborn (ibid.). The Midrash also adds that Jacob’s sons drew lots to decide who was to bring the bloodstained coat of Joseph to Jacob (Gen. R. 84:8). Details are given of the manner in which the territory of Israel was divided among the tribes (BB 122a), and that brothers can divide by lot an estate bequeathed to them is laid down as the law (BB 106b).

[Louis Isaac Rabinowitz / Stephen Pfann (2nd ed.)]

Post-Talmudic Times

According to Jewish thought a decision arrived at by lot is not regarded as the result of blind choice. Only once is an objection taken to deciding matters by lot and, peculiarly enough, it has been included in the Shulhan Arukh. The tosafists apparently had a reading to the Sifrei Deuteronomy 18:13: “From what do we learn that it is forbidden to enquire by casting lots? Since the Bible says Thou shalt be wholehearted with the Lord thy God” (see Tos. Shab. 156a). The statement does not occur in the present editions of the Sifrei, which give an entirely different deduction from this verse (in Pes. 13b the doctrine that “one should not enquire of the Chaldeans” is deduced from this verse, a reading which is supported by the context in which it occurs). Either the tosafot had a different reading, or, as appears probable, the deduction is based upon 1 Samuel 14:41, where the word tamim (“wholehearted” in Deut. 18:33) is taken to mean “lots” (see 14:42). Whatever the case may be, this statement has been incorporated in the Shulhan Arukh (YD 179:1) in the laws against witchcraft. It is, however, an isolated statement; a tolerant and even positive view has been taken throughout the ages with regard to lotteries (but see “Gambling”). A possible reflection of this is seen in the fact that although games of chance and gambling are not permitted in the State of Israel, the National Lottery is sponsored by the government and the proceeds of the weekly Mifal ha-Payis (payis is the talmudic word for lottery) are designated for hospitals and schools.

[Louis Isaac Rabinowitz]

“LOUIS, name of 18 kings of France. Of particular importance in Jewish history are the following:
LOUIS I (the Pious; 778–840), king of Aquitaine (from the age of three), emperor of the West from 814. Of the Carolingian emperors, Louis was the best disposed toward the Jews. He retained several Jewish merchants at his court in the capacity of “merchants of the palace” who enjoyed extremely favorable privileges, part of which were no doubt also valid for all the Jews in the empire. These privileges guaranteed to their holders and their households (including near relatives, slaves, and servants) the widest liberty of movement, the right to acquire and sell property, and exemption from a variety of tolls and imposts affecting persons and goods in transit. Missionary activities by Christians among pagan slaves owned by these Jewish merchants were prohibited. They were authorized to employ Christians on condition that they were freed from work on Sundays and Christian holidays. Their real property and movable goods were safeguarded. In the judicial sphere, the holders of these privileges were exempted from “question” (torture) and trial by ordeal and could take the oath according to Jewish custom. These privileges later became the model for several privileges granted by local lords (such as Bishop *Ruediger to the Jews of Speyer) or by German emperors (*Henry IV to the Jews of Worms). However, the most serious consequences for the future legal status of the Jews, especially those of France and Germany, were contained in the provisions in Louis’ privileges, which placed the Jews under the immediate jurisdiction of the emperor. These enabled him to benefit from the fines and indemnities imposed on persons who injured or killed one of these merchants, who were in the service of the palace or the imperial chamber and had been taken under the emperor’s protection (*Mainbour). Some scholars have concluded that this was the origin of the principle of “imperial servitude” of the Jews, the "servi camerae regis."

That the greater part of the provisions in these privileges benefited not only the “merchants of the palace” but the whole of the Jewish population is evident from the efforts of *Agobard, bishop of Lyons, to have them repealed when the Jews of Lyons and other towns of his diocese took advantage of them. Louis had moreover appointed an imperial official, the Magister Judaeorum, who was responsible for the protection of the Jews. Toward 826–8 this position was held by a certain Evrard. Even before attacking the privileges held by the Jews, Agobard had already, in about 820, clashed with Louis over the Jews, when the bishop had attempted to baptize Jewish children in Lyons, Chalon, Mâcon, and Vienne. At the time, Louis accorded the Jews his full protection. His goodwill toward the Jews was not even weakened when his own deacon, *Bodo, fled to Muslim Spain and embraced Judaism. Texts erroneously attributed to Louis, in particular the “forged capitularies,” include enactments less favorable to the Jews, as well as the formula for an oath to be taken in a humiliating manner; these are forgeries belonging to a later period.

LOUIS VI, king of France from 1108 to 1137. During his reign jurisdiction over the Jews (and their revenues) gradually passed from royal control to the hands of the Church. The Abbey of Saint-Denis, in 1112, obtained from the king judicial control over the Jews in the town. In 1119 Louis ceded half his income from the Jews of “Tours to the Abbey of Saint-Martin there; and in 1122 he granted five houses belonging to Jews to Abbot Suger of Saint-Denis.

LOUIS VII (called the Young), king of France from 1137 to 1180. In 1144, Louis banished from the kingdom those Jews who had been converted to Christianity and had later returned to Judaism. In 1146, Louis authorized the Jews to return to Sens, from where they had been expelled. During the preparations for the Second Crusade, of which Louis became one of the principal leaders, Peter the Venerable of Cluny wrote to the king advising him to confiscate the possessions of the Jews; however, Louis followed the more tolerant counsel of Bernard of Clairvaux, who suggested that only the interest on the debts that Crusaders owed to Jewish moneylenders should be canceled.

LOUIS VIII, king of France from 1223 to 1226. On Nov. 8, 1223, Louis published an edict on the Jews, which had strong fiscal motives. Even though only a number of barons signed this decree, it was declared to be equally binding upon those who had not. The edict, the first attempt by the monarchy to affirm its legislative power over all the baronies of the kingdom, ordained the suppression of all interest due on debts toward the Jews, and the repayment of these debts within three years, on the condition that they were registered. Non-registered debts as well as those which had been pending for more than five years were to be considered as canceled. The king evidently received a quota of the debts collected in this way, which explains why the fiscal income from the Jews increased to a total of 8,682 livres in 1226. The seal which had served to authenticate debts toward the Jews was abolished. Furthermore, Jews were no longer allowed to move from one seigniory to another. This edict had extremely serious consequences for the future legal position of the Jews.

LOUIS IX, king of France from 1226 to 1270. In his attitude toward the Jews, Louis differed from his predecessors and successors solely in that he placed the interests of the Church before his personal concerns and those of the kingdom in general. This was especially evident in the material assistance he granted to converts: expenses on their behalf often exceeded the income derived from the Jews of France. On other occasions, when this income could not be used for this purpose because the king considered that it was defiled by the sin of usury, he tried to restore the money to the victims of usury or their heirs.

In all other respects Louis’ attitude toward the Jews was characterized by implacable enmity, which endured throughout his long reign. As early as 1230, he issued the famous Ordinance of Melun which forbade the Jews to engage in any money-lending activities; at the same time, it was stipulated that no one was allowed to detain a Jew who was the property of another lord. However, Louis was compelled to bow to the economic pressures that rendered dependence on Jewish credit indispensable. In 1234 he seized one-third of the debts owed...
to the Jews and decreed that in the future they would be permitted to take pledges only in the presence of trustworthy witnesses. There is reason to believe that Louis took no measures to protect Jews persecuted by would-be crusaders in 1236 in several provinces (Anjou, Poitou, Mançois, Touraine, Berry). When in 1239 Pope Gregory IX requested the kings of France and Portugal to order the seizure of Jewish books for examination, Louis was the promptest and most zealous to comply; 24 cartloads of Jewish books were burned in 1242. The resolute and clear-sighted defense conducted by *Jehiel b. Joseph of Paris at the famous Paris *disputation in 1240 was to no avail, for the judgment was virtually predetermined. However, the king's outburst, reported by his biographer Jean de Joinville, that rather than discuss questions of faith with a Jew a layman should plunge his sword into him, was probably caused by his anger at the courageous arguments advanced by R. Jehiel (who was compelled to flee). When *Innocent IV, moved by the protests of the Jews that they could not teach the Bible without the Talmud, ordered it to be examined again, Odo (Eudes) of Chateauneuf, chancellor of the University of Paris, opposed the pope and the condemnation stood. In December 1254 Louis threatened with expulsion any Jew who kept copies of the Talmud or other banned books; at the same time he forbade them to engage in any kind of moneylending and ordered them to earn a livelihood in manual toil or any other lawful trade. When he decreed in 1257 or 1258 that the profits of usury should be restored to its victims, the commissioners who carried out the task were authorized to sell the real properties of the Jews to raise the required sums of money. In 1268 Louis called for the arrest of all the Jews and the confiscation of their property in preparation for their eventual expulsion; however, this extreme measure remained in abeyance. A year later, under the influence of the apostate Pablo Christiani, the king ordered the Jews to wear a distinctive "badge and instructed his officers to assist the apostate in compelling Jews to listen to missionary sermons.

It is noteworthy that no Jewish historian mentions Louis on any occasion. Joseph ha-Kohen briefly describes his expulsion project of 1254 but without mentioning the king's name. A contemporary Christian author, Matthew of Paris, makes the most succinct comment on Louis' attitude to the Jews: "See how the king of France hates you and persecutes you.

**Louis X** (called Le Hutin: "The Quarreler"), king of France from 1314 to 1316. Soon after his accession, Louis paved the way for the return of the Jews expelled from the kingdom of France in 1306. On April 1, 1315, he suspended the collection of the debts owed to them which were still outstanding from the time of the expulsion. An ordinance was issued on May 17, 1315, regulating the jurisdiction of the Jews in the eventuality of their return to France, which he authorized on July 28, 1315. It permitted them to resettle in the localities where they had lived previously; ordered that their synagogues, cemeteries, and books, with the exception of the Talmud, should be restored to them; and prohibited them from moneylending against interest, allowing them only to take pledges. However, they were permitted to trade freely. The ordinance concluded with the king's guarantee to take the Jews under "his special protection and administration." In fact, in authorizing the return of the Jews, Louis was principally motivated by monetary interests. The duration of this right of residence was set for 12 years, with the possibility of prolongation and one year's notice of revocation. However, a new expulsion order was issued less than seven years later (1322) by Charles IV while the delay of one year's notice to enable the Jews to dispose of their possessions was not observed.

**Louis XI**, ruler of Dauphiné from 1440 (as Louis II), and king of France from 1461 to 1483. As dauphin, Louis tried to keep the Jews in his province and even to attract newcomers, offering them in 1449 advantageous privileges if they would settle in Crémieu. On several occasions he defended the Jews against the nobility of Dauphiné, confirming their privileges, and even granting them new ones in 1451, 1453, and 1455. However, after his accession to the throne of France, he imposed a heavy fine of 1,500 gold crowns on them in 1463, because "they had spoken ill of the king during his absence." Nevertheless, he reconfirmed the privileges of the Jews of Dauphiné in 1476, that is, 80 years after they had been banished from the kingdom.

**Louis XII**, king of France from 1498 to 1515. Louis ordered the final expulsion of the Jews from *Provence in 1501. In order to compensate for the loss to his revenues caused by the departure of the Jews from Provence, Louis introduced a tax in 1512 on the remaining Jews there, who had accepted baptism. Known as the "tax of the neophytes," it amounted to a total of 6,000 livres. Down to the 18th century, a number of noble Provençal families were held in discredit because they were reputedly descended from these "neophytes."

**Louis XIII**, king of France from 1610 to 1643 with his mother Marie de Medici as regent until he was declared of age in 1614. On April 23, 1615, Louis signed letters patent renewing the expulsion order "against not only Jews but also those who profess and practice Judaism." This order appears to have been directed especially against Marranos and possibly also against those Jews who had come to Paris with Concini (Maréchal d'Ancre), the young king's minister, and his wife, Leonora Galigai. The letters patent were recorded by the parlement, but as far as it is known they were not put into effect in any way. However, after the assassination of Concini at Louis' command, in 1617, Leonora Galigai was tried for sorcery and the charge of practicing Judaism was also brought against her. During Louis' reign, the Jews of *Comtat Venaissin could bring action against defendants living in the kingdom of France and even win their cases. When Louis visited Metz in 1622, he granted the Jews letters patent which declared their presence in the town a necessity.

[Bernhard Blumenkranz]

**Louis XVI**, king of France from 1774 to 1792. Among Louis' ministers were Turgot, Choiseul, and "Malesherbes, who were favorably inclined toward the Jews. On his order a
census was taken of the Jews of *Alsace in 1784; letters patent concerning them were issued during the same year. Their delegate, Herz *Cerfberr, was received at Louis’ court, although he had no official status, and notice was taken of his representations. The first important step toward improvement of the status of the Jews was the abolition of the body tax in 1784. Other projects to alleviate their situation were under study when the Revolution broke out.

[Reene Neher-Bernheim]

**LOUIS, MORRIS** (1912–1962), U.S. painter. Dubbed a post-painterly abstract artist and a Washington color painter, Morris Louis Bernstein, who changed his name in 1938, was born in Baltimore, Maryland. After studying at the Maryland Institute of Fine and Applied Arts in Baltimore (1929–32), he worked as a Works Progress Administration artist in Baltimore (1934) and then in New York City, where he lived from 1936 to 1940. He returned to Baltimore in the early 1940s and lived in Washington, D.C., from 1952 until his premature death. Early on he made allover compositions in the vein of Jackson Pollock’s drip paintings and experimented with collage. His biomorphic *Charred Journal* paintings (1951) referred to the Nazi book burnings.

After seeing Helen *Frankenthaler’s seminal painting *Mountains and Sea* (1952, National Gallery of Art, Washington, D.C.) in April 1953, Louis changed his working method. Influenced by Frankenthaler’s thin veils of color staining the unprimed canvas, Louis began to saturate his paintings in three major series: *Veils* (1954, 1958–59), *Unfurleds* (1960–61), and *Stripes* (1961–62). Interwoven colors characterize *Veil* paintings such as *Blue Veil* (1958, Fogg Art Museum, Harvard University, Cambridge). To make these large works, Louis poured diluted paint down the angled canvas to create a wavelike effect of blended, layered color that covers nearly the entire surface of the work. In contrast to Pollock, Louis achieved a sense of painterliness without touching a paintbrush. *Unfurled* paintings such as *Beta Kappa* (1961, National Gallery of Art, Washington, D.C.) show colorful thin rivulets of paint running diagonally down and inward from the top corners of the canvas leaving large central portions of the painting white. Straight bands of color, varying in thickness and arranged horizontally or vertically across the white canvas, characterize the *Stripe* paintings. In all of these works Louis emphasized the flat ground, eschewing illusions of depth.

[Samantha Baskind (2nd ed.)]

**LOUIS-DREYFUS, JULIA** (1961– ), U.S. actress. Born in New York but raised in Washington, Louis-Dreyfus has roots in a prominent French banking and financial family. Her father is Gerard Louis-Dreyfus, an important French financier. Her grandfather, Pierre Louis-Dreyfus, fought for the French Resistance during World War II. Her cousin Robert Louis-Dreyfus was the owner of Adidas, the sports-equipment manufacturer, and of the French soccer club Olympique de Marseille. Julia Louis-Dreyfus studied theater at Northwestern University in Chicago and began her theatrical career there with the Practical Theater Company and the Second City Comedy troupe. After three years, 1982 to 1985, on the popular television series *Saturday Night Live* and appearances in a number of films, including *Hannah and Her Sisters* (1986) and *National Lampoon’s Christmas Vacation* (1989), Louis-Dreyfus was cast as Elaine Benes, the ex-girlfriend and pal of Jerry *Seinfeld in the comedy series Seinfeld in 1989. The show proved to be the most popular series of the 1990s, and she won an Emmy Award as best supporting actress in a comedy series in 1996 for her role in Seinfeld. The series, famously about “nothing,” but really about the everyday foibles of single people in New York City, also starred Jason *Alexander and Michael Richards. After the end of the series in 1998, Louis-Dreyfus starred in several other television situation comedies.

[Stewart Kampel (2nd ed.)]

**LOUISIANA** , south-central U.S. state at the mouth of the Mississippi River. In 2001 its population was estimated at 4,470,000 including about 15,000 Jews. The largest Jewish communities are Greater *New Orleans, which includes Metairie and the North Shore (13,000), Shreveport (1,100), and Baton Rouge, the state capital (1,200); there are also organized communities in Alexandria, Lafayette, Lake Charles, Monroe, and New Iberia. Jewish welfare federations function in New Orleans (1913), Alexandria (1938), Monroe (1938), and Shreveport (1941). There are approximately 18 congregations in the state; about 13 rabbis served these congregations. Many of the other congregations are served by student rabbis.
Early New Orleans
It has generally been assumed that the Louisiana Code Noir, or Black Code, promulgated in Paris in 1724 and excluding settlement by Jews and the practice of any religion other than Catholicism in the French colony of Louisiana, discouraged the immigration of Jews to the area.

Although there were transient Jews in the colony, the first recorded settler was Isaac Rodriguez Monsanto, a Dutch-born merchant who had taken his brothers and sisters to Curacao before moving his headquarters to New Orleans in 1757. Between 1757 and 1769 Monsanto conducted successful business operations with settlers and merchants throughout Louisiana, the Illinois country, Atlantic and Caribbean ports, and Europe. In 1769, when Monsanto and his family and associates were expelled from New Orleans under the rigorous Spanish rule of Governor Alejandro O’Reilly, who invoked the first provision of the Code Noir for their expulsion, the Monsantos took refuge in British West Florida, but all gradually filtered back into Spanish Louisiana. The Monsantos, born Jewish, all participated in the rituals of the Protestant and Catholic churches without baptism.

Judah *Touro arrived in New Orleans from Boston in late 1801 or early 1802 and became, through diligence and his simple manner of living, a wealthy man. He was indifferent to Judaism until late in life, when he was persuaded by Gershom Kursheedt, the first truly religious Jew in the city, to build a synagogue for the second New Orleans congregation, Nefutzoth Yehudah, or Dispersed of Judah, organized in 1845. Other early settlers were equally unconcerned about the preservation of Jewish identity.

Of the approximately 15 Jews who were in New Orleans in January 1815, when the battle for the city between American forces, led by General Andrew Jackson, and the British took place, at least ten and possibly 11 had some part in the action. Touro suffered a near-fatal wound. Of these 15, seven remained bachelors, seven intermarried, and one, Manis Jacobs, married a Christian woman after his first (Jewish) wife died. It was Manis Jacobs who became the first president of Shaarei Chassed or Gates of Mercy (1827), the first congregation in Louisiana and indeed anywhere in the Mississippi Valley south of Cincinnati. This congregation, Sephardi at the outset, later became Ashkenazi as increasing numbers of Jews arrived in the town from the German-speaking lands. But Jewish religious life did not prosper in New Orleans. The wealthiest men did not support any of the three congregations in existence by 1850. (Gates of Prayer Congregation was established in the Lafayette suburb of New Orleans in January of that year.) Touro’s building of a synagogue did not inspire others to do likewise. Intermarriage continued apace in New Orleans, perhaps more than in any major city in the United States.

German Jews at the port of New Orleans fanned out from that city into more rural areas and became peddlers and artisans. Significant numbers of Jews were country merchants and traders in small Louisiana towns before the Civil War. They established benevolent societies, cemeteries, or congregations in Alexandria (1854), Donaldsonville (1856), Baton Rouge (1858), and Monroe (1861). But the most significant Jewish institution in Louisiana was the Association for the Relief of Jewish Widows and Orphans of New Orleans (1854), one of the earliest agencies of its kind in the United States. Made necessary by frequent epidemics of yellow fever and cholera in the New Orleans area, this association was supported from its inception by assimilated Jews who demonstrated no other concern with their Jewish identity. The free-wheeling atmosphere of the state, dominated by New Orleans, encouraged the full participation and integration of Jews; there was then little anti-Jewish prejudice, which seems to have gained momentum only in the late 19th century. Among Louisiana’s notable assimilated Jews were U.S. Senator Judah P. *Benjamin (1853–61); Henry M. Hyams, Benjamin’s cousin, lieutenant governor of Louisiana in 1859; and Dr. Edwin Warren Moise, speaker of the Louisiana legislature at the same time and later state attorney general. It was apparently no accident that each of these men intermarried. In 1872, the first Rex, King of Carnival, was Louis J. Salomon, a great-grandson of Haym *Salomon, the well-known Revolutionary War patriot.

The Civil War and After
More than 200 Louisiana Jews are known by name to have served in the Confederate forces, but the true number is probably three times that large. Three of these men, S.M. Hymans, Edwin I. Kursheedt, and Leon R. Marks, achieved the rank of colonel. Benjamin Franklin Jonas, served as a private; he became the second Louisiana Jew to serve in the U.S. Senate.
(1879–85). Dr. Joseph Bensadon, who was the first medical director of Touro Infirmary (1854), was a surgeon in the Confederate army from 1862 to 1865.

The distinctive leader of the Jews of New Orleans after the Civil War was Rabbi James K. *Gutheim, who before the war served as Reverend at Dispersed of Judah then moved to Gates of Mercy soon after the war’s end. He encouraged the growing Reform movement within the congregation, but, when proposed reforms in the liturgy he recommended in 1868 caused an uproar, he accepted the position of Reader at Temple Emanu-el in New York City. He returned to New Orleans four years later in response to the creation of Temple Sinai, a new Reform congregation organized by his followers from Gates of Mercy.

Rabbi Isaac Leucht, who followed Gutheim to the pulpit at Shaarei Chessed, also became the rabbi when Gates of Mercy and Dispersed of Judah amalgamated in 1881. Leucht began calling the merged congregation Touro Synagogue, in memory of the philanthropist whose largesse assisted both congregations in their formative years. He assisted in relief work during the yellow fever epidemic of 1878, as well as in civic work; and he was a bridge to the gentile community, serving as president of the Red Cross Society and a member of the State Board of Education.

In 1882 the Hebrew Foreign Mission Society of New Orleans, in conjunction with the Hebrew Emigrant Aid Society, sponsored an agricultural colony of Russian Jews at Sicily Island in Catahoula Parish. But the project failed when the Mississippi River overflowed and flooded the entire area that year.

Jewish Life in the 19th and 20th Centuries
Beginning in the mid-19th century, Jewish merchants and traders organized communities throughout the state. The largest, except for New Orleans, was Shreveport, where a synagogue, Har El, was founded in 1859 and an Orthodox congregation was organized in 1892. One of the marks of the development of intolerance was a local ordinance (1873) prohibiting Jews from opening their stores on Sunday, Zionist, B’nai B’rith, and other communal organizations were formed, and in 1914 the Reform temple was dedicated. A Shreveport attorney, Sidney Herold, in 1915 successfully persuaded the State Court of Appeals to prohibit the reading of the Bible in public schools.

Baton Rouge, the state capital, had Jewish settlers in the early 19th century, but not until 1868 was their number sufficient to form the small congregation which became B’nai Israel in 1879. In Alexandria a Young Men’s Hebrew Association was organized in 1882, and the city had Reform and Orthodox synagogues. Jewish communities appeared in Morgan City in 1875, in Opelousas in 1877, and in Lake Charles in 1895. In Bogalusa, an Orthodox congregation was organized in 1925. Communities also functioned in Plaquemine (1856–1912), St. Francisville (1877–1905), and Bastrop (1877–1923). Bastrop and other small communities are served by the United Jewish Charities of Northeast Louisiana, organized in 1938 in Monroe. From 1915 to 1933 Mendel Silber of New Orleans ministered to congregations in New Iberia, Morgan City, and Plaquemine.

In the 20th century movement from smaller to larger communities occurred among Louisiana Jews. Moreover, the total population of Louisiana Jewry declined somewhat after 1940, when there were about 16,000 Jews in the state. But despite the continuing small proportion of Jews in the state population, many Louisiana Jews have attained statewide or national prominence, including the 19th-century philanthropist Isidore *Newman; civic leader Julius Weis; Isaac Delgado, a charter member of the Louisiana Sugar Exchange who contributed to the art museum and Charity Hospital memorial building; the actress Adah Isaacs *Menken; U.S. congressman Adolph Meier (1891–1908); and state legislators George Joel Ginsberg (1928–32), who sought the impeachment of Governor Huey P. Long before the State Senate in 1929, and Norman Bauer, speaker of the House of Representatives in 1942. Henry A. Lazarus was a member of the state Supreme Court (1880) and Emile Godchaux (1909–18), Max Dinkelspiel (1919–24), and I.D. Moor served on the state Court of Appeals. Alexandria, Monroe, Crowley, Donaldsonville, and Morgan City have elected Jewish mayors, and many Jews have served as school board members and presidents. Jews have prospered financially in Louisiana, and the Jewish professional and managerial classes have grown significantly since 1940.

[Bertram Wallace Korn and Edward L. Greenstein]

In the wake of Hurricane Katrina in August 2005, the general population of Greater New Orleans has gone from approximately one million to about half that number. In Orleans Parish the population has fallen from 475,000 to less than 100,000. While most of the synagogues received some repairable damage, Congregation Beth Israel, the only congregation in the city that offered twice daily services before the hurricane, was inundated with ten feet of water. All of their Torahs were damaged and had to be buried. The members of the Jewish community have scattered to Houston, Dallas, Atlanta, Baton Rouge, Lafayette and points in between. When and whether they will return remains to be seen.

[Bertram Wallace Korn and Irwin Lachoff (2nd ed.)]

LOUISVILLE, the largest city in Kentucky and home to its oldest and largest Jewish community. Jews may have owned land in the Louisville area as early as the late 18th century and a few arrived at the beginning of the 19th, but the first Jewish institutions arose in the city only in the 1830s. An Israelite Benevolent Society was listed in the Louisville city directory in 1832 and regular worship services were established around 1838. Louisville’s first Jewish congregation dates from 1842,
when Adath Israel was chartered. Jews continued to arrive in the city over the next decade, primarily from the German states and from Posen, and in 1851 a second congregation was established, known first as the Polish House of Israel and soon after as Beth Israel. A third congregation, Brith Sholom, was organized in 1880. Among early Adath Israel spiritual leaders was Bernhard Henry Gotthelf (1819–1878), in 1862 appointed the second Jewish chaplain of the Union Army. Both Adath Israel and Brith Sholom were early adopters of Reform practices. Other organizations established by Louisville's 19th-century German-Jewish settlers included a lodge of B'nai B'rith, chartered in 1852, and the Standard Club (forerunner of the Standard Country Club), established in 1883. Louisville's Jewish population stood at about 2,500 in 1880.

Toward the end of the 19th century, the city's most prominent Jewish residents included clothiers Moses and Henry Levy (arrived in Louisville in 1861); dry goods magnate Henry Kaufman and his colleague Benjamin Straus (partners in 1883); attorney Aaron Kohn (1846–1916), Jefferson County prosecutor and a Louisville alderman in the 1880s; distiller and philanthropist Isaac W. Bernheim (1848–1945); and lawyer and scholar Lewis Dembitz (1833–1907), city tax attorney from 1884 to 1888 and the uncle of Louis D. Brandeis, himself a Louisville native whose ashes are interred beneath the portico of the University of Louisville law school that bears his name.

Around the turn of the 20th century, East European Jews began arriving in large numbers and they tended to cluster in a cohesive downtown neighborhood centered on Preston Street. As elsewhere in America, they engaged both in commercial activities and in wage labor in trades such as tailoring and cigarmaking. Five new congregations were established in Louisville between 1882 and 1905, at least four of them byproducts of the influx of East Europeans and Orthodoxy in outlook. These congregations were B'nai Jacob (1882), Beth Hamedrash Hagodol (1887), Anshei Sfard (1893), Adath Jeshurun (1894, the successor to Beth Israel), and Agudath Achim (1905). In 1902, Louisville's Orthodox congregations banded together to hire a "chief rabbi" and arrange for the supervision of kashrut, the maintenance of a mikveh, and the organization of a Talmut Torah Society.

Louisville's East Europeans established a number of ethnic and cultural organizations as well. As early as 1907 there were three Zionist circles in Louisville and a Yiddish Literary Society was established around World War I. A chapter of Hadassah was organized in 1919. Louisville's Jewish population was reported to be 12,500 in 1927 and 13,800 in 1937. In the period after World War II, the number of Jews in Louisville began to decline and the city's Jewish population, as well as its institutions, gradually migrated away from the downtown area, relocating mainly to the Highlands neighborhood at first, and then farther to the east as well. Louisville's Jewish population was reported as 8,500 in 1960 and 9,200 in 1984.

Already in the late 19th century, a number of Jewish service and welfare institutions were established in Louisville. These included a chapter of the National Council of Jewish Women, organized in 1893; a Young Men's Hebrew Association (the forerunner of the Louisville Jewish Community Center), incorporated in 1890; and a social service agency called Neighborhood House, founded in 1896. In 1903, Louisville's Jewish Hospital was established to provide facilities for Jewish doctors who were denied staff privileges elsewhere and to care for patients who might prefer treatment in a Jewish environment. By the end of the 20th century, Jewish Hospital was a world leader in both artificial heart and hand transplant surgery.

As the number of Jewish welfare institutions in Louisville increased, a Federation of Jewish Charities was created around 1908. This body became the Jewish Welfare Federation by 1918 and the Jewish Social Service Agency in 1951. In 1934, a second coordinating body was established: the Louisville Conference of Jewish Organizations. Intended primarily as a fundraising agency, over time the Conference developed into the community's principal coordinating and public relations body as well, adopting the name Jewish Community Federation of Louisville in 1971.

A sampling of prominent Louisville Jews of the 20th century includes bacteriologist Simon Flexner (1863–1946); juvenile justice and welfare advocate Bernard Flexner (1865–1945); medical education reformer Abraham Flexner (1866–1959); attorney Charles W. Morris (1892–1961), a civic and political activist and a founder of the Louisville Conference of Jewish Organizations; art historian Justus Bier (1899–1990) and musicologist Gerhard Herz (1911–2000), both of whom fled Nazi Germany and joined the University of Louisville faculty in the 1930s; businessman and humanitarian Arthur S. Kline (1866–81); community stalwart Lewis D. Cole (b. 1913), one-time chairman of the National Jewish Community Relations Advisory Council; Charles M. Leibson (1929–95), named a justice of the Kentucky Supreme Court in 1983; popular mayor Jerry Abramson (b. 1946), first elected in 1983; and community activist Marie Abrams (b. 1937), who became national chair of the Jewish Council for Public Affairs in 2004.

Among the more prominent rabbis who served in Louisville were Adolph Moses (1840–1902), an advocate of a radical form of Judaism he called “Yahvisim”; Hyman G. Enelow (1877–1934), later rabbi of Temple Emanu-El in New York; Asher L. Zarchy (1863–1932), chief rabbi of the Orthodox community from 1903 until 1932; the civic-minded Joseph Rauch (1880–1957), for whom the city's planetarium is named; Simcha Kling (1922–91), author of the text Embracing Judaism; and Herbert Waller (1914–1994), active in interfaith work.

At the turn of the 21st century, the communal institutions in Louisville included, aside from the Jewish Federation and Community Center, the Jewish Family and Vocational Service, created in 1978 as a successor to the Jewish Social Service Agency; Shalom Tower, providing subsidized housing for the elderly; the Four Courts Senior Center, a nursing home facility; the Louisville Vaad Hakashruth; the Elihu Academy and Torah Academy day schools; and several supplementary education programs. Louisville's congregations at the turn of the century were Anshei Sfard (Orthodox), Adath Jeshurun...
LOUNY

(Conservative), Keneseth Israel (Conservative, formed in 1926 by the merger of B’nai Jacob and Beth Hamedrash Hagodol), The Temple (Reform, created in 1976 by the merger of Adath Israel and Brith Sholom), and Temple Shalom (Reform, established in 1976). The Jewish population of the city at the turn of the century was approximately 8,700, with perhaps 10 percent being “new Americans” from the former Soviet Union.

[Lee Shai Weissbach (2nd ed.)]

LOUNY (Ger. Laun), town in N.W. Bohemia, Czech Republic. Jews are first mentioned in Loune in 1254 – one year after it received its freedom as a town – as living on a Jewish street and having a synagogue and a cemetery. The city records for 1380–92 contained a special section for Jewish lawsuits. In 1505 there were 12 Jewish houses. A Jew, accused in 1541 of having acquired a menstrual, was burned and the community was expelled from the town. From 1655 only one Jewish family was protected by the town, but in 1680 a cemetery was established. The cemetery and the prayer room were used by Jews from the vicinity. At the end of the 18th century there were 43 “bad Jews” in Loune, i.e., Jews who did not have permission under the “Familiants Law to live there, and the first Jew to settle there in 1849 was forcibly returned to his former town by the crowd. Thereafter, Jews came to Loune, a synagogue was built, and in 1874 a German-language Jewish school was founded (given up in 1897); a new cemetery was built in 1875 (which still existed in 1970). Fifty-one Jewish families lived in Loune in 1880 and 567 persons in 1890. In 1895 the community adopted Czech as the official language. In 1902 there were 666 Jews in Loune and the 18 surrounding villages; and in 1930 there were 205 (1.8% of the total population). The community was deported to the Nazi death camps in 1942, and the synagogue’s equipment was sent to the Central Jewish Museum, Prague. The community was briefly reestablished after World War II.

[Jan Herman]

LOURIE, ARTHUR (Vincent; 1892–1966), composer. Lourie was born in St. Petersburg, where he also studied and converted to Catholicism in his early 20s. He became head of the music department of the Commissariat for Public Instruction after the Revolution. In 1920 he settled in Paris and immigrated to the United States in 1941. His compositions include symphonies, operas, ballets, and choral works in the avant-garde idioms of their respective periods, the later ones turning to the re-creation of old forms. Lourie also wrote a biography of Serge *Koussevitzky (1931).

LOURIE, ARTHUR (1903–1978), Israeli diplomat. Born in Johannesburg, South Africa, Lourie practiced as a barrister-at-law and lectured in Roman-Dutch law at Witwatersrand University. He served as political secretary of the Jewish Agency in London from 1933 until 1948, working under Nahum *So-kolow and Chaim *Weizmann. He spent most of World War II in the United States, engaged in Zionist political work. In 1945 he was a member of the Jewish Agency delegation at the San Francisco UN Conference and, from 1946 to 1948, was director of the Jewish Agency UN Affairs Office in New York. From 1948 Lourie was a member of the Israeli foreign service: from 1948 to 1953 he was Israel consul general in New York, from 1957 to 1959 he was ambassador to Canada, from 1960 to 1965 ambassador to the United Kingdom, and deputy director-general, Israel foreign ministry, 1965–72. A member of several Israel delegations to the UN General Assembly, he was head of the delegation in 1959.

[Benjamin Jaffe]

LOURIE, NORMAN VICTOR (1912–2003), U.S. social worker and government official. Born in New York, Lourie graduated from Cornell University in 1936. From 1937 to 1939 he was a research associate with the Russell Sage Foundation and from 1939 to 1943, an assistant director of the Bronx House and Madison House settlements in Manhattan. After serving in World War II as director of the social work section of the U.S. Army School for Military Neuropsychiatry, he became the director of the Hawthorne Cedar Knoll School for the correction of juvenile delinquents (1946–51). In 1951 he moved to Philadelphia to direct the work of the Association for Jewish Children and from 1955 onward was executive secretary of Pennsylvania’s Department of Public Welfare. He took part in the White House Conferences on Children and Youth in 1950 and 1966 and was a member of the advisory council of the President’s Committee on Juvenile Delinquency. He also taught in the graduate faculty of the School of Social Work at the University of Pennsylvania. Lourie was chairman of the editorial board of the Journal of Jewish Communal Service (1952–58) and Child Welfare (1962–64). He was president both of the National Association of Social Workers and the Academy of Certified Social Workers during 1961 to 1963, as well as of the American Orthopsychiatric Association, 1967. Active in community and professional affairs, Lourie assisted refugees from Vietnam. He served as senior policy adviser for the Institute for Economic Development (1980–82) and the National Immigration, Refugee and Citizenship Forum (1981–90), both in Washington, D.C.

LOUSE (Heb. צִמְצָר, singular, insect; one of the ten plagues with which Egypt was smitten (Ex. 8:3–14; Ps. 105:31) was the plague of lice. The כִּנָּה in Isaiah (51.6): “They that dwell therein shall die kemokhen” may refer to the
love; i.e., "like a louse." The louse caused much suffering to people of all classes in former times. A distinction was made between the dark-colored head louse and the light-colored clothes louse (Pes. 112b), two strains of the Pediculus hominis, against which people sought to protect themselves by constantly changing and washing their clothes — although they were also compelled to search their garments to kill the lice (Tosef., Shab. 16:21, where the louse is called maakhlolet, i.e., the eater). Lice nits were regarded as the smallest of creatures, and hence the statement that "the Holy One blessed be He feeds the whole world, from the horned buffalo to the lice nits" (Av. Zar. 3b). Some maintained that "the louse does not multiply and increase" (Shab. 107b) but generates spontaneously.

LOVE.

In the Bible

In the Bible, "love" has, like the word "love" in most languages, many and various shades of meaning.

HEBREW WORDS FOR "LOVE." It is represented by Hebrew words which range from abstract to the concrete, from the general to the specific. The word love between man and woman (I Sam. 13:4; Ex. 20:17; Ps. 45:1) is the basis for the obligation of family affection, up to theological conceptions of God's love for Israel, and of Israel's love for God. In most of the passages, "to accept, adopt, or recognize," could profitably be substituted for "to love," and "to reject, disown," or "repudiate," for "to hate." The root most commonly used is ʿahav. Another verb raham and the noun rahamim point to the family feeling through their connection with rehem, the mother's womb; they express the *compassion presupposing the sufferer, *compassion, distress, or weakness of the other party. The root hafez means "wish for" or "delight in," but is also used, with a person as object, in the sense of "feel inclined." A similar meaning is attached to razah, "to be pleased with," and "accept." The root hashaq involves instead the sense of personal attachment. As for the verb hakan and the noun henn, both express the idea of concrete favor, rather than warm affection. Finally, the often-used word hesed means "loyalty," but sometimes designates the "real love" (Gen. 20:13; 47:29; 1 Sam. 20:8; 11 Sam. 9:1; Jer. 2:2; Ruth 2:20), which is evinced in acts of devotion and friendship, and is conditioned by the fact that there are two parties connected with each other by ties of family, tribe, nationality, treaty, covenant, etc.

LOVE AS A SPONTANEOUS RELATIONSHIP. The word "love" is first of all used to denote the father's or mother's love (Gen. 22:2; 25:28; 37:3; 44:20; Prov. 13:24; Ruth 4:15), the love between young people intending to marry (Gen. 29:18, 20; I Sam. 18:20), or between husband and wife (Gen. 2:24; 29:10, 32; Judg. 14:16; 16:15; 1 Sam. 15; Prov. 5:19; Eccles. 9:9; 11 Chron. 11:21). This use is largely attested in the Song of Songs, whose unique obvious theme is love between man and woman, celebrated in glowing colors and passionate words (e.g., 1:3, 4, 7; 2:5; 3:1, 2, 3, 4; 5:8). "Love" designates also the specifically sexual desire for a woman (I Sam. 13:3, 4, 15). The verb ʿahev denoted also affection and esteem. It is used in this sense for David and Jonathan, to express natural friendship (1 Sam. 18:1, 3; 20:17; 11 Sam. 1:26; Prov. 1 Sam. 16:21); for a servant, to denote his attachment to his master's family (Ex. 21:5); and for the people, to signify their enthusiastic sympathy for David (1 Sam. 18:16, 22, 28). The participle ʿahem means "friend" at least 17 times out of the 62 occurring in the Bible. On the other hand, Isaac, for instance, is said to "love" game as Rebekah knew to prepare it (Gen. 27:4, 9, 14). The verb ʿahev seems to express there a preference, as in several other texts (Gen. 25:28; 37:3, 4; Deut. 21:15; 1 Sam. 15).

The rendering of reʾa in Leviticus 19:18 ("Love your reʾa as yourself"), and similar passages, by "neighbor" is hallowed by tradition; but "fellow citizen" would be more enlightening, since the reference here to one's fellow Israelite is obvious from its identification by parallelism with "kinsmen" (benei ammehka) in Leviticus 19:18 and the fact that an additional verse, verse 34, was needed in order to include the metic (ger, but see Love of Neighbor, below). Common sense tells that the "love" that these verses require the Israelite to extend to his fellow citizen and to the metic residing in Israel is consideration, or, as Jewish tradition realistically defines it, not treating them in a manner in which one would resent being treated (so the interpretation of Pseudo-Jonathan, Lev. 19:18, 34, in accordance with the famous saying attributed in Shab. 31a to Hillel but in Eusebius, Preparatio evangelica, 8:7, 8, to Philo, and also to be found in Arist. 207; Tob. 4:15; Test. Patr., Iss. 5:2; Test. Patr., Dan 5:3).

THE RECIPROCAL LOVE OF GOD AND PEOPLE. In the Bible, the object of the divine love is generally the people of Israel. The two passages where Jerusalem is presented as the object of God's love (Ps. 78:68; 87:2) are only variants of that fundamental aspect. The relation of God to His people is conceived as a union marked by love on one side and demanding a corresponding love on the other. This reciprocal love of God and the people is expressed in categories of familial or social unity: father-son relationship, marriage analogy, or covenantal love.

The doctrine of God's love for Israel, and the imperative necessity of Israel's love for God are rarely found in the first four books of the Bible, but they constitute the basic principles of the Deuteronomic teaching. The Lord's love for Israel is there viewed as the result of His election, manifested in the covenant and sanctioned by it. This clearly appears in Deuteronomy 7:7–8, where the divine love for Israel is mentioned parallelizing the oath sworn by God in the rite of the covenant-making, and is ultimately justified by God's free choice. His free and personal love to Israel is manifested above all in the deliverance from Egypt. This primal love of the Lord for Israel (Deut. 4:37; 7:13; 10:15; 23:6) is the basis for the obligation of Israel's love in return (Deut. 6:5; 7:9; 10:12; 11:13, 15; 13:4; 19:9; 30:6, 16, 20). Love in Deuteronomy is therefore a love that
God can command: “You shall love the Lord your God with all your heart, and with all your soul, and with all your might” (Deut. 6:5; cf. 10:12; 11:1; 30:6). It is also a love intimately related to fear and reverence (Deut. 4:10; 5:29; 6:24; 8:6; 10:12; 14:23; 17:19; 31:13). Above all, it is a love which must be expressed in obedience to the requirements of the law. For to love God is to be loyal (davag) to Him (Deut. 4:4; 10:20; 11:22; 13:5; 30:20), to walk in His ways (Deut. 10:12; 11:22; 19:9; 30:16), to keep His commandments (Deut. 10:13; 11:1, 22; 19:9), to fulfill them (Deut. 11:22; 19:9), to heed them or His voice (Deut. 11:13; 13:5), and to serve Him (Deut. 6:13; 10:12; 11:13; 13:5). It is, in brief, a love defined by and pledged in the covenant. If the people appear to be unworthy of the divine love because of its ingratitude or infidelity, the love will change into wrath.

W.L. Moran has established the relationship of this Deuteronomistic concept of love with the ideology and the terminology of ancient Oriental treaties, from the 18th to the 7th centuries B.C.E., in which the term “love” is used to describe the loyalty and friendship joining independent and equal rulers (cf. 1 Kings 5:15), overlord and vassal, or king and subject. This use of the term “love” is no innovation of the author of Deuteronomy 6:5, which is generally considered the earliest reference to the love of God in Deuteronomy. Since Judges 5:31 belongs most likely to the original Song of Deborah and uses the expression “those who love Him,” it is probable that the term “love” goes back to a very early period in the Israelite covenant tradition. The formula “those who love Me” appears also in the passage of Exodus 20:6 and Deuteronomy 5:10, which belongs to the Decalogue. The father-son relationship in Deuteronomy, which reflects the very ancient Israelite concept of Israel as the Lord’s son (cf. Deut. 32:6, 10–11, 18–20), is also found in the body of the Book of Deuteronomy (Deut. 1:31; 8:5; 14:1). If there is tenderness in this relationship as seen in Deuteronomy 1:31; 32:10–11; Isaiah 61:16; Jeremiah 31:19; 31:9; and Hosea 11:1, the Lord is in Deuteronomy 8:5 the father who does not spare the rod, but this divine chastening is considered in Proverbs 3:11–12 as a sign of the divine love. Israel appears as a disobedient son also in Isaiah 1:2 and 30:9. He is disloyal even to the point of turning away from the Father to other gods (Deut. 32:18–20), just as a faithless vassal abandons his sovereign for another overlord. God intervenes then as one who is angry with his sons for their disloyalty (Deut. 32:19), and who is, therefore, ready to punish them (Isa. 30:1–5, 8–14).

In Deuteronomy 14.1, the relationship between father and son as applied to God and Israel is a motive to obey a particular command. It is thus clearly akin to the covenantal love, which should exist between the suzerain and the vassal, called respectively father and son in the diplomatic terminology of the ancient Near East (cf. E. Lipinski, Le poème royal du Psaume LXXXIX, 1–5, 20–38 (1967), 57–66). Malachi 1:6 parallels the son with the servant, and expects reverence from each. Since covenantal love involves reverential fear, there may be here a later offshoot of the same tradition. It may reasonably be inferred, therefore, that the ancient Israelite concept of Israel as God’s son is very close to the Deuteronomistic conception of covenantal love between God and Israel, though it is also associated with the current imagery of father and son. It can be influenced too by the idea of divine Fatherhood, expressed in personal names of the type aviyyah (Abijah), aviyyaḥa (Abijahu), “the Lord is my Father.” Occasionally, the affection of God for His people is also depicted as the love of a mother for her child (Isa. 49:15; cf. 66:13; Deut. 32:11).

The husband-wife metaphor of Hosea 2 recurs in the earliest poems of Jeremiah (Jer. 2–3; 31:2–6), who had most likely been influenced in his youth by the Hoseanic tradition. Ezekiel, too, knew the symbolism of the marriage (Ezek. 16:23), which recurs again in Deutero-Isaiah as a means of describing Israel’s restoration after the Exile: Zion was a deserted wife (Isa. 49:14; 54:6; cf. 60:15; 62:4), without children (Isa. 49:20; 51:18; 54:1), and reduced to captivity (Isa. 40:2; 52:2), because she has been repudiated by the Lord (Isa. 50:1); but the Lord had decided to take her back (Isa. 54:5–8). Yahweh’s wrath required the rejection of the people – the repudiation of the unfaithful wife. This was the historical turning point with which the prophets were confronted. Nevertheless, the people was the Lord’s people, the chosen people, the object of God’s love. What would become of the election and of the divine plan for Israel if the “repudiation” became definitive? A tension ensued between God’s love and God’s wrath. Even the end of Judah as an independent state did not mean the complete annihilation of the nation. The reason is that Israel is precious in the Lord’s eyes, and is loved by the Lord. In Hosea 14:5 it is expressly said that God of His own free will and love will heal the faithlessness of His people. Ezekiel emphasizes that the Lord will restore Israel, but not because of her fidelity to the covenant (Ezek. 16:60–68); and Deutero-Isaiah (under the influence of Ezekiel, e.g., ch. 36) says that God blots out the transgressions of His people not because of their sacrifices, but “for His own sake,” i.e., His sovereign love (Isa. 43:22–44:5).

A few texts affirm that God loves the righteous (Ps. 146:8; Prov. 15:9; cf. 312), and some psalmists refer to God’s compassion (Ps. 25:6; 40:12; 51:3; 69:17; 119:77) for all His creatures (Ps. 145:9). Such texts are relatively rare: the Lord’s love is almost exclusively love for Israel, the elect people. Even the prophets never say that the Lord “loves” other peoples, or that mankind is an object of His love; but God’s actions in Israel’s history are dictated by His love. The same is true of His punitive educative work as well as of His gracious gifts in the continued course of history. This is the main theme of the biblical theology of love, probably because the divine love is generally conceived as related to the covenant. The use of the word hesed reveals indeed that this term also belongs to the covenantal terminology.

The love for God is sometimes signified in an indirect way, without mentioning the divine name. Thus when Amos 5:15 exhorts the people to “love the good,” he intends the justice demanded by the divine law (cf. Micah 6:8; Ps. 52:5), which is mentioned 11 times in Psalm 119 as an object of love (vs. 47, 48, 97, 113, 119, 127, 140, 159, 163, 165, 167). Of course, the author
meant by law, the stipulations of the covenant. The love of wisdom (Prov. 8:17, 21; cf. 4:5–6; 7:4; Eccles. 4:11–14) is also interpreted as love of the law (Wisd. 6:17–18; cf. 6:12; 7:10), but this theme probably has an Egyptian origin: the personified divine wisdom seems to be an Israelite adaptation of the Old Egyptian Maat, whose love was also highly recommended in texts celebrating this deified idea of truth and justice (cf. Ch. Kayatz, Studien zu Proverben 1–9 (1966), 98–102). The biblical passages mentioning the love for the Temple or Jerusalem (Isa. 66:10; Ps. 26:8; 122:9) express instead the desire for the divine familiarity, more vividly felt in the holy places.

[Edward Lipinski]

Post-Biblical

The Song of Songs has been called the world’s greatest love poetry. In range of imagery, lyric quality, and personal insight, it has taught the true nature of love to much of mankind. While it was admitted to the Bible only after a struggle, and then, apparently, because it was seen as an allegory of the love of God for Israel, the manifest content of the poems could never be denied. Thus an intimate link was established in Jewish literature between human love and the love of God. Jewish mysticism made this a major motif in its esoteric teaching. Rabbinic literature likewise reveals its appreciation of love only tangentially but with the same deep feeling: “A man once said, ‘When love was strong, we could have made our bed on a sword-blade; Now that our love has grown weak, a bed of 60 cubits is not large enough for us’” (Sanh. 7a).

It is not the love in itself, or the passion associated with it, or its sexual fulfillment which are valued in these writings, as much as the understanding and the generosity which love creates and sustains. Thus, understanding and generosity become the highest ideals for human relationships. Love between man and woman is almost always connected with marriage, which is either the goal of love or the motive which brings it into being. This ideal of love in marriage which leads to understanding and generosity, though influenced by the various cultural circumstances among which Jews found themselves, remained relatively stable over the centuries. Though the ideal of romantic, courtly love did penetrate the Jewish community in the 11th and 12th centuries, unrequited passion never became a major Jewish concern.

Following the Aristotelian denigration of the senses and passion, the Jewish philosophers, “Maimonides in particular, tended to denigrate sexual love, and to intellectualize the love of God.

They viewed the love of God as an essentially cognitive matter. Maimonides explains that “And thou shalt love the Lord thy God with all thy heart” means that “you should make His apprehension the end of all your actions” (Guide of the Perplexed, 1:39; see also 3:33; Yad., Teshuvah 10:3–4, 6).

Hasdai Crescas, as part of his general attack on the Maimonidean system, rejected this intellectualization of man’s fundamental relationship to God. In great measure this is due to Crescas’ insistence that positive attributes may be postulated about God (see *God, Attributes of). Since he then connects will and goodness with God, it is obvious that the appropriate response to such a benevolent God is love (Or Adonai, i:3, 3). This feeling becomes for Crescas the desired basis of man’s service to God (ibid., 2:6, 1–2).

Joseph Albo’s Book of Principles 3:35 treats human love of God and God’s love for humanity in general, and for Israel in particular. God is worthy of human love because He is good, beneficent, and pleasant, the three criteria Aristotle posited for the object of love (Nicomachean Ethics 8:2; cf. Maimonides, Commentary to Mishnah Avot 1:6). God’s love for people is analogous to a king’s love of his subjects, a father’s love of his children, and a husband’s love of his wife. Albo also represents God’s love for Israel as a “desire” (heshek), which has not cause or reason (3:37).

The Renaissance philosopher Judah Abrabanel (Leone Ebreo; Leo Hebraeus) devoted his book Dialoghi di Amore (“Dialogues of Love”) to the theme of love, to the connection between love, passion, and reason, and to love as the principle moving the world and expressing the mutual relationship between God and his creatures.

The mystics, though they had an anti-corporeal, ascetic strain in their teaching, similar to the Aristotelian view of Maimonides, nevertheless, had a more emotional understanding of love, and, following the Song of Songs, could see in the sexual passion between man and wife the model of the reintegration of the presently fragmented divine unity (Zohar 1:49b–50a). In modern times, Jewish thinkers have tended to accept the general, gradual reaffirmation of the physical aspects of human existence as essentially healthy. In the 19th and early 20th century, before this change of attitude toward the physical aspects of love, most Jewish discussions of love remained under the influence of German idealistic philosophy.

The Neo-Kantian philosopher Hermann Cohen emphasized the moral characteristic of love in Judaism: the love of the alien and of one’s fellow Jew is a function of the feeling of compassion, and human love of God is defined as the love of the moral ideal. After World War I, the existentialist philosophy of Franz Rosenzweig and Martin Buber introduced a new concern for the whole person, and emphasized human relationships. For them, love becomes the very ground of one’s being, the source of all meaning and the guide to all action.

Rosenzweig characterized divine revelation as an expression of love of man. Since revelation occurs in the present – creation being the past and redemption the future – the love of God is the embodiment of the human-divine encounter in every present moment. God being the source of love, He can also command man to love Him (“Love the Lord your God”) as an expression of His love for man. Buber emphasized the necessary connection between love of one’s fellow (re’i) and love of God, whom he calls “the eternal you (Thou),” Against Soren Kierkegaard, who felt the need to abandon his beloved fiancée in order to make room for love of God, Buber argued that only by love of the other person, the human “you”
Love and Fear of God (Heb. ‘דֵּרֶךְ וּ’אֲדַלְתָּנָה)
In his morning prayer the Jew asks God to “unify our hearts to love and fear Thy Name.” This request indicates the recognition, prevalent in Judaism since a century or two before the destruction of the Second Temple, that the love and fear of God are the major motives for serving Him, and that there is some tension between them.

Both terms are widely used in the Bible, but the concept of fearing God appears much more frequently than that of loving Him. It is not clear, however, exactly what the biblical writers sought to convey about their faith by using a word for it which, when related to normal experience, regularly describes emotions of dread and fright (Josh. 10:2; Jer. 42:16). In many of its uses, the term loses all denotations of fear, and conveys a broad sense of one’s religion, one’s god, or one’s pattern of worship (11 Kings 17:28; Isa. 29:13). In some cases the term occurs in conjunction with the love of God, so that the two appear to have a similar content (Deut. 10:12). Some scholars have therefore argued that the terms are identical in meaning, but this interpretation seems unlikely in view of the heavy biblical emphasis on God’s punishing sin and His utter transcendence of man. He is never described as simply loving man, though He does love Israel; rather the emphasis is on His mercy and benevolence, that is, though He is the master, He deals kindly. Hence, while the primitive denotations of fear have been sublimated in much biblical usage to a more intimate relationship with God, there is good reason to believe that the fear of God is a primary Hebrew response to God as the transcendent one, but it shades off into the love of God as the benevolent one. In both terms, however, the immediate connotation is action. Neither is used to commend an emotional state, worthy because of the feelings it arouses. Both are used as motivations for doing the will of God. They are means to observance.

By early rabbinic times, the emphasis on love had risen to parity with that on fear. Throughout talmudic times, the emphasis was increasingly placed on love as the most appropriate motive for the service of God. This is in accord with the rabbinic stress on carrying out the commandments for their own sake (li-shemah). The implication arises that, in doing them out of fear, it is reward and punishment which move the doer, which, to the rabbis, are extrinsic and inferior motives. They do not insist that doing the commandments for their own sake is the only acceptable way for Judaism, but rather accommodate themselves to human frailty by reasoning that from extrinsic motivation people will come to intrinsic motivation, which indicates their preference. Hence, though a number of rabbinic dicta make a distinction between the two motives, none of them prefers service from fear to service from love. The following are typical: “The reward of the lover is two portions; that of the fearer is one” (Sif. 28:140–1); “Act out of love, for the Torah makes a distinction between one who acts out of love and one who acts out of fear... In the former case his reward is doubled and redoubled” (Sif. Deut. 32).

A major addition to the meanings of loving God is the rabbis’ association of martyrdom with the term. Love would naturally seem to imply a willingness to do anything for one’s beloved. With R. Akiva as the model, the rabbis saw the will to give one’s life for God and His teaching as the highest expression of love for Him (Ber. 61b; Sif. Deut. 32). The rabbis, however, considered martyrdom an end in itself, and placed severe restrictions on the conditions under which one had to give one’s life for the love of God. This idea became a major part of the medieval Jew’s sense of the right motive from which to serve God.

With the advent of Muslim-Jewish philosophy, with its rigorous, abstract evaluation of motives, a full-scale preference for the love of God over the fear of God began to pervade Jewish literature. For Maimonides, the rigorous philosophical estimate of all things led to a disparagement of the fear of God as a motive worthy of women and children alone (Maim., Yad, Teshuvah 10:1). Only the love of God, because it seeks nothing for itself, should be considered the motive which men ought to strive to achieve as the basis for their action. Yet Maimonides’ Aristotelianism did not permit him to accept love in all its emotional connotations. What he carried over of love’s normal meaning is its singleness of focus and its comprehensive relation to its object. In terms of man’s inner state, however, since thinking was for Maimonides the most significant thing one can do, love was completely reinterpreted in terms of reason and cognition (ibid. 10:6). Even where Maimonides used the symbols of the love of God, his meaning always related to an intellectual activity which concentrates utterly on its object and seeks to carry that fixation into every other aspect of existence (Guide of the Perplexed, 3:51). Such intensive love of God is called “desire” (heshek).

Isaac Arama’s treatise Hazuz Kashaḥ portrays the philosophers as attaining the rank of love of God resulting from admiration, but not the higher rank of “fear of God. On the other hand, the philosophers negated divine love of man, because in their view God does not relate in any way to individual humans. Baruch Spinoza typifies such a philosophic position, emphasizing that God does not love individual people (Ethics 5:17). In Jewish mysticism, by contrast, though there are continual references to the fear and love of God, no cut emphasis on one or the other becomes dominant in any of the major movements. The Zohar, for example, esteems both very highly. The concept of deveqet calls on man to intimately associate his being with God and to be linked to Him in every activity of his life. This concept incorporates aspects of the traditional ideas of both the love and fear of God. It carries over the closeness of the former, yet maintains a sense of the distance and greatness of God.

Modern Jewish thinkers have avoided discussing the fear of God, since it seems too closely associated with the image of man as passive and abject. Wishing to ascribe to man an active role in his relationship with God, they have almost
universally made the reciprocal love of God and man central to their teaching. Since this idea can easily be extended to the point where the distance between God and man is obliterated, as in various schools of humanism, some thinkers have begun to suggest that a concern for the fear of God is not incompatible with the dignity of man and is required by the transcendence of God.

Love of Neighbor

Leviticus 19:18 commands: "Love your neighbor (re'akha) as yourself: I am the Lord." The surrounding verses qualify this commandment. They prohibit unfair dealing and defrauding even of the defenseless, and forbid vengeance and the bearing of a grudge.

It is not clear whether the commandment to love one's neighbor applies to Jews only or to non-Jews as well. There is no substantial data from the Bible concerning the practice of the commandment. From the parallel term in the first part of the verse, benei ammeka ("children of your people"), it would seem that re'akha ("your neighbor") in the second part of the verse refers to specifically Jewish neighbors (see for example, Maim., Yad, Deot 6:3), though the word re' is used elsewhere in the Bible to refer to non-Jewish neighbors as well. The fact that the love of the resident stranger (ger) is enjoined in the same chapter in a separate verse (19:33–34) would seem to indicate further that "neighbor" in verse 18 refers specifically to Jews. It is clear that according to the interpretation of the rabbis of the talmudic period the commandment of loving one's neighbor does not refer to idolaters. Idolatry is, of course, the classic wickedness in Jewish eyes. While there is no commandment to hate idolaters, and while there are in rabbinic literature many stories about the positive relations between Jews and idolaters, the law places so many restrictions on association with idolaters and their goods that the commandment of neighborly love cannot easily be said to apply to them.

The rabbis had a clear appreciation of the significance of this commandment. Akiva called it the epitome of the Torah. Ben Azzaia, in preferring the verse: "In the day that God created man, in the likeness of God made He him" is not denying Akiva's assertion of the importance of this commandment (Sifra 19:18). If anything, he is seeking a more inclusive verse, for "neighbor" might be understood literally or locally, but "creation in the image of God" excludes no human being. Similarly, both Hillel (Avot 1:12) and R. Meir (ibid. 6:1) enjoin that one should love all mankind ("creatures"). Concern for the non-Jew and his welfare is understood to be part of the Jewish goal of promoting peace among men, mi-penei darkhei shalom ("in the interest of peace"). From this commitment a whole range of moral responsibilities toward gentiles devolves upon Jews. Maimonides, in a typical ruling from the many in medieval writings, writes: "We bury the dead of heathens, comfort their mourners, and visit their sick, as this is the way of peace" (Yad, Avel 14:12).

In modern times, when the Jew's neighbor for the first time is widely understood as encompassing all humanity, the understanding of neighborly love by Jewish thinkers has been, correspondingly, universalized.

Moses *Mendelssohn argues that the commandment in Leviticus 19:18 cannot mean to love someone else as one loves oneself, which is impossible; moreover, had the Torah intended to command love of neighbor "as yourself," it would have said ke-nafshekha. The term kamokha, in his analysis, does not mean "as yourself" but "that which resembles you"; the commandment thus means "love your fellow, for he is like you, equal to you and resembling you, for he was also created in the image of God; he is human, like you. This includes all humans, since all of them were created in [God's] image" (Be'ar to Lev. 19:18; the commentary to Leviticus was prepared by H. Wessely, and was supervised and edited with bracketed additions by Mendelssohn).

Samson Raphael *Hirsch makes the love of all mankind a condition for being a true Israelite, and Hermann *Cohen considers it the necessary and unique concomitant of Jewish *monotheism. Cohen also follows Mendelssohn in interpreting the commandment as meaning love for the other who is like you. "The ethical self must be engaged in action. For this self, there exists no I without a Thou. Re'akha means "the other," the one who is like you. He is the Thou of the I. Selfhood is the result of an unending relation of I and Thou as well as its abiding ideal" ("Charakteristic der Ethik Maimunis" (1908), in: Juedische Schriften 111, Eng. tr. in E. Jospe (ed.), Reason and Hope: Selections from the Jewish Writings of Hermann Cohen (1971), 218).

Leo *Baeck writes: "In Judaism neighbor is inseparable from man... there is no 'man' without 'fellowman,' no faith in God without faith in neighbor..." (Essence of Judaism (1936), 193).

LOVELL, LEOPOLD (1907–1976), South African politician who was the only white man in the first cabinet of independent Swaziland. Born of Russian immigrant parents, he practiced law in Benoni in the Transvaal. During the 1930s he organized resistance to the Greyshirt (pro-Hitler) movement, and had its gangs expelled from the town. Lovell represented Benoni (S. Transvaal) in the House of Assembly from 1949 until 1958 when the Labor Party ceased to be represented in Parliament, and was an outspoken opponent of the Nationalist Government’s apartheid policies. He took up residence in Swaziland in 1961 and was admitted to the bar there. In 1967 he became a member of its Parliament and was appointed minister of finance, commerce, and industry. [Lewis Sowden]

LOVESTONE, JAY (Liebstein, Jacov; 1897–1990), U.S. Communist Party leader; architect of U.S. organized labor’s post-World War II anti-Communist foreign policy. Lovestone, who was born in Lithuania, was taken to the United States as a child and grew up on New York’s Lower East Side.

Lovestone joined the Socialist Party as a youth and was active in that party’s left wing. In response to the Bolshevik Revolution, Lovestone was a founder of the Communist Party of America in 1919, which merged with another faction in 1921 to form what became the Communist Party of the United States. He served as its executive secretary from 1927 to 1929. While American Communism’s top bureaucrat, Lovestone outlined the notion of “American Exceptionalism,” i.e., that the United States did not fit into the general Communist theory. However, he and his theory were reviled and ostracized after Stalin’s Comintern declared a “third period” of capitalist crisis and revolutionary upsurge, which included the United States. Following the Stalinization of American Communism, Lovestone formed an opposition Communist Party (later the Independent Labor League) and during the Depression fought Communists in the auto workers’ and ladies garment workers’ unions. In 1944 Lovestone was chosen to head the Free Trade Union Committee. Thereafter, he guided the American Federation of Labor’s anti-Communist foreign policy. He constructed a worldwide intelligence network which, throughout the Cold War era, worked closely with the CIA. When the AFL and CIO merged, Lovestone continued his anti-Communist activities within the merged labor movement’s Department of International Affairs. In 1963 he became director of the AFL-CIO’s International Affairs Department (IAD), which covertly channeled millions of dollars from the CIA to anti-Communist activities internationally, particularly in Latin America. During the 1960s he vigorously supported American military intervention in Cuba, the Dominican Republic, and Vietnam, and opposed the concepts and practitioners of neutralism and revolutionary nationalism. In 1974 he was expelled from the AFL-CIO when it came to light that he had been connected with the CIA.

[Kenneth Waltzer / Ruth Beloff (2nd ed.)]

LOVY, ISRAEL (Lowy; Israel Glogauer; 1773–1832), hazzan and composer. Born near Danzig, Lovy received his talmudic education in Glogau, where his father officiated as hazzan. From the age of 13 he acted as assistant hazzan in various communities of Moravia, Bohemia, Saxony, and Bavaria. In 1799 Lovy was employed in Fuerth, where he continued his education in European music. After temporary employment in Mainz, Strasbourg, and London, he went to Paris in 1818, and in 1822 he became the chief hazzan of the newly founded synagogue in the Rue Notre Dame de Nazareth. There he organized a four-voiced choir, for which he composed his Chants religieux… pour les prières hébraïques (1862). He had already appeared as a concert singer in Germany, and in Paris was urged to go on the stage, but refused. His tunes were popular among the German cantors, but his priority as a “reformist” passed to Solomon “Sulzer whose innovations had a wider influence. The “Polish airs” notated at the end of his Chants (149–57) are the first appearance in print of the “hazzanic-klezmeric” (folk) repertoire for weddings and other family rejoicings and an important relic of 18th-century traditions.

[Beitha Bayer]

LOW (Loewe), British family of Hungarian origin which became prominent in journalism and literature.

MAXIMILIAN LOEWE (1830–1900) was born in Hungary and joined the Nationalist party led by Louis Kossuth. After the failure of the 1848 revolution in Hungary, Loewe fled to England where he engaged in business. Within a short time he acquired a considerable fortune as a result of speculation but in 1878 lost it all. Loewe became interested in the Theist movement and helped to establish its church. He was a profound admirer of British culture and imbued his children with a love of English literature.

His son, SIR SIDNEY JAMES MARK LOW (1857–1932), became a lecturer at King’s College, London. His bent was for literature but the state of the family finances compelled him to earn his living as a journalist which he successfully combined as literary editor of the Standard (1904). He edited, with F.S. Pulling, the Dictionary of English History in 1884 and 20 years later published his second and most important work, The Governance of England (1904). As a journalist, Low achieved a high reputation for his style and sense of history and was...
given access to the papers of eminent statesmen such as Lord Milner and Leopold S. *Amery. From 1888 to 1897 he achieved fame as editor of the *St. James Gazette. During World War I, Low wrote a series of books on the British Empire in which he took a strict imperialist line with high propaganda value. He was knighted in 1918. An ardent patriot and confidant of leading statesmen, he was compelled to resign his official position as editor of the wireless service of the Ministry of Information in order to forestall a House of Commons question on his “Central European origin.”

Maximilian’s second son, Sir Maurice Low (1860–1929), was also a well-known journalist. He immigrated to the U.S. when the family fortunes waned and became Washington correspondent of the *Boston Globe and subsequently of the London *Daily Chronicle and *Morning Post. He was considered one of the best correspondents in the United States and by his writing and lectures did much to arouse American public opinion to an awareness of the German menace and to improve the image of Britain. For these services, he was knighted in 1922. He wrote studies of the United States, of which the best known is *The American People (2 vols., 1909–11), as well as books concerning World War I and a political novel.

Maximilian Loewe had six sons and five daughters. One daughter, Edith, who was a leader of *WIZO, married Montague David *Eder, psychologist and Zionist leader. Ivy, a daughter of Sir Sidney Low, married Maxim *Litvinov, the Soviet political leader.

**BIBLIOGRAPHY:** D. Chapman-Huston, *Memoir of Sir Sidney Low* (1936); *The Times* (June 18, 1929), 18 (obituary of Maurice Low).

**ADD. BIBLIOGRAPHY:** ODNB online for Sir Sidney Low.

**LOW, MINNIE** (1867–1922), U.S. social service leader. Low was born in New York City and moved to Chicago with her family when she was 10 years old. Inspired by her friend, social reformer and Hull House Settlement director Jane Addams, Low helped found the Maxwell Street Settlement House in 1893. Low’s work within Chicago’s Jewish immigrant community earned her the reputation as the “Jane Addams of the Jews.”

While organizing the Maxwell Street Settlement House, Low supported herself financially by working as secretary to Hannah Greenbaum *Solomon, the philanthropist and activist who founded the *National Council of Jewish Women. With Solomon’s assistance, Low became executive director of the Seventh Ward Bureau (later known as the Bureau of Personal Service), a position that she held from 1897 until her death in 1922. The organization helped East European Jewish immigrants who settled in Chicago to secure housing, medical care, loans, and legal aid, and sponsored a workroom that compensated female workers with coal and secondhand clothes. A critic of institutions that dispensed alms, Low advocated a scientific approach to philanthropy that promoted self-sufficiency through a combination of work and loans.

The same year that Low began her affiliation with the Seventh Ward Bureau, she also helped to create the Woman’s Loan Association. Administered exclusively by women, the Woman’s Loan Association provided Jewish immigrants with interest-free loans primarily to start and maintain small businesses. Low also played a prominent role within other Chicago Jewish agencies: Central Bureau of Jewish Charities, Desertion Bureau, Helen Day Nursery, Home for Jewish Friendless, and Jewish Home Finding Society (an organization that helped widows with dependent children and placed children with adopted families).

Low’s social work activity extended beyond the Jewish community. In 1899, for example, she joined a group of well-known Chicago social reformers including Hull House leaders Louise de Koven Bowen and Julia Lathrop, women’s club activist Lucy Flower, and Judge Julian Mack to organize the Juvenile Court of Chicago, the nation’s first separate juvenile court. Soon after the court’s establishment, Low was hired as a probation officer. In addition, Low’s reputation was not limited to Chicago. She achieved national recognition when her colleagues elected her president of the National Conference of Jewish Charities in 1914.

Limited finances and poor health plagued Low throughout her life. Never married, Low supported herself financially through employment as a salaried professional. Low left high school during the first year because of health problems and suffered from a prolonged illness before she died on May 28, 1922. At the memorial service, Addams delivered a eulogy that chronicled their friendship and honored Low’s accomplishments.

[Shelly Tenenbaum (2nd ed.)]

**LOW (Lev), WILLIAM ZE’EV** (1922–2004), Israeli physicist. Low was born in Vienna and studied in Canada and the U.S., receiving his doctorate from Columbia University in 1950. In the same year he immigrated to Israel, and was appointed professor of experimental physics at the Hebrew University in 1961. In 1960 he was elected president of the Physical Society of Israel. He has published nearly 200 papers in the field of solid state physics, laser physics, shockwaves, and microwaves, and is the author of *Paramagnetic Resonance in Solids* (1960). He was awarded the Israel Prize for exact sciences in 1962 and the Rothschild Prize for physical sciences in 1965.

A strictly observant Jew and profound talmudist, Low founded, and was first president of, the Institute of Science and Halakhah, the main purpose of which is to find scientific halakhic solutions to various problems connected with modern society and the Jewish religion, mainly in regard to observance of
The institute is also engaged in the collection of various rabbinical responsa connected with modern technological and agricultural problems. Low was also instrumental in establishing the Jerusalem College of Technology and was the first president and rector of this accredited college, whose purpose was to train yeshivah students as engineers for Israel industry, and thus bring them into direct contact with the economic and industrial life of the country. The staff consists of professors in the field of technology as well as yeshivah teachers. He has published two books of responsa.

**LOWDERMILK, WALTER CLAY** (1888–1974), U.S. land conservation and hydrology expert, friend of Zionism and Israel. Lowdermilk was born in North Carolina and studied at the universities of Arizona and California. After studying afforestation problems in Britain, he joined the afforestation department of the U.S. Department of Agriculture. Later, he studied soil erosion and conservation, being one of the first to base his conclusions on field experiments. In 1927, after five years as professor of afforestation at the University of Nanking, he founded a hydrological experimentation station in Southern California. His researches were the basis, in part, for U.S. soil conservation schemes in the 1930s, and from 1937 to 1947 he headed the research department of the U.S. Soil Conservation Service.

In 1939 Lowdermilk visited Erez Israel, where he studied conditions and development prospects. He published his conclusion in *Palestine—Land of Promise* (1944), in which, contrary to the view upon which the Mandatory Government ostensibly based its White Paper restricting further Jewish immigration on the grounds that the economic absorption capacity of Erez Israel was full, he showed that the country could support a population of three million. He warmly praised Zionist land settlement and agricultural development, and proposed a comprehensive plan for the development of the Jordan Valley along the lines of the U.S. Tennessee Valley Authority and the diversion of the river's sweet waters for irrigation for the benefit of Erez Israel and the neighboring countries. After the establishment of Israel's independence, this scheme became the basis for the Israel National Water scheme. He also proposed the generation of electricity by the transmission of Mediterranean water through a tunnel to the Dead Sea. Lowdermilk visited Israel in the early 1950s and for three years served, on behalf of the UN Food and Agriculture Organization, as an advisor to the Ministry of Agriculture on the preparation of Israel's soil conservation and water schemes. In 1955 he returned to Israel on behalf of the U.S. government and helped to develop the Agricultural Engineering Department of the Technion in Haifa, which he headed for three years and which bears his name. His writings include *Jewish Colonization in Palestine* (1939) and “Assignment in Israel” in *The Land* (1960), pp. 168–83.

**LOWE, ADOLPH** (1893–1995), economist. Born in Stuttgart, Germany, Lowe was a civil servant in Germany's ministries of labor and economic affairs and in the central statistical office (1919–26). From 1926 to 1931 he was a professor of economics and sociology at the University of Kiel, where he became director of research at the Institute for World Economy. In 1931 he was appointed professor of economics at the University of Frankfurt. In 1933, with the advent of the Nazis, he went to England where, until 1940, he was a lecturer in economics and political science at the University of Manchester. He left England in 1940 because he was perceived as an enemy alien. He settled in New York City, where he began teaching at the New School for Social Research. From 1943 to 1951 he directed research at the Institute of World Affairs in New York City. General economic theory, economic development, and business fluctuations were his main professional interests. Lowe retired from teaching in 1963 but remained at the New School for Social Research in the capacity of lecturer. He returned to Germany in 1983, where he lived to the age of 102.

[Joachim O. Ronall / Ruth Beloff (2nd ed.)]

**LOWE, ELIAS AVERY** (1879–1969), foremost 20th century authority on Latin paleography. Born in Lithuania, Lowe (originally Loew) came to New York at an early age and after studying at City College graduated from Cornell University. In 1902, aided by the philanthropist James Loeb, he went to Germany, where he received his doctorate in 1907 under the master paleographer Ludwig "Traube, writing on *Die ältesten Kalendarien aus Monte Cassino*. In *Studia Palaeographica* (1910) he established extremely sophisticated criteria for dating Beneventan and Visigothic minuscule manuscripts. His work *The Beneventan Script* (1914), a subject to which he returned with his two-volume *Scriptura Beneventana* (1929), was the first full-scale study of a particular Latin script. His work on the complex textual tradition of the rule of St. Benedict was an important supplement to that of Traube. In 1913 Lowe was appointed lecturer and in 1927 as reader in paleography at Oxford; but his most fruitful period was from 1936 on, when he was appointed professor at the Institute for Advanced Study at Princeton, retiring in 1946. There he was a close friend of Einstein. His master work was *Codices latini antiquiores*, a palaeographical guide to all Latin manuscripts prior to the ninth century in 11 volumes (1934–66), arranged according to the country where the manuscripts are currently to be found and containing facsimiles of sample passages of each manuscript, with important notes on their date, origin and style. At the time of his death he was at work on a 12th volume, containing a supplement and a series of indices, as well as a companion to the work explaining how it was to be used. Jacob *Epstein, an early schoolmate, made a bust of Lowe, now in the Metropolitan Museum in New York.

[Louis Harry Feldman (2nd ed.)]
LOWENSTEIN, ALLARD KENNETH (1929–1980), U.S. political activist. Born in Newark, NJ, Lowenstein was raised in Westchester County, NY, and educated at the Horace Mann School, the University of North Carolina, Chapel Hill (B.A. 1949) and Yale Law School (LL.B. 1954). After graduating from UNC, Lowenstein became an aide to liberal North Carolina senator Frank P. Graham. Later he became president of the National Student Association (an organization substantially funded by the CIA unbeknowst to Lowenstein and other NSA leaders). He worked for Adlai Stevenson’s presidential campaign in 1952. After the campaign he went to work for Eleanor Roosevelt at the United Nations.

After law school and two years in the U.S. Army, Lowenstein undertook a dangerous fact-finding trip to South Africa and South West Africa (now Namibia) to investigate apartheid, and wrote a book, _Brutal Mandate_ (1962), about his findings. While practicing law in New York in 1960, he worked in the election campaign of liberal Democratic congressman William FITTS Ryan. In 1961 he began teaching at Stanford University, and became involved in student and civil rights activities. Fired for his activities at Stanford, he took a position at North Carolina State University at Raleigh, where he became a civil rights activist. A talented organizer, known as a kind of “pied piper” for idealistic students, Lowenstein soon became a strategist with movement leaders in the South, including Martin Luther King, Jr. He took a leading role in recruiting young white volunteers – many of whom were Jewish – for Freedom Summer, the campaign to register voters in Mississippi and other Southern states in 1964, on behalf of the Student Nonviolent Coordinating Committee (SNCC). But he fell out with the organizers over his attempts to control their activities and limit their ideas to those of traditional liberalism. At the 1964 Democratic Convention Lowenstein supported the compromise imposed by President Lyndon Baines Johnson over the struggle to seat an integrated delegation in place of the official white segregationist delegation from Mississippi.

In 1967 as opposition to the Vietnam War increased Lowenstein, from his teaching perch at City College of New York, began the Dump Johnson movement within the Democratic Party over the Vietnam War. He is credited with persuading Senator Eugene McCarthy to run against President Johnson in the primary primaries in 1968, eventually causing Johnson to withdraw his candidacy. That year Lowenstein ran for, and won, a congressional seat from a largely Black and Jewish district centered in Long Beach. In Congress he was an outspoken voice against the Vietnam War and for draft reform.

He failed to win reelection in 1970, and also lost subsequent attempts in primaries to win election in other New York districts in 1972 and 1974. Various hasidic factions in Brooklyn opposed his election. In 1971 Lowenstein became the chairman of the liberal Americans for Democratic Action. In 1977 he was appointed by President Carter as the U.S. representative to the United Nations Commission on Human Rights. His later years were relatively quiet. However, in 1980 Lowenstein was shot to death in his law office in New York City by a mentally ill former associate from the civil rights movement. His funeral gathered many of those who had participated in his many causes.

[Leo W. Schwarz]

LOWENSTEIN, SOLOMON (1877–1942), U.S. social work executive and Reform rabbi. Lowenstein, who was born in Philadelphia, was ordained by Hebrew Union College in 1901. He was successively employed as superintendent of the United Jewish Charities in Cincinnati (1901–04); assistant manager of the United Jewish Charities in New York (1904); superintendent of the Hebrew Orphan Asylum (1905–18); deputy commissioner of the American Red Cross in Palestine (1918–19); and director of the Federation of Jewish Philanthropic Societies (1920–35). In 1935 he became the Federation’s executive vice president and held this post until his death. During this period, coinciding with the depression of the 1930s, Jewish philanthropy greatly expanded and shifted and Lowenstein coordinated and systematized its operations. Lowenstein was president of the National Conference of Social Work (1938), and was also a trustee of both the American Jewish Committee and the American Jewish Joint Distribution Committee, and a vice president of the American Friends of the Hebrew University.

LOWENTHAL, MARVIN (1890–1969), U.S. Zionist writer. Born in Bradford, Pennsylvania, Lowenthal was sent by Louis D. Brandeis to the West Coast to organize the Zionist movement there (1916–18). From 1924 to 1929 he traveled abroad as European editor of the _Menorah Journal_, and for part of this time also represented the American Jewish Congress. During these years he wrote extensively on literature, politics, and Zionism, evincing affection for the secular elements in Jewish culture. He became widely known in the United States through his essays and lectures, but his most enduring works are his travel and historical books. His craftsmanship and urbanity of style appear at their best in _The Jews of Germany_ (1936; includes bibliography of his works). Lowenthal served on the Zionist Advisory Commission (1946–49) and was editor of _The American Zionist_ (1952–54). His works include a book on Jews in Europe and North Africa, _A World Passed By_ (1933); and he edited _Henrietta Szold: Life and Letters_ (1942) and the one-volume precis of the _Diaries of Theodor Herzl_ (1956). He translated and edited _Memoirs of Glueckel of Hameln_ (1932) and a one-volume abridgment of Montaigne’s _Autobiography_ (1935).

LOWEY, NITA MELNIKOFF (1937– ), U.S. congresswoman representing parts of Westchester and Rockland counties in the state of New York. Lowey, who was first elected to the House of Representatives in 1988, was the first woman and the first New Yorker to chair the Democratic Campaign Committee (2001–2002). The daughter of Beatrice and Jack Melnikoff,
Lowey was born in the Bronx, New York. She attended the Bronx High School of Science and Mount Holyoke College (B.A., 1959). She and her husband, attorney Stephen Lowey, had three children. They were active philanthropically in the New York City region Jewish community and were synagogue members.

In Congress Lowey was a member of the powerful House Appropriations Committee, and the ranking Democrat on the Foreign Operations, Export Financing, and Related Programs subcommittee. She was described as an extremely effective, committed, and influential legislator who “maneuvered skillfully through the appropriations process” so that she could successfully help New York. Lowey took a key position promoting a strong U.S./Israel relationship and was a leading advocate for the annual U.S. aid package for Israel. Additionally, she fought for and secured $350 million to help Israel resettle refugees from the former Soviet Union. Domestically, Lowey supported educational opportunity, school modernization, teacher development, and literacy programs, as well as support. On the Appropriations Committee she successfully pushed for increased federal investments in biomedical research on cancer, diabetes, and Alzheimer's disease and authored the first bill that mandated clear, concise food allergen labeling.

On the Select Committee on Homeland Security, Lowey advocated federalizing air and nuclear security and increasing port and rail security. She helped secure over $20 billion for the recovery of New York after the September 11, 2001, terrorist attacks and has supported a variety of anti-terrorism measures.

[Judith Friedman Rosen (2nd ed.)]

LOWICZ (Pol. Łowicz), town in the province of Lodz, central Poland. The Jews began to settle there at the beginning of the 16th century. In 1516 they were expelled by Archbishop Jan Laski and established themselves in the surrounding towns. Until 1579 the presence of Jews in Lowicz was authorized only on market days and during fairs. At the regional church synod held in Lowicz in 1556 it was decided to inflict severe punishment on four Jews of *Sochaczew who had been accused of *Host desecration. At the close of the 16th and during the 17th centuries Jewish merchants played an important role in the Lowicz fairs. From the beginning of the 19th century the Jewish population of the town increased rapidly. The 60 Jews (2.5% of the population) who lived in Lowicz in 1808 earned their livelihood mainly as innkeepers and craftsmen. With the renewal of the Lowicz fairs in 1820 much of the trade in the town was in Jewish hands. In 1827 the Jewish community of Lowicz numbered 405 (11% of the population). In 1829 a wooden synagogue was erected; the local Jewish cemetery was founded in the early 1830s. In 1897 the construction of the Great Synagogue was completed. During the years 1828–62 the Jews were allowed to live only in the Jewish quarter. In the course of time Hasidism gained influence in the community. In 1863 some Lowicz Jews contributed funds to the Polish rebels and collaborated with them in smuggling arms.

The Jewish population increased from 1,161 in 1857 (21% of the population) to 3,552 in 1897 (35% of the total). Their principal sources of livelihood were shopkeeping, trade with the neighboring peasants and the soldiers of the local Russian military camp, and crafts. A considerable part of the Jewish poor was employed in the textile, stocking, and food manufacturing industries. Under the influence of the *Bund, Jewish workers and students participated in the revolutionary incidents which took place in Lowicz in 1905. From the beginning of the century Zionist groups were organized. At the end of 1914 there were Jewish victims and severe damage to property as a result of the battles which were fought in the town and its vicinity. In 1917 six Jewish delegates were elected to the municipal council, forming half of its membership. In 1921 there were 4,517 Jews (30% of the total population) in Lowicz. In the interwar period CYSHO (Central Yiddish School Organization) and Beth Jacob schools functioned. From 1935 to 1939 the weekly Mazovscher Vokhenblat was published in Lowicz. In 1931, 4,339 Jews (25% of the total population) lived in the town. In 1933 anti-Jewish riots occurred, which were repelled by the Jewish *self-defense.

[Arthur Cygielman]

Holocaust Period

On the outbreak of World War II there were about 4,500 Jews in Lowicz. The German army entered the town on Sept. 9, 1939. That day all Jewish males were ordered to assemble in the market place. They were imprisoned in the synagogue and tortured for two days. During 1940 about 3,500 Jews from the towns of Lodz province, which had been incorporated into the Third Reich, were forced to settle in Lowicz. In May 1940 a ghetto was established there. On June 17, 1941, a decree forbidding Jews to live in the town or country of Lowicz was issued. All the Jews were transferred to the *Warsaw ghetto and shared the plight of Warsaw Jewry. No Jewish community has been rebuilt in Lowicz.

[Stefan Krakowski]

LOWIE, ROBERT HARRY (1883–1957), U.S. anthropologist. Born in Vienna, Lowie was taken to the U.S. and educated in New York. He studied anthropology under Franz *Boas, and served two institutions, the American Museum of Natural History (1907–17) and the University of California at Berkeley (1917–50). He did field work among various American Indian tribes, especially the Crow, his early interest in comparative mythology led to his publishing several works, notably Primitive Society (1920) and Primitive Religion (1924). Lowie's contributions to anthropology were widely recognized and he edited...
the American Journal of Anthropology. During World War II he taught an "area" course on Germany and this experience, combined with ethnographical field trips, led to his publication of The German People – a Social Portrait to 1914 (1945), and Towards Understanding Germany (1954), which assessed the impact of the war on the German personality. Though generally a follower of the Boas school, which insisted on the scientific method, Lowie contended that more importance ought to be allotted to the biological factor in accounting for differences among individuals as well as groups. He also resisted Freudian generalizations, and envisaged the possibility of applying correlation techniques to culture variables. In his ethnographical studies Lowie was concerned to illuminate the interaction between social organization, religion, and folklore. He has been considered by some the precursor of structural anthropology.

[Ephraim Fischoff]

LOWINSKY, EDWARD ELIAS (1908–1985), U.S. musicologist. Lowinsky was born in Stuttgart, Germany. In 1934, after the Nazi rise to power, he emigrated to the United States. He taught at the University of California at Berkeley and at the University of Chicago, where he initiated an entire generation of scholars, and in 1961 was appointed Ferdinand Schevill Distinguished Service Professor. His research in the music of the Renaissance represented a significant breakthrough: from 1964 to 1977 he was the general editor of the series Monuments of Renaissance Music. Lowinsky is considered one of the major figures of postwar musicology. His numerous publications include major critical editions and innovative historical and stylistic observations. Among his important publications are Tonality and Atonality in Sixteenth Century Music (1961), The Medici Codex of 1518 (1968), Cipriano da Rore's Venus Motet: Its Poetic and Pictorial Sources (1986), and Music in the Culture of Renaissance and Other Essays (ed. Bonnie Blackburn, 1989).

[Jeohash Hirshberg and Amnon Shiloah (2nd ed.)]

LOWN, PHILIP W. (1890–1978), U.S. shoe manufacturer and philanthropist. Lown arrived in New York in 1907, later attending the University of Maine and obtaining a degree in chemical engineering (1918). Lown went into shoe manufacturing, eventually heading Lown Shoes Inc. (from 1933) and Penobscot Shoe Co. Settling in Lewiston, Maine, in 1935, he became active in civic and Jewish communal affairs, especially educational. Lown served as a longtime board member, vice president, and president of the American Association for Jewish Education from 1950 on, and was one of the leading philanthropists of Jewish education in the United States. He endowed a chair in Jewish philosophy at Brandeis University and founded the Lown School of Near Eastern and Judaic Studies. He was president of the Hebrew Teachers’ College of Brookline, Massachusetts, from 1962 and vice president of the American Friends of the Hebrew University. He served as a national cabinet member of the UJA from 1950 and was treasurer of the Combined Jewish Philanthropies of Boston. A jubilee volume edited by Judah Plich was published in his honor in 1967.

The Philip W. Lown School of Near Eastern and Judaic Studies, established at Brandeis University in 1953, is the center for teaching and research programs in the areas of Judaic studies, ancient Near Eastern studies, Islamic and modern Middle Eastern studies, and Jewish communal studies. The Hebrew College of Brookline has established the Philip W. Lown Medal for Distinguished Service to Jewish education and culture in the United States.

“LOWTH, ROBERT” (1710–1787), Hebraist. Appointed professor of poetry at Oxford in 1741, Lowth devoted a series of 34 Latin lectures to the literary qualities of biblical poetry. Originally published as Praelectiones de sacra poesi Hebraeorum (Oxford, 1753), these were translated into English as Lectures on the Sacred Poetry of the Hebrews (London, 1787). Lowth was the first modern scholar to formulate the theory of parallelism as the metrical basis of biblical Hebrew poetry, a discovery which had been partially anticipated in the 16th century by Azariah de “Rossi, whom Lowth quoted. Renaissance scholars, relying on classical and contemporary verse forms, had tried unsuccessfully to scan poetic passages in the Bible as though they were classical hexameters, but Lowth showed that Hebrew poetry was fundamentally antiphonal, the latter part of each verse echoing the idea of the first by corroboration or contrast – “The mountains skipped like rams/the hills like children of the flock.” His translation of the Book of Isaiah (1778) was also original in biblical translation, distinguishing between the prose and poetry of the original Hebrew. Lowth is notable for having stressed the sublimity of Old Testament literature and the vividness of its imagery in an era of prudery and circumlocution. He was bishop of Oxford 1766–67 and thereafter bishop of London.

[Murray Roston]

LOWY, FRANK (1930–), Australian businessman. Born in Czechoslovakia, Lowy survived the Holocaust in Hungary before fighting for the Israeli army in the War of Independence. In 1952 he migrated to Sydney, Australia, where, with fellow Jewish migrant and long-time business partner John Saunders, he opened a delicatessen in a Sydney suburb. In 1959 Lowy and Saunders opened one of Australia’s first suburban shopping centers, Westfield Plaza in Blacktown, Sydney. Westfield Holdings Ltd. grew into one of the most important retailers of the country. By the 1980s Lowy had become one of the richest men in Australia, and in 2004 was credited with a fortune of $4.2 billion (about US $4 billion), ranked jointly as the second largest private fortune in that year’s Australian “rich list.” In 2001 he bought out nine shopping malls in the United States.
and also owned six shopping centers in Great Britain. Worth U.S. $18 billion in 2004, the Westfield Group, as it was known, was the largest shopping center owner in the world. Lowy was also chairman of the Australian Soccer Association.

[William D. Rubinstein (2nd ed.)]

LOYTER, EFRAIM BARUKHOVICH (1889–1963), Russian theatre director and teacher. Born in Berdichev, Loyter began his career in 1906 as a theater critic in Vilna newspapers. He also published Yiddish stories. He was close to the Zionist-Socialist party. During World War I he was a representative in Central Russia of ЕОКПО, the Jewish Committee to Help War Victims. Together with Л. Собол, he edited the literary anthology *Yevreyskiy mir* (“Jewish World,” Moscow, 1918).

Loyter was one of the heads and directors of the Jewish theatrical studio of the Kiev Culture League (Kiev-Moscow, 1919–24) where with a group of actors whom he had trained he staged plays by L.L. Peretz, Shalom Aleichem, Peretz Hirshbein, and others. He studied directing in Moscow with Y. Vakhantsov and C.Y. Meyerhold. In Baku in 1924–25 he headed the Workers’ Theater and the Jewish theatrical studio. In 1925–28 he was director of the State Jewish Theater of the Ukraine where he staged *Purimspiel* and also *Vogyne* (“In the Fire”) by М. *Daniel and Loyter; Two Kunt Lemels by A. *Goldfaden, and other works. In 1929 in Moscow together with S. *Mikhoels he established a theatrical studio, teaching there (until 1935) and also at the Teaching-Theater Center (from 1933 to 1935). From 1935 to 1941 and 1945 to 1949 he was artistic director of the Odessa Jewish Theater where he staged, among other plays, Maxim Gorky’s *Mother* (1938) and *Wandering Stars* (1940) by Shalom Aleichem. Loyter also directed plays in Russian and Ukrainian. During World War II, he was evacuated to Tashkent. During this time he staged plays in Uzbekistan (and was awarded the title of Honored Artist of the Uzbek SSR, in 1943) and Tadzhikistan. He wrote a book in Russian, *Slovo na stsene I estrade* (“Word on Stage and on the Boards,” 1954), and an introduction to the anthology he compiled *Slovo na stsene* (“Word on Stage,” 1958).

His brother NACHUM LOYTER (1891–1966) was also a theatrical director. In 1919 he studied at the theater studio of the Kiev Culture League and in 1922 graduated from the State Higher Directors’ Workshop. From 1925 to 1929 he was the director of the Moscow Prolet-cult (Proletarian Culture) Theater. From 1930 he headed the State Jewish Theater of the Ukraine in Kharkov, from 1936, the Odessa Jewish Theater, and from 1937 the Kiev Jewish Theater. From 1940 to 1957 N. Loyter worked in the Y. Kolas Belorussian Theater, first in Vitebsk, then in evacuation in Uralsk. He was awarded the title of Honored Art Worker of the Belorussian SSR in 1945 and a Stalin Prize in 1946.

[Mark Kipnis / The Shorter Jewish Encyclopaedia in Russian]

LOZINSKI, SAMUEL (1874–1945), Russian historian. Born in Bobruisk, Belarus, he studied in the universities of Berlin, Paris, and St. Petersburg. In the years 1904–06 he was rector of the foreign department of the newspaper *Kievskije Otkliki* (“Kiev Echo”). Lozinski specialized in the history of Western Europe, writing studies on the modern history of France, Austria, Holland, and Belgium. He collaborated in editing and translating standard historical works into Russian, including E. Renan’s *Histoire du peuple d’Israel* and H.C. Lea’s *History of the Inquisition of Spain*. He also did research in Jewish history and edited the sections on Jewish culture in Europe and the history of the Jews in France and England in the Russian-Jewish encyclopedia (*Yevreyskaya Entsiklopediya*). Under the Soviet regime, Lozinski lectured in history at the universities of Leningrad, Minsk, Rostov, and other cities. During the 1920s he belonged to the small circle which was active in Jewish historical research under the conditions of the new regime. He edited a collection of documents, *Kazyomnye yevreyskiye uchilishcha* (“Jewish Governmental Schools,” 1920), and edited the collections *Yevreyskaya Starina* and *Yevreyskaya Letopis*. To antisemitism he dedicated the work “The social roots of antisemitism in medieval and modern times” (1929). He also engaged in research on the history of the Church. His two works *Svyataya Inkvizitsiya* (“The Holy Inquisition,” 1927) and *Istoriya Papstva* (“History of the Papacy,” 1934) were published by the Academy of Sciences of the U.S.S.R.

[Yehuda Slutsky]

LOZOFSKI (Dridzo), SOLOMON ABRAMOVICH (1878–1952), Soviet statesman and trade union leader. Born into a poor family in Danilovka, Yekaterinoslav province (today Dnepropetrovsk district, Ukraine), Lozofski went to work at the age of 11 and completed his studies on his own. He joined the Russian Social-Democratic Party in 1901 and in 1905 attached himself to the Bolshevik wing. Lozofski participated in the Revolution of 1905, and several times was arrested, but escaped. In 1909 he arrived in France where he was active in the socialist movement until 1917. Lozofski returned to Russia following the outbreak of the February Revolution and was immediately elected secretary of the Trade Union Council. His opposition to Lenin’s policies during and after the October Revolution led to his expulsion from the party in March 1918 and until December 1919, when he rejoined the Bolsheviks, he was a leader of the Internationalist Social-Democrats. From 1920 on, he was appointed to a series of important posts, serving as head of the Communist Trade Union International (Profintern; 1921–37), director of the state publishing house (1937–39), deputy commissar of foreign affairs (1939–46), and deputy director and later director, of the Soviet Information Bureau. From 1939 to 1949 he was a member of the central committee of the Communist Party.

In his capacity as head of the Soviet Information Bureau, Lozofski was responsible for the work of the Jewish *Anti-Fas-
cist Committee and was concerned with world Jewish affairs. It is
believed that in 1944 he supported the plan to set up a Jewish
autonomous settlement in the Crimea and that this led to his arrest in 1949, when the authorities began to liqui-
date Jewish culture in the Soviet Union. Lozovski was tried
withgether with 24 other Jewish writers and intellectuals in July
1952, and was executed with them on August 12, 1952. He was
posthumously rehabilitated in 1956.

[Benjamin Pinkus]

LOZOWICK, LOUIS (1892–1973), U.S. printmaker, painter,
draftsman, and writer. Born Leib Lozowick in Russia, he
changed his name to the more Anglicized Louis upon his
arrival in America. At the age of nine he had lived with his
brother in Kiev, where he attended secular school and took
his first art classes at the Kiev Art School (1903–5). When his
brother moved to the United States in 1906, Lozowick joined
him in Newark, New Jersey.

After studying at the National Academy of Design in New
York (1912–15) with the Jewish artist Leon Kroll and others,
Lozowick went to Ohio State University, graduating Phi Beta
Kappa in 1918. He served in the U.S. Army for a year before an
extensive stay in Europe. Lozowick spent a year in Paris and
then lived in Berlin for three years, befriending other Russian
artists in Germany, including El Lissitzky. With Lissitzky, Lo-
zowick traveled to Moscow, where he became acquainted with
Constructivist principles, gaining admiration for a machine
esthetic that highlighted the potential of the urban land-
scape. From 1919 to 1928 Lozowick made a series of canvases
of ten American cities (e.g., Minneapolis, 1926–27, Hirshhorn
Museum and Sculpture Garden, Washington, D.C.) rendered
in a precisionist idiom. In 1923 Lozowick began making lith-
ographs, often of the cities he had rendered in paint. He re-
turned to America in 1924.

Lozowick worked on a series of pen and ink drawings of
imagined technology called Machine Ornaments from 1922 to
1927. He incorporated three movable machine ornaments as
the set design for the 1926 stage production of Gas in Chicago.
The same year Lord and Taylor asked Lozowick to design the
set for a fashion show and a window display. Again using the
forms of his machine ornaments, Lozowick created larger-
than-life Constructivist inspired architectonic backdrops.

He began to make drawings for the leftist periodical New Masses in
the late 1920s. Around 1930 Lozowick admitted human figures into his art, often picturing laborers of the
metropolis. His social imagery described injustices facing the
workers as well as others; the lithograph Lynching (1936) was
included in the 1936 American Artists’ Congress print exhi-
bition “America Today.” Lozowick also worked as a New Deal
artist (1934–37), designing two works for New York City’s post
office on 33rd street and several lithographs.

Later in life Lozowick moved away from Cubist-inspired
industrial subjects. With a more supple line and sometimes
increased color, Lozowick made increasingly realistic prints.
Trips to Israel in 1954, 1964, and 1968 produced several images
of the land. On a commission from the United Jewish Appeal,
Lozowick executed a lithograph of a pious Jew in synagogue
entitled Lone Worshipper (1966).

A prolific writer, Lozowick wrote Modern Russian Art
(1925) and a monograph on William *Gropper; he contrib-
uted art criticism to several magazines, including The Meno-
rah Journal. His autobiography, Survivor from a Dead Age, was
published posthumously.

ologue Raisonné (1982); L. Lozowick, Survivor from a Dead Age: The

[Samantha Baskind (2nd ed.)]

LUBACZOW (Pol. Łubaczów), town in Rzeszow province,
S.E. Poland. Jews are mentioned in Lubaczow as early as 1498.
When confirming the municipal rights of the town in 1523,
King Sigismund I granted a privilege according to which the
Jews were forbidden to trade in the surrounding villages. In
1562 only two Jewish houses were mentioned in Lubaczow;
there were three Jewish houses in the first half of the 17th cen-
tury, but in 1662 there were no Jews at all, probably a result of
the Swedish wars and the wars against the Cossacks (in 1655
the town was burned down by the Cossacks). In 1717 the Jews
of Lubaczow paid 560 zlotys poll tax, 425 in 1719, and 500 in
1721; in addition they were to pay the king a yearly “kettle
tax” of 1,200 zlotys, and for cattle slaughtering the shoulder
blade duty (lopatkowe). In 1765 the community of Lubaczow
withgether with the town of Potylicz and surrounding villages
numbered 687 poll tax payers. In 1880 the community num-
bered 1,503 (34% of the total population), 1,911 in 1900, 2,711 in
1910, and 1,715 (32%) in 1921. At that time Lubaczow had 106
Jewish workshops, 33 of which had salaried workers.

Holocaust Period

Before the outbreak of World War II there were about 2,300
Jews in Lubaczow. The majority of them were deported in the
autumn of 1942 to *Belzec death camp. The remaining Jews
were exterminated on Jan. 6, 1943. After the war, the Jewish
community of Lubaczow was not reconstituted.

[LUBARSKY, ABRAHAM ELIJAH (1856–1920), early member of
Hovevei Zion (*Hibat Zion) in Russia. Born in Balta,
Ukraine, Lubarsky was engaged in business. From 1893 he was
agent for Wissotsky Tea in Odessa and traveled throughout

the large communities in Russia, making connections with the prominent figures in Hebrew and Yiddish literature in the late 19th century. He was especially close with *Ahad Ha-Am, whom he stimulated to write his famous first essay, Lo Zeh ha-Derekh. Lubarsky was one of the first members of the secret society *Benei Moshe and influenced K.Z. *Wissotsky to support the Hebrew monthly Ha-Shiloah. He contributed to the Hebrew press throughout this period. In 1903 he immigrated to the United States, where he became the moving spirit of the Hebrew movement. Lubarsky was a founder there of the Histadrut Ivrit and its newspaper, Ha-Toren.

LUBARTOW (Pol. Lubartów; Rus. Lyubartov), town in Lublin province, E. Poland. The poll tax paid by the Jewish community rose from 1,500 zlotys in 1717 to 2,400 zlotys in 1736. In 1766 there were 764 Jewish poll tax payers. The community also had jurisdiction over 217 Jews in the neighboring villages and 37 Jews in the townlet of Kamionka. Among the 218 heads of families were 14 contractors, 20 merchants, 34 tailors, 5 hatters, and 9 carters. The community maintained two synagogues and a mikveh; 164 houses were owned by Jews. In 1796 the owner of the town granted the Jews a privilege defining the status of the kahal and the Jewish craftsmen's guilds. Among the town's wealthiest Jews were the merchant family *Peretz and the chief contractor, Solomon Kosiovicz. In the first half of the 19th century the Jews were allowed to keep taverns only with the permission of the local lord. The community numbered 2,074 (58% of the total population) in 1827; 1,820 (56%) in 1857; 2,163 (53%) in 1897; and 3,269 (54%) in 1921. In that year there were 176 Jewish workshops in the town, about half of them employing salaried workers.

Holocaust Period

About 3,500 Jews lived in Lubartow before World War II. In November 1939 over 2,500 Jews were ordered to leave the town and settle in Parczew and Ostrow. Most of them came back within a year. In May 1942 about 1,000 Jews from Slovakia were deported to Lubartow. On Oct. 11, 1942, Jews from Lubartow were deported to the Sobibor and Belzec death camps. Near Lubartow two Jewish partisan units were active for more than a year, under the command of Samuel Jegier and Mietek Gruber.

[Encyclopaedia Judaica (Germany)]

LUBAVICH (Lyubavichi), small town in Smolensk district, Russia; until 1917 it was in Mogilev province (gubernia), Belarus. The Jewish population numbered 1,164 in 1847 and 1,660 (67.3% of the total) in 1897. Lubavich became the center of *Chabad Ḥasidism in Lithuania, Belarus, and the eastern Ukraine after Dov Ber, the son of the founder of the *Chabad system, *Shneour Zalman of Lyady, moved from Lyady to Lubavich in 1813. His nephew and son-in-law Menahem Mendel (the "Zemah-Zedek") extended the influence of the dynasty (see *Schneersohn). The Jews in the town mainly earned their livelihood from the flax trade, and in providing for the many Hasidim who visited their "rabbi" there. His grandson Shalom Baer established the yeshivah Tomekh Temimm in 1897 in Lubavich. He left Lubavich in 1915, but the name of the town remained connected with the Chabad movement (the "Lubavich Hasidim"). After the 1917 Revolution the town's economy declined and the Jews suffered from persecution by the *Yevsektiya. In 1926 there were only 967 Jews in Lubavich (50% of the total population). Of the 205 families living then, 43 were in engaged in agriculture, 80 in crafts, and 27 in trade, and the others unemployed. In 1939 the number of Jews dropped to a couple of hundred. The Germans entered the town on July 21 or 22, 1941, and a few days later a group of working Jews was executed. In November 1941 a ghetto was organized and refugees from Vitebsk and Rudnia were brought there. The ghetto's 485 inhabitants were soon murdered outside the town.

LUBETKIN, ZIVIA (1914–1978), founder of Jewish Fighting Organization (ZOB), fighter in the Warsaw Ghetto Uprising. Born in Beten, near Slonim, Zivia Lubetkin was a member of the Zionist labor youth movement Deror and a representative of *He-Halutz on the National Jewish Council. She married Itzhak *Zuckerman (Cukierman). In the summer of 1939, she attended the Zionist Congress in Basle and returned to Poland in September. During the time of the German invasion she found herself in the Soviet zone of occupied Poland and made her way back to Warsaw, where she was part of the underground. After witnessing the deportations of the summer of 1942, when more than 265,000 Jews were shipped from Warsaw to Treblinka between July 23 and September 12 without resistance, she was one of the organizers of the Jewish Fighting Organization, the ZOB. She participated in the first armed resistance to the Germans in January 1943. At the time of the Warsaw Ghetto Uprising (April 1943), she was among the fighters in the central ghetto while her husband was one of the leaders of the revolt, operating on the Aryan side. On May 8, 1943, after the main bunker at Mila 18, which housed the command of the Jewish fighters’ organization headed by Mordecai *Anielewicz, fell, Lubetkin escaped from the ghetto with the other surviving fighters through the sewage system. There had been no advanced planning for an escape route and the escape through the sewers was improvised by Simcha Rotem ("Kazik"). Upon arriving on the Aryan side the two clashed,
as Lubetkin wanted to wait for other Jews hiding in the sewers and Kazik insisted that they leave rather than risk apprehension by the Germans. In August of the same year, she and her husband sent Isaac Schwarzbart, a member of the Polish National Council in London, a telegram that reported the results of the revolt in the ghetto, called for help, and included a warning to the Jews of Western Europe of the fate awaiting them after deportation to Poland. Zivia Lubetkin fought with the partisans and participated in the Polish revolt of October 1944, together with other survivors of the Warsaw uprising. After Poland was liberated from German occupation by the Soviet army in January 1945, Zivia Lubetkin settled in Palestine. She and her husband were among the founders of kibbutz *Lohamei ha-Gettaot, which built a memorial and museum to the ghetto fighters. They were active in the ghetto fighters’ organization in Israel. As a member of the executive of *Kibbutz ha-Me’uhad, she was appointed to the Executive of the *Jewish Agency (1966–68). In her testimony at the *Eichmann trial, she described the Warsaw Ghetto Uprising. A compilation of Lubetkin’s extemporaneous speeches, Days of Destruction and Revolt, was published in 1979.

[B. Mordechai Ansbacher / Michael Berenbaum (2nd ed.)]

**LUBETZKY, JUDAH** (1850–1910), French rabbi. Lubetzky was born in Russia. He went to Paris in 1880 and was appointed rabbi of the Eastern European Jews there the following year and a member of the Paris bet din in 1904. He published his edition of parts of the Sefer ha-Hashlamah of Meshullam b. Moses of Béziers from a manuscript in the Paris library of Baron *Guenzburg, together with his own commentary, entitled Torat ha-Hashlamah, and an introduction giving the biography of Meshullam and of other Provençal scholars (3 vols., 1885–1910). In 1896 he published Bidkei Battim, comprising: (1) notes and amendments to the Sefer ha-Hashlamah on tractates Berakhot, Tzniut, Yevamot, and Megillah, with a biographical introduction on some Provençal rabbis; (2) Meshullam’s criticism of Maimonides’ laws of Eruvin and Shevi’ot, from a manuscript, with Lubetzky’s own notes; (3) a critique of Mordecai Horowitz with regard to the *Cleves get.

Lubetzky became famous for the vigorous stand he took against the proposal to introduce a conditional clause into Jewish marriages in France, with the aim of making civil divorce effective in the dissolution of Jewish marriages. The proposal was first made in 1885 and again in 1893. By his articles in the Hebrew periodicals and by enlisting the opposition of the great rabbis of the time he was successful in having it rejected. In 1907 an assembly of French rabbis resolved to adopt the proposal. Lubetzky then collected the opinions of more than 400 eminent scholars and, supported by Baron Rothschild, succeeded in having the resolution rescinded. He prepared all the material relevant to the proposal for publication and sent it to Ḥayyim Ozer *Grodzinski. When the proposal was again raised, Grodzinski gave the material to Aaron D.A. Waronovski, who published it with the title, Ein Tenai be-Nissu’in (1930).

[Shlomoh Zalman Havlin]

**LUBIN, ABRAHAM** (1937– ), hazzan. Lubin was born in London and immigrated to Israel in his youth. He sang in the Shirat Yisrael choir in Jerusalem with the cantor Zalman *Rivlin. In 1950 he returned to London and studied in Yeshivat Etz Haim and also furthered his studies in cantorial liturgy at Jews’ College, and continued his musical studies, the culmination of which was his Doctor of Music degree honoris causa from the Jewish Theological Seminary. He settled in America in 1958 and from 1968 was cantor to the Rodfei Zedek congregation of Chicago. He was active in the Cantors’ Assembly and also its president (1995–97), as well as an editor of the Journal of Synagogue Music. He published numerous articles and studies concerning the history of prayer and liturgy, including “The Influence of Jewish Music and Thought in Certain Works of Leonard "Bernstein.” As a concert artist he was well versed in Hebrew, Israeli, and Yiddish songs and appeared in concert recitals throughout the United States, Europe, and Israel.

[Akiva Zimmerman / Raymond Goldstein (2nd ed.)]

**LUBIN, ISADOR** (1896–1978), U.S. economist. Born in Worcester, Massachusetts, Lubin received his Ph.D. in economics from the Brookings Institution (1926). He taught economics for a year at the University of Missouri (1917–18) and left to serve as statistician for the U.S. Food Administration, from which post he moved to the U.S. War Industries Board as a special expert. He returned to teaching in 1926, at the universities of Michigan and Missouri and Brookings Institute (1922–33). Subsequently, he served many public and semipublic institutions, including governmental agencies and the Allied Reparations Commission, the International Labor Organization, and the U.S. Mission to the United Nations.

In 1933 Lubin assumed the position of U.S. commissioner of the Bureau of Labor Statistics. He took part in drafting the National Industrial Recovery Act. He served as labor consultant on the Federal Emergency Administration of Public Works, advising on wages and projects (1933–39). A member of the President’s Economic Security Committee (1934), he helped create the unemployment insurance section of the Social Security Act. He was also instrumental in getting the Fair Labor Standards Act passed in Congress in 1938. In 1940, President Franklin D. Roosevelt appointed Lubin deputy director of the labor division of the Office of Production Management. In 1941, he became FDR’s economic assistant, in which capacity “his favorite economist” assembled and in-
interpreted for the president the statistics on all war programs. From 1946 to 1951 Lubin was president and board chairman of the research organization Confidential Reports, Inc., and from 1950 chairman of the executive committee of the Franklin Delano Roosevelt Foundation.

In 1959–61 Lubin was professor of public affairs at Rutgers University. During the 1960s and 1970s he was a member of the board of directors of the New School for Social Research, consulted for the Twentieth Century Fund, and was consultant to the United Israel Appeal, Inc. (a U.S. body representing the Jewish Agency for Israel), in which capacity he paid frequent visits to Israel. He was also a member of the boards of the Weizmann Institute in Israel and Brandeis University.

Lubin’s publications include The British Coal Dilemma (1927), The British Attack on Unemployment (with A.C.C. Hill, 1934), and Our Stake in World Trade (with F.D. Murden, 1954), all of which reflect his interests in labor economics, economic development, and trade policy.

[Joachim O. Ronall / Ruth Beloff (2nd ed.)]

LUBIN, SIMON JULIUS (1876–1936), U.S. economist, businessman, executive, and public servant. Lubin, who was born in Sacramento, California, entered the Sacramento firm of Weinstock, Lubin & Company after his graduation from Harvard in 1903 and rose to become its president. Lubin drafted the California State Immigration and Housing Law and in 1913 Governor Hiram Johnson named him to head the California State Commission of Immigration and Housing. In that position he strived to improve conditions among migrant farm workers. In 1934 Lubin was appointed to a National Labor Board commission to settle agricultural strife in California’s Imperial Valley. Lubin also was consultant to the California Emergency Relief Administration; founder (1926) and president of the Sacramento Region Citizens Council; and founder (1931) and president of the Pan-American Institute of Reciprocal Trade. Although a Republican, he vigorously supported much of the New Deal.

LUBITSCH, ERNST (1892–1947), film producer and director. Lubitsch was born in Berlin and gained early acting experience in Max Reinhardt’s troupe. From 1913 he played comic parts in the movies, creating the role of “Meyer” or “Moritz” (archetypical Jewish names in Germany), the butt of good-natured low comedy in a series of successful films. Lubitsch progressed from actor to director and from 1914 to 1917 made many slapstick comedies. Having been persuaded to make serious motion pictures, he produced several successful films which brought Pola Negri to the screen. In 1922 he moved to Los Angeles to direct Rosita with Mary Pickford. Many other successes followed, but Lubitsch really made his name with the advent of the “talkies,” and especially with his film The Love Parade (1929), which starred Maurice Chevalier and Jeanette MacDonald. Lubitsch was a master of subtle humor which, when combined with fanciful situations, came to be regarded as the “Lubitsch touch.” His pictures had a zany, implausible quality which appealed to millions of film-goers. His later successes included The Smiling Lieutenant (1931); Trouble in Paradise (1932); The Merry Widow (1934); and Ninotchka (1939), starring Greta Garbo.

[Stewart Kampel]

LUBLIN, city in E. Poland, center of the district of the same name. In the 16th and 17th centuries Lublin was famous for its fairs (see Market Days and *Fairs). Annexed by Austria in 1795, it was incorporated in Russian Poland in 1815. From 1918 to 1939 it was in Poland and from 1939 to 1945 under German occupation; after World War II it was again in Poland.

Jews were first mentioned as transients in Lublin in 1316. The city denied Jews the right to settle there on the basis of its privilege de non tolerandis Judaicis. In 1336 King Casimir got Jews to found a settlement in the vicinity of the castle, afterward known as Podzamcze. In the second half of the 16th century the community was given land for its institutions and for a cemetery. The Jews were allowed to set up movable stalls for shops but not to erect buildings. In 1602 there were 2,000 Jews in Lublin. The population figures did not change greatly until the second half of the 18th century; in 1787 there were 4,321 Jews in the city. Tension with the citizenry continued, largely centered around the right of the Jews to live within the city walls. Jews settled mainly in houses belonging to clergymen and feudal lords, who were outside the jurisdiction of the city council, paying them substantial sums for the privilege. They were very active at the Lublin fairs, engaged in local trade, and some were tailors, furriers, manufacturers of brushes, brewers, and bakers, despite the bitter opposition of the Christian merchants and artisans. The rivalry between the Christian and Jewish tailors ended in 1805 when a united guild was founded. In 1786 King Stanislaus I (Poniowski) ordered the expulsion of the Jews from Lublin. As a result of the intervention of Jewish leaders the expulsion did not take place until 1795, when Lublin was annexed by Austria.

Tensions in the 16th to 18th centuries were aggravated whenever the Polish High Court convened in Lublin, especially when trying a *blood libel case. The court hearings were then followed by attacks on the Jews; some were murdered and their property stolen. If the High Court sentenced the accused Jew to death the execution usually took place on a Saturday...
in front of the Maharashal Shul synagogue, and elders of the kehillah and other Jews had to attend. An execution was often followed by an attack on the Jewish quarter. Like the whole of Jewry in Poland–Lithuania, Lublin Jews suffered greatly during the Chmielnicki uprisings in 1648–49. Another period of hardship followed in the second half of the 18th century with the disintegration of the Polish state.

In spite of hardships, the fairs and yeshivah of Lublin became central in Jewish communal and cultural life in Poland (see *Councils of the Lands). The first known rabbi of Lublin was Jacob b. Joseph *Pollak; *Shalom Shakhna b. Joseph was nominated by the king of Poland in 1541 as rabbi for Lublin and district. Other rabbis were Solomon b. Jehiel *Luria, in office for 15 years; Mordecai b. Abraham *Jaffe; and Meir b. Gedaliah *Lublin, known in halakhic literature as Maharam of Lublin. Lublin communal institutions included a well-organized hevra kadisha and a “preacher's house” which provided visiting preachers with food and lodging. The fortified Maharashal Shul, the most famous synagogue in Lublin, was built in 1567. It burned down in the great fire of 1655 but was later rebuilt.

In the 16th century Lublin had several well-known physicians. At the beginning of the century the king of Poland exempted one, Ezekiel, from various taxes in recognition of his services. Another famous physician of that century was Solomon Luria, author of a medical treatise. Physicians in Lublin in the 17th century were Samuel b. Mattathias, Moses Montalto, and Hayyim Felix Vitalis, who graduated from Padua in 1658 and served as physician to the Polish king. During the 19th century Lublin became an important commercial center through the exploitation of the economic opportunities created by the vast Russian markets. The Jews expanded their wholesale commerce and their industrial establishments. One of the largest cigarette factories was founded by a Jew in 1860 and employed about 100 workers; 95% of the tanning industry was owned by Jews. The increased number of Jewish workers became an important factor in Jewish social life: workers' unions were established in various trades, and the first groups of the Bund emerged at this time. In 1868 there were 2,973 Jews in Lublin, increasing to 8,747 (56% of the total population) in 1875. In 1862, just before the annulment of the prohibition on Jewish residence within the city, they numbered 10,413; by 1897 they had increased to 23,886.

Hasidism played a prominent role in Lublin, mainly through the influence of the local zadikim, such as *Jacob Isaac ha-Ḥozeh (“the seer”) of Lublin, and the Eiger dynasty from the middle of the 19th century. At the same time some of the community rabbis strongly opposed the Hasidim, particularly Azriel Horovitz (late 18th century) and Joshua Heshel Ashkenazi who was nominated in 1852. As the latter was rich and economically independent he led the struggle against Hasidism without any regard for the opinions of the kehillah members. In the 19th century traditional education in the ḥeder and yeshivah continued, although Lublin lost its communal and cultural prominence with the abolition of the Councils of the Lands and the predominance of Ḥasidism. From the second half of the 19th century, the first Jewish schools with instruction in Russian or Polish were founded. In 1897 the first Hebrew school was opened.

In independent Poland there were no substantial changes in the occupational structure of the Jewish community but the percentage of Jews in the population decreased. In 1921 there were 37,337 Jews in the city (34.7% of the population as opposed to 50.9% in 1897). The numbers remained steady; 38,937 in 1931 and 37,830 in 1939 (according to the German census). Many Jewish workers were engaged in the “leather industry; in 1939 the biggest leather factory in the city belonged to a Jew and half the employees were Jews. Consequently the trade union of Jewish leather workers had a membership of above 500. In Lublin, as in the whole of Poland, the Jews suffered from the hatred of the Poles and the anti-Jewish policies adopted by independent Poland between the two world wars. In the 1930s attacks on Lublin Jews were led by students of the Lublin Catholic University, whose rector was the author of antisemitic pamphlets. Antisemitic propaganda was the main topic of the leading Polish newspaper in the city, Głos Lubelski (“Voice of Lublin”).

In spite of this Lublin Jews led an active social and cultural life between the wars. Trade unions were influenced by the Bund and the Left Po’alei Zion. In the middle-class sector the Orthodox *Agudat Israel and the *Folkspartei – both anti-Zionist – were influential. Branches of all the Zionist parties were active. The focus of local political interest until 1936, except in the Bund, was the community organization. In education the traditional ḥeder system was joined by *Beth Jacob schools for girls and by an Orthodox Zionist Yavneh school. The secular Zionist *Tarbut Hebrew school had its first graduates in 1933. Cultural activities included dramatic societies, libraries, orchestras, and a sports organization. A Jewish daily, Lubliner Togblat, was published. The most famous yeshivah of that period in Lublin was the Yeshivah Hakhamei Lublin, founded by Meir *Shapira, rabbi from 1925 to 1933. After the death of Shapira a court of three dayyanim functioned instead of a rabbi.

[Shimshon Leib Kirshenboim]

Hebrew Printing

The wandering printer Hayyim Schwarz (Shahor), his son, and son-in-law went to Lublin around 1547, where they began printing, with periodically renewed privileges (1550, 1559, 1578). Their first productions were liturgical items, notably the mahzor of 1550. With the help of *Eliezer b. Isaac (Ashkenazi) of Prague they brought out a fine Pentateuch in 1557, and a (complete?) Talmud edition (1559–77), partly printed in nearby Konsha Wolowie when the plague broke out in Lublin in 1559. With a fresh outbreak of the plague in 1592, the printers moved temporarily to Bistrowitz. Kalonymus b. Mordecai *Jaffe, who had married Hayyim Schwarz's granddaughter and whose name appears in the Pentateuch mentioned above, took over when Eliezer b. Isaac and his son left for Constantinople around 1573. Kalonymus managed the printing house.
till his death in about 1603, and it was continued (with interruptions) under his descendants to the end of the century and possibly beyond. A fire destroyed the plant and most of the books in 1647, but printing was resumed soon after. A great variety of works – liturgical, homiletical, and rabbinical – were issued there, among them Mordecai Jaffe’s *Levushim* (1591–?), a mishnah (1594–96), the *Talmud* (1611–39), the first editions of Samuel Edels’ *Novellae* (1617), and the *Zohar* (1623–24). Jacob Hirschchenhorn and Moses Schneidermesser opened a Hebrew printing press in 1875 (from 1910 Hirschhenhorn and Streisenberg); Feder and Setzer were active from 1894; and M. Schneidermesser in the 1920s.

**Holocaust Period**

At the beginning of 1941 the Jewish population of Lublin was about 45,000, including some 6,300 refugees. The city was captured by the Germans on Sept. 18, 1939. In the very first days of the occupation, Jews were forcibly evicted from their apartments, physically assaulted, and put on forced labor. Some Jews were taken as hostages, and all the men were ordered to report to Lipowa Square, where they were beaten.

For a while, the Nazis entertained the idea of turning the Lublin district into a Jewish reservation for the concentration of the Jews from the German-occupied parts of Poland and other areas incorporated into the Reich. At the end of 1939 some 5,000 refugees arrived in Lublin, and another 1,300 came in February 1940 (from Stettin). The group from Stettin did not remain in Lublin. In April 1940 the plan of a Jewish reservation was officially discarded; at a later stage, Lublin became one of the centers for the mass extermination of Jews. For a while, the city was the scene of the activities of Odilo *Globocnik*, commander of the police and the S.D. and head of “Aktion Reinhardt” (see *Poland, Holocaust Period*).

The existing Jewish community council remained in office until Jan. 25, 1940, when the Judenrat was appointed. The composition of the Judenrat did not differ greatly from the former community council; it consisted of 24 members, most of them prewar political figures, and was headed by Henryk Bekker, an engineer. The outstanding leader in the Judenrat however, was its deputy chairman, Mark Alten, who later became its chairman, when the Judenrat was reconstituted, on March 31, 1942, and restricted to 12 members. During the first period of its existence, the Judenrat did not confine itself to the execution of Nazi orders (such as the provision of forced labor) but initiated a number of projects designed to alleviate the harsh conditions. Public kitchens were established and provided meals for the local poor and the refugees; the ghetto was divided into a number of units for the purpose of sanitary supervision, each unit run by a doctor and several medical assistants. There were also two hospitals with a total of over 500 beds and a quarantine area in the Maharshal Shul with 300 beds. Hostels were established to house abandoned children, but the Judenrat did not succeed in reestablishing the Jewish school system, and the schooling that was available to the children was carried on as a clandestine operation.

In March 1941 the Nazis ordered a partial evacuation of the Jews in preparation for the official establishment of the ghetto. About 10,000 Jews were driven out to villages and towns in the area in the period March 10–April 30, 1941, and at the end of March the ghetto was created, with a population of about 34,000. On April 24, 1941, exit from the ghetto was restricted.

At the beginning of 1942, when the extermination campaign entered its decisive stage, the Jews of Lublin were among its first victims. Their deportation began on March 16, and in its course 30,000 Jews were despatched to the death camp at *Belzec* or were murdered on the way. The rate of deportation was fixed at 1,500 per day, and attempts by the Jews to hide were of no avail. The remaining 4,000 Jews were taken to Majdan Tatarski, where they lived for a few more months under unbearable conditions. On Sept. 2, 1942, 2,000 Jews were murdered, as were another 1,800 at the end of October. Some 200 survivors were sent to the *Majdanek* death camp. Some Jews, who were skilled craftsmen, were still employed in Lublin, but in May 1943 the workshops were liquidated and the Jewish workers sent to Majdanek. Another 300 were kept in the Lublin Fortress, where they were employed in a few remaining workshops until July 1944, when they too were put to death a few days before the Nazis evacuated the city.

Lublin was also the site of a prisoner of war camp for Jews who had served in the Polish army. The first prisoners arrived in February 1940. Those who came from the area of the General Government were set free, but some 3,000, whose homes were in the Soviet-occupied area or in the districts incorporated into the Reich, remained in detention. The Judenrat tried to extend help to the prisoners, and there was also a public committee which provided the inmates with forged documents in order to enable them to leave the camp. When the Germans stepped up the extermination campaign, there were some attempts to escape from the camp, to which the Germans responded by imposing collective punishment upon the prisoners. Nevertheless, there were continued efforts to obtain arms, and some prisoners succeeded in escaping to the nearby forests, where they joined the partisans; some of the escaped prisoners assumed senior command posts in the partisan units. On Nov. 3, 1943, the last group of prisoners was deported to Majdanek.

[Aharon Weiss]

**Contemporary Period**

On July 24, 1944 the Red Army liberated Lublin. The next day Polish regular army and guerilla units entered the city. A few thousand Jewish soldiers served in those units, and among the guerillas was a Jewish partisan company under Captain Jechiel Grynszpan. Until the liberation of Warsaw in January 1945, Lublin served as the temporary Polish capital. During that time some Jewish cultural and social institutions were established there, among others the Central Committee of Polish Jews. Several thousand Jews, most of whom survived the Holocaust in the Soviet Union, settled in Lublin, but the majority
of them left during the years 1946–50 due to the antisemitic attitude of a great part of the Polish population. A club of the Jewish Cultural Society was still functioning in the city until 1968, when all remaining Lublin Jews left Poland.

[Stefan Krakowski]

LUBLIN, MEIR BEN GEDALIAH (Maharam of Lublin; 1558–1616), Polish talmudist and halakhic authority. His acronym, **MaHarA MaR**, stands for Morenu Ha-Rav Meir, "Our teacher, Rabbi Meir." Meir was apparently born in Lublin. His principal teacher was his father-in-law, Isaac b. David ha-Kohen Shapiro, head of the yeshivah and *dayyan* of Cracow. Meir's eminence in learning was such that he became the head of the yeshivah at Lublin (1582–87) at the age of 24, and before he was 30, he was appointed *dayyan* and head of the yeshivah at Cracow (1587–95). He was rabbi in Lemberg from about 1595 until 1613, when he was appointed rabbi as well as head of the yeshivah at Lublin, where he died. Meir of Lublin was one of the greatest teachers of his generation. Wherever he settled, he established a yeshivah to which numerous pupils flocked from all parts of Poland and beyond. From all over Europe rabbis turned to him with halakhic questions or problems of communal concern, or for advice. He encouraged them by stressing his readiness "to reply to anyone putting a problem to me, for in this I find pleasure" (responsum no. 18).

In the introduction to his responsa, his son Gedaliah states that Meir wrote seven works, which he enumerates (see below). Only two, however, have been published. **Meir Einei Hakhamim** ("Illuminating the Eyes of the Wise") was published by his son Gedaliah (Venice, 1619). Regarded as a most important talmudic work and often republished, it was later printed in all editions of the Talmud. It is a commentary on most of the tractates of the Talmud and mainly centers around the statements of Rashi and the tosafists. In it Meir displays profound acumen, and although he treats the remarks of the tosafists with every respect as embodying the truth and not to be negated, he was nevertheless sometimes critical of them and emended various passages which he maintained had been wrongly inserted by copyists. His commentary, unlike the lengthy lectures he gave to his pupils, is distinguished by its brevity.

The other published work, **Manhir Einei Hakhamim** ("Enlightening the Eyes of the Wise"; *ibid.*, 1618), containing 140 responsa, throws light on the religious, economic, and political life of the Jews of Poland and of other countries (cf. Responsa 13, 15, 40, 56, 81, 86, 118, 128, 137, et al.). These responsa reflect his method, temperament, and qualities. Although he was influenced in his halakhic decisions by French, German, and Polish scholars, he displayed independence and was critical of his predecessors. Despite the importance of the Shulhan Arukh as a supreme halakhic authority, Meir refrained from "building the basis of any ruling upon the implications of its words, since they were not derived from a single source, but were ... compiled from unconnected collections of sayings" (Responsa No. 11). On several questions, particularly in cases involving loss of money or livelihood, he adopted a lenient view (ibid. 50), and he showed concern for the status of women (ibid. 81) and for protecting the rights of widows and orphans (ibid. 109). Insistent that his decisions be accepted, he more than once declared that his opinion was "the clear truth" (ibid. 92, 111, et al.).

Although Meir, like his contemporary, was given to casuistry in his responsa, a thread of clear thought and logic runs through all his statements. His responsa are one of the earliest sources for knowledge of the *Council of the Lands* (ibid. 40, 125) to which he ascribed great importance and in whose meetings he participated on several occasions (ibid. 84, 88).

Meir had hundreds of pupils, the most distinguished of them being Isaiah *Horowitz and Joshua Heschel of Cracow. The five unpublished works mentioned in Gedaliah's introduction are Ma'or ha-Gadol, a commentary on the Arba'ah Turim of Jacob b. Asher; Ma'or ha-Katan, a commentary on Sha'arei Dura; Ner Mitzvah, on the Sefer Mitzvot Gadol (Semag) of Moses of Coucy; Torah Or, a commentary on the Pentateuch; and Or Shivat ha-Yamim. To this day, Meir's works are used to interpret the Talmud and are quoted in the application of the halakhah.

[Shlomo Eidelberg]

LUBLINSKI, SAMUEL (1868–1910), German playwright, literary historian, and philosopher of religion. Born in Johannisburg, East Prussia, Lublinski began work as an apprentice bookseller in Italy. He then started to write for various German journals and eventually devoted himself entirely to literature. His work took him to Berlin, Dresden, and finally to Weimar. Lublinski was at first influenced by Ibsen and the dominant naturalistic movement but he soon veered to the...
neoclassical theories and techniques of Paul Ernst. His plays on historical and mythological themes include Der Imperator (1901), Hannibal (1902), Elisabeth und Essex (1903), Peter von Russland (1906), and Kaiser und Kanzler (1910). He was best known, however, for his critical insight into literary trends and for his work as a philosopher of religion. Lublniški’s views on naturalism and impressionism and his sociological approach to the study of literature appear clearly in Literatur und Gesellschaft im neunzehnten Jahrhundert (4 vols., 1899–1900), Die Bilanz der Moderne (1904), and Der Ausgang der Moderne (1909). His Jewish loyalties are evident in the essay Juedische Charaktere bei Grillparzer, Hebbel, und Otto Ludwig (1899), and in two somewhat unscientific religious works, Die Entstehung des Judentums (1902) and Der urchristliche Erdkreis und sein Mythos (2 vols., 1910). Lublniški was one of the earliest Zionists in Berlin.

LUBNY, a town in Poltava district, Ukraine. Jews settled in Lubny in the first half of the 17th century, under the auspices of the important Vixhnievietski family. Jews defended the town during the Pavliuk uprising (1637–38), and 200 of them were killed during the Chmielnicki massacres of 1648–49. The Jews appeared again in Lubny at the end of the 18th century. From 361 in 1847, their numbers increased to 3,006 (30% of the total population) in 1897. The writer Shalom Aleichem served there as a state rabbi in 1880–82. In the 1881 riots some Jewish homes and stores were robbed. In the beginning of the 20th century there was a talmud torah, a library, and a bank. There was Zionism activity, and after the October 1917 revolution all members of the community council were Zionists. In the 1920s about 100 Jews worked in the tobacco factory, others worked in the flour mills, and 1,200 were artisans. A Yiddish elementary school existed in Lubny. In 1939 the Jewish population numbered 2,833 (10.5% of the total). The Germans occupied Lubny on September 13, 1941. On October 16, 1941, they gathered 4,500 Jews from Lubny and its environs, and murdered them outside of town. The remaining skilled laborers were killed in April–May 1942. The Jewish population numbered about 600 (2%) in 1959 and was estimated at about 250 in 1970. Although there was no organized Jewish religious life, once a year the Jews assembled at the mass grave of the Holocaust martyrs. Most Jews emigrated in the 1990s.

LUBOSCHITZKI, AARON (1874–1942), Hebrew writer, poet, and educator. Born in Poland, he became a member of the Hebrew literary circle in Warsaw at the turn of the century. He served as headmaster of a Hebrew school and established Aviv, an educational publishing house. Later, he taught in Smolensk, Russia, again in Warsaw (where in 1922 he set up the Barkai publishing house), and then in Brest-Litovsk, Volkovysk, and Lodz. After Lodz fell to the Germans during World War II, he was sent to the Warsaw ghetto and was active in clandestine cultural activities until his death at the hands of the Nazis.

Luboshitzki began his literary career at the age of 15, and published articles and poems in most of the Hebrew journals of the time. His first volume of poetry, Pigei Noar, was published in 1894. Among his other works are Pirkei Shirah (originals and translations, 1897), Yosele ha-Mattmid (1899), a story in verse, and Viddai (1899), poems with national themes. He wrote many children’s poems, some of which were very popular, stories and plays for children and adults, and he translated poetry. His textbooks in Jewish history were widely used in Hebrew schools in Poland and elsewhere.

LUBOSCHUTZ, family of musicians. LEA LUBOSHUTZ (1887–1965), violinist, began her career as a concert violinist in Russia. She arrived in the United States in 1925 and gave violin recitals. She later became active mainly as a teacher and from 1927 was a faculty member of the Curtis Institute of Music, Philadelphia. Her son BORIS GOLDOVSKY (1908–2001) was a pianist, opera conductor, lecturer, and radio commentator in the United States. Her brother PIERRE LUBOSHUTZ (1891–1971) formed a piano duo with his wife Genia Nemenoff, and gave concerts in the United States and Europe. A sister of Lea and Pierre, Anna Luboshutz, was a cellist.

LUBRANIEC (Rus. Lyubranets; Yid. Lubrentsk), small town in Bydgoszcz province, central Poland. The Jewish community was founded in the first half of the 17th century. Jewish merchants of Lubraniec had commercial ties with Danzig and Leipzig. The Breit overlord granted Lubraniec Jews a privilege in 1780, permitting them to engage in commerce and crafts. The Jewish population numbered 2,411 in 1765. The stone synagogue was considered one of the oldest buildings in the town. The Jewish community numbered 475 (47% of the total population) in 1808; 1,148 (60%) in 1827; 987 (58%) in 1857; 816 (39%) in 1897; and 834 (38%) in 1921. Between the two world wars the town contained a children’s home of the Central Yiddish School Organization (CYSHO; see *Education). Before the outbreak of World War II there were about 880 Jews in Lubraniec. The Jewish community was liquidated in the spring of 1942, when the Jews were deported to *Chelmno death camp.

LUCCA, B. (originally Luca Bernstein; 1873–1931), Romanian poet and playwright. Luca was born in Rannicul Sarat. He published verses in Jewish periodicals (Hatikua; Lumea evreică; Puntea de fildeș) beginning in 1913. Luca's first verse collection Reflex de suflet (“Reflection of a Soul,” 1915) is a volume of elegies on the death of the author's child. Another volume, Golgota (1918), includes poems written during World War I describing the sufferings endured, in a realist form. Thanks to this volume, Luca came to be considered the first anti-war poet in Romanian literature between the wars. In 1919 he published a volume of anti-war sketches Pacate (“Sins”), and in 1922 another volume of poems Versuri primitive (“Primitive Verses”). In 1919 in Craiova, he edited and published the literary review Zorile. In 1919–22 he wrote a number of plays presented at the National Theater of Craiova, one of them called Omul de prisos (“The Superfluous Man”), and all published in a single volume (1922). Luca died in Bucharest.

**LUCAN** (Marcus Annaeus Lucanus; 39–65 C.E.), Roman epic poet, the nephew of *Seneca the Younger. In his Bellum Civile (ii, 592–3) he, like Varro, *Tacitus, and others, describes the Jews as devoted to the rites of an unseen (or indefinite) God (incertus deus). Elsewhere, he mentions the military help sent by Idumeans to Pompey.

[Jacob Petroff / Shimon Gibson (2nd ed.)]

LUCCA, city in N. Italy. It was probably in the ninth century that the *Kalonymus family settled in Lucca and founded a talmudic academy there. In the year 917 members of the family moved to Mainz, thereby establishing talmudic studies in the Rhinelan. In 1145 Abraham *Ibn Ezra wrote some of his works in Lucca. When *Benjamin of Tudela visited the city about 20 years later, he found some 40 Jewish families. Around 1431–32 Angelo di Gaio (= Mordecai b. Isaac) of Forlì opened a loanbank at Lucca; later the poet David b. Joab of Tivoli settled there. When the opinion of Savonarola was asked, he stated that while Jews should not be invited in order to lend money, they should be fined. Since they did not pay, they were expelled. Around the middle of the 16th century a few Jews returned but after 1572 they were not allowed to stay for more than 15 days at a time. This restriction was set aside in individual cases from 1738. Since then, however, no more than a handful of Jews have lived in Lucca.

LUCCA, PAULINE (1841–1908), singer. Born in Vienna, she was the daughter of Koppelman Lucka, who had been baptized in 1834. In 1861 Giacomo *Meyerbeer recommended her for permanent engagement at the Berlin Opera, where she remained until 1872, also undertaking guest appearances. After 1872 she toured in the United States and from 1874 to 1889 was an honorary member of the Vienna opera. She created the role of Selina in Meyerbeer's L'Africaine, and was considered the best Carmen of her time. A *prima donna assoluta in the grand tradition, she had a voice range of 2½ octaves.

**LUCENA,** town in Andalusia, in S. Spain, S. of Córdoba; important Jewish community in the 11th century. During the period of Muslim rule Lucena was famous as “the entirely Jewish city,” and a tradition states that it was founded by Jews. Several prominent families, including that of the historian Abraham *Ibn Daud, claimed that their settlement in Lucena dated from the time of Nebuchadnezzar. Isaac *Abrabanel linked the derivation of the name of the town with the biblical town of Luz. Until the 12th century Lucena was a cultural center of Andalusian Jewry. In 853 Natronai Gaon wrote “that Alisana of Luz. Until the 12th century Lucena was a cultural center of Andalusian Jewry. In 853 Natronai Gaon wrote “that Alisana of Luz. LUCENEC

LUCENEC (Slovak Lučenec; Hung. Losonc), town in S. Slovakia, until 1992 Czechoslovak Republic, since then Slovak Republic. The first appearance of Jews in the area was at the end of the 18th century. Under the patronage of Hungarian nobleman Žilaszy, they settled in the Lučenec suburb of Tábor. The community was established in 1808 or 1814. The majority of the Jews lived on the Szilassy estate in Tábor. Soon Jews could also be seen in Lučenec proper. In 1845, there were 45 Jewish families living in Tábor. In 1825 they established a hevra kaddisha, and in 1830 Rabbi Moses Hoegyes began to officiate. Since there was no synagogue, prayers were held in a private home. The first local Jews were rather poor and could hardly support a congregation. Moreover, the lives of the community members were constantly marred by frequent quarrels. Only a threat by local authorities to put the community under gentle supervision established some order. It was formally incorporated in 1852.

The proclamation of the Magyar Commonwealth in 1867 was followed by an exodus of Jews. This was provoked by a harassed situation, a lack of employment, and antisemitic laws. In 1870 the community numbered 150. In 1880 no Jews were officially registered in Lučenec. In 1910 they numbered 2,135. The second Czechoslovak census (1930) recorded 2,278 Jews. In 1941 there were 2,103 Jews living in Lučenec.

The invasion of the Magyar Polshevics in the spring of 1919 caused disturbances, but there are no reports of anti-Jewish riots such as there were in many other parts of Slovakia.

During the war, Lučenec Jews participated in political activities. Some supported Magyar nationalist parties; only when these parties displayed open antisemitism did the Jews leave. Zionist organizations were active, and a large proportion of the local Jews identified itself as Jewish by nationality. The Jewish party clashed with Jewish Magyar assimilationists.

In November 1938 Lučenec, together with the rest of south Slovakia, was annexed by the Hungarian kingdom, and the anti-Jewish laws of that state were applied immediately to local Jewry. In 1941 Jewish men aged 18 to 45 were recruited for forced labor in the Hungarian army; many died in service. In March 1944, the German army occupied Hungary and immediately started to persecute the Jews, in cooperation with Magyar Fascists. At the beginning of June 1944, the Jews of Lučenec were ghettoized; on June 16 they were sent to Auschwitz, where most perished.

Some 80 Jews returned from the deportation; they organized a new community and reinstituted Jewish life. In 1945, the Joint Distribution Committee organized a kosher kitchen for the returned survivors. In 1947 there were 271 Jews in Lučenec. In 1948 the Neolog synagogue was reestablished. During 1948–1949, most of the Jews emigrated, a larger proportion to Israel. Nevertheless, Lučenec remained one of the few active congregations in Slovakia, and a minyan was kept until the Velvet Revolution of 1989. The cemetery was cleaned up and the Neolog synagogue rebuilt. In the 1990s there were 50 Jews. The local community was still active in 2005.

[Meir Lamed / Yeshayahu Jelinek (2nd ed.)]
LUCERNE (Ger. Luzern), city in the canton of the same name, central Switzerland. Jews were first mentioned in Lucerne in 1252, when the terms of their protection were defined. During the 14th century, a fine was prescribed for anyone perpetrating a blood libel against the Jews without previously notifying the council. A regulation of 1310 deals with the sale of meat from animals slaughtered by Jews. The Jews, who were authorized to possess real estate, were principally engaged in moneylending. During the massacres following the *Black Death (1348–49) the community came to an end; the town was compelled to indemnify the duke of Austria for the losses he had thus incurred. In 1381, there were once more Jews living in Lucerne. A few Jewish physicians practiced there during the 15th and 16th centuries. In the mid-17th century, Jewish livestock merchants again appeared at the local markets. Some Jews, mainly from Alsace and *Endingen/Lengnau, visited markets in the canton Lucerne in the 18th and 19th centuries, though not without arousing a certain degree of opposition.

The local community was founded in 1866, but never developed to any considerable extent. In 1912, a synagogue was erected in the style of the Orthodox synagogue of Frankfurt/Friedberger Anlage. The leading family was the Erlangers, immigrating from South-Baden Gailingen. Abraham Erlanger became Orthodox and gave the community its special imprint already in the 1920s. In 1936 the oratory was devastated by Swiss Fascists. From 1938 there was a small Lithuanian-type *yeshivah ketanah in Lucerne moving later to nearby Kriens. For some years a *Beth Jacob seminary for teaching Orthodox girls existed. The community became more Orthodox (*haredi) in the 1980s, so that some of its members left and joined communities in Zurich. In the Lucerne canton 399 persons declared themselves as Jewish in 2000; 200 were members of the community (2004).

[Lucian of Samosata (c. 120–c. 180), greatest Greek satirist, whose mother tongue was probably Aramaic. In a satiric essay, *Alexander the False Prophet* (13), Lucian tells how a charlatan Alexander of Abonoteichus (in Asia Minor) pronounced some meaningless words, which, he says, could be either Hebrew or Phoenician, thus dazzling his audience in his native city, who had not understood what he was saying except that he was somehow involved in the cult of the gods Apollo and Asclepius. In a mock-tragedy, *Podagra* (line 173), he speaks of a fool who allows himself to be taken in by the spells of a Jew.  

[Louis Harry Feldman]

LUCKMAN, SIDNEY (Sid; 1916–1998), U.S. football quarterback, one of the pioneers who revolutionized the game in the 1940s as the first of the T-formation quarterbacks; member of the College and Pro Football halls of fame. Luckman was born in Brooklyn, N.Y., the child of German-Jewish immigrants, and grew up in Flatbush near Prospect Park, where he learned how to throw a football. After graduating as an All-City halfback from Erasmus Hall High School, Luckman played at Columbia University from 1936 to 1938, and was named AP All-America third team, Grantland Rice All-America honorable mention, and AP All-East first team in 1937. The next year he finished third in balloting for the Heisman Trophy. In 24 collegiate games, Luckman amassed 180 pass completions in 376 attempts (.479), for 2,413 yards passing and 20 touchdowns. Luckman then played quarterback, halfback, and defensive back in the NFL for the Chicago Bears from 1939 to 1950, leading the team to five Western Conference championships and four World Championships between 1940 and 1946. Luckman's greatness and importance to the game was his unparalleled understanding and grasp of the complex T-formation, which brought football into the modern age.

In the 1940 championship game, Luckman and the Bears beat the Washington Redskins 73–0 in one of the most lopsided scores in history. Luckman had his best season in 1943, when he threw a record 28 touchdowns in 10 games – a mark that stood until 1959 – and gained league MVP honors. On November 14 that season, Luckman had his greatest single game on "Sid Luckman Day" at the Polo Grounds against the New York Giants, when he threw a record seven touchdowns and a record 443 yards in the 56–7 trouncing, the first quarterback to surpass 400 yards in a game. In the 1943 title game he threw for 286 yards and five touchdowns in a 41–21 victory over the Redskins. He retired following the 1950 season, completing 904 of 1,744 passes (51.8 percent) for 14,686 yards (8.42 yards per pass) and 137 touchdowns in 128 career NFL games. He also punted 230 times for a 38.4-yard average, rushed for two touchdowns, and returned 14 interceptions for 293 yards and one touchdown. His TD pass percentage of 7.9 is the best ever, and his 8.42-yard-per-attempt mark is the second best. Luckman led the league in touchdown passes in 1943, 1945, and 1946, in yards per attempt in 1939, 1940, 1941, and 1943, and in passing yards in 1943, 1946, and 1947. He was named All-NFL five times (1940–44, 1947). Luckman was elected to the College Football Hall of Fame in 1960 and the Pro Football Hall of Fame in 1965. He wrote *Passing for Touchdowns* (1948) and *Luckman at Quarterback: Football as a Sport and a Career* (1949).  

[Elli Wohlgelehrter (2nd ed.)]  

LUCUAS (early second century C.E.), Jewish “king” and leader of the Jewish rising in Cyrene (115–117 C.E.). The sources are divided as to the name of the Jewish leader; whereas Eusebius (Historia Ecclesiastica 4:2) refers to the Jewish king Lucuas, Dip Cassius (68:32) calls him Andreas. It has been suggested, therefore, that the “king” had a double name: Λουκούας ὸ καὶ
Avdréaç. Mention of a Jewish “king” perhaps signifies the messianic overtones of the Jewish revolt in Egypt and Cyrene. One of the “Acts of the Alexandrine Martyrs” describes a dispute between a Greek and Jewish embassy before the Roman emperor Hadrian, and from its contents it is apparent that the subject under debate is connected with the Jewish revolt in Alexandria. A certain king of the stage and mime is mentioned as being brought forth by the Alexandrians to be mocked by the Roman prefect. Tcherikover, in analyzing the papyrus, points out that although it is possible that the “king” described is Lucuas, “he certainly would have been a prisoner in the hands of the Romans, and not of the Alexandrians” as is implied in the text. Furthermore, it is difficult to ascertain why Hadrian should be angry with the Alexandrians, if the object of their mockery was “the Jewish king” responsible for the uprising.

---

**LUDO, ISAC IACOVITZ** (1894–?), Romanian author, journalist, and translator. Ludo began his literary career in his native Jassy, but soon moved to Bucharest, where he contributed to the Jewish review *Lumea evreic* and to leading Romanian periodicals. When the Jewish daily *Mântuirea* was founded in Bucharest in 1919, Ludo joined the staff and became one of its chief contributors. He also directed the Zionist daily *Șiștri* and the periodical *Palestina ilustrată*, later editing the Jewish weekly *Adam*. A prominent figure in Romanian Jewish life, Ludo played a leading part in the fight against antisemitism, and in all his writings bitterly attacked both Jewish assimilationists and opponents of the Jews. He spent the two years before World War II in France.

Most of Ludo’s works are concerned with Jewish problems. *Doi mari poeți – Heinrich Heine și A.C. Cuza* (“Two Great Poets – Heinrich Heine and A.C. Cuza,” 1934), first published in *Adam*, mordantly satirizes the Romanian antisemitic leader Cuza, who fancied himself as a poet and claimed that the Jews were incapable of artistic creativity. In *Jurnal unei obsesi* (“Around an Obsession,” 1936), a lengthy analysis of Cuza’s and the Nazis’ anti-Jewish claims, he dealt incidentally with the scurrilous portrayal of Romanian Jews in Ionel Teodoreanu’s popular novel *La Medeleni* (1926). Ludo also wrote several more books about the Nazis and Fascists, such as *Hitler salvează echilibrul istoric* (“Hitler Preserves the Balance of History”), *Nae lonescu apără pe Evrei impotriva țidanilor* (“Ionescu Defends the Hebrews against the Jews”), and *De la Rasputin la Hitler* (“From Rasputin to Hitler”). After World War II, he continued to write polemical works against the pre-Communist regime, the old political parties, and the defunct Romanian dynasty. He also published Romanian translations of Jewish classics, such as *An-Ski’s Dyubuk* (1927), *Zangwill’s King of the Schnorrers* (1934), and many short stories by *Sha-lom Aleichem.

---

**LUDOMIR, MAID OF** (1806–1887?), popular title of Hannah Rochel Werbermacher, the only woman in the history of Hasidism to function as a rebbe or charismatic leader in her own right. Although unusual in her following, some of Werbermacher’s activities had predecessors in traditional Jewish female roles, including the *firzogern* or *zogerke* (prayer leader), *klogmutter* (professional mourner), and *vaybersher opshprecherke* (traditional healer). Born in the Volhynian town of Ludomir (Russian, Vladimir Volinsky), Werbermacher exhibited extreme piety and a talent for learning as a child. At 12, Hannah Rochel experienced the traumatic death of her mother and one day fell into a coma at her mother’s grave. After hopes for her recovery had been abandoned, the girl suddenly awoke and announced that the heavenly court had granted her a new and higher soul. From this point on, Hannah refused to marry and became known as the Maid of Ludomir (Yiddish, *Ludomirer Moid*); she began to wear a tallit and tefillin and to perform healings. The Maid’s father, a wealthy merchant named Monesh, died when she was 19, leaving her a sufficiently large inheritance to support herself without a husband or community aid. She built her own *štibl* (small prayer house) and held gatherings like a hasidic rebbe. In addition to teaching Torah and leading prayers in Ludomir, the Maid also traveled to other *štetlakh* (towns), where she delivered homilies to groups of women. The Maid attracted a circle of followers, primarily women and working class men, known as the “Maid of Ludomir’s Hasidim.” She also attracted opponents, who accused her of being possessed by a dybbuk (malevolent spirit). Eventually, Mordechai of Chernobyl, the most powerful *zaddik* in the region, was asked to intervene. He convinced the Maid to marry; her new husband, however, awed by her holiness, could not consummate the marriage and the couple soon divorced. Subsequently, the Maid appears to have lost much of her influence in Ludomir and may have suffered a crisis of confidence. Around 1860, she immigrated to Eretz Israel, where she reestablished herself as a holy woman, first in the Old City of Jerusalem and then in Meah She’arim. Here, too, the Maid attracted a following of hasidic women and men, as well as Sephardi and possibly some Muslim Arab women, and led gatherings at the Western Wall, the Tomb of Rachel, and her own *besmedresh* (study house). After her death, her grave on the Mount of Olives became a site of devotion. While the original tombstone was apparently destroyed under Jordanian rule, in 2004 a new tombstone was erected on her possible gravesite and people began to pray at the location. Over the years, the Maid’s story has been retold in plays, novels, stories, a play within a novel (Isaac *Bashevis Singer’s Shosha*), as well as several radio dramas starring Mollie *Picon*.

---

[Abraham Feller]
LUDVIPOL, ABRAHAM (1865–1921), Hebrew journalist. Born in Novograd-Volynsk, he was active in the *Hibbat Zion movement in Odessa. In 1890 he sailed for Erez Israel but was not permitted to land. After a sojourn in Alexandria he went to Paris, where he studied and began his career as a journalist, writing in Hebrew for Ha-Melitz, as well as in French and Yiddish for other papers. His reputation as a leading Hebrew journalist grew during the Dreyfus affair. When the daily *Ha-Zofeh was founded in 1903 he was invited to take up the post of editor. In 1907 he settled in Erez Israel to establish a Hebrew daily of Hovevei Zion, but the project fell through. He was active in public affairs in Tel Aviv, and when the daily *Haaretz appeared at the end of World War I, he became a member of its editorial staff.

[Getzel Kressel]

LUDWIG (Cohn), EMIL (1881–1948), German biographer and author. The son of Hermann *Cohn, a famous ophthalmologist, Ludwig was born in Breslau. After 1907 he spent most of his life in Switzerland. He began his literary career as a playwright and novelist, but became internationally popular through his colorful biographies, which were translated into many languages. His vast output included Goethe (3 vols., 1920), Napoleon (1925), Bismarck (1921), Wilhelm II (1926), Lincoln (1930), Michelangelo (1930), Hindenburg (1935), Cleopatra (1937), Roosevelt (1938), Simon Bolivar (1939), and Stalin (1945). He also wrote shorter essays on Rembrandt, Beethoven, and Balzac, and character studies of three eminent German Jews, Sigmund *Freud, Ferdinand *Lassalle, and Walther *Rathenau. Like Lytton Strachey in England, Stefan Zweig in Germany, and André Maurois in France, Ludwig regarded biography as a work of art. He did not pretend to compete with the scholars on whose research he based his presentation of historical figures and his personal views often cast doubt on the objective truth of his writing. Nevertheless, he always showed keen insight into the personalities of his subjects and into the historical and social conditions in which they lived, and his work was distinguished by a dynamic literary style. Among Ludwig’s other books were one on Jesus, Der Menschensohn (1928), Drei Diktatoren (1939), and a study of the abdication of King Edward VIII (1939). He also wrote some geographical books, including Der Nil (1935, The Nile, 1936), and Am Mittelmeer (1923, On Mediterranean Shores, 1929). Ludwig was baptized in 1902, but 20 years later, after the assassination of Walter Rathenau, he publicly renounced Christianity. During his American exile he became one of the most decided enemies of the Third Reich, publishing several critical works, such as How to Treat the Germans (1943) and The Moral Conquest of Germany (1945).

[Sol Liptzin]

LUDWIG, REUBEN (1895–1926), Yiddish poet. Born in Lipowitz, Ukraine, Ludwig immigrated to New York in 1910. Suffering from tuberculosis, he moved in his twenties to the drier areas of the American Southwest, while making a meteoric appearance among the *In-Zikh group of Yiddish poets. His poems appeared in the major Yiddish periodicals, emphasizing the imminence of death, expressing sadness and hopelessness while longing for joy and glorious adventure. His Gezamlte Lider (“Collected Poems,” 1927) include songs of the Rockies and of the American Southwest, then still undiscovered by Yiddish poets. He sympathized with and wrote about various minorities, including Indians, Mexicans, Chinese, and African-Americans.

[Sol Liptzin / Marc Miller (2nd ed.)]

LUDZA (Rus. Lyutsin), town in Latgale district, Latvia. A Jewish community probably existed in the 16th century and fled before Ivan the Terrible’s soldiers in 1577. A substantial community appeared in the end of the 17th century, and in 1802 there were 582 Jews in the town and district. The Jewish population numbered 2,299 in 1847; 2,803 (54% of the total) in 1897; 2,050 (40.6%) in 1920; 1,654 (30.4%) in 1930; and 1,518 (27.4%) in 1935. In the second half of the 19th century Jews lived from trade in lumber, grain, flax, and other farm products. Sixty families went to southern Ukraine to settle there in the Jewish agricultural colonies. About 40% of the town’s tailors were Jews. The community suffered greatly during and after World War I. The Jewish population also decreased because many Jews there moved to Riga, the capital of Latvia, and other larger population centers, or emigrated. Most of the Jews in Ludza were occupied as shopkeepers or artisans. Jews owned 191 of the 302 larger trade premises. A big fire in 1938 destroyed 95% of Jewish stores and houses. Most of the children studied in a Hebrew public school.

Ludza was famous for its rabbis and scholars. The best known were those of the Zioni family, and later the Don Yahya family, related by marriage. David Zioni officiated as rabbi from 1806 to 1808; he was succeeded by his son Naphali (1808–56), who was followed by Aaron Zelig (1856–76), author of the responsa Zioni (1875). A prominent member of the Zioni family was Itzele Lutziner, author of Olat Yizhak (1–2, 1885–97), who served as rabbi in *Rezekne. Eliezer b. Shabbetai Don Yahya, author of responsa on the Shulhan Arukh, Even Shetiyyah (1893), was a disciple and son-in-law of...
Aaron Zelig Zioni and his successor in the rabbinate of Ludza (1870–1926). Eliezer's son, Ben Zion, was the son-in-law of Isaac Zioni, and for 26 years officiated as rabbi in Vilaci; after the death of his father he succeeded him in the rabbinate in Ludza (1926–41). Ben Zion, who perished in the Holocaust, was the author of halakhic books and historical articles. Because of the high standard of Jewish learning the community was known as the "Jerusalem of Latvia."

HoLoCaust Pe rioD
Ludza was occupied by the Germans on July 3, 1941. A ghetto was founded on July 20, and murders, looting, rape, and forced labor began. On August 17, 1941, about 800 Jews were murdered at Lake Zorba outside of town. The few hundred that remained were killed in small actions, the last in May 1942. About 100 Jews returned after the war, but soon most of them left for Israel.

[Lshmuel Spector (2nd ed.)]

LUEBECK, Baltic port in Germany. An imperial city and capital of the Hanseatic League, Luebeck did not permit Jews to reside within its gates, although in the 17th century Jewish peddlers were common and their presence highly resented. In 1680 the city, in need of competent money changers, permitted two Schutzjuden to live there; in 1701 their number was restricted to one. Jewish peddlers, dealers in old clothes and secondhand goods, settled in the nearby village of Moisling, and in 1697 received permission to establish a recognized Jewish community. The attempts of the Luebeck authorities to restrict their activities met with little success. From 12 families in 1709 the settlement in Moisling had grown to 70 by the end of the century. In 1724 a rabbi was engaged and a cemetery opened; the community was under the jurisdiction of the Altona rabbinate. Although Moisling was annexed to Luebeck in 1824 they were forced to leave the city proper, returning to Moisling, where they built a new synagogue (1827) and opened a school (1837). Emancipation granted during the 1848 Revolution gave the Jews the right to settle in Luebeck, where a synagogue was opened in 1850; a new one was consecrated in 1880. The last five rabbis who served in Luebeck and Moisling were Ephraim Fischel Joel (1825–51), his son-in-law Alexander Adler (1850–69), his son-in-law Solomon Carlebach (1870–1919), who wrote a history of the Jewish community, succeeded by his son Joseph Carlebach (1920–22), and David A. Winter (1922–38). The Jewish population in the city rose from 522 in 1857 to 700 in 1913, but after the advent of the Nazis, declined to 250 in 1937. The last 85 Jews were deported to Riga in 1941–42. After the war a new community was established, which numbered 350 in 1948; by 1952 only 30 remained.

[Jacob Rothschild]

In 1960 the Juedische Gemeinschaft Holstein was founded as a federation of the few remaining Jews in the federal state of Schleswig-Holstein, including Luebeck. The number of members continued to decline, with the Gemeinschaft being dissolved in 1968 and the Jewish community of Hamburg taking responsibility for Jewish life in Luebeck. In 1994 and 1995 two arson attacks on the synagogue were carried out. In 2005 an independent Jewish community with more than 600 members was founded. Almost all the members were immigrants from the former Soviet Union.

[Larissa Daemmig (2nd ed.)]

"LUEGER, KARL" (1844–1910), leader of the antisemitic *Christian Social Party in Austria. Born in Vienna into a lower-middle-class family, he qualified as a lawyer. He began his political career with the left wing of the Progressive Party and was elected as its candidate to the city council in 1875. There he associated with Jewish members, among them Ignaz Mandl, a Jewish lawyer who remained his friend and political adviser even after Lueger had ousted him from the Democrats in 1889. In 1884 he sponsored the Democrats' electoral demand for "equality of all faiths." Elected to the parliament in 1885, he cooperated with the political antisemite Georg von *Schoenerer but denied being himself an antisemite. A year later he berated the Liberal majority in the city council for refusing to deliver a congratulatory address to Adolf *Fischhof on the occasion of his 70th birthday. In spite of this, Lueger made a violently antisemitic speech in 1887 in support of Schoenerer's bill against Jewish immigration from Russia and Romania. After allying himself with Karl von *Vogelsang, in 1893 he united the different Christian factions into the Christian Social Party, which he led until his death. Lueger was extremely popular with the lower middle classes, largely because of his folksy and vulgar speeches uniting popular economic and religious antisemitic prejudices. He succeeded in forging a party which channeled social discontent, depicting capitalism and Marxism alike as products of the Jewish mind and fusing these new themes with the centuries-old hatred of the Jews stemming from Church doctrine. In 1897 *Francis Joseph 1 confirmed Lueger as mayor of Vienna after he had refused to do so on three previous occasions. In this office, which he held until his death, he effected many social reforms. His administration pursued discriminatory practices against Jews, mainly through not employing them in the city services and limiting their numbers in high school and the university. Nevertheless he was in the habit of doing petty favors for poor Jews,
even appearing in a synagogue wearing the mayoral chain. In his administration he employed, besides Mandl (who was baptized at the age of 72), the partly Jewish vice mayor Julius Porzer and the renegade Max Anton Loew. He accepted invitations to Jewish homes and is reported to have said: “Wer ein Jude ist, bestimme ich” (“It is up to me to decide who is a Jew”). A collection of Lueger’s papers, translated and edited by R.S. Geehr, was titled after this notorious phrase: “I Decide Who Is a Jew!” (1982).

Lueger’s antisemitism was opportunistic rather than racist, but he had a profound influence on the young Adolf Hitler in his formative years, and established on a firm footing the Viennese antisemitic tradition.

LUGANSK (1935–58, Voroshilovgrad), capital of the Lugansk district, Ukraine. The town was founded at the end of the 18th century and Jews started to settle there, numbering in 1897 1,505 (7.5% of the population). Three Jewish schools were opened in 1910. From 1908 to 1916 the position of “kaz-yomni ravvin” (“government-appointed rabi”) of Lugansk was held by the Hebrew writer J.B. Lerner. There he published two newspapers for Jewish children, one in Hebrew (Perahim) and another in Russian. During World War I many refugees arrived in Lugansk, and were aided by the community. In 1926 there were 7,132 Jews (c. 10%), increasing to 10,622 (5% of the total). In the 1920s many Jews were unemployed, mostly among the ex-bourgeoisie, but in the 1930s they began to work on the railroad and in industry. The city was occupied by the Germans on July 17, 1942. Most of the Jews were evacuated or fled. Of the remaining 1,038, the majority were murdered at Ivanitcher Yar on November 1, 1942, and January 21, 1943, together with Jews from other localities, all together 1,986 persons. There were 5,500 Jews (2.5%) in the city in 1959. Most remaining Jews emigrated in the 1990s.

[Avi Hyman and Brenda Cappe (2nd ed.)]

LUGA (1510, 1553, and 1591). Jacob, son of Leffmann Behrends (the Hanover *Court Jew), was allowed to settle there in 1680; a number of *Judenstrasse in 1288 indicates that Jews were living there earlier. They maintained a synagogue and mikveh in the 14th century. The Jews dealt in moneylending and were under the protection of the dukes of Lauenburg. In 1350, during the “Black Death, the Jews were massacred, only a few managing to escape despite the feeble attempt of the duke to protect them. The houses of the Jews were subsequently sold by the duke to the very burg-
fined in ghettos, located in the center of the city. In 1703 this number had been reduced to 54 families, among whom the "Finzi, the "Senigallia, and the "Del Vecchio were prominent. The Del Vecchio and later the "Fano families produced several eminent rabbis, more than would be expected from so small a community, though by 1797 it had grown to 648 members. They were mostly involved in market of textile, silver, and second-hand products. In 1796 the French authorities granted emancipation to the Jews, but during the reaction following the temporary withdrawal of the French troops the ghetto was plundered three times. In 1802 the Jews in the city numbered 470. When papal rule was restored in 1814, the old interdictions again came into force and became even harsher under Pope *Leo XII, with the result that several families left Lugo. In 1853, 396 Jews were there. Later they followed the drift to the larger cities. Twenty-six Jews were murdered in Lugo during the Holocaust period. In April 1945 the town was liberated by the Jewish Brigade. In 1969 there was only one Jewish family in Lugo.

LUKÁCS, GEORG (1885–1971), Hungarian philosopher, literary critic, and socialist. Born in Budapest into a family of movement, Jews had begun to leave Luka; there were 446 in 1891, 1,878 in 1910, 1,774 in 1924 (8.9% of the total population). During World War I, 173 members of the community served in the Hungarian army. Both an Orthodox rabbi and a Reform preacher served in the town. Even before the 1848 Revolution allowed them freedom of movement, Jews had begun to leave Luka; there were 446 in 1869, but by 1930 there was no community leadership. Between 1941 and 1942, the period of the Romanian Fascist regime, some of the Jewish men were conscripted for forced labor, and many Jews lost all their belongings. The Jewish population numbered 1,043 in 1942. A number of Jewish youngsters accused of Communist activities were deported to Transnistria by the Antonescu regime. After World War II the Jewish population increased, as Jewish refugees from the surrounding districts and northern Bukovina settled there (1,620 in 1947). The number of Jews declined from the 1950s through immigration to Israel. By 1970 only 220 were left.

[Yehouda Marton / Paul Schveiger (2nd ed.)]

LUIDOR, JOSEPH (d. 1921), Hebrew writer. Born in Galicia, Luidor settled in Erez Israel as a youth, working as an agricultural laborer in various places, including Rehovot and Ein-Hai (Kefar Malal). He was especially close to J.H. *Brenner, and, along with Brenner, was murdered by Arabs in 1921 in Jaffa. His body was never found. Luidor’s stories, published in Ha-Zefirah, Ha-Shiloah, Ha-Toren, and Ha-Po’el ha-Za’ir, were among the first writings to deal with the workers of the Second *Aliyah. He also wrote literary reviews. A collection of stories (Sipurim) was published in 1976, with an introduction by Dow Landau.

[Getzel Kressel]

LUKA (Ger. Luck), small town in W. Bohemia, Czech Republic. According to tradition, Jews from Bavaria founded the town in the 11th century, and they are mentioned in local records for 1198. Luka Jews had to supply a chalice for King *Přemysl Ottokar II (1253–78) when he visited the pope. A Jewish “place of worship” is mentioned in 1432. During the Thirty Years’ War (1618–48) the community was almost decimated by the plague. Luka Jews, like those of Hrozneta (Lichtenstadt), did business in nearby *Carsbad. The synagogue and community records were destroyed in a fire in 1842. In 1850, 1,150 Jews lived in Luka (80% of the total population). In the 19th century Feibul (Phillipp) Kohn was mayor of Luka for 28 years. Both an Orthodox rabbi and a Reform preacher served in the town. Even before the 1848 Revolution allowed them freedom of movement, Jews had begun to leave Luka; there were 446 in 1869, but by 1910 there was no minyan. On Nov. 10, 1938, the synagogue was burned down. Gravestones in the Jewish cemetery were sold by the Nazis to a stonemason.

LUKÁCS, GEORG (György; 1885–1971), Hungarian philosopher, literary critic, and socialist. Born in Budapesto into a fami-
ily of bankers, Lukács first attracted public attention through his collection of essays on art and philosophy entitled Die Seele und die Formen (1911) and he founded a new theater in Budapest for the production of modern plays. He left Judaism at this period. During World War I, Lukács championed the cause of the proletariat and joined the Communist Party in 1918. When the communist regime of Bela *Kun came to power in 1919 Lukács was made commissar for education. In this post he established a national council for culture to impose communist ideas on Hungarian literature and culture. After the collapse of the Kun regime Lukács fled to Vienna where he wrote Geschichte und Klassenbewusstsein (1923; History and Class Consciousness, 1971), a controversial volume of essays reinterpreting cultural values from a Marxist viewpoint which criticized Communism as it had developed in Russia. His biography, Lenin (1924), restored him to favor as an orthodox Marxist. In 1933, when Hitler came to power in Germany, Lukács fled to Russia where he edited several communist journals including Internationale Literatur and the Hungarian literary journal Uj Hang ("New Voice").

Lukács returned to Hungary after World War II and was elected a member of Parliament. He was made president of the Academy of Sciences and professor of aesthetics and cultural philosophy at the University of Budapest. His unorthodox views led to frequent clashes with the Hungarian Communist Party and after the abortive rising in 1956, he was forced to hide in the Yugoslav embassy. He was restored to favor in the following year and was the recipient of many tributes and honors on his 80th birthday in 1965.

A prolific writer, Lukács was well known for his Marxist interpretations of literature. He was much influenced, however, by the humanist concept of Socialism as preached by the Jewish socialist, Moses *Hess. His writings, especially his autobiography Mein Weg zu Marx (1933), reflected his opposition to the militant revolution of the orthodox Marxists and advocated humanitarian Socialism based on respect for the individual. His study of Hess, Moses Hess und das Problem der idealistischen Dialektik, was published in 1926.

[Sol Liptzin]

LUKAS, PAUL (1887–1971), U.S. actor, born in Budapest. After nine years at the Comedy Theater, Lukas went to the U.S. in 1927 and became prominent in films and plays. The high point of his career was his portrayal of Kurt Mueller, a German refugee, in Watch on the Rhine, on the Broadway stage in 1941 and on the screen in 1943. For his film performance, Lukas won a Best Actor Oscar, a Golden Globe, and a New York Film Critics Award. He also appeared on Broadway in A Doll's House (1957), Call Me Madam (1950), Flight Into Egypt (1952), and The Wayward Saint (1955).

His more than 90 films include Little Women (1933), Dodsworth (1936), The Lady Vanishes (1938), Confessions of a Nazi Spy (1939), Address Unknown (1944), Deadline at Dawn (1946), Berlin Express (1948), 20,000 Leagues under the Sea (1954), Four Horsemen of the Apocalypse (1922), and Lord Jim (1965).

[Lukow (Pol. Luków; Rus. Lukov), town in the province of Lublin, E. Poland. By the 15th century there was considerable Jewish settlement in Lukow with a developed autonomous organization. A responsum (no. 59) of R. Meir b. Gedaliah *Lublin (1558–1616) mentions the synagogue of Lukow, which was destroyed by fire. Joel *Sirkes (the Bah) served as rabbi of the community at the end of the 16th or the beginning of the 17th century. At the time of the Chmielnicki massacres (1648–49) the community suffered heavy material losses and the new synagogue was burned down. In 1659 the Jews of Lukow were granted a royal privilege which confirmed their former rights to live in the town, to acquire land and houses, and to engage in commerce and crafts; they were also authorized to erect a synagogue and maintain a cemetery. In 1727 a poll tax of 120 zlotys was imposed on the community. With the progress of economic activities in the town during the second half of the 18th century the Jewish population considerably increased. In the middle of the 18th century a dispute broke out between the communities of Lukow and Miedzyrzec Podlaski over the question of their authority over the small neighboring communities. According to the census of 1765, there were 543 Jews (137 families) there. During the 1780s the rabbi of the community was Samson Zelig b. Jacob Joseph ha-Levi, the author of Teshu'ot Hen (Dubno, 1797).

After the Congress of Vienna (1815), Lukow passed to Russia, being in Congress Poland. The Jewish population numbered 2,023 (c. 60% of the total population) in 1827, 2,114 (c. 68%) in 1857, and 4,799 (c. 55%) in 1897. In this period many of the Jews were Hasidim and followers of the zaddikim of Kotsk, Aleksandrow, Radzyn, and Gur. Between 1906 and 1920 the zaddik Hershele Morgenztern, the great-grandson of R. Menahem Mendel of *Kotsk, lived in Lukow. The Jewish population increased to 6,145 (49% of the total) by 1921; there were then 348 Jewish workshops in Lukow. Of the 24 members of the municipal council, ten were Jews (five being delegates of the *Bund). Between the two world wars the Jews of Lukow struggled against antisemitism, and an anti-Jewish economic boycott was organized. The last rabbi of the town (from 1937) was Aaron Note Freiberg, who perished with the members of his community in a death camp.

[Arthur Cygielman]

Holocaust Period
About 6,000 Jews lived in Lukow at the outbreak of World War II. In May 1942 over 2,000 Jews from Slovakia were deported to the town. In October 1942 they were sent, together with over 2,000 Jews from Lukow, to the *Treblinka death camp and exterminated. At the beginning of December 1942
a closed ghetto for the remaining Jews in Lukow was established. On May 2, 1943, the ghetto was liquidated by extermination of its inmates.

[Stefan Krakowski]

**LULAV** (Heb. לולא, “a shoot” or “a young branch of a tree”), a term applied in the Mishnah to all trees, e.g., “the lulavim of the terebinth, the pistachio, and the thorn” (Shev. 7:5) and to the vine (Or. 1:7). Its use, however, was particularly confined to the “palm branch, one of the components of the *Four Species* (Arba’ah Minim; cf. Mish., Suk. 3 and 4). Its use in Jewish ritual is on the Feast of Sukkot.

**LUMBROSO,** Italian–Tunisian family of scholars, diplomats, leaders, and rabbis of Castilian origin. **JACOB AND RAPHAEL,** sons of **DANIEL LUMBROSO,** intervened on behalf of their community in 1686, after a heavy tax had been imposed upon it by the bey. They were the leaders of the *Gornim community* (of Leghorn origin) in *Tunis.*

**ISAAC BEN JACOB** (d. 1752) was one of the most brilliant representatives of Tunisian Jewry. He promoted talmudic studies and was largely responsible for the numerous rabbis of eminence who lived in 18th-century Tunis. During his period of office as chief rabbi, the split between the Tuansa (native Tunisian Jews) and Gornim occurred (1710). He attempted to find a compromise solution to the difficulties which arose between the two groups. For a long time he acted as the bey’s tax collector; the bey also appointed him *qidʾid* (= leader) of the Jews. Wealthy and generous, he gave his financial support to many students. His principal work, entitled Zeraʾ Yizḥak (“Seed of Isaac,” 1768), was published in Tunis after his death. It is a voluminous didactic commentary on several parts of the Talmud and also contains funeral eulogies delivered by the author, as well as some scholarly notes on several passages in the Bible. The second part of the book Benei Joseph by Joseph *Tanuji,* consisting of notes on several tractates of the Talmud and seven responsa by Isaac Lumbroso, which were found by the editor with Lumbroso’s Zeraʾ Yizḥak had been printed, is also entitled Zeraʾ Yizḥak. To this day, Isaac is widely renowned among Jews of Tunisian origin as having been a scholar and a mystic.

**ISAAC VITA** (1793–1871), who was born in Tunis, was known especially for his philanthropy. For several decades he was the undisputed leader of the Leghorn Jews in Tunis and president of the “Portuguese” congregation. He was also a dayyan.

His son **ABRAM BEN ISAAC VITA** (1813–1887), who was also born in Tunis, was appointed personal physician of the bey and minister of health in the Tunisian government. He established learned societies, and under the patronage of his sovereign he propagated Western culture in Tunisia. He was also a philanthropist. He wrote several authoritative scientific studies in the field of medicine. The king of Italy granted him the title of baron. His brother GIACOMO was one of the most prominent merchants of Marseilles, where until 1881 he was the exclusive representative of Tunisia for the whole of France, with the rank of consul general. **DAVID** (1817–1880), who was born in Tunis, was an important financier and diplomat. He played a prominent role in Tunisian politics. **ACHILLE** (1858–1914), who was born in Mahdia, was a shipowner in Gabès, where he represented Italy. He was known especially as a poet and author.

[David Corcos]

Abraham’s son, GIACOMO LUMBROSO (1844–1925), was a classical historian and archaeologist. Born in Tunis, he taught at the universities of Palermo, Pisa, and Rome, and was elected to the famous Accademia dei Lincei. A specialist in the Hellenistic civilization of Egypt, he was widely recognized as an expert in the ancillary disciplines of papyrology and epigraphy. His major published works were *Recherches sur l’économie politique de l’Egypte sous les Lagides* (1870) and *L’Egitto al tempo dei Greci e dei Romani* (1882, 1895). He also compiled a glossary in ten folio volumes, *Testi e commenti concernenti l’antica Alessandria.* After his death, publication of this work was begun under the auspices of the Italian journal *Aegyptus* (serie scientifica, vol. 4), but only a small part was printed (1934, 1936) before wartime priorities ended the project.

His son was **ALBERTO EMMANUELE LUMBROSO** (1872–1942), Italian historian, who was born in Turin, and like his father, turned from law to history. He specialized in the Napoleonic period, on which he wrote numerous articles and books. His first major work was a Napoleonic bibliography (1894–96) that was followed by a study of the continental system, *Napoleone I. e l’Inghilterra* (1897) and *Napoleone II* (2 vols., 1902–05). In 1903 he became director of the *Revue Napoléonienne* (published in Paris). In 1904, after the National Library in Turin suffered a disastrous fire, Lumbroso donated his personal library as the core of a new collection. In 1916–18 he was Italian military attaché to Greece. In his *Le origini economiche e diplomatiche della guerra mondiale* (2 vols., 1926–28), he argued that World War I represented a triumph of Anglo-Saxon imperialism. His *Bibliografia ragionata della guerra delle nazioni* was published in 1920.

[Frank D. Grande]

**LUMET, SIDNEY** (1924– ), U.S. theatrical and film director. Born in Philadelphia, Lumet, the son of actor Baruch Lumet and dancer Eugenia Wermus Lumet, was a child actor at the Yiddish Art Theater. He appeared on Broadway in 1937 and
later directed off-Broadway shows. Between 1937 and 1948 he performed in such Broadway productions as Dead End; The Eternal Road; Schoolhouse on the Lot; Morning Star; Journey to Jerusalem; and Seeds in the Wind. In 1947 he founded an off-Broadway group of actors that consisted of former members of Lee Strasberg’s Actors Studio, including Yul Brynner and Eli Wallach, who had become dissatisfied with Strasberg’s concepts. On Broadway, Lumet directed Night of the Auk (1956); Caligula (1960); and Nowhere to Go but Up (1962).

Lumet joined the Columbia Broadcasting System in 1950 and gained a reputation as a director of live television dramas. He directed such TV series as Studio One (1948); Danger (1950); Crime Photographer (1951); and You Are There (1953), as well as the musical Mr. Broadway (1957); All the King’s Men (1958); the miniseries The Sacco-Vanzetti Story (1960); and Rashomon and The Iceman Cometh (1960).

On the screen, the first film that Lumet directed was Twelve Angry Men (Oscar nomination for Best Director, 1957). In 1959 he directed Tennessee Williams’ The Fugitive Kind, and in 1962 Eugene O’Neill’s Long Day’s Journey into Night and Arthur Miller’s A View from the Bridge. His later movies, most of which were shot in New York City, include Fail-Safe (1964), The Pawnbroker (1965), The Hill (1965), The Group (1966), Bye Bye Braverman (1968), Funny Girl (1968), The Appointment (1970), The Anderson Tapes (1971), Serpico (1973), Murder on the Orient Express (1974), Dog Day Afternoon (Oscar nomination for Best Director, 1975), Network (Oscar nomination for Best Director, 1976), Equus (1977), Prince of the City (which he co-wrote; Oscar nomination for Best Screenplay, 1981), Deathtrap (1982), The Verdict (Oscar nomination for Best Director, 1982), Family Business (1989), A Stranger among Us (1992), Guilty as Sin (1993), Night Falls on Manhattan (which he also wrote, 1997), and Gloria (1999).

Among his numerous awards and nominations, Lumet was presented with a Lifetime Achievement Award by the Directors Guild of America in 1993; won the Joseph L. Mankiewicz Excellence in Filmmaking Award at the Director’s View Film Festival in 2004; and received the Honorary Academy Award of Merit in 2005. Lumet’s book, Making Movies, was published in 1995.

LUMINA (“The Light”), Jewish Social Democratic group in Romania in the 1890s. Its founders were M.*Wechsler, L. *Gelerter, L. Geller, M. Haimovitz – later well known in the “Arbeter Ring” (“Workmen’s Circle”) in the United States – and R. Schwartz. Lumina originated in *Jassy in 1893 as an opposition group to the leadership of the Romanian Social Democratic Party. It rejected the latter’s tendency to closer cooperation with the liberal bourgeois party, which was the main factor in antisemitism in the country, and also demanded a clear stand on the “Jewish problem.” The circle developed into a solely Jewish body which in 1895 emerged as an independent group. It published the periodical Lumina (1895–97) in Romanian and Der Veker (“Awakener”) in Yiddish. Previously (December 12, 1887–January 9, 1888), another pioneer journal of Romanian Jewish socialism had been published under the same title, edited by Stefan Stanca. The society criticized the Social Democratic Party for contenting itself with a demand for general voting rights for all citizens while the Jews were still regarded as “aliens without rights.” Lumina considered that one of its functions was to organize the Jewish workers for an independent struggle for political and civic rights, on the assumption that the “liberation of a nation is impossible if it is dormant and frozen.” The society, which also had contact with Jewish Social Democrats in Russia, favored the principle of organizing special unions for workers of differing nationalities to function in cooperation. The Jassy group had connections with similar groups in other places in Moldavia (northern Romania). It sent a memorandum (in German) to the congress of the Socialist International in London in 1896, in which it set out its principles and requested a discussion of the problem of the Jews in Romania. The memorandum also explained that the Jewish proletariat and bourgeoisie, though in opposition from the class aspect, had a common interest in obtaining civil and political rights. Lumina had reservations on Zionism and religious attitudes, but Veker claimed that a man “who is unable to raise himself to love and sacrifice for his own people, can certainly not be such an idealist as to sacrifice himself for strangers.”

[Moshe Mishkinsky]

LUNCZ, ABRAHAM MOSES (1854–1918), author, publisher, and editor of geographical works on Erez Israel. Luncz emigrated in 1869 from Kovno, where he was born, to Jerusalem, and was accepted as a pupil in the Ez Hayyim yeshivah. The director, R. Moses Nehemiah Kahana, was in favor of secular education and the use of Hebrew as a spoken language. Because of this, Luncz was able to continue his secular studies and his reading of Haskalah books. The head of the Jerusalem maskilim at that time was Israel Dov *Frumkin; Luncz began to associate with him and took part in the founding of the Maskilim Circle and the Moses Montefiore Library (1873–74). In 1873 he began to write in Frumkin’s Ha-Havazelet, and like the latter, he criticized the methods of the *halukkah and its administrators. However, he did not always oppose the traditional community. When H. *Graetz attacked the Jerusalem community after his visit of 1873, during which he was insulted by religious fanatics, Luncz defended it in 1874 in his Ivrî Anokhi (“I am a Hebrew”). After having already written several geographical articles, Luncz published in 1876 a guide.
LUNEL, town in Hérault department, S. France, home of a medieval Jewish community renowned for its scholars. According to local tradition, the town was founded by inhabitants of Jericho who arrived there after the conquest of their native city. Tourist brochures also claim that this community was outstanding for its medical studies and that its physicians carried out the first surgical operation in Europe. The nearby remains of the synagogue seem to have greater historical validity. The earliest historical evidence on the Jewish community of Lunel is recorded by *Benjamin of Tudela (1159). The community had probably been founded some time before, because by then it numbered at least 500 persons (or perhaps 300 families). Scant information on the Jewish community appears in non-Jewish sources. Toward the close of the 12th century, a Jew of Lunel, David ha-Kohen, son of Solomon, granted a loan to Agnète, wife of Guilmel viii, lord of Montpellier. On the other hand, in 1393 the lord of Lunel sold part of the incomes from his barony to a Jew of Montpellier named Thauros. The existence of a cemetery is attested in documents dating from the end of the 13th century. On the eve of the expulsion in 1306, six Jews from Lunel were arrested and imprisoned in the Châtelet of Paris. The community must have been reconstituted after the return of the Jews to France in 1315 for, on Aug. 22, 1319, King Philip v the Tall ordered proceedings against the Jews of Lunel who, during Lent, had supposedly insulted the cross. A considerable amount is known about the Jewish scholars of Lunel. Benjamin of Tudela praised them for their erudition, piety, and generosity, not only toward the students who came to study at the yeshivah but also to every Jew in distress. *Meshullam b. Jacob was rosh yeshivah and a well-known halakhic authority. Of his five sons, the best known were Jacob, a commentator; *Aaron b. Meshullam of Lunel, impassioned defender of the philosophy of Maimonides; and *Asher b. Meshullam ha-Kohen of Lunel, a mystic and a brilliant talmudist. Meshullam b. Jacob's son-in-law, Moses b. Judah of Béziers, was living in Lunel at the time of Benjamin of Tudela's visit, as was Judah b. Saul ibn "Tibbon, who settled there after persecution forced him to leave Granada. Many scholars, such as Zerahiah b. Isaac ha-Levi *Gerondi and "Abraham b. David of Posquières, stayed in Lunel for varying periods of time. Others more intimately connected with the town included "Abraham b. Nathan ha-Yarhi (second half of the 12th century); the talmudist *Jonathan b. David ha-Kohen of Lunel; Manoah, commentator on Maimonides' Mishneh Torah; and Abba Mari b. Moses, also known as *Astruc of Lunel, a halakhic authority and vigorous opponent of science and philosophy. His main supporters were Isaac b. Avigdor, Simeon b. Joseph of Lunel, and Meir b. Isaiah; and his staunchest adversary was Solomon b. Isaac of Lunel, referred to as Nasi, who lived in Montpellier. Meshullam b. Machir, also known as Don Bonet Crescas of Lunel (d. 1306), is the last scholar known to have been a native of the town. Throughout the 14th and 15th centuries, however, there were several scholars who bore the name "de Lunel" or "Ha-Yarhi," especially in Provence. The name was later found among families in Comtat Venaissin and the author Armand *Lunel belonged to one of these.

[Bernhard Blumenkranz]

LUNEL, ARMAND (1892–1977), French novelist. The descendent of an old Provençal Jewish family, Lunel was born in Aix-en-Provence. After studying law, he later taught philosophy in Monaco. Writing in his spare time, he made his name with his sensitive and imaginative portrayals of Provence and its colorful inhabitants, both Jews and non-Jews. Lunel’s major works include L’Imagerie du Cordier (1924); Nicolo-Peccavi, ou l’Affaire Dreyfus à Carpentras (1926); Noire et grise (1930); Le Balai de sorcière (1935); Jérusalem à Carpentras (1937), a collection of short stories; La Maison de la femme peinte (1946); Les Amandes d’Aix (1949); and La Belle à la fontaine (1959).

Lunel wrote librettos for his childhood friend, the composer Darius Milhaud, notably the text of Esther de Carpentras (1926), on which Milhaud later based his opéra-bouffe, Barba Garibo (1950), and the oratorio David (1954), which was performed for the 3,000th anniversary of Jerusalem. “Esther,” inspired by an old Provençal Purim play, evokes the humor and drama of Jewish life in Carpentras during the Middle Ages. Lunel also initiated a series of books on the French provinces, to which he himself contributed Jai Vu Vivre La Provence (1962). Lunel was awarded the Gobert History Prize of the French Academy for his The Jews of Languedoc Provence and The French States of the Pope (1975) and the 1976 French Grand Prix for Literature.

LUNEL, JACOB DE (18th century), Provençal poet. In 1737 he was one of the scholars of Carpentras who approved the publication of the prayers for Rosh Ha-Shanah and the Day of Atonement according to the local rite. He revised and enlarged a Purim play by Mardochée Astruc written in Provençal, which he published in 1774 (new edition by E. Sabatier, 1877). Some of his liturgical poems appear in the Seder ha-Kunteres (Mahzor Avignon). He also composed a Hebrew ode on the occasion of Louis xV’s escape from assassination in 1757; this poem was recited with musical accompaniment in the synagogue of Avignon.

LUNÉVILLE, town in the Meurthe-et-Moselle department, N.E. France. Several Jews were mentioned in Lunéville in 1470–72, just before the expulsion from the duchy of Lorraine. From 1702 Lunéville was the seat of the ducal court of Lorraine; Samuel Lévy took charge of the court’s commercial interests in 1705. Two Jewish families were authorized to live in the town by an edict of 1753; there were 16 families residing there when the synagogue was constructed in 1785. A cemetery was not consecrated until 1791. The community numbered 315 persons in 1808 and 400 in 1855; from 1870 it was augmented by a number of manufacturers from Alsace. Among the Hebrew printing presses established in France in the latter part of the 18th century and early in the 19th was one belonging to Abraham Brisach, who produced in Lunéville a maḥzor with Judeo-German translation in 1797 and a Likkutei Zevi in 1798. A hospital, established in 1857, was in use until 1944. Alfred Lévy, later chief rabbi of France and a native of Lunéville, was rabbi there from 1869 to 1880. During World War I the incumbent minister, S. Weill, and several other Jews were among the civilians slaughtered at Lunéville (1914); 18 other Jews from Lunéville fell in battle in this war and six in World War II. One hundred and ninety-four Jews (including the patients in the hospital and 65 refugees) were deported from Lunéville during the German occupation; only nine survived. In 1969 there were about 200 Jews in Lunéville, half of them from North Africa.

LUNGE, GEORG (1839–1923), German industrial chemist. Born in Breslau, Lunge started his own chemical factory in 1862. He went to England (1865) and worked in the coal tar and soda industries. He was a professor at the Zurich Polytechnic (1876–1907) and wrote Handbuch der Sodaindustrie (2 vols., 1879); Industrie der Steinkohlentheer-Destillation und Ammoniakwasser Bearbeitung (2 vols., 1882); Taschenbuch fuer die anorganisch-chemische Grossindustrie (1908, 19214), with E. Berl); he edited (also with E. Berl) the Chemisch-technische Untersuchungsmethoden (4 vols., 1899; Technical Methods of Chemical Analysis, 6 vols., 1908, 1924); and Technical Gas Analysis (1914).

LUNIETZ (Ilintskey), GEDALIAH BEN ISSAC OF (d. 1785), hasidic preacher and zaddik in Ukraine, son of a dayyan in Polonnoy. An ardent preacher who stirred his listeners, Gedaliah was one of the sources of hasidic legend. His mentors in Ḥasidism were Dov Baer the Maggid of Mezhirech and Jacob Joseph of Polonnoye. Gedaliah was the most outstanding disciple of Aryeh Leib of Polonnoye. He served as rabbi in Ostropol, Miropol, and Ilintsy. His Teshvüt Hen (Berdichev, 1816) includes sermons, some of them on the importance and holiness of Erez Israel, expressing a profound sense of the bitterness of exile and anticipation of redemption.

LUNTS, LEV NATAVONICH (1901–1924), Russian playwright and literary theorist. Lunts was born into a well-educated St. Petersburg family which immigrated to Germany after the 1917 Revolution. He himself, however, remained in Russia for a time, suffered from malnutrition, and died in
Hamburg at the age of 23. Lunts was a founder and spokesman of the important young writers’ group in Petrograd known as the Serapion Brothers and named after a hero in one of the novels of E.T.A. Hoffmann, the 18th-century German romantic. The group’s aims were to free art from political pressures and to win tolerance for artistic dissent. In his articles Lunts argued that Russian literature was unduly tendentious and uniformly realistic, and recommended that it emulate Western models. His play Vne zakona (“Outside the Law,” 1923) is set in Spain and its central theme is that power corrupts. It was translated into many languages and became part of the repertoire of several Western European theaters. The Soviet authorities saw in his plays criticism of the regime and forbade performing them in the Soviet theaters. Two of his stories, “V pustyne” (“In the Desert,” 1922) and “Rodina” (“Homeland,” 1923), deal with ancient Jewish historical events.

[Yitzhak Maor]

LURIA (Lourie, Lurje, Loria, Lurja), well-known family traceable to the 14th century. The Luria family spread throughout Germany, Bohemia, Eastern Europe, Italy, and Oriental countries. The name perhaps derives from Luria, a small town near *Bassano in the Vicenza region of Italy, but this is by no means certain. All who bear this name did not necessarily belong to one family, and there is certainly no connection between this family and the Luria family (who were Levites) to which Isaac *Luria (the Ari) belonged. The main Luria family is descended from *Rashi and legend extends its descent to the tanna *Johanan ha-Sandelar. The source of the family history is the genealogical document compiled by Johanan b. Aaron Luria (see later) which *Joseph b. Gershom of Rosheim received from the author and incorporated in his Sefer ha-Mikhnah. Solomon b. Aaron b. Jehiel, Johanan’s grandson, sent a copy to his relative, Solomon *Luria (Maharshal), who made an addition to the copy detailing his connection with Jehiel, brother of the author of the document. This copy is important for determining the link between the German and Polish branches. The document passed to Solomon Luria’s descendants from generation to generation, each successive member adding his own name. One copy was published, after 300 years, in Ha-Maggid (vol. 1 (1857), 178) by Moses Eliezer *Beilinson, himself a member of the Luria family. This copy, which completed the German branch, was published in Solomon Luria’s responsa (Fuertbr, 1767; Lemberg, 1859).

The founder of the family was SOLOMON SPIRA (a son-in-law of Mattathias Treves; see *Treves family). It is related of his daughter MIRIAM (1350 – the second generation) that she taught halakkah from behind a curtain in the yeshivah. Nothing is known of Samson of Erfurt (third generation), Jehiel (fourth), and Nethanel (fourth) but their names, but Nethanel’s son, AARON LURIA (1450), was known and honored as a rabbinical authority. He was one of the opponents of the convention of rabbis called by Seligman Oppenheim in Bingen in 1456 and his responsa on the subject was printed in the responsa of R. Moses *Mintz (no. 63) along with the views of other opponents. A number of the responsa (16, 19, 23, and 24) of Mintz and Israel *Bruna (nos. 259–61) are addressed to him. JOHANAN (late 15th–early 16th centuries), who compiled the genealogical table, was Aaron’s son. He was given the right to establish a yeshivah in *Strasbourg or *Colmar. Losing all his wealth in the Burgundian wars of 1475, he passed the last years of his life in *Worms. He is the author of Meshivat Nefesh, a homiletical and kabbalistic commentary on the Pentateuch (Mss. Bodleian, nos. 257–8) with an appendix, Teshuvat ha-Minim u-Shelar Inyanim, which is a defense of Judaism against Christian criticism. His didactic ethical poem Hadrakah has been published a number of times. His grandson SOLOMON (d. before 1583) compiled the second version of the Luria family tree for Solomon Luria. His only son, JOSHUA MOSES (d. 1591), who was responsible for the third version, served as rabbi in Worms. He is referred to in the customal of Worms (Mss. Breslau Seminary lxxvii, 133) and in other works. His son AARON (d. 1613) was a dayyan in the bet din of Isaiah *Horowitz in Frankfurt. After him, unbroken knowledge of the German branch of the family ceases, but the family history does not come to an end then. Joseph of Rosheim was related to the head of the family, Solomon Spira, and his grandson, Elijah b. Moses *Loanz (1564–1636), was also the maternal grandson of Johanan Luria.

The name Luria is found in Prague until the end of the 16th century and still later, but the connection between this branch and the German one cannot be established. It is doubtful if the kabbalist Jehiel *Luria of Safed (late 16th–early 17th centuries) belonged to this family. Some identify him with Jehiel Ashkenazi *Luria, author of the Heikhal ha-Shem (Venice, 1601). The founder of the Russian-Polish branch was JEHIEL LURIA, brother of Johanan (above). Around 1470 he left Germany and died in Bassat, Lithuania, where he had apparently served as rabbi. His great-grandson was Solomon Luria (the Maharshash). JACOB MOSES BEN ABRAHAM HELIN ASHKENAZI, a grandson of the Maharshash, compiled a commentary, Yedel Moshe, on the Midrash Rabah (Frankfurt on the Oder, 1705). SOLOMON LURIA (early 17th century), “the physician of Lublin,” was a cousin of the Maharshash. Jehiel *Heilprin, author of Seder ha-Dorot, was the eighth generation from the Maharshash, and Abraham *Gombiner, author of Magen Avraham, the sixth generation. David b. Judah Judel *Luria (Radal) was the tenth generation. His nephew, David b. Jacob Aaron *Luria (1800–1873), devoted himself to improving Jewish education in Minsk.

In the 19th century, when the Jews of Russia were compelled to adopt surnames, many chose the name Luria without having any connection with the family. It is unclear what connection, if any, there is between bearers of the name Luria in Italy and the Luria family, and it is possible that the genealogical tree of this branch, transmitted by Z. *Margolioth in his Malalot ha-Yuḥasin (1900), 61–65, is a 17th-century forg-
ery intended to connect the Italian family with the more renowned one.

In 2004, Neil Rosenstein published a complete Luria family genealogy. He traces the family back to the *tanna* Hillel, and from him back to King David. He presents numerous interlocking genealogical tables, many of which connect the Luria family to the leading rabbinic sages of the past 500 years.

**LURIA, ALEXANDER ROMANOYICH** (1902–1977), Soviet psychologist. Luria was born in Kazan to a well-known physician. He graduated from the universities of Kazan (1921) and the 1st Medical Institute of Moscow (1937). In 1949 Luria was appointed professor in the department of psychology at the Moscow State University, a full member of the Academy of Pedagogical Sciences in 1947, and director of the Laboratory of Experimental Psychology and Restoration of Higher Cortical Functions, U.S.S.R. Academy of Medical Sciences, Moscow. He was one of the founders of neuropsychology. The most frequently translated Soviet psychologist, Luria was familiar to psychologists the world over having acted as the program chairman of the 18th International Congress of Psychology, held in Moscow in 1966. He had wide professional interests which included brain mechanisms of mental operations (neuropsychology), with special reference to disturbances associated with brain lesions, the role of speech in mental development and control of child behavior, and mental retardation. He was a prolific writer and his books include Sovremennaya psikhologiya v ego osnovnykh napravleniyakh ("Basic Trends in Modern Psychology," 1928); Rech i intellekt derevenskogo, gorodskogo i besprizornogo rebyonka ("Speech and Intellect of Country, City, and Homeless Children," 1930); The Nature of Human Conflicts … (1932); Rech i razvitie psikhicheskikh protsessov u rebyonka (with F. Ya. Yudovich, 1956); Speech and the Development of Mental Processes in the Child, 1959); The Mentally Retarded Child (ed. and coauthor, 1961); Higher Cortical Functions in Man (1966); and The Mind of a Memonist (1968). Luria was a foreign member of the American National Academy and a member of many foreign research institutes in America and Europe.

**LURIA, DAVID BEN JACOB AARON** (1800–1873), educationalist; a pioneer of Haskalah in Russia. He was born in Minsk in a wealthy family. Influenced by the program of Max *Lilienthal, Luria concentrated on reform of the educational system of the community of Minsk. In 1843 he transferred the talmud torah of Minsk to new premises, provided its pupils with clothing, introduced European methods of study and order into the institution, engaged new teachers, and added secular studies and the Russian language to the traditional curriculum. The success of the institution encouraged the establishment in 1845 of a school for the children of “house owners” under the name of “Midrash Ezrajim” (“School for Citizens”) which was attended by about 100 children. At the end of 1846 the Russian authorities, who were about to open a government school for Jews of the town, closed Luria’s educational institutions. He continued to spread the ideas of the Haskalah in Minsk, and his house was regarded by Orthodox circles as a “meeting place for heretics.” He contributed to the periodicals *Ha-Maggid* and *Kokhavim* and published a collection of commentaries to verses of the Bible, and other essays, in the spirit of the Haskalah, Omer ba-Sadeh (Vilna, 1853).

**LURIA, DAVID BEN JUDAH** (1798–1855), Lithuanian rabbi and scholar. Luria was born in Bykhow, Mogilev region. He studied under Saul *Katzenellenbogen in Vilna, but in 1815 returned to his native town, where he remained for the rest of his life and where he founded a yeshivah. A false accusation that grew out of a family quarrel in Bykhow, supported by letters forged in his name attacking the czarist government, led to his imprisonment in the fortress of Schlusselburg, from which he was released when the forgeries came to light (1837/38). Luria was active in communal affairs and together with Isaac *Volozhyner met with Sir Moses *Montefiore when the latter visited Vilna in 1846 to investigate the condition of the Jews in Russia. Luria corresponded with I.B. *Levinsohn, encouraging the translation of his book, Zerubavel, as a useful weapon against the calumnious attacks on the Talmud by antisemites and the maskilim. In one of his responses to the rabbis of Mantua, he vehemently attacked the reformists for their attempts to delete from the liturgy the prayers for the coming of the Messiah and the future redemption (Responsa, Ra-Dal (1898) 21c–d).

Luria was regarded as one of the Torah leaders of his generation, particularly after the death of his spiritual mentor, *Elijah b. Solomon (Gaon of Vilna). His literary works embrace almost all the books of the Oral Law. They are chiefly textual glosses, notes, source references, and expositions of the sayings of the talmudic scholars, reflecting extraordinary knowledge of Torah together with a feeling for scientific criticism and an understanding of the plain meaning reminiscent of the methods followed by the Gaon of Vilna.

Of his works the following are particularly worthy of note: his commentary to the Mishnah (Vilna, 1886–90); his notes to most of the Talmud, and his glosses to the Midrash Rabbah, which were published in the large Vilna (Rom) editions; his commentaries to the Midrash Samuel Rabbati (1852); to the Pesikta Rabbati de Rav Kahana (1893); to the Pirkei de-Rabbi Eliezer (1852) with an extensive and detailed introduction; Kökhevei-Or (1877), notes to Sefer *Yuhasin* and to Seder ha-Dorot; Kadmut Sefer ha-Zohar (1856), notes to the Zohar,
aimed at proving that its author was indeed Simeon b. Yohai; notes to the *Shelhitot of Ahai Gaon (1861); Nefesh David (appended to the Yahal Or (1882) of the Vilna Gaon), expositions of the Zohar and the Zohar Hadash; a commentary on the Book of Esther (1887); and several responsa (1898). Luria also arranged for the publication of several works of the Vilna Gaon, adding to them his own notes: Toellet Eliyahu (1856) on the aggadot to Bava Kamma, the glosses of the Gaon on the Jerusalem Talmud; order of Zera'im, and Luria's own glosses on the order Moped (1858). He also wrote notes on Aliyyot Eliyahu (1882), Joshua H. *Lewin's book on the Gaon.

**BIBLIOGRAPHY:** S. Luria, in: D. Luria, Kadmut Sefer ha-Zohar (1887; repr. 1951), 2–16; I.B. Levinsohn, Be'er Yizhak (1890), 163–5; H.N. Maggid-Steinschneider, Ir Vilna (1900), 157–9; S. Ginsburg, Ketavim Historiyyim (1944), 28–39.

**LURIA, ISAAC BEN SOLOMON** (1534–1572), kabbalist, referred to as Ha-Ari ("לְאָרִי"); the [sacred] lion" from the initials of Ha-Aliyot Rabbi Yizhak, "the divine Rabbi"). This cognomen was in use by the end of the 16th century, apparently at first in kabbalistic circles in Italy, but Luria's contemporaries in *Safed refer to him as R. Isaac Ashkenazi (וֹפֶנְנָו), R. Isaac Ashkenazi Luria (יָפַנְנָו), also as De Luria. His father, a member of the Ashkenazi family of Luria from Germany or Poland, emigrated to Jerusalem and apparently there married into the Sephardic Frances family. As he died while Isaac was a child, his widow took the boy to *Egypt, where he was brought up in the home of her brother Mordecai Frances, a wealthy tax-farmer. Traditions concerning Luria's youth, his stay in Egypt, and his introduction to kabbalah are shrouded in legend, and the true facts are difficult to distinguish. Contradicting the widely accepted belief that he went to Egypt at the age of seven is his own testimony recalling a kabbalistic tradition which he learned in Jerusalem from a Polish kabbalast, Kalonymus (see *Sha'ar ha-Pesukim, para. Be-Ha'alotekha)

In Egypt, Luria studied under *David b. Solomon ibn Abi Zimra and his successor, Bezalel *Ashkenazi. Luria collaborated with the latter in writing halakhic works such as the Shitah Mekubbezot on tractate Zevahim, which according to Hayyim Joseph David *Azulai was burned in Izmir in 1735. Their annotations of some of Isaac *Alfas'i works were printed in Tummat Yesharim (Venice, 1622). M. Benayahu has conjectured that commentaries on passages in tractate Hullin and other talmudic tractates, extant in a manuscript written in Egypt not later than 1655 in the academy of a hakham named Mohariel, derive from notes made by pupils of Luria's yeshivah in Egypt. However, this is doubtful since the manuscript mentions Sefer Pesukim, a collection of halakhic decisions by the same author, and there is no evidence to indicate that Luria was the author of such a book, certainly not before he was 20 years old. It is certain, however, that Luria was familiar with rabbinical literature and was believed to be outstanding in the non-mystical study of the law. As well as religious study, he also engaged in commerce while in Egypt, as attested by documents in the Cairo *Genizah. A document relating to his business in pepper dating from 1559 had been published by E.J. Worman (REJ, 57 (1909), 281–2), and a second, relating to grain, by S. Assaf (Mekorot u-Melkarim (1946), 204).

Assaf connects this with Luria's sojourn in Safed, but there is no doubt that it was written in Egypt. The entire document is in Luria's handwriting, the only extant specimen to date. This material supports the evidence of Jedidiah Galante (in Leon Modena's Sefer Ari Nohem, ed. by S. Rosenthal; Leipzig, 1840) that, like many of the Safed scholars, Luria conducted business in the town; three days before his death he made up his accounts with his customers. Many of the scholars of Safed similarly engaged in business activities.

While still in Egypt, Luria began his esoteric studies and retired to a life of seclusion on the island Jazirat al-Rawda on the Nile near Cairo. This island was owned by his uncle, who in the meantime had become his father-in-law. It is far from clear whether this retirement, which is reported to have lasted for seven years, took place in his youth at the beginning of the 1550s or when he was older. Legend antedates it considerably. In 1558, Luria endorsed a halakhic decision jointly with Bezael Ashkenazi and Simeon Castellazzo. In his mystic study, he concentrated on the Zohar and works of the earlier kabbalistics, and, of the works of his contemporaries, made a particular study of Moses *Cordovero. According to evidence dating from the end of the 16th century, it was during this initial period of kabbalistic study that he wrote his single work, a commentary on the Sifra di-Zeni'uta ("Book of Concealment"), a short but important section of the Zohar (published in Vital's Sha'ar Ma'amrei Rashbi). The book gives no hint of the original kabbalistic system that Luria expounded at the end of his life and shows some influence of Cordovero. In Egypt he met Samuel ibn Fodeila, a kabbalist, to whom Luria wrote a lengthy letter on kabbalistic topics. Here he refers to his own book and asks him to examine it in his brother's house, evidently in Egypt. Luria may have made a pilgrimage to Meron before going to Safed, since there are references to his presence at the Lag ba-Omer festival in Meron. In 1569, or perhaps at the beginning of 1570, he settled in Safed with his family and studied Kabbalah with Cordovero for a short time. Some of his glosses on passages of the Zohar were evidently written while Cordovero was still alive and some after his death, since Luria refers to him both as "our teacher whose light may be prolonged" and "my late teacher." On the other hand, he had already begun to impart his original kabbalistic system to a number of disciples in Safed, among them distinguished scholars. After Cordovero's death at the end of 1570, Hayyim *Vital drew particularly close to Luria, becoming his principal and most celebrated disciple.

Luria may have gathered around him in Safed an academy whose members engaged in esoteric and esoteric studies. The names of some 30 of his disciples are known. Vital confirms (in the manuscript on practical Kabbalah, holograph in the Musajoff collection, Jerusalem) that a week before his preceptor died they had been studying the tractate Yevamot.
He also gives some information about Luria's system of study in the non-mystical parts of the law. Luria occasionally delivered homilies in the Ashkenazi synagogue in Safed, but generally refrained from religious teaching in public. On the other hand, he often took long walks with his closest disciples in the neighborhood of Safed pointing out to them the graves of saintly personages not hitherto known, which he discovered through his spiritual intuition and revelations. At this period, he had already become famous as a man who possessed the "holy spirit" or received the "revelations of Elijah." He taught his disciples orally, instructing them both in his own system of theoretical Kabbalah, and also in the way to communion with the souls of the righteous (zaddikim). This was accomplished by "unification" of the Sefirot and exercises in concentration on certain of the divine names and their combinations, and especially by means of kavanah, i.e., mystical reflection or meditations in the act of prayer and the fulfillment of religious precepts. He himself wrote down little of his teaching, apart from an attempt to provide a detailed commentary on the first pages of the Zohar and glosses on isolated passages. These were collected from his autograph by Vital and assembled in a special book, of which a number of handwritten copies are extant.

Luria acknowledges his inability to present his teachings in written form since the overflow of his ideas did not lend itself to systematization. Nor did he select the various subjects for study in his doctrine in a logical sequence but at random. He guarded the secret of his system and did not permit its propagation during his lifetime, therefore becoming celebrated at first mainly for his conduct and saintly qualities. Some who applied to study under him were rejected, including Moses *Alshekh. His relations with the scholars of Safed were friendly; a halakhic consultation addressed by him to Joseph *Caro appears in the responsa titled Avkat Rokhel (no. 136). Luria undoubtedly regarded himself as an innovator, preeminent among contemporary kabbalists. Certain allusions made to his disciples suggest that he believed himself to be "the Messiah, the son of Joseph," destined to die in the fulfillment of his mission. The period of his activity in Safed was brief, for he died in an epidemic on July 15, 1572. His grave in Safed was and remains a place of pilgrimage for successive generations.

Both in enthusiastic descriptions by his disciples and their pupils, written in the decade after his death, and in their careful preservation and collection of his teachings and faithful rendering of his personal traits, Luria's striking personality is attested. The relevant details are scattered in the writings of his disciples, particularly those of Vital. Some have been assembled in book form, such as the Shulhan Arukh shel R. Yitzhak Luria, compiled from the writings of Jacob Zemah and published a number of times (first in Poland, 1660–70), the Orhot Zaddikim, on the precepts of Luria from the writings of Vital (vol. 2, Salonika, 1770), and in Patora de Abba (Jerusalem, 1905). In addition, a wealth of legend accumulated around his personality, with historical recollection and authentic fact mingled with visionary pronouncements and anecdotes of other holy men. Such mythical elements already appear in works written 20 years after Luria's death, such as the Sefer Haredim of Eliezer *Azikri, Sefer Reshit Hokhmah by Elijah de *Vidas, and the books of Abraham "Galante. The legend is crystallized in two important documents, whose sequence of publication is a matter of controversy. One is the collection of three letters written in Safed between 1602 and 1609 by Solomon (Shlomel) Dresnitz, an immigrant from Moravia, to his friend in Cracow. The letters were first published in 1629 in Ta'alumot Hokhmah by Joseph Solomon *Delmedigo, and circulated from the end of the 18th century under the title Shivhei ha-Ari ("The Tributes of Ha-Ari"). The second document, Toledot ha-Ari ("Biography of Ha-Ari"), appears in numerous manuscripts from the 17th century; one version is published under the title Malasei Nissim ("Miracles"), although inside it is called Shivhei ha-Ari; it appeared at the beginning of Sefer ha-Kavannot (Constantinople, 1720). This version of the legend was generally regarded as the later one, based on the Safed letters. However, M. Benayahu has published a complete edition of this recension (1967) and argued that it served as the basis for the source of Dresnitz' letters. Benayahu considers that the book was compiled between 1590 and 1600 by one of the scholars of Safed, and its various recensions circulated widely in the Orient and Italy. This, the first kabbalistic hagiography, compounces fact and imagination in its biographical account of the life of the saintly man.

There is no doubt that the legend of the Ari was widespread and circulated earlier than the written sources treating his kabbalistic teaching. These compositions form an extensive literature. Although frequently described by kabbalists as Kitvei ha-Ari, "the writings of Luria," they are in fact the works of his disciples and their own disciples, edited and sometimes condensed. While most remained in manuscript, a few were published between 1572 and 1650. Moved by mystical inspiration, Luria expounded his ideas with many variants. His hearers seem to have noted down some of his teachings during his lifetime but mainly transmitted them from memory after his death, frequently superimposing their own interpretation. The conventicle of Luria's disciples included some important kabbalists who rated themselves highly and considered themselves faithful recorders of their master's doctrine. Personal friction and rivalry were not unknown. In the annals of the Kabbalah Hayyim Vital has won the laurels as Luria's chief disciple; the works of his associates and rivals have been passed over or erroneously attributed to Vital himself, in which case they acquired the reputation of authoritative sources of Luria's teachings. In fact, a number of variants of these are extant which, in the main, are not interdependent but represent independent traditions recorded by his disciples, including one which must be considered spurious. There are four such principal traditions:

1) That of Moses *Jonah of Safed, crystallized in Sefer Kanefi Yonah. The complete authentic text is extant in numerous manuscripts, particularly in Ms. Sasson 993, copied by the
author himself in Constantinople in 1582. A defective edition was compiled by Menahem Azariah "Fano in Mantua (first published in Korzec, 1786). This is an important source for the study of Lurianic Kabbalah, and as yet no satisfactory evaluation of it has been attempted. The author has omitted some of Luria's teachings, such as the doctrine of *zimzum ("withdrawal"), although, compared with Vital's rendering, his exposition of other teachings of Luria excels in clarity.

(2) That of "Joseph ibn Tabul who, after Luria's death, taught Lurianic Kabbalah to several pupils, among them Samuel Bacchi, an Italian kabbalist. Ibn Tabul compiled a systematic exposition of Lurianic Kabbalah divided into *derushim ("homilies"), with a number of supplements. The homilies are extant in manuscript and for a long time were attributed to Vital under the title *Derush Ḥeẓvi-Bah and were also published in his name (1921, at the beginning of *Simhat Kohen by Ma'sud ha-Kohen al-Haddad). This text is most important for the version of the doctrine of *zimzum that it includes, parts of which were omitted by Vital.

(3) That of Hayyim Vital. In contrast to the comparatively limited scope of the preceding disciples, Vital rendered his preceptor's teachings in detail. He augments the words which he specifically quotes as Luria's or propounded according to what he heard, with numerous additions of his own. He also wrote his first versions immediately after Luria's death, although he confirms that certain expositions were only very briefly noted after he had heard them. Luria's teachings, in a book which he calls *Ez Hayesim ("The Tree of Life"), were mainly written approximately between 1573 and 1576. However, he sometimes added a different version of the chapters, so that occasionally four variants on the same theme are found. The existence of these differing recensions has introduced considerable confusion into Vital's writings. The original sequence in *Ez Hayesim falls into eight parts (called "Gates"): (a) all material in Luria's hand collected by Vital; (b) *Shā'ar ha-Derushim, a systematic presentation of Luria's theosophical doctrine; (c) *Shā'ar ha-Pesukim, explanations of biblical passages, arranged in a sequence that follows the Bible; (d) *Sha'ar ha-Gilgulim, the mystical doctrine of metempsychosis, *gilgul, and its source; (e) *Sha'ar ha-Kavvanot, on the mystical intentions and meditations required for prayer (*kavanah ha-tefillah); (f) *Sha'ar ha-Mitzvot, the reasons for the religious precepts; (g) the doctrine of amends for sins (*tikkunei avot); (h) instructions for mystical "unifications" (*yiḥadim), which Luria transmitted to each disciple individually. This version of *Ez Hayesim remains in manuscript. Using it, Hayyim Vital's son, Samuel "Vital, compiled eight further "gates" in which Luria's own literary heritage is distributed according to its contents. These are (a) *Sha'ar ha-Hakdamot; (b) *Sha'ar Ma'amarei asbhi; (c) *Sha'ar Ma'amarei Razai; (d) *Sha'ar ha-Pesukim; (e) *Sha'ar ha-Mitzvot; (f) *Sha'ar ha-Kavvanot; (g) *Sha'ar Ru'ah ha-Kodesh; (h) *Sha'ar ha-Gilgulim. The first edition of this compilation, *Shemonah She'arim, was published, without the title *Ez Hayesim, in the above sequence in Jerusalem (1850–98; new ed. 1960–63). Many kabalists, in particular among the Sephardim, recognized this version only as authoritative and rejected the rest of Luria's writings, including books which were assembled from Vital's own later recensions. Since "the eight gates" remained in the home of Vital and his son, and were only rarely copied by others before 1650, kabalists wishing to study Lurianic Kabbalah used other recensions of Vital's books and eclectic anthologies of Lurianic kabbalism which circulated from 1586. Several of these, which were compiled in Safed itself, are extant (such as Schoken Ms. 97 of 1586 in Jerusalem), in the handwriting of MosesJonah, and the manuscript of 1588 (Enelow collection 683, in the Jewish Theological Seminary, New York). Copies of Vital's writings that had remained in Jerusalem, where he stayed for several years in the 1590s, were also in circulation from the middle of the 17th century, and various collections have been compiled from them: *Sefer ha-Derushim, *Sefer ha-Kavvanot, and *Sefer ha-Likkutim. It was not until the end of the 17th century that a comprehensive edition of Vital's writings relating to Luria's Kabbalah was made. This was compiled in Jerusalem by Meir "Poppers of Cracow with a few additions from Luria's other associates. Poppers divided his edition into *Derekh Ez Hayyim, *Peri Ez Hayyim, and *Nef Ez Hayyim, which in fact includes all the subjects covered in the *Shemonah She'arim. It was in this recension that Vital's writings became widely disseminated, especially in Europe, and became familiar long before the bulk of them were first published in Korzec in 1784. The printed book thereafter titled *Ez Hayyim is actually the *Derekh Ez Hayyim of Popper's recension. A number of books stemming from traditions compiled by Vital have been published in his name, such as *Ma'avo She'arim, an introductory section (Korzec, 1784); *Ozerot Hayyim (ibid., 1783); and *Arba Meot Shekel Kesef (ibid., 1804), part of which is indubitably a forgery.

(4) Superimposed on the tangled web of the three preceding traditions and their mutually interfused forms is a fourth deriving from the works of Israel "Sarug (Saruk), who propagated Lurianic Kabbalah in Italy and several other European countries after 1590. He is actually the author of *Sefer Limmudei Azilut ("Doctrines on Emanation"), published in Vital's name (Munkacs, 1897), which contains an entirely different interpretation of the doctrine of *zimzum and the origin of divine emanation. Since Sarug was the first to spread this teaching in Italy, his version was accepted in wider circles, although there is no doubt that he added original speculations of his own to it. Sarug was not one of Luria's disciples in Safed but based his reconstruction on those works of Luria's principal disciples that reached him. He may have known Luria personally in Egypt, since there are grounds for assuming that he was born there, and his signature is appended to a kabbalistic manuscript written in Egypt in 1565 (British Museum, Almanzi 29) for Isaac Sarug (his father?). The innovations in his version in particular made a considerable impression, and for a long time it was the one accepted as authoritative, furnishing the basis for most of the earlier works on Lurianic Kabbalah; for example the *Tul'amunot Ḥokhmah and *Novellot.
Hokhmah of Joseph Solomon Delmedigo (Basle, 1629–31), the Emek ha-Melekh of Naphtali *Bacharach (Amsterdam, 1648), and Ma'ayan ha-Hokhmah (ibid., 1652) – which is in fact Sefer Hathalyot ha-Hokhmah, a treatise originating in Sarug’s circle. Lurianic Kabbalah, therefore, won adherents in the 17th century through the propagation of a version far removed from his original teaching. The inconsistencies in the different versions and the contradictions in Vital’s own renderings gave rise to an exegetic literature which flourished particularly among the kabbalists in Italy, North Africa, and Turkey. Throughout these metamorphoses, however, the Lurianic system remained the crucial factor for the development of later Kabbalah. Apart from these variants, there are also a number of treatises and essays extant in manuscript, written by other disciples of Luria, such as Joseph *Arzin, Judah Mishān, *Gedaliah ha-Levi, and Moses *Najara.

Before Luria’s theoretical teachings became known, he won fame as a poet. A number of his liturgical hymns, only a few with mystical content, were published in the collection Yefeh Nof (Venice, 1575–80). Best known of his mystical poems are three hymns for Sabbath meals which have been included in most prayer books. Written in the language of the Zohar they describe, in kabbalistic symbolism, the meaning of the Sabbath and the special relationship between man and the world above on this day. Also published in Venice in 1595 were his Tikkunei Teshuvah, “penitence rituals” (titled Marpe le-Nefesh), and in 1620 his Sefer ha-Kavvanot, an anthology of mystical meditations on prayers and rules for behavior. There is a characteristic contradiction between Luria’s theoretical Kabbalah, with its numerous bold innovations in theosophical doctrine and the concept of creation which changed the face of Kabbalah (see zimzum; *Kabbalah), and his marked tendency to extreme conservatism when interpreting Jewish ritual customs and folkways. He upheld all the traditional usages, reading a mystical significance into them. He taught that each of the tribes of Israel could be regarded as having its own special entrance to heaven, which had resulted in differences in custom and liturgy, so that no particular usage could be considered superior to others. However, Luria did prefer the Sephardi liturgy, and the mystical meditations on prayer in which he instructed his disciples were based on Sephardi ritual. This was why only the Ashkenazi kabbalists and Hasidim accepted the Sephardi liturgy in prayer, as they adopted many of his other observances.

Luria himself attempted to clarify his position in relation to the Kabbalah of Moses Cordovero, and the question has occupied a number of other kabbalists. Answering inquiries on the difference between the two kabbalists, he replied that Cordovero treated of olam ha-tohu, “the world of confusion,” while his own teaching dealt with olam ha-tikkun, “the world of restitution,” – i.e., each was concerned with entirely different planes and states of being in the spiritual realm of emanation, and so Cordovero’s province did not impinge on that of Luria. Most kabbalists refrained from attempting to mix or combine the two kabbalistic systems. Vital, too, who at first was Cordovero’s disciple, wrote that he paved “the plain way [derekh ha-peshaṭ] for beginners in his wisdom” while Luria traced the “inner, most important path” (stated in a dream in 1573 recorded in Vital’s Sefer ha-Hezyonot). In reply to Vital’s question (according to testimony in “Shār Ruḥāḥ ha-Kodesh”) as to why he had penetrated more deeply into the mysteries than Cordovero, Luria said that this did not come about through reliance on divine revelation or similar phenomena but because “he took greater pains than the rest of his contemporaries.”

The entire structure of Lurianic Kabbalah is permeated with messianic tension. The introduction of the eschatological element into his basic concept of Kabbalah fundamentally changed later thinking. This element is implicit in his doctrine of Tikkun, restitution or restoration of the inner and outer cosmos. In no small measure it prepared the ground for the messianic ferment of the Shabbatean movement (see Shabbetai *Zevi). The deeds of man are invested with mystical significance, not only because they are linked with the secret workings of creation, but also because they are integrated into a vast cosmological drama which is enacted in order to rectify the original blemish in the world and to restore everything to its proper place. It is not the role of the Messiah to accomplish the *redemption; the task of cosmological restitution is imposed on the entire Jewish people through strict observance of the precepts and prayer. When this spiritual restitution has been effected the Messiah’s appearance is inevitable, for it signifies the consummation of the cosmic process. The primary concepts of Lurianic Kabbalah provide an explanation for the existence of evil and impurity in the world and relate at every stage to the Jewish national and messianic mission.

There is no justification for the theory, widely held by modern historians, that the principles Luria introduced are based on the traditions and ethical doctrine of the *Hasidei Ashkenaz. Nor should Lurianic Kabbalah be viewed as the epitome of “practical” Kabbalah in contrast to “theoretical,” or speculative, Kabbalah. The theoretical and practical aspects are blended in every kabbalistic system, particularly in that practiced by the scholars of Safed. Luria’s originality does not lie in his stress on the practical aspects of man’s adhesion to his Creator, or on the performance of good deeds, but in his pioneer conception of the theoretical aspect of Kabbalah.

[Gershom Scholem]
view of the relationship between Luria and Sarug, claiming that the latter was an early – rather than a later – student of the former. Especially important are studies on material printed from other disciples of Luria such as ibn Tabul and Penzieri (see Meroz and Rubin). According to Meroz's analyses, the interactive situation in the relations between Luria and his disciples should be taken into consideration as a formative factor in the emergence of his teachings.

The scholarly understanding of the phenomenological structure of Lurianic has undergone substantial changes. The variety of tendencies found in the writings of the students is understood as not reflecting a unified position, which is sometimes found on the "esoteric" level. The concept of a significant change in Luria's thought, and divergences between his disciples, is dominant in more recent scholarship. Likewise, the importance of earlier concepts of Lurianic innovations, has been placed in relief, especially with regard to the concept of Parzufim, Zimzum, or Adam Kadmon (Huss, Idel, Liebes, Sack), and in more general terms the importance of the writings of Cordovero, who was Luria's teacher, emerges.

In sum, the writings of Lurianic Kabbalah have been published in an important collection of articles following the death of his main followers has been discussed in...

**LURIA, JEHIEL BEN ISRAEL ASHKENAZI** (16th–17th century), kabbalist; scholar of *Safed* and its emissary to Western Europe. It may be assumed that he was a relation of Isaac Ashkenazi *Luria* (Ha-Ari). In 1599 he was in Worms and in 1601 in *Venice*, apparently on his return journey to *Erez Israel*. That year he published three works in *Venice: Heikhal ha-Shem* containing early Kabbalistic fragments on the ten *Sefirot*, with an appendix of several sayings in the name of Isaac Luria and two *piyyutim* (the *Bar Yohai piyyut* and “an elegy on the desolation of the Temple to be said in the early morning vigil”); *Asis Rimmonim*, an abridgment of the *Pardes Rimmonim* of Moses Cordovero; and *Haredim* of Eleazar *Azkiri*, the first edition from the manuscript. He returned to *Erez Israel* from this mission and in 1604 was again sent out by the Safed community, on this occasion together with Solomon ibn *Zur*, to the countries of North Africa. Several letters about the mission are extant that were written from Safed to philanthropists in Algeria, and in these the conditions of the Jews of Safed at that time are described. A responsum by Luria on kabbalistic topics is cited by Abraham *Galante* (in *Kol Bokhim* on *Lam. 1:6*).

[Avraham Yaari]

**LURIA, NOAH** (*Lurey, Noyekh*; 1886–1960), Soviet Yiddish poet, essayist, editor, translator, and pedagogue. Born in Blashne, Belorussia, Luria joined the *Bund* in 1905, was imprisoned in 1907–8, and joined the Russian army in 1917 after the February Revolution. From 1918 he was an official of the *Yidishe Kultur Lige* in Kiev and was active in reforming Jewish education there. He began to write in his early twenties, first in Hebrew and later in Yiddish, writing for children and translating European children’s classics into Yiddish. From 1930 he mainly wrote realistic tales of Soviet Jewish life. His last Yiddish work to appear in his lifetime was a review in *Heymland*, 6 (July–August 1948), while a Russian translation of one of his works appeared in 1957. He died in Moscow, reportedly leaving behind many unpublished critical studies. His story “Oys Khaver” (“No Longer Friends”) was reprinted in the first issue of *Sovetish Heymland* (1962).

[Leonard Prager]

**LURIA, SALVADOR EDWARD** (1912–1991), U.S. biologist and Nobel Prize winner. Born in Turin, Luria studied medicine at the university there working under Giuseppe *Levi*, and from 1938 to 1940 did research at the Institute of Radium in Paris. After the fall of France in 1940, Luria immigrated to the U.S., where he taught at Columbia (1940–42), Indiana University (1943–50), and the University of Illinois (1950–59), before becoming a professor of microbiology at the Massachusetts Institute of Technology in 1959. In 1964 he was appointed professor of biology at MIT. He was an associate editor of the *Journal of Bacteriology* (1950–55), editor of *Virology* from 1955, and published *General Virology* (1953–67). Luria was one of the pioneers of microbial genetics. In 1943, with Max Delbrueck, he showed that the appearance of bacterio- phage-resistant strains of bacteria was the result of spontaneous mutations. The reasoning and design of this classic experiment became a model for subsequent research in vital and bacterial genetics. He dealt with lysogeny (the attachment of viral DNA to the bacterial chromosome), transduction (the transfer of genetic material from one bacterium to another by a virus), and the control of phage properties by the bacterial host. Luria’s later experiments, employing novel techniques, extended the principles of genetics to viruses and bacteria and formed an essential part of the foundation of the new science of molecular biology. In 1969 Luria was a corecipient (with Max Delbrueck and Alfred Hershey) of the Nobel Prize for physiology and medicine.

[Mordecai L. Gabriel]

Luria’s open stance as a member of the peace movement may explain his appearing on a federal blacklist of 48 scientists drawn up by the National Institutes of Health in 1969. A critic of both American involvement in Vietnam and the Israeli invasion of Lebanon, he was also an opponent of what he regarded as insufficient safeguards on nuclear power, and
in 1976 he and other scientists called for an end to the building of new atomic power plants.

Luria founded the MIT Center for Cancer Research, and was director of the center from 1972 to 1985. In 1974 he won a National Book Award for *Life: The Unfinished Experiment*, a non-academic work. He officially retired from MIT in 1978, but remained active there. From 1984 he served as senior scientist for the biotechnology company, the Repligen Corporation.

**BIBLIOGRAPHY:** McGraw-Hill *Modern Men of Science* (1966), s.v.

**LURIA, SOLOMON BEN JEHIEL** (1510?–1574), posek and talmudic commentator (known as Rashal or Maharshal = Morenu ha-Rav Shelomo Luria). Few biographical details are known of him. He was probably born in Poznan (Poland). His family was related to many of the important families of the time, including *Katzenellenbogen* and *Minz* of Padua. Luria was orphaned in his youth. He was educated by his maternal grandfather, Isaac Klober, a well-known scholar, and Luria took pride in the fact that he received most of his learning and traditions from him. Since his grandfather was his only teacher, Luria was primarily a self-taught scholar. This explains in part his sharp criticism of other sages and his unusual independence of thought. When 40 years old, he was appointed rabbi and *rosh yeshivah* of Ostrog. About 20 years later he moved to Brisk (Brest-Litovsk) where he may also have been rabbi before he went to Ostrog, and then to Lublin where he served as a *rosh yeshivah*, at first in the yeshivah founded by Shalom Shachna. However, after becoming involved in a quarrel with Israel, the son of Shalom, he left and in 1567 – with the permission of the government – founded his yeshivah, the *Yam shel Shelomo*. He was greatly inclined, almost obsessed, with the oral teaching in the yeshivah which he was able to teach in accordance with his own system. Although Luria raised many pupils who became rabbis in Poland and Lithuania during his own and the following generation, some left his yeshivah and went to R. Israel. Luria felt this desertion deeply and complained about it in harsh words. Among his outstanding pupils were Mordecai *Jaffe* and Joshua *Falk*.

Luria was unique for his time in the complete independence he showed in halakhic ruling and in the critical method which he employed. His *magnum opus* was the *Yam shel Shelomo*, a halakhic compendium that follows the order of the Talmud. For Luria, the Talmud was the ultimate source of Jewish law, which explains his decision to write his book as a halakhic commentary on the Talmud. At the same time, Luria felt that all the relevant sources should be used. Thus his legal decisions were based on a comparison of all the vast commentaries and halakhic material – both that compiled before and during his time – with the talmudic sources, showing remarkable profundity while strictly avoiding the *pilpul* and hairsplitting which then dominated the yeshivot of Poland, particularly that of Shalom Shachna. Luria valued Kabbalah to the point of quoting the Zohar and other kabbalistic works in his *Yam shel Shelomo*. However, he never used kabbalistic sources as the final arbiters of the law. Even though Luria meant his work to be of practical use, by tying his discussions to the order of the Talmud it became cumbersome to use. His rulings were accepted by most of his contemporary scholars with whom he was in correspondence and exchanged responsa. However, his extraordinary firmness – as well as his public accusations that many of the rabbis who were stringent in their rulings had their eye on monetary gain and “the benefit it brought them and their scribes” (responsum 21) – roused many opponents against him.

His criticism also included the quality of the printed text of the Talmud of which the first good and complete editions had been published in the preceding generation. His own personal glosses correcting the corrupt text were written into his personal edition of the Talmud. Despite the fact that these were made for his personal use, they were published, first as a separate work in 1581 and later in the margins of the printed Talmud texts. As a result, Luria had great impact on almost every page of the Babylonian Talmud, on its text, on Rashi’s commentary, and on the Tosafot.

There is no doubt, as he himself states, that the method of *pilpul* was also used in Luria’s yeshivah, but he distinguished between the oral teaching in the yeshivah which was designed to sharpen the minds of the pupils and that whose aim was purely to arrive at the truth, as well as between both these methods and the ability to posit the halakhah. His independence in his rulings was tempered with a great reverence for the school of Rashi and the tosafists and the early Franco-German authorities generally, and in particular for their traditions and customs, which he always accepted. In addition he relied heavily in halakhah on the decisions of Israel *Isserlein*, the author of the *Terumat ha-Deshen* (Venice, 1519), even though he does not refrain at times from taking an independent line from him (responsum 39). Luria’s works include an exceptionally wide range of literary sources, from commentaries and halakhic works, from the geonic period down to his own time, of which he had an extensive collection in his rich library – both of published works and manuscripts. In addition to his glosses and textual emendations of the Talmud, he also wrote on the liturgy, Maimonides’ *Mishneh Torah*, the *Turim* (see *Jacob b. Asher*), the *Semag* (see *Moses b. Jacob of Coucy*), Rashi’s biblical commentary, and other works. His interest encompassed many fields, including grammar and Kabbalah, to which he was greatly inclined, although he made very little use of it in his halakhic decisions. To philosophy and its study he was greatly opposed, and hard words on this subject passed between him and Moses *Isserles*, his younger relative whom Luria held in high esteem despite the bitter dispute which arose between them toward the end of Isserles’ life. Joseph *Caro’s commentary to the Turim, Beit Yosef* was published at that time. Luria, though valuing the work for its own sake, was strongly opposed to the *halakhah* being decided in accordance with it since it was not primarily based upon the tosafists and the Franco-German scholars.
Luria seems to ignore the Shulhan Arukh, although there is no doubt that he knew it.

Only some of Luria’s works have been preserved, including the following:

1. **Yam shel Shelomo** on the Talmud (on Bava Kamma; Prague, 1616–18; on Hullin; Cracow, 1633–35; etc.). It is not certain how comprehensive the original work was, only his comments to a few tractates having been preserved. The book is distinguished for its clarity and for its remarkably detailed, orderly, and erudite presentation of each topic. From it one can clearly follow the manner in which the halakhah with which he is dealing developed from the geonic period until his time;

2. **Hokhmat Shelomo** (Cracow, 1582 or 1587), glosses on the text of the Talmud together with short comments. This work was published in most editions of the Talmud in a very abridged – and many times corrupt and meaningless – form, after many of his emendations had already been inserted into the actual text of the Talmud. Ironically, the corrupted text of his glosses was the result of further scribal and typographical error;

3. **Ammudei Shelomo** (Basle, 1600), expositions of the Semag;

4. **Yeriot Shelomo** (Prague, 1609), glosses and expositions of Rashi’s Bible commentary and glosses to Elijah ‘Mizrahi’s supercommentary to it;

5. **Ateret Shelomo** (Basle, 1599–1600), a commentary on the Shatari’ Dura (see ‘Duera, Isaac Ben Meir);

6. **Responsa** (Lublin, 1574–75). These responsa are exceptionally valuable for the insight they afford into the culture of the Jews of Poland and Lithuania in this period of their efflorescence, and the status and moral standard of the rabbinate of his time. Responsorsum 29 contains an early historical document on the chronology of the scholars of Germany from the time of *Gershom b. Judah, until the middle of the 14th century;

7. Luria wrote a commentary to the Grace after Meals (Venice, 1603; Jerusalem, 1882);

8. Luria also wrote a commentary to the Sabbath Zemirot (Lublin, 1596; Brooklyn, 1986) and expositions of scriptural verses;

9. **Hanaghot Maharshal** (Brooklyn, 1986), Luria’s personal customs, printed from manuscript.

His other works include a critique of Abraham Ibn Ezra’s Pentateuch commentary; works on Kabbalah, including *Sefer Menorat ha-Zahav* (New York, 2002) and *Perush ha-Ilan* (in Mesekhet Azilut, Jerusalem, 2000); and other works.

[Israel Moses Ta-Shma / David Derovan (2nd ed.)]

**LURIE, HARRY LAWRENCE** (1892–1973), U.S. social worker. Lurie, who was born in Goldingen, Latvia, was taken to the U.S. in 1898. During 1913–14, Lurie was employed as a staff member by the Federation of Jewish Charities in Buffalo, New York. After service with the Detroit Department of Public Welfare (1915–22), he was subsequently employed as faculty member at the University of Michigan (1922–24); superintendent of the Chicago Jewish Social Service Bureau (1925–30); lecturer at the University of Chicago (1926–30) and the New York School of Social Work (1931); executive director of the Bureau of Jewish Social Research (1930–35); and executive director of the Council of Jewish Federations and Welfare Funds (1935–57). In the latter capacities, he was a leader in orienting Jewish social work toward the main currents of the American profession. He became editor of the *Encyclopedia of Social Work* in 1962 and wrote *A Heritage Affirmed* (1961), a history of the federation movement in American Jewish philanthropy.

**LURIE, JOSEPH** (1871–1937), Zionist leader and Hebrew educator. Born in Pumpenai, Lithuania, Lurie studied at the University of Berlin, where, together with Leo ‘Motzin and Shemaryahu ‘Levin, he established the first Russian Jewish students’ group (1889) and joined the *Benei Moshe association*. Lurie was a delegate to the First *Zionist Congress*. From 1899 to 1904 he edited the Zionist weekly *Der Yud* (“The Jew”), gathering around him the best of the Yiddish writers. He stressed the importance of the Yiddish language as a national heritage in a series of articles in the St. Petersburg daily *Der Fraynd*, the literary supplement of which he edited until 1906. In that year he was elected to the central committee of the Zionist Organization in Russia and became editor of the Zionist organ *Dos Yidishe Folk* (“The Jewish People”) in Vilna. In 1907 he went to Erez Israel, joining the staff of the Herzlia High School in Tel Aviv. Lurie was a key figure in the language controversy with the *Hilfsverein der deutschen Juden*, which tried to introduce German as a language of instruction. During World War I he was banished by the Turkish authorities. From 1919 he headed the education department of the Zionist Organization, later of the Valad Le’ummi (National Council of the Jews in Palestine). An advocate of an understanding with the Arab national movement as vitally important to the Zionist movement, he was a member of “Berit Shalom in its early days. His book, *Erez Yisrael* (1914), is a collection of his articles about life in Erez Israel.

**BIBLIOGRAPHY:** D. Kimhi (ed.), *Nefesh le-Doktor Yosef Lurie* (1938); I. Klausner, *Opeziyyah le-Herzl* (1960), index; B. Dinur, *Benei Dori* (1965), 156–60; *LNYL*, 5 (1965), 27–29 (incl. bibl.).

[Yehuda Slutsky]
LURIE, RANAN RAYMOND (1932– ), political cartoonist, editor, lecturer. A member of the renowned Lurie family, Lurie was born in Port Said to a family that had been in Jerusalem for six generations. He was educated in Tel Aviv (Herzlia Hebrew Gymnasium) and in Jerusalem (art college) and served as a major (res.) in the IDF paratroops. He worked for Israeli newspapers until invited by Life magazine to come to the United States in 1968. There he worked as political cartoonist for Life, Newsweek, and Time, and his cartoons are syndicated in more than 1,000 publications in 102 countries with a total readership of 104 million. Ten books of his cartoons were published in five languages and he received many awards for his work. He contributed regularly to leading television shows and was editor in chief of Cartoon News magazine.

His son Rod was a radio talk show (“The Rod Lurie Show”) host in Los Angeles and published Once Upon a Time in Hollywood.

LURIE, TED (1909–1974), Israel journalist. Born in New York, Lurie immigrated to Palestine in 1910 and joined the staff of the Palestine Post at its outset in 1921. He was news editor from 1937 to 1947 and was Jerusalem correspondent of the London News Chronicle (1944–46). From 1948 to 1950 he was acting editor of the Palestine Post (later the Jerusalem Post) and in 1955 was appointed editor and managing director.

LURIE, ZVI (1906–1968), “Mapam labor leader in Israel. Born in Lodz, Poland, Lurie went to Palestine in 1925 and worked as an agricultural laborer in *Petaḥ Tikvah. In 1925 he joined the hakhshara group of Ha-Shomer ha-Za‘ir at Ein Ganim and settled with them at kibbutz Ein Shemer in 1927. From 1929 to 1931 he was an emissary for Ha-Shomer ha-Za’ir in Poland, and from 1931 to 1937 he was secretary of the world leadership of Ha-Shomer ha-Za'ir in Warsaw and editor of its weekly. In the following years he was active on all the central bodies of the movement in Palestine. From 1941 to 1948 Lurie served on the Váad Le‘ummi and on its executive from 1946 to 1948 as director of the Information Department. In 1948 he joined the Provisional Council of the State of Israel and was a signatory of the Declaration of Independence. Lurie was on the *Jewish Agency Executive in New York from 1948 to 1955 and was a member of the Executive in Jerusalem and head of the Organization Department from 1956. A collection of his speeches entitled Mi-Devarav appeared in 1968.

[Benjamin Jaffe]

“LUSCHAN, FELIX VON” (1854–1924), German archaeologist, ethnologist, explorer, and anthropologist. Von Luschan studied at the universities of Vienna and Paris and then joined the Berlin Museum fuer Volkerkunde, of which he was the director from 1904 until his death. He undertook numerous expeditions to the Balkans, North and South Africa (especially Benin), and New Guinea and Anatolia. In 1881 he began anthropometric work in Lycia in western Asia and for three decades continued to assemble data on the physical evolution of man there. On the basis of his research and studies of the cephalic indices of a large number of Jews, Von Luschan came to the conclusion that the notion of a distinct Jewish race was fallacious. Early in his career he formulated a theory that the Jewish people was actually an amalgam of Semites, Hittites, and Aryan Amorites, a view he later recanted after it was espoused by antisemites like Houston Stewart *Chamberlain.

Von Luschan energetically combated all forms of racism and in his Voelker, Rassen, Sprachen (1922), particularly attacked antisemitism. Writing from the anthropological perspective, he rejected the notion of the biological inferiority of any given race and criticized the popular confusion of such distinct, autonomous entities as race, nationality, and culture.

[Ephraim Fischoff]

LUSTIG, ARNOST (1926– ), Czech writer, screenwriter, and journalist. Born in Prague, Lustig was deported to the Theresienstadt concentration camp in 1942 and later to a number of others, including Auschwitz and Buchenwald. At the end of the war he managed to escape from the death train and reach Prague, where he later graduated from the School of Political and Social Sciences. Until 1968 he worked as a journalist at various periodicals (he was a war correspondent in Israel in 1948) and a screenwriter. During the brief period of liberalization in Czechoslovakia in 1967–68, Lustig was elected to the Central Committee of the Czechoslovak Writers’ Union. After the Soviet invasion in August 1968, he left Czechoslovakia for Israel and Yugoslavia. He ultimately became a professor of the history of literature and film at the American University in Washington.

Lustig’s work is based mainly on his tragic experiences in concentration camps and postwar life in his homeland. He made his literary debut with the collection of stories Night and Hope (1958) filmed as Z. Brynych’s A Transport from Paradise (1962), and Diamonds in the Night (1958), filmed by J. Němec (1964) – both showing the life of young Jews in the Terezin ghetto. Other short story collections and novels appeared quickly one after the other, such as The Street of Lost Brothers (1959); My Acquaintance Vili Feld (1961); First Destination Happiness (1961); Night and Day (1962); Dita Saxov (1962, filmed by A. Moskalyk, 1967); Thou Shalt Not Humiliate Anyone (1963); A Prayer for Catherine Horowitz (1964), which won the Czech State Prize (1966) and was nominated for the American National Book Award (1973); Waves in the River (1964); White Birches in the Autumn (1966); The Bitter Scent of Almonds (1968); The Lower (1969), set against the
Arab-Israeli War of 1948; A Street of the Lost Ones (1973); and From the Diary of Seventeen-Year-Old Perla S. (1979). After the Velvet Revolution in Czechoslovakia and the establishment of the Czech Republic, he published Darkness Casts No Shadow (1991); Colette: A Girl from Antwerp (1992); Tanga: A Girl from Hamburg (1992); House of the Returned Echo (1994); and a number of short stories, such as “Friends”; “Chasm”; and “Fire on the Water.”

Lustig wrote Memories, 3 x 18 (2003) and many newspaper articles about the Czech political and cultural scene, including the problems of the Jewish community in the Czech Republic. Much of Lustig’s fiction has been translated into several languages. In 2004 he was awarded the Vladislav Vančura Prize. From 2004 Lustig lived in Prague.

[Avigdor Dagan / Milos Pojar (2nd ed.)]

**LUSTIG, MOSES** (1906–1976), German journalist. Born in Tarnobrzeg, near Cracow, Lustig worked for the Polish press in Lodz from 1926. From 1933 to 1939 he co-edited a Polish weekly in Nowy-Sacz. After World War II he became the editor of the DP Express and was on the editorial board of Iber-gung and other DP publications in Munich, Germany. In 1951 he founded the weekly Muenchener Juedische Nachrichten which he published until his death.

**ADD. BIBLIOGRAPHY:** Der Journalist, 11:2 (1961), 29.

**LUSTIGER, JEAN-MARIE ARON** (1926– ), French cardinal. Born in Paris to a family of Jewish immigrants from Bendzin (Poland), during his childhood he converted to Roman Catholicism, being baptized on August 21, 1940, in Orleans. His parents were deported by the Nazis and his mother died in Auschwitz (his father survived). Ordained as a priest in 1954, he headed the Paroisse universitaire in Paris, a parish aimed at the student population, and from 1959 to 1969 the Centre Richelieu, which trained the chaplains working with students. In charge of a Parisian parish until 1969, he was then promoted by Pope John Paul II to bishop of Orleans and, in 1981, to archbishop of Paris, the highest position in the French Church, a position that he held until 2005. He was nominated a cardinal already in 1983 and was considered for many years to be a serious candidate for the papal succession. After his nomination as archbishop, he stated that he considered himself both a Jew and a Christian, a position that provoked controversy. With time, nevertheless, he was recognized as one of the outstanding promoters of better understanding and dialogue between the two religions, as when Jewish organizations opposed the establishment of a Carmelite convent at Auschwitz. In 1998, he received the Nostra Aetate Prize of the Sacred Heart University of Fairfield (Connecticut) together with former chief rabbi of France René Samuel Sirat. A member of the Académie française since 1995, he wrote numerous books, including an autobiography, Le choix de Dieu (1987).

[Philippe Boukara (2nd ed.)]

*LUTHER, MARTIN* (1483–1546), German religious reformer. During the first period of his activity (approximately 1513–23), Luther often condemned the persecution of the Jews and recommended a more tolerant policy toward them, based on the spirit of true Christian brotherhood. Commenting on Psalm 22 (around 1519), he roundly condemned the “Passion preachers [who] do nothing else but exaggerate the Jews’ misdeeds against Christ and thus embitter the hearts of the faithful against them.” Speaking of the controversy between Johann *Reuchlin and Johann *Pfefferkorn, he strongly disapproved of the confiscation of the Talmud and rabbinic literature. Even in later times he referred to Reuchlin as his predecessor and teacher. Although declaring that it was impossible to expect the conversion of the whole Jewish people, he nevertheless nurtured the belief that, after listening to his teachings, many Jews would acknowledge the truth and accept Christianity.

Luther directly considered the Jewish question first in his pamphlet Dass Jesus Christus ein geborener Jude sei (“That Christ Was Born A Jew,” 1523). Arguing that the Jews, who were from the same stock as the founder of Christianity, had been right in refusing to accept the “papal paganism” presented to them as Christianity, he added, “If I had been a Jew and had seen such fools and blockheads teach the Christian faith, I should rather have turned into a pig than become a Christian.” Partly because of his polemics against the use of images in churches, he himself was branded a “half-Jew” (semi-Judaes) by the church authorities. Perhaps encouraged by his conversion of one of the two Jews who had reportedly visited him at the Diet of Worms (1521), Luther had high hopes for the success of his mission among the Jews. Early missionary attempts had failed “not so much [because of] the Jews’ obstinacy and wickedness, as rather [through] the absurd and asinine ignorance and the wicked and shameless life of the popes, priests, monks, and scholars.” Pleading their seeing the light, the Jews should be treated more considerately and given greater opportunities to gain a livelihood.

At first, Luther’s disruptive impact on Roman Catholicism (which the Jews equated with the detested kingdom of “Edom) was welcomed by Jews as a break in the monolithic power of the Church. Others hoped that the turmoil arising in the Christian world through the spread of Lutheranism would lead to toleration of all forms of worship. Moreover they expressed the view that a partial reform of the Church was welcome since it led the Church away from its former evil. There were even some, like Abraham *Farissol, who regarded Luther as a Crypto-Jew, a reformer bent on upholding religious truth and justice, whose anti-idolatrous innovations were directed toward a return to Judaism. Some scholars, particularly of the Sephardi diaspora, such as Joseph ha-Kohen (1496–c. 1575), had strongly pro-Reformation sympathies.
Although, however, appreciating Luther's apparent kindliness toward them, the Jews resisted his message. Whether through irritation at their refusal to accept his truth or for some other reason, Luther grew increasingly hostile toward the Jews. In 1526 he complained of the Jews' stubbornness in clinging to their traditional interpretation of Scripture. His repeated attacks on usury began to assume an anti-Jewish bias and his successive Table Talks of the 1530s contain frequent complaints about "the stiffnecked Jews, ironhearted and stubborn as the devil." The increasing vehemence of his attacks is apparent in his "Letter Against the Sabbatharians," in which he harshly condemns that Protestant sect for adopting Jewish customs. Openly anti-Jewish and couched in Luther's characteristic style of extreme vituperation are two pamphlets written in 1542 and 1543, "On the Jews and Their Lies" and "On the Shem Hamephoros" ("The Ineffable Name"). Repeating the accusations and invective of medieval anti-Jewish polemics and making use of the works of the apostates Antonius "Margaritha and Bernhard Ziegler, he subjects the Jews to a torrent of vile abuse, calling them "venomous and virulent," "thieves and brigands," and "disgusting vermin." Although Luther poured out such violent language on the heads of all his enemies – princes, lawyers, bishops, and especially the pope – in the case of the Jews he also made practical suggestions, ranging from forced labor to outright banishment. As many of the Protestant rulers of the times relied on Luther's political advice, his attitude resulted in the expulsion of the Jews from Saxony in 1543 and the hostile Judenordnung of Landgrave Philip of Hesse in the same year. The tenor of his suggestions was equally virulent in his "Admonition against the Jews," a sermon preached in 1546, shortly before his death.

In Germany in particular, Luther's volte-face in his attitude toward the Jews caused bitter disappointment in Jewish circles. After his request to answer Luther's calumnies had been turned down by the authorities of Strasbourg in 1543, "Josef (Joselman) b. Gershom of Rosheim expressed undisguised hostility to the Reformation, calling Luther "the unclean" (אכלה פורה, a word play on his name). Among Reformation thinkers, a certain group (notably the Swiss Heinrich Bullinger and the Nuremberg preacher and Hebraist, Andreas "Osiander) criticized Luther's anti-Jewish stance.

Despite his fight against Judaism, Luther had a deep and abiding love for the Hebrew Bible. Although his Hebrew was weak and his Greek little better, his translation of the Bible into German was one of the most significant in literary history. He accepted the Hebrew language as the only one adequate for the translation of and commentaries on the Bible he laid greater stress on intuition and revealed religion than on grammatical or linguistic questions. "I am not a Hebraist with respect to grammar [he said], nor do I wish to be one. . . I rather translate freely. . . Accurate interpretation is a special gift of God." Although he often used, perhaps unwittingly, the interpretations of Rashi and recognized the importance of Moses and David "Kimhi, on the whole he rejected rabbinic authorities, feeling that not only *Jerome but also *Nicholas de Lyre (on whom he relied heavily) were misled by them.

Inconsistency and violence characterized Luther's utterances in all fields, but perhaps in none with more disastrous consequences than in his statements on the Jews. Due to his vituperative anti-Jewish polemics, the Lutheran Church, unlike that which owed its foundation to John *Calvin, retained all the superstitious abhorrence of the Jews inherited from the medieval Catholic Church. Indeed Luther's attitude was worse, for he recognized no duty to protect the Jews. Throughout the subsequent centuries Luther's ferocious castigation of the Jews provided fuel for antiremites and the vicious force of that legacy was still evident in Nazi propaganda.

---

**LUTOMIERSK,** a suburb of Lodz, central Poland (formerly a town). Jews first settled in Lutomiersk, which had then an independent municipal status, at the end of the 17th century, and an organized community existed from the 18th century. In 1765, there were 404 Jews living in the town and 41 in eight surrounding villages. Lutomiersk belonged to the Sieradz and Wielun areas, where, according to decisions of the Sejmik (provincial parliament) of 1786, 1787, and 1788, Jews were forbidden to lease inns, taverns, and breweries. At the end of the 18th century four Jews founded a tannery; another Jew, Pinkus Israel, established a cloth factory in 1785, employing 20–30 workers. In 1796 this factory was commissioned by the Prussian government to supply cloth to the army in the province. The wooden synagogue, built in the 18th century by Hillel Benjamin of Lask, burned down during World War I (1915). The Jewish community numbered 657 (53% of the total population) in 1808 and 1,102 (51%) in 1827. Apart from shopkeeping, they were engaged mainly in weaving, tanning, tailoring, and carpentry. In 1857 their number had declined to 999 (46%) because many had moved to Lodz. They numbered 992 (38%) in 1897 and 775 (35%) in 1921 and 750 in 1939. A 1921 report of the *American Jewish Joint Distribution Committee* mentioned 58 Jewish enterprises in Lutomiersk, 36 of which employed salaried workers.

[Encyclopaedia Judaica (Germany)]

**Holocaust Period**

When World War II broke out there were about 2,000 Jews living in Lutomiersk. The anti-Jewish terror began with the arrival of the Germans. Jews were kidnapped in the streets for hard and humiliating labor, their beards were cut off, and their property was requisitioned. Just before the occupation...
and within its first weeks, nearly 1,300 Jews escaped and by October 1939, only 750 Jews remained in Lutomiersk. In the summer of 1940 an open ghetto was created, but a year later it was closed off and no one could leave without a pass. Groups of Jews were daily led out of the ghetto for hard labor. At the end of 1941, the German authorities established a tailor shop for 20 Jewish tailors, which took many orders and provided the Jews with a small income. Lutomiersk ghetto was liquidated at the end of July 1942, when the surviving Jews were deported to the death camp in *Chelmno.

**LUTOSTANSKI, HIPPOLYT** (1835–1915), antisemitic agitator of Polish origin, born in Lithuania. Lutostanski was originally a Catholic priest but converted to the Greek Orthodox Church after he had been defrocked on charges of corruption. When Russian society became increasingly antisemitic at the end of the 1870s, he wrote several libelous books, including "The Problem of the Use of Christian Blood for Religious Purposes by Jewish Sects" (1876) and "The Talmud and the general population. In the 18th century Lutsk suffered from the *Haidamack uprising, and from a *blood libel in 1764.

The Lutsk community participated in the regional (galil) council of *Volhynia, as well as in the *Councils of the Lands. The city was a center of Torah study and had many yeshivot. Among its famous rabbis in the 17th and at the beginning of the 18th centuries were Moses b. Judah ha-Kohen (formerly of Cracow), Jacob Schor, the son of Ephraim Solomon *Schor, and Joel b. Isaac Halpern, known as the Great Rabbi Joel. Part of the fortress built by Prince Witold was rebuilt as a fortified synagogue, with the permission of King Sigismund 111. From the gunmounds on the roof, Jews served as gunners during enemy attacks on the city, while underground tunnels led from the synagogue to other key buildings in the city. This building withstood the fires and enemy attacks of centuries. In 1765 there were 1,083 Jews in Lutsk, and under Russian rule during the 19th century the number of Jews in Lutsk was increased to 5,010 in 1847, and to 9,468 (out of a total of 15,804) in 1897, when the Jews were expelled from the rural communities following the czar’s regulation of 1804. However, they lived under constant threat of expulsion, since Jews were prohibited from settling within 50 versts of the Russian border, and Lutsk was included in this category in 1844.

During World War I the Jews suffered both from the armies and from war devastation, as the city changed hands...
several times and was occupied by Russian and German troops. Under the rule of "Petlyura in 1918 many Jews were massacred, and when the Polish armies entered Lutsk they looted Jewish houses and organized anti-Jewish riots under the pretext that the Jews had helped their enemies. In the face of these assaults the Jews organized themselves in "self-defense. Between the two world wars the Lutsk community shared in the troubles and struggles of Polish Jewry, facing antisemitism and hostile economic and social legislation. For instance "Bata," the shoe factory opened in Lutsk with the assistance of the government, caused many Jewish shoe factories to close down.

The Jewish population grew in the 1920s. According to official figures, 14,860 Jews lived in Lutsk in 1921 (about 70% of the general population) whereas in 1931 they numbered 17,366 (48.5%). In 1937, however, they numbered only 15,880 (36.5%). The Jews took part in the civic life of the city and had their elected representatives in the city council. Between the world wars the Lutsk community led a rich religious and cultural life. Its last rabbi was Zalman "Sorotzkin. It had a hospital as well as several social and medical organizations, some of which were assisted by Lutsk Landsmanschaften in the U.S. A printing press attached to a Dominican monastery in Lutsk apparently produced some Hebrew books. Jewish schools were maintained by various organizations, among them the 'Tarbut schools run by the Zionist organization and the Beth Jacob girls' school by the Agudat Israel.

[Shimshon Leib Kirshenboim]

Holocaust Period

By 1939 the Jewish population of Lutsk had increased to an estimated 20,000. Under Soviet occupation (1939–41) Jewish public life was repressed, Jewish organizations were disbanded, and private enterprises nationalized. Some Jewish businessmen were ordered to leave the town. In June 1940 the Soviet authorities uncovered the Zionist Gordonia underground and imprisoned its leaders. Many refugees who had fled to Lutsk from Nazi-occupied western Poland were deported to the Soviet interior. When the German-Soviet war broke out on June 22, 1941, many young Jews left together with the retreating Soviet forces. The town fell to the Germans on June 27, and a few days later some 300 Jews were murdered in retaliation for Ukrainian nationalist prisoners that had been killed, probably by the Soviet NKVD. On July 4, 3,000 Jews were put to death by the Einsatzkommando 4a in the nearby fortress (zamek) of Lubart. On October 19, 1941, a labor camp was established, and a ghetto was set up on December 11–12, 1941. The Jewish leaders made every effort to alleviate starvation and control epidemics. An orphanage, an old age home, and public kitchens were established in the ghetto, but the degree of suffering was hardly diminished. On March 15, 1942, a few hundred men were sent to Vinnitsa for the construction of the Fuehrer’s HQ there. Only three survived by fleeing to Transnistria. In the spring of 1942 a group of young Jews attempted to escape from the ghetto to the forests, but most of them were caught and murdered by the Ukrainians. A few, however, managed to join the Soviet partisans and fought the Germans as part of the Kowpak units. One of the refugees of the Lutsk ghetto, Joel Szczersbato, became the commander of the seventh battalion of the partisans. Meanwhile the Germans carried out the large-scale Aktion in which the majority of the Lutsk ghetto was murdered (Aug. 20–23, 1942). About 17,500 Jews were led to the Polanka hill on the outskirts of the city and massacred. On September 1, 1942, some 2000, most who emerged from hiding, were murdered. The remaining 500 Jews, who were employed as artisans in the labor camp, were executed on Dec. 12, 1942. However, the Germans encountered armed opposition on the part of these Jews, who had fortified their building, armed themselves with a few guns and other weapons, and repeatedly repulsed German attacks. With German reinforcements the labor camp was taken, with some German losses. Among those who helped Jews was Vitold Fomenko, who supplied food to the ghetto and false identity cards to fugitives, found hiding places, and saved dozens of Jews. When the Soviets captured Lutsk on Feb. 2, 1944, only about 150 Jews came out from their hideouts or the nearby forests. No organized Jewish life was renewed in Lutsk. There are Lutsk societies in the United States and in Israel, Sefer Lutsk having been published in 1961 by the Israel Lutsk society. In the late 1960s there was a Jewish population of about 1,500, but there was no synagogue, the former old synagogue having been converted by the authorities into a movie theater. In the 1990s most Jews emigrated from Lutsk.

"LUTZ, CARL (Charles; 1895–1975), Swiss diplomat who was responsible for saving Jewish lives in World War II. Lutz was made responsible for the interests of a number of countries who had severed relations with Hungary. He arrived in Budapest on January 2, 1942. As the representative of British interests, he came into contact with Moshe (Miklos) Krausz, the Jewish Agency immigration representative in Budapest. They developed a good relationship, working to maintain the modest flow of immigrants from Hungary to Palestine until the German occupation in March 1944.

Following the German occupation, Lutz gave Krausz and his team diplomatic protection in a Swiss office building. During the concentration and ensuing deportation of Hungarian Jewry – according to German documents 437,401 Jews were deported on 147 trains between May 15 and July 9, primarily to Birkenau, where a railroad spur was built directly into the camp to receive them – Krausz continued to try to foster emigration to Palestine and implored the Swiss and the Jewish Agency to influence the British to declare the holders of Palestine visas potential British citizens. At the height of the deportations, in late June 1944, the British agreed to Krausz’s proposal. On July 7, the Hungarian regent, Miklos Horthy, declared that the deportations must cease. Soon after he also
declared his willingness to allow 7,500 Jews to immigrate to Palestine, along with their families. This became known as the Horthy Offer, and it rendered Palestine visas even more valuable.

Working with Lutz, Krausz assembled a team, which was comprised mostly of Zionist youth movement members. From the Glass House on Vadasz Utca, a Swiss holding, they distributed Palestine visas along with Schutzbriefe, letters of protection in the name of Switzerland. Some 50,000 Schutzbriefe were disseminated. After October 15, 1944, when the fascist Arrow Cross leader Ferenc Szalasi was brought to power by the Nazis, Lutz and other neutral diplomats redoubled their efforts to protect Jews from deportation. In addition to safeguarding those Jews who held legitimate Schutzbriefe, they also tried to help the thousands who held counterfeit documents. They intervened with the Hungarian authorities, trying to stop the deportations altogether, and – until that was possible – to mitigate their effect.

In November, the Hungarian authorities declared that a ghetto must be established for those Jews without Schutzbriefe, while Jews holding legitimate papers would be housed under the auspices of their foreign protectors. Lutz and the other neutral diplomats did what they could to prevent the founding of the ghetto. Although they managed to have its establishment postponed, they could not avert its ultimate creation. Once it was set up, they did their best to care for the Jews’ day-to-day needs, working with the Zionist youth underground. Lutz, along with other neutral diplomats, also procured homes for the Jews under his protection. Jews bearing false Schutzbriefe found their way in to these homes and Lutz did his best to protect them as well. Nonetheless, both he and Raoul *Wallenberg, a Swedish attaché, were forced to delineate between Jews with real documents and Jews with forged papers at the concentration point in Obuda. Lutz also tried to save the deportees, who were being marched from Obuda to the Austrian border by foot. He filled out unused Salvadoran visas in their names and managed to pluck Jews from the lines of the Death March. With the conquest of Pest by the Soviets in mid-January 1945, Lutz moved to Buda. There he protected Jews in a Swiss building until that side of the city was also taken in mid-February. Lutz’s work in saving Jews was officially recognized by *Yad Vashem in 1965.

[Luxembourg]

LUTZKY, A. (pseudonym of Aaron Zucker: 1894–1957), Yiddish poet. Born in Dimidovke (near Lutsk), Ukraine, he was privately educated and prepared for a career as a cantor. Before arriving in the U.S. in 1914, Lutzky had visited Warsaw and recited his poems to LL. *Peretz, who was so delighted with them that he tried to retain him in Warsaw. Life was not easy for the young immigrant who worked as peddler, teacher, and violinist. When he published his first poems in 1917 in the Yidishes Tageblat and Der Tog, Abraham *Cahan, editor of the Forverts, recognized his talent, derived the pseudonym “Lutzky” for him from the name of his birthplace, lured him away from the rival dailies, and engaged him to write a weekly poem for the newspaper. A few months later, Lutzky was drafted into the U.S. army and fought at Verdun. When he returned, he astonished his readers with a strange, bizarre style. Special evenings, which increased his popularity, were arranged at which he acted out his new poems. Soon Herz Grossbard, Joseph *Buloff, and other famed actors discovered the dramatic quality of his work and spread his fame throughout the Yiddish world. Lutzky published his works in many periodicals, including Fraye Arbeter Shinte, Tsuksntf, Yidisher Kemfer, and Di Goldene Keyt. Four books of lyrics appeared during his lifetime, of which the best known was Breshis-In-mitn (“Mid-Genesis,” 1932), in which he philosophized on creation and destruction. A fifth volume, Fun Aldos Gut (“Of All Good Things,” 1958), appeared posthumously and includes a bibliography. Some of Lutzky’s lyrics were translated into Hebrew and into English. The pessimistic poet learned to transmute adversity into gay rhymes and images. His poems are playful parables, often devoid of any moralizing intent. They are theatrical narratives that animate the inanimate world through carefully chosen words and phrases. When Lutzky projected the drama of the waters that flow all over the world, or of pieces of paper that flutter about in the wind, or of beans that discourse before disintegrating in a seething pot, lifeless nature became poetically and dynamically alive.

[Shlomo Bickel / Marc Miller (2nd ed.)]

LUX, STEFAN (1888–1936), film producer. Born in Vienna, he was twice wounded during World War I as a volunteer in the Austrian army. He worked in his profession in Germany but immigrated to Prague in 1933 after *Hitler’s advent to power. Alarmed by the world’s indifference to Nazism’s and Fascism’s increasing influence, Lux decided to sacrifice his life to alert humanity. On July 3, 1936, he shot himself in the press gallery at which he acted out his new poems. Soon Herz Grossbard, Joseph *Buloff, and other famed actors discovered the dramatic quality of his work and spread his fame throughout the Yiddish world. Lutzky published his works in many periodicals, including Fraye Arbeter Shinte, Tsukunft, Yidisher Kemfer, and Di Goldene Keyt. Four books of lyrics appeared during his lifetime, of which the best known was Breshis-In-mitn (“Mid-Genesis,” 1932), in which he philosophized on creation and destruction. A fifth volume, Fun Aldos Gut (“Of All Good Things,” 1958), appeared posthumously and includes a bibliography. Some of Lutzky’s lyrics were translated into Hebrew and into English. The pessimistic poet learned to transmute adversity into gay rhymes and images. His poems are playful parables, often devoid of any moralizing intent. They are theatrical narratives that animate the inanimate world through carefully chosen words and phrases. When Lutzky projected the drama of the waters that flow all over the world, or of pieces of paper that flutter about in the wind, or of beans that discourse before disintegrating in a seething pot, lifeless nature became poetically and dynamically alive.

[Shlomo Bickel / Marc Miller (2nd ed.)]

LUXEMBOURG (Luxembourg), grand duchy, formerly a county, bordered by France, Germany, and Belgium. Jews were first noted in the city of Luxembourg, capital of the country, in 1276. In the early 14th century immigrants from the neighboring region of Trier formed several small Jewish
settlements. During the *Black Death (1349) many of the Jews were massacred and the remainder expelled from the cities of Luxembourg and Echternach, notwithstanding the protection of Count Charles IV. They must have returned soon after, for in 1367 the existence of a Porte des Juifs ("Jews' Gate") is mentioned in the capital. The total expulsion of the Jews was decreed in 1391, but as early as 1405 some few individuals were once more living there. The homes of the Jews were destroyed and their possessions looted following an uprising in 1478. After that only two Jewish families remained, but by 1515 the number of families had grown to 15, residing in Luxembourg, Echternach, and Arlon, which was then still part of the county. The expulsion decreed in 1530 was fully implemented with the exception of some Marranos and a few traders at the fairs. Jews disappeared from Luxembourg until the Napoleonic period, when about 15 families from *Lorraine settled there. In 1808 the number of Jews was 75. Under Napoleonic legislation they were subject to the Trier consistory until the establishment of Luxembourg's own consistory in 1838. The first synagogue was built in 1823 and the first chief rabbi, Samuel *Hirsch, was appointed in 1843, serving until 1866. There were 87 Jewish families (369 persons) in the city of Luxembourg in 1880 and 63 families in the rest of the duchy. The growth of this population necessitated the construction of a new synagogue in Luxembourg in 1894, and another in Esch-sur-Alzette in 1899. The Jewish population, numbering 1,171 persons in 1927, increased considerably with the arrival of refugees from Germany; in 1935, 3,144 Jews were resident in the duchy.

Simon R. Schwarzfuchs

Holocaust Period

At the time of the invasion of Luxembourg on May 10, 1940, over 1,000 of the 4,000 Jews in the grand duchy (among them about 1,000 refugees) managed to flee to France. A new consistory was formed on the initiative of Rabbi Serebrenik, and in August 1940 the Nazis set up a civil administration under Gauleiter ("district head") Gustav Simon. After the German annexation, discriminatory racial laws operating throughout the Reich were extended to the grand duchy (Sept. 5, 1940), and 355 commercial enterprises were handed over to "Aryans." On Sept. 13, 1940 the *Gestapo announced that all the Jews would be deported on the following Day of Atonement if the consistory did not succeed in arranging their emigration prior to that date. Due to the consistory's efforts, particularly through a petition sent to *Himmler, this measure was postponed, but emigration remained the sole road to survival. Between Aug. 8, 1940 and May 26, 1941, when Rabbi Serebrenik was forced to leave in peril of his life, 700 Jews possessing more or less authentic visas fled overseas. In another operation, about 1,000 people were secretly evacuated to France in small groups. After these rescue operations the consistory became the Aeltestenrat der Juden and administered the remaining 850 Jews. Of these, 127 emigrated in January 1942 and the rest were deported; only 35 of the latter survived.

Contemporary Period

After World War II approximately 1,500 Jews returned to Luxembourg. Mostly merchants, they succeeded in renewing their business activities and, with financial assistance from the state, devoted themselves to reconstructing their community. The community's institutions were revived and a new synagogue built, the old one having been destroyed in 1943. Instrumental in these achievements was the consistory presided over by Edmond Marx, in cooperation with Rabbi Kratzenstein, who served the community from 1946 to 1948, and Rabbi Lehrmann (1949–59). In Esch-sur-Alzette a community of 40 families established itself with a new synagogue as its center. Maurice Levy was president of the consistory from 1961 to 1968 and was succeeded by Edmond Israël. From 1959 the chief rabbi was Emmanuel Bulz. In 1970, there were 1,200 Jews in Luxembourg. It was in the city of Luxembourg that the chancellor of the German Federal Republic, Konrad Adenauer, and Israel's foreign minister, Moshe *Sharet, signed on Sept. 10, 1952, the agreement on German reparations to Israel. There were around 600 Jews living in Luxembourg in the early 21st century. The community is dominated by Luxembourgers who returned after the Holocaust but there have been recent Jewish immigrants. The Consistoire appoints the chief rabbi.

[Emmanuel Bulz]

Relations with Israel

Luxembourg's relations with Israel have always been cordial. Luxembourg voted in the UN in Nov. 1947 in favor of the partition of Palestine and has maintained full diplomatic relations with Israel. Israel is represented in Luxembourg by her ambassador in Brussels, while Luxembourg's interests in Israel (as in most other countries) are represented politically by the Dutch embassy and economically by the Belgian embassy. Official visits of the foreign ministers of both countries were exchanged in 1969. Luxembourg, which plays a central role in the European Economic Community, wholeheartedly supported Israel's application for association with the Common Market. In 2005, as part of his visit to the Middle East, Jean Asselborn, president of the Council of the European Union and Luxembourg's minister for foreign affairs and immigration, visited Israel and affirmed the European Union's commitment to Israel as an important friend and partner.

LUXEMBURG, ROSA (1871–1919), German economist and revolutionary. Born into a family of merchants in Zamosc, Poland, Rosa Luxemburg joined the Polish revolutionary movement as a schoolgirl in Warsaw. As a consequence of the threat of imprisonment she was forced to leave the country at the age of 18 and immigrated to Switzerland. There she studied political economy and history at the University of Zurich, worked in the underground Socialist movement of Polish emigrants, and
met her longtime partner and lifetime comrade Leo Jogiches. In the early 1890s she helped to found the Social Democratic Party of Poland and Lithuania which cooperated for a time with the Marxist Russian Social Democratic movement. Migrating to Germany in 1898, she obtained German citizenship through a formal marriage with a printer. She became active among Polish workers and joined the editorial staff of the *Saech- sische Arbeiter-Zeitung, the Leipziger Volkszeitung, and later the *Vorwaerts, and was a regular contributor to the *Neue Zeit. Rosa Luxemburg was a leading figure in the revolutionary left wing of the German Socialist movement. As a correspondent of the *Vorwaerts she participated in the revolution of 1905–06 in Warsaw, was imprisoned, but escaped and resumed her political activity in Germany, devoting a large part of her attention to the general strike as a revolutionary weapon. She was active in both the Polish and the German Labor movements and was a prominent figure in the Socialist International. She opposed World War I as an imperialist enterprise and spent a long period in prison as a consequence. In 1916, together with Franz Mehring, Karl Liebknecht, Leo Jogiches, and others she founded the “Spartakusgruppe,” a revolutionary organization, which at the end of 1918 was transformed into the Spartakusbund and in the beginning of 1919 into the Communist Party of Germany (KPD). She was on friendly terms with Lenin but they disagreed on a number of issues. She was very critical of the Bolshevik reign of terror in the Soviet Union. With Karl Liebknecht she edited the Communist daily *Die Rote Fahne from November 1918, and she was arrested with him in Berlin on January 15, 1919. They were brought to the Berlin Eden-Hotel, where both were tortured and murdered by army officers. Rosa Luxemburg’s body was thrown into the Berlin Landwehrkanal and found only months later. On June 13, 1919, she was buried at the cemetery of Berlin-Friedrichsfelde, followed by a large funeral procession.

As an economist, Rosa Luxemburg is widely known for her theory of imperialism. She was convinced that in a pure capitalist society the inadequacy of the local market would lead to a search for markets in countries with more primitive methods of production. There would be a struggle for foreign markets, and imperialism would thus become the guiding principle of foreign policy. Although capitalism must automatically disappear with the exhaustion of external non-capitalist markets, it would collapse before reaching this limit, because expanding capitalism would produce profound social conflicts leading to a victorious proletarian revolution. She developed this theory in *Die Akkumulation des Kapitals (1913). Of great interest are Rosa Luxemburg’s views on nationalism. For her, Socialism and national self-determination were conflicting ideas. She opposed Poland’s independence; her “fatherland” was the international working class, her aim the Socialist revolution. Although Rosa Luxemburg did not show any interest in Jewish matters or in a specifically Jewish labor movement, she was constantly attacked in antisemitic terms. Rosa Luxemburg’s important publications include *Die industrielle Entwicklung Polens (her doctoral thesis, 1898), *Sozialreform oder Revolution (1899), *Massenstreik, Partei und Gewerkschaften (1906), *Die russische Revolution (ed. by Paul Levi, 1922, and by Ossip K. Flechtheim, 1965), *Einführung in die Nationalökonomie (ed. by Paul Levi, 1925), and *Politische Schriften (ed. by Ossip K. Flechtheim, 1966). Her Gesammelte Werke appeared in various editions from the 1920s on. Numerous collections of letters were published, among them Briefe aus dem Gefängnis (1920), Briefe an Karl und Luise Kautsky (1923), Briefe an Freunde (ed. by B. Kautsky, 1950), Briefe an Leon Jogiches (1971), and Gesammelte Briefe (vol. 1–6, 1982–93).

[Mirjam Triendl (2nd ed.)]

**LUZ** (Heb. לוּז), an old name for *Beth-El, first mentioned in the account of Jacob’s dream there (Gen. 28:19). Beth-El is again called Luz in Genesis 35:6; in his blessing of Joseph’s sons, Jacob refers to God’s appearance at Luz, meaning Beth-El (Gen. 48:3). In the description of the borders of Ephraim, however, the two cities are treated as separate entities (Josh. 16:2); in the parallel account of Joshua 18:13, Luz is mentioned first, then the “side” (*katef*) of Luz, “the same is Beth-El.” The man who delivered the city to the Israelites went into the land of the Hittites and built there another Luz (Judg. 1:26). According to later sources, Luz and Beth-El are the same city (Eusebius, *Onom. 4:28ff.; 40:20; 120:8ff.;* also Madaba Map). Eusebius locates Beth-El 12 mi. (c. 19 km.) north of Jerusalem on the left (“west”) side of the road to Neapolis (Onom. 40:20). Some scholars have concluded from the biblical references that Luz remained the name of the city until the time of Jeroboam and that Beth-El was originally the name of the sanctuary to the east of it. A more probable view is that Luz was the ancient name of neighboring “Ai (Heb. Ha-Ai, “the ruin”); Beth-El, which was founded in the Middle Bronze Age, doubtless inherited the role and area of the prominent Early Bronze city only about 1 mi. (1½ km.) distant.

[Michael Avi-Yonah]

**LUZ** (Lozinsky), **KADISH** (1895–1972), Israeli politician and third speaker of the *Knesset, member of the Second to Sixth Knessets. Born in Bobruisk, Belorussia, Luz received traditional schooling. He studied economics and social sciences at the University of St. Petersburg, and science and agriculture at Odessa and Dorpat, Estonia. He was one of the founders of the *He-Halutz movement. In 1916–17 he served
in the Russian army and received the rank of officer at the outbreak of the Russian Revolution. He was one of the founders of the organization of Jewish soldiers in Russia, initiated by Joseph *Trumpeledor. In 1920 Luz settled in Palestine, where he worked on land reclamation at *Kiryat Anavim and *Be'er Toviyyah, and on road construction in the Jezreel Valley. In 1921 he joined kibbutz *Deganyah Bet. He was a member of the secretariat of the Central Control Committee of the *Histadrut in 1935–40, a member of the Tel Aviv Workers Council secretariat in 1941–42, and a member of the Hve'er ha-Kevu'zot secretariat in 1949–51. Later on he was a member of the secretariat of Ihud ha-Kevuzot ve-ha-Kibbutzim and a member of the Mapai Central Committee. Luz was a delegate to the Twentieth Zionist Congress in 1937 and of the Twenty-Second Congress in 1946. He was a member of the Haganah, and in the War of Independence fought in the Jordan Valley. Luz was elected to the Second Knesset on the Mapai list in 1951. He served as minister of agriculture in 1955–59. He was elected speaker of the Knesset in 1959, serving in this position for ten years. During this period the new Knesset building was built, and Luz presided over the festive opening in August 1966. He provided artist Marc Chagall with the quotes from the Old Testament on which he based most of the pictures that appear on the three tapestries he made for the Knesset State Hall. Luz’s moderation and impartiality made him a popular figure with all the parliamentary groups in the House.

His writings include Avnei Derekh ("Milestones," 1962), a book of memoirs, Ehud mi-Sheneim-Asar (1970), and numerous articles and booklets on labor problems and the kibbutz movement. In 1974 there appeared Adam ve-Derekh: Devarim bi-Khtav u-Be’al Peh, Mi-Shelo ve-Alav, containing items by and about him. 

[Susan Hattis Rolef (2nd ed.)]

LUZKI (Lucki), ABRAHAM BEN JOSEPH SOLOMON (Aben Yashar) (1792–1855), Karaite scholar and poet in Crimea. He was born in *Lutsk (Luck) and moved as a child with his father Joseph Solomon b. Moses *Luzki in 1803 to Yevpatoriya, where the latter was shofer. He was subsequently sent to Constantinople, where he entered the service of a Karaite merchant Shabbatai Kvitko for 13 years and married his daughter. Luzki devoted much time to the study of Talmud and rabbinic literature with Rabbanite teachers and acquired extensive knowledge of languages – Spanish, Greek, and Italian – before returning to Yevpatoriya. When in 1827 his father succeeded in obtaining exemption of the Karaites from military service, Luzki composed a poem in honor of Czar Nicholas 1. In 1835 he was elected hakham of Yevpatoriya, but declined the office. In 1844 he founded a study house in Yevpatoriya and taught there until 1853. Some of his disciples, such as Yehuda Savuskan, Avraham Yefet, and Elijah *Kazaz, became well-known public figures of the Karaites communities in the Crimea. He died in the course of a visit in Ekaterrinoslav.

His published works include Iggeret Zug ve-Nifrad (Yevpatoriya, 1833, reprint Ramleh, 1978), a decision concerning marriage law, mitigating former more severe Karaites rulings; liturgical poems, of which eight are included in the Karaites prayer book (Vienna ed. (1854), 168ff.); Shoshannim Edut le-Yosef, a collection of poems, lamentsations, sermons, and obituaries (Ashdod, 2005); Mishlei Musar, a translation of fables into Karaites language (Yevpatoriya, n.d.) and a translation of Joseph *Ha-Efrati’s drama, Melukhat Shalul ("The Reign of Saul") from Hebrew into Karaites language. There remain in the Inst. of Oriental Studies of St. Petersburg and in the National Russian Library a large number of MSS which comprises his correspondence, list of books, and MSS in his own library, comments on some treatises, and so on.

[Jakob Naphtali Hertz Simchon]

LUZKI (Lutcki, Lucki), JOSEPH SOLOMON BEN MOSES (Yashar) (1770–1844), Karaite scholar and public figure, born at Kukizow near Lwow. He lived at Lutsk (Volhynia), had disciples there, and was a judge in the municipal council; he knew Russian and Polish well. In 1802 he moved to Yevpatoriya in the Crimea by invitation of the heads of the community to become melammed and shofer. He remained in these offices about 40 years and had many disciples. Luzki went with the Hakhme Simhah *Babovich to St. Petersburg where they succeeded in obtaining exemption for the Karaites from compulsory military service, imposed on the Jews in 1827. A detailed account of their journey and activities is given by Luzki in Iggeret Teshu’at Yisrael (Yevpatoriya, 1840; with a Tatar translation by the author’s brother-in-law, Abraham *Firkovich). A thanksgiving prayer he composed on that occasion was subsequently recited by the Karaites every year on the anniversary. In 1831 Luzki visited Erez Israel with his wife.

His works include Sefer ha-Hinnukh le-Petaḥ Tikvah, a didactic manual in two parts: (a) Petah ha-Tevah, a primer and Hebrew prayers for children with Tatar translation; (b) Zeiker Rav, by Benjamin *Mussafia, with Luzki’s translation of the Hebrew words into the Tatar language (Constantinople, 1831); and Tirat Kesef, a comprehensive supercommentary on the Sefer ha-Miḥvah by the Karaites *Aaron b. Joseph (printed with Sefer ha-Miḥvah, Gozleve, 1835). Luzki is also the author of a calendar for the years 1859 to 1901 (printed posthumously, in Yevpatoriya, 1858), and of liturgical poems, prayers, and hymns, some of which were incorporated in the Karaites prayer book.

[Isaak Dov Ber Markon]

LUZKI (Lucki), SIMHĀ ISAAC BEN MOSES (1716–1760), Karaite scholar and spiritual leader, known also as “the Karaites Rashi” and “Olam Zā’ir” (the latter meaning literally...
“microcosm” — acronym based on the gematria of his name). In the introduction to most of his works he mentioned that he was the son of Moses son of Simhah, son of Joseph son of Yeshu’a (died in Derazhne in 1649 during the Chmielnicki revolt), son of Simhah, son of Yeshu’a, son of Samuel, of a noble family. He was born in Lutsk and resided there until 1754, when he moved to Chufut-Qaleh by invitation of the rich patron Mordecai ben Berakhah, one of the heads of the local community, to become the head of the bet midrash after the demise of its head, Shmuel ben Josef *Kal’i. Luzki held that position until his death in Chufut-Qaleh.

Luzki copied many rare Karaite manuscripts and wrote about 24 books on various subjects. His treatises were devoted to such topics as Karaite halakhah (esp. laws of ritual slaughter, calendar) – Akedat Yizḥak (1525, INUL mic. 52308), Sha’arei Zedek (ITS mic. 9089, INUL mic. 95456), etc.; history of the split (hilluk) between Rabbanism and Karaism; and exegesis of Karaite texts.

His book Me’irat Einayim (1750; Ashdod, ed. Yosef Algamil, 2002) is a compilation of halakhah, exegesis, and historiography with a historical and bibliographical account of Karaism in its second part, Ner Zaddikim. His well-known treatise Orah Zaddikim (1757) is an abridgment of Ner Zaddikim (Orah Zaddikim, Vienna, 1830). It contains also important bibliographical material – a list of most of the Karaite books, the names of their authors and biographical details about some of them. Luzki introduces a traditional apologetic Karaite claim, that the split between Rabbanism and Karaism began during the First Temple period with the division of the Jewish state into two kingdoms. Some of Luzki’s works were devoted to Kabbalah, philosophy, and theology. According to his own assertion, he was forced to study Kabbalah from books, because the Rabbanites refused to teach him (see Livnat Sapir, ed. Yosef Algamil, Ashdod, 2002, 32–33). In his six treatises on Kabbalah (Sefer Bereshit (1746), Olam Zair (1748), Rekkhe Elohim (1750), Kevod Melakhim (1750), Sefer ha-Tapu’ah (1751) (Evr i, 170; [INUL mic. 13759]), Livnat Sapir (1756); Kevod Elohim (1751; Algamil ed., Ramle, 2000)) Luzki explains main concepts of the Lurianic Kabbalah, such as sephirat, divine names, and Hebrew letters. There is no innovation in these works, except for the very attempt to make Kabbalah acceptable to the Karaites. Luzki knew about modern science, but rejected it as speculative (Kevod Melakhim, ed. Yosef Algamil, Ashdod, 2002). He also wrote an exegetical work, Be’er Yizḥak (1737); Or ha-Hayyim (Yevpatoriya, 1847), an extensive commentary on the philosophical work by Aaron b. "Eliah of Nicomedia, Ez Hayyim; Toreti Zuhav im Nekuddot ha-Kesef; a guide to the commandments of Jewish law (Algamil ed., 1978), and many other works.

Luzki also composed liturgical poems and a number of prayers. Some of them were included in the Karaite siddur. Most of his views and his philosophical theology were based on medieval science, which he combined with Lurianic Kabbalah.

Luzki acquired his knowledge from numerous Rabbanite sources, which he often quoted in his works (e.g., Maimonides, Rashi, Saadiah Gaon, Ibn Ezra, Nahmanides, Joseph Albo, Pirke de-Rabbi Eliezer, Solomon ibn Gabirol, Judah Halevi, Hayyai Crescas, Prophat Duran, Yashar of Candia etc.). He continued the earlier Karaita trend of understanding most of Rabbanite literature as "the words of our forefathers." Luzki also cites such non-Jewish sources as Greek and Roman philosophers Plato, Aristotle, and Seneca; and such Arab thinkers as al-Ghazālī and al-Ṭabarzī.

**LUZ OF THE SPINE**, a bone which, according to the rabbinical reading, is to be found at the base of the spine, an addition to the 18 vertebrae. Called the luz she-ba-shidrah, it is indestructible and is the source of the future resurrection of the body. According to the Midrash, R. Joshua b. Hananiah demonstrated it to the Emperor Hadrian, in answer to his questions as to how the resurrection would take place. “They put it in water and it did not dissolve, in fire and it was not consumed, on a mill and it was not ground. They placed it on an anvil and struck it with a hammer. The anvil cracked and the hammer split, but it remained whole” (Eccl. R. 12:5, no. 1; Lev. R. 18:1). It is apparently the statement that the luz is an addition to the 18 vertebrae which is the basis of the statement of the Talmud that the “Birkat ha-Minim, the 19th blessing added to the original 18 of the daily ‘Amidah, corresponds to the luz of the spine (Ber. 288b). On the other hand, the enumeration of the bones of the body in the Mishnah (Oho. 1:8) lists only the 18 vertebrae and does not mention the luz. There is no scientific basis for this legend. It may be connected with the statement that in the second city of “Luz (Judg. 1:26), which was still identified as existing in talmudic times as a place where the “tekhelet, the blue dye for the ritual fringes (Num. 15:38), was manufactured, “the Angel of Death had no permission to pass through it, and when old men there become tired of life, they go outside the city to die.” In the reading is, “they are carried out beyond the city walls to die.” The belief in the indestructibility of the luz was linked with Ps. 34:21, which was translated, “He keeps all his bones; one of them cannot be broken.” The Church Fathers Origen and Jerome also regarded it as a pointer to resurrection, and this was accepted by non-Jewish scholars in the Middle Ages, and they spoke of the “Jews’ bone” (Judenknechlein) and identified it with the last vertebra of the spinal column.

[Louis Isaac Rabinowitz]

**LUZZATTI, LUIGI** (1841–1927), Italian statesman and economist; the first Jew to become prime minister of Italy. Born in Venice, he graduated in law from the University of Padua. Luzzatti’s devotion to economic and social studies arose from
his desire to improve the condition of the poor. He began by founding a mutual aid society for the gondoliers of Venice which was opposed by the Austrian police and in 1865 he was expelled from Venice as a revolutionary. He went to Milan where he became professor of economics at the Istituto Tecnico and then professor of constitutional law at the University of Padua (1867). In 1889 Luzzatti became general secretary of the Ministry of Agriculture, Industry, and Commerce. He was elected to Parliament in 1871 and sat continuously for 50 years until 1921 when he was raised to the Senate. He was minister of the treasury on three occasions (1891–92, 1896–98, and 1904–06) and together with Sidney *Sonnino reduced the Italian treasury deficit and secured the conversion of the public debt, thus restoring Italy's finances. In 1909 Luzzatti became minister of agriculture and was prime minister (1910). His ministry introduced numerous reforms aimed at winning popular support, but his right-wing administration was defeated by a combination of Liberals and Socialists the following year. An outstanding orator and expert economist, Luzzatti founded the Banca Popolare in Milan and founded the first cooperative store in Italy. He also negotiated many of Italy's principal commercial treaties. During World War I, Luzzatti established the National Foundation for the sons of peasants fallen in the war and in 1922 presented a plan for international currency stabilization. Though religiously nonobservant, he retained his Jewish sympathies and acted on behalf of oppressed European Jews, intervening through diplomatic channels for the granting of civic rights to the Jews of Romania. Luzzatti supported Zionist enterprises in Palestine, particularly the agricultural settlements which he much admired. Luzzatti's writings were collected under the title Opere di Luigi Luzzatti, including Grandi Italiani: grandi sacrifici per la patria (1924), and Dio nella libertà: studi sulle relazioni tra lo Stato e la Chiesa (1926; God in Freedom..., 1930), a collection of essays on religious liberty.

[Giorgio Romano]

LUZZATTO (sometimes Luzzatti), Italian family. The name is probably derived from Lausitz (Lat. Lusatia), from where according to tradition the family emigrated into Italy in the mid-15th century, settling in the Venetian territories. One of the seven Venetian synagogues bore the name "Scuola Luzzatto," and many members of the family are buried in the cemetery of the community on the Lido. Others lived in the towns and townships around Venice. The poet and kabbalist Moses Hayyim *Luzzatto derived from the Paduan branch of the family. In 1595 the two brothers Abraham and Benedetto Luzzatto, from Venice, settled in *San Daniele del Friuli. From this branch of the family were descended the brothers Ephraim *Luzzatto and Isaac *Luzzatto, both poets. Another descendant, Marco (Mordecai b. Nathan; 1720–1799), was an author and translator. All of his works are in manuscript, and include a Hebrew-Italian dictionary. When the Venetian government introduced its policy of excluding the Jews from the smaller places under its rule in 1777, the San Daniele community became dispersed. The scholarly carpenter Hezekiah Luzzatto settled in Trieste, where his son Samuel David *Luzzatto was born, the first historian of the family. His son Philoxenus (Filosonso; 1829–1854) was an Orientalist. He published many works, including studies on *Hisda'i ibn Shaprut, the Beta Israel (Falashas), and Hebrew inscriptions. The most recent member was Federico Luzzatto (1900–1961) who, after a distinguished career in the Italian navy, settled as a farmer in Ereẓ Israel, and did valuable research on Italian Jewish history. Today members of the Luzzatto family, sometimes no longer professing Judaism, are to be found in most important Italian cities and scattered throughout the world.

[Umberto (Moses David) Cassuto]

LUZZATTO, EPHRAIM (Angelo; 1729–1792), Italian Hebrew poet and physician. Ephraim was born in San Daniele del Friuli, son of Raffaello Luzzatto, scion of one of the earliest Jewish families who settled in San Daniele. Already his grandfather, Isacco, embraced the profession of physician. Ephraim studied medicine in Padua between 1742 and 1751. It seems that afterwards Ephraim practiced at Padua, Trieste, and Leghorn. Luzzatto's earliest record at the Bevis Marks Synagogue in London is for the year 1764, although it seems that he had arrived in England already in 1755. In 1779 Ephraim was appointed physician in London's Portuguese community hospital, Beth Holim. Luzzatto was well known in the medical world of 18th-century England. He appears in a very positive light in the memoirs of John Taylor, the oculist to George III. Like many of his contemporaries, Ephraim was known for his loose way of life. He frequented the gaming table as well as the theaters of Drury Lane. He had a quarrel with the actor Baddeley, whom, it seems, he cuckolded. In 1792 he left for a visit in Italy with his companion and lover Ann Davis. He died at Lausanne, and he was buried in the local burial ground.

Ephraim was also a poet. He collected his 55 poems, some of them written in Italy and some in England, Elieh Be-nei ha-Ne’urim ("These Are the Children of My Youth") in 1768 in London. The book was often republished, and influenced the poetry of M.I. *Lebovsohn and J.L. *Gordon. The collection includes occasional poems, moralistic poetry, and some erotica. Most important, however, are his love sonnets which have, for the period, a remarkable lyrical quality. These displays a variety of moods: indulgent, satirical, and passion-
ate. His poems reflect individual experience, and are thus an innovation and a precursor of the Hebrew lyric poetry of the Haskalah.

[Elieser Kagan / Samuele Rocca (2nd ed.)]

**LUZZATTO, GINO** (1878–1964), Italian Socialist and economic historian. Born in Padua, Luzzatto graduated in philosophy and law and then lectured in economic history successively at the universities of Bari, Trieste, and Venice. He held a professorship from 1910 to 1935 except for the years 1938–45, when he was suspended because of Italy’s antisemitic laws. Luzzatto supported the Socialist cause and was an indomitable opponent of Fascism. He was imprisoned by the authorities and on his release joined the underground resistance movement. During the period of antisemitic reaction in Italy his works were published under a pseudonym, Giuseppe Padovan, or with his name omitted. From 1946 to 1951 he was councilor and assessor of the municipality of Venice.

Luzzatto was active in Jewish affairs as vice president of the Venice Jewish community and president of the Italian "ORT. He also wrote several essays on the economic situation of Italian Jewish communities (e.g., *I banchieri ebrei in Urbino nell’età ducale, 1903*), as well as on the economy and the cooperative movement in Israel.

Luzzatto’s writings extended over half a century. His main economic works include *Storia del commercio dall’antichità al Rinascimento* (1914); *Storia economica dell’età moderna e contemporanea* (2 vols., 1934, 1948), and *Studi di storia economica veneziana* (1934) and various volumes of *Storia Economica d’Italia* (1949–63).

**BIBLIOGRAPHY:** *Studi in onore di Gino Luzzatto*, 4 vols. (1950); *Nuova Rivista Storica*, 49 (1965). [Giorgio Romano]

**LUZZATTO, ISAAC (Isacco)** (1730–1802), Italian poet and physician. Born in San Daniele del Friuli (Italy), Isaac, like his brother Ephraim *Luzzatto*, graduated in medicine at Padua (1747). Upon the expulsion of the Jews from San Daniele, as from other rural localities in the Venetian Republic (September 1777), he alone was allowed to remain with his family and practice there. In the summer of 1779, Luzzatto traveled to Vienna and successfully petitioned Maria Theresa to authorize his fellow townsman to continue living in the rural districts of Austria where they had established themselves. His *Toledot Yizhak*, a collection of poetry, was published in 1944 by D.J. Eckert and M. Wilensky, with a biography and notes. It includes Hebrew poems, mostly sonnets, on religious and ethical themes, conundrums, and a parody of a mishnaic treatise satirizing the customs of his community (*Mishnayot San Daniele, or Maseket Derekh Erez*). Luzzatto also translated into Hebrew *La Libertà a Nice*, by the Italian poet Metastasio, at the latter’s request. Isaac Luzzatto’s second wife, Tamar, was a sister of Hezekiah, father of Samuel David *Luzzatto*.

**LUZZATTO, JACOB BEN ISAAC** (16th century), rabbi and author. Luzzatto was born apparently in Safed where he spent his childhood. He later moved to Europe where he lived in Basle and probably also in Posen and Cracow. Luzzatto was the author of *Koftor va-Feraḥ* or *Yashresh Yaakov* (Basle, 1581; also called in another version *Kehillat Yaakov*, Salonioka, 1854), an attempt to defend talmudic aggadot attacked by the Christian censors as anti-Christian. Luzzatto explained the aggadot according to Rashi, the *tosafot*, Solomon b. Abraham Adret, and R. Nissim, citing also parallel readings in the Jerusalem Talmud, Midrashim, and kabbalistic works, giving them allegorical meanings. He was also probably the final corrector, after the censor, of the Basle Talmud (1578–81), since it contains some of his glosses. He edited (including a preface and index) the *Tâmei ha-Mitzvoth* (Basle, 1581) of Menahem Recanati and Solomon Molcho’s *Sefer ha-Mefôar* (Cracow, 1570). A copy of the latter in Luzzatto’s own handwriting is extant (Ms. Oxford, 1660). Luzzatto is identified with the Jacob b. Isaac Luzzatto of Posen who corrected the *Toseq Hayyim* (Cracow, n.d.) of Elijah Vidas. He probably died in Ereẓ Israel, though some believe he died in Venice.

[Umerto (Moses David) Cassuto]

**LUZZATTO, MOSES HAYYIM** (Heb. acronym RaMHaI; 1707–1746), kabbalist, writer of ethical works, rhetorician, logician, and Hebrew poet; leader of a group of religious thinkers who were mainly interested in the problems of redemption and messianism and probably tried to use their mystical knowledge to hasten the era of redemption. Luzzatto was born in Padua, *Italy, into one of the most important, oldest, and most respectable families in Italian Jewry (see *Luzzatto family*). Regarded as a genius from childhood, he knew Bible, Talmud, Midrash, halakhic literature, and classical languages and literature thoroughly. He also had an extensive knowledge of contemporary Italian culture. Luzzatto had a good scientific education, but his chief interest in Western culture was in literature. His main teachers were Isaac *Cantarini, who taught
him poetry and secular sciences, and Isaiah Bassan, who taught him mainly *Kabbalah and became his friend and protector. Luzzatto’s achievements, personality, and great knowledge of mysticism made him a leader of a group of young men in Padua, many of whom came there to study at the city’s famous university and thus represented the more open and aware element among young Jews in Italy and in Eastern Europe. The group was formed originally for collective study, but eventually a more active line was adopted.

Probably the most important event in Luzzatto’s personal life occurred in 1727. While he was immersed in kabbalistic speculations, he suddenly heard a divine voice, which he believed to be that of a *maggid (i.e., a divine power inclined to reveal heavenly secrets to human beings). From that moment, the Maggid spoke to Luzzatto frequently and he noted these revelations, which comprised his kabbalistic writings for a few years. Most of them have not survived; only a few are known and have been published. Luzzatto used the maggid’s revelations in his teachings to the members of the group around him, which by then had become a secret group dealing in messianic speculations and activity. One of the members of this group, Jekuthiel *Gordon, described in some letters the activities and character of the group. One of these letters fell into the hands of Moses *Hagiz, who believed it to be a description of a typical Shabbatean heretical group. Hagiz addressed the rabbis of Venice, warning them of the danger he believed this activity signified, and the rabbis turned to Isaiah Bassan, Luzzatto’s teacher, who tried to defend his beloved pupil. A vehement controversy followed, in which many of the leading rabbis of Italy took part, and numerous personal attacks were made on Luzzatto. It was believed that only a perfect scholar and kabbalist could receive a revelation from a maggid, and many thought that the young, unmarried Luzzatto did not measure up to that standard. According to a later testimony, a search was made at his home, and evidence of dealings in magic was uncovered. After a long struggle, Luzzatto yielded (1730) and agreed to give his kabbalistic writings to Bassan for safekeeping, to refrain from writing the maggid’s revelations (at least while out of the Holy Land), and from teaching Kabbalah.

This compromise did not resolve the conflict. In 1731 Luzzatto married. The continuing controversy in Italy forced him to leave for Amsterdam in 1735. While breaking his journey in Frankfurt, he asked for the protection of Jacob ha-Kohen. The latter, instead of helping him, used threats to make Luzzatto sign a statement denouncing the maggid’s revelations and his kabbalistic teachings as false (the rabbis of Venice had meanwhile announced that these writings should be burned). Luzzatto’s writings were handed over to Jacob ha-Kohen, who probably burned some of them and hid the rest. Settling in Amsterdam, where he was left in peace, Luzzatto wrote on many subjects, but he did not openly teach Kabbalah. In 1743 he went to Erez Israel, probably in order to escape from the prohibition on teaching Kabbalah. He lived a short time in Acre and died there, with his family, in a plague.

Luzzatto’s Messianic Doctrine
When Luzzatto formulated his messianic doctrine, the circle around him began actively to seek messianic redemption. The first “code” of the group, which has survived (signed by the members in 1731), includes ten laws, dealing with the methods of study, the relationship between the members and Luzzatto, and a declaration of the group’s aim: “That this study [or speculation] will not be regarded as a private tikkun of the members nor will it be atonement for personal sins, but its only kavvanah will be wholly dedicated to the tikkun of the holy Shekhinah and all of Israel.” Seven members had signed this “code,” including Jekuthiel Gordon. Other members joined later, among them Luzzatto’s brother and Moses David *Valle, who became one of the group’s leaders. He was the writer of the group, author of a voluminous commentary on the Bible, which is extant in a few manuscripts. The members of this group believed that the process of redemption had already begun, and that it was going to reach its culmination in a few years. Their saintly way of life and kabbalistic speculations were intended to facilitate this process. Moreover, they were sure that they, personally, had an important part to play in the process.

The writings of Moses David Valle seem to hint that Valle saw himself as the Messiah, son of David. Jekuthiel assumed the role of Serayah of the tribe of Dan, who was to be the commander of Israel’s army in the messianic era. Other messianic roles were distributed among the other members. Luzzatto’s own role becomes clear from a unique document preserved in his own handwriting – his commentary on his own ketubah, which he wrote at the time of his marriage. This document proves that Luzzatto understood his marriage to signify a mystical event in the heavenly worlds, the union between Moses and Zipporah (which happened to be the name of his wife), who represent the elements of masculinity and femininity in the divine realm. The earthly marriage ceremony he understood as only a symbol of the redemption of the Shekhinah and her union with her divine husband. It is evident, therefore, that Luzzatto saw himself as a reincarnation of Moses, the man who rescued his people from the exile in Egypt and would redeem them from this last galut as well.

Luzzatto’s opponents understood the messianic nature of his circle, and were afraid of the Shabbatean overtones which such activity might contain. The problem of whether Luzzatto’s ideas and activities can be called “Shabbatean” or not is unsolved. Luzzatto himself admitted to being influenced by the writings of “Shabbetai Zevi’s “prophet,” *Nathan of Gaza. However, he maintained that the good element in them should be separated from the heretical context. In some of Luzzatto’s kabbalistic ideas, elements of Shabbatean influence can be found, for he maintained that the Messiah must descend to the realm of Satan, the Shabbatean explanation for their Messiah’s conversion. However, Luzzatto insisted that this should not involve the Messiah’s earthly body; it should be a spiritual experience only, involving no sin. Luzzatto was also moderately inclined toward the Shabbatean idea that a sin might
serve a holy purpose, but he always made radical changes in the Shabbatean ideas which avoided their heretical and antinomian nature.

His Treatises on Logic
A messianic figure, a man who conversed with the maggid, Luzzatto was also well versed in logic, an art traditionally seen as the high road to philosophy or its favored instrument (organon). Logic was for him the centerpiece, the indispensable tool to mold the spirit and to search for truth. While the forest grows wild, knowledge acquired through logic is like a “fair garden with well-defined alleys and well-drawn groves.” Circa 1740, while residing in Amsterdam, Luzzatto penned two treatises, Sefer ha-Higgayon (“Treatise on Logic”) and Derekh Tzvunot (“The Way of Reason”). The first is a real primer on logic. Luzzatto does not specifically quote his sources and merely states that he found them in earlier works written in other languages than Hebrew. It seems that he knew very well the logical works of Aristotle, the Millot ha-Higgayon of Maimonides, and the corpus of medieval Hebrew logic (Joseph Kaspi, Gersonides, Moses Narboni). The influence of some Renaissance logicians, such as French Humanist Pierre de la Ramée (Petrus Ramus, 1515–1572), can also be perceived.

Following the Aristotelian formula, in his treatises Luzzatto deals successively with the three modes of reasoning: “Categories,” or “Logical Terms,” propositions, and syllogisms. He also postulates two methodological rules: order (seder) or gradation (hadragah), and distinction – havshanah, both rules being complementary. Luzzatto uses a vocabulary very similar to that of Descartes in his Rules for the direction of the mind: whoever follows order can “keep himself on the straight path without straying” (Ways of Reasons, p. 4). The words “order” and “gradation” have the same meaning in his terminology. To respect order is to proceed gradually, while both rules being complementary. Luzzatto uses a vocabulary very similar to that of Descartes in his Rules for the direction of the mind: whoever follows order can “keep himself on the straight path without straying” (Ways of Reasons, p. 4). The words “order” and “gradation” have the same meaning in his terminology. To respect order is to proceed gradually, while following the internal hierarchy of reality. Therefore, one must follow the gradation rule, which entails giving priority to general principles (kelalim), to species and kinds, to specific details (peratim), to individuals. To illustrate this rule, Luzzatto takes the classical example of the tree. Since, according to the logical order, principles come before details, the roots (shorashim) of the tree come before the branches (anafim). Instead of floundering amidst a flurry of details, instead of trying to embrace the infinite diversity of beings and things, the mind must strive to perceive the relatively small number of principles involved. The rule of distinction is the ability to seize what is specific to each being and to each thing, together with the link uniting each and every one of them. In order to differentiate properly, it is necessary to follow gradation, the hierarchical order, by discerning the place and the status of each of the elements of reality: whether it is a principle and a root or a detail and a branch.

Derekh Tzvunot, the second work, is a handbook of talmudic logic in which Luzzatto reviews the reasoning processes used by the Sages. He sees logic as the one and only propaedeutic system to study Talmud, this “vast ocean set before us, whose arguments are mighty waves, whose laws roll forth rising to the heavens and plunging to the depths.” Structurally, Derekh Tzvunot is identical to Sefer ha-Higgayon. Here again are the three parts of logic – categories, propositions, syllogisms – as well as the notions of gradation and distinction. What makes this work unique is the way Luzzatto uses these reasoning processes to unwind the tangle of talmudic discussions (mahlokot) and to identify clearly halakhot and other legal principles.

The fact that logic, which is a rational method, and Kabbalah are both at the heart of the work of Luzzatto has puzzled many commentators. By focusing only on the rather perfunctory contrast between rationalism and irrationalism, philosophy and mysticism, they often tend to see the link between the two domains as a mere product of proximity. A closer study of the texts helps to correct the conventional picture. It pinpoints many expressions of the close link between “the art of logic” and the “science of the Kabbalah.” Luzzatto himself explicitly postulates that link by making logic the necessary preparation for accessing the “science of the divine.” Furthermore, the logical rules of gradation and distinction play a central role in the Kabbalah as he sees it, and they are invested there with an ontological significance.

His Kabbalistic Writings
Commentators on Luzzatto’s writings in the field of Kabbalah usually divide them in two groups: some are general works describing central kabbalistic ideas and emphasizing the importance of Kabbalah for attaining full religious life; the other writings convey his own original kabbalistic concepts. Most of the latter works were written under the influence of the maggid. In his correspondence, Luzzatto himself differentiates between two elements: the commentaries (perushim) in which he interprets the Zohar and the Lurianic Kabbalah, thereby perpetuating kabbalistic tradition; and the new writings (hiḥburim ḥadashim) in which he expounds his original vision of “divine unity” where he gives it a sense which is both ethical and historiosophical. In fact the elements of commentary and innovation are closely linked in the kabbalistic writings of Luzzatto. Luzzatto’s outstanding kabbalistic work is Kelah (= 138) Pithei Ḥokmah, a systematic exposition of the Lurianic Kabbalah. There Luzzatto demonstrates the task which he has undertaken in the history of the Kabbalah: to reveal the internal meaning (nimshal) of the paradigms (meshalim) so numerous in the Lurianic writings, to which they tend to give an anthropomorphic coloring. Luzzatto often quotes from the works of Maimonides; in the same spirit he believes that it will be thus possible to get rid of the main cause of error concerning what is divine: materialization (hagshamah). Rejecting an interpretation which would accept the Lurianic descriptions literally (ki-feshuto) and in a materialistic sense, is for Luzzatto also part of the fight he is leading against Shabbateanism.

Kelah Pithei Ḥokmah is the perfect illustration of the close connection between logic and Kabbalah in the works
of Luzzatto. The very structure of that treatise is built on the gradation rule. Each petah – door or chapter – opens with a general principle (kelal), the details or particular aspects of which are then exposed. Before turning to commentary and explaining the themes which are unique to the Lurianic Kabbalah (such as zimzum), Luzzatto innovates by exposing the principle on which his own kabbalistic doctrine is based: divine unity conceived both as the origin and the finality of creation. He uses the distinction rule to delimit with precision the object of Kabbalah, and details what he means by “divine” (Elohub). He thus refines a principle which was already present in the works of his predecessors, such as Menahem Azarya de Fano, while giving a completely novel interpretation of zimzum, the act of contraction or withdrawal of the divine infinity (Ein-Sof) which preceded the emanation of sefirot. To the traditional division between divine essence and divine will Luzzatto adds a new distinction within the will, to stress two aspects: one, infinite (the Ein-Sof) and the other, finite (the sefirot). Thus is the zimzum assimilated to a movement tending to slant and orient the infinite aspect of the will toward its finite aspect, and hence toward the world and its creatures. This movement, which is achieved within the very core of divine will, is perceived by Luzzatto in an ethical sense, that is, as the wish to do good to another than the self (hatavah). A man of his time, Luzzatto takes this definition of zimzum as a stepping stone for a whole new philosophy of history. He postulates that human history has a meaning beyond the seemingly disorderly course of events, and, in his view, it is moving according to divine direction (hanhagah) toward a finality which is no other but “doing good” (hatavah). He develops a true dialectic process according to which historical proceedings comprise two dimensions, the one being revealed and visible, corresponding to the factual events where evil is manifesting itself in all its power, and the other secret and invisible, consisting in the inescapable progress of mankind toward that ultimate end which is the “perfect good.”

(Luzzatto’s interpretation, by the way, was widely accepted, and even the early Hasidim adopted it.) The introduction to this work, also printed separately, Derekh Ez ha-Hayyim, explains the religious merits of kabbalistic study. This small work was widely read and accepted. Another work belonging to the same category is Hoker u-Mekubbal (Maamar ha-Vikku’ah), designed as a dialogue between a philosopher and a Lurianic kabbalist. In this work, Luzzatto answers, point by point, many criticisms against the Kabbalah which were current among the rationalists in Italy, and tries to prove that only Lurianic Kabbalah can give a satisfactory answer to Judaism’s religious problems.

The most important of the writings influenced by the maggid was the Zohar Tinyana, which was written in Aramaic, the language of the original *Zohar. Most of the work is now lost; parts were printed as Razin Genizin, Megillat Setarim, and Tikkunin Hadashim (Tikkunei Zohar being one of the later parts of the original Zohar). Although Luzzatto used the Zohar’s language and literary form, his main and almost sole idea expressed and studied in these works was the idea of the redemption. Luzzatto employed older kabbalistic ideas about the redemption but gave them a new form and new structure. Detailed study was devoted to the duties of the various messianic figures in the process of the redemption – the Messiah son of Joseph, Messiah son of David, and Moses. Luzzatto studied the function of the various heavenly Sefirot in this process, especially the third Sefirah, Binah, whose revelation and influence on this world would bring about the culmination of the redemption. Recently, a part of Luzzatto’s diary describing the first revelations of the maggid was discovered, and the theological problems discussed there are the same as those in the other known parts of the Zohar Tinyana. Problems of the redemption and the history and adventures of the Messiah’s soul are also dealt with in Luzzatto’s short treatises, Addir ba-Marom and Ma’amor ha-Gé’ullah.

Luzzatto’s Ethical Works
Long after his death, and after the controversy around him had subsided, Luzzatto became a saint in the eyes of most of Eastern European Jewry. This did not come about because of his kabbalistic writings, but because of his major works on ethics. His chief work in this field, and his best-known book, is Mesillat Yesharim, written in Amsterdam (English translation Mesillat Yesharim: The Path of the Upright by M.M. Kaplan with Hebrew text and introduction, 1936, 19642), which uses as a framework the famous baraita of R. *Phinehas b. Jair (Sot. 9:15). Luzzatto instructs the reader in the path of ascent from the forsaking of sinful ways, through moral behavior, to the peak of prophecy and contact with the divine spirit. The popularity of the book resulted from its systematic exposition of every problem which might prevent the attainment of religious and ethical perfection. The author explains the importance and meaning of every step on the way, describes the means by which it can be made, and warns the reader of the dangers which might obstruct his way. Luzzatto wrote the book in a simple, rabbinic style, using some philosophical terms, but no kabbalistic element is evident, though detailed analysis reveals some underlying kabbalistic assumptions. This work was printed many times, translated into many languages, and alongside *Bahya ibn Paquda’s Hovot ha-Levavot, became the most influential ethical work in Judaism. In some yeshivot in Eastern Europe where the book was studied, pupils were expected to know it by heart.

In other ethical and theosophical works Luzzatto studied some basic theological questions, using philosophical language, although the underlying kabbalistic approach is apparent. In his Derekh ha-Shem and Da’at Tevunot, Luzzatto studied in detail the problems of the aim of creation, Adam’s sin, the ways of divine justice, the relationship and mutual dependence between the just and the sinner, the next world and the world of the redemption, etc., alongside discussions of everyday problems of religious and ethical behavior – prayer, the Commandments, the ways to overcome evil desires, etc. All his works in this field were widely read and accepted, and
contributed to his metamorphosis to sage and saint, instead of a controversial figure suspected of Shabbateanism.

Poetry and Letters
Luzzatto wrote numerous poetical works. Many of them were lost, and many are still in manuscript. A collection of his poems, published by S. Ginzburg (1945), includes mainly works written in honor or in memory of friends or for weddings. His talent is revealed through his rich and flowing imagery, and his use of the Hebrew language is masterly. These poems were written according to the ancient tradition of Hebrew poetry in Italy, which relied on the traditions of Hebrew poetry in both Muslim Spain and Renaissance Italy. Besides these, Luzzatto's published poems include a few religious pieces, all of which contain kabbalistic and messianic overtones; sometimes he added a mystical commentary to his own religious poems. He also wrote many prayers, and it seems that he wrote 150 religious poems in the form of the Psalms, but this work has not survived.

However, Luzzatto's most famous poetic works are his verse dramas. His first play, Maaseh Shimshon, was written before he was 20 years old to exemplify the rhetorical laws he propounded in his Leshon Limmudim, a treatise on rhetoric, in which he made use of his knowledge of classical and contemporary Italian literature. It seems that Luzzatto felt close to Samson, his tragic hero, possibly for messianic reasons, and that he gave the play some poetic depth. His second and most important play, Migdal Oz, was written while he was still in Italy. It was composed in the form of contemporary Italian pastoral drama, but Luzzatto gave the plot such Jewish overtones that some critics think that the play is in fact a kabbalistic allegory. His third and last play, La-Yesharim Tehillah, written in Amsterdam, is one of Luzzatto's last works. The play is an allegory, which probably gives expression to the feelings of persecution he experienced at the time of controversy around him, and at the same time reflects his belief in the ultimate victory of the just. In Migdal Oz and La-Yesharim Tehillah, Luzzatto used commonplace love plots to give expression to poetic sentiments far beyond the conventional plots. Luzzatto's plays were accepted and admired by Hebrew writers and intellectuals in Italy and Western Europe, and many were influenced by them. Luzzatto's works, especially Migdal Oz, exercised a strong influence on Haskalah literature, especially its poetry and drama. These maskilim, who were inimical to the kabbalists, were so impressed by the plays that they forgot Luzzatto's kabbalistic writings and messianic aspirations and adopted him as if he were one of their own.

A vast amount of Luzzatto's personal writings was discovered and printed by S. Ginzburg. This collection includes many of Luzzatto's letters, as well as letters addressed to him, or concerning his activities and the controversy around him. The collection includes his personal revealing letters to his teacher and defender, Isaiah Bassan. Among other documents, this collection includes the texts of the regulations of Luzzatto's circle, texts of the accusations against him, etc. The details make possible a chronological reconstruction of Luzzatto's bibliography, though many of the works mentioned are unknown today.

Kinat ha-Shem Zevaiot, a polemical work of a personal nature, was written in answer to the accusation that his theolo- gies and activities were Shabbatean in nature. A portion of this work was printed in Koenigsberg in 1862. Luzzatto clearly expresses his negative attitude toward Shabbatean heresy and antinomian practices, but he does not deny that there is truth in some Shabbatean kabbalistic ideas. However, he explains that these should be studied with care, to separate “the fruit from the husk.”

Luzzatto's place in the history of Hebrew literature was the subject of a long argument, which still persists. Some scholars (e.g., "Lachover), seeing him as the first "modern" Hebrew writer, begin the history of Hebrew modern literature with the study of his dramatic poems. Others maintain that, as modern Hebrew literature was a revolutionary development that rebelled against the religious character of medieval literature, Luzzatto cannot be included among its creators, because of his strong ties with such past ideologies as Kabbalah and messianism. Yet others, however, see the development of modern Hebrew literature as an evolutionary process, which never broke completely from traditional ideas and concepts. These regard Luzzatto's works as a compromise between old and new, signifying the start of a new era in Hebrew literature.

It cannot be doubted that Luzzatto's works as a whole are a typical product of 18th-century culture: his Kabbalah was Lurianic Kabbalah, which was the accepted theology of the time; his strongest emotions were aroused by messianic problems, in common with most of the more aware thinkers of his age; a contemporary of Leibniz, he felt concerned by the problems of theodicy as well as of historiosophy; and he accepted the conventions of 18th-century Italian literature. However, Luzzatto's work is unique for at least three reasons. The first is the unique connection he achieved between such apparently foreign subject matters as rhetoric and logic on the one hand, and Kabbalah on the other. Through this encyclopedic aspect he takes his place among the great Italian thinkers of the Renaissance, from Pico de la Mirandola and Marsile Ficino to Johann Alemano and Elijah del Medigo. The second is that, unlike previous Jewish-Italian thinkers, such as Leone "Modena or Azariah de "Rossi, Luzzatto did not doubt the fundamental Jewish beliefs, despite his close connections with Italian secular culture. He could be, at the same time, both a Jewish traditionalist and a writer of dramatic poems in the Italian manner. Thirdly, unlike any other writer of the 18th century, Luzzatto, though persecuted when alive, was accepted by the three main 19th-century Jewish movements, which were fighting bitterly among themselves: the Hasidim saw him as a saintly kabbalist and used some of his kabbalistic ideas; their opponents, the Mitnaggedim, regarded his ethical works as the clearest pointers toward a Jewish ethical, rabbinic way of life; and the Haskalah writers saw Luzzatto as a progenitor of their own movement, and his works as the beginning of He-
brew aesthetic writing. Every facet of Luzzatto's work, therefore, remained alive and creative in the divided and confused Jewish culture of the 19th century.

[Joseph Dan / Joelle Hansel (2nd ed.)]

**LUZZATTO, SAMUEL DAVID**

(often referred to by the acronym of *ShaDaL* or *ShEdaL*; 1800–1865), Italian scholar, philosopher, Bible commentator, and translator. His father, Hezekiah, was an artisan at Trieste and a scholarly Jew who could claim descent from a long line of scholars (see *Luzzatto* family). He wrote his first Hebrew poem at the age of nine. His mother died when he was 13 and his father’s pecuniary status declined seriously making it necessary for the young Luzzatto to assist his father in his work. His own wife died after a long illness, and he eventually married her sister. He survived two of his children – one, Philoxenus (or Filosseno), had been a young man of especially great promise. Samuel David’s translation of the Ashkenazi prayer book into Italian appeared in 1821/22, and that of the Italian rite in 1829. He established a regular correspondence with the Jewish scholar, Isaac Samuel *Reggio*, and through the efforts of the latter, Luzzatto was appointed professor of the newly established rabbinical college of Padua in 1829. There he spent the rest of his life teaching Bible, philology, philosophy, and Jewish history. His versatility and the scope of his learning are best seen in the mass of letters written to all the outstanding Jewish savants of the day – to *Geiger*, *Zunz*, *Rapoport*, *Steinschneider*, and others. Almost 700 of these letters were published and many ran into several pages; some are in themselves dissertations. He wrote a Hebrew commentary on the Pentateuch (5 vols., with Italian translation, 1871–76; new ed. by P. Schlesinger, 1965) and the *Hafifrot*, on the Book of Isaiah (together with a translation into Italian, 1845–97; new ed. by P. Schlesinger and completed by A.M. Hove, 1970), on Jeremiah, Ezekiel, Proverbs, and Job and a long dissertation in Hebrew on Ecclesiastes (1876; repr. 1969). It is in this type of work that his attitude to Judaism is revealed. He was a traditionalist and had a great veneration for Rashi in particular. His antagonism toward Abraham Ibn Ezra is asserted boldly in his letters and Bible commentaries. He maintained that his own dislike for Ibn Ezra did not stem so much from the latter’s departure from tradition as from his insincerity (see: Letters nos. 83, 242, 272, 275, and 543). Luzzatto had his grievances against Maimonides too, but in the case of the latter his language is more restrained. Luzzatto, as he himself wrote, divided seekers of truth into two groups – those who follow Rashi and Samuel b. Meir and those who are the disciples of Maimonides and Ibn Ezra (Letters nos. 272 and 275). His own commentary on the Pentateuch is not fundamentalist, and whereas he himself did not take the first chapters of Genesis literally, he criticizes those who treat them as an allegory (Letters no. 83). He believed them to be meant as model lessons from which we are to derive moral and ethical values. In his writings, he readily quotes the views of his pupils, mentioning their names when so doing. Although denying the Solomonic authorship of Ecclesiastes he upholds the unity of the Book of Isaiah. He maintained a firm belief in revelation and treated the text of the Torah with sacred regard although he occasionally allowed himself to depart from the traditional phrasing of the words as reflected in the Masorah and the Talmud. A natural corollary of his attitude to the classical authorities is Luzzatto’s high regard for the Aramaic translation of Onkelos to which he devoted his *Ohev Ger* (the “Lover of the Proselyte,” 1830), an allusion to the conversion of Onkelos to Judaism. He named his son Philoxenus (the Latin equivalent of *Ohev Ger*). He divided the work into two parts. The first demonstrates the method of Onkelos when the latter seems to depart from the literal translation of a text, especially when he wants to avoid anthropomorphisms. The second part of *Ohev Ger* deals with matters of text and is technical.

Luzzatto’s philosophy may be compared with that of Judah Halevi. “I esteem Maimonides very greatly” he wrote (Letters no. 83), “but Moses the Lawgiver never dreamed of philosophy and the dreams of Aristotle.” He lists his objections to the *Guide* of Maimonides and to some remarks in *Sefer ha-Madda* and to others in Maimonides’ commentary on *Mishnah Sanhedrin* (ch. *Helek*) and in the *Shemonah Perekim* (commentary on *Avot*). He was opposed to Maimonides’ enumeration and formulation of the 13 principles of faith and his condemnation of those who did not subscribe to these (Letters no. 238). Luzzatto’s attitude to Greek philosophy was negative and even hostile, and his negative views on Kabbalah are found in his *Vikku’ah al Hokhmot ha-Kabbalah* (1852). He blames rationalistic philosophy for having brought about – as a reaction – the flowering of Kabbalah and mysticism. As for the Zohar, he rejected the authorship of Simeon b. Yohai as did Jacob *Emden and Leone “Modena before him, and Luzzatto was apparently influenced by the latter’s Ari Nohem (1840). Luzzatto’s religious thinking does not rest at the rejection of “atticism” – Hellenism – as diametrically opposed to Judaism, and of a moral rationalism as represented in the Middle Ages by Maimonides and in modern times by Kant. For him the idolizing of “progress” and the utilitarianism which speaks from the craving for (outer but not inner) emancipation of modern Jewry were the very antithesis of free Jewish thinking and living. He had nothing but contempt for the rotten European civilization. In his theological writings, most of them
published lectures such as *Teologia Morale israelitica* (1862; English translation by S. Morais in *Jewish Index*, 1872) and in his *Yesodei ha-Torah* (1880; repr. 1947; English translation by N.H. Rosenblum, *Foundations of the Torah*, 1965) as well as in his letters, he develops his own positive system of Jewish theology and religious philosophy, based on the firm belief in revelation, tradition, and the election of Israel. These he wants to see protected from the prevailing winds of Christian-Protestant criticism and an evolutionary historical relativism. The Torah and the Commandments must not be rationalized and submitted to such relativism, nor can one separate morality from religion. They both flow from the same innate human quality of *hemlah* (empathy). The Jewish people is both the carrier and guarantor of this revealed, national religion which embodies its own universalism and humanitarianism. Hebrew language and literature, the main object of Luzzatto’s scholarly work, help to foster and deepen Jewish spirit and loyalties. This romantic and nationalistic conception of Judaism embraces a sort of religious Zionism, while rejecting the “false holiness” of the idle *halakhah* Jew. Luzzatto wants the youth of the *yishuv* to return to the soil and the soil of the Holy Land to its former productivity. This conception is apparent in his liturgical researches, in particular by his edition of the *Mahzor Roma* which he provided with a comprehensive introduction (1856; new edition of the introduction by E.D. Goldschmidt, 1966).

Luzzatto also edited the medieval chronicle *Seder Tan-naim ve-Amora'im* (1839); and the prolegomena to an edition of *Joseph ha-Kohen’s Emek ha-Bakha* (1852), ostensibly by M. Letteris, are essentially Luzzatto’s work. He also did pioneering work in his editions of Judah Halevi’s poetry (*Betulat Bat Yehudah*, 1840; *Diwan Rabbi Judah Halevi*, 1, 1864) and his anthology of medieval Hebrew poetry (*Tal Orot*, 1881) and thus contributed greatly to the revival of interest in medieval Hebrew poetry. His own Hebrew poetry had great merit. The same intimate acquaintance with and fine feeling for the Hebrew language, the result of intensive biblical studies, helped Luzzatto with his linguistic and grammatical researches (see *Prolegomeni ad una grammatica ragionata della lingua ebraica* (1836; *Prolegomena to a Grammar of the Hebrew Language*, 1896); *Grammatica della lingua ebraica* (1853–69; *Ketavim Ivriyyim*, 1966); *Elementi grammaticali del caldeo biblico*… (1865; *Grammar of the Biblical Chaldaic Language*,…, 1876)). Of bibliographical importance are his *Opere del De Rossi* (1868) and *Yad Yosef* (1864), a catalog of the Almanzi collection. Luzzatto also published *Avnei Zikkaron*, on the Hebrew tombstone inscriptions of Toledo (1841), being the first to treat epitaphs as an important primary source for Jewish historical research. An autobiography of Luzzatto appeared in 1882 (Hebrew in *Ha-Maggid*, 1882; German, 1882), and memorial volumes in Italian (*Commemorazione…*, 1901) and in German (*Luzzatto-Gedenkbuch*, 1900). There are a number of collections of his articles such as *Beit ha-Ozar* (3 vols., 1847, 1888, 1889) and *Peninei Shadal* (1888); but much of his scholarly work remains scattered over various periodicals, pamphlets, works of other authors, and much has never been published. An edition of all his Hebrew writings was begun in 1913 (*Ketavim Ivriyyim*) but was not completed.

[Alexander Tobias]

**LUZZATTO, SIMONE BEN ISAAC SIMHAIH** (1583–1663), Italian rabbi and author. He was born, probably in Venice, of a well-to-do family of German origin already established in the region for many generations. Luzzatto was ordained in 1606 and served as rabbi in Venice for 57 years. The affluent circumstances of his family made it unnecessary for him to waste his energies in miscellaneous work to supplement his livelihood, as was the case with his contemporary and associate Leon *Modena, after whose death in 1648 he became senior rabbi of the community. Unlike Modena he objected to the presence of gentiles at his sermons in the synagogue, though he had some non-Jewish pupils, including, for a month in 1646, the French mystic Charles de Valliquierville. Luzzatto was one of seven members of the *yeshivah kelalit* of Venice. He became head of this rabbinic council in 1648, after the death of Modena. Shortly after this, he became involved in a drawn-out dispute with the lay leaders of the community over the question of rabbinical ordination, on which he insisted in having a deciding voice. Among his responsa was one (no longer preserved) which permitted travel by gondola in Venice on the Sabbath. His work *Socrate ovvero dell’umano sapere*, dedicated to the Doge (1651), written in dialogue form with Socrates as the principle interlocutor, is an attempt to demonstrate that human reason is impotent unless assisted by revelation. There is nothing specifically Jewish about this work, which shows a considerable degree of competence in philosophy and in classical literature (though not in Greek), and is a remarkable exemplification of the degree of culture prevailing at this time in the Italian ghettos. His most important publication, however, was his work *Discorso circa il stato de gli hebrei et in particular dimoranti nell’inclita città di Venetia* (1638), in which he put forward reasoned arguments for the toleration of the Jews especially on economic grounds, given their role in international trade. He argued that they performed functions that could be achieved by no other element, while on the other hand, unlike foreign merchants, they were completely under the control of the government and would not transfer their profits outside the state. This was the first apologetic work of its type and the first in which economic arguments were brought forward systematically in order to advocate the toleration of the Jews, their retention of residential rights, and their unique commercial
privileges. It is difficult to know if Luzzatto actually believed all of his arguments or just used them to defend the Jews of Venice and to strengthen his case. Of note is his refutation of Tacitus’ view of the Jews. Indeed, since he devotes a major portion of the Discorso to his argument, it must be viewed as a rebuttal of contemporary political thought even more than a work of apologetics. Luzzatto emphasizes the decisive role of the Jewish community of Venice in the development of the city. A reply to the work was published by the Christian priest Melchior Palontritti under the title Breve Risposta a Simone Luzzatto (1642). A Hebrew translation was published in Jerusalem in 1950; and an English translation was prepared early in the 18th century by the English deist John “Toland (though not published), who used Luzzatto’s arguments lavishly in his book of 1714 advocating the naturalization of the Jews. It is now known that the book was written at great speed when a dangerous crisis developed for the Venetian Jews owing to the discovery of large-scale commercial frauds in which some leading families were implicated.

Luzzatto also wrote an Italian treatise in which he vindicated the authority of tradition and of the Oral Law (now lost, but referred to by Samuel Aboab in his responsa, Devar Shimuel (1702), n. 152). He is said to have also written Trattato delle opinioni o dogmi degli ebrei e dei riti loro principali (Puerst, Bibliotheca, 284) and, together with Leone de Modena, a work on the Karaites (Wolff, Bibliotheca, vol. 3, 347). He is also reputed to have had considerable competence as a mathematician. Luzzatto’s pupil, the apologist Giulio Morosini, reports in his Vita della Fede several instances of his liberal mind and outspokenness in matters of religion, shown for example when in 1649 he arbitrated a dispute between two former Marranos about the “seventy weeks” of Daniel. He is also said to have spoken contemptuously of the Kabbalah and to have disbelieved in the preservation of the Lost Ten Tribes. Christian contemporaries, misunderstanding his freedom of spirit, reported that he was prevented by force from embracing Christianity on his deathbed.

[Cecil Roth / David Derovan (2nd ed.)]
buried there. From 1600 to 1606 there was a violent conflict between the Jews and the Jesuits over the synagogue which had been constructed (in late Gothic style, after the plan of an Italian architect) by the philanthropist Isaac b. Nahman (founder of the famous "Nachmanovich family) in 1582. The Jesuits claimed that the land on which the synagogue was constructed was their property. The Jews were victorious and the synagogue, which was named the Taz (or "Di Gildene Roiz") after one of the daughters of the Nachmanovich family who died mysteriously), remained standing until the Holocaust. Lvov was the center of "Red Russia" (Galicia, i.e., Western Ukraine) and Podolia-Bratslav region, and its community leaders represented the whole region at the "Councils of the Lands. By the electoral system of the community, a limited number of the wealthy descendants of noble families were assured of long periods in office.

From 1684 to 1772
In the "Chmielnicki massacres of 1648–49 and the successive wars of the second half of the 17th and early 18th century, the Jews of Lvov, especially those who lived outside the town, suffered great losses in life and property. Their houses were at the mercy of the enemy and they were compelled to seek refuge within the town. Generally the Jews played an active part in the defense of the town. During Chmielnicki's siege in 1648 and the Russian siege of 1655, the attackers demanded that the Jews be delivered into their hands. Meeting with the refusal of the townsman, they settled for a large ransom. During the whole of this period, the townsman's struggle against the control of trades and crafts by the Jews continued. The latter's efforts to expand their quarter came under special attack. The Jewish quarter consisted of only 49 building lots and the houses built on them were too small to accommodate the established inhabitants and the refugees from many wars. All the efforts of the townsman to confine the Jews to their quarter and to restrict their trade were in vain, for the nobles usually supported the Jews. At this time the Jews also opened shops in the center of town. During this period, war damages, ransom payments, the costs of court cases, the necessity to rebuild damaged houses, and the decline of Lvov in favor of other commercial centers brought about severe economic crises. In 1727 the community owed the municipality 438,410 zlotys, while in 1765 their debts to the noblemen, the clergy, and the religious orders amounted to 381,999 zlotys, and those to the municipality to 820,409 zlotys. Although direct and indirect communal taxes were raised the community was unable to become solvent. According to the census of 1764/65, 6,142 Jews lived in Lvov – over two-thirds of them outside the town walls – and only 57 of the 3,060 men were self-supporting.

When Shabbateanism began to spread in Poland, David Halevi (d. 1667), *av bet din* of the congregation outside the walls, sent his son and stepson to *Shabbetai Zevi; they returned his enthusiastic supporters. After Shabbetai Zevi's apostasy, his adherents in Lvov were excommunicated (1722).

In 1754 Leib Krisse (Kriss), right-hand man of the pseudomessiah Jacob "Frank, came to Lwow to propagate the Frankist message. Frank himself arrived in the town in December of 1755, but he was compelled to leave. A disputation with the Frankists was held in 1759. The spokesman for the Jews was R. Hayyim Kohen Rapoport, *av bet din* of the town and region.

During the 18th century, the importance of the Lwow community declined and its authority was reduced. The limits of the provincial council's authority were also restricted after the annexation of Podolia to Turkey (1772). In Galicia itself, the expansion of the surrounding communities (Zholkva, Brody) further limited the authority of the Lwow community. At the meeting of the provincial council in 1720, it was declared that "we, the men of the province, have no further portion or inheritance in the holy congregation of Lwow and the rabbi who will be nominated by it." At the meeting of the council in Berzhany in 1740 the rabbinate of the province was divided into two regions and the *av bet din* of Lwow held office in only one of them. Conflicts within the community over the distribution of taxes, the election of rabbis, and other affairs resulted in the intervention of the secular authorities to a greater degree than in the past. Menahem Simhah Emmanuel de Jonah (d. 1702), a member of a large family of physicians and himself court physician to King John III Sobieski, was highly influential during the second half of the 17th century. He was the "nesi Erez Israel" (the chief treasurer of the funds for Erez Israel collected in Poland), a *parnas* of the Councils of the Lands, and the holder of many public offices.

From 1772 to 1914
The Jewish population of Lwow rose from 18,302 in 1800 to 26,694 in 1869, and 57,000 (28% of the total population) in 1910. According to the 1820 census, 55% of the Jews engaged in commerce (the majority as shopkeepers and retail traders) and 24% in crafts. The 745 Jewish craftsmen included 249 tailors, 133 furriers, 51 bakers, and 34 goldsmiths. The Jews of Lwow controlled the wholesale trade between Russia and Vienna. Some were army purveyors, or wholesale dealers in tobacco, cereals, and salt; others owned flour mills; and Jews pioneered industry and banking in the town. Lwow Jewry suffered as a result of the economic crisis in Galicia during the 19th century. After 1772 the townsman's struggle to restrict Jewish rights of residence and trade was supported by the Austrian authorities. From the beginning of the 19th century only the wealthy and educated merchants who had adopted the German way of life were authorized to live outside the Jewish quarter. In 1848 the Jews were allowed to participate in the elections to the municipal council, but their representation was limited to 15% and later to 20%. In spite of the religious equality granted in the Austrian Empire in 1849, the municipality continued to evict the Jews from the retail trade, and the Christian artisans' guilds struggled against Jewish artisans. The prohibition on acquiring real estate was abolished in 1866, and after the "Sejm of Galicia had revoked all discrimination against Jews the municipality of Lwow was compelled to annul those re-
restrictions opposed to the Austrian constitution of 1867. Intensified antisemitic tendencies then prevalent among the Poles and Ukrainians of Lvov and the vicinity were partly caused by the assimilation of the upper strata of the Jews to the ruling German culture.

TRENDS WITHIN THE COMMUNITY. Hasidism made headway in Lvov at the end of the 18th century, and although no zaddikim settled there they occasionally visited the town. In 1792 and in 1798 there were open clashes between Hasidim and their opponents. During the 1820s, a hasidic shitbel was founded and in 1838 there were seven such prayer rooms. As the *Haskalah movement penetrated Lvov, an anonymous herem was proclaimed in 1816 against a group of maskilim and especially against Solomon Judah *Rapoport, Benjamin Zevi Nutkis, and Judah Leib Pastor; it was only as a result of pressure from the authorities that it was rescinded by the av bet din, Jacob Meshullam Orenstein. During the 1830s a violent dispute broke out over the question of a change in the traditional Jewish dress. In 1844 a Reform Temple was opened and Abraham Cohen of Hohenems, Austria, was appointed as preacher. He was also made director of the German-Jewish school opened during the same year. The Orthodox were vigorously opposed to him and their opposition gained momentum after the authorities confirmed him as rabbi of the province in 1847. A year later he and his family were poisoned and Orthodox fanatics were accused of having committed the crime.

The assimilatist intelligentsia circles of Lvov identified themselves with German culture, and in 1868 the *Shomer Israel organization was formed, with its ideological organ, Israelet. The movement was opposed by the Doresh Shalom society, founded in 1878 and disbanded a short while later, and after it by the *Agudat Ahim (1885), which called for assimilation into Polish culture. Its organ was the Ojczyzna ("Fatherland"). Toward the end of the century, the move toward Polish assimilation gained in strength and the Jewish representatives from Lvov in the Austrian parliament joined the Polish camp. During the 1870s Orthodox circles organized themselves within the framework of the *Mahzikei Hadas, in which the Hasidim were predominant. Lvov was the home of Hertz *Homberg. Within the framework of his educational activities, four schools for boys, three for girls, and a teachers' seminary headed by Aaron Friedenthal were founded there. All were closed down with the liquidation of Homberg's educational network in Galicia in 1806. Jewish children, however, began to attend general schools. Legal restrictions against the attendance of Jews in secondary schools and universities were removed in 1846. There were then many Jews in the liberal professions, including distinguished lawyers and physicians. From the emancipation period, there were numerous cases of apostasy in Lvov. Between 1868 and 1907, 713 Jews abandoned their faith, while 86 Christians were converted to Judaism. In 1874 there were 69 registered hadarim in the city and the first "reformed heder" (heder metukkan), in which 381 pupils studied, was founded in 1885. An institute for religious studies opened in 1910.

During the Austrian period the two congregations in Lvov merged into a single community, which from the 1830s was led by moderate assimilationists. These included Immanuel *Blumenfeld, Meir Jeraheheel Mieses, and Emil *Byk. Rabbis who held office in this community were Joseph Saul Nathanson, Zevi Hirsh Orenstein, Isaac Aaron Ettinger (see *Ettinger Family), Isaac *Schmelkes, and Aryeh Leib Braude. The preachers at the temple were Dr. S.A. *Schwabacher, Dr. Y.B. Lewinstein, Dr. Ezekiel Caro (who in 1909 was confirmed as rabbi of the community together with R. Isaac Schmelkes), and Dr. S. Gutmann. During the late 19th and early 20th centuries, the power of the assimilationists declined and nationalist-Zionist influence began to be felt. The first Zionist societies, Mikra Kodesh and Zion, were formed in 1883 and 1888. They formed the nucleus of the all-Galician Zionist organization. Periodicals and newspapers were published: Przyszłości, Wschód, Ha-Karmel, Der Veker, and Togblat. Activists in the Zionist societies included Reuben Birer, Joseph Kobak, David Schreiber, Abraham and Jacob Kokas, and Adolph *Stand. The first moves were made toward a Jewish workers' movement and artisans' unions, while some joined the P.P.S., the Polish workers' movement; the representative of this group was Herman *Diamand.

From 1914 to 1939
With the outbreak of World War I, thousands of refugees arrived in Lvov from the regions bordering on Russia. The entry of the Russian army into the city in August 1914 was accompanied by robbery and looting, the closure of Jewish institutions, and the taking of hostages. With the return of the Austrians in June 1915, Jewish life was resumed, assistance to the refugees was organized, and the public institutions functioned once more. In November 1918, when the Poles and the Ukrainians fought for control of eastern Galicia, pogroms broke out in Lvov; 70 Jews lost their lives and many were wounded. It was then, when the German, Polish, and Ukrainian nationalistic cultures were in conflict, that the inherent risks of assimilation were made manifest to the Jews.

During the period of independent Poland (1918–39), the community of Lvov was the third largest in Poland and one of its most important centers. From 99,595 in 1910 the number of Jews increased to 109,500 (33% of the total population) in 1939. In the struggle between the Poles and the Ukrainians, each side accused the Jews of supporting the other. The rise of antisemitism and the severe economic situation were reflected in every sphere of Jewish life. The economic crisis was also illustrated by the reduction in community taxes: from 497,429 zlotys in 1929 to 310,481 zlotys in 1933. During this period, Lvov had three Jewish secondary schools with instruction in Polish; a Hebrew college for advanced studies in Judaism (founded in 1920), first directed by Moses *Schorr; a nationalist-religious school, Ma-Ta-T (Mi-Ziyyon Teze Torah); a vocational school; many hadarim; and a talmud torah. There were many Ashke-
nazi synagogues and hasidic prayer rooms. The newspapers Chwila ("The Moment"), Lemberger Togblat, and Opinia were published. The community was governed by assimilationists in coalition with the Orthodox, while for the greater part of this period the Zionists formed the opposition. In national politics, the Lvov members of the Polish parliament adopted a moderate line. They opposed the minorities bloc and were among the initiators of the "Ugoda (see also O. Thon and H. Rosmarny), the agreement with the Polish government (1925). The Orthodox, especially the Hasidim of Belz, as well as the rich Jews, supported the government majority list.

Hebrew Printing
After the first partition of Poland (1772), which brought Galicia under Austro-Hungarian rule, the government forced Jewish printers to transfer their presses from "Zolkiew (Zholkva) to the Galician capital of Lvov in order to facilitate their censorship. The first to move were W. Letteris and H.D. Madpis, the latter producing Elijah Levi's Pirkei Eliyahu in 1783. The house of Madpis brought out a new edition of the Talmud (1859–68) and a seven-volume Shulhan Arukh with standard commentaries (1858–61), still one of the best editions (a similar one was printed by J.L. Balaban and his son, who began printing in 1839). In 1785 J.S. Herz set up his press, which produced a good edition of Maimonides' Mishneh Torah (1805–11). Madpis' granddaughter, Judith Mann-Rozanes, also moved from Zolkiew, while her son, M.H. Grossmann, continued printing until 1858. About 20 other printers were active in Lvov in the century and a half before the outbreak of World War II, making the city one of the main centers for the production of Hebrew books, not only for Eastern Europe but for the Balkans as well.

Holocaust Period
In September 1939, at the beginning of World War II, Poland was partitioned between Germany and the U.S.S.R., and Lvov became part of Soviet Ukraine. The economy was nationalized; Jewish organizations, parties, and institutions were closed. Jewish schools turned into Yiddish ones with Soviet curriculum. A Jewish theater was opened at the initiative of actors from among the thousands of refugees who flocked to the city. But after the outbreak of the German-Soviet War, the Germans captured the city (July 1941); it then had a Jewish population of about 150,000, including thousands of refugees from the Nazi-occupied western part of Poland.

The local Ukrainian population welcomed the German troops, while Stefan Bandera's units joined up with the invading forces and played a major role in stirring up hatred of the Jews and in murdering them. An incited mob attacked the Jews for three days. Thousands of Jews were put in jail, where they were tortured and murdered. During July several hundred Jewish public figures and youth were put to death; over 2,000 Jews were shot in "Aktion Petliura" (July 25–27). On July 15, the Jews were ordered to wear the yellow badge, and at the beginning of August a fine of 20,000,000 rubles ($4,000,000) was imposed upon them. Jewish property was confiscated and looted and in August the desecration and destruction of synagogues and Jewish cemeteries was carried out.

A Judenrat was appointed by the authorities, headed by Joseph Parnes, who was killed shortly afterward when he refused to supply the Nazis with a quota of men for forced labor. A similar fate was in store for two of his three successors; the last chairman of the Judenrat, Ebersohn, was executed together with the other members of the council in February 1943. Under German supervision, the Judenrat handled taxes, social welfare, and food and housing control. A Jewish police force came into being as a special department of the Judenrat; in the course of time it was manipulated by the Nazis to serve their own aims. On Aug. 1, 1941, Eastern Galicia was incorporated into the General Government, Poland, and all anti-Jewish restrictions that had been in force in western Poland for the past two years were now also applied to the Jews of Lvov (see *Holocaust, General Survey). Labor camps were set up in the city and vicinity, where many Jews were either murdered outright (especially young people) or died as a result of the inhuman conditions prevailing in the camps. In November 1941 the Jews of Lvov were all concentrated in a special quarter of the city and subjected to starvation.

In March 1942 about 15,000 Jews from Lvov were deported to *Belzec extermination camp. The big Aktion, however, took place from August 10 to 23, in which 40,000 Jews perished. Following the Aktion the s.s.-Gruppenfuehrer Fritz *Katzmann ordered the establishment of a ghetto, completely sealed off and surrounded by a barbed-wire fence. The overcrowding caused a series of epidemics which killed thousands of ghetto inmates. In further Aktionen (November 1942 and January 1943), another 15,000 Jews were murdered, some in Belzec and others in the Janowska Road camp. The rest of the ghetto inmates, some 20,000 people, were restricted to a portion of the ghetto designated as the Jewish camp and the Judenrat was liquidated. In the last Aktion (June 1943), which resulted in the death of most of the surviving Jews, the Jews offered armed resistance. In places where the Nazis encountered gunfire and hand grenades, they poured gasoline on the Jewish houses and set them in flames. The 7,000 Jews who survived the massacre were dispatched to the Janowska Road camp. Apart from a few Jews in labor camps, Lvov and the environs were made "judenrein. A few hid in the "Aryan" part of the city.

Janowska Road Camp. The camp, a place of torture and murder, was set up on Janowska Road in October 1941. One part of the camp contained quarters for the ss men and camp police, and a prison barracks (the latter also served as a transit camp for deportees to Belzec extermination camp). The other part contained workshops which in the course of time developed into a special unit, the German Armament Works (DAW; see *SS, Enterprises in the East). Designed as a forced labor camp for Jews from Lvov and the area, Janowska in fact
became an extermination camp. Tens of thousands of Jews from Eastern Galicia were brought there, some of whom were murdered on the spot and others sent on to Belzec. Prisoners were killed in many instances for the “entertainment” of the murderers. Yet in spite of the conditions, the Jews created cultural activities in the camp and prepared for armed resistance. The Germans, under the threat of possible resistance, liquidated the camp in a surprise Aktion on Nov. 20, 1943. Only a few individuals escaped. The special conditions prevailing in Lviv – a hostile Ukrainian population, the lack of forests in the area to provide shelter, and the absence of a local partisan movement – precluded the rise of organized Jewish resistance. However, a few sporadic and isolated attempts to resist were made. Some Jews fled to the remote forests, but in most instances the local peasants handed them over to the Nazis. Some instances of resistance have been recorded, e.g., during the liquidation of the ghetto and one in the Janowska Road camp. In one instance, a group of camp prisoners charged with the disposal and cremation of corpses attacked and killed several of the German guards. A few dozen prisoners then escaped, but most of them were caught and murdered.

When the Soviet forces entered in July 1944, a Jewish committee was established to help the survivors. Of the 3,400 Jewish survivors who registered with the committee by the end of 1944, only 820 were from Lviv ghetto itself. Most of the survivors settled in Israel, after wandering through Europe, while the rest emigrated to other countries overseas. Some of the ashes of the Lvov martyrs were taken to Israel and interred at the Nahalat Yizhak cemetery near Tel Aviv.

Contemporary Period

A monument to the memory of Jewish victims of the Nazis, with inscriptions in Hebrew, Yiddish, and Russian, was erected shortly after World War II. In the 1959 census 29,701 Jews were registered in the Lvov oblast (district), 5,011 of whom declared Yiddish to be their mother tongue. In the city, a center of Ukrainian nationalism, an anti-Jewish atmosphere prevailed in most spheres of life. In 1957 several Jewish students were arrested for “Zionist activities.” Organized matzah baking was prohibited in 1959, and in the same year pressure was brought to bear on the local mohalim to induce them to sign a declaration promising to abandon circumcision. In the Jewish cemetery only a small section was kept intact and used for burials. In 1962 several hundred Jews were arrested for “economic crimes.” In that year several articles were published in the local Ukrainian newspaper, Lvivska Pravda, demanding the closure of the only remaining synagogue on the pretext that it served as a meeting place for “speculators” and other criminals. It was in fact closed toward the end of that year, and all synagogue officials were arrested and charged with “economic crimes.” The community slaughterhouse was handed over to a local municipal organization. In 1965 local Jews addressed a petition to Prime Minister Kosygin asking to be given a place for worship. They were allotted a building site, but the financial burden of erecting a new synagogue was too great. In 1969 the militia broke into private minyanim and dispersed them by force. Most Jews emigrated in the 1990s.

LVOVICH, DAVID (known as Davidovich; 1882–1950), leader of the territorial-Socialist movement and of *ORT. Born in southern Russia and brought up in an assimilation-
ist environment, Lvovich first became acquainted with Jew-
ish affairs and the Jewish workers’ movement when he visited Minsk in 1903 and came into contact with the *Po’alei Zion. After he left Russia he maintained relations with the Herut group founded by N. *Syrkin. In 1905 he visited Ereẓ Israel and on his return he abandoned general Zionism in favor of territo-
rialism. After joining the *Zionist-Socialist Workers’ Party (SS or ZS), he founded the SS League abroad and established student groups in Germany. A member of the party’s commit-
tee in Odessa from late 1905, he was the leader of its *self-de-
defense group during the October pogrom. At the SS convention in Leipzig (1906), he represented that trend which connected the future realization of territorialism with the unavoidable turn of the course of Jewish emigration from the towns toward agriculture and concentrated colonization. He later worked for an active policy in the organization and regulation of emigra-
tion. As the representative of the ss at the conventions of the Jewish Territorial Organization (see “Territorialism”) he was elected to the Angola Committee (Vienna, 1912). In 1907 he was the representative of the ss at the Socialist International Congress in Stuttgart. Lvovich tried to promote cooperation between the ss, the “Jewish Socialist Workers’ Party” (“Sejmists”), and the Po’alei Zion. In 1917 he was elected to the Social-Rev-
olutionary list by Jewish colonists of southern Ukraine as the
only delegate of the "United Jewish Socialist Workers' Party at the constituent assembly. Turning his energies to working for ORT in Russia, he traveled abroad (1919) as its emissary, along with L. *Bramson, in order to establish the world ORT league (1921). Becoming a member of its executive council in 1937 he was elected vice president and in 1946 co-president. He published his memoirs in Sotsialistisher Teritorializm (1934), 79–89.

LWOFF, ANDRÉ MICHEL (1902–1994), French biologist and Nobel Prize winner. Born in the Allier department, France, Lwoff became head of the Microbial Physiology Laboratory of the Pasteur Institute in Paris in 1938. Lwoff's earlier work dealt with the morphology and biology of the ciliate protozoa, and particularly the problem of the genetic continuity of cell structures. His later research dealt with the biology of viruses, the genetics of bacteria, and the mechanisms by which viruses are replicated in the course of a viral infection. During World War II he was awarded the Medal of the Resistance for his work in the French underground. After the war Lwoff and his collaborators began a study of lysogeny. Lwoff demonstrated that in this condition the bacterial cell harbors a "prophage" which is harmless to the host cell and is transmitted genetically. It can be induced by external factors, such as ultraviolet light, to become virulent, causing destruction of the host cell and liberation of infectious virus particles. This discovery led to entirely new ideas as to the evolution and biological role of viruses. Lwoff was corecipient of the 1965 Nobel Prize for medicine and physiology. Among his books are Problems of Morphogenesis in Ciliates (1950) and Biological Order (1962). He was also editor of Biochemistry and Physiology of Protozoa (3 vols., 1951–64).

[Mordecai L. Gabriel]

LYADY, a town in Vitebsk district, Belarus; under Polish rule until 1772, when it was incorporated into Russia and was included in the Mogilev province. A Jewish settlement in Lyady is mentioned in documents of 1731. In 1766 there were 207 Jewish poll tax payers. During the 19th century, Lyady became a "Jewish" townlet, the Jews forming the majority of the population. There were 2,137 Jews registered with the community in 1847, and 3,763 (83.9% of the total population) in 1897. Lyady became known as the home of "Shneour Zalman, the founder of the Chabad movement, who lived there during the last 12 years of his life, and was referred to as the "Rabbi of Lyady." His son, Dov Baer, also lived there at first. In 1869 the great-grandson of Shneour Zalman, Shneour HaYyym Zalman, settled in Lyady. He and his sons maintained a hasidic "court" in the town. In 1926 there were 2,020 Jews (56% of the total population). In 1939 there was a Yiddish school and a kolkhoz, where 14 families worked. In 1939 the number of Jews in Lyady dropped to 897 (38% of the total). Lyady was the birthplace of Alexander Siskind *Rabinovitz (Azar) and Reuben *Brainin. The Germans occupied the town on July 18, 1941. In March 1942 some 2,000 Jews from the town and environs were assembled and murdered on April 2, 1942, outside Lyady.

LYAKHOVITCHI (Pol. Lachowicze; Yid. לַעֲכוֹויטש), city in Brest-Litovsk oblast, Belarus. Jews were living in Lyakhovitchi by the first quarter of the 17th century. According to a decision of the Lithuanian Council of 1623 (see *Councils of the Lands), the community was subordinated to the kahal of *Pinsk. During the second half of the 18th century the city's annual fairs were an important meeting place for Jewish merchants. There were 729 Jewish poll tax payers in 1766; in 1847 the community numbered 1,071, increasing to 3,846 (76.6% of the total population) in 1897. A branch of the Karlin hasidic dynasty prevailed in the town. The chaos during World War I and the immediate postwar years caused a drop in the Jewish population and in 1921 it numbered only 1,695 (58.7%). A Tarbut school and a yeshivah with 50 pupils operated there.

[Encyclopaedia Judaica (Germany)]

**Holocaust Period**

On the eve of the German occupation (June 24, 1941) the community consisted of 6,000 Jews. The Germans entered town on June 26, and on June 28 a number of Jewish community leaders were murdered in the nearby forest, following which a pogrom broke out in which 82 Jews were killed (July 1). In fall 1941 the Jews were ordered to assemble in the marketplace, where a Selektion was made to separate the 1,500 able-bodied from the 2,000 “nonproductive.” The latter were taken to a trench and murdered; some tried to escape but most of these were shot. The "productive" persons were interned in a ghetto. A group of young persons, led by Zalman Rabinowicz, Josef Peker, and Haim Abramowicz, organized resistance units. On June 10, 1942, a second Aktion was carried out in which 1,200 Jews were murdered. Some attempts at resistance were then made. When an Aktion to liquidate the entire ghetto was carried out the Germans met with armed resistance. Some ghetto inmates escaped to the forests and joined the partisans, among them Shmuel Mordkowski, who was an outstanding resistance fighter. The rest were killed on June 24, 1942. Fewer than ten Jews survived in Lyakhovitchi. About 80 Jews from the town who had joined the Soviet army in 1941 also survived.

LYCK (Pol. Elk), town in Poland; before 1945 in E. Prussia. During the late 17th century Jewish tradesmen visited the mar-
ket town and subsequently established a community which, in 1713, numbered 29 persons. Its shohet, Eliezer Lipmann Silbermann, founded the Hebrew weekly "Ha-Maggid which was printed in Lyck from 1856 to 1891. The "Mekizei Nirdamim Society was also founded by Silbermann and, between 1864 and 1874, 15 of its publications were printed in Lyck. Among them was S.D. *Luzzatto's 1864 edition of *Judah Halevi's Diwan, S. *Buber's edition of the Pesikta de Rav Kahana (1868), and parts of I. *Lampronti's Pahad Yizhak (1864–74). In the second half of the 19th century many Hebrew books were printed in the town and smuggled across the border to Russian Jewry. The community of Lydda increased from 90 persons in 1845 to 250 (3.65% of the total population) in 1880, then declined to 137 in 1913 and 16 in 1939.

### LYDDA

(Heb. *

Lydda (Heb. *

In the Hellenistic period the town was outside the boundaries of Judea; it was detached from Samaria and given to Jonathan the Hasmonean by Demetrius II in 145 B.C.E. (1 Macc. 11:34; Jos., Ant., 13:127), becoming a toparchy of Judea (Jos., Wars, 3:35). In Maccabean times it was a purely Jewish town; Julius Caesar restored the privileges of the Jews of Lydda (Jos., Ant., 14:208). In the Roman period it was counted as a village, although it was as populous as a city (Jos., Ant., 20:130). In 43 B.C.E. its inhabitants were sold into slavery by Cassius, the governor of Syria (Jos., Ant., 14:275). Quadratus, the Syrian governor in the time of Claudius, executed several Jews there; Cestius Gallus, the Roman proconsul of Syria, burned it on his way to Jerusalem in 66 C.E. It was within the command of John the Essene at the beginning of the First Jewish War (66–70); Vespasian occupied it in 68 C.E.

According to talmudic sources, Lydda was situated on the boundary of the Shephelah and the coastal plain, one day’s journey from Jerusalem; other sources call the plain around it the Shephelah of Lydda (Ma‘as, Sh. 5:2). The town flourished between the First and Second Jewish Wars. It had a large market; cattle were raised in the area; and textile, dyeing, and pottery industries were established. A Christian community existed there in the time of Peter (Acts 9:32–35). It was the seat of a Sanhedrin; famous talmudic scholars, such as R. Tarfon, R. Eliezer b. Hircanus, R. Akiva, Joshua b. Levi, Judah b. Pazzi, Eleazar bar Kappara, and Hanina bar Hama taught there. Among its synagogues was one specially maintained by a community of Tarsians. After the war of Bar-Kokhba (132–135), Jews remained in Lydda, though its agricultural hinterland had been destroyed. The patriarch R. Judah 1 leased estates in its plain.

In 200, the emperor Septimius Severus established a Roman city at Lydda, calling it Colonia Lucia Septimia Severa Diospolis. Its territory consisted of the combined toparchies of Lydda and Thamna. The town remained partly Jewish. It took part in the revolt against the emperor Gallus in 351 and was punished when the revolt failed; according to one Midrash, out of ten measures of poverty in the world, Lydda had nine. The Samaritan element became more powerful in Byzantine times, although the town, part of Palaestina Prima, was predominantly Christian and had a bishop. Justinian built a church there. It was the legendary birthplace of St. George; hence its name Georgiopolis in late Byzantine and crusader sources. It was captured by the Muslim general ’Amr ibn al-‘As in 636 and until the foundation of Ramleh (c. 715) it served as headquarters of the province of Filastin. In 1099 it was occupied by the crusaders and became a seigneurie with a vicomte in charge. The crusaders built a Church of St. George there, still partly preserved. In 1170, Benjamin of Tudela found only one Jewish family there. After Saladin’s reconquest of the town in 1191, more Jews settled in it. In the 14th century, Estorí ha-Parhi found a Jewish community there. Under the Mamluks Lydda was the seat of an administrative district. The town seems not to have been inhabited by Jews during the early Ottoman period. Ancient remains in modern Lydda include a mound, a Jewish tomb, and a Greco-Samaritan inscription. A magnificent mosaic floor within a large villa was uncovered in recent archaeological work in the city; the floor has Nilotic scenes with sea creatures and boats.

**Modern Period**

In the 19th century a small Jewish community existed in Lydda, but the 1921 Arab riots compelled the last of its Jewish inhabitants to leave. Further attempts to reestablish the community during the British Mandate failed because of ensuing violence. The town, which numbered only a few hundred families at the beginning of the century, expanded quickly and in 1919 became an important railway junction. In 1944, Lydda numbered about 17,000 Arab inhabitants, one-fifth of them Christians and the rest Muslims.

During Israel’s *War of Independence, Lydda was occupied by Israel forces in Operation Dani on July 10, 1949, and the great majority of its inhabitants abandoned the town. The first Jewish settlers went to Lydda at the end of 1948 when its population numbered 1,200, with 1,050 of them Arabs. In 1949 it received municipal council status. In 1955, in the spirit of a prototype plan made by architect Michael Bar, the Jewish settlers were housed in modern houses in the northern part of the city, and the Arab population was housed in the east. This separation has continued until today. The new parts of Lydda...
LYDIA, LYDIANS  (Heb. לוד, Lod; Assyr. Ludda), people who, together with the Phrygians and other Anatolian peoples, infiltrated Anatolia after the decline of the *Hittite empire at the beginning of the 12th century B.C.E., and settled in the vicinity of the Maeander River (modern Buyuk Menderes) and the western part of the Anatolian heights. After their infiltration, the Lydian tribes assimilated within the local Hittite population and partly took on its language. It is significant to note that one of the kings of the first dynasty is called by the Hittite name Muršiliš (Gr. Myrsilus), a name which was common among the Hittite kings. This dynasty ended with a court uprising, when the head of the royal guard, Gyges, took over the rule. Gyges established the second Lydian dynasty, which ended with the reign of Croesus, when Lydia was conquered by the Persian king Cyrus. During the time of Gyges, relations were established between Lydia and the kingdom of Assyria, because Gyges sought the aid of the latter against the Cimmerians. An important part of this episode has been preserved in the Annals of Ashurbanipal, which records a request for aid by "Guggu king of Luddu (Lydia)" from the Assyrian king (Rassam Cylinder, 2:95). The name of Gyges, in its Hebrew form, *Gog, found its way into Ezekiel (38:2–3). He is referred to here as the head of two Anatolian peoples, Meshech and Tubal. It may thus be concluded that legends about Gyges were popular in both the classical world and the Assyrian empire. Gyges attempted to gain control of central Anatolia and its western coast. The Lydian capital was at this time already in *Sardis. The last Lydian king was Croesus, known throughout the Greek world for his legendary wealth; he was defeated by the Persian army in 547. This brought an end to the Lydian kingdom, which became a province of the Persian empire. The name of the area was preserved as Lydia until a later period, and appears in its biblical Hebrew form, Lud, in talmudic sources as well. The name appears in the Bible together with the names of the Anatolian peoples who were known in the ancient Near East in the eighth and seventh centuries. In Genesis 10:22, Lud is considered a son of Shem and listed together with Elam, Assyria, etc. This ethnic juxtaposition reflects the geographic relationship of the whole northeastern territory as well as an ethnic unity. The parallel list in I Chronicles 1:17 also includes Meshech, which emphasizes the geographic-ethnic orientation of the list. There is an interesting report in Jeremiah 46:9 which speaks of the army of Pharaoh Neco and which also mentions the Lydians as bowmen serving as auxiliaries of the Egyptian forces. Some scholars regard Ludim (Lydians) as a distortion of Luvim (Libyans), but it is more reasonable to assume that the verse refers to mercenary forces of Lydians who, like the Greeks, served in the Egyptian army.

Jews in Lydia

The beginning of Jewish settlement in Lydia is connected with the establishment of Jewish military settlements by Antiochus III. Josephus relates that during Antiochus’ campaign in the East in 269–204 B.C.E. a revolt broke out in Lydia and Phrygia, and Antiochus decided to transfer 2,000 Jewish families from Mesopotamia to the rebellious regions. Each family received a plot of land upon which to build a house and for cultivation. They were to be exempt from taxation for ten years, and during the initial period their needs were to be provided for. They received special authority to live according to the customs of their ancestors. The authenticity of the document quoted by Josephus (Ant., 12:147 ff.) is denied by some, but since Jews served as soldiers and dwelt in military settlements as early as in the Persian era, it can be regarded as genuine. These settlements became the nucleus of the Jewish settlement in Asia Minor generally and in Lydia in particular. Lydia remained in the possession of Antiochus until the battle of Magnesia in 190 B.C.E. when it was given by the Romans to Eumenes II king of Pergamum.

In 133 B.C.E. Attalus III bequeathed the kingdom to the Romans and an Asian province was created which included Lydia. Information about the Jews of Lydia derives chiefly from the Roman era. Many documents having reference to the Jews of Sardis have been preserved. From a resolution about the Jews by the citizens of Sardis it is clear that the Romans...
granted the Jews the right to live according to their customs and even to be judged by their own laws. The ancient synagogue of Sardis was discovered and excavated in the 1960s.

The sending of the half shekel to the Temple in Jerusalem was a source of friction between Jews and gentiles, who did not look favorably upon the export of the money from their city to a foreign country. The proconsul Gaius Norbanus Flaccus (in the time of Augustus, 27 B.C.E.–14 C.E.) wrote to the authorities of Sardis ordering them not to prevent the Jews from collecting the money and sending it to Jerusalem. There is extant from a still later period, the time of Trajan, an inscription from the city of Thyatira in Lydia (Frey, Corpus, 2 (1952), 16, no. 752). In this inscription the word Sambatyon occurs. Some consider it to be a Jewish inscription, while others regard it as being connected with "the God fearing ones" who were not regarded as full Jews. There is already reference to a "God fearing" woman from this city in an earlier period in Acts 16:14.

[Lea Roth]

LYON-CAEN, CHARLES LÉON (1843–1935), French jurist. The son of a tailor, Lyon-Caen spent some time on his father’s business before studying law. His doctoral thesis, Partages d’ascendants (1867), earned him a considerable reputation as a jurist and he became professor of law at the Sorbonne in 1872, a post he held for nearly half a century. Lyon-Caen was an authority on commercial and international law and was the author of important works on both subjects. His Precis de droit commercial (2 vols., 1885) and Traité de droit commercial (8 vols., 1888), written with Louis Renault, became standard works, while his Droit international privé maritime (1883) was one of the first textbooks on maritime law as a separate branch of the law. His other works include De la condition légale des sociétés étrangères en France (1870). Lyon-Caen was elected to the Académie des sciences morales et politiques in 1884 and became its permanent secretary in 1893. He was active in Jewish affairs as president of L’œuvre des orphelins Israélites and the Comité d’aide aux émigrants juifs.

[Shulamith Catane]

LYONS, capital of the Rhône department, E. central France. According to a medieval Jewish legend one of the three boats loaded with Jewish captives during the siege of Jerusalem docked at Lyons. Herod Antipas, tetrarch of Galilee, was exiled to the city by Caligula in 39 C.E. Lyons seems to have had a Jewish population in both the first and the second centuries. Little more is known about Jews in Lyons until the beginning of the ninth century, however, when there was a large, prosperous, and powerful Jewish community in the city. The Jews owned slaves and also employed Christian laborers in their homes and in their commercial and agricultural enterprises. Relations between Jews and their Christian neighbors appear to have been amicable. Jewish vintners and butchers sold their merchandise to both Jews and Christians. Jews also served as purveyors to the imperial palace. Some Jews were employed in public service, especially as collectors of imposts and taxes. Their religious services also appear to have been attended by Christians, many of whom declared that they preferred the preaching of the Jews to that of the Catholic priests. Such opinions could only have been an extreme irritant to the bishop, *Agobard, who had hoped to convert the local Jews to Christianity. A first attempt around 820, targeting children, involved the use of a measure of force, and encountered determined resistance from parents and the vigorous intervention of the emperor, *Louis the Pious. Louis had to intervene on several other occasions against this troublesome bishop, at times dispatching his special envoys in charge of Jewish affairs, the missi or magister Judaeorum. *Amulo, Agobard’s successor, mounted a campaign against the Jews of Lyons, but without success. In the Middle Ages the Jews lived in the Rue Juiverie at the foot of Fourvière hill. When they were expelled in 1250 they were living in the present Rue Ferrachat.

For a century Jews only visited Lyons for short periods, but in the second half of the 14th century there was again a Jewish settlement in the city. They paid municipal taxes, and special officials were appointed with jurisdiction over them. As the city was not part of the Kingdom of France, the new community was not affected by the expulsion order of 1394. They were expelled some years later, however, probably in 1420; most of them moved to neighboring Trévoux. Beginning in the 16th century, Jews reappeared in Lyons sporadically as merchants at the fairs and probably also as correctors of Hebrew printing. A group of Jews arrived in Lyons in 1458 (perhaps from Spain and Portugal), but they too were forced to leave. Apparently Joseph *Nasi opened a bank there for some time, but it was closed down by Henri II. A community gradually reestablished itself in the 17th century, consisting mainly of families from Avignon as well as from Comtat Venaissin, Alsace, and Bordeaux. In 1775, the community officially requested permission to open a cemetery. At first they bought space in the vaults of the city hospital. Twenty years later they were able to purchase a cemetery at La Guillotière. Nevertheless, the number of Jews remained insignificant, and there was no synagogue or permanent prayer room.

[Bernhard Blumenkranz / David Weinberg (2nd ed.)]

The community was attached to the *Consistory of Marseilles in 1808. With the influx of Jews from Alsace and Lorraine, the community grew to number 300 in 1830, and 700 in 1840. The majority lived in very modest circumstances, inhabiting two poor quarters in the Rue Lanterne and Rue de la Barre. From 1838 a prosperous industrialist, Samuel Heyman
de Ricquèles, was leader of the community. De Ricquèles initially endowed Jewish schools and charitable institutions with the intention of reforming them; after a few years, however, he encountered hostility from more traditional elements and was forced to retire. The number of Jews grew to 1,000 in 1848 and 1,200 in 1854. The community acquired the services of a salaried rabbi in 1850. In 1857 it formed its own consistory, which also included Saint-Étienne (116 Jews), Chalon-sur-Saône (125), Besançon (379), and Montbéliard (202). Among its presidents were Solomon Reinach and Generals Levy and Worms. Solomon Munk represented Lyons at the Central Consistory. In 1864 the Grande Synagogue was erected on the Quai Tilsitt. At the beginning of the 20th century, with the arrival of immigrants from the Mediterranean area, a Sephardi community was formed in the suburb of Saint-Fons. On the eve of World War II Lyons had 500–600 Jewish families.

[Moshe Catane / David Weinberg (2nd ed.)]

Holocaust and Postwar Periods
As a result of the Franco-German agreement (June 1940), Lyons became a “free” city. During much of World War II, it served as a refuge for Jewish organizations, particularly the offices of the Central Consistory, as well as philanthropic and Zionist bodies. Information, both official and unofficial, to the Jewish communities in France, protests against anti-Jewish measures, and secret orders of the resistance all emanated from Lyons. Many Jewish leaders were arrested there. Lyons also hosted a center for Jewish studies for refugee intellectuals, to which Léon Algazi notably contributed, and a reception center for Jewish physicians, on the initiative of OSE. During the Occupation the city also provided sanctuary for large numbers of Jews. Probably its most important role was that of a major center of the Jewish resistance. Jewish resistance fighters generally operated in total isolation from other resistance organizations, with only occasional support and cooperation from Catholic and Protestant elements. Lyons was also the home of an active Catholic resistance effort, thanks to the pastoral letter which Cardinal Gerlier had read on September 6, 1942, in which he denounced the persecution of Jews. Led by the notorious Klaus Barbie, local Nazi officials fought ruthlessly against members of the resistance and against Jews. The arrests, torture, and deportations reached a peak in August 1944, when prisoners from the “Jewish quarters” in the Monluc Fort prison were taken to Bron airfield to de-mine the area after the bombardment. After the war the remains of 109 individuals were uncovered.

After the war many Jewish refugees settled permanently in Lyons. Nevertheless, the community of approximately 7,000 was hardly any larger than in 1939. With the city’s economic expansion and the influx of immigrants from North Africa in the 1950s and 1960s, the Jewish population had increased to over 20,000 in 1969. In 1961 the community inaugurated one of the first and foremost community centers in France. The various communal religious bodies – consistorial, Sephardi, and Orthodox – generally worked in close cooperation, and a new synagogue was inaugurated in 1966 in La Duchère, a new quarter of the city. A regional consistory was also founded in 1961. In 1987, there were said to be about 25,000 Jews living in Lyons. The community institutions include an ORT vocational school, two religious schools, and numerous kosher butchers and restaurants. There are more than 20 other communities in the vicinity. Two are especially notable. Villeurbanne, with a Jewish population of 1,900, has a synagogue that was built in 1965 with money from the Claims Conference and with the help of Aktion Sühnezeichen (“Repentance Society”), a group of young Germans seeking expiation for Nazi crimes. The community of Saint Fons-Vénissieux was originally founded in the interwar period by Jews from North Africa. Numbering about 1,000, a majority of whom are industrial workers, it maintains a synagogue and community center.

[Georges Levitte / David Weinberg (2nd ed.)]

LYONS, ALBERT MICHAEL NEIL (1880–1940), author, known as A. Neil Lyons. Born in Kimberley, South Africa, Lyons came to England as a child and was educated at Bedford Grammar School. From 1899 he was a journalist, chiefly for the Topical Times. He then became a prolific playwright. Lyons’ best-known work, London Pride (1916), “a London play for London people,” was written in collaboration with Gladys Unger. Other works by Lyons include Kitchener Chaps (1915); an anthology of short stories (1929); Tom, Dick and Harriet (1937), and a number of biographies.

LYONS, EUGENE (1898–1984), U.S. journalist and author. Born in Russia and educated in New York, Lyons spent seven years in Moscow after World War I as United Press correspondent. He expressed his disillusionment with the Soviet system in Assignment in Utopia (1937). He edited the magazines American Mercury and Pageant, and joined the staff of the Reader’s Digest in 1946, becoming a senior editor in 1952. His books continued to reflect his anti-communist outlook: Stalin, Czar of all the Russians (1940), The Red Decade (1941), and Our Secret Allies (1953). He also wrote Herbert Hoover, A Biography (1964).

LYONS, ISRAEL (c. 1700–1770), English Hebraist. Lyons, who was born in Poland, settled in Cambridge (c. 1732), worked as a silversmith, and became an authorized teacher of Hebrew at the university. He contributed Hebrew verses to the volume of elegies (1738) on the funeral of Queen Caroline

LYONS, JACQUES JUDAH (1813–1877), hazzan, rabbi, and communal leader. Lyons was born in Surinam. He served as a hazzan of Congregation Neve Shalom in Paramaribo (1833–37). Immigrating to the United States, he served for two years as hazzan of Congregation Beth Shalom of Richmond, Virginia, and in 1839 began his ministry at the oldest Jewish congregation in the United States, the Spanish-Portuguese congregation Shearith Israel of New York City. Lyons, who was unyielding in his orthodoxy, served as superintendent of the Polonies Talmud Torah School attached to his congregation, as president of Hebra Hased va-Emet, the congregation’s benevolent society, and as a director of the Sampson Simon Theological Fund, and was a founder of the Jews’ Hospital. Lyons and Abraham *de Sola of Montreal prepared and published A Jewish Calendar for Fifty Years (1854), including an essay on the Jewish calendar system and historical data about Jewish communities in the United States, Canada, and the West Indies. From before 1861 to the end of his life, Lyons gathered data and sources on the history of the Jews of the U.S. Although he died before completing the work, this collection was donated to and calendared by the American Jewish Historical Society (see bibl.) and is a most significant source for students of early North American Jewish history.

Lyons is memorialized in the poem “Rosh Ha-Shanah, 5638” by his niece Emma *Lazarus.

[Isidore S. Meyer]

LYONS, SIR JOSEPH (1848–1917), English caterer and founder of J. Lyons and Company. Lyons was born in London, educated in a Jewish school, and started his career as a watercolor painter, exhibiting at the Royal Institute. In 1887 he joined Alfred *Salmon, the brothers Montague, and Isidore *Gluckstein in founding the catering firm of J. Lyons and Company, of which he became the chairman. This concern began by catering at exhibitions, and in 1894 opened the first of many tea shops. It pioneered popular catering and developed into the largest catering establishment in Britain. Sir Joseph Lyons was deputy-lieutenant for the County of London. He was knighted in 1911. J. Lyons continued to be one of the best-known chains of cafeterias and tea shops in Britain for most of the 20th century.

**BIBLIOGRAPHY:** P.H. Emden, Jews of Britain (1943), 486–90.

**ADD. BIBLIOGRAPHY:** ODNB online; DBB, 3, 888–89; S. Aris, The Jews in Business (1970), index.

LYONS, LEONARD (1906–1976), U.S. newspaper columnist. Born in New York, Lyons practiced as a lawyer while writing a column for the English-language section of the Jewish Daily Forward. In 1934 he started his popular column, “The Lyons Den,” in the New York Post. For 40 years, Lyons churned out six columns a week, chronicling the activities of celebrities and important figures in all walks of life and all ranks up to the White House. His column was syndicated in more than 100 newspapers in the U.S. and abroad. His personal policy of focusing on the positive rather than the scandalous aspects of his subjects’ lives endeared him to the many public figures he sought to interview. Blending his professional with his personal life, Lyons counted among his close friends such luminaries as Alfred Hitchcock, Ernest Hemingway, Ava Gardner, Marlene Dietrich, Orson Welles, Milton Berle, Sofia Loren, and Joe DiMaggio. His son Jeffrey Lyons was a well-known film and theater critic.

[Ruth Beloff (2nd ed.)]

LYOTARD, JEAN-FRANÇOIS (1924–1998), French postmodern and poststructuralist philosopher. Lyotard was a central figure in the theory debates in the last quarter of the 20th century. He combined political activities with an academic career. He was a socialist militant, although later he distanced himself from Marxism as a totalizing theory. He was active in the cause of Algerian liberation, and supported the student revolution of May 1968, when he was at the Philosophy Department at the University of Paris X, Nanterre. Lyotard held several university positions before becoming professor of philosophy at the University of Paris V, Vincennes. He was active in the Collège International de la Philosophie, with Jacques *Derrida, and also served as visiting professor in various American universities.

**Work**

Following his early interest in phenomenology (La Phénoménologie, 1954), Lyotard became critical towards his earlier work in Discours, figure (1971), preferring psychoanalysis to phenomenology. He also criticized Marxism and structuralism, including the psychoanalysis of Lacan, in the name of a “libidinal economy” (Economie libidinale, 1974). The publication of Au juste and La Condition postmoderne, both published in 1979, and foremost Le Différend (1984), represent further milestones in his thought.

La Condition postmoderne is the first philosophical essay in which the terms “postmodern” and “postmodernity” are keywords, expressing the idea of the incredibility of meta-narratives. For Lyotard, science does not justify itself; accordingly,
it needs narratives, which in turn endow scientific knowledge with coherence and direction.

Lyotard was deeply suspicious of theories purporting to tell "the truth" about something. His thought had many political and social consequences. In characterizing society as "libidinal economy," Lyotard accentuated the role of desire in society. He described reality in terms of energy, feelings, and desires. There are different desires at work in political and social contexts. Lyotard advocated a "libidinal politics" in which a variety of desires would not be destroyed. Totalizing and terrorizing theories would not allow desires to flourish. He further maintained that there is a conflict between truth and justice. If one appeals to general truth in order to realize justice, this is unjust, since one excludes different desires and other views of truth. He argued that the "grand narratives," that present themselves as the comprehensive understanding of humankind and its history, had lost their credibility and failed. He challenged master narratives with the discourse of others and invited the reader to leave the grand narratives. Politics, contrary to what Plato and Aristotle thought, is not the science or art of the good; rather, politicians ought to choose the lesser evil, since other voices are always silenced by political decisions.

Libidinal philosophy thus renounces universal truth and the meta-narratives of science, work, freedom, universal fraternity and history, Marxism, and human emancipation, and uncovers what detached theories seek to keep at a distance. It was modernism's project to realize universality, yet this universality was often conceived as white and European or American. Lyotard did not believe in these narratives of progress and civilization, which culminate in Hegel's vision of history or in F. Fukuyama's ideas concerning the end of history. Lyotard thought that reality is made up of singular events that general theories cannot represent, and he opted for a society with a multiplicity of language games and codes of conduct.

In his work, Lyotard highlighted the role of the non-rational and showed how it differs from intelligible structure. In his critique of Lacan, for instance, he discloses how desire as a non-linguistic force is more than what is understood in the structuralist understanding of the unconscious as a symbolic system. In Lyotard's mind, Auschwitz counters Hegel's thesis that reality and rationality are reversible, in other words, that the deeper structure of reality is rational. Lyotard maintained that, in the Hegelian perspective, Auschwitz would be an accidental, irrational event that does not prevent history from becoming more and more rational. For Lyotard, the event of Auschwitz itself contradicts Hegel's thesis that reality conforms to a rational structure.

There is a clear influence of Emmanuel Levinas in Lyotard's writings; for instance, both thinkers oppose totalization. But their philosophies are also very different, if only for the fact that Lyotard contrasts ethics and politics.

Lyotard and the "Jew"
Building upon Freud's thinking, Lyotard writes on the unforgettable that is always forgotten. He emphasizes the "forgotten" and defines real history as "anamnesis" (recollection). The "jew," which Lyotard wrote in lower case and between quotation marks, would represent the repressed, which is the object of psychoanalysis as "la recherche du temps perdu" (in search of lost time). The "jew," to whom Lyotard attributes a symbolic meaning, is the name that the West has given to its own unconscious anguish; the "jew" is linked to the disturbing law and is not to be assimilated to others. Freud, Benjamin, Adorno, Arendt, and Celan would be great non-German Germans and non-Jewish Jews, stateless persons who, in their ethical life, detest geo-philosophy and are always linked to what brings a person out of the sameness, in contact with otherness. Lyotard developed a critical thinking concerning Martin Heidegger's ontology that lacks ethics. In his eyes, Freud belonged to those persons who knew that ethics is not linked to a place. On the background of Lyotard's thoughts of the crisis of the great ideals and of all unifying thinking, the "jews," who hold high the prohibition of making idols, are not to be distilled in a dubious all-encompassing, universal world history that does not distinguish between ideal and reality.

"LYSIAS" (d. c. 36 B.C.E.), son of Ptolemy (son of Menneaus), king of Chalcis in the region of the Lebanon. On the death of his father (c. 40 B.C.E.), Lysanias inherited the principality of Chalcis and continued to support the Hasmoncean prince, Antigonus, in the latter's attempt to oust the house of Herod from Judea. To this end Lysanias induced the Parthian satrap of Syria, Barzapharnes, to restore Antigonus to his throne, offering the Parthian 1,000 talents and 500 women (cf. Jos., Wars 1:248; according to Jos., Ant. 14.331 the offer was made by Antigonus himself). The ensuing Parthian conquest of Judea (40 B.C.E.) was short-lived, and with the defeat of the Parthians Lysanias lost his kingdom, which was presented by Mark Antony to the Egyptian queen Cleopatra (37–36 B.C.E.). Lysanias was subsequently accused by Cleopatra of supporting the anti-Roman invasion, and was executed by order of Antony.

against Judah, but the defeat of Gorgias in the battle of Emmaus compelled him to march in person against Judea. According to I Maccabees (though some scholars cast doubt on the veracity of this account) fortune did not favor Lysias, and as a result of his failure the persecutions were abolished and a general amnesty proclaimed by Antiochus IV. On the death of Antiochus shortly afterward, Lysias became regent and de facto ruler of the empire, in the name of Antiochus V who was a minor. Judah’s attempt to capture the Acra compelled Lysias to come again to Judea, this time with a large army, and accompanied by the king. At the battle of Bet Zekharyah (163 B.C.E.) the Syrians gained the upper hand and Lysias besieged Judah and his followers who had fortified themselves within the Temple. He was, however, forced to raise the siege in order to fight against Philip, who had been appointed heir by Antiochus before his death. Lysias, whose influence with the young king was paramount, made peace with Judah and in addition to rescinding the edicts, restored the Temple to the Jews. The evidence in I Maccabees 11 completes the general picture and confirms Lysias’ willingness to pacify the Jews not only by military means but also by rescinding the decrees and restoring religious freedom. When Demetrius I was appointed to the Syrian throne, Lysias was put to death.

[Uriel Rappaport]

**LYSIMACHUS OF ALEXANDRIA** (of uncertain date), author of several mythographical works and a book on Egypt. In addition to the scurrilous versions of the Exodus given by *Manetho* and *Chaeremon*, Josephus adds the account of Lysimachus, who, he says, “surpasses both in the incredibility of his fictions” (Apion, 1:304–20). According to Lysimachus’ version, in the reign of Bocchoris (perhaps a corruption of behkor, in allusion to the plague of the first-born during which the Jews left Egypt), king of Egypt, the Jews (see also *Tacitus, Historiae*, 53), afflicted with leprosy and scurvy, took refuge in the temples. A dearth ensued throughout Egypt, and an oracle of Ammon informed the king that the failure of the crops could be averted only by purging the temples of impure persons, driving them out into the wilderness and drowning those afflicted with leprosy. After the lepers had been drowned, the others, numbering 110,600 were exposed in the desert to perish. A certain Moses, however, advised them to proceed until they reached inhabited country, instructing them to show goodwill to no man, to offer not the best but the worst advice, and to overthrow any temples which they found. When they came to the country now called Judea, they built a town called Hierosyla (“town of temple-robbers”). At a later date they altered the name to avoid reproach and called the city Hierosolyma. Josephus attempts to refute the account, not by offering other evidence, but by showing its intrinsic improbability.

[David Winston]

**LYUBESHOV** (Pol. Lubieszów; Yid. Libeshey), hasidic dynasty established in Lithuanian Polesia in the early 19th century, originating in Volhynia. Its founder, Shemariah Weingarten (d. 1846), was the son of Abraham Abba-Joseph of Soroca (Soroki) and son-in-law of the celebrated Volhynian zaddik David ha-Levi of Stepans. His leadership was acknowledged in Pinsk, *Kobrin, Lyubeshov, Janow, Telekany, Motol, and Khomsk, among other places. Shemariah, who was also a scholar, was given a special right to the rabbinate in Kobrin and the surrounding villages, a unique case in the annals of Hasidism in Lithuania. The establishment of the dynasty helped to spread Hasidism in this part of Polesia. Shemariah’s successor in Lyubeshov was his son Jehiel Michael, and later, his other son Abraham Abba (d. 1861), who served as rabbi of the nearby town of Janow and in Lyubeshov. At that time the influence of the Lyubeshov dynasty, especially in Kobrin, passed to the hasidic “court” of Kobrin. After Abraham Abba’s death, his son Hayyim Isaac served as zaddik from 1861 to 1879, and his grandson Jacob Loeb from 1879 to 1922. In 1886 the second son of Hayyim Isaac, Abba (d. c. 1924), served as zaddik in Janow, which caused a split among the Lyubeshov Hasidim. The successor of Jacob Loeb in Lyubeshov was his son Isaac Aaron, who lived in Pinsk and gathered around him the Lyubeshov Hasidim. Between the two world wars he visited his Hasidim in the U.S. He and his followers perished during the Holocaust.

It was characteristic of Lyubeshov Hasidim that their zaddikim served as rabbis of towns in Lithuania (Kobrin, Janow, and Lyubeshov). Essentially it was a branch of the Volhynian Hasidism. Their zaddikim left no written works. An important principle of Lyubeshov Hasidism was the holiness of the zaddik. They opposed fasting, emphasized the virtue of joy, and had their own melodies. They were concerned with settlement in Ereẓ Israel and during the 19th century set up a Lyubeshov *kolel* there.

[Wolf Zeev Rabinowitsch]
there were 3,297 (73% of the total population). In 1921 there were 3,141 Jews (94% of the total population), in 1931 3,807 (of 4,169 total population) in the city of Lyuboml. Most of the small traders and artisans were Jews, and they owned the flour mills, and the trade in farm productions. There were two Hebrew Tarbut schools, one Yavne religious school, and a small yeshivah.

[Encyclopaedia Judaica (Germany)]

**Holocaust Period**

Before the outbreak of World War II there were about 3,500 Jews in Lyuboml. The German army entered the town on Sept. 17, 1939, but according to the German-Soviet agreement, it withdrew after three days when the Red Army entered the town. The economy was nationalized, all Jewish organizations and institutions were closed, and one Yiddish school with a Soviet curriculum remained. The Germans occupied the town on June 25, 1941, and some of the 500 Jews who had been drafted into the Red Army were caught and executed. On July 22, 400 men were murdered, and on August 21 another 400 were killed, mostly women. On December 5, 1941, Jews were herded into a ghetto with a density of up to 20 persons per room. For a week from Oct. 1, 1942, the ghetto inmates were murdered – on the first day about 1,800 Jews were killed. There were groups who tried to escape, but only 30 succeeded in reaching the forests, and joined Soviet or Polish partisan units. After the war, the Jewish community of Lyuboml was not reconstituted.

MAACAH (Heb. מַעַכָּה).

(1) one of David’s wives, daughter of Talmai King of Ge-shur, mother of Absalom (II Sam. 3:3; I Chron. 3:2);

(2) one of Rehoboam’s wives, daughter of Absalom or Abisalom son of David, mother of Abijam or Abijah (I Kings 15:2; II Chron. 11:20, 22) and Asa (I Kings 15:11; II Chron. 15:16).

The references to the second Maacah pose certain problems, as a literal reading of all the passages related to her indicates that she is the daughter of Absalom, who, according to II Samuel 14:27, had only one daughter, Tamar. The above references also indicate that Maacah is the mother of Abijah. According to II Chronicles 13:2 (MT), Abijah’s mother is Micaiah, daughter of Uriel. Finally the references show Maacah also to be the mother of Asa.

In order to resolve these contradictions, the Masoretic Text of II Chronicles 13:2 must be corrected in accordance with the Septuagint, which reads “Maacah daughter of Uriel.” Everywhere else in the Masoretic Text as well as in the Septuagint Abijah’s mother is called Maacah daughter of Absalom.)

With this correction the problems are more easily resolved. Maacah is then the granddaughter of Absalom, the daughter of Uriel and Tamar, the mother of Abijah, and the grandmother of Asa. Some of the original confusion results from the fact that the Bible often used the term “children” for “grandchildren” and even descendants who are generations removed (cf. Gen. 31:28; I Kings 15:11, et al.).

W. Rudolph (see bibl.) adopts the view of M. Noth (see bibl.) that II Chronicles 13:2 represents the original text of I Kings 15:2 which is now influenced by I Kings 15:10. Then Abijah would be the son of Rehoboam’s wife Micaiah daughter of Uriel, and Asa the son of Abijah’s wife Maacah, who would have been the literal daughter of an unknown Absalom, not the granddaughter of David’s son Absalom. King Asa deposed Maacah from being queen mother because of an abominable image she had made for Asherah (I Kings 15:13). S. Yeivin
MA'AGAN MIKHA'EL

MA'AGAN MIKHA'EL (Heb. מַﬠַגָּן מִיכָאֵל, “Michael’s Anchorage”), kibbutz on the seashore of Israel at the southern end of the Carmel Coast, affiliated with Ha-Kibbutz ha-Me'uhad. Ma'agan Mikha'el was founded in 1949 by the first group of graduates of the Israel boy scout movement, who were later joined by immigrants from different countries. In 1969 Ma'agan Mikha'el had 665 inhabitants. By 2002 the number had increased to 1,290. Its economy was based on fruit plantations, crops, livestock, carp ponds, software, and an injection molding plant for plastic products. A nature reserve is located at Ma'agan Mikha'el, at the split mouth of the Taninim (“crocodiles”) River. The reserve, rich in water fowl, comprises the Yonim (“doves”) islet in the sea and the former Kabara swamps which were drained by the *Palestine Jewish Colonization Association (PICA), and hosts many migratory birds. Prehistoric finds were made in the nearby Kabara caves. The name of the kibbutz commemorates Mikhail Pol'ak, a director of PICA.

WEBSITE: maaganm.kibbutz.org.il. [Efraim Orni]

MA'ALEH ADUMIM (Heb. מַﬠַלֶה אֲדֻמִּים, “Ascent of the Five”), city located east of Jerusalem, on the Jericho road. Ma'aleh Adumim was founded in 1977 by Israelis and new immigrants. The city is located on land occupied by Israel during the Six-Day War, spreading over 20 sq. mi. (50 sq. km.). Various Israeli governments have avowed that Ma'aleh Adumim will remain part of Israel in any peace settlement. In 2002 the population of the city reached 26,500, growing at the high rate of 2.9% annually. The majority of the population works in nearby Jerusalem, while some are employed in the industrial area of the city.

[Shaked Gilboa (2nd ed.)]

MA'ALEH AKRABBIM (Heb. מַﬠַלֶה עַקרְבִּי, “Ascent of Akrabbim”; “ascent of the scorpions”), locality mentioned several times in the Bible as being at the southern boundary of the Promised Land. According to Numbers 34:4, the border started “at the end of the Salt [Dead] Sea eastward” and turned south of Ma'aleh Akrabbim, continuing toward the “wilderness of Zin”; the account in Joshua 15:3 is similar. The border of the Amorites apparently ran from Ma'aleh Akrabbim, “from Sela, and upward” (Judg. 1:36). Abel identified it with Naqb al-'SaFi to the west of the Arabah, while Mazar locates it to the east, on the road to Sela. The Akrabatine of 1 Maccabees 5:3 apparently refers to the district of Acra to the north of Jerusalem.

Ma'aleh Akrabbim is now the name of a section of a road to Eilat that snakes down into the canyon of Nahal Zin, about 2½ mi. (4 km.) west of the “Small Crater” (Makhtesh ha-Katan). Until the road to Eilat that passes through Ma'aleh ha-Azma'ut by Mitzpe Ramon was built, all traffic to Eilat passed through Ma'aleh Akrabbim. The spot is an excellent lookout point over Nahal Zin and the Arabah.

employed as skilled laborers in the Nahariyyah and Haifa areas or maintained lucrative farmsteads. In 1969 the town had 4,750 inhabitants including 3,160 Jews in Màalot, the majority of whom originated from North African countries, and 1,590 Arabs at Tarshiha, some Muslim and some Christian. Màalot was the target of an early terrorist attack, in May 1974, when 21 schoolchildren were killed. In the mid-1990s, the population was approximately 12,800, rising to 20,650 in 2002, including 80% Jews, 9% Muslims, 10% Christians, and 1% Druzes. In 1996 Màalot-Tarshiha received city status. Its area is 2.7 sq. mi. (7 sq. km.). During the 1990s, the economic base of the city was expanded by the addition of 100 factories and workshops, but income remained well below the national average. From 1992 Màalot-Tarshiha has hosted the International Symposium for Stone Sculpturing.

[Efraim Orni / Shaked Gilboa (2nd ed.)]

**MA’AMAD or MAHAMAD**, council of elders in a Sephardi community or congregation in the West after the expulsion from Spain, corresponding to the *kahal* (in the sense of the supreme community council) in Ashkenazi communities. Schooled by bitter memories of the crisis in Spain on the eve of the expulsion, the policy of the ma'amad tended to be conservative and authoritarian in the extreme. One of the characteristic features of ma'amad policy was that on completion of its term of office the ma'amad itself appointed its successors. A nominee was obliged to accept the assignment. Those who disobeyed the directives of the ma'amad were fined heavily, and in some cases were even excommunicated.

[Natan Efrati]

**MA’ANIT** (Heb. מַעְאַנִית; “Furrow”), kibbutz in central Israel, E. of Pardes Hannah, affiliated with Kibbutz Arzi Ha-Shomer ha-Za’ir. It was founded in 1942 by pioneers from Czechoslovakia. In the Israel *War of Independence* (1948), the village, lying close to the Samarian Hills, was exposed to Arab attack. Ma’anit engaged in intensive farming (field crops, avocado plantations, citrus groves, and dairy cattle), and operated Galam, the country’s leading fructose, glucose, and starch manufacturer for industrial and consumer use. In the mid-1990s, the population was approximately 550, dropping to 459 in 2002. Ma’anit lies near the site of ancient *Narbata* where, in 66 C.E., Jews from Caesarea sought refuge when the war against Rome broke out (Jos., Wars, 2:5, 14). In its initial years, the kibbutz bore the name Narbata.

[Efraim Orni]

**MA’ARAVOT** (Heb. מָעַרַבֹּת, also ma‘aravim, sing. *ma‘aravit*), an arrangement of *piyyutim* that embellish the Ma‘ariv (Avrit) prayers for festivals and special Sabbaths. The piyyutim are topical and conclude with an allusion to all the blessings recited before the *‘Amidah*. Originally these piyyutim were used in place of the regular prayers, but in the course of time the regular prayers were reinstated and the piyyutim were offered at the end of each prayer just before its blessing. Except for the lengthy *piyyut* recited before Mi Khamokha (“Who is like Thee?”), the *piyyutim* are brief. This lengthy *piyyut* is composed in the form of a single or double alphabetical acrostic with the name of the author appearing at the end. Some communities customarily added a reshit (“prelude”) to the Ma‘ariv. On the eve of Shavuot, Tosefet Bikkur (“Addition of First Fruit”) or simply Bikkur, a piyyut whose subject is the bringing of the first fruits, is recited. The ma‘aravot are in current usage in most Ashkenazi communities, but there are no ma‘aravot in the Sephardi rite.

[Abraham Meir Habermann]
a great influence on the Zohar is chronologically impossible and conceptually incorrect.

In general, the author's main aim was to remove, or at least weaken, the mythical elements which are basic in the Kabbalah and in certain rabbinic sayings. The author's theosophical tendency is not made apparent in the first two chapters, which are essentially theological and do not constitute a consistent theory. The author's purpose in the first chapter is to indicate that true faith is based on the concept of a personal God, the Creator of the world and its supervisor. God acts in the world and He can alter the laws of nature, as proven by the miracles related in the Bible. The second chapter, however, stresses the absolute unity of God, which is based on the denial of any corporeality, plurality, or change within Him. In God there is neither modification of thought nor of action. There is no change in Him and none in His deeds. The changes revealed by worldly events are caused by the actions of man. Man is a vessel which contains God's action, which is simple and undifferentiated but is received differently by different people, each one according to his merit.

The author's theosophical speculations first appear in the third chapter. The Divinity is here defined as the totality of the ten Sefirot, which constitute God's direction of the world. This aspect of God alone is expressed in the Bible and Talmud while the Divinity Itself, referred to as Ein-Sof (“infinity”), is hinted at only to initiate. Ein-Sof, the infinite, the hidden aspect of the Divine, is expressed neither through the order of nature nor in the laws of the Torah. The act of emanation itself, which is the emergence of the Sefirot from Ein-Sof, does not constitute an innovation or a change in the Divine: it is simply the revelation of what had been hitherto concealed. The author attempts to explain through reasoning and homily that both the legends of the rabbis on the modification in God's thought regarding the ways in which the world should be conducted and the description of the dynamic relations among the diverse Sefirot in Kabbalah literature are simply a projection of human experience upon Divinity. Because it is observable in human experience that man decides on the most desirable alternative by a process of choice and deliberation, he therefore ascribes to divine leadership an ideal synthesis of Justice and Mercy, as if it resulted from a similar process. In a similar manner, he expounds the aggadic legend concerning the waning of the moon which the kabbalists related to an act occurring in the world of the Sefirot; other legends are also given a kabbalistic interpretation.

The chapter entitled “Sha‘ar ha-Harishah” (about the nature of sin) is of particular interest. According to this, the sins related in the Bible as committed by individuals or generations are essentially sins of a mystical character. Though the sin was actually committed, its essential significance lies in the thought connected with it. In some instances the sin is brought about by an excess of meditation, while in others it results from the sinner's wish to disrupt the pattern of relationship of the Sefirot. Most of these themes had already appeared in earlier kabbalistic literature but here they are given a systematic description, and the book is also a systematic summary of most themes treated in early Kabbalah literature.

**MAARIV**, Israeli daily newspaper published in Tel Aviv. *Maariv* was founded in February 1948 by journalists who had left *Yedioth Aharonoth* following disagreements with its proprietor. The group, led by Dr. Azriel *Carlebach, who became the editor of Maariv, included Aryeh *Dissenchik, Shmuel *Schnitzer, Shalom *Rosenfeld,* and David Giladi; it sought to create a newspaper run as a journalistic cooperative. Sixty percent of the paper's equity and 50% of its voting shares were held by journalists. Requiring extra-journalistic financial backing, they turned to investor Oved Ben Ami. Although the cooperative-style journalistic management strengthened motivation through participation it created a cumbersome editorial decision-making process – which eventually contributed to Maariv's losing its position as the country's largest selling newspaper to Yedioth Aharonoth. Originally the newspaper appeared in the late afternoon, but, like Yedioth Aharonoth, over the years it began appearing earlier in the day so that by the 1980s it had become a morning newspaper in all but name. The editorial board reflected a spectrum of political views, if mostly to the right. Until the 1980s, the newspaper was regarded as a mid-market newspaper, catering to a broad readership, with serious in-depth coverage of changing events, but without the intellectual stuffiness which characterized some of the morning daily press. After Carlebach died in 1956, he was replaced by Aryeh Dissenchik, whose wide connections in the political establishment brought the newspaper a slew of exclusive reports. But after Dissenchik's death in 1974, and his replacement by Shalom Rosenfeld, the paper's circulation declined, dropping still further when Shmuel Schnitzer, the paper's widely read columnist, succeeded Rosenfeld in turn. The paper's somewhat paternalistic and patriotic style failed to keep up with the country's changing political mood in the 1970s, and lacked appeal to younger people and the rising Sephardi class. In a vain attempt to halt the circulation decline, Iddo Dissenchik, son of Aryeh Dissenchik, was appointed editor in 1985. A graduate of the Columbia School of Journalism, Dissenchik had previously been a news editor on the paper and its foreign correspondent in the United States. He introduced a number of changes, including new supplements. But in order to inject further capital into the paper, 87% of its stock was sold to Robert *Maxwell, the British media mogul, who, in turn, appointed Dov *Yudkovsky, who since 1989 had represented Maxwell's Israeli interests, as editor. A $25 million full-color printing press was purchased. After Maxwell died in 1992 the newspaper was bought by arms dealer Yaakov *Nimrodi, who gave his son, Ofer, responsibility for the newspaper. At the time of Maxwell's death, the newspaper had accumulated...
debts of $40 million and its circulation was 90,000 daily and 200,000 on weekends as against Yedioth Aharonoth’s 295,000 daily and 350,000 on weekends. Dan Margalit, Maariv’s op-ed editor, served briefly as editor, a post which Ofer Nimrodi himself filled from 1992 to 1995, when Yaacov Erez, the paper’s veteran military correspondent, became editor. In the so-called wiretapping scandal Nimrodi was imprisoned for eight months in 1999 for wiretapping the phones of Yedioth Aharonoth publisher Arnon Mozes and Dov Yudkovsky. Amnon Abramovitch, a Maariv investigative reporter, resigned from the newspaper after discovering that his telephone had also been tapped. In 2003 Amnon Dankner, a Maariv columnist who had come to Nimrodi’s defense in the wiretapping scandal, was appointed editor. Under Nimrodi, Maariv went downmarket in editorial content and layout, but while he succeeded in reducing the gap between Maariv and Yedioth Aharonoth – 23% of Israelis read Maariv daily and 28% on weekends according to a 2005 Teleskekeri survey – the gap remained. Nimrodi had additional media-related and other commercial interests. In 2004 the newspaper set up an Internet news site, NRG. The newspaper owned a number of magazines, including magazines for youth, and a publishing house, and had developed interests in the cellular phone industry.

[Yoel Cohen (2nd ed.)]

MAARSEN, ISAAC (1893–1943), Dutch rabbi, chief rabbi of The Hague. Maarsen was born in Amsterdam, where he studied at the Amsterdam rabbinical seminary and at the university, graduating in classical philology. He was ordained as rabbi in 1918 and became teacher of Talmud in the high school department of the rabbinical seminary. In 1919 he was appointed a dayyan and member of the Amsterdam rabbinate. Five years later he was appointed chief rabbi of The Hague, then the second-largest community in Holland. He excelled chiefly as preacher and lecturer, and in his writings against Reform Judaism. He translated the tractate Avot and medieval and modern poetry from Hebrew into Dutch, and engaged in research on the history of the Dutch rabbinate. His reputation rests on his studies in the fields of rabbinical literature, which appeared in various Hebrew periodicals. His main works are Tiferet le-Moshe (1928), notes to Nahmanides’ commentary on the Pentateuch; Parshandata (1930–36), a critical edition of Rashī’s commentary to the Prophets and Hagiorapha, which he did not complete, only three parts appearing, on the Minor Prophets, Isaiah, and Psalms; and Muhlefet ha-Shitah (1940), on the difference between Rashī’s comments on the Bible and the same verses when quoted in the Talmud. He met his death in the Holocaust.

[Benjamin De-Vries]

MA’ARUFYA (Aram. מַעְרֻפִּיָּה), medieval Hebrew concept signifying the tie between a Christian client and the Jew who was his permanent supplier, moneylender, or financial administrator. The din ha-ma’arufya (“law of ma’arufya”) was never generally prevalent; where it applied it specified that the relationship between the Jewish merchant and his client was the exclusive prerogative of that Jew alone, which the community (kehilla) protected by means of the herem (ban). According to some scholars the term derives from the French while others consider that it comes from Arabic. Some scholars have drawn a distinction between the implications of ma’arufya and ma’arija, considering that the first denotes a non-Jewish customer who maintains commercial relations with a certain Jew while the second denotes the exclusive right to trade with him. However, this view is untenable since both forms are used indiscriminately.

Ma’arufya was known in the communities of France and Germany in the tenth century. It is possible that this usage originated in the privileges granted to merchants by the municipal councils or lords of various European towns during the 10th and 11th centuries guaranteeing them trading monopolies. From the responsa of Gershom b. Judah (Me’or ha-Golah), it appears that the din ha-ma’arufya was applied in almost every community. However, 11th-century sources indicate that by then the custom was not accepted everywhere: “there are places where the ma’arufya is enforced and there are places where it is not enforced” (Joseph Bonfils (Tuv Elem) in: Haggahot Ma’aimoniyot of Meir ha-Kohen, Hilkhot Shekhenin, 6:8). As Jewish business activities were narrowed down to moneymaking in Ashkenazi areas toward the end of the 12th century, ma’arufya lost much of its former importance. The din ha-ma’arufya is not explicitly recorded in the communities of Spain, although in them too the trend against competition is evident. The essence of ma’arufya, and often the term itself, was operative in the communities of Poland-Lithuania and Russia until the modern era. Because of the variety of occupations there, the scope of the concept was applied to give craftsmen and artisans exclusive rights over their customers. The regulations of the crafts’ associations included articles intended to assure the established rights of artisans to their clients. If a craftsman had done work for the ma’arufya of another craftsman, he was obliged to remit all his profits to him without deducting his own expenses. These rights were bequeathed from father to son, and when there were no heirs the rights were transferred to the dead man’s guild.

MA’AS (Heb. מַשָּׁ; “Action” or “Deed”), moshav in central Israel, near Petah Tikvah, affiliated with Tenu’at ha-Moshavim, founded in 1934 in the framework of the Thousand Families Settlement Scheme by veteran agricultural workers. They gradually enlarged their holdings from auxiliary to full-fledged farms while earning their living as hired labor-
ers in the Petah Tikvah citrus groves (therefore calling their village, until the 1950s, Be-Hadragah, "Gradually"). Citrus groves constituted the prominent farm branch in Ma‘as. In 1968 its population was 400. By the mid-1990s it had grown to approximately 645, maintaining its size with 667 inhabitants at the end of 2002.

Efraim Orni

MA‘ASEH (Heb. מַעֲשֶׂה), a factual circumstance from which a halakhic rule or principle is derived; as such it constitutes one of the Jewish law sources. A legal principle originating from ma‘aseh is formally distinguished from those originating from one of the other legal sources of Jewish law – such as Midrash (see *Interpretation), *takkanah, *minhag, and *sevara (see *Mishpat Ivri) – by the fact that in the latter cases the legal principle appears in selfstanding form, whereas in ma‘aseh it is integrated with and bound to a particular set of concrete facts, from which it must be separated and abstracted if it is to be enunciated. As will be seen below, this formal distinction is also of substantive importance. The term ma‘aseh is customarily used in tannaitic sources (Shab. 24:5; BB 10:8; Eduy. 2:3); in the Babylonian Talmud the equivalent term is uveda and in the Jerusalem Talmud sometimes dilma (see, e.g., TJ, Ber. 1:1, 2c; Pe‘ah 3:9, 17d; et al.).

Substance of Ma‘aseh
Ma‘aseh constitutes a legal source in two ways: one is represented by the judgment given in a concrete “case” before the court or competent adjudicator (halakhic scholar) – as in other legal systems; the other, by the specific act or conduct of a competent halakhic scholar, not necessarily in his capacity as judge or posek. In either case ma‘aseh serves as a case for the determination of a halakhic principle as regards both civil law (dinei mamonot) and ritual law (dinei issur ve-hetter).

Citation of a halakhic principle by way of ma‘aseh does not in every case warrant the conclusion that such ma‘aseh is necessarily the source from which the principle was evolved – since the principle may possibly have been in existence before and the halakhic scholar only having had applied it in such case. In this event, the ma‘aseh is not constitutive but only declarative of the existence of the particular halakhic rule (see below). However, ma‘aseh – even when only declarative – lends the particular halakhic principle a special validity, as ma‘aseh rav (“an act is weightier,” Shab. 21a) or ma‘aseh adif (“an act is preferred,” BB 83a), since a rule tested in the crucible of practical life is regarded by the scholars as having a different force from one for which there is no evidence of its practical application. Hence, once a particular halakhic principle has been followed in practice – even though its application is subject to dispute – it may no longer be varied, since “what has been done is no longer open to discussion” (K Ḥ 29b, concerning blowing of the shofar on Rosh Ha-Shanah when it falls on a Sabbath).

The particular force of a halakhic principle originating from ma‘aseh is tied to the substantive principle underlying the entire halakhic system, namely that the Torah was entrusted to the authority (al da‘atan) of the halakhic scholars (see *Authority, Rabbinical; *Mishpat Ivri), it being presumed that the judicial decision and conduct in daily life of the competent halakhic scholar are the outcome of his penetration and correct understanding of the halakhah. The scholars were fully aware of the power attached to an act of deciding the law and for this reason exercised great care before doing so (Git. 19a, 37a, and Rashi thereto). In particular, the halakhic scholar is held to reveal, by his conduct, the active image of the halakhah and therefore “the service of the Torah is greater than the study of it” (Ber. 7b); one of the ways by virtue of which the Torah is acquired is “attendance on the sages” (Avot 6:6), since practical application of the Torah leads to appreciation of the living and active halakhah, its correctness and creative force. For this reason it was required of the halakhic scholars to act with much forethought in their day-to-day conduct of halakhic matters (Tosef., Dem. 5:24 concerning the discussion between R. Gamaliel and R. Akiva); R. Ishmael explained his particularly careful approach toward a certain rule concerning the Keri‘at Shema in these words: “lest the pupils see and lay down halakhah for generations” (Ber. 11a; Tosef., Ber. 1:6).

In Jewish law, ma‘aseh constitutes a legal source, not because it has the force of binding precedent which (as will be seen below, the Jewish legal system generally does not recognize as a principle), but because the scholars recognized it as a lawmaking source from which to derive halakhic principles becoming part of the general halakhic system. The fact that it remained permissible to dispute a halakhic principle derived from ma‘aseh did not serve to deprive it of its substantive character as one of the legal sources of Jewish law – just as, for instance, Midrash remained such notwithstanding the fact that different and contradictory halakhic principles were often derived from it by the use of different methods of Bible exegesis.

An Act of Deciding the Law
The laws derived from ma‘aseh form a very substantial part of the general system of Jewish law – the latter representing, in its nature and path of development, a classic example of a legal system founded on a series of legal acts or “cases,” adding up to a comprehensive system of case law (see also *Codification of Law). This character was already stamped on the halakhah in the Torah, in which there are many laws enjoined in relation to a particular act or event, as, e.g., in the matter of the blasphemy of the Name (Lev. 24:10–23), the gathering of sticks on the Sabbath (Num. 15:32–36), the law of inheritance concerning the daughters of Zelophehad (Num. 27:1–11), and the law of the second Passover (Num. 9:1–8).

Talmudic sources are replete with halakhhot, in all fields of the law, quoted in the form of an act of legal decision or in the form of an independent ruling which is, however, either preceded or followed by the facts of the relevant case. The case described does not always form the original source of the halakhic rule, but frequently, and in various ways, it is possible...
to prove that the rule was actually created as an outcome of the case. Sometimes this fact is expressly stated. Thus, with reference to the law that a bill of divorce must be prepared by the husband for delivery to his wife, the Mishnah states that it suffices if the bill be prepared by the wife provided that the husband procures the signature of witnesses to it since what matters is the signature and not the person by whom the bill is drawn up (Git. 2:5). This principle was learned from a case that occurred in a small village near Jerusalem, a case in which the scholars decided that it was only necessary for a bond of indebtedness to be signed, and not drawn up, by the witnesses (Eduy. 2:3). Similarly, the amoraim derived from earlier cases a number of halakhic principles concerning the laws of proselytization (Yev. 46b) and the laws of restoring a loss (hashavat avedah: cf. BM 25b with TJ, BM 2:4, 8c – the rule of Abba b. Zavda).

Sometimes derivation of a halakhic principle from the ma'asah is not expressly acknowledged, but from the content it may be deduced that the principle was derived from the adjacent case description. Thus, according to ancient halakhah, suretyship for a loan undertaking was valid only if made prior to establishment of the principal debt, i.e., the creditor as it were agreeing to grant the loan on the strength of such suretyship. However, R. Ishmael, in a case that came before him, extended the scope of suretyship by holding it valid in certain circumstances, even if made after grant of the loan, i.e., if the person standing *surety signed after the signature by the witnesses of the deed of loan. Ben Nanas differed, maintaining that the suretyship had to precede grant of the loan. The new principle enunciated by R. Ishmael is earlier stated in the Mishnah, in the form of a self-standing legal rule (BB 10:8; for further examples, see Ned. 8:3; BM 30a).

Conduct of a Halakhic Scholar

Talmudic sources also contain a great number of halakhot, in all fields of the law, stated in the form of a description of the conduct of a halakhic scholar and in like manner to the statement of acts of legal decision. Thus in one instance the Mishnah (Shab. 24:5) first quotes several halakhot concerning permissible labors on the Sabbath in the form of independent rules: “they may stop up a light-hole or measure a piece of stuff or a mikveh”; in continuation, it is stated that in the time of R. Zadok’s father and in the time of Abba Saul b. Botnir there occurred a case in which such labors were done on the Sabbath and in conclusion it is stated that from such occurrence the permissibility of these labors on the Sabbath was learned. An analysis of the halakhot thus stated offers proof that even when the self-standing halakhic ruling is stated in the Mishnah before the ma’asah, it does not exclude the possibility that chronologically speaking the ma’asah preceded such a ruling and that the former is the source of the latter – except that the compiler of the Mishnah saw fit to state first the ruling and then the ma’asah. At times disputes concerning a tradition entertained by the halakhic scholars and relating to the conduct of a particular halakhic scholar led in turn to disputing opinions as regards the halakhic principle to be derived from the aforesaid conduct (see, e.g., Suk. 2:7 concerning the dispute between Bet Shamai and Bet Hillel, arising in connection with the ma’asah of R. Johanan b. ha-Horani).

Distinguishing Ma’asah

Just as a halakhic principle acquires special force and significance from the fact that it has been applied in a practical case, so the latter fact entails the risk of possible error in the manner of deduction of the principle from the practical case. Hence, in deduction of the principle it is required that two important distinctions be made: first, the factual aspect of the case must be precisely distinguished from the legal aspect; secondly – and more difficult – the part that is not material and has no bearing on the halakhic conclusion must be distinguished from the material part which leads to the halakhic conclusion. This distinguishing process is sometimes directed toward a specific purpose, for instance toward restriction of the halakhic principle derived from a case when the need for it arises in a concrete matter for decision. In English law – which has the system of case law – the process of distinguishing is also greatly developed, and here too one of the main functions of the process is to distinguish between the ratio decidendi and mere obiter dictum. The distinguishing process has been of primary importance to the development of both legal systems.

The phrase commonly employed in the Mishnah for the act of distinguishing is einah hi ha-middah, “that is not the inference” (Pes. 1:6–7), and in the Talmud, “This was not stated explicitly but by implication” (BM 36a, et al.; see also BB 130b and Rashbam thereto, s.v. halakhah adifah), or “Tell me what actually transpired!” (BM 70a, et al.). The process of distinguishing is well illustrated in Bava Mezial 36a. Rav is quoted as holding that a bailee who entrusted a bailment to another bailee is not liable – i.e., for any more than he would have been liable had he kept the bailment himself – since he entrusted it to a person having understanding (ben daat); however, R. Johanan is recorded as holding that the first bailee liable for all damage occasioned to the bailment while it is deposited with the second bailee, since the owner might say to the former that he entrusted the bailment to his personal care and did not wish it entrusted to another (see “Shomerim”). In the continuation of the discussion it is stated, “R. Hisda said: This was not stated by Rav explicitly but by implication,” i.e., that Rav’s rule was deduced by implication from a legal decision he gave in a practical case, but that the rule was deduced in error because no proper distinction had been made. The facts of the case decided by Rav were as follows: gardeners used to deposit their spades every day, on completion of their work, with an old woman; one day they deposited their spades with one of their members and the latter, wishing to join in some festivity, deposited them with the old woman, from whom they were stolen; when the other gardeners sought compensation from the bailee gardener for the loss of their spades, Rav held the latter exempt from liability. From his decision it had been erroneously concluded that the latter held in fa-
In Post-Talmudic Times

Ma'aseh, both as an act of legal decision and as the conduct of a halakhic scholar, continued to serve as an important legal source in post-talmudic times. The halakhic scholars of this period derived many legal conclusions from practical cases in talmudic literature. Thus Maimonides decided that a person engaged in study of the Torah shall stop studying and recite the Keri'at Shema whenever it is the time to do so; however, a person engaged in public matters shall not desist from such activity, even if meanwhile the time for Keri'at Shema passes (Yad, Keri'at Shema 2:5). Maimonides derived this halakha from an account in the Tosefa stating that R. Akiva and R. Eleazar b. Azariah omitted to recite Keri'at Shema because they were preoccupied with public matters (Tosef., Ber. 1:14; see comment of Elijah Gaon to Sh. Ar., OH 70:4).

In like manner, mūṣim of the post-talmudic scholars, in the form of both practical decisions (see below) and conduct, served as a legal source for the deduction of halakhah by subsequent scholars. Mūṣim of the latter kind are frequently quoted in post-talmudic halakhic literature in the form of testimony by pupils to the conduct of their teachers in different matters of the halakhah. Special books of halakhah were even compiled in which a considerable part of the material was based on the author's observation of the conduct of his emi-

The Responsa Literature

With the development in post-talmudic times of one of the main branches of the literary sources of Jewish law, namely the responsa literature, ma'aseh came to fulfill an important role as a lawmaking source. The responsa literature represents the case law of the Jewish legal system. A concrete problem that arose in daily life – whether in matters between individuals or in matters of man's relationship to the Almighty, in matters of civil or ritual law – was brought before the local dayyan or halakhic scholar, and they, whenever they experienced any doubt or difficulty in reaching a solution to the problem at hand, turned to the distinguished halakhic scholars of their generation. Certain matters, particularly disputes between the individual and the public or its representative bodies, came directly before the most prominent halakhic scholars. They deliberated all the factual and legal aspects of the case and submitted their findings and conclusion in a written responsion to the questioner. The she'elat ha-teshuvah – question and response – accordingly represents a classic example of an act of legal decision, and answers to all the requirements set by the talmudic sages for recognition of ma'aseh as a legal source, since this procedure is a true application of “having asked and been informed that a halakha is to be taken as a guide for practical decisions …” (above: BB 130b). This character of the responsa literature has served to lend the legal principle emerging from it a particular standing and force exceeding that of a principle derived from the commentaries and novellae and even, in the opinion of the majority of halakhic scholars, exceeding that of a principle derived from the books of halakhah and pesakim (see “Codification of Law” in cases of inconsistency between the two. Hence, “more is to be learned from the conclusions stated in the responsa than from those stated by the posekim [in the codes], since the latter did not write their conclusions in the course of deciding the law in a concrete instance” (Resp. Maharil no. 72). Similarly, “when halakha is laid down in practice there is greater penetration to the heart of the matter than in the course of theoretical study; there is also greater divine guidance (sayata di-shema) in a practical case … for a conclusion that comes in answer to a practical case is preferable and more directed to the real truth than what is forthcoming from mere theoretical study” (Meshiv Davar, pt. 1, no. 24).

Jewish Law and Binding Precedent

Recognition in Jewish law of ma'aseh as a legal source from which may be derived the principles that emerge from it is
unconnected with the question of whether any conclusion so derived has the force of binding precedent for the purpose of deciding the law in a similar case. In fact, as will be seen below, Jewish law does not recognize the principle of binding precedent.

PREDICENT IN OTHER LEGAL SYSTEMS. The legal “case” occupies a very modest place in the source hierarchy of the Roman legal system; certainly the latter does not recognize at all the principle of binding precedent. Justinian expressly laid down that judgments be given according to laws and not precedents: “non exemplis, sed legibus iudicandum est” (c. 7. 45. 13; see J. Salmond, Jurisprudence (1966), 141f.; C.K. Allen, Law in the Making (1964), 342f.). Most continental legal systems, following that of Rome, exemplify the codificatory system of law, and in these the decisions of the courts represent no more than material of a theoretical and persuasive nature, without binding force (Salmond, ibid.). The position is different in English law: “The importance of judicial precedents has always been a distinguishing characteristic of English law. The great body of the common or unwritten law is almost entirely the product of decided cases, accumulated in an immense series of reports extending backward with scarcely a break to the reign of Edward I at the close of the 13th century… A judicial precedent speaks in England with authority; it is not merely evidence of the law but a source of it” (Salmond, p. 141). As regards the extent to which the courts are bound by precedent, Salmond goes on to say: “It is necessary to point out that the phrase ‘the doctrine of precedent’ has two meanings. In the first, which may be called the loose meaning, the phrase means merely that precedents are reported, may be cited, and will probably be followed by the courts. This was the doctrine that prevailed in England until the 19th century, and it is still the only sense in which a doctrine of precedent prevails on the continent. In the second, the strict meaning, the phrase means that precedents not only have great authority but must (in certain circumstances) be followed. This was the rule developed during the 19th century and completed in some respects during the 20th” (p. 142). The merits of this development toward the strict meaning of precedent have not remained unquestioned, and in recent times there has been increasing discussion of the correctness and efficacy of this approach (ibid., p. 143 and see note, p. ix, concerning the extrajudicial statement made in the House of Lords in 1966, relaxing the rule of being bound to follow its own previous decisions “when it appears right to do so”).

COMPARISON OF PRECEDENT IN ENGLISH AND IN JEWISH LAW. At their respective starting points the two legal systems have much in common in their approach to precedent but they diverge in their manner of development. In both “case” constitutes a source of law; both are, to a large extent, built up around case law, and have developed in consequence of concrete legal decisions in daily life; the basic material at the heart of most Jewish law codifications is likewise the product of legal principles derived from day-to-day legal decisions (see *Codification of Law), and from this point of view the main difference between the two legal systems is that the Jewish law equivalent of the “immense series of reports,” namely the responsa literature, dates from the geonic period onward, i.e., from the middle of the eighth century and not, as in England, from the end of the 13th century (see *Mishpat Ivri). On the other hand, Jewish law has not accepted the doctrine of precedent in the strict meaning of the term – as has English law, commencing from the 19th century – and the power of ma’aseh in Jewish law has been confined to that of precedent in the loose meaning of the term, as described by Salmond, “precedents are reported, may be cited, and will probably be followed by the courts.” For two reasons, each of which will be dealt with below, Jewish law has been unable to adopt the doctrine of a binding precedent which imposes its inherent halakhic conclusion on the dayyan when deciding the matter before him: first, because of this legal system’s conception of the substantive nature of a judgment given between the two parties to a suit; secondly, because of the method and approach of Jewish law toward deciding of the halakhah in general.

SUBSTANTIVE NATURE OF A JUDGMENT IN JEWISH LAW AND THE PROBLEM OF PRECEDENT. In Jewish law, the finality of a judgment is subject to many reservations, even in relation to the instant parties themselves. According to the original Jewish law, no judgment is absolute and final in the sense of res judicata in Roman law, except insofar as it accords with the true objective state of affairs as regards both the facts and the law. Hence, it always remained possible for a judgment given by the court on the available facts to be set aside, and for the matter to be heard afresh when either of the parties was able to produce new evidence. Since this possibility posed a serious obstacle to the due administration of justice and to orderly economic life, which demand an end to litigation, the practice was introduced of having the parties acknowledge – in court and prior to judgment – that they had no further evidence whatever to adduce, thereby annulling in advance the efficacy of any further evidence they might later wish to bring (see Sanh. 31a; Yad, Sanhedrin 7:6–8; Sh. Ar., HM 20). Similarly, the original law held that any judgment which transpires to be wrong in law – i.e., in case of error as regards decided and clear halakhah – is inherently invalid, although not so in case of an erroneous exercise of discretion. Here again the way was found to ensure the stability and finality of a judgment (Sanh. 33a; Yad, Sanhedrin 6:1; Sh. Ar., HM 251:3 and Rema thereto; see also Gulak, Yesodei, 4 (1922), 175–83, 201–3; and see *Practice and Procedure (Civil)).

A judgment in Jewish law accordingly has a dual nature: theoretically it is not final until the truth has been fully explored; in practice reservations were laid down – which would be accepted by the parties and normally would apply automatically – aimed at ensuring an end to litigation between the parties to a dispute and at acceptance of the judgment as decisive and as determining the respective rights of the parties.
The stated theoretical nature of a judgment, which applies even as regards determination of the law for the instant parties themselves, has necessarily entailed the conclusion that a judgment shall not have the force of a binding precedent in relation to a similar problem arising between different parties; hence “if another case comes before him even if it be a like case in all respects – he may deal with it as he sees fit, since the dayyan need only act according to what his own eyes see” (Nov. Ran to bb 130b; Nov. Ritba, ibid.).

Methods and Approach of Jewish Law Concerning Deciding of the Halakhah and the Problem of Precedent. The doctrine of binding precedent also conflicts with the very method and approach of Jewish law concerning deciding the halakhah (see *Mishpat Ivri; “Authority, Rabbinical; *Codification of Law). The fact of halakhic difference of opinion, as the latter developed in the course of time, is regarded as a phenomenon that is not only legitimate but also desirable and indicative of the vitality of the halakhah and of the possibility of different approaches, based on common general principles, in the search for solutions to new problems that arise. The decisive yardstick in a case of halakhic dispute, is the correctness of each opinion “in accordance only with the Talmud of R. Ashi” (i.e., the Babylonian Talmud: Piskei ha-Rosh, Sanh. 4:6) and based “with definite proof on the Talmud, as well as the Jerusalem Talmud and Tosefta, when there is no definite decision in the Talmud” (Yam shel Shelomo, introd. to bk). For this reason no codification of Jewish law was accepted which laid before the dayyan deciding the law one single, arbitrary, and final opinion on any given matter. For the same reason Jewish law accepted the doctrine of hilkhet ha-Vatra’ei (“the law is according to the later scholars”), which was designed to ensure freedom of decision for later scholars – albeit with due reference to and regard for the decisions of earlier scholars. The basic rule applicable is that the judgment of a person who has erred because he was unaware of the decisions of earlier scholars shall be of no force as soon as that person gains such knowledge and realizes his error; however, “if he does not find their statements correct and sustains his own view with evidence that is acceptable to his contemporaries – the authority of Jephthah in his generation was as that of Samuel in his, and there is only the judge that ‘shall be in those days’ – he may contradict their statements, since all matters which are not clarified in the Talmud of R. Ashi and Ravina may be questioned and restated by any person, and even the statements of the geonim may be differed from... just as the later amoraim differed from the earlier ones; on the contrary, we regard the statements of the later scholars to be more authoritative since the latter knew not only the legal thinking of their contemporaries but also that of the earlier scholars, and in deciding between the different views they reached the heart of a matter” (Piskei ha-Rosh, loc. cit.).

This conception of a flexible and dynamic legal order naturally left no room for the doctrine that especially a conclusion springing from a practical decision should impose itself on the judicial process. The court which is apprised of a matter has the task of referring to, and taking into proper consideration, all the available relevant laws and certainly the rules emerging from earlier practical decisions, particularly when the halakhic principle emerging from the practical decision has been accepted without exception in a series of legal decisions (“daily practical acts of decision,” Ket. 66b; bb 173b; etc.). However, if after such study the judge should, in reasonable manner and in reliance on the halakhic system itself, come to a different legal conclusion from that reached by earlier scholars, he will have not only the right but also the duty to decide as he sees fit; such decision will take precedence over an earlier decision in a like matter, since the judge will also have known the legal thinking of earlier scholars and have decided as he did by going to the root of the matter.

Thus maaseh constitutes one of the significant lawmaking sources of the Jewish legal system, and every principle emerging from it becomes part of the accumulated body of laws comprising this system, in accordance with which the judge must decide. In standing and validity such principles are like any others deriving from the statements of posekim and halakhic scholars, and embraced by the common rule that the judge must consider every law on its substantive merits and decide, in the concrete case before him, according to his own knowledge and understanding deriving from due examination of all the relevant rules of Jewish law.

[Menachem Elon]

Maaseh and Precedent

Precedent: The Relationship Between the Regional Rabbinical Courts and the Rabbinical Court of Appeals. Jewish law does not recognize the principle of a binding precedent obliging a bet din to rule in accordance with previous rulings. Today, after the establishment of the Rabbinical Court of Appeals (see *Appeal), this has ramifications for the compliance of the regional rabbinical courts with the rulings of the Rabbinical Court of Appeals, and specifically in cases in which the Rabbinical Court of Appeals rules that a case is to be returned for an additional hearing in the regional rabbinical court. In such cases, certain forums of the regional rabbinical courts accept the authority of Rabbinical Court of Appeals, to rehear the case and rule accordingly, whereas other regional rabbinical court forums refuse to accept the rulings of the Rabbinical Court of Appeals as binding upon them, believing that according to Jewish law, the regional rabbinical court is not required and may not rule other than in accordance with its own views, unless persuaded that it erred in its initial ruling. The practical solution in such cases of refusal is to have the matter transferred to a regional rabbinical court willing to rehear the case. In some cases the Supreme Court has intervened in cases in which the regional rabbinical court has refused to obey the instructions of the Rabbinical Court of Appeals, and has forced such compliance, or has nullified the regional court’s ruling (see bibliography, Warhaftig, p. 131; see also *Appeal).
RABBINICAL COURT RULINGS AS A PRECEDENT IN A CIVIL COURT. According to Israeli law, civil courts adjudicating matters involving personal status are required to rule in accordance with Jewish law. (See *Mishpat Ivri: Jewish Law in the State of Israel.*) The rule is that the High Court of Justice cannot sit as an appellate court on rabbinical court rulings and may not intervene in its rulings. The question of whether rulings of rabbinical courts should constitute binding precedents for the civil courts when questions already decided by the rabbinical courts arise in proceedings before the civil courts was decided in the *Yosef v. Yosef* case.

The *Yosef case* (CA 63/69, *Yosef v. Yosef*, 24 (1) PD 792) (hereinafter: "the decision") concerned a woman with independent income, who sued her husband for maintenance. While on a substantive level, the Supreme Court ruled in accordance with the ruling of the rabbinical courts, the court was divided over the question of whether it was bound by the rabbinical court's interpretation of the applicable Jewish law. The case concerned a woman earning income from her own work, who sued for maintenance from her husband. The Supreme Court ruled, in accordance with Jewish law and the decisions of the rabbinical courts, that her income should be deducted from the amount her husband owes her for her maintenance, and the husband must pay the balance between the wife's earnings and the amount of the maintenance payments, to the extent that the amount of maintenance is greater than the amount of the wife's earnings. (See "Husband and Wife." ) Regarding the question of the civil court's subordination to the rulings of the rabbinical court, Justice Kister ruled that when a civil court is required to apply Jewish law, it must accept rabbinical court decisions as definitive of Jewish law. He explained:

*The reason why we must follow the decisions of the rabbinical courts in these matters is to be found in the laws of the Torah, which provide that one must obey the decisions of the halakhic authorities of each generation, "Jehptah in his generation can be equated to Samuel in his generation" (p. 805 of decision).*

Justice Haim Cohn, in his minority opinion regarding the deduction of the wife's earnings from her maintenance payments, stated that the civil court is required to interpret Jewish law according to its own understanding, and is not bound by the interpretation given to it by the rabbinical courts:

*However, the rule regarding the authority of the judge of that time (Deut. 17:9) applies not only to rabbinical courts, but to every judge in Israel. The proof is that the three judges of inessential quality (kalei olam) – Jerubaal, Bedan and Jehptah, "are considered equal to the three most outstanding judges (hamurei olam)" – Moses and Aaron and Samuel. This teaches us that Jerubaal in his generation was equated to Moses in his generation, Bedan in his generation is equal to Aaron in his generation, Jehptah in his generation is equal to Samuel in his generation. This means that even if the most insignificant person is chosen as a community leader, he must be regarded as equal to the mightiest (p. 809 of decision).*

Justice Cohn further argued that civil courts cannot accept the rulings of the rabbinical courts as either guiding or binding precedents, since these courts do not necessarily rule according to the laws of the State.

Justice Zvi Benin wrote that while the civil courts are not bound to accept the rulings of the rabbinical courts, "it stands to reason that a secular court, in reaching a decision on an issue that has been definitively decided by a religious court, will give that determination greater weight, and will generally be guided by it" (p. 810, ibid.). According to recent court decisions, civil courts are competent and authorized to give their own interpretations of Jewish law in matters of personal status, and are not bound by prior rabbinical courts' rulings. Nevertheless, the High Court of Justice does not intervene in the content of a rabbinical court's rulings, and does not intervene in the rabbinical courts' interpretations of Jewish law. (See HCJ 5969/94 *Akinin v. Haifa Civil Court*, 50 (1) PD 370.)

*[Menachem Elon (2nd ed.)]*

**Ma’aserot** (Heb. מאשירות, "Tithes"), seventh tractate in the order *Zera’im*, in the Mishnah, Tosefta, and Jerusalem Talmud. It is sometimes referred to as *Ma’aser Rishon* ("First Tithe" – genizah fragments, Cambridge Ms., Tosefta Ms., and Maimonides’ introduction to the Mishnah), but Albeck points out that this is a misnomer influenced by the name of the tractate following it, *Ma’aser Shenai* ("Second Tithe"). *Ma’aserot* deals chiefly with the precepts connected with the separation of the tithes to be given to the Levites from the produce of the land (see Num. 18:20–24), and the prohibition against making use of produce before the tithe has been separated.

The tractate contains five chapters. Chapter 1 defines the types of produce liable to tithing (1–4), the stage of growth at which they become liable, and when, after harvesting, untithed produce becomes forbidden. Chapter 2 gives circumstances in which casual eating of untithed produce is allowed, i.e., by the laborer. Chapter 3 continues with laws of tithe as they
concern the laborer, and deals with the tithing of produce found on the road or in the field and the buildings or localities which render the produce brought there liable to tithe. Chapter 4 deals with the tithing of preserved fruits, liability for tithing arising through the onset of the Sabbath, chance eating from a vat of olives or a winepress, and the eating of insignificant parts of the produce. Chapter 5 deals with the liability for tithing of replanted produce, the selling of produce to those not trusted to tithe, and kinds of vegetables exempt from tithing.

The Tosefta has three chapters, supplementing the Mishnah with numerous accounts and decisions of the tannaim. Its editing appears to have been late, since it contains accounts (ch. 3) of Judah and Hillel, the sons of Rabban Gamaliel III. The order of the paragraphs does not correspond to that of the Mishnah, and there is no corresponding Tosefta to mishnayot 2:2, 6, 7, 4:4; and 5:6, 7. The Jerusalem Talmud covers about 14 columns of the Krotoszyn edition. It includes an interesting debate regarding the role of aggadah between Ze’ira and his colleague, who goes so far as to say that aggadic books are none other than “black magic” and attacks the aggadic method as being illogical (3:9, 51a). The Babylonian Talmud has no Gemara to Ma’aserot, as it has none on the whole of the order Zera‘im, except for tractate Berakhot. This tractate was translated into English by H. *Danby, The Mishnah (1933), 66–73.

[David Joseph Bornstein]

MAASER SHENI (מאתת שני) “second tithe,” name of a tractate in the Mishnah, Tosefta and Jerusalem Talmud, expounding on the biblical commandment (Dt. 14:22–27) to set aside a tenth of one’s produce, to be consumed “before the Lord thy God, in the place which he shall choose to cause his name to dwell there”; i.e., in Jerusalem. The Torah states that, if it is inconvenient to transport the produce itself, then it may be exchanged for money with which foodstuffs may be purchased in Jerusalem. The rabbinic understanding was that this requirement would be superseded by the “poor tithe” that is separated instead on the third and sixth years of the sabbatical cycle according to Dt. 26:12–15. This interpretation is found in early sources like the Septuagint, though Jubilees (32:11) and Josephus (Ant. 4:8 [22]) state that the poor tithe is additional to the second tithe.

Much of the Mishnah tractate consists of specific definitions of the concepts mentioned in the Torah, such as: what items may or may not be purchased with the second tithe money; the legal procedures for the exchange; whether the sanctity of the tithe extends to containers and waste products; what qualifies as “eating”; under what circumstances may the coins be exchanged for other coins; defining the exact city limits of Jerusalem in which the second tithe food must be eaten; what counts as a coin for which the tithe may be redeemed.

The second tithe money may be spent on food, drink, and anointing oil for personal consumption, or for freewill shelamim offerings (which are eaten by the owner), but not on sacrifices for which the owners are otherwise obligated. The exchange of the original produce for cash was perceived by the rabbis as a “redemption” process in which the sanctity of the original items was transferred to the coin, and then to the foodstuffs that were purchased with it. Leviticus 27:31 requires that an additional fifth be added when redeeming a tithe. The halakhah understood this as a fifth of the total; i.e., one fourth of the original produce’s value. The interpretations of this procedure were influenced by those for redemption of sacrifices (see Lev. 27:27, etc.). The Mishnah discusses situations when the additional fifth need not be paid, and mentions some subterfuges for avoiding its payment.

According to the rabinic interpretation, the designation that fruit (or grapes) in the fourth year after planting “shall be holy for giving praise unto the Lord” (Lev. 19:24) means that it must be consumed in Jerusalem, or exchanged for money under conditions similar to those prescribed for the second tithe. Because of the resemblance of the rules, the topic of fourth-year fruit is also dealt with in Chapter 5 of this tractate, though it probably belongs more appropriately to Orlah.

The Jerusalem Talmud (3:8, 50b) relates the story of Rabbi Joshua ben Korha’s castigation of R. Eleazar ben Rabbi Simeon for assisting the Romans, in a shorter and more original version than that of the TB, BM 83b.

[David Joseph Bornstein]

MAAYANI, AMI (1936—), Israeli composer and conductor. Born in Tel Aviv, Maayani studied composition with Paul *Ben-Haim at the Academy of Music in Jerusalem, and then graduated from the Faculty of Architecture at the Technion in Haifa. He wrote a monumental 1,000-page Hebrew monograph on Wagner. Maayani taught theory and composition at the Academy of Music, Tel Aviv University, and at the Rubin Academy of Music and Dance in Jerusalem. From 1993 until his retirement in 2003 he was head of the Academy in Tel Aviv. During this time he collaborated with architect Yoram Raz in designing the very successful auditorium for the Rubin Academy of Music in Tel Aviv. Mayani won the AKUM Prize (1974), the international competition “Holocaust and Rebirth,” and the 1BA Prize for the 25th Anniversary of Israel.

Maayani’s prolific output reflects his special penchant for idiomatic and brilliant instrumental writing. It includes concertos for harp (1960, 1966); concerto for violin (1987); concerto for cello (1967); Qumran, a symphonic metaphor (1971); three symphonies and other orchestral and chamber works; and Yiddishe Lieder for voice and orchestra (1973). Maayani’s strong individualistic personality creates a unique synthesis of elements of Arabic music with traditional Western modal- ity and harmony.

[Uri (Erich) Toepplitz and Yo hanan Boehm / Jeho ash Hirshberg (2nd ed.)]

MAAZEL, LORIN (Varen cove; 1930– ), conductor, violi nist, and composer. Born in France, Maazel studied violin and piano in Los Angeles and Pittsburgh, and conducting with Vladimir Bakaleinikoff. Between the ages of nine and 15, Maazel conducted many of the great American and Canadian orchestras. In 1945, he entered the University of Pittsburgh to study philosophy, languages, and mathematics. While a student, he was a violinist with the Pittsburgh Symphony Orchestra. Maazel made his European conducting debut in Italy in 1953. In 1960, his performance of Mahler was acclaimed for its scrupulous articulation and expressive power. The same year he was the first American and the youngest conductor ever to conduct at the Bayreuth festival. Soon after, he was being referred to as a "legend in his own time." Maazel conducted 5,000 opera and concert performances with over 150 leading orchestras around the world and held such prestigious posts as artistic director of the Deutsche Oper Berlin (1965–71), music director of the Berlin Radio Symphony Orchestra (1965–75), and music director of the Cleveland Orchestra (1972–82). He also conducted the Orchestre National de France, the Vienna Vienna Staatsoper, and the Pittsburgh Symphony. He was music director of the New York PO from the 2002–03 season. His latter-day operatic productions were at the Metropolitan Opera, Paris Opera, Royal Opera House (London), and La Scala (Milan), and he became involved in film opera productions. His discography encompasses over 300 recordings including the complete symphonies of Beethoven, Mahler, Rachmaninoff, Sibelius, and Tchaikovsky, and around 40 operas. Maazel gave benefit concerts for international organizations such as UNICEF and the International Red Cross. The governments of France, Germany, Italy, Portugal, and Sweden awarded him with their highest honors. He was named an honorary life member of the Israel Philharmonic in 1985 and was referred to as a "legend in his own time." Among his publications are "Vom Herzen: Moge es wieder zu Herzen gehn" (in *Die 9 Symphonien Beethovens: Entstehung, Deutung, Wirkung*, 1994).

[Naama Ramot / (2nd ed.)]

MA’BARAH (Heb. מַעֲבָרָה; plural ma’barot), transitional immigrants’ camp or quarter in the early 1950s in Israel. At the end of 1949, 100,000 immigrants were living in camps, receiving accommodation, meals and services free, under demoralizing conditions. As the government and the *Jewish National Fund started large-scale development programs, and the newcomers began to earn their keep, the communal din-

ing halls were closed down, and the inmates were enabled to make their own domestic arrangements. Camps which were not suitable for this system were closed down and new ones – ma’barot – set up, with a wooden, asbestos, or tin shack, or at least a tent, for each family, wherever there was a demand for labor, near the towns.

Although the ma’barot were a great improvement over the early camps, the primitive accommodation gave rise to serious social problems. They were gradually cleared by providing the newcomers with permanent housing and, from 1954, sending immigrants straight from the ship or plane to the villages or towns where they were to settle permanently.

[Michael Avi-Yonah]

MACALISTER, ROBERT ALEXANDER STEWART (1870–1951), Irish archaeologist. From 1899 to 1900 he participated with F.J. Bliss in the excavation of mounds in the Shephelah and in 1902–05 and 1907–09 directed the excavation of Gezer, publishing a three-volume report single-handedly in 1912. In 1925 he directed an excavation on the hill of Ophel in Jerusalem. In his later years, he was professor of Celtic archaeology at Dublin (1909–43). He was one of the pioneers of Palestinian archaeology, being the first to publish his finds in an exact manner and laying the foundations for comparative dating by ceramics and context dating. His works include *The Philistines* (1914) and *A Century of Excavation in Palestine* (1925).

[Michael Avi-Yonah]
ence between Christianity and Judaism have very much to do with a man's fitness to be a bishop or a rabbi. But they have no more to do with his fitness to be a magistrate, a legislator, or a minister of finance than with his fitness to be a cobbler. He also urged that it was inconsistent to deny formal political rights to Jews in a society where they had acquired the substance of political power. Rarely had the case for Jewish emancipation been presented with the literary force of Macaulay's essays and speeches; the support of one of England's leading men of letters had a significant effect on public opinion. They are still among the most cogent set of arguments made for religious toleration and liberalism. Macaulay's own relations with Jews, almost certainly very slight, remain to be examined in detail.

[Sefton D. Temkin]

MACCABEANS, ORDER OF ANCIENT, a friendly benefit society in Britain whose members are Zionists. Founded in 1896 by Ephraim Ish-Kishor and registered under the Friendly Societies' Act, the Order of Ancient Maccabeans still exists. Its aims are those of all British friendly societies, namely, to assist members in distress, provide free medical aid, etc. Its special character is laid down in its rules concerning membership: all persons "of the Jewish faith who declare themselves adherents to the Zionist Movement" can become members. From its inception the order was a firm supporter of Zionism, contributed to its various funds, and became a champion of practical Zionist work in Ereẓ Israel. In 1914 a Maccabean Land Company was founded to enable its shareholders to acquire land in Ereẓ Israel. The organization of the order displays masonic features. A grand beacon and high degree council supervise its work; branches are called beacons, of which there are 25 (there once were beacons in Palestine as well); the principal officers are called grand commander, grand treasurer, and grand secretary. Members are called upon to obey the decisions of their order and are forbidden to inform nonmembers of the order's activities.

The revised statutes of the Zionist Organization passed by the Tenth Zionist Congress (1911) permitted the establishment of so-called Sonderverbaende (separate unions), in addition to the existing territorial organizations, on the condition that every Sonderverband numbered at least 3,000 shekel-buying members and that it professed special views on Zionist work. The Order of Ancient Maccabeans applied for this status, and though its claim was opposed by the English Zionist Federation, the order prevailed. In 1912 the Zionist Executive decided in favor of the order's status as Sonderverband on the condition that a Joint Zionist Council be formed, comprising representatives of both the order and the federation. In the 1930s, however, the order lost its special status. Prominent members of the order were Herbert *Bentwich, who served as grand commander; Chaim *Weizmann, who represented the order at Congresses; and Selig *Brodetsky, who served as grand commander. In 2004 its president was Sir Ian Gainsford. Its papers from the 1890s to 1964 are held at the Parkes Library, Southampton University.

[Israel Philipp]

MACCABEE, the additional name given to Judah, son of Mattathias, leader of the revolt against Syria (168 B.C.E.), later referred to as the "Maccabean Revolt." It was no accident that the revolt broke out at a rural location such as *Modi'in and not in Jerusalem itself. It began with the killing of a local who was willing to sacrifice to a pagan idol, and the action was taken by a zealous minor native priest, Mattathias (1 Macc. 2:27; cf. 2:42) who subsequently called on those around him to follow the law and "maintain the covenant" and to fight the offensive edicts of Antiochus IV. The object was clearly to return to the religious autonomy Jews originally enjoyed, but the later successes of the revolt dictated otherwise. The name Maccabee is also applied loosely to other members of the family, as well as to the Hasmonean dynasty as a whole. For suggestions as to its derivation, see *Judah Maccabee and *Hasmoneans. The name is also given in Christian tradition to the seven children martyred by Antiochus Epiphanes when they refused to commit idolatry. Shrines to their memory and that of their mother Salome (in Jewish tradition Hannah) were established in many parts of the Christian world (see *Hannah and her Seven Sons).

[Shimon Gibson (2nd ed.)]

MACCABEES, FIRST BOOK OF (1 Maccabees), a historical work extant in Greek, covering the period of 40 years from the accession of Antiochus Epiphanes (175 B.C.E.) to the death of Simeon the Hasmonean (135 B.C.E.). Its name in the Septuagint and in the writings of the Church Fathers (Eusebius and Clement) is Τα Μακκαβαϊκά, i.e., "Maccabean matters" or "the Book of the Maccabees." The original Hebrew name of the book is unknown. According to Origen it was "Sabarth Sabaniel." Different hypotheses have been suggested to explain these words, which should perhaps read: לְפָתַח תִּי הָרִיב (Sefer Beit Sarevanei El), the words Sarevanei El ("who strive for God") being a translation into contemporary (mishnaic) Hebrew of Jehoiarib, the name of the priestly order (see 1 Chron. 24:7; Neh. 12:6, 19) to which the Hasmonean family belonged. In support of this conjecture is the fact that in later times, after the glamor of the Hasmonean dynasty had become tarnished, the name Jehoiarib is found translated by the above word in its Aramaic form סראבניאי (mesarevei; TJ, Tan. 48, 68d) though it is there used in a pejorative sense as "rebellious," "fractious."

1 Maccabees is the main, and at times the only, historical source for the period. The book opens with the conquest
of Alexander the Great, but immediately after this relates the activities of Antiochus Epiphanes and the Jewish Hellenizers (whom the author calls "the sons of Belial" – the reprobates) and summarizes the events of Mattathias’ revolt, through the rededication of the Temple, down to the time when John *Hyrkanus, the eldest son of Simon the Hasmonean, was appointed ruler.

The many expressions in the Greek version which occur only in biblical Hebrew (e.g., from the hands of the gentiles: mi-yad ha-goyim; and his heart was raised: va-yaram libbo; before his face: al panav; and the matter found favor in their eyes: va-yitav ha-davar be-eineichem) clearly confirm the testimony of the Church Fathers that the original language of the book was Hebrew. The style was biblical Hebrew (including use of the vav converse), and particularly that of the historical books of the Bible. Like Joshua and Judges, it begins with the vav converse, but reflects the style of Ezra and Nehemiah in including historical documents and similar testimony. Like these biblical books, although it is written largely in prose, now and again it includes poetry, such as the Lamentation of Mattathias (2:7–13), prayers (3:18–22; 4:30–33; 7:41–42), and a hymn (1:4:8–15). Unlike II Maccabees it does not contain explanations of historical or personal psychological motivation, of the sort usually found in the works of the contemporary Greek historians.

The writer achieves a high degree of objectivity. He even refrains from censuring the *Hassideans who opposed the Hasmoneans, though it is clear where his sympathies lie since he regards the Hasmoneans as chosen by Providence "to give deliverance unto Israel" (5:62). The course of events described is not considered as diverging from the natural order, and supernatural intervention is almost entirely absent from the narrative, even though the basic assumption underlying the entire book is that Israel’s success is a direct result of their faith and their steadfastness in their loyalty to the Torah and the keeping of the commandments. The author is very circumspect about mentioning God’s name. In place of the Tetragrammation or the biblical Elohim, he either writes “Heaven” (3:18, 50, 60; 4:10, 40, et al.) or else uses a circumlocution to avoid the use of a proper name altogether (e.g., 2:21, 26; 3:22, 53; 4:10, et al.).

The book ranks high as an accurate historical source, and even the numbers it contains are not exaggerated. In spite of scholarly arguments to the contrary, the idiomatic constructions typical of this book incontrovertibly prove it to be the work of a single author. His name is unknown, but he almost certainly was an eyewitness to the events he describes (cf. 6:39). He avoids expressing outright partisanship, but the fact that he wrote at the beginning of John Hyrcanus’ rule, when the latter was still a Pharisee, and lauds Mattathias’ decision to permit defensive military action on the Sabbath – which was approved by the Pharisaic school (Jos., Ant. 12:276; 14:63; Tosef., Er. 4:6–7) – indicates that he was close to this circle.

The literary sources used by the author include both letters from official archives (such as those from the Seleucid kings and Roman officials to the Hasmoneans), and public documents (such as the people’s declaration assigning the high priesthood and the chief executive position to Simeon), as well as other literary sources in Hebrew (among them the various poems). Thus it is that the author employs two different systems of dating: one for external affairs (where he starts the year in the fall, in the month of Tishri), and one for internal events (which he dates according to the calendar starting in the month of Nisan).

The original Hebrew version seems to have disappeared quite early. The Church included I Maccabees in its canon together with the rest of the Septuagint and this was ratified by the Catholic Church Council of Trent. After the Reformation, the Protestant removed it from their Bible and relegated it to the Apocrypha. A Hebrew translation was made in the 17th century (published by D. Chwolson).

[Yehoshua M. Grintz]

**MACCABEES, SECOND BOOK OF (II Maccabees),** known in Greek as Τα Μακκαβαϊκά, that is, the narratives about (Judah called) the Maccabee. It was this title which gave the title to the other books of the *Apocrypha* bearing the same name. It is an abridgment of a larger work of five books written by a *Jason of Cyrene who is otherwise unknown (see 2:23–28). Traces of the original division may be preserved in the similar conclusions in several chapters (3:40; 7:42; 10:9; 13:26; 15:37–39). Unlike I *Maccabees which was written in Hebrew, the original language of this book was Greek; and unlike the former, which begins with an account of the revolt of Mattathias and tells of the wars of his sons the *Hasmoneans up to the days of John Hyrcanus, this book deals solely with the deeds of *Judah Maccabee, and only until his victory over Nicanor on 13 Adar II, 164 B.C.E. (“Nicanor Day”). However, the main account is prefaced by a lengthy introduction on the actions of the Hellenizers, Simeon of the priestly division of Minyamin (Bilgah), who wanted to be the agoranomos (the market overseer) in Jerusalem, and Jason the brother of the high priest Onias, and Menelaus the brother of Simeon, both of whom wanted to be high priests. Their acts of plunder and bribing the king caused the people to rise against them, but their contacts with kings led to the intervention of the Syrian king Antiochus IV Epiphanes and to the religious persecutions which were in fact the direct cause of the Maccabean revolt.
The events related subsequently are in general similar to those in I Maccabees, although the two books are independent of each other. However, chapters 8–12 present a different order: the death of Antiochus IV (10:1–9) and the arrival of Lysias at Beth-Zur (ch. 11) here precede the purification of the Temple. The epitomizer for some reason or other altered the original order (8:29, 34–36; 10:1–8; 8:30–33; 9:1–29; 10:9; he apparently thought that the letter in 11:22, in which Antiochus IV is regarded as having died, belonged to the same period as the other letters in that chapter which, however, preceded it by a year). If the original order is restored, however, the events accord with those in I Maccabees. In its extant form, II Maccabees begins with an addendum to the main body of the book, consisting of two letters sent at different times from Judea to Alexandria which request that the festival of Hanukkah be observed. The first was written, according to its date, in 124 B.C.E. (in the days of John Hycanus), while the second, undated one (which has all kinds of aggadic stories and is regarded as largely apocryphal) was written earlier, and is a letter from Judah (Maccabee) to Aristobulus, the tutor of King Ptolemy (Philemoter, 180–145 B.C.E.).

The main part of the book commences with 2:19, at a time when Onias (111) was high priest, Seleucus ruled in Asia, and peace and tranquility reigned in Erez Israel; however, the avarice of several high priests led to a complete reversal of the situation. Simeon of the priestly division of Minyamin (see above) informed the king's strategus in Syria and Phoenicia that there were vast treasures in the Temple. The king's mission to take the treasure failed (the envoy Heliodorus saw angels smiting him and fainted), and Jason and Menelaus (see above) then began to compete for the high priesthood. As a result of their rivalry and the base acts accompanying it in Jerusalem and Antioch (where Onias the high priest was killed), the people revolted, and Antiochus instituted religious persecutions against them. At first many suffered martyrdom. Then Judah Maccabee rose in revolt together with his men, defeating first the local governor, then the commanders Nicanor and Gorgias (8:8–29), and in the month of Xanthicus (Adar, March) 164 B.C.E. (11:1–15) triumphed over the commander in chief Lysias near Beth-Zur and purified the Temple (10:1–8). There follows a description of wars with various neighboring countries (8:30–33; 10:15–38; 12:2–9, 17–31), and an account of Antiochus IV's death (ch. 9: described here as a punishment from heaven) and his contrition (the author cites a letter from him to the Jews of Antioch (9:19) and interprets it as addressed to all the Jews). After this comes an account of the wars against Antiochus Eupator (13:1–27), the mission of the priest Alcimus, and Judah's victory over Nicanor (15:36).

In its literary form, as well as in its language, this book is entirely different from I Maccabees. Unlike the latter, which uses simple, matter-of-fact language, II Maccabees is written in the style of Greek historians: in ornate language, rich in idioms and poetic metaphors, and in expressions filled with pathos, drama, and rhetoric, stirring the reader. Also, as was usual with these historians, the book is full of various stories of miraculous events, of the intervention of heavenly creatures, directly (by angels) and indirectly (by signs in heaven and on earth presaging evil).

The purpose of the book is religious propaganda, the basic idea being that the sin of the nation is the cause of the divine punishment ("For it is not a light thing to do wickedly against the laws of God: but the time following shall declare these things", 4:17). Yet the suffering that comes upon Israel is only to chasten the people (6:12–17), and is itself a sign of the divine providence – to warn them against sin. The aim of the introduction is to show that the sin of the priests lay in serving alien forces. In this book – for the first time – Judaism stands as an antipode to "Hellenism (2:21, 8:1, 14:38), and the Greeks are represented as barbarians, avid for plunder and pillage (4:8, 23, 32, 42; 5:16). In contrast, the strength of the Jews lies in the fulfillment of the practical mitzvot (the observance of the Sabbath – 6:11; 8:26; 12:38; the precaution against ritual uncleanness – 5:27), and outstanding examples of such acts of bravery are given. One is the story of the elderly Eleazar, who steadfastly refused to eat forbidden food despite all the torture inflicted on him; another is of the woman and her seven sons who suffered martyrdom for the sanctification of the Divine Name (6:18ff.; ch. 7 – see *Hannah and her Seven Sons). Much emphasis is also laid on the belief in the resurrection of the dead (7:14; 12:43). Although his views are very close to those of the Pharisees, it is impossible to tell whether the author, Jason, was one of them. He was apparently a contemporary of Judah Maccabee, as several incidents sound as if they emanate from an eyewitness.

[Yehoshua M. Grintz]
tion to Dionysus' mysteries were to be put to death, and those consenting were to be granted full citizenship. As most Alexandrian Jews remained loyal to their faith, the king ordered all the Jews of the country to be brought to Alexandria and put to death. Clerks attempted to register them but failed for shortage of writing material. Crowds of Jews were then concentrated in a hippodrome where they were to be trampled to death by intoxicated elephants. Their destruction was twice miraculously averted. On the third attempt two angels appeared and struck terror into the king, his army, and the elephants, the beasts turning about and falling upon the soldiers. In the end the king repented and prepared a banquet in honor of the rescued Jews. There are serious objections to the historicity of this story. The king's decree combines an infringement of civil rights that could apply only to Alexandrian Jews, with a census of the Jews of the whole country. Moreover, the only purpose of the census could be to institute a poll tax. However, this would become meaningless if the whole Jewish population were to be put to death; it is probably for this reason that the author had to find a device to stop it. The story of the elephants is told by Josephus (Apion, 2:53–55), but about another Ptolemy. The account of the two angels, as well as that of the king's intrusion into the Temple of Jerusalem, is derived from 11 Maccabees 3. The theme of the king who is instigated by his counselors to annihilate the Jews is from the Book of Esther. These and other details of the story can be put down as commonplaces of persecution literature. By prefacing his patchwork with a description, albeit irrelevant, of the battle of Rafa, taken from a reliable historian, the author manages to concoct an etiology for a festival, the original meaning of which had been forgotten. The book was written in Greek and its style is characterized by its many rare words and neologisms.

das, The Third and Fourth Books of Maccabees (1953), includes bibliogra-
phy. For further bibliography see Maccabees, First Book *of.

[Yehoshua Amir (Neumark)]

MACCABEES, FOURTH BOOK OF (1V Maccabees),
apocryphal book, included in the Septuagint. It presumably dates from the first century C.E., and is erroneously ascribed by Christian tradition to *Josephus. It does not deal with the warriors of the Maccabean revolt, but with the story of the martyrs of the preceding religious persecution, as related in 11 Maccabees 6–7. It is of special interest as the only surviving major piece of Greek rhetoric in Jewish literature. 1V Maccabees is a philosophical sermon on the theme "pious reason masters passion." This theme, stated at the outset, is frequently repeated in the course of the sermon. After an initial inquiry along the lines of standard Stoic doctrine into the nature of reason and the varieties of passion, the preacher offers historical examples of the ability of reason to control passion. He finally comes to examples provided by the "occasion of this day," the heroic death of the victims of Antiochus' persecution. After a short historical exposition, he describes old Eleazar and the mother (later known as "Hannah) with her seven sons, whom the king tries to force to eat ritually forbidden food. They refuse and each defends his refusal in a fervent speech in the face of cruel torture before being put to death. It seems that the details, as far as they are not drawn from 11 Maccabees, emanate from the author's own imagination. He spares no pains to excite the emotions of his audience, incorporating detailed descriptions of the torture instruments, delicate analysis of the mother's inner struggle, and great exclamations of admiration for the martyrs. This sermon is one of the outstanding specimens of the "Asiatic" school of rhetoric, known for its linguistic excesses, neologisms, redundance of language, and overemphasis.

A most interesting feature is the interweaving of Greek philosophical and Jewish traditional motifs. Not only are moral conflicts and temptations illustrated by biblical stories but in line with the concept that the Torah is the "philosophy" of the Jews, biblical laws are presented as practical means of Stoic self-education and are thus classified according to the different cardinal virtues they help to develop. It passes unnoticed that in the course of this presentation the ideal of the Stoic sage is replaced by that of the God-fearing man, and that heroism is interpreted as the endurance of hardship. The martyr reaps all the glory. He is called an athlete and his ability to endure suffering is the apex of all the moral virtues. The author regards firmness in bearing pain as the victory of reason and as virtually destroying the tyrant's power. The principal religious motivation of the martyr is loyalty to God's law. Eleazar makes no distinction between greater and lesser commandments. Violation of either constitutes contempt for the Lawgiver. The martyrs are certain that God will reward their faithfulness after their death and that He will inflict eternal punishment on the godless king.

The sermon was obviously intended for delivery; otherwise, the mention of its "occasion" would be meaningless. However it may not have been a synagogue sermon, since, in Hellenistic (as in rabbinical) Judaism, such sermons seem always to have been based on a biblical verse. Perhaps it was a Hanukkah sermon, but in the absence of any known association of that festival with the martyrs, it may be more correct to think of it as intended for an assembly at their supposed tomb (at Antiochia?) on a traditional commemoration day.

No traces of 1V Maccabees have been detected in later Jewish tradition, but Christianity adopted it, together with the "Maccabean Saints" (see "Hannah and her Seven Sons"), to whom both the Eastern and the Western Church dedicated a Commemoration Day. Sermons delivered on that day, sometimes referring expressly to 1V Maccabees, have been preserved from Gregory of Nazianzus, Augustine, and other Church Fathers. The heroism of the "Maccabees" left its mark on Christian martyr worship, although the Jewish source lacks the special note of longing for torments characteristic of Christian martyrology.

BIBLIOGRAPHY: Charles, Apocrypha, 2 (1913), 653–85; M. Ha-
das, The Third and Fourth Books of Maccabees (1953), including de-
Maccabiah, international games, recognized and approved by the International Olympic Committee, held every four years in Israel and open to athletes of the Jewish faith from all countries. The aim of the Maccabiah is to raise the standard of physical culture and sports among Jewish youth and to encourage and foster a sense of belonging to the Jewish people.

The idea of Jewish Olympics was conceived by one of the founders and veteran leaders of the Maccabi movement in Palestine, Joseph Yekeutieli, who advocated it with zeal from 1921. After he had succeeded in persuading the mayor of Tel Aviv, Meir Dizengoff, to build the first sports stadium in the country, he brought his plan before the Maccabi World Congress at Ostrava, Czechoslovakia, in 1929 and it was enthusiastically approved. In 1932 the first Maccabiah was held in Tel Aviv, with contingents from 23 countries and 500 athletes.

A great number of the athletes and accompanying personnel remained in Palestine after the Maccabiah and thus the games became not only a tool for stimulating sports but also an important means for promoting Aliyah. The second Maccabiah in 1935 was even more of an "Aliyah Maccabiah," since most of the 1,700 sportsmen from 27 countries, and their escorts, remained in Palestine because of the antisemitism which was sweeping Europe following the Nazis’ access to power in Germany. The third Maccabiah could not be held until 1950.

In 1953 the fourth Maccabiah was held. The Maccabi World Union congress which followed it adopted a resolution to build a Maccabiah village to house the visiting contingents. Since then the Maccabiah games have been held regularly every four years, the fifth in 1957, the sixth in 1961, the seventh in 1965, and the eighth in 1969, with an ever-increasing participation of athletes from over 30 countries. The main sports embraced by the Maccabiah are track and field events; gymnastics; swimming and water polo; boxing, wrestling, and fencing; tennis and table tennis; and soccer, basketball, and volleyball. The Maccabiah games contributed to Israeli sports and established themselves as an international Jewish events. Mark “Spitz, who won seven Olympic gold medals, participated in the Maccabiah along with many other world class athletes.

The Maccabi World Union Executive, which sponsors and organizes the Maccabiah games, appoints the International Maccabi Games Committee (IMGC). This generally includes the chairmen of the territorial Maccabi organizations. In countries where no organization exists, leading Jewish sportsmen and people connected with athletes are appointed to select and arrange the training of the various teams. Since the third Maccabiah, "Ha-Po'el Israel has taken an active part with its general secretary a member of the IMGC. The "Betar and "Elizur sports organizations also participate in the Maccabiah games.

The program for the Maccabiah games includes festive opening and closing ceremonies under the patronage of the president and the prime minister of the State of Israel, with contingents parading under their national flags.

In the 15th Maccabiah of 1997 a terrible tragedy clouded the games. During the opening ceremonies, a newly constructed bridge over the Yarkon River collapsed as the Australian contingent, numbering 731 members, was crossing it on the way to the stadium. Four of the athletes were killed immediately and 70 were injured. Many of the injuries became more serious because of the pollution of the river. The opening ceremonies continued while the rescue operation was under way, until Prime Minister Binyamin Netanyahu called a halt to the festivities. The event tarnished the image of the Maccabiah Games and damaged Israel-Australia relations, especially those with the Australian Jewish community.

In 2002 the 16th Maccabiah was held under the threat of terror attacks. The games were defined as a vehicle of identification of the Jewish people with the State of Israel, but fewer participated than in previous years.

MACCABI WORLD UNION. The international Jewish sports organization which bears the name of "Judah Maccabee had its origin in the belief of young Eastern European Jews involved in the growing movement for a national home in Palestine at the end of the 19th century that one essential prerequisite was the improvement of the physique of ghetto youth. To this end, gymnastics clubs were founded in a number of Eastern and Central European countries. They were not immediately called Maccabi. The first club, opened in Constantinople, Turkey, in 1895, was called the Israel Gymnastics Club, while others were named after another hero, Bar Kokhba, or were known by the Hebrew names “Ha-Ko’ah (“strength”) or “Ha-Gibbor (“strong man”). The Bar Kokhba club published a monthly journal Juedische Turnzeitung, later called Der Makkabi; it first appeared in 1900 and promoted athletics and national Jewish education. In 1897 the first of a series of Bulgarian clubs was opened in Plovdiv; a club was organized in Berlin in the following year and in Vienna in 1899. 1901 saw the establishment of a Polish club in Lemberg.

The concept of a nationalist sports movement received impetus in 1898 from a stirring address by the well-known Zionist leader, the physician Max *Nordau, at the second Zionist Congress in Basle, in which he proclaimed:

Gymnastics and physical training are exceedingly important for us Jews, whose greatest defect has been and is a lack of discipline... nature has endowed us with the spiritual qualities required for athletic achievements of an extraordinary quality. All we lack is muscle, and that can be developed with the aid of physical exercise... The more Jews achieve in the various branches of sport, the greater will be their self-confidence and self-respect.

[Menahem Savidor / Shaked Gilboa (2nd ed.)]
The truth of Nordau’s contention was demonstrated in 1903 at the fourth Zionist Congress in Basle, where a group of 35 outstanding gymnasts from various European clubs staged an impressive display. It was at this Congress that the foundations were laid for the Juedische Turnerschaft—the Union of Jewish Gymnastics Clubs—which united all the existing sports clubs, beginning with a membership of some 1,500. It was headed first by Ernst Tuch and later by Theowald Sholom, both of them from Germany. During the first decade of the 20th century the movement spread to more countries on the European continent and to Palestine, where clubs were formed in Jaffa (1906) and Jerusalem (1911). The first real approach to Zionism came in 1912, when at a Maccabi conference in Berlin it was decided to organize group excursions to Palestine (1913 and 1914). By this time there were over 100 affiliated clubs in Europe, with a membership running into several thousands, and the movement had come to be accepted, unofficially, as part of the Young Zionist movement. World War I halted Maccabi activities, but with its close they were renewed everywhere in Europe. As the movement grew, so did the need for firmer integration and in 1921, at a convention in Carlsbad, Czechoslovakia, the Maccabi World Union was formed, and the first Maccabi World Union congress elected Dr. Heinrich Kuhn of Germany as its first president. With ten affiliated countries, the Maccabi World Union started its operations as an organic part of the Zionist movement. By the time of the second Maccabi congress a year later, under the presidency of Heinrich Lellever (1891–1947) of Germany, no less than 22 territorial organizations had affiliated, and the world membership had grown to nearly 100,000.

The first headquarters of the movement were in Vienna, but in 1927 they were moved to Brno, Czechoslovakia, and in 1929 to Berlin, where the movement flourished under the energetic leadership of Dr. Lellever. In 1929 the first international sports meeting was held in Prague; another was held in Antwerp, Belgium, the following year. These were forerunners of the world “Maccabiah games which were to be staged in Palestine from 1932 onward. In 1935 headquarters were transferred from Nazi Germany to London, where Selig “Brodetsky took over the presidency of the World Union, and the second Lord Melchet (“Mond) became honorary world president. In 1939 the world executive was divided into two sections, one operating in Britain and the other, under Lellever, in Palestine. By the time World War II broke out, the world membership was estimated at 200,000 with branches located in most countries of Europe and in Palestine, Turkey, Egypt, China, Australia, South America, and South Africa. It was in 1939 that a nucleus of refugees from Europe established Maccabi in the U.S.

During the war, the activities of the constituent branches of the World Union virtually ceased. Immediately following the war Maccabi leaders in England and Palestine revived the clubs still in existence and helped survivors of the Holocaust to get to Erez Israel. In the countries that now came under Russian control, Jews were forbidden to engage in sports activities as Jews, although a Maccabi group did exist for a short period in the Russian zone of Berlin. In 1946 the first of the annual European Maccabi conferences was held in Basle. The decimation of Jewish communities by the Nazis and the prohibitions of the Iron Curtain countries reduced the number of young recruits to Maccabi in Europe, but new branches were springing up in North and South America, South Africa, and Australia. The birth of the State of Israel gave the movement a new focus and a new impetus, and from 1948 onward all the activities of Maccabi were oriented toward Israel, where the headquarters of the entire movement were established in Tel Aviv. By 1969, 38 countries were affiliated to the World Union, and the membership was estimated to be about 200,000. By the early 21st century the number of countries had grown to over 50 and membership to 400,000, organized in six confederations: Maccabi Israel, European Maccabi confederation, confederation Maccabi North America, confederation Maccabi Latin America (CLAM), Maccabi South Africa, and Maccabi Australia (APA). Seventy executive members elected by the confederations run the global organization.

**Israel**

During World War II members of the Maccabi, formerly of the *Haganah, volunteered for the British army and established a Maccabi unit in 1941. In the same year the movement instituted what has become the tradition of the relay of runners carrying a lighted torch from Modi’in, the home of the Maccabees, to various parts of the country and, since the establishment of the State, to the presidential residence in Jerusalem. (In 1977 it reached the president of the United States.) Since the Six-Day War, Maccabi has organized marches “In the Footsteps of the Fighters” to such places as Mt. Sinai, the “Path of the 35” to Kefar Ezyon, Masada, and the ascent of the Hermon.

Maccabi’s soccer and basketball teams have dominated their sports in Israel. The Maccabi Tel Aviv soccer team has won 18 league championships and 22 state cups through the 2004/5 season, while the Maccabi Tel Aviv basketball team, in addition to winning 45 league championships and 35 state cups, has also won the European championship five times.

Maccabi has a junior organization “Young Maccabi” which was founded in 1929 and whose aims include training youth towards good citizenship and personal fulfillment in all branches of Israeli life and adherence to Jewish traditional values. (For Israel Maccabi until World War II, see “Sport in Israel before 1948.”)

**MACCOBY, ḤAYYIM ZUNDEL** (1858–1916), Zionist preacher, one of the first members of Ḥovevei Zion (see *Ḥibbat Zion*) in England. Born near Kobrin, Poland, Maccoby decided to become a preacher when he discovered his oratorical talents, and he attracted many followers. In 1873 he was ac-
Maccoby, Hyam

Maccoby, Hyam (1924–2004). British scholar of ancient Judaism. Born in 1924 in Sunderland, the son of a mathematics tutor and the grandson of the Maggid of Kamenets (see "Maccoby, Ḥayyim Zundel), Poland, Hyam Maccoby was educated at Oxford. He became a schoolteacher and was then the librarian of Leo Baeck College, London. In 1958 he was made research professor at the Centre for Jewish Studies at Leeds University. Maccoby was widely known for his writings on Jesus, the founder of Christianity, and his milieu in Roman Judea. In such works as Jesus: the Jewish and the Jewish Resistance (1980), Maccoby argued that Jesus should be viewed as a liberal but Torah-observant Pharisee, who opposed the Romans but not other Jews. Maccoby also saw the origins of Christian antisemitism as beginning with the foundations of Christianity as a separate religion, a view he put forward in such works as Judas Iscariot and the Myth of Jewish Evil (1992) and in Paul and Hellenism (1991). Maccoby was widely known through his many appearances on television; he was frequently attacked by both Christians and Orthodox Jews.

[William D. Rubinstein (2nd ed.)]

“MCDONALD, JAMES GROVER (1886–1964), first U.S. ambassador to Israel. McDonald, who was born in Coldwater, Ohio, was assistant professor of history at the University of Indiana, before moving to New York. From 1919 to 1933 McDonald served as chairman of the Foreign Policy Association. During the 1920s he made numerous trips abroad for this organization becoming, in the process, a familiar figure at the League of Nations headquarters in Geneva. McDonald’s interest in Zionism was sparked by his experiences as League of Nations high commissioner for refugees from Germany. He held this post from 1933 to 1935 when he resigned and issued a dramatic statement accusing the German government of planning a policy of race extermination and attacking League members for their indifference to the plight of the German refugees. In 1938 he was elected to head the newly created Presidential Advisory Committee on Political Refugees (PACPR), a quasi-official agency whose main task was to serve as a conduit for funneling the names of prominent refugees to be considered for special visitor’s visas to the State Department. In September 1940 McDonald clashed with officials in the State Department who were imposing ever-stricter regulations to halt the influx of refugees. When the White House was finally called upon to mediate in the conflict, McDonald asked for and received Eleanor Roosevelt’s support. However, despite her intercession, Roosevelt supported the State Department. In May 1943, seemingly affected by the lack of administration’s support for the refugee cause, McDonald rejected an opportunity to head the U.S. delegation to a refugee conference at Bermuda. During the next two years, he frequently advocated that Palestine be opened to immigration, “limited only by the absorption capacity of the area.” In 1945 his efforts were partly rewarded when the Anglo-American Committee of Inquiry on Palestine, of which he was a member, recommended the admission of 100,000 displaced Jews. President Truman appointed McDonald U.S. special representative to Israel in 1948 and ambassador in 1949. McDonald served in this post until his retirement in 1951. He wrote My Mission to Israel 1948–1951 (1953). After his retirement, McDonald devoted much time to Zionist-sponsored causes, especially the sale of Israel bonds.

[Henry L. Feingold]

Macedonia, region of southeastern Europe where Alexander the Great was born. As a result of the latter’s conquests and subsequent Greek rule in Palestine, the Hebrew term “Javan” as it appears in the Bible was generally translated by the rabbis “Macedonia” (cf. Targum Pseudo-Jonathan to Gen. 10:2; Yoma 10a). Although the origins of a Jewish community in Macedonia are unknown, it is certain that such a colony existed toward the end of the Second Temple period. Philo, in the list of Jewish communities quoted from the correspondence of Agrippa I to Caligula, refers also to the Jews of Macedonia (The Embassy to Gaius, 281). Moreover, the fact that Paul and his followers made a number of journeys to Macedonia, and that their doctrines were readily accepted there, tends to substantiate the existence of a Jewish colony (cf. Acts 16:9; 18:5; 20:1; 1 Cor. 16:5; 11 Cor. 1:16; 2:13; 7:5). Josephus, in describing the Jewish community of Alexandria, claims that the Jewish residents there were granted the right to be called “Macedonians” (Wars 2:487–88; Ant. 12:8; Apion 2:35). However, papyrological research has shown that the phrase “Macedonian” eventually lost its original ethnic significance, and is in fact a designation of specific military status.

For later periods see also *Bulgaria; Byzantine *Empire; *Greece; *Yugoslavia.

[Isaiah Gafni]
MACHABEY, ARMAND (1886–1966), French musicologist and composer. Born in Pont-de-Roide, France. Machabey studied classics and music in Paris with d’Indy and Pirro, concentrating on composition, but eventually devoted himself to musicology. His main contributions were made in the field of medieval musicology. He wrote his dissertation (1928) on the evolution of musical forms in the Middle Ages, for which he was awarded the Bernier Prize of the Académie des Beaux-Arts in 1930. His writings include monographs on Ravel, Anton Bruckner (1946), Le Bel Canto (1948) as well as Traité de la critique musicale (1946) and studies of notation such as La Notation musicale (1952). He also wrote about Girolamo Frescobaldi (1952) and Guillaume de Machaut: la vie et l’oeuvre musicale (2 vols., 1955), which are his best-known works. In 1957 he edited with Dufourcq and Raugel the Larousse de la musique encyclopedia. His compositions include chamber and solo instrument music such as six short preludes for piano, six pieces for violin and piano, and orchestral works.

MACHADO, family name of Portuguese *Marranos. The best known is perhaps DAVID MENDEZ MACHADO (d. 1753), who left his native Lisbon in 1732 after he had aroused the suspicions of the Inquisition that he practiced Judaism in secret. He arrived in Savannah, Georgia – by way of London – during 1733. Within that year he married Zipporah Nuñez (c. 1714–1799), daughter of the former Portuguese court physician Samuel Nuñez; Machado was then appointed hazzan at New York City’s Spanish-Portuguese synagogue, Shearith Israel, serving from 1734 to 1753. His daughter, REBECCA (1746–1831), married Jonas Phillips (1736–1803), the revolutionary war patriot. Among David Machado’s descendants were Uriah Phillips Levy and Mordecai Manuel Noah. The Machado family name appears also in the earliest records of the *Marranos. The Machado family name appears also in the earliest records of the Mexican Inquisition: ANTONIO MACHADO and his daughter ISABEL were inculpated during the trial of Jorge de Almeida in 1600.

MACHAERUS, Transjordanian frontier fortress erected by the Hasmonean king Alexander *Yannai (Iannaeus) in southern Perea, E. of the Jordan and adjacent to the border of Nabatean Arabia (Jos., Wars, 1:161; 3:46; 7:163–170). The place served as one of the depositories for his treasures (Jos., Ant., 13:417). It served as a base for Alexander and *Aristobulus in their resistance against the Romans. Pliny describes it as one of the strongest points in the region after Jerusalem (Pliny, Historia Naturalis, 5:16, 72) and Strabo lists the fortress among the Hasmonean strongholds (162, 40). Taken by Gabinius and destroyed, it was later rebuilt by Herod the Great. Machaerus was also the place where *John the Baptist was executed. According to Josephus (Ant., 18:116–117) John’s activities in the lower Jordan River region so alarmed the Tetrarch *Herod Antipas (nicknamed the “fox”: Luke 13:32), son of Herod the Great, that he had him executed. The story given in the gospels regarding the reason for John’s execution is different, but in no way contradicts the reason given by Josephus. According to Mark (6:17–18; cf. Matt. 14:3–4; Luke 3:18–20) John spoke out publicly about the unlawfulness of the union between Herod and Herodias (in keeping with Lev. 18:6) which annoyed Herod considerably, but he was eventually beheaded owing to a request made by Salome on the occasion of Herod’s birthday (Mark 6:14–29; Matt. 14:1–12). The place served as one of the stations for signaling the appearance of the new moon and the arrival of holidays (Tosef., RH 2:2). Herds, mainly of goats, were said to have been raised in the mountains of Machaerus (Tam. 3:8). In the Jewish War against the Romans the fortress was taken over by the Zealots (Jos., Wars, 2:485) and remained one of their strongholds even after the fall of Jerusalem (Jos., Wars, 4:555). In 72 C.E. the Roman legate Lucilius Bassus captured it after a short siege (Jos., Wars, 7:164 ff.; which also includes a description of the site). Machaerus (Jabal al-Mishnaqa) is situated close to the present-day village of al-Mukawir, 14 mi. (c. 22 km.) southwest of Madaba. The site was visited in the 19th century by J.L. Burckhardt, H. Tristram, and C.R. Conder. F.M. Abel made a survey of the site in 1909. In the 1920s a sculpted head identified by P. Ilton as the head of Salome was said to have been found in a cave 80 ft. north of Machaerus. Excavations were first made at the site by J. Vardaman in 1968, but the results were never published. In the early 1970s Strobel made a survey of the Roman siege-works around the site. Bassus’ unfinished ramp is still visible on one side of the site. Father V. Corbo undertook major excavations at the site from the late 1970s. A few tombs from the first century C.E. were recently investigated at the site.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

MACHAUT, DENIS DE (late 14th century), Parisian Jew who converted to Christianity. The provost of Paris decreed that
his youngest child was to remain under the father’s guardianship and receive a Christian upbringing, while the other three children were entrusted to Christian families. De Machaut was to be allowed to visit them but not his wife, who had remained Jewish. After a period of time determined by the provost, the children were to be interrogated on their intention to become Christians or not. A short while later, when Denis de Machaut disappeared, the Jews were accused of having seized him in order to attempt to bring him back to Judaism. Seven of the community’s leaders were condemned to be burned at the stake. On April 6, 1394, parliament commuted the sentence to imprisonment until De Machaut was returned. The sentence was accompanied by repeated, severe corporal punishment, and the Paris community was also fined 10,000 livres. It has been claimed that this affair was a decisive factor in the expulsion decree against the Jews or France issued in 1394.

[Bernhard Blumenkranz]

**Machir** (Heb. זָכַר), son of Manasseh and grandson of Joseph. Although Machir appears to have been an only son according to Numbers 26:29–34 (cf. Gen. 50:23), other traditions ascribe more sons to Manasseh (Josh. 17:2), and name Asriel as a brother (1 Chron. 7:14). Machir’s mother is said to have been an Aramean (*ibid.*). He married “Maacah who bore him Peresh and Sheresh (1 Chron. 7:16). He also had a daughter (1 Chron. 2:21). He is most frequently described as the father of Gilead (Num. 26:29; Josh. 17:1; 1 Chron. 2:21; 7:14). Machir is the eponym of one of the most important clans of the tribe of Manasseh, the special status of which is acknowledged in Genesis 50:23. In the Song of Deborah, Machir is mentioned along with Ephraim and Benjamin (Judg. 5:14) while Manasseh is missing, indicating that this powerful tribe is represented by Machir. Further, the Song distinguishes between this tribe and the Gilead who resides in Transjordan and who, along with the tribe of Reuben, did not participate in the war (Judg. 5:15, 17). However, the location of Machir west of the Jordan contradicts other sources which state that the Machirites captured the Gilead and the Bashan in Moses’ time before the Israelites crossed the Jordan (Num. 32:39–40; Josh. 17:1). It is reasonable to suppose that at first the entire clan dwelt west of the Jordan. Later, a part of it crossed to the eastern side (cf. Josh. 13:31, "A part of the sons of Machir"). It was subsequent to this settlement that Machir became head of Gilead. According to Numbers 32:39–42, the clan settled in the northern Gilead from the Jabbook to the Yarmuk, while "Jair, son of Manasseh, and Nobah were located even farther north, in the Bashan (cf. Deut. 3:14). In contrast to this, Joshua 13:29–31 and 17:1–2 record that the Machirites settled both in the Gilead and in the Bashan, whereas Jair was situated in the land of Gilead (1 Chron. 2:22). These contradictions may be reconciled by assuming that Jair was another branch of the larger clan of Machir or, in the course of time, became affiliated with it. Indeed, in 1 Chronicles 2:21 Jair is considered Machir’s descendant. Further, Maacah’s being Machir’s wife (1 Chron. 7:16) suggests that the Machirites settled north of the Yarmuk, bordering the land of Maacah. The reference in 1 Chronicles 7:14 apparently hints at an ethnic assimilation of the families of Machir with the Aramean population north of the Yarmuk.

**Machir ben Judah** (first half 11th century), younger brother of “Gershom b. Judah, “the Light of the Exile.” Machir was the author of *Alef Bet de-Rabbi Machir*. This work was in the possession of Rashi and the tosafists, who quote from it (Rashi, Gen. 43:11; Pes. 50a; Er. 22a; Tos. Nid. 7b s.v. *shammattu*, et al.), but it is now lost. It was the first talmudic dictionary to be compiled in Europe, not unlike the *Arukh* of “Nathan b. Jehiel of Rome. Its chief function was to connect words used in the Talmud with Scripture, to explain them, and to translate them into French. In consequence it also engaged in biblical exegesis. All the explanations in Machir’s book were, evidently, given anonymously, no authorities being mentioned in it.

Machir had four sons: Nathan, Menahem, Nehemiah, and Yakar. These four collected the rulings, customs, and responsa of the great scholars of their locality. Menahem included all the material in a work which is referred to in the literature of the *rishonim as Ma’aseh ha-Makhiri* (Rabban Eliezer b. Nathan – Prague, 1610, 84c). Most of the material in his book, since lost, was included in the works of the De-*VeI Rashi* (“school of Rashi”) and the whole book may have been used as the foundation for the *Ma’aseh ha-Ge’onim* (Berlin, 1909), certainly in respect of the information it affords about the customs of Speyer, Worms, and Mainz. The majority of the material in the *Ma’aseh ha-Ge’onim* is from these four brothers.

**Machlup, Fritz** (1902–1983), U.S. economist. Born in Wiener Neustadt, Austria, Machlup was a partner in a paper manufacturing enterprise in 1923. In 1929 he began lecturing at the Volkshochschule in Vienna. In 1933 he emigrated to the U.S. He was a research fellow at the Rockefeller Foundation in New York City, which he left in 1935 to become professor of economics at the University of Buffalo. In 1947 he was appointed professor of political economy at Johns Hopkins and in 1960 became professor of economics and international finance at Princeton University, serving at the same time as director of Princeton’s international finance section (1960–71). During the 1960s, one of Machlup’s principal interests was the expansion of international liquidity. In 1963, he formed an organization of academics, known as the Bellagio Group, to study the looming international monetary problems, develop
MACHPELAH, CAVE OF

an academic consensus, and offer practical solutions. Among the offices he held in academic organizations were the presidencies of the Southern Economic Association (1960); the American Association of University Professors (1962–64); the American Economic Association (1966); and the International Economic Association (1971–74). He also served as a consultant to the U.S. Treasury (1965–77).

He is regarded as one of the fathers of the concept of “the information society” and “the information economy.” Although Machlup never won a Nobel Prize, the Nobel committee listed his name several times as a candidate.

MACHPELAH, CAVE OF (Heb. המְעַרְפֶּלֶּה). The word “Machpelah,” which in the Bible always appears with a definite article, is variously the name of a cave (Gen. 23:9, 19; 25:9); a field, “the cave which is in the field of Machpelah” (Gen. 49:30); and a place, “the field of Ephron, which was in Machpelah” (Gen. 23:17). The actual meaning of “Machpelah” is understood by all the early translations (Targum, Septuagint, et al.) as well as by the rabbis to mean “double” (from the Hebrew root k-p-l) and is interpreted in rabbinical literature as referring either to a double cave or to the “couples” buried in the cave. Machpelah is situated near Mamre, identified with Hebron (Gen. 23:19, 33:19). The Bible relates that Abraham, wishing to bury Sarah, purchased Machpelah from Ephron the Hittite for 400 silver shekels. Abraham himself, Isaac and Rebekah, Jacob and Leah were all later buried there. Jacob specifically commanded his sons not to bury him in Egypt but to lay him to rest with his fathers in the cave of Machpelah (Gen. 47:28–31; 49:30).

The site of the cave is today identified with Haram el-Khalil in modern Hebron. Surrounding the area, to a height of 39 ft. (12 m.), is a magnificent wall, distinguished by its decorative drafted-margin masonry, which are up to 23 ft. (7.5 m.) in length, and a very particular arrangement of pilasters. This wall is attributed to the time of Herod the Great and surrounding walls with pilasters also existed at the Temple Mount in Jerusalem and at Mamre (Ramat el-Khalil) (see Jacobson, Magen). Josephus, who describes the tombs of the patriarchs as “of really fine marble and exquisite workmanship” (Jos., Wars 4:532), does not, however, mention the surrounding wall (temenos). The first to prepare a plan of the structure was Ermete Pierotti between 1854 and 1861. A major study of the monument was later made by L.H. Vincent and E.J.H. Mackay following World War I in 1919. In 1968–69 excavations were conducted by Z. Yeivin along the southwestern side of the surrounding wall, bringing to light leveled rock surfaces, cupmarks, and a plastered installation. Interestingly, the monumental Herodian walls were very carefully adapted to the irregularities of the underlying surface of the rock, perhaps in an attempt to preserve the holiness of the hill.

The earliest source on the arrangement of the Patriarchal graves is in the Book of Jubilees (36:21) which states that “Leah is buried to the left of Sarah.” According to the Jerusalem Talmud, the graves of the patriarchs are situated in the form used for the partaking of a meal; the most prominent reclining at the head, on the middle couch, the second above him and the third below him (TJ, Ta‘an. 4:2). The two structures, which today mark the tombs of Abraham and Sarah, are indeed in the center of the compound area. The tombs of Jacob and Leah are at the northwestern end so that when facing the tombs from the southwest – the probable original entrance – the tomb of Leah is in fact to the left of Sarah’s. The area inside the compound was evidently originally left roofless (a similar conclusion may be reached regarding the Mamre compound). The Byzantines built a church, later converted by the Muslims into a mosque, at the southeastern extremity, which left the two constructions marking Isaac and Rebekah’s tombs inside, while those for Abraham and Sarah were outside, at the entrance. In the floor, inside the mosque, are two openings leading to the cave underneath. One of these, at the southeast wall, is covered by stone slabs fixed with iron hooks. The other, at the opposite wall, is open, as a Muslim custom requires the lowering of an oil lamp which is continually lit.

The actual form of the cavern is uncertain but from the accounts of travelers it seems safe to conclude that there are at least two caves joined by a passage and possibly a third inner chamber. The entrance to the caves (apart from the two openings) is inaccessible today, though following the Six-Day War, Moshe *Dayan, who was serving as defense minister at that time, managed to gain access to a flight of steps leading to a narrow subterranean tunnel extending beneath the tomb of Isaac and leading to a chamber containing Moslem inscribed plaques. Rabbinic sources mention the burial of Adam and Eve in the Machpelah and the alternative biblical name for Hebron, Kiriath-Arba (“the town of the four”), is explained to refer to the four couples buried there. According to Josephus and apocryphal sources, the sons of Jacob were also buried in the Machpelah. A Muslim tradition maintains that Joseph was buried here, his tomb and the Mosque of Joseph being just outside the southwest exit of the compound. This tradition is probably due to a corruption of the Arabic name for Esau, whose head, according to aggadic sources, fell within the cave after he had been killed in a battle for the right of burial in the Machpelah (Sot. 13a; Páre 39).
During the Byzantine period, the Jews were authorized to pray within the area. The Christians entered through one gate and the Jews through another, offering incense while doing so; when the Arabs conquered the country they handed over the supervision of the cave of Machpelah to the Jews, in recognition of their assistance. During the late 11th century, the official responsible for the area bore the title of “The Servant to the Fathers of the World.” The Jews of Hebron were accustomed to pray daily in the cave of Machpelah for the welfare of the head of the Palestinian gaonate. Many Jews sought to be buried in the vicinity of the cave of Machpelah. It was then written of them that “their resting-place was with that of the Fathers of the World.” Benjamin of Tudela, the 12th-century traveler, relates that “many barrels, full of the remains of Jews, were brought there and they are still laid to rest there to this day.” The Mamluk sultan Baybars prohibited the Jews and Christians from praying within the area (1267). Jews, however, were permitted to ascend five, later seven, steps on the side of the eastern wall and to insert petitions into a hole opposite the fourth step. This hole pierces the entire thickness of the wall, to a depth of 6 ft. 6 in. (2.25 m.). It is first mentioned in 1521, and it can almost certainly be assumed to have been made at the request of the Jews of Hebron, possibly on payment of a large sum, so that their supplications would fall into the cave situated under the floor of the area. The extremity of the hole is below the blocked opening in the mosque floor and leads to the cave.

Following the Six-Day War of 1967 the Machpelah became a popular center of pilgrimage, and Jews, after a period of 700 years, were once more able to visit the tombs of the patriarchs, and regular services were held there. Though strictly regulated, the use of the Machpelah by Jews and Muslims has made it one more bone of contention in a divided city. On Purim, February 25, 1994, Baruch Goldstein, Kiryat Arba’s medical doctor, entered the Machpelah during Muslim prayers and opened fire with an automatic weapon, killing 29 and wounding 100.

MACK, JULIAN WILLIAM (1866–1943), U.S. judge and Zionist leader. Mack, who was born in San Francisco, graduated from Harvard Law School in 1887, studied at the universities of Berlin and Leipzig, entered law practice in Chicago, and served as professor of law at Northwestern University (1895–1902) and the University of Chicago (1902–40). He was elected judge of the circuit court of Cook County, Illinois, in 1903, and was judge of the Chicago juvenile court (1904–07), and the U.S. commerce court (1911–13). In 1904 he became president of the National Conference of Social Workers. His interest in the welfare of children was recognized in his ap-
pointment as one of the chairmen of the White House conference on children in 1908. Mack was appointed to the U.S. circuit court of appeals in 1913 and presided over hundreds of civil and criminal cases until his retirement in 1941. As a judge in Chicago and subsequently, Mack fought for a progressive approach to the problem of juvenile delinquency. During World War I, he performed ably on several national assignments, including the establishment of standards for reasonable treatment of conscientious objectors. A member of the Harvard University Board of Overseers for 18 years, he was influential in blocking a proposal in 1922 for a *numerus clausus for Jewish students.

Mack's interest in Jewish affairs was deep and abiding. In addition to active participation in social work and charitable endeavors, he was among the founders of the American Jewish Committee in 1906 and on its executive committee for 12 years. Influenced by *Brandeis, Mack became an ardent Zionist, served as president of the first American Jewish Congress in 1918, and first chairman of the *Comité des Délégations Juives at the Versailles Peace Conference in 1919. Mack was elected president of the *Zionist Organization of America in 1918, but resigned with Brandeis in a dispute over methods of developing Palestine. He continued his efforts, however, holding high posts in the Palestine Endowment Fund, World Jewish Congress, Jewish Agency for Palestine, United Palestine Appeal, and the Hebrew University. The Israel settlement Ramat ha-Shofet ("Judge's Hill") was so called in his memory. Mack's credo, "We ask no more for the Jew than we do for anyone else," expressed both his sense of justice and loyalty to his people. He wrote Americanism and Zionism (1918).

**MACKLOWE, HARRY** (1938– ), U.S. real-estate developer. One of New York's best-known builders, Macklowe, the son of a garment executive from Westchester, dropped out of the University of Alabama, New York University, and the School of Visual Arts before throwing himself into the real-estate business in the 1960s. He moved quickly from broker to builder, developing a keen interest in architecture and modern art that were reflected in his sleek modernistic buildings and starkly white minimalist offices. Although he had been a prolific builder, Macklowe became well known in 1985 when his company tore down two single-room occupancy hotels in midtown Manhattan during the night without turning off the gas or obtaining permits. He was not criminally charged, but he paid New York City $2 million to settle a civil lawsuit, and one of his executives pled guilty to criminal misdemeanor charges. Years later he built the Macklowe Hotel on the site. But Macklowe, like many New York developers, lost a string of buildings, including the hotel, to lenders during the recession in the mid-1990s. When the New York real-estate market began heating up again in 1996, Macklowe found new financial partners and resurfaced. He converted a loft building into a luxury apartment house. He bought a tired-looking office building on Madison Avenue in 1996 for $45 million, a price that even his banker thought was too high. Macklowe renovated the building, installed more windows in the offices, and expanded the retail space on a valuable stretch of the avenue. It looked like a huge success until a section of the brick façade crashed to the street, closing traffic on Madison Avenue for weeks. In 2003 Macklowe bought the 50-story General Motors Building on Fifth Avenue in New York for $1.4 billion, then the most ever paid for a skyscraper in the United States.

[Stewart Kampel (2nd ed.)]

**MACNIN** (Cohen ben Maknin), Moroccan family of *Mogador which at the close of the 18th century was at first appointed "merchants of the sultan." *MACŪD MACNIN (d. 1832) was sent to Europe in 1809 by Sultan Mulay Suleiman in order to acquire a large amount of military equipment for the defense of the Moroccan ports. In 1813 he arrived in London as minister plenipotentiary. From 1795 his brother *MEIR (d. c. 1830) headed the important firm of Mogador, whose principal agencies were in Marseilles and London. From 1799 the latter agency was directed by his nephew Solomon Sebag, the father of the future Sir Joseph Sebag-Montefiore. From the beginning of his reign Mulay Abd al-Rahmān (1822–59) granted Meir Macnin the exclusive right to export certain products and foodstuffs from *Tetuán and *Tangier and opened on his behalf the port of Tit to the maritime commerce of cereals. The port of Mazagan was put under his authority. From 1823 the sultan named him as his representative and envoy to the Christian courts, with the right of appointing consuls wherever he found the necessity. In 1826 he left on a special mission to London, and in 1828 he was appointed minister plenipotentiary.

**MÂCON**, capital of the department of Saône-et-Loire, E. France. The first *Church council of Mâcon (583) issued a series of decisions concerning the Jews. However, the first specific record of the presence of Jews in Mâcon dates from about 820, when *Agobard, archbishop of Lyons, began missionary activity among Jewish children at Mâcon who were sent to Arles for safety; he also arranged for the delivery of sermons condemning friendly relations between Christians and Jews. From 886 Jews are mentioned as owners of fields, and especially vineyards, on the outskirts of Mâcon and its surroundings, in at least 15 villages and places where they cultivated the land themselves. The Jewish quarter developed in Bourgneuf. The cemetery was situated not far from Pont Jeu, formerly known as Pont du Juifs. Several medieval Hebrew tombstones have been discovered, some of which are preserved in the Museum of Mâcon. Not far from the site of the cemetery, there was a house commonly known by the name Sabbat, a term
sometimes employed in Burgundy for synagogue. In 1378, the municipality attempted to compulsorily segregate the 18 Jews still living in Mâcon in a separate quarter. They were expelled from the town in 1394. During the 17th and 18th centuries, Jews of Avignon visited Mâcon and its surroundings to trade. At the beginning of World War II, there were about 50 Jewish families living in Mâcon, but they were not organized into a community. The postwar community, consisting mainly of arrivals from North Africa, numbered 200 in 1969.

[Bernhard Blumenkranz]

“MACROBIUS, AMBROSIUS” (c. 400), Roman grammarian. He credits “Augustus with a grim pun reflecting Jewish abstention from swine flesh. On hearing that “Herod had ordered his own son to be killed, Augustus remarked: “I would rather be Herod’s pig [Gr. *hus*] than his son [Gr. *huios*]” (Saturnalia 2.4, 11).

(Jacob Petroff)

**MADABA, MEDEBA** (Heb. מֵיתְבָּא). Moabite city, situated about 5½ mi. (9 km.) S. of Heshbon in the center of a fertile plain, the biblical Mishor, 2,550 ft. (785 m.) above sea level. The city was captured by the Israelites from the Amorite king Sihon and was allocated to the tribe of Reuben (Num. 21:30; Josh. 13:9, 16). Near Madaba, David defeated the Aramean allies of Ammon (1 Chron. 19:7; cf. 1 Sam. 10). Israel lost its hold on the city when the monarchy was divided. Omri re-captured it, but the Moabite king Mesha restored it to Moab. In Mêsha’s inscription (the “Moabite Stele”), King Omri is referred to as having taken “possession of all the land of [the] Me(ḥa)deba” (see also 11 Kings 3:4–5). In c. 160 B.C.E. persons from Madaba were accused of killing John, brother of Judas Maccabaeus (1 Macc. 9:35–42; Jos., Ant., 3.1.2). Subsequently Jonathan and Simon retaliated. It was finally conquered by John Hyrcanus I and remained in Hasmonaean control down to the time of Alexander *Yannai* (Jannaeus). Hyrcanus II ceded it to the Nabateans, handing it over to Aretas III in return for his help against his brother Aristobulus II (Jos., Ant., 14.1.4). Two funerary inscriptions are known mentioning the Beni ‘Amirat family from the time of the Nabatean hegemony in the region. In 106 C.E. it was incorporated into the Roman province of Arabia (Provincia Arabia). The town was mentioned by various writers including Eusebius (128:20), Ptolemy (Geog. 5.16.4), Hierocles (Syn. 720–21), George of Cyprus (No. 1062), and Stephen of Byzantium (Eth. 4.49:6). A number of inscriptions are known, one mentioning the city council (bolkeuta) of Madaba, and two others the names of Roman centurions from the Third Cireniens Legations stationed at Madaba. An imperial inscription relates that an important building was erected in 219/20 C.E. next to the city gate. Jews lived there in Mishnaic times (Mik. 7:1), but they were probably a minority. It was a flourishing Christian city in Byzantine times, with the town expanding considerably, serving as a bishopric from the mid-fifth century. It had numerous churches, most of which were paved with mosaics, dating mainly from the sixth to eighth centuries. The best known of these is the northern church with a mosaic pavement designed as a map of the Holy Land (see below). According to an Arab historian (947 C.E.), al-Mas‘udi, Madaba was ruled by the Ghassanids in the sixth century. An inscription found within a large cistern credits the emperor Justinian with building activities at Madaba. A pictorial representation of the city of Madaba appears in one of the panels of a mosaic uncovered in the Church of St. Stephen at Umm Rasas dating to the early Abbasid period. Few descriptions of Madaba are known from the Abbasid through to Ottoman periods. In the early 21st century Madaba was a flourishing town in Jordan with Christian and Muslim inhabitants.

The first explorers to describe the ancient ruins of Madaba were U. Seetzen in 1806, followed by J. Burkhart in 1812, members of the American Palestine Exploration Society in 1872, C.R. Conder in 1881, and G. Schumacher, P.M. Séjourné, and F.J. Bliss in the 1890s.

**The Madaba Mosaic Map**

In 1884 the mosaic map was discovered during the erection of a new Greek Orthodox church, but it was only in 1896, when part of it had already been ruined, that it finally came to the attention of scholars, with the announcement made in 1897. The mosaic was restored and recorded in color by a German expedition in 1965–66. The map was laid in the transept of a Byzantine period church and originally measured 72 ft. (22 m.) × 23 ft. (7 m.). It represented the biblical Holy Land and neighboring regions, from Byblos (Gebal) in the north to No-Ammon (Thebes in Egypt) in the south. The map was oriented toward the east, with the Mediterranean Sea at the bottom. The scale is uneven, largest for the more important areas (central Judea – 15,000; Jerusalem – 1:1,650). In general, it follows the *Onomasticon* of Eusebius; it was based on a Roman road map, with the addition of vignettes representing the principal cities. The Greek texts give biblical and contemporary names, sometimes with a historical note or verse from the Septuagint. Important places and tribal areas are marked in red. The extent part of the map covers an area from Neapolis (Nablus) to Egypt. The most valuable section is the detailed plan of Jerusalem, showing two colonnaded streets, the Tower of David, many churches and monasteries, including the Church of the Holy Sepulcher and that on Mount Zion, baths, and perhaps even the Western Wall. Most of the other cities indicated on the map are fragmentary. It notes many names in the Negev which are not recorded elsewhere. A few natural features are indicated on the map, as well as boats in the Dead Sea, animals in the deserts, and ferries across the Jordan. In some details, the Madaba map shows clear evidence of the influence of Jewish lore, as in the location of the mountains Ebal and Gerizim near Jericho (although a second Tur Ger-
izim is placed in its true position near Nablus). The mosaic is dated by consensus of opinion to the mid-sixth century C.E., but a few scholars (notably Bahat) would like to date it much later to the second half of the seventh century C.E.

[Michael Avi-Yonah / Shimon Gibson (2nd ed.)]

**MADAGASCAR**, island off Africa. Legends and theories about alleged Jewish descent of and influence on inhabitants of Madagascar are current and widespread, but the resemblance of certain customs is probably a consequence of contact with Islam through trade activities in the late Middle Ages. Various theories and suppositions regarding affinities to the ancient Hebrews were published by a French Lazarist missionary, Joseph Briant, in a booklet entitled *L’Hebreu à Madagascar*.

 Madagascar never had a sizable Jewish population. A few score of Jewish families settled in Tananarive during the French colonial period, but no community was created.

**Relations with Israel**

The State of Israel was among the very first (and still few) countries to establish an embassy in the newly proclaimed Malagasy Republic (1960), and, over the years, Presidents Tsiranana and Ben-Zvi exchanged visits and Israel Prime Minister Eshkol and Foreign Minister Golda Meir also visited Madagascar. Israel activities in Madagascar include the construction of the first luxury hotel, and agricultural experts have helped to produce citrus and improve poultry breeding and corn production. In addition, about 200 people from the Malagasy Republic have undergone technical training in Israel. Relations between the two countries were close, although the intimate relationship between France and Madagascar cast a shadow over the picture after the 1967 change in French policy toward the Arab-Israeli conflict. Following the Yom Kippur War, Madagascar broke off diplomatic relations with Israel, but ties were resumed in 1993.

[Zvi Loker]

**MADAGASCAR PLAN**, proposal for Jewish settlement devised by the Nazi regime in the 1930s. Like most of the Nazis’ schemes to solve the “Jewish question,” the Madagascar Plan had already been conceived by others. In 1885, the German antisemitic nationalist Paul de Lagarde had advocated deporting the Jews of Poland, Russia, Romania, and Austria in preparation for German colonization of the East. He preferred the French island colony of Madagascar on the east coast of Africa over Palestine. In 1926 and 1927, both Poland and Japan investigated Madagascar and proposed the island as a possible solution to their overpopulation problem; both dismissed the idea as not feasible. In 1937, a new Polish commission was sent to Madagascar to determine if Jews could be induced to settle there. Leon Alter, the director of *HICEM* in Warsaw, and Salmon Dyk, an agricultural engineer from Tel Aviv, took part in the mission. The assessments of the commission’s director Major M. Lepecki and of Alter differed widely, but it was obvious to all that the area was generally inhospitable to Europeans and that there was a serious danger of potential settlers contracting endemic tropical diseases. This point was emphasized by the French governor-general of the island Marcel Olivier in his statements and writings opposing the proposal. Yet the proposal refused to die. On December 9, 1938, French Foreign Minister Georges Bonnet informed German Foreign Minister Joachim Ribbentrop that, in order to rid France of 10,000 Jewish refugees, it would be necessary to ship them elsewhere. According to Ribbentrop, the French were seriously considering sending them to Madagascar.

The island of Madagascar was also discussed within the Nazi regime, which generally considered mass emigration to be the “Final Solution” to the “Jewish problem.” On March 5, 1938, the SS officer in charge of forced Jewish emigration, Adolf Eichmann, was commissioned to assemble material to provide the chief of the Security Police (SD) Reinhardt Heydrich with “a foreign policy solution as it had been negotiated between Poland and France,” i.e., the Madagascar Plan. Temporarily shelved in the wake of the war, the project was again taken up after the fall of France in the summer of 1940. Eichmann prepared a detailed official report on the island and its “colonization” possibilities based on information gathered from the French Colonial Office. He added an evacuation plan calling for 4,000,000 Jews to be shipped to Madagascar over a period of four years. Eichmann also advocated the creation of a “police reserve” as a giant ghetto (“Gross-Getto”). The plan was to be financed by a special bank managing confiscated Jewish property and by contributions exacted from world Jewry. The idea was also analyzed by Martin Luther’s department in the German Foreign Office, which served as a liaison with the SS. The plan leaked out and was published in Italy in July. The American Jewish Committee was alarmed enough to commission Eugene Hevesi to write a special report, which was eventually published in May 1941, that sought to demonstrate that Jews, as Europeans, could not survive the conditions on the island. By that time, of course, the Nazis were already preparing a completely different “Final Solution.” In August 1940, the Third Reich officially endorsed the Madagascar Plan. The 20-page proposal presented a detailed plan which no longer depended upon the consent of defeated France. The operation, whose code word was “Endlosung,” was repeatedly discussed throughout 1940 and 1941. By the fall of 1941, the extermination program was already well underway. On February 10, 1942, only a few weeks after
the “Wannsee Conference, the Madagascar Plan was officially shelved and replaced in public policy statements by the program of “evacuation to the East.”

[Leni Yahil]

**MADISON, JAMES**

Capital of Wisconsin since 1837. Madison’s Jewish presence dates back to roughly 1850, when a merchant named Aaron Boskowitz clerked in a store. By 1863, about 40 Jewish households, mostly storekeepers from Bohemia and West Prussia, had established a synagogue, a burial society, and a women’s auxiliary. Through the 1870s, most of the original members died, stopped practicing Judaism, or moved away. The synagogue dissolved altogether in 1922. From 1880 to 1910, a small Jewish community existed in the nearby city of Monroe, Wisconsin. Its members were merchants from Poland and Austria who had ties to wholesale houses in Chicago. Several of Monroe’s Jews came to Madison, notably Solomon Levitan, who had run a store in nearby New Glarus. A Progressive, Levitan served seven terms as Wisconsin state treasurer during the 1920s and 1930s.

Madison’s present Jewish institutions trace their roots to Jews who arrived in the Madison area in the 1890s from Minsk, via Milwaukee. Like Jewish immigrants elsewhere, they tended to work in the junk and grocery businesses. In 1904, they built an Orthodox synagogue whose members went on to found Madison’s present-day Conservative and Reform congregations. Elias Tobenkin, who came from the shtetl of Kapule, Minsk, in 1899, wrote about Madison in his novels *Witte Arrives* (1914) and *God of Might* (1925).

Rachel Szold Jastrow, sister of Henrietta “Szold, founded Madison’s chapter of Hadassah. Jewish men in Madison tended to affiliate with clishovitl lodges, but Hadassah brought together women from all strata of Madison’s Jewish community.

What distinguished Madison from other small Jewish communities was the presence of the University of Wisconsin. Jews had been students there since the early 1860s, and Joseph Jastrow, a psychologist and the first Jewish faculty member, was hired in 1888. In 1911, philosopher Horace Kallen began a chapter of the Menorah Society, an early Jewish student organization. Antisemitism in many university departments prevented many Jews, such as Ludwig *Lewisohn, Lionel *Trilling, and Milton *Friedman, from obtaining tenure-track professorships. However, economist Selig *Perlman, kinesthesiologist Blanche Trilling, pharmacologist Arthur Solomon Loevenhart, among others, held tenured positions at Wisconsin before World War II. In addition to the Menorah Society, some Jewish students at Wisconsin joined Avukah, a student Zionist society, a Reform student congregation, and Jewish fraternities and sororities. The Hillel Foundation, established in 1924, served as a clearinghouse for Jewish activities on campus. Scholars fleeing the Holocaust settled at Wisconsin. Some, like pharmacist George Urdang, escaped before the war; others, like historian George Mosse and poet Felix Pollak, came to Wisconsin afterwards. During the late 1940s and 1950s, departments across the university ended their prejudice against hiring Jewish faculty.

During World War II, the Madison Jewish Welfare Fund organized USO events at Truax Air Force Base, and many Jews who served there returned to Madison after the war. As antisemitism faded, Jewish families began to move to new subdivisions across the city. Increased access to graduate and professional schools, combined with the consolidation of traditional Jewish businesses, prompted more Jews to seek work in education, government, and the professions.

Although members of the state legislature hinted that “out-of-state radicals” were responsible for campus protests, vaguely antisemitic statements like these made little difference to most Madison Jews. Some student-movement leaders, such as future Madison mayor Paul Soglin, had Jewish roots, but many were gentle Wisconsinites.

Totaling roughly 6,000 people in the early 2000s, Madison’s Jewish community has continued to thrive since the 1970s. Observant Jews attend local Reform, Reconstructionist, Conservative, and Lubavitch congregations, plus the Hillel synagogue on campus. The Madison Jewish Community Council and Jewish Social Services support local and international Jewish initiatives. Immigrants from Canada, South Africa, Israel, and the former Soviet Union continue to settle in Madison, often as professors, doctors, and other professionals.

[Jonathan Pollack (2nd ed.)]

“**MADISON, JAMES** (1750–1836), fourth president of the United States. The son of a prominent Episcopalian family, Madison graduated from the College of New Jersey in 1771. Because he was then considering a career in the ministry, he spent an additional year studying theology and Hebrew. Throughout his political career, he contended that complete religious liberty was essential for a harmonious society and that religious institutions established by the state engendered “ignorance and corruption.” During the Virginia constitutional convention in 1776, he opposed a provision for full religious “toleration,” proposing instead that the law declare “the full and free exercise of it [religion] according to the dictates of conscience.” In 1784 he successfully led the opposition to a resolution in the Virginia House of Delegates for a tax in “support of the Christian religion, or of some Christian church” and warned that “Instead of holding forth an asylum to the persecuted, it is itself a signal of persecution.” As president he vetoed two bills in 1811 which would have granted legal prerogatives to certain churches.

While serving as a congressman from 1780 to 1783, Madison borrowed money from the Jewish broker Haym Salomon, whom he later referred to gratefully in a letter. Writing to Mordecai M. *Noah in 1818, he expressed delight at the blessings conferred upon Jews by religious liberty in America, while in 1820 he wrote to Jacob “De La Motta that while being little known, “the history of the Jews must be forever interesting.”
During his presidency he appointed several Jews to government posts, including John *Hays as collector for the Indian Territory in 1814, Mordecai Noah as consul general at Tunis in 1813, and Joel *Hart as consul at Leith, Scotland, in 1817.

[Edward L. Greenstein]

**MADMŪN BEN JAPHETH BEN BUNDĀR** (d. 1151), son of the first *nagid* of the Jews of South *Yemen*. Madmūn continued in his father's position as the "official of the merchants" in *Aden*, representing the merchants who traded with India, and in this capacity was also the leader of the Jews and the *nagid* of the communities of South *Yemen*. Dozens of letters have been preserved in the *Genizah* which were written to or by him, as well as court actions connected with his name and poems in his honor. More details are known about him than about any other *nagid* of *Yemen* from the 11th to the beginning of the 14th centuries. He was in charge of the port of Aden and supervised the customs payments. He formulated the agreements about prices of merchandise and his house served as a post office for the Jewish merchants, as well as a warehouse for merchandise. He owned ships which sailed from Aden to Ceylon. Among his wide-ranging activities, he jointly owned a ship with a vizier in *Yemen*. In a court action he is named "the confidant of rulers whether on the sea or in the desert," which means that he was held in esteem by the Muslim rulers and drew up agreements with tribal leaders and the leaders of pirates in order to assure free navigation on the sea routes between *Egypt* and *India*. In the above-mentioned court action it is stated that he was "appointed on behalf of the rashei galuyyot ["exilarchs"] and the rashei yeshivot ["academy heads"]." It is not clear whether the reference here is to the exilarch in Babylon or to a person representing the exilarch who lived in *Yemen*; there is an hypothesis that the reference is to the *bet din* in *San'a*. Rashei yeshivot refers to the Palestinian academy in *Egypt*.

Madmūn maintained close contact with the *gaon* Mazarīb of Solomon ha-Kohen, who was active in 1127–39 as head of the Palestinian academy which moved to *Egypt* as a result of the conquest of Palestine by the Crusaders. Madmūn sent the *gaon* questions on *halakhah*, together with expensive gifts which were also given to the scholars of his academy. He ordered that the name of the *gaon* be mentioned in the *reshit* prayer after the name of the exilarch. His attachment to the Palestinian academy aroused the opposition of the supporters of Babylonia. In documents he is called "the *nagid* of God's people, the minister of ministers, head of the communities." The Tunisian merchant Abraham b. Perahyah b. Yiju writes of him in his eulogy: "with seven names given by the exilarch," among which are mentioned, *alluf, nagid*, and friend of the academy. When he died, his eldest son, Ḥalfon, who is also called *nagid*, continued in his father's position in economic and public life.

[Eliezer Bashan (Sternberg)]

**MADON** (Heb. מָדוֹן), Canaanite city in the north of *Erez Israel* whose king was defeated by Joshua in the battle at the waters of *Merom* (Josh. 11:1; 12:19). It is usually identified with the tell at Qarn Ḥittin (Horns of *Hittin*), a peak about 4 mi. (7 km.) west of Tiberias. Remains of walls, including one of cyclopean masonry, and potsherds from the Canaanite and Israelite periods were found on this tell. The identification is based on the similarity between the names Madon and Khirbat Madin, situated south of Qarn Ḥittin, which Arabic tradition connects with Moses’ father-in-law Jethro, the priest of Midian, whose grave is venerated nearby. Some scholars, however, question the form of the name Madon, which is the sole basis for the identification. No town with this name is known from any other source; the Septuagint calls it Marron and identifies it with the city Merom near the site of the battle (in LXX: ὑδωρ Ῥαρρων, “waters of Merom”). *Merom* is known from various sources as an important city in Upper *Galilee* and Madon may be a corrupt form of its name.

[Yohanan Aharoni]

**MADRAS** (today Chennai), city in S. India. Formerly known as Fort St. George, Madras was the first territorial acquisition of the English East India Company in 1639. In the last decades of the 17th century its diamond trade attracted Anglo-Portuguese Jewish merchants, who were allowed by the Company to establish a merchant colony which continued until the end of the 18th century. In the Madras corporation, established in 1688, the “Hebrew merchants” were represented by Jewish aldermen. Among the Jewish merchants prominent in the early days were Bartholomew *Rodrigues, Domingo do Porto, Alvaro da *Fonseca, Jacques *Paiva, Francis Marques, Isaac do Porto, Joseph d’Almanza, and Isaac Sardo *Abendana*. In the 18th century many Ashkenazi Jews from *London* participated in the profitable trade, including Marcus *Moses* and his family, Ephraim Isaac, the *Franks*, and later the Portuguese family De *Castro* and *Salomon* *Franco*. The Jewish merchants in Madras were integrated into the English society and were on good social terms with several of the governors.

The fluctuating nature of the merchant colony apparently prevented the organization of a Jewish community and the only communal institution seems to have been a cemetery. Some tombstones still remain, but they have been transferred to a new municipal site in *Madras* called the “People’s Park,” the entrance of which bears a tablet inscribed in Hebrew Beit ha-Hayyim. Only 20 Jews were living in Madras in 1968. Unlike those of *Cochin, *Bombay, and *Calcutta, the Jews in

Madras did not create any literary works. It was only due to the Christian mission that some Hebrew books were published there in the 19th century. A noteworthy Jewish literary event there was the publication of the *Travels from Jerusalem... of *David d’Beth Hillel in 1832. In the early 21st century the Jewish community of Chennai consisted mainly of expatriates.

[|Walter Joseph Fischel|

**Madrid (Magerit)**, capital of Spain. Mentioned as a Moorish stronghold, it was a tiny town in the Middle Ages. A small Jewish community existed there in the 11th century. Most of the Jews there were apparently merchants during the Muslim period. Nearby was located the small town of Alluden, whose name is derived from the Arabic al-Yahudiyyin ("the Jews"). Madrid was captured from the Muslims by Alfonso VI in 1083.

[Haim Zew Hirschberg]

**The Community’s Status**

The community began to flourish during the 13th century, the Jewish quarter being located on the present Calle de la Fé ("Street of the Faith"). The synagogue, which was destroyed during the persecutions of 1391 (see below), was situated next to the Church of San Lorenzo. In 1293 a copy of the resolutions passed by the Cortes in Valladolid was sent to Madrid, in which Sancho IV ratified a series of restrictions concerning the Jews. They were barred from holding official positions, the rate of usury they were permitted to charge was defined, and they were prohibited from acquiring real estate from Christians or from selling them properties already acquired, among other limitations. In 1307, when Ferdinand IV confirmed these prohibitions at the Cortes in Valladolid, a copy of them was passed to Madrid. They were endorsed by Alfonso XI in 1329. A directive from the time of *Asher b. Jehiel (early 14th century)* permitting action to be taken against an "informer who had harmed the community is extant (Asher b. Jehiel, Responsa, Constantinoiple (1517), ch. 17, no. 6).

The Jews of Madrid owned goods and real estate in the town and its environs. In 1385 John I acceded to the request of the Cortes and delivered a copy of its resolutions to Madrid. He then imposed a series of restrictions concerning the relations between Jews and Christians, prohibiting Jews from holding official positions, canceling debts owed them by Christians for 15 months, and abrogating the right to acquire stolen goods, among other regulations.

**Persecutions and Expulsion**

The persecutions of 1391 were disastrous for the Madrid community. Most of its members were massacred, some adopted Christianity, and community life came to an end. The municipal authorities, in a report sent to the Crown, complained of the pueblo menudo ("little people") who continued the rioting and pillaging for a whole year. Several of the rioters were arrested and tried, but many escaped justice. Apparently the community was later reestablished, although it was greatly impoverished.

During the early 1460s, *Alfonso de Espina preached in Madrid against the *Conversos. It was there that he turned to *Alfonso de Oropesa, the head of the Order of St. Jerome, to enlist his support in eradicating judaizing tendencies among them. In 1478 the municipal council complained that the Jews and the Moors there were not wearing a distinctive sign (*badge). The Crown answered the complaint on November 12 and ordered that the offenders should be punished in the prescribed manner. On February 2, Ferdinand and Isabella renewed the restriction issued by John II in 1447 which prohibited the Jews of Madrid from trading in foodstuffs and medicaments and from practicing as surgeons.

No details are known as to how the community fared after the decree of expulsion of the Jews from Spain was issued in March 1492. However, on Oct. 7, 1492, Ferdinand and Isabella ordered an investigation into reports of attacks on local Jews by various persons who had promised to assist them in reaching the frontiers in order to go to the kingdoms of Fez and Tlemcen. On Nov. 8, Fernando Nuñez Coronel (Abraham *Seneor) and Luis de Alcalá were authorized to collect the debts still owing to Jews.

In Madrid there were two Jewish quarters. One existed until 1481, the other was established that year. In the 15th century Jews lived in various parts of the town, in the area of Puerta del Sol and in the neighborhood of Santiago. The Jewish quarter until 1481 was near Puerta de Valnadú, in today’s Isabell II square.

**The Conversos**

Several Conversos of Madrid were tried by the Inquisition. They were at first tried in Toledo; however, in 1561 when Madrid became the capital of the kingdom during the reign of Philip II, the supreme tribunal of the kingdom was established there and subsequently numerous *autos-da-fé were held in the city. During the 17th century, many Portuguese Conversos were tried there and one of the large autos-da-fé in this period has been painted by Rizzi de Guevara. During the 1630s, Jacob *Cansino negotiated with the Conde-Duque de Olivares concerning the possible return of the Jews to Madrid, after the example of the Jewish community in Rome. However, the talks had no results because of opposition from the Inquisition. Throughout this period, Madrid was the principal center of the activities of the Portuguese Conversos, several of whom were connected with the court, while others developed diversified business enterprises and maintained relations with the Converso centers outside the Iberian Peninsula.

**The Reestablished Community**

Jewish settlement in Madrid was gradually renewed from 1869, with the conferment of the constitution and the arrival of Jews from North Africa, who were joined by Jewish immigrants.
from Europe. However, it was only during the 1920s that a community was organized. During World War I, Madrid gave asylum to a number of refugees, and Max *Nordau and A.S. *Yahuda, who lectured there in Semitic philology, lived there during this period. Among the first Jews to settle in Madrid was the Bauer family, whose members played an important part in the organization and development of the community. The law of 1924 which granted citizenship to individuals of Spanish descent encouraged the further development of the community, and in the early 1930s there was an addition of refugees from Nazi Germany. During the Spanish Civil War, the community underwent much suffering and most of its members dispersed.

In 1941, the Arias Montano Institute for Jewish Studies was founded and a department of Jewish studies headed by Professor Francisco Cantera-Burgos was organized within the University of Madrid. It was later headed by Professor F. Perez Castro. Madrid also gave asylum to war refugees, who were supported by the American Jewish *Joint Distribution Committee. After the war, the community began reorganization. A synagogue was founded in Calle del Cardinal Cisneros. In 1958, a Jewish center with a synagogue was opened. In 1959, while the representative of the World Sephardi Federation, Yair Behar Passy, was visiting Madrid, an exhibition of Jewish culture in Spain was held at the National Library of Madrid. An Institute for Jewish, Sephardi, and Near Eastern Studies was founded jointly by the Higher Council for Scientific Research and the World Sephardi Federation in 1961. (In 1968 the institute amalgamated with the Arias Montano Institute.) Within the framework of the institute, the first symposium on Spanish Jewry was held in Madrid in 1964. Leaders of the Madrid community in the late 1960s included A. Bauer, H. Cohen, L. Blitz, and M. Mazin (the president of the community). In that year the community numbered over 3,000, a level it maintained into the 21st century. It served as a center for Jewish students from abroad coming to study in Madrid. Jewish immigrants from North Africa constitute the majority of the Jews. In 1968 the community inaugurated its new communal center and synagogue. Dr. B. Garzon was appointed first rabbi of the community, which had a recognized school and a Jewish scout movement. The Sephardi Federation of Spain in Madrid coordinates the activities of all the Jewish communities in Spain.

In Madrid there are several institutions that have great importance from the Jewish historical point of view. In theArchivo Histórico Nacional, the Biblioteca Nacional, and the Academia de la Historia there are numerous documents related to the Jews. In the Biblioteca we find the Bible of Ferrara and kept in the Casa de Alba is the famous Bible translated by Moses Arragel into Castilian. In El Escorial, near Madrid, are valuable Hebrew manuscripts in the library of the monastery. The Institute Arias Montano, dedicated to research in Jewish and Sephardic studies, publishes the journal Sefarad devoted to the these topics.

Maduro, Ricardo

**Maduro, Ricardo** (1946– ), president of Honduras. Maduro is a member of a prominent Jewish family of Portuguese origin that can be traced from Portugal to Amsterdam and then to Curacao and Panama. His father, Osmond Levy Maduro of Panama, settled in Tegucigalpa, the capital of Honduras. Ricardo Maduro studied economy at Stanford University and became a successful businessman. As a supporter of democracy he became active in the Nationalist Party of Honduras. After losing his son to kidnappers, he also worked for measures to ensure law and order. After he was accused of being a Panaman, and therefore ineligible to run for president, the High Election Tribunal declared him a Honduran citizen; he was elected president on Jan. 27, 2002.

**Maes, Andreas** (Masius; 1517–1573), Flemish Hebraist and Orientalist. A lawyer and a diplomat, Maes spent much of his life in Italy, where he met Guillaume Postel, under whom he studied Arabic and with whom he thereafter maintained an interesting correspondence. In Venice, Maes joined the humanist circle of Daniel Bomberg and was in touch with the pioneer grammarian Elijah Levita. Maes contributed to the Antwerp polyglot Bible (1568–72), in which he published an edition of the Targums and the first printed grammar and lexicon of Syriac. His Hebrew-Greek edition of Joshua, Josuae imperatoris historia… (Antwerp, 1574), which appeared posthumously, aroused controversy because of its independence in regard to the masoretic text. This work lists the rabbinic and kabbalistic manuscripts in Maes’ library, which must have been one of the major collections of Judaica in the Renaissance. Maes was apparently a member of the heretical Flemish sect (“The Family of Charity”) led by Postel, Arias Montano, and the printer Christophe Plantin. Maes opposed the papal condemnation of the Talmud and the burning of rabbinic books at Rome in 1559.

**Maestro, Yaaakov** (Jacko; 1927– ), Greek Holocaust prisoner. Maestro was born in Salonika. In 1943, at age 15, he
arrived at Auschwitz in the first deportation from Salonika. In Salonika, he had learned German from his father, who was a tourist guide, and had done odd jobs during the German occupation of Salonika as a shoeshine boy and porter, coming into contact with German and Italian soldiers. Upon arriving in Auschwitz, camp commander Schwartz, who had replaced Rudolph Hess, noticed that he was a German speaker. He became a translator and was in charge of work assignments for 16,000 prisoners in Auschwitz. He worked under the political prisoner Yeze Pozinski during the morning hours in the *Fuhrerbarrack* in the office of the *Arbeitsdienst*. The two prisoners coordinated the work schedule according to demand and registered the details of the prisoners on card files in the *Kartei* Department. Maestro could ease conditions for prisoners by not sending them to difficult work groups. He could also arrange for them to remain in the barracks to avoid hard labor. He helped many Jews, possibly hundreds, to survive. He concerned himself with the needs and fate of the Greek Jewish prisoners and passed notes between separated family members in the camp complex. He also supplied additional food, and in order to manipulate the work schedule he often bribed the Nazi commanders with money, food, cigarettes, or vodka, which he acquired on the black market in the camp or from political prisoners, or from civilian workers, who could buy him various items on the outside in exchange for payment. He also bribed Nazi guards and commanders to save prisoners from punishment and helped keep *musselmens* from being sent to death.

On three occasions his sister Esther (whose married name was Sidikario after the Holocaust) saved a total of 181 girls from Bloc 25 in Birkenau who were destined for gasping, sneaking them out through the windows to an adjacent shack.

After the war Maestro immigrated to Israel and ran a car repair garage. [Yitzchak Kerem (2nd ed.)]

**MAFTIR** (Heb. מפטייר; "one who concludes"), name given to the three or more concluding verses of the weekly Sabbath *sidrah* ("Torah portion") as well as to the final verses of the portions read on festivals and public *fast days*. The person who is called up to the reading from the Torah of these passages and who then recites the *haftarah* from the Prophets is also called *maftir*.

**MAGDALA** (Migdal), a city on Lake Gennesaret (the Sea of Galilee) in Galilee, about 7 km. north of Tiberias. It is overlooked by a high escarpment near the Wadi Hamam (the Valley of the Robbers). "Migdal" is an Aramaic word meaning "tower" or "fortress." The Greeks called the village Taricheia, a word meaning "pickling," because of Magdal’s fish salting industry, one of the mainstays of its economy. The other important element of its economy was its boat-building.

Magdal was first excavated in 1971–74 by Corbo and Loffreda, who found what they misidentified as a mini-synagogue (actually a stepped fountain house or *nymphaeum*), a water reservoir, and some mosaic floors. One of the mosaics, now on display at Capernaum, depicts an ancient boat with both sails and oars. Situated west of Capernaum (Jos., Life, 59, 72), Magdala was walled on the land side and contained a stadium.

[Magdeburg] Magdeburg, city in Germany. The Jewish community of Magdeburg is one of the oldest in Germany. As early as 965 there were Jews living in the town, and they were placed under the jurisdiction of the archbishop by Otto the Great. They traded in the "clothing-court" (*Kleiderhof*), in the merchants’ quarter, and conducted their trade even beyond the Oder River. Their quarter, the *Judendorf*, was situated in the south...
of the city, in the archbishop’s domain. The Jews took part in the funeral procession of Archbishop Walthard von Magdeburg in 1012. The cemetery dates from the 13th century – the oldest gravestone bears the date 1268 – later enlarged in 1312 and 1383. In 1213 the soldiers of Otto IV destroyed the Judendorf, and four years later the Jews moved to nearby Sudenburg, where numerous other Jews already lived. Demanding jurisdiction over the Jews in 1260, the canons of the cathedral laid claim to the fines they paid in silver, while those paid in gold were to remain the property of the archbishop. Prominent in the city were R. Hezekiah b. Jacob, who corresponded with R. Isaac Or Zarua (*Issac ben Moses of Vienna), and R. *Ḥayyim b. Paltiel, rabbi in Magdeburg in 1291, who was in correspondence with R. Meir of Rothenburg. The Jews were persecuted in 1302 and again during the *Black Death disturbances of 1349, despite the attempts of the archbishop and the city authorities to protect them. They were attacked again in 1357 and 1384 when another epidemic broke out. Archbishop Dietrich employed a Jewish court banker between 1361 and 1367. In 1410 Archbishop Guenther issued a letter of protection (*Schutzbrief) for a period of six years, at a cost to the community of 40 silver marks. During the 15th century the community maintained a flourishing yeshivah. In 1493 the Jews of Magdeburg were expelled; the synagogue was converted into a chapel and the cemetery destroyed.

When the great elector, Frederick William, readmitted Jews to *Prussia (1671), Schutzjuden settled once more in Magdeburg. From 1703 they were to be found in Sudenburg, from 1715 in the newer part of town (the Neustadt), and from 1729 in the Altstadt. A religious school was founded by the modern community in 1834 and a *hevra kaddisha in 1839. Rabbis of the community included Ludwig *Philippson, editor of *Allgemeine Zeitung des Judentums; Moritz *Guedemann, and Moritz Spanier, both of whom wrote a history of the community. Eduard *Lasker and Otto *Landsberg were repeatedly elected to parliament from Magdeburg. The prosperous community, which included 45 doctors (who founded their own club in 1903), had about 20 social, cultural, and charitable organizations in 1933. The number of Jews increased steadily from 330 in 1817 to 559 in 1840; 1,000 in 1859; 1,815 in 1885; 1,842 in 1910; and around 3,200 in 1928, then dropped to 2,361 (0.6% of the total population) in 1933. The synagogue, built in 1851 and enlarged to seat 900 in 1897, was burned down on November 10, 1938. The men were interned in *Buchenwald. By May 17, 1939, only 679 Jews remained in the town, and the majority were transported to concentration camps. On July 1, 1944, there were still 185 Jews living in Magdeburg, mainly partners of mixed marriages, who managed to survive the war. After the war, some Jews returned to Magdeburg. In 1962 the Jewish community numbered 79 and diminished to 49 in 1969. It declined even more during the 1970s and 1980s, dwindling to 35 in 1989. But in 2005 it rose to 635 members due to the immigration of Jews from the former Soviet Union. Magdeburg is the seat of the Association of Jewish communities in the State of Saxony-Anhalt, which was founded in 1994.

### Bibliography

**Magdeburg Law**, term applied to the constitutional and commercial urban law which developed in *Magdeburg in the Middle Ages and became a pattern for new city constitutions in Central and Eastern Europe. The Magdeburg law was adopted by most cities in central, eastern, and northern Germany, Bohemia, and Moravia. Magdeburg, the mother town of the constitutions, possessed a supreme court, to which appeals and queries were addressed, including litigation between Christians and Jews. These cases were treated fairly, without discrimination and with no accompanying degrading oaths. In the 14th century the charters of many towns in Galicia were copies of this law, as were those of Lublin (1317), Sandomierz (1536), Lemberg (Lvov; 1356), Vilna (1387), Brest (1370), and Grodno (1391); in the following century it was extended to several towns in southern Poland, among them Lutsk (1432) and Minsk (1496), and in the 16th century to the towns of Pinsk (1511), Kovel (1518), Tarnopol (1530), Mogilev (1578), Vitebsk (1582), and others. Originally, the privileges enshrined in the law were granted only to German craftsmen and merchants, Jews and all other non-German town dwellers being excluded. However, in the charter granting the law to the city of Lemberg (June 17, 1365), the Jews, Armenians, and other nations were free to decide whether they wished to avail themselves of it or whether they preferred to abide by their own laws and remain subject to the jurisdiction of their elders, under the chairmanship of the local bailiff. Later the law was granted to all the townspeople, including Jews (as in Kiev and Podolia). One of the paragraphs of the Magdeburg law which was of importance for the Jews provided that no Jew could be forced to stand warranty for objects he had bought or received as a pawn, i.e., to reveal from whom he had bought or received them. The Jews were therefore not responsible for receiving stolen property.

**Bibliography:** Kisch, Germany, 62–70, index; idem, Jewry in Medieval Germany (1949), index; I. Bershaski, Litovskie Yevreui (1888), 221, 234, 241–3.

**Magen David** (Heb. מגן דוד, “shield of David”), the hexagram or six-pointed star formed by two equilateral triangles...
which have the same center and are placed in opposite directions.

From as early as the Bronze Age it was used – possibly as an ornament and possibly as a magical sign – in many civilizations and in regions as far apart as Mesopotamia and Britain. Iron Age examples are known from India and from the Iberian peninsula prior to the Roman conquest. Occasionally it appears on Jewish artefacts, such as lamps and seals, but without having any special and recognizable significance. The oldest undisputed example is on a seal from the seventh century B.C.E. found in Sidon and belonging to one Joshua b. Asayahu. In the Second Temple period, the hexagram was often used by Jews and non-Jews alike alongside the pentagram (the five-pointed star), and in the synagogue of Capernaum (second or third century C.E.) it is found side by side with the pentagram and the swastika on a frieze. There is no reason to assume that it was used for any purposes other than decorative. Theories interpreting it as a planetary sign of Saturn and connecting it with the holy stone in the pre-Davidic sanctuary in Jerusalem (Hildegard Levy, in *Archiv Orientální*, vol. 18, 1950, 330–65) are purely speculative. Neither in the magical papyri nor in the oldest sources of Jewish “magic does the hexagram appear, but it began to figure as a magical sign from the early Middle Ages. Among Jewish emblems from Hellenistic times (discussed in E. Goodenough, *Jewish Symbols in the Greco-Roman Period*), both hexagram and pentagram are missing.

The ornamental use of the hexagram continued in the Middle Ages, especially in Muslim and Christian countries. The kings of Navarre used it on their seals (10th and 11th centuries) and (like the pentagram) it was frequently employed on notarial signs in Spain, France, Denmark, and Germany, by Christian and Jewish notaries alike. Sometimes drawn with slightly curved lines, it appears in early Byzantine and many medieval European churches, as, for example, on a stone from an early church in Tiberias (preserved in the Municipal Museum) and on the entrance to the Cathedrals of Burgos, Valencia, and Lerida. Examples are also found on objects used in the church, sometimes in a slanted position; as on the marble bishop’s throne (c. 1266) in the Cathedral of Anagni. Probably in imitation of church usage – and certainly not as a specifically Jewish symbol – the hexagram is found on some synagogues from the later Middle Ages, for example, in Hame lin (Germany, c. 1280) and Budweis (Bohemia, probably 14th century). In Arab sources the hexagram, along with other geometrical ornaments, was widely used under the designation “seal of Solomon,” a term which was also taken over by many Jewish groups. This name connects the hexagram with early Christian, possibly Judeo-Christian magic, such as the Greek magical work *The Testament of Solomon*. It is not clear in which period the hexagram was engraved on the seal or ring of Solomon, mentioned in the Talmud (Git. 68a–b) as a sign of his dominion over the demons, instead of the name of God, which originally appeared. However, this happened in Christian circles where Byzantine amulets of the sixth century already use the “seal of Solomon” as the name of the hexagram. In many medieval Hebrew manuscripts elaborate designs of the hexagram are to be found, without its being given any name. The origin of this use can be clearly traced to Bible manuscripts from Muslim countries (a specimen is shown in Günzburg and Stassoff, *L’ornement hébraïque* (1905), pl. 8, 15). From the 13th century onward it is found in Hebrew Bible manuscripts from Germany and Spain. Sometimes parts of the masorah are written in the form of a hexagram; sometimes it is simply used, in a more or less elaborate form, as an ornament. Richly adorned specimens from manuscripts in Oxford and Paris have been reproduced by C. Roth, *Sefarad*, 12, 1952, p. 356, pl. 11, and in the catalog of the exhibition “Synagoga,” Recklinghausen, 1960, pl. B. 4.

In Arabic magic the “seal of Solomon” was widely used, but at first its use in Jewish circles was restricted to relatively rare cases. Even then, the hexagram and pentagram were easily interchangeable and the name was applied to both figures. As a talisman, it was common in many of the magical versions of the mezzuzah which were widespread between the tenth and 14th centuries. Frequently, the magical additions to the traditional text of the mezzuzah contained samples of the hexagram, sometimes as many as 12. In magical Hebrew manuscripts of the later Middle Ages, the hexagram was used for certain amulets, among which one for putting out fires attained great popularity (see Heinrich Loewe, *Juedischer Feuerversegner*, 1930).

The notion of a “shield of David” with magical powers was originally unconnected with the sign. It is difficult to say whether the notion arose in Islam, where the Koran sees David as the first to make protective arms, or from inner traditions of Jewish magic. From earlier times there is only one instance connecting the hexagram with the name David on a sixth-century tombstone from Taranto, southern Italy. There seems to have been some special reason for putting the hexagram before the name of the deceased. The oldest text mentioning a shield of David is contained in an explanation of a magical “alphabet of the angel *Metatron*” which stems from the geonic period and was current among the “Hasidei Ashkenaz of the 12th century. But here it was the holy Name of 72 names which was said to have been engraved on this protective shield, together with the name MKBY, which the tradition of the magicians connected with Judah Maccabee. In cognate sources this tradition was much embellished. The name of the angel Taftifiyyah, one of the names of Metatron, was added to the 72 holy names, and indeed an amulet in the form of a hexagram with this one name became one of the most widespread protective charms in many medieval and later manuscripts. (From c. 1500 onward the name Shaddai was often substituted for the purely magical one.) This must have provided the transition to the use of the term “magen David” for the sign. What caused the substitution of the figure instead of the “great name of 72 names” is not clear, but in the 16th century instructions can still be found stating that the shield of David should not be drawn in simple lines but must be composed of certain holy names and their combinations, after the pattern of those biblical manuscripts where the lines were composed of the text.
of the masorah. The oldest known witness to the usage of the term is the kabbalistic Sefer ha-Geval, written by a grandson of Nahmanides in the early 14th century. The hexagram occurs there twice, both times called "magen David" and containing the same magical name as in the aforementioned amulet, demonstrating its direct connection with the magical tradition. According to other traditions, mentioned in Isaac Arama's Akedat Yizhak, the emblem of David's shield was not the image known by this name today, but Psalm 67 in the shape of the menorah. This became a widespread custom and the "menorah Psalm" was considered a talisman of great power. A booklet from the 16th century says: "King David used to bear this psalm inscribed, pictured, and engraved on his shield, in the shape of the menorah, when he went forth to battle, and he would meditate on its mystery and conquer."

Between 1300 and 1700 the two terms, shield of David and seal of Solomon, are used indiscriminately, predominantly in magical texts, but slowly the former gained ascendancy. It was also used, from 1492, as a printers' sign, especially in books printed in Prague in the first half of the 16th century and in the books printed by the Foa family in Italy and Holland, who incorporated it in their coat of arms. Several Italian Jewish families followed their example between 1660 and 1770. All these usages had as yet no general Jewish connotation. The official use of the shield of David can be traced to Prague, from where it spread in the 17th and 18th centuries through Moravia and Austria and later to southern Germany and Holland. In 1534, Charles IV granted the Prague community the privilege of bearing its own flag – later called in documents "King David's flag", on which the hexagram was depicted. It therefore became an official emblem, probably chosen because of its significance as a symbol of the days of old when King David, as it were, wore it on his shield. This explains its wide use in Prague, in synagogues, on the official seal of the community, on printed books, and on other objects. Here it was always called magen David. Its use on the tombstone (1613) of David Gans, the astronomer and historian, was still exceptional, obviously in reference to the title of his last work Magen David. Except for one tombstone in Bordeaux (c. 1726), no other example of its being used on tombstones is known before the end of the 18th century. A curious parallel to the development in Prague is the one case of a representation of the Synagogue as an allegorical figure, holding a flag bearing the magen David in a 14th-century Catalan manuscript of the Breviar d'amor by Mafre d'Ermengaud (Ms. of Yates Thompson 31 in the British Museum).

The symbol early moved to other communities. Its use in Budweis has been mentioned above, and the Vienna community used it on its seal in 1655. In the following year it is found on a stone marking the boundary between the Jewish and the Christian quarters of Vienna (according to P. Diamant) or between the Jewish quarter and the Carmelite monastery (according to Max Grunwald). Apparently it was an officially recognized symbol. When the Viennese Jews were expelled in 1670 they took the symbol to many of their new habitats, especially in Moravia, but also to the Ashkenazi community of Amsterdam, where it was used from 1671, first on a medalion permitting entrance to the graveyard. Later it became part of the community's seal. Curiously enough, its migration eastward was much slower. It never occurs on official seals, but here and there during the 17th and 18th centuries it appears as an ornament on objects for use in synagogues and on wood carvings over the Torah shrine (first in Volpa, near Grodno, 1643).

The use of the hexagram as an alchemical symbol denoting the harmony between the antagonistic elements of water and fire became current in the later 17th century, but this had no influence in Jewish circles. Many alchemists, too, began calling it the shield of David (traceable since 1724). But another symbolism sprang up in kabbalistic circles, where the "shield of David" became the "shield of the son of David," the Messiah. Whether this usage was current in Orthodox circles too is not certain, though not impossible. The two kabbalists who testify to it, Isaiah the son of Joel Ba'al Shem (Jacob Emden, Torat ha-Kena'ot, p. 128) and Abrahem Hayyim Cohen from Nikolsburg, combine the two interpretations. But there is no doubt that this messianic interpretation of the sign was current among the followers of Shabbatei Zevi. The famous amulets given by Jonathan Eybeschuetz in Metz and Hamburg, which have no convincing interpretation other than a Shabbatean one, have throughout a shield of David designated as "seal of MBD" (Messiah b. David), "seal of the God of Israel," etc. The shield of David was transformed into a secret symbol of the Shabbatean vision of redemption, although this interpretation remained an esoteric one, not to be published.

The prime motive behind the wide diffusion of the sign in the 19th century was the desire to imitate Christianity. The Jews looked for a striking and simple sign which would "symbolize" Judaism in the same way as the cross symbolizes Christianity. This led to the ascendancy of the magen David in official use, on ritual objects and in many other ways. From central and Western Europe it made its way to Eastern Europe and to Oriental Jewry. Almost every synagogue bore it; innumerable communities, and private and charitable organizations stamped it on their seals and letterheads. Whereas during the 18th century its use on ritual objects was still very restricted – a good specimen is a plate for mazzot (1770), reproduced on the title page of Monumenta Judaica, catalog of a Jewish exposition in Cologne, 1963 – it now became most popular. By 1799 it had already appeared as a specific Jewish sign in a satirical antisemitic engraving (A. Rubens, Jewish Iconography, no. 1611); in 1822 it was used on the Rothschild family coat of arms when they were raised to the nobility by the Austrian emperor; and from 1840 Heinrich Heine signed his correspondence from Paris in the Augsburger Allgemeine Zeitung with a magen David instead of his name, a remarkable indication of his Jewish identification in spite of his conversion. From such general use it was taken over by the Zionist movement. The very first issue of Die Welt, Herzl's Zionist journal, bore it as its emblem. The magen David became the symbol of new hopes.
and a new future for the Jewish people, and Franz Rosenzweig also interpreted it in *Der Stern der Erloesung* (1921) as sum-
ming up his philosophical ideas about the meaning of Juda-
ism and the relationships between God, man, and the world. When the Nazis used it as a badge of shame which was to ac-
company millions on their way to death it took on a new di-
mension of depth, uniting suffering and hope. While the State of Israel, in its search for Jewish authenticity, chose as its em-
blem the menorah, a much older Jewish symbol, the magen David was maintained on the national (formerly Zionist) flag, and is widely used in Jewish life.

MAGEN DAVID ADOM (MDA, Hebrew “Red Shield of David”), Israel’s emergency medical first aid society (equiva-
 lent to the Red Cross). Magen David Adom was founded in
1930 and was recognized by the government of Israel and by
the Knesset (MDA Knesset Law 1950/1970). It operates several
major services: first aid, ambulance, and mobile intensive-care
services; national blood bank services, including a fraction-
ination institute for plasma by-products; and first aid instruc-
tion. The MDA institutions include the MDA executive commit-
tee, the MDA council, and the MDA conference. The conference
is held every four years and deals with organizational activ-
ity and future goals. The council consists of 45 members and
the executive committee consists of 12 members; both insti-
tutions are made up of MDA members and public representa-
tives named by various government bodies.

Magen David Adom operates in 11 geographical areas,
running 95 first aid stations, with some 700 ambulances de-
ployed in these stations and in ambulance posts in kibbutzim
and settlements. In addition, there are operational at first aid
stations – on alert and in reserve – some 50 mobile intensive-
care units, 22 mobile disaster units, and 18 blood mobiles. MDA
employed 1,500 workers in 2006, while its volunteer force
numbered more than 5,000 in 1991 and 10,000 in 2006. MDA
National Blood Service is responsible for the collection, pro-
cessing, examination, and distribution of blood units to hos-
pitals all over Israel. The services include the national donor
operation, the central blood bank, and the plasma processing
institution, which were located inside Tel Hashomer hospital
and employed 200 workers in 2005. The services collect about
280,000 blood units each year.

In time of war, Magen David Adom is part of Israel
Civil Defense, more precisely, of the IDF Home Front Com-
mand, and operates in close cooperation with the IDF Medi-
cal Corps.

MDA’s budget for 1995 came to $33 million, covered by
income from ambulance services, blood services, first aid and
first aid equipment sales, and other internal sources as well as
a government subsidy.

Its equipment and development budget for 1995 totaled
some $7 million. This sum, raised for MDA by its Friends so-
icies in 15 countries, is earmarked for special development
projects and purchase of lifesaving vehicles, medical equip-
ment, etc. MDA Friends societies are active in Argentina, Aus-
tralia, Belgium, Canada, France, Germany, Great Britain, It-
aly, The Netherlands, South Africa, Sweden, Switzerland, the
United States, Uruguay, and Venezuela.

Following worldwide efforts – supported by prominent
statesmen in many countries – to have Magen David Adom in
Israel admitted into the International Federation of Red Cross
and Red Crescent Societies, this finally occurred in 2006.

Notwithstanding the delay, over the years MDA contin-
ued to cooperate with the International Red Cross and offer
assistance to other countries afflicted by natural and other
disasters.

Special relations on a bilateral basis are conducted by
the MDA with the American Red Cross, German Red Cross,
The Netherlands Red Cross, Czech Red Cross, and Hungarian
Red Cross.

In 1978 the American Red Cross issued a directive to all
its national chapters to display the flag of MDA at all functions
and meetings at which other emblems of National Red Cross
and National Red Crescent Societies are displayed.

MAGGID (Heb. מגד; pl. maggidim), literally “one who re-
lates” (cf. II Sam. 15:13). The term, however, has two special
notations in later Hebrew: a) a popular – and often itiner-
ant – preacher, and b) an angel or supermundane spirit which
conveys teachings to scholars worthy of such communication
in mysterious ways.

The Maggid as Preacher

Itinerant preachers appear in Jewish history long before the
emergence of the specific term. Descriptions of the life and
social standing of some tannaim and amoraim depict them
as leading the lives of itinerant preachers. During the geonic
period, however, there is no record of them and it is not until
the 11th century that one finds mention of them. Tales about
some of the *Hasidei Ashkenaz show them as begging itiner-
ant preachers. The tradition of the itinerant maggid developed
during the late Middle Ages. The 14th-century anonymous
author of the Sefer ha-Kaneh and Ha-Peli‘ah sets much of his
bitter social and moral criticism in the context of his experiences while wandering and preaching in various communities. In the second half of the 16th century *Ephraim Solomon b. Aaron Luntschitz was a typical, if much respected and influential, itinerant maggid. He relates that "in my later years, yielding to the importunities of prominent men, I preached in Lublin, especially during the great fairs, where Jewish leaders as well as large masses of the people gathered. There I used to express myself quite freely covering the shortcomings of the rabbis as well as of the laity, undeterred by any consideration or fear. This boldness, naturally enough, created for me numerous enemies who heaped slander upon my name and otherwise persecuted me... Of course, I could well have avoided all this wrath and uproar had I been willing to be more restrained in my utterances, or were I more chary of my personal honor. But I had long resolved to put the honor of God above my own" (Ammudei Shesh (Prague, 1617), introduction). In this, as in many other passages, Luntschitz shows his strength of character and the troubles that beset a courageous itinerant preacher, attuned to the mood and spiritual needs of his public but fearless in criticizing them. Use of the parable (mashal) is already much in evidence in his writings, which also show a conscious effort to stimulate his public and impress them through a show of wit and learning. All these traits were common from the 18th century on when the name maggid came into regular use to denote both an itinerant and non-itinerant preacher. There are records of salaried maggidim appointed by the community. Some historians have ascribed a considerable part in the social and religious upheavals of the end of the 17th and during the 18th centuries to the influence of itinerant maggidim, who, they consider, functioned as a kind of "non-establishment intelligentsia," having much of the learning and influence of the regular scholars but largely without their connections in the upper strata of Jewish society. They have thus attributed the rise and early success of Hasidism to the influence of such maggidim, pointing out that several of the early hasidic leaders were called maggid or the synonym for maggid, mokhtiah ("morals preacher"), such as Dov Baer of Mezhirech or Jacob Joseph of Polonnyo. Others, however, note that even the most radical of the 18th-century maggidim, Berechiah (Berakh) b. Eliakim Getzel the Younger, considered himself, despite his outspoken social criticism, to be allied by the nature of his office to that of the communal rabbi. They show also that much of the anti-hasidic propaganda was conducted by maggidim, chief among them being Jacob Kranz "the Maggid of Dubno," an admiring pupil of Elijah b. Solomon Zalman, the Gaon of Vilna, who expressly followed the advice of the Gaon on the method of preaching. Kranz, who was celebrated for his parables, exemplifies the type of maggidim who were associated with the Mitnagged leadership in Lithuanian Jewry. Lithuania and the Mitnagged culture remained throughout the 19th and into the 20th centuries the field of activity of the maggidim. Sometimes the office of maggid was combined with that of dayyan, hence the modern titles, mostly in Eastern Europe, of maggid mei-sharim u-moreh zedek (the maggid of uprightness (cf. Is. 45:19) and teacher of righteousness, the latter being a synonym for a dayyan). Sometimes the maggid was appointed to a town, with the official title of maggid de-mata, in Yiddish Shtot-magid. Vilna had a Shtotmagid, usually a respected and outstanding scholar, until recent times. Men like Ezekiel b. Isaac ha-Levi Landau, the Shtotmagid of Vilna; the great itinerant maggid Moses Isaac Darshan, the "Kelmer Maggid"; or the maggid suspected of Haskalah leanings, Zevi Hirsch b. Ze‘ev Wolf Dainow, the "Slutzker Maggid," continued a tradition of preaching expressly intended for the masses, which contained much social criticism but also provided social guidance. Their preaching was also characterized by the mournful sing-song intonation of their delivery (see also "Musar movement"). Their direct successors were the "Zionist maggidim" like Z. Maccoby the "Kamenitzer Maggid," and Zevi Hirsch Masliansky. Many of the moshullainim ("She'elot u-Teshuvot min ha-Shamayim) for the yeshivot and Erez Israel actually filled the function of maggidim. Wherever Mitnagged communities were established in other countries, maggidim accompanied the immigrants. In modern Erez Israel, Ben Zion Yadler and Benzion Alfes were in the tradition of the great maggidim. A few maggidim are still active in the State of Israel and the United States (see also "Darshan;" Preaching).

[Haim Hillel Ben-Sasson]

In Kabbalah

The angel or heavenly force called the maggid passes secrets to a kabbalist, when he is asleep or awake, speaks words from his mouth, or dictates to him when he is writing. This revelation is one of the outstanding phenomena in Kabbalah in the 16th to 18th centuries. Throughout the history of Kabbalah, kabbalists relied on heavenly inspirations, the revelations of Elijah, "Metatron, and other angels, or even on heavenly forces such as the Holy Spirit, in addition to questions in dreams and magical means of communication with heavenly forces. An early stage of this phenomenon may be seen in the questioning in dreams practiced before the formation of the Kabbalah, and even regarding the problems of Kabbalah, e.g., by Jacob of Marvège (Provence), author of She'elot u-Teshuvot min ha-Shamayim (commentary by R. Margulies, Lvov, 1929). The maggid of the 16th to 18th centuries is simply another version of the previous occurrence, though at times the phenomenon seems, in particular cases, to have personal psychological roots.

The image of the maggid who reveals heavenly secrets was apparently first crystallized in the circle of Joseph "Taitzak, who lived at the time of the Spanish expulsion and whose circle included many of the great kabbalists and preachers of Safed. The revelations of Taitzak (or those attributed to him) were written prior to the expulsion and were presented as coming from God Himself. In the Safed literature, the main expositions of the essence of the maggid are found in the writings of Moses "Cordovero and Ḥayyim Vital. In this circle the most outstanding phenomenon was the appearance of the
maggid of Joseph *Caro. Recording the words of the maggid, Caro wrote Sefer ha-Maggid, of which only a fragment has survived, called by the printers Maggid Meisharim. The major statements of Caro's maggid were sermons interpreting the secrets of the Kabbalah and biblical commentary, but many of his pronouncements have a personal and practical meaning. The maggid guided Caro in his wanderings in Turkey and directed him to immigrate to Ereẓ Israel. He stimulated Caro to write his halakhic works and to behave morally, promising him achievements in halakhah and in his personal life, toward attaining his great dream – martyrdom, like Solomon "Molcho. Caro's maggid was the Shekhinah ("Divine Presence"), the tenth Sefirah in the kabbalistic system, which took on the form of the Mishnah, the Oral Law. To bring about the appearance of the maggid, Caro would study mishnayot. The maggid spoke to him while he was awake, often just as he awoke. Scholars have not reached a conclusion concerning the psychological nature of this revelation, but it is clear that it did not affect the relation of Caro's personality to reality; it was one aspect of his personality which neither contradicted nor harmed the whole.

The Shabbatean movement gave great impetus to appearances of maggidim and many revealed secrets to the Shabbateans. The revelations of a maggid to Isaac Zurgeon, an associate of *Shabbetai Zevi in Adrianople in 1668 who confirmed the latter as Messiah and defended his apostasy, have been published (R. Schatz, in: Sefunot, 12). There also exists particularly detailed information on the appearance of a maggid in the house of study of Abraham *Rovigo, leader of a Shabbatean circle in Modena, Italy, from 1675 to 1691. The first maggid to appear in his house of study was that of Baer Perlhefter – like Caro's – encouraged his master and teacher to immigrate to Ereẓ Israel. He stimulated Caro to study the revelations concerns the reason for Shabbetai Zevi's death and a prediction of his return in a year's time. Apparently, a maggid was later revealed to Rovigo himself. The most detailed revelations in this house of study have been transmitted by Mordecai Ashkenazi, a pupil of Rovigo's from Zolkiew who was neither a scholar of Torah nor of esoteric matters but who astounded Rovigo with his Shabbatean revelation. Ashkenazi's notebook and other documents relating the revelations of his maggid have survived. This maggid always revealed himself in a dream; at first only his voice was heard and afterward his form was seen. Scholom has suggested that this was a projection of the image of Rovigo, Ashkenazi's teacher. His revelations include Shabbatean theories, and together with them private advice, mostly on routine matters and on Ashkenazi's education and studies. Apparently they even included criticism of the former maggid, that of Baer Perlhefter, based on suspicions of Perlhefter's sins toward the end of his life, whose nature is not clear. Ashkenazi's maggid – like Caro's – encouraged his master and teacher to immigrate to Ereẓ Israel and gave him practical advice on ways of realizing this aim, whose background was Shabbatean messianism.

A lengthy and stormy dispute was caused by a maggid who revealed himself to Moses Hayyim *Luzzatto in Italy in 1727. The maggid dictated to Luzzatto, in the language of the Zohar, Razin Genizin, Tikunim Hadashim, and other works, which were meant to become a second Zohar (Zohar Tinyan). The maggidim of Ashkenazi and Caro also spoke the language of the Targum, i.e., Aramaic. The record of the first revelation of Luzzatto's maggid, who appeared on Wednesday, Rosh Hodesh (the New Moon of) Sivan 1727, still exists. This maggid was a voice without an image who spoke to the recipient while he was awake and not in a dream, and alone. This angered Moses *Hagiz and others, because they thought that the young Luzzatto was not worthy of such a heavenly revelation and also because they suspected the Shabbatean character of the revelations.

The nature of the phenomenon apparently must be examined in the general context of kabbalistic mysticism, which consistently seeks heavenly confirmation for the secrets revealed to the kabbalist. At different times, various forms were given to these confirmations – some by pseudography and some by a divine revelation. In general, it appears that there was no fraudulent basis to these revelations, that their source lay in the kabbalist's complete conviction of the hidden heavenly truth in the secrets revealed to him, and that his testimony that he heard them from a divine source is honest. In addition, it seems that the maggid is also connected with the parapsychological phenomenon of the materialization of part of the kabbalist's soul which, acquiring an independent form, dissociates itself from the rest of his person and, confronting him objectively as it were, speaks to him.

[Joseph Dan]

MAGGID, DAVID (1862–1942?), scholar and writer. Maggid was born in Vilna, son of Hillel Noah "Maggid-Steinschneider. As secretary to S.J. *Fuenn, he assisted him in writing Ha-Oẓar ("The Treasury," 1884–1903) and Keneset Yisrael ("Assembly of Israel," 1886–90), a biographical dictionary of Jewish authors and scholars. Later, in St. Petersburg, he taught Jewish religion in government secondary schools. The author of numerous articles on Jewish history and art, he was also a contributor to the Yevreyskaya Entsiklopediya. His research encompassed Jewish music of antiquity and the Middle Ages as well as the folklore of the Jews of Crimea. In 1919 he succeeded A.A. *Harkavy as librarian of the Jewish and Oriental department of the National Library of Petrograd. In 1921 he
MAGGID-STEINSCHNEIDER, HILLEL NOAH (1829–1903), Hebrew scholar and writer. Maggid-Steinschneider, born in Vilna, owed the first part of his name to his grandfather Phinehas, who was Maggid in Vilna, and the second part to his profession, stonemasonry (Steinschneider). He also was a bookdealer. As a stonemason he often composed tombstone inscriptions, which led to an interest in and research about the lives of well-known Vilna families and personalities, particularly those buried in the old and new cemeteries of the town. He published Ir Vilna (part 1 only, 1900), a biographical work containing hundreds of biographies of famous Vilna personalities. Maggid also assisted S.J. *Fuenn in collecting material for his history of Vilna Jewry, Kiryah Ne'emanah (1860), and also prepared its second edition with numerous additions and a biography of the author (1915). He wrote a history of the *Guenzburg family completed by his son (Toledot Mishpehot Guenzburg, 1899) and a biography of David Oppenheim (in Y. ben Hayyim Mezah (ed.), Gan Perahim, 1882); with his father-in-law J. Gordon he composed a Thousand Year Calendar, Luah al Elef Shamim (1854).

Maggid contributed numerous biographical and genealogical articles to Hebrew periodicals, such as Ha-Shahar, Ha-Karmel, and Ha-Maggid. He was put in charge of the *Strauch library when they were given to the Vilna community. Maggid’s biographical and bibliographical research, much of which remained unpublished, was of importance, though like other works of the transitory period from old to modern scholarship, his writings lacked organization and literary form.

[Yaḥuda Slutsky]

MAGHAR, AL-, Druze village in northern Israel, 10 mi. (16 km.) N.W. of Tiberias. One of the major Druze centers, the village had 5,750 inhabitants in 1969, of whom a minority were Christian and Muslim Arabs. Its economy was based on hill farming and on local workshops. By the end of 2002 Maghar’s population had tripled its size to 17,900 (57% Druzes, 23% Christians and 20% Muslims). The village has municipal council status and extends over an area of 9 sq. mi. (23 sq. km.). In 2000, income there was about half the national average. The place is possibly identical with Ma’ariyyah or Me’arot where a priestly family lived in talmudic times (Baraita of the Twenty-Four Mishmarot).

[Efraim Orni / Shaked Gilboa (2nd ed.)]

**MAGHREBI-MA’ARAVI**, name of Jewish personalities and congregations originating from North Africa. The Arab geographers designate North Africa and Spain as Maghreb, the West. The name Maghreb-Ma’arav (“West”), Maghrebi-Ma’aravi (“the Westerner”), occurs in geonic literature and later. It continues to be applied to North African congregations and their rites. The Maghrebs speak different Arabic dialects, which, in addition to special rites and patterns of life, distinguishes their language from other, Eastern Judeo-Arabic dialects and their customs from other congregations.

**MAGIC.**

**Early Magic**

Broadly defined, magic is a system of non-canonical ritual practices aiming at changing reality. In early Jewish magic this system was based on the use of powerful verbal performative formulae—inchantments—which oral or written expression was realized in the framework of a ceremony. The purpose of the magical act was generally to compel metaphysical entities such as demons, angels, stars and celestial bodies, holy names, and even God Himself, to bring about for the user the reality he desired. Early Jewish magical literature is evidenced in magical writings and objects from the Land of Israel, Babylonia, and North Africa, dating from the third century until the 12th (prior to the development of the Kabbalah and the change it effected in Jewish magic in the direction of practical Kabbalah). This literature enables us to trace the verbal elements of the adjuration as a magical text, such as the employment of the verbal root, šb, addressing the metaphysical forces in the first person singular, the utilization of expressions of urgency, and threats towards them, indicating the client mentioned in the magical object by his first name and the name of his mother, and more. On this basis we can establish that as more of these textual characteristics are found in any given Jewish text, its magical tendency increases. From here we can also define all the Jewish magical cultural products. Texts that include adjurations, such as books of guidance for sorcery, are magic texts in a broader sense, and those that express beliefs and customs commonly found in texts of both these categories are magic texts in the broadest sense; objects upon which adjuration texts are found such as sheets of paper, leather, cloth or metal, or clay bowls are magic objects (amulets, magic bowls), and in the wider circle are included objects that serve as a means of ritual power in the context of
the outlook expressed in the magical literature; ceremonies where adjuration texts are written or uttered, or where use is made of magical objects, are considered as ceremonies of magical character. This manner of definition of magic allows a flexible relationship between it and the other components of Jewish culture, and in particular the religion. Instead of an a priori culture-dependent dictionary distinction that strives to distinguish between what is magic and what is not viewed as such, one finds a dynamic system of phenomena characterized as possessing a greater or lesser magical essence, but not necessarily related to their place in the overall socio-cultural system of ritual power. Relinquishing the apposition of magic to religion in the phenomenological dimension allows us to divert the distinction between them to the social plane where the non-canonical position of magic finds expression. 

Texts, magical objects, and ceremonies generally do not have a routine place in the Jewish canonical system of practice for attaining ritual power. At the same time it is not impossible that portions of the latter, such as the biblical examination of the suspected adulteress, the recitation of the Shema before going to sleep, and the mezuzah, be defined as possessing a magical character. In this manner the cultural products of early Judaism itself testify to the gap between the official and explicit perception (in the Bible and the Mishnah) that prohibits sorcery and considers it as a capital sin and its firm place in the day-to-day lives of the people. Recognition of the existence of this gap is naturally related to the recognition of the distance between the inner-cultural definition of magic as an illegitimate form of ritual activity by its very essence, and its external, academic definition, based on sociological notions of religion, that views it as the non-canonical, marginal, and in most cases prohibited part of the overall activity aimed at attaining ritual power (which also includes a legitimate-canonical side, i.e., religion), repressed by the ruling religious center of society as concerns its struggle over power and control.

The sources documenting early Jewish magic may be divided into two kinds: primary sources, those originating in magical culture itself, and secondary sources, those found in texts that are not, in essence, magical. Primary sources from the biblical era are rare. Noteworthy among them are silver amulets from the end of the seventh century B.C.E., found in a burial network in the Hinnom valley in Jerusalem, and upon which the priestly blessing is inscribed. In the Bible itself, sorcery and divination are prohibited and those who dealt in them were persecuted. It would appear, however, that this prohibition, closely tied in the Bible to the religious-ethical uniqueness of the people of Israel and its distinctiveness from the surrounding nations, well testifies to the perpetuation of these ritual practices that priestly and prophetic circles aspired to marginalize in favor of those that they themselves offered and to which they attributed canonical status. Nevertheless, at least in one outstanding case, that of the ordeal for examination of the suspected adulteress (Num. 5:21–31), one suspects the acquisition of a magical practice (which underwent an intercultural, priestly, oioi typification) by the religious establishment. The result bears testimony to the belief in the performative power of curses among both that priestly establishment and the people as a whole. Metaphysical beings central to magical practice such as angels, Satan, and demons are indeed mentioned in the biblical literature, however in a way that is unconnected to the overall system of typical magical beliefs and practices in which they were to function later. First and foremost, they are not introduced as being under any kind of vigorous human manipulation. In the only case where Satan is mentioned as being expelled by words that may reflect an exorcistic formula, it is by God Himself, and from His presence (Zech. 3:2). Human power to manipulate concrete reality is admitted in the Bible in both the hands of foreign sorcerers, such as the Egyptians, or Balaam, and God’s prophets. In any case, it is always subservient to God’s will and force. Even the marvels manifested time and again by God’s prophets are not performed on account of their own power. Being men of the one and only omnipotent God, their miracles are viewed mainly as a didactic performance of what He Himself executes.

The apocryphal literature in general, and particularly the writings of the Dead Sea sect, increased immeasurably the angelological and demonological deliberations and well reflect the metaphysical expansion of society within Judaism in this period. The figure of Satan (also called Belial or Mastema) has evolved into the head of an army of evil spirits and the lord of the demons. The origin of these demons, imageless and highly harmful spiritual beings, was perceived as the product of the impure hybrid coupling of rebellious angels with the daughters of Adam (a tradition alluded to in Genesis 6:1–4, and expanded in 1 Enoch and in the Book of Jubilees). At that time, it is told, sorcery was brought down to the world and given to women. Alongside the Book of Remedies was delivered to Noah, according to God’s command, for protection against the wicked demons that had attacked his children. The Qumran scrolls reveal to us a well-developed demonological perception. Qumranic Psalm fragments testify to apotropaic ritual practices against demons. The works of Josephus and the New Testament reflect a similar reality in the first century C.E. Demons were perceived as the cause of both corporal and mental disorders and their removal through rituals that featured magical objects, roots, and verbal formulae was a common method of healing. Comparing the depictions of exorcism and healing performed by Jesus according to the New Testament with the Greek magical papyri reveals his place as a Jewish magician within the intercultural tradition of Late Antiquity as well as his uniqueness within that tradition (both in terms of his actions of healing and exorcising, and in utilizing them as a means of his religious mission). According to the testimony of the Gospels, Jesus was accused by his Jewish opponents of using the power of Beelzebul, the prince of the demons. In other words, he was accused of being a sorcerer, i.e., possessing considerable supernatural power, but that this power was derived from an impure source and was therefore illegitimate.
His followers naturally saw him as a holy man who was performing miracles through divine power.

The apocryphal literature and the Dead Sea sect literature also demonstrate the considerable angelological expansion of social reality; only here human magical power vis-à-vis the angels is not yet reflected. Their assistance to men is judged a gesture of good will, a divine mission, or preordained reality, but not the result of their compulsion to act in this way through human efforts. This notion appears in full force in the primary sources of early Jewish magic: amulets and incantation bowls that were geared primarily for protection, healing, and success and which document actual magical activity for the clients mentioned in them by name, and magical recipes collected in compositions and books of recipes. The magical recipe literature presents to us the notion that magic is a part of normal life. It is hard to imagine an area of life for which no magical assistance is offered in this literature. The amulets and magic bowls connect this theoretical literature to the actual day-to-day lives of the Jews of Late Antiquity.

Ancient Jewish magical praxis was based on a system of beliefs that concerned the connection between physical and metaphysical reality and the manner by which language is capable of connecting between them for human profit. Social reality was expanded to include metaphysical beings that were divided into four categories: (a) God; (b) celestial beings such as angels, stars and planets, divine names, etc.; (c) various demons and evil spirits (including personifications of harmful sorcery); (d) the dead. The correct use of an adjuration (mostly by a suitable person within a well-defined ceremony) was viewed as being able to subordinate any one of the above to obey the adjurer's will. Generally the adjurations were aimed at activating the celestial beings, principally angels or demons. The magical use of God or the dead is rarely documented. Magical compositions such as the Book of Mysteries (Sefer ha-Razim) or the Sword of Moses (Harba de-Moshe) reveal to us a highly developed angelological perception. The names of the angels, their order and relative powers are placed at the disposal of whosoever wishes to manipulate them. Divine aid, in the form of a command that God sent to his angels, is what allows man to take power over them through the use of incantations and divine names and to manipulate them at will. Magical practice is therefore portrayed in these works as a part of the Jewish monotheistic belief and not as anomalous to it. Alongside this angelology a rich demonology is also revealed in the magical literature. Demons were perceived as responsible for every misfortune in human life and in particular when it affected the body. Protection from them and their removal from the moment they penetrated someone's life space was a central purpose of Jewish magical activity. However, the magical literature testifies to the use of magical means for dealing with many other matters. These include the relations between people such as marriage and sexual relations, success in litigation, control over one's fellow being, injuring someone, protection from injury, victory in battle, and so on. They appear to be further used in such daily cares as improving the products of labor and agricultural produce, fishing, trade, and even minor objectives such as kindling an oven in winter or the expulsion of crickets or mice from the house. Besides all this, another area of great importance was served by magic: knowledge. Angels, demons, and the dead functioned in the Jewish magic culture as agents of almost limitless knowledge that could be adjured to reveal to man whatever he desired to know. Summoning angels for this purpose was associated on occasion with the practice of the dream request. Thus, while divination is not identical to magic, there is much evidence of Jewish magical divination practices based on utilizing adjurations as well as other magical means.

As noted, the basis of early Jewish sorcery was in the use of adjurations. These verbal formulae, which were defined with precision and adapted individually for their specific objectives, were mostly uttered or written in a ceremonial framework. The ritual state of all the participants in the ceremony was also well defined and almost always entailed the purity (in halakhic terms) of the performer. The conditions of the performance of the ceremony and its verbal, material, and behavioral components varied with each case. On more than one occasion they were borrowed from Hellenistic magic. Professional terms loaned from the Hellenistic magical jargon testify, too, to the intercultural relationship in this field, the other expression of which was the penetration by indubitably Jewish elements into Hellenistic magical practice. It is not easy to chart with precision the elements of the magic ceremony. However, beyond the variety of means one central mechanism, which constitutes a system, stands out: the sympathetic mechanism. In early Jewish magic it is usual to find attempts to bring about a reality by means of juxtaposing it to another based on the principle: "Just as A, so B." The depiction of one reality (A) may be done simply and freely, or it may be through similitude (for example, "just as the sky is suppressed before God and the Earth is suppressed before people... so may the inhabitants of this town be suppressed and broken and fallen before Yose son of Zenobia"). Often, serving this purpose are biblical verses whose meaning, or words appearing in them, are relevant for the desired effect (for example, "Noah found favor with the Lord" (Gen. 6:8) is quoted for attaining "grace and favor"); "I will not bring upon you any of the diseases that I brought upon the Egyptians" (Ex. 15:26) is quoted for healing). The choice of magic materials necessary for the sorcery may also reflect this aim (for example, a round bowl would serve for protection from all sides, a heart of a young lion for attaining courage). Often, the ceremony includes the preparation of a magical object, that is, an object which has adjuration texts on it. This will serve the client over a length of time. Amulets were worn on the body or were buried in the house or even in the synagogue. Incantation bowls were buried in the corners of rooms or below the threshold, dwelling places of demons against whom the bowls were intended. Occasionally the verbal adjuration was sunken into a piece of food or a liquid that the client would have to swallow or to rub over his body. In this way the magical quality
of the words passed into the client's body and strengthened him from within.

The secondary magical sources, the rabbinic literature, and early Jewish mystical works demonstrate that the magic outlook was not confined to the more boorish classes of society. The early Jewish mystical literature testifies to the central place of performative ritual power in two areas: (a) as a means to overcome the hostile angels in the course of a mystical journey to God's Throne of Honor; (b) as a social advantage in the possession of the mystic in this world following his return from his heavenly journey. The magical matter is so pronounced in the early Jewish mystical literature that some of the scholars judge this aspect (and not the experiences of the ascent to the higher realm and the sight of God) as the kernel unifying all the writings that constitute this literature. Rabbinic literature, too, indicates the place of the magical and demonological outlook, and the accompanying practices, in the social-religious elite. Three approaches are reflected in it alongside each other (as is typical of this polyphonic literature), and all are founded on the very recognition of the efficacy of sorcery: (a) an official halakhic position that associates sorcery with the "Ways of the Amorite," meaning the gentle customs prohibited for Jews on account of the Jews' distinctiveness from them, prohibits it in every way, and punishes those who dabble in it bystoning (while distinguishing the real acts of magic from acts of deception that are not judged as the sin of sorcery); (b) a pragmatic approach that permits the use of those magic objects and verbal means (that are not, of course, denoted as such) whose benefit has been proven (primarily for medicinal purposes), permits the study of sorcery (as opposed to its operation), and even requires of those taking a seat in the Sanhedrin to be "masters of sorcery"; (c) a narrative approach that uses, in the manner of the talmudic homiletic story, magical motifs for didactic purposes. Here a dual tendency is noticeable whereby on the one hand the ritual-magical powers of the sages themselves (which naturally are not identified with sorcery but rather with holiness based on a life of Torah and observance of the divine commandments) are extolled, while on the other hand accusations are leveled at the "other," primarily women and heretics, for acts of sorcery. This labeling is intended to mark out these "others" as dangerous people who act with illegitimate power, and to marginalize them, placing them far from the desirable legitimate focus of power, that of the sages themselves, who are both the narrators and the heroes of the narratives. The climax of this dual tendency is found in the stories that describe struggles between sages and sorcerers or sorceresses, which, as is to be expected, end in the sages' victory, and in this way exemplify their worthy socio-religious model. It would appear therefore that the contradiction between the halakhic and narrative approaches toward magic is not to be resolved through distinguishing between the "rabbis' genuine viewpoint," which was negative and deprecatory by virtue of their religious beliefs and the laws deriving from them, on the one hand, and their "lip service" to the beliefs of the ignorant masses (which originated in the penetration of foreign influences), through lack of choice, and for didactic purposes, on the other hand, as was done in the past, but by recognizing the aspirations of the rabbis for a social monopoly over ritual power. The rabbinic demonological stories are to be understood in a similar way. They, too, should be seen as a narrative shaping of motifs that rest upon popular beliefs in both their own circles as well as amongst the masses, with a didactic objective. More than the stories are concerned with demonic reality in itself, they are about the relations between this reality and that of the sages, and more specifically the relative superiority of the sages and their disciples over all that affects the ways of the demons. This includes protection from them and control over them by the power of their holiness, their legal authority, and ritual-magical means. Thus, the demonological stories join the magical and mystical ones in revealing a ramified system of beliefs and ritual practices relating to angels, demons, and sorcery in the Jewish culture of Late Antiquity. Primary magical evidence completes the picture by tying the literary testimony to day-to-day experience and exposing the actual praxis of ancient Jewish magic.

[Yuval Harari (2nd ed.)]

In Medieval Hebrew Literature
TERMINOLOGY. The terms "magic" (kishuf), "magician" (mekhashef), and "witch" (mekhashefah) are relatively rare in medieval Hebrew literature, especially when compared with the frequency with which magic practices are mentioned. The underlying reason is undoubtedly the explicit biblical prohibition against the practice of magic (repeatedly dwelt upon in medieval Hebrew literature) and the Bible's abhorrence of magicians and soothsayers. There is, therefore, no favorable allusion to magic practices in medieval literature, and they are rarely dealt with in a purely informative manner, although the numerous texts of the Genizah dealing with this topic allow us to understand in how many ways magic was present in Jewish life during the Middle Ages. Such terms as kishuf, mekhashef, and mekhashefah were descriptive of the wicked, sinners, and non-Jews. Magic was discussed in medieval Hebrew literature, but surreptitiously, under the guise of different names, such as segullot ("remedies" or "charms"), kamèót ("amulets"), refuót ("cures"), goralót ("destinies" or "fortunes"), simanim ("signs" or "omens"), and refafót ("bodily itching as a portent"). The medieval writer thus was able to circumvent the term "magic" and eschew a direct confrontation with the biblical prohibition. In fact, the practice of magic was very popular and widespread among medieval Jews, and the number of texts including magical elements is very striking.

SOURCES AND DISSEMINATION. Literature on magic is universal in its character, its methods, and its structure. Each society, each language, and every period contributed toward magic literature, enriching it or modifying it in the light of the particular characteristics of the society, the culture, and the times. The main themes and methods in magic were, however, transmitted from country to country, from language to lan-
guage throughout the ages without any basic changes being wrought. In the Middle Ages, Jewish magic literature differs very little from the magic literature of other nations. Magi-
cal practices were very widespread during the Middle Ages not only in Jewish communities but also among Muslims and Christians. Textbooks of magic circulated in the three cul-
tures, although theoretical considerations were less frequent. Hebrew works on magic quote extensively from non-Jew-
ish magic literature, citing especially sources that medieval
scholarship attributed to ancient Greek authors. The basic
terminology and methods found in Hebrew works are simi-
lar to those dominant in non-Jewish works. In some Hebrew
works a term may be used which was originally Hebrew but
is applied in such a way as to show that it was copied from
a non-Hebrew work; its Hebrew origin had apparently been
unknown to the Hebrew writer, for example, the term Elo'i Sa-
baot derived from the Hebrew Elohei Zevaot. Angelology and
formulas in Hebrew, Greek, and Latin of the Hellenistic
period were basic to the development of medieval magic
literature. Since this period led to the fusion of Hebrew and
non-Hebrew formulas, the process continued throughout the
Middle Ages when terms and formulas from Arabic, German,
French, Slavic, and other languages were added to medieval
Hebrew magic literature. To date there is no serious study on
the sources on which medieval Hebrew magic works drew.
The various influences have neither been defined nor classi-
fied and no clear distinction can therefore be made between
the following sources: the Assyrian and Babylonian (which
apparently also influenced the Talmud), the Hellenistic (Jew-
ish-Hellenistic and Greek), the ancient Egyptian and their
later adaptations during the syncretistic periods of the Roman
Empire, the original Arabic and their fusion with the Persian
and Indian, and the European which were intermingled with
Arabic and other sources. Principally, however, there is as yet
no way to distinguish in every case between traditional He-
brew magic, derived from the biblical and talmudic periods,
and the magic elements which reached Jewish writers from
foreign sources. An example is a Greek and Arabic traditional
connection between Saturn and magic; in Jewish medieval
thought both magic and Saturn, who is in charge of the Jew-
ish people, are also connected with the Sabbath day (Idel). We
know today that Jewish magic in the Middle Ages was strongly
influenced by two Arabic treatises, al-Kindi’s De radiis and al-
Majariit’s Picatrix, which were translated into Latin and He-
brew, but their actual degree of influence has not been suffi-
ciently studied. Until such studies are made, only impressions
and generalizations can serve as basis for any assumption as
to the nature of medieval Hebrew magic works.

Though there are no detailed studies on hand, there is
no doubt that Jewish medieval magic drew on all the above-
mentioned sources. Some medieval Hebrew works correspond
very closely to non-Jewish magic writings. Others, for example
a number of 18th-century collections of Hebrew magic for-
umulas, differ little from magic formulas which survived from
the Geonic period. Collections which originated in North Africa
are very similar to works on magic by Jews in Germany. There
is thus no essential difference in the basic magic formulas and
the attitude toward magic between the various nations, coun-
tries, and periods. The same fusion of ancient and medieval
sources is to be found in each of these works, all of which con-
tain Arab, European, and authentic Jewish elements.

The Character of Hebrew Magic Literature. The
character of Hebrew magic literature was influenced not only
by the biblical prohibition on witchcraft but by the nature of
this literature. Works on magic neither use nor are identified
by terms denoting magic, but were written under the guise of
concepts which neither reveal their special character nor
their contents. There are hundreds of collections on magic, in
print and in manuscripts, appearing under such names as si-
manim, refafot, refuiot, goralot, and segullot. These works are
usually not devoted only to one branch of magic or popular
superstition, but to a variety of practices such as dream inter-
pretation, popular medicine, and amulets. Unfortunately, the
complete typology of magic literature has not yet been seri-
ously studied.

Many of these works are anonymous; in others the name
of the editor or compiler appears in the introduction. (The
term “author” is not applicable to such works, which are
nothing but collections drawn from various sources.) Rarely
is there anything known of them from other sources; most of
them were obscure writers who did not engage in scholarly
activities. This may be the underlying reason for the low level
of the language and literary merit of most of these works.
Some of the writings on magic are attributed to ancient sages
and scholars; thus, for example, works which are partly de-
vo ted to the interpretation of dreams are often ascribed to
the biblical figures Daniel or Joseph; works on goralot (“des-
tinies” or “fortunes”) are attributed to the wise “Ahi thophel
the Gilonite, etc. Babylonian geonim and early scholars, from
Saadiah b. Joseph Gaon to Nahmanides, have had works on
magic ascribed to them. Though widely disseminated, works
on magic were mostly not written within the framework of
medieval and early modern scholarly Hebrew literature. In any
case, the corpus of Jewish magic, including complete books
and fragments, is very large. Some of the better known works
that discuss magic are Maimonides’ Guide of the Perplexed
and Mishneh Torah, including sorcery and magic among the
forbidden practices; the commentaries on the Pentateuch
by Nahmanides (13th century); the responsa of Solomon ben
Adret and the sermons of Nissim *Gerondi in the 14th cen-
tury; Nishmat Hayyim by *Manasseh ben Israel, in which the
author devotes a long chapter to the description of magical
practices; Derekh ha-Shem by Moses *Hayyim *Luzzatto, has a
section on magic; and Shalshelet ha-Kabbalah, an important
historical work in which the author, Gedaliah b. Joseph *Ibn
Yahya, a Renaissance scholar, also discusses magic.

The literature of the Ḥasidim, or Ashkenaz, probably more
than any other medieval corpus of Hebrew scholarly writings,
is a source on medieval magic (12th and 13 centuries), especially
Sefer Hasidim and the esoteric works of *Judah b. Samuel ha-Hasid of Regensburg and of his disciples, of which Ḥokhmah ha-Nefesh, a work on psychology by *Eleazar b. Judah of Worms, is a prime example. The concern of the Ashkenazi Ḥasidim with magic practices and phenomena has its roots in some of their theological ideas.

Magic and Medieval Disciplines. Medieval man, as reflected in the literature on magic, did not clearly differentiate between magic and other branches of knowledge, especially between medicine, astrology, and magic. There were very different kinds of magic, some of them of a high cultural level, and other more popular types. Cultural magic was considered a branch of medieval science, at the same level as medicine or astrology. Many times, this magic was a kind of alternative medicine. Most of the collections dealing mainly with magic do not distinguish between the treatment of an ailment according to the accepted norms of popular medicine, such as the application of heat, herbs, and certain foods, and magic means, calling for the help of angels and demons to heal the patient. This failure of distinction was not only due to the lack of a scientific framework but to the desire to lend authority and legitimacy to magic formulas when combined with medical practice. These works also do not clearly distinguish between astrology and magic. Works on gorolos ("destinies" or "fortunes") include astrological calculations which portend the fate of a man according to the constellations at his birth, and determine his character traits and religious, economic, and social status. The same works also contain magic instructions on how to use the auguries of the constellations for other purposes and how to change a man's fate through incantations and amulets, etc.

Most of the magic in the extant collections is devoted to simanim which derives from the fact that the Talmud, contrary to its injunction against the practice of magic, allows the practice of "signs." This literature describes various events, feelings, or even the itching of various parts of the human body (rejafot), which are indicative of an oncoming event. Incantations are often chanted and charms used in an attempt either to nullify an ominous portent or to enhance a benign prophecy. To this category also belongs the literature of "dream interpretation" which describes in detail various occurrences within dreams thought to reveal the future to the dreamer. Sometimes advice is tendered in the use of magical means to prevent the bad dreams from being realized. Compilations of popular medical literature, such as The Book of Women's Love (perhaps 13th century), contained many magic (mainly love magic) elements and formulas; most of these practices, reflected in the written materials or transmitted in oral form, were current during the Middle Ages. Their main goal was to manipulate sexuality, intervening in human relationships. Some of these formulas are taken from the tradition of the "practical Kabbalah."

The segullah is basic to all magic formulas and is the main magic means used by the person himself. Knowledge of many charms is the professional distinction of the expert magician. The central element in the segullah is a name or a series of names which is considered holy. The common appellation of a magician in Eastern Europe in the 17th and 18th centuries as Baal Shem or Baal Shem Tov ("owner of the Holy Name" or "owner of the Holy Good Name") is rooted in this practice. The name used is most frequently that of an angel, or, sometimes, one of the many names of God. Sometimes even the name of a demon is resorted to which would seem to make this form of magic "black magic." The demon invoked in such charms is, however, thought to be a "bad angel" (mal-akh habbalah) who should be addressed when the magician intends to harm someone, kill an enemy, cause damage, find the whereabouts of a thief and make him return his loot, etc. Some of the names in the segullah are common biblical or talmudic-midrashic names, mostly polysyllabic so as to awe the hearer and to seem as strange as possible. Many of the names were culled from Heikhalot and Merkabah writings, the Hebrew mystical literature of the talmudic and geonic period from which the major part of Hebrew medieval angelology is derived; sometimes even from non-Hebrew sources; others were created anagrammatically according to a definite system, either from other known names or from biblical verses.

The name, which is the essence of the segullah, is supplemented with various elements which differ from book to book and even from page to page in the same work. The segullah, or the petition for magical intercession (of a supernatural power), must be written in a clear form or enunciated clearly and loudly. Sometimes the time at which the deed should occur (a certain hour of the day or night or a certain day of the month) is also given; an astrological element was thus added to the magical charm. Certain substantive elements are also added, such as bits of flesh, bone, or skin from various animals (or even the human body), or certain herbs or plants. In the classic cases of sympathetic magic sometimes the performer of the act of magic, when he directs an incantation against a certain person, draws a picture of the latter or writes his name, or even molds his likeness in clay. These means were especially resorted to in the case of a thief. The suffering inflicted by sympathetic magic on the thief caused him to reveal the cache of the stolen goods and give them back. Through these means demons could also be compelled to serve man, when an incantation with the name of the culprit proved ineffective.

The segullah is used both as a direct magic act to attain a certain aim and as an auxiliary to medical aid, to reveal a man's fate, to appease or prompt the auguries of a "sign," or to interpret a dream. An amulet, for instance, is usually nothing more than a segullah written in a certain form, so that a person could carry it with him always. Such a charm is usually protective, invoking the heavenly powers to safeguard the wearer against any harm.

The contents of works on segullot are arranged according to their purposes. A title states the function of the charm after which there is a description of the charm including the holy names and the other necessary elements. Another type
of segullot literature, sometimes called shimmushim (“uses”), is arranged according to the holy names indicating the purpose and uses to which each name can be put. Thus, for instance, Sefer ha-Heshek lists 70 names of the archangel Metatron, after each of which the author gives the use that it can be put to and what magical purpose can best be served by using one particular appellation of this angel. The holy divine names, composed either of 42 letters or 72 letters, which are comprised of units of three or six letters, serve many magic purposes; each name can be the means of achieving a specific magic goal. Treatises on the magic use of the Psalms (Sefer Shimmush Tehillim) and on the properties of the members of animals were very common in Jewish houses. Some form of magic was even practiced by rabbis who did not see them as opposed to Judaism (Barkai). “Shimmushei Tehillim” (“The Uses of the Psalms”), a body of magic writings, describes the magic power inherent in certain verses and chapters in the Psalms and in some other Scriptures. The Bible was also used for the purpose of “sign” magic, i.e., prophecies. A person practicing this magic would open the Bible, put his finger at random on a certain verse and the content of this verse would reveal the attitude of the Divine Powers to the question or request of the person inquiring.

Relationship between Mystic and Magic Literature. Scholars believe that the extent of the influence of magic on Jewish mysticism has not yet been sufficiently studied. Historical circumstances rather than literary or conceptual affinities have created an impression, especially in modern times, that there is a similarity or even identity between mystic literature and magic in Jewish life and thought. One expression of this view is the term “kabbalah ma’asit” (“practical tradition”), which is magic, and “kabbalah iyyunit” (“theoretical tradition”), which is mysticism. “Kabbalah” in this context means nothing more than tradition and does not denote any special mystical system. Nineteenth-century scholars of Jewish studies who were fiercely opposed to *Hasidism, which is one derivation of the Kabbalah proper (the mystical ideology), saw Hasidism and Kabbalah as representing medieval superstition, and did not try to differentiate between mystical thought and magic practice, which to them seemed to derive from the same source. Their ideas were accepted even by some 20th-century scholars.

Still, there is some connection between the development of magic literature and mystical literature. In talmudic times there undoubtedly existed a unique magic literature to which such works as Sefer ha-Razim, published in a scholarly edition (by M. Margaliot, 1966; there is an English translation by M.A. Morgan, 1983), clearly testify. The book is an example of early Jewish magic which did not have any mystical tendency, and which is influenced mainly by non-Hebrew sources.

If the magic elements are not very dominant in this kind of rabbinic literature, the writings of the Heikhalot and the Merkabah have a strong magical component. Included are works of a clear magical character, e.g., Hakkarat Panim ve-

Sidrei Sirtutim, a work on chiromancy. Even major works of this literature, such as Sefer Heikhalot Rabbati, include some material concerning prophecies, signs, and even incantations. According to the conceptual view of Heikhalot and Merkabah literature, when the angels revealed heavenly mysteries (revelations which constitute the body of this literature) to the talmudic sages they also made esoteric magic disclosures in which they described the divine worlds and eschatological secrets. These texts of early Jewish mysticism include many adjurations of magical character asking the angels to come down and reveal to man the mysteries of heaven and earth, including the complete knowledge of the Torah, and sometimes allowing to the necessary rituals for the heavenly journey of the mystic. The means of achieving the goals of this mysticism is magic; the authors of this literature “attempted to integrate magic into Judaism” (Schafer). The magical view of the Hebrew language, combining letters for forming divine names, is one of the bases of this form of Jewish mysticism. Medieval scholars, the Hasidei Ashkenaz, and the kabbalists who reported to Heikhalot and Merkabah literature in their esoteric and mystical speculations also accepted the magic tradition that it embraced and sometimes even practiced it.

Magic is relatively little treated in theoretical Kabbalah writings, especially in works which concentrated on matters concerning the structure of the divine worlds, the Sefirot, and the developments within the divine realm (themes central to kabbalistic literature). Many kabbalists, from those in the Gerona circle (13th century) on, did not practice magic at all. The doctrines of medicine and astrology are undoubtedly nearer to that of magic than the doctrines of Jewish mysticism. A detailed examination of magic literature clearly shows that most of those who practiced magic, or the authors of works on magic, did not know anything about mysticism in general, or Kabbalah in particular. It is therefore very unlikely that kabbalistic symbolism of the holy Sefirot, or the kabbalistic concept of evil, would appear in magic charms. When the Zohar became part of the holy literature and widely known, it was used for magic purposes, but no more than the Book of Psalms. The use that both works were put to does not reflect their original content. Supernatural knowledge and powers were, however, attributed to many kabbalists. Even Isaac the Blind, one of the earliest kabbalists who lived in Provence, was described as having the power to distinguish between a new soul, which appeared for the first time in the world, and an old soul, which had been reincarnated. This tradition of magic and supernatural hagiography of prominent kabbalists developed continually up to the times of Isaac *Luria and *Israel Ba’ali Shem Tov. The writings of Moshe *Cordovero (16th century), the kabbalist of Safed, are also full of magical views, since he adopted a type of Kabbalah very close to astral magic.

Based on a tradition preserved in a talmudic text on the creation of an artificial man, unable to speak, and using techniques found in the Sefer Yeẓirah (combination of letters), medieval kabbalists and hasidic circles developed the idea of the golem, which was from the very beginning replete with
Magic content. There were different modalities of this idea in Franco-Ashkenazi and Sephardic centers, going from the purely material being to the fully spiritual one. Zoharic and Lurianic kabbalists were not interested in the topic, while ecstatic kabbalists and Cordovero paid attention to it. In particular, the Ashkenazi texts dealing with the _golem_ were basically magical, as shown by Idel.

Magic in Kabbalah literature is touched upon in discussion of earthly or demonological matters, but even in this literature it was cautiously treated and circumscribed. Few magic elements are found in the Zohar, and in the writings of other early kabbalists there are even less. The case of the ecstatic Kabbalah, the school of Abraham *Abulafia*, is very different: for him, magical techniques like the combination of letters can be a help in attaining the personal mystical experience that endows the mystic with magical powers.

Later magic literature and kabbalistic doctrine were also seldom fused. Ḥayyim *Vital describes some magic practices in his autobiographical work _Sefer ha-Ḥezyonot_ ("Book of Visions"), which, however, he does not relate to the special kabbalistic doctrine of his teacher, Isaac Luria. In his theological works, magic is a marginal theme. Though he accepted magic, it did not impinge on his innermost spiritual beliefs expressed in the kabbalistic myth which he set down in many books. The same applies to the writings of many other kabbalists.

The Hasidic Ashkenaz discussed magic in their works at length and also had some magic works attributed to them. The relationship they established between esoteric theology and magic speculation was rooted in a peculiar theological development. The Ashkenazi hasidic theology is based on the concept that God, far away from the natural world and the laws that govern it, is revealed, according to these laws, within the world of man in specific, well-defined phenomena which confirm to man His existence. Such phenomena, miraculous in character, including magic, witchcraft, and demonology, defy the laws of nature and reveal the power of the hidden Godhead. The Hasidic Ashkenaz consequently tried to collect in their writings as many descriptions of such phenomena as possible which they analyzed and on which they commented in the light of their own esoteric doctrine. The inference, however, cannot be drawn that they dealt in practical magic more or less than other scholars of that period. The implication is merely that they were theologically interested in such matters more than others, and therefore included them in their literature.

The Hasidic Ashkenaz thus became famous as scholars possessed of magic knowledge, and many legends revolved around them, such as the story about a competition in magic between *Samuel b. Kalonymus he-Ḥasid*, and three non-Jewish magicians; the story about the ability of Eleazar b. Judah of Worms to get very quickly from place to place (*kefizat ha-derokh*) by the power of a magical formula; the tale of Judah b. Samuel he-Ḥasid who overpowered an evil magician; and many others. How far the legends woven about scholars were removed from the actual lives of these scholars may be seen by the fact that Abraham *Ibn Ezra*, the Spanish Jewish philosopher and commentator, became the hero of many magic stories (probably because of his astrological works).

Some 19th-century scholars described modern Hasidism, founded by Israel Baal Shem Tov, as a prime example of magic and superstition. While many leaders of the hasidic movement believed in magic and practiced it, especially in giving amulets (the Baal Shem Tov himself dealt in magic and probably made his living as a popular healer and magician), hasidic theoretical literature, the vast homiletic literature which describes its ideology, is devoid of all magic elements. Hasidic tales might contain elements of the use of magic or of overcoming magic deeds performed by evil non-Jews, but hasidic doctrines chewed magic elements even more than the kabbalistic literature which the Hasidim had inherited and developed. The difference between the "practical tradition" of Ḥasidism, which practiced magic, and the "ideological (theoretical) tradition" of the movement is probably more pronounced in modern Ḥasidism than in any other mystic movement.

**Medieval Jewish Magicians.** The terms _mekhashef_ ("magician") and _mekhashefah_ ("witch") in medieval literature designate two very different categories. A _mekhashef_ is a person possessed of secret knowledge in magic which he uses for his own profit or to help others. He is considered a professional and is paid for his services. While in medieval Hebrew literature there are few records of a Jew being described as a _mekhashef_, in the early modern period the usage is much more frequent but under the name "Baal Shem (i.e., "owner of the Holy Name").

_Mekhashef_ designates a certain psycho-pathological state, often connected with cannibalism. The term alludes to women and men who wander in forests, singly or in groups, or sometimes live in a community and kidnap babies or even grown-ups in order to eat them or suck their blood. While the term _mekhashefah_ frequently recurs in medieval Hebrew literature, the actual phenomenon it represents seems to have been rare. In the 12th and 13th centuries in Central Europe these vampires were called _"shtria_" for the female (from the Latin _strix_, _striga_) and werewolf for the male. Such vampires do not necessarily possess any supernatural powers or secret knowledge. In _Sefer Ḥasidim_, a 13th-century ethical work, there is a description of a baby born with teeth and a tail. The rabbi of the community advised that these be cut, so that when he grew up he would not eat people. This seems to testify to a case where a child was considered to have been born a werewolf, and could be cured naturally. No supernatural elements seem to be involved either in the birth of the werewolf or the proposed cure. A community where women ate children is also described in _Sefer Ḥasidim_. When threatened that if they continued their practice their teeth would be ground on the stones of the well, they stopped. The story is told as a clinical fact (which it probably was) and there seems to be neither any supernatural nor religious connotation or implication. On the other hand, in other stories from 13th-century Central Europe...
such creatures are immortal. They never die naturally but are killed in a prescribed manner. In one case, a witch was offered divine forgiveness if she were to reveal the secret of how she might be killed. Thus the person who committed the sin of cannibalism could religiously be saved. The phenomenon, apparently pathological in nature, was, in some cases, explained supernaturally – as if such cases were already dead, and therefore could not be killed. The mekhashefah does not belong to magic in the strict sense but designates a species of abominable creatures who form a category in themselves to which should be added the beliefs associated with them such as the belief in the “mare,” a woman who strangles men in their sleep (hence the word “nightmare”). Other unnatural creatures who do not fit into either of the above categories should be classed somewhere between demons and magicians, or demons and witches. The term mekhashefah and the literature that evolved around it had relatively little influence on the development of medieval Jewish culture; the term mekhashef, however, is much more prominent.

In the 17th and 18th centuries in Eastern Europe the position of magicians (“ba’alei Shem”) began to emerge on the Jewish social scene. The ba’alei Shem practiced magic and popular medicine, used amulets, drove away demons, and prophesied. Owing to the power inherent in the names they knew to use, they could discover thieves, retrieve lost articles, purify houses from evil spirits, etc. From the historical point of view, however, these magicians were of special significance in that many of them disseminated Shabbatean ideas throughout Eastern Europe; magicians were also instrumental in the development of the hasidic movement.

MAGIC IN MEDIEVAL JEWISH SOCIETY. In the opinion of some scholars, a negative attitude in respect to magic has relegated the study of magic, and its role in medieval Jewish society, to the margins of Jewish studies. The existing materials, in particular the fragments of the Genizah, have not yet been adequately studied, and we still lack today good monographs on medieval Jewish magic and divination. For that reason, it is not easy to attain an accurate picture of the social role of magic during these centuries. Jewish intellectuals did not consider magic either as an ideological or social challenge which had to be dealt with. But the texts of the Genizah show that magic was familiar at both the elite and popular levels of culture (Wasserstrom). The belief in the power of magic was apparently universal in Jewish society, both in the East and in the West, from the beginning of the Middle Ages up to early modern times. Opposition to magic was voiced by but a few which, when expressed in writing, formed a minor element within their work. While Maimonides, like some other Jewish philosophers, rejected magic and the use of amulets, he was not deeply concerned with it and only devoted a few passages to the problem in Guide of the Perplexed, much less, for instance, than to his argument with astrology on which he wrote a special treatise. Among others who repudiated magic were Saadia Gaon (who rejected it in the same way as astrology) and Hai Gaon; they too, however, did not stress the question in their writings. As a consequence belief in magic hardly ever called forth any defenders in Hebrew literature. In the great 13th-century controversy the rabbis of France in their criticism also denounced Maimonides for his opposition to magic; it was, however, a very minor point. Menahem Ziyonon’s short treatise on the defense of magic and the belief in demons, Zefunei Ziyonon (in Ms.), is written from a kabbalistic point of view as were similar treatises by other kabbalists.

The practice of magic (which is quite different from a belief in magic) was also not a major problem in Judaism, though magic as such was condemned outright because of the biblical prohibition and it therefore was practiced under the guise of different names. The practice of “signs,” “charms,” amulets, astrology, and popular medicine was never a subject of serious scholarly discussion. Magic was employed without deep discussion in many areas of life: for influencing people’s feelings and opinions, for healing all kinds of illness, for incantations, for mystical trance-inducement, for apotropaic charms, and even for finding hidden treasures. Some halakhists tried to accept the situation, distinguishing between magical practices that were directly forbidden and other practices that could be seen as not properly magic and were allowed. It was not strange that some magical practices, connected first of all with popular medicine or with human relations, or even with mystical traditions, were explained as something natural, and as such were not forbidden. Other kinds of magical practices, performed with the intention of influencing astral forces, or related to black magic, were usually prohibited. Owing to the biblical prohibition on magic the most vulgar and “black” forms of magic did not become common in Judaism and such practices as necromancy were very rare. While some books on magic contain formulas for killing an enemy by magic means, for love potions, etc., there is no evidence that these were practiced. These formulas were probably copied from non-Jewish sources. Sorcery was many times identified with black magic, and while some jurists did not see in it any real danger, others saw it in the context of demons or destructive angels and considered it forbidden as contrary to God’s will.

As a result the practice of some kinds of magic was not a legitimate and commonly accepted profession in medieval Jewish society and the religious convictions of a man who practiced magic were suspect. Formulas were thus written down since there was no oral transmission within a special class of practitioners of magic. Many Jews, especially in the East, usually consulted non-Jewish magicians rather than Jewish magicians.

The Christian injunctions against magic and witchcraft and the fierce persecutions against those who practiced magic, which started around the end of the 15th century, affected in a particular way many *Conversos, but also old Christian families that had to face similar charges. Jews and Conversos were accused of ritual crimes and were persecuted by the Inquisition, as in the case of “the holy child of La Guardia” at the end of the 15th century which was considered a case of black
magic. This kind of attitude does not have parallel in Judaism. There are few examples in Judaism of Jews persecuting Jews because of magic practices. In those rare cases where there is evidence of such persecutions, the accusation served as a camouflage for more fundamental reasons. Thus the accusations of the rabbis of Venice against Moses Hayyim Luzzatto for dealing in magic were a guise for their suspicion that he had Shabbatean tendencies. In those Jewish communities where Christian anti-witchcraft persecutions had an influence, such as Italy, the relationship between Jews and non-Jews was closer than elsewhere.

The only social sphere of Jewish life in which magic practice attained legitimacy was in the formulas of the herem ("ex-communication"). Many herem texts have incantations with a clear magic undertone.

The un-transcendental purposes of most magical practices were probably one of the reasons why magic played such a minor role in cultivated medieval Jewish literature. There are few records of major significance in which magic featured, such as Joseph della Reina’s attempt to hasten the redemption through magic means. Magic literature centers around such minor matters as toothaches and lost articles, and some attempt at prophecy of private persons’ destiny. It thus did not always relate to the major historical and ideological problems of medieval Jewish society. The private character of the practice rendered it unimportant in the eyes of both its supporters and opponents so that it never became a major issue of dispute.

In spite of the relatively small influence that magic had on medieval Jewish thought, some scholars consider that the widespread use of magical practices among Jews made the members of other communities see magic as a Jewish specialization. This can in no way justify the fact that Jewish magic became a cause for antisemitism and hatred toward the Jews in the Middle Ages. The belief that every Jew was an evil magician, possessed of supernatural evil powers, was very widespread among certain popular groups of Christians in the Middle Ages and early modern times. In some uncultivated ambiances Jews were believed to be the people of Satan and they thus possessed supernatural secrets. This concept was one of the major sources of persecutions and blood libels throughout that period. Jewish reality in the Middle Ages hardly gave any substance to such accusations or to such an impression of the Jewish people. The basis for it was Christian theology, which in ecclesiastical circles described the Jews as deicides, therefore Satanic, and therefore possessors of magic.

[Joseph Dan / Angel Sanz-Badillos (2nd ed.)]

MAGIDOR, MENACHEM (1946– ), president of the Hebrew University of Jerusalem. Magidor was born in Petah Tikvah, Israel. He received his academic education at the Hebrew University of Jerusalem, getting his B.Sc. in mathematics and physics in 1965, a M.Sc. in mathematics in 1967, and a Ph.D. in mathematics in 1972. In 1968 he joined the department of mathematics at the Hebrew University. From 1975 to 1977 he was a lecturer in the department of mathematics of Ben-Gurion University and in 1976–78 he was head of the computer science program there. In 1978 he returned to the Hebrew University, where he became professor in 1982. In 1987–89 he was chairman of the Institute of Mathematics and Computer Science and in 1988–89 he was member of the executive committee of the board of governors of the university. In 1992 Magidor was named dean of the faculty of sciences, a position he held until 1996. From 1997 he was the president of the Hebrew University. Magidor was a member of professional and academic associations in the field of mathematics. He served as editor of several academic journals and book series and published some 50 articles.

[Shaked Gilboa (2nd ed.)]

MAGIDOV, JACOB (1869–1943), Yiddish writer and editor. Born in Odessa, he received both a traditional and a secular education. Immigrating to the United States in 1886, he worked in a shirt factory and studied law at night, passing the bar examination in 1904 and for a time practicing law. Active
in the Jewish labor movement from his arrival, he played an important role in 1888 in the founding of the United Hebrew Trades, an important institution devoted to organizing Jewish workers into unions. He was also active in the Socialist Labor Party. Magidov began his career as a writer and editor in the Jewish socialist press in 1894. He wrote for Di Arbeiter Tsaytung on American politics and became city editor of the Dos Abend Blat at the end of the 1890s. After writing for the Forverts for a short time he joined Der Morgen-Zhurnal in 1901 and remained associated with it for the rest of his life. His book Der Shpigel fun der Ist Side (“The Mirror of the East Side,” 1923) contains valuable insights into Jewish personalities of his generation. Magidov was one of the many immigrant intellectuals who felt it their duty to bridge the gap between the Yiddish-speaking masses and their new environment. Especially as the city editor of Der Morgen-Zhurnal, he served them as an interpreter of events in the new homeland.

**BIBLIOGRAPHY:** LNYL, 5 (1965), 389ff. [Henry J. Tobias]

**MAGINO, MEIR** (late 16th century), Venetian inventor. In 1587 Pope Sixtus v invited him to introduce into the Papal States his process of extracting silk thread from the cocoon twice a year. Concerning this new process, Magino published an Italian work entitled Dialoghi di M. Magino Gabrielli Hebreo venetiano sopra l’utili sue invenzioni circa la seta (Venice, 1588); this elegantly printed book contains numerous illustrations, among them a portrait of the author, and a Hebrew poem written by him with an Italian translation by S. Tellerino. A second patent secured for Magino the rights to a new process for polishing mirrors and colored cut glass with a special kind of oil. He was also granted the exclusive right to produce special wine bottles, which are still in use in Roman wineries. One of his children, GABRIEL induced Ferdinand I of Tuscany to issue the famous appeal to Jews to come and settle in Leghorn (1593). He was promised the office of consul general of the Jews in Pisa and Leghorn, but the appointment did not materialize.

**MAGNES, JUDAH LEON** (1877–1948), U.S. rabbi and communal leader. He was chancellor and first president of the Hebrew University of Jerusalem. Magnes was born in San Francisco, California, to parents who emigrated from Poland and Germany in 1863. He attended the Hebrew Union College, where he was ordained as a Reform rabbi in 1900. Magnes spent the years 1900–03 studying in Berlin and Heidelberg. During his years in Germany he traveled widely in Eastern Europe and was profoundly moved by the intensive Jewish life he found. It strengthened his earlier sympathetic feeling toward Zionism and brought him to the commitment to make Zionism and service to his people his mission in life.

On his return from Germany he became rabbi of Temple Israel in Brooklyn (1904–05) and afterward the assistant rabbi of Temple Emanu-El in New York (1906–10). At the same time he served as the secretary of the American Zionist Federation (1905–08) and later became the president of the Kehillah of New York “City from its founding in 1908 until its demise in 1922; he left for Palestine in the same year. Founded to advance and coordinate Jewish life in New York City, the Kehillah dealt vigorously with such internal problems as religious life and Jewish education; in the latter area its Bureau of Jewish Education, directed by Samson “Benderly, pioneered in the centralization and modernization of Jewish education in the U.S. The Kehillah was active and effective in labor arbitration and helped to repress crime in the immigrant Jewish areas in cooperation with the city’s police department. It provided a nexus for cooperation between “uptown” and “downtown” Jews and a forum for Jewish public opinion. Magnes was the Kehillah’s moving spirit and most competent leader, spokesman, peacemaker, fund raiser, and philosopher, and thus a leading figure in the metropolis. In 1905 he participated in the Zionist Congress at Basle as a member of the U.S. delegation. It was there that he came face to face with the leaders of Russian Jewry and through them he reached a greater understanding of East European Jewry. Back in New York (after his first visit in Palestine) he headed the greatest Jewish demonstration against the Kishinev pogroms and established the Self-Defense Association which collected funds for the purchase of arms to be smuggled to the Jewish *self-defense* bodies in Russia. In 1904 he joined Solomon “Schechter’s inner circle and moved toward religious traditionalism. In Zionism he became a disciple and follower of Aḥad “Ha-Am, whom Magnes called “The Harmonious Jew.” After the Kishinev pogroms he helped Cyrus “Sulzberger and Louis “Marshall in establishing the American Jewish *Committee. In 1908 he married Beatrice Lowenstein, the sister-in-law of Louis Marshall, and this brought him closer to the leading Jewish circles. At the same time he strengthened his ties with the East European Jews.

Magnes’ shift toward religious traditionalism brought him to break with Temple Emanu-El. His unfulfilled demands for religious changes led him to resign in 1910. From 1911 to 1912 he was rabbi of B’nai Jeshurun, a leading Conservative congregation, after which he left congregational work altogether to devote himself to Jewish public service. However, Magnes’ opposition to U.S. entry into World War 1 in 1917 out of pacifist convictions, and his activity in the peace movement during the war, undermined his leadership of a Jewish community firmly committed to the war and concerned over possible imputations of disloyalty. His brilliant U.S. Jewish communal career actually ended in 1917. In 1922 Magnes emigrated with his family to Palestine, where he continued his activities in establishing the Hebrew *University of which he was the chancellor (1925–35) and first president (1935–48) until his death. He was active in raising funds for the university, in securing the donation of several personal libraries, and in
developing several of its major divisions, especially the Institute for Jewish Studies which was inaugurated in 1924, even before the official opening of the Hebrew University in 1925. The Hebrew University honored him first by publishing Sefer Magnes in 1938 and later by naming one of the Chairs of Bible and the press of the University after him, as well as by granting him and Chaim Weizmann the first honorary degrees of the university. With the beginning of World War II, in spite of his pacifistic outlook on life, he called for war against Nazi Germany, serving as chairman of the Supply Board Scientific Advisory Committee of the War. He also helped his life-long friend Henrietta Szold in her Youth Aliyah work and became the chairman of an Emergency Council of Hadassah in Palestine, as well as the chairman of the Middle East Advisory Council of the American Jewish Joint Distribution Committee which he had helped found in World War I. During World War II he helped Jews who escaped to Turkey from Nazi-occupied countries, became responsible for the direction of relief work amongst the Jews throughout the Orient. Out of his pacifist convictions and the belief that the Jews are not all nations, he sought an accord with the Palestinian Arabs and entered the political arena with the conviction that Jewish-Arab accord is of the greatest importance not only for the peaceful building of the country but also for the Jewish spirit. He started his political agitation immediately after the 1929 disturbances (see Israel, State of: Historical Survey), stating, “One of the greatest cultural duties of the Jewish people is the attempt to enter the promised land, not by means of conquest as Joshua, but through peaceful and cultural means, through hard work, sacrifices, love and with a decision not to do anything which cannot be justified before the world conscience” (Opening Speech of the Hebrew University Academic Year 1929/30). Magnes renewed his activities after the riots in 1936 and opposed the Royal Commission’s suggestion for the partitioning of Palestine, always believing in the policy of establishing Palestine as a binational state and feeling that it was his personal mission to bring the Arabs and Jews together (see Berit Shalom; Palestine Partition and Partition Plans; Palestine, Inquiry Commissions on). With this belief he carried on his political activities until his death in New York in 1948 while on a visit there. He was later reinterred in Jerusalem. A Judah L. Magnes Memorial Museum was set up in Oakland, California, in 1961, and later moved to Berkeley. Magnes’ writings and speeches were collected in War-Time Addresses 1917–1921 (1923), Addresses by the Chancellor of the Hebrew University (1936), and in The Perplexity of the Times (1946).

[Magnes Museum, Judah L. Located in Berkeley, in a century-old mansion about a mile from the University of California, the Magnes Museum contains the third largest collection of Judaica in the United States. The Museum was founded in 1962 in Oakland by the New York-born Jewish educator Seymour Fromer, with editor and writer Rebecca Camhi Fromer as co-founder, and moved to its current location four years later. It is named in honor of Judah L. Magnes, who was born in San Francisco in 1877 and raised in Oakland, the first native Californian to receive rabbinical ordination. Magnes was the founder and first president of the Hebrew University of Jerusalem and his friend and colleague Martin Buber became honorary chair of the museum soon after its inception.

During Seymour Fromer’s 36-year tenure as museum director, and following his retirement in 1998, the museum has collected, preserved, and made available artistic, historical, and literary material reflecting Jewish life and culture throughout history. In 1968, the Siegfried Strauss Collection was acquired as the core of the museum’s ceremonial art holdings, which have expanded to include one of the world’s largest collections of Hanukah menorahs and Torah binders, costumes, and other textiles. The museum also rescued artifacts from endangered Jewish communities such as Czechoslovakia, Morocco, Egypt, and India.

Over the decades the museum has acquired thousands of prints, drawings, portfolios, and posters of Jewish interest including works by Hermann Struck, Ben Shahn, and Marc Chagall. It holds the works of painters such as Max Liebermann, Daniel Moritz Oppenheim, Toby Rosenthal, Lazar Krestin, Lesser Ury, Muriel Minkowski, Isadore Kaufman, and Raphaël Soyer; and sculptors such as Elbert Weinberg and Harold Parris. In 1974, the museum won accreditation by the American Association of Museums, the first U.S. Jewish museum to receive such recognition, and three years later was a founding member of the Council of American Jewish Museums.

The museum is also a repository for historical documents of Jews in the American West. Its Western Jewish History Center, initiated in 1967 and directed for more than three decades by San Francisco State University Professor Moses Rischin, was the first regional Jewish history center in the U.S. It contains a comprehensive archival research library, including letters and diaries, organization reports and minutes, portraits and photographs, marriage and death certificates, and Anglo-Jewish newspapers published since 1857. In addition, the Western Jewish History Center has published more than a dozen books on Northern California Jewry: bibliographies, narrative histories, and personal memoirs. Through its Commission for the Preservation of Pioneer Jewish Cemeteries and Landmarks, the Museum has restored, and continues to maintain, seven Jewish Gold Rush cemeteries in the California Mother Lode in the foothills of the Sierra Mountains.

The Museum sponsored the Jewish-American Hall of Fame, which has minted medals annually in recognition of Jews who have made significant contributions to American
life. Annual poetry, video, and photography competitions were established to showcase the work of contemporary artists and filmmakers. The Museum's Harry and Dorothy Blumenthal Rare Book and Manuscript Library has a significant collection of illuminated ketubbot, manuscripts, and printed materials relating to Jewish customs and ceremonies, and to Jews in India and the Karaites.

From its inception, the Magnes has made Holocaust studies one of its leading priorities and was one of the first museums to have a gallery devoted to the artifacts and art of the Shoah. In the mid-1960s, under the guidance of leading Oakland Rabbi Harold Schulweis, it established the Institute for the Righteous Acts, a center documenting and analyzing the altruistic behavior of rescuers of Jews during the Nazi Era. The museum has published numerous survivor memoirs and has emphasized the post-liberation period, with a publication and exhibit on the detention camp in Cyprus, and several works on the Displaced Persons camps.

Drawing on its own collections and loans from the U.S., Europe, and Israel, the Magnes has maintained a regular schedule of art, history, and ethnographic exhibits on Jewish life and culture. The Jacques and Esther Reutlinger Gallery was built in 1981 to accommodate changing exhibits and associated educational programs.

Especially in the 1970s and 1980s, the museum was one of the key catalysts of a Jewish cultural renaissance in the Bay Area as Fromer nurtured many young Jewish scholars and artists. He provided studio and exhibition space for the revival of illuminated Ketubot, led by David Moss; he assisted Deborah Kaufman in founding and developing the first Jewish Film Festival; he commissioned the California Jewish historian Ava Kahn to create educational materials for schools; he provided the impetus to Fred Rosenbaum who founded the adult school Lehrhaus Judaica and wrote several books on local Jewish history published by the museum.

In 2002, a younger Jewish museum in San Francisco emphasizing contemporary art merged with the Magnes. But disagreements about the direction of the merged institution resulted in a de-coupling in about a year. The Magnes looks forward to erecting a new center in the growing arts district of downtown Berkeley.

[MAGNIN, EDGAR FOGEL (1890–1984), U.S. Reform rabbi and communal leader. Magnin was born in San Francisco to a well-known mercantile family. He was ordained at Hebrew Union College (1914). After a year as rabbi in Stockton, California (1914), Magnin led Congregation B'nai Brith, called from 1929 onward the Wilshire Boulevard Temple in Los Angeles, which grew under his leadership from 400 families to 2,000 to become one of the largest and most influential congregations in the country. During his tenure, the landmark building on Wilshire Boulevard that still serves as the home of his congregation was built and opened. His service to the congregation coincided with the dramatic expansion of Los Angeles Jewry in size and in influence. Outspoken, colorful, forceful, Rabbi Magnin was for many decades the unofficial voice and representative of the Los Angeles Jewish community in a variety of religious, governmental, social, educational, and cultural organizations and institutions and the leading voice of West Coast Reform Judaism. He was an early pioneer in Christian Jewish dialogue. During World War II he represented the Jewish Welfare Board and traveled to combat zones under the auspices of the National Conference of Christians and Jews. Within the Jewish community he was a leader in the Los Angeles Jewish Community Council, Cedars-Sinai Hospital, University Religious Conference, Los Angeles Hillel Council, Hebrew Union College–Jewish Institute of Religion, and B'nai Brith, among many others. Rabbi Magnin was a lecturer in history at the University of Southern California (1934–55) and at the California School of Hebrew Union College. The graduate school at HUC in Los Angeles is named the Edgar F. Magnin School of Graduate Studies. Deeply involved in political life, he delivered a prayer at the first inauguration of Richard M. Nixon in 1969. Author of *How to Lead a Richer and Fuller Life* (1951), he was columnist for the *Los Angeles Herald Examiner* and the Anglo-Jewish weekly *Heritage*. The street in front of the temple is name Edgar F. Magnin Square.

[Max Vorspan]
ern United States, including Los Angeles, Seattle, Oakland, Santa Barbara, and other fashionable locales. All stores were designed by respected architects and the buildings became instant landmarks. When her store was destroyed by fire following the 1906 earthquake, Magnin retrieved her merchandise from the spared Customs House and continued to sell garments from her undamaged home, hiring carriages to bring customers to her makeshift store. In this way, she clothed the new needy and made a substantial profit. Dubbed “Queen Victoria” by her family because of her regal demeanor, Magnin lived into her mid-nineties, daily inspecting the main San Francisco store until her death.

[Ava F. Kahn (2nd ed.)]

MAGNUS, English family. SIR PHILIP MAGNUS (1842–1933) was an educator and politician. Born in London, he was a minister of the West London Synagogue of British Jews (Reform) from 1866 to 1880, and lectured in applied mathematics at University College, London. In 1880 Magnus was appointed organizing secretary and director of the newly established City and Guilds of London Institute. He served on the Royal Commission whose report led to the Technical Education Act of 1884. Magnus was responsible for inclusion of a faculty of engineering at the reconstructed London University in 1889. From 1906 to 1922, he was the university’s member of parliament, the first Jew to be elected for a university seat. He was knighted in 1886 and created a baronet in 1917. Magnus played a leading part in Anglo-Jewish affairs, as chairman of the council of the West London Synagogue and as a vice president of the Board of Deputies of British Jews and the Anglo-Jewish Association. He was violently opposed to Zionism and was one of the founders of the anti-Zionist League of British Jews. Sir Philip’s wife KATIE MAGNUS (1844–1924) was a writer. The daughter of the Portsmouth goldsmith and communal figure Emanuel Emanuel, she published traditional and historical tales for young readers and her often reprinted *Outlines of Jewish History* (1886) was an especially successful evocation of the past. Her *Jewish Portraits* (1888) included studies of *Judah Halevi,* *Heine,* and *Moses Mendelssohn.* Sir Philip and Lady Magnus’ son, LAURIE MAGNUS (1872–1933), began his writing career mainly with studies of English poetry. In 1902 he wrote *Aspects of the Jewish Question,* which revealed him to be an anti-Zionist like his father. Four years later, in *Religo Laici Judaei* (“The Faith of a Jewish Layman”), he again propounded the view that Judaism was a religion and not a nationality. For 14 years, from its inception in 1917 to its suspension, he edited the anti-Zionist *Jewish Guardian.* He was active in Jewish communal life as a warden of the West London Reform Synagogue, a member of the council of Jews’ College, London, and president of the Union of Jewish Literary Societies. His most important books were *Dictionary of European Literature* (1926) and *The Jews in the Christian Era and their Contribution to its Civilization* (1929). He was also a director of Routledge, the publishers. He married Dora (c. 1882–1972), the daughter of Sir Isidore “Spielmann. As Laurie Magnus shortly predeceased his father, the baronetcy devolved directly upon his son SIR PHILIP MONTEFIORE MAGNUS (1906–1988). Educated at Westminster school and Oxford, he was originally a civil servant before becoming a full-time writer. He was the author of a number of successful and highly regarded biographies: *Edmund Burke* (1939), *Sir Walter Raleigh* (1952), *Gladstone* (1954), *Kitchener* (1958), and *King Edward VII* (1964). He severed his connections with Judaism, and in 1951 formally added his wife’s family name to his own, becoming Sir Philip Magnus-Allcroft. His best-selling biography of Gladstone is credited with restoring the reputation of the Victorians after its decline following World War I.

[Vivian David Lipman / William D. Rubinstein (2nd ed.)]

MAGNUS, EDUARD (1799–1872), German painter. Born in Berlin, Magnus studied medicine, philosophy, and architecture and traveled in France, Italy, Spain, and England before turning to painting. Magnus was a member of the generation of painters who effected the changes of art in Berlin in the 1830s and 1840. Magnus’ work reflects the transition in German art of the period from Biedermeier to Realism. Beginning as a Nazarene (see Philipp *Veit), he developed a romantic neoclassicism influenced by the French painter Ingres, and finally a realistic style. He had a good reputation as a portrait painter. His paintings differ from other portraits in the posture of his figures and in their natural facial expression, as seen in the 1845 portrait of Felix Mendelssohn Bartholdy (private collection). Among his other subjects were the singer Jenny Lind, the sculptor Thorwaldsen, and members of the Prussian royal family. Magnus also left some paintings recording his travels. He perceived the talent of the young artist Adolf Menzel and encouraged him by buying his paintings. He was baptized as a child.

[Jihan Radjai-Ordoubadi (2nd ed.)]

MAGNUS, HEINRICH GUSTAV (1802–1870), German chemist and physicist. Magnus, who was born in Berlin into a wealthy family, left Judaism. He began teaching at the University of Berlin in 1831. From 1845 to 1869 he was professor of physics and technology at Berlin, and in 1861 became rector of the university. His numerous discoveries include the first platinum-ammonia complex, Magnus’ green salt
(Pt(NH3)4)Pt-Cl4) and the “Magnus Effect.” The latter referred originally to projectiles which, subjected to rapid rotation, are turned aside from their original direction by forces which act upon them crosswise. It has important aerodynamic applications.

[Samuel Aaron Miller]

MAGNUS, MARCUS (also known as Mordecai ben Man- lin Dessau, Raubach, and Weisel; d. 1736), court agent of the Prussian crown prince, later King Frederick William I. In his struggle for power in the *Berlin community, his great rival was Jost *Liebmann and later Liebmann’s widow, Esther. In 1709 he became head of the community and in 1720 the spokesman for provincial Jewry before the Prussian authorities. After a protracted quarrel, in which both sides appealed to the king, Magnus persuaded the community to erect one public synagogue instead of the private ones maintained by Liebmann and the Veit and Riess families (1712/14). In 1722 he was appointed salaried permanent chief elder of the Berlin community together with Moses Levi *Gomperz, a position he held until his death.

[Meir Lamed]

MAGNUS, PAUL WILHELM (1844–1914), German botanist. His father, Meyer Magnus, was a member of the Berlin City Council. Under the influence of the botanist Paul *Ascherson, the young Magnus abandoned the thought of a medical career and turned to the study of botany. After obtaining his degree, Magnus was invited by the Ministry of Agriculture to participate in scientific surveys of the North and Baltic Seas. His studies of specimens brought back from these expeditions led to important contributions on the growth patterns of algae as well as to pioneering investigations of the chytrids, an obscure and still poorly understood group of fungi. Magnus joined the faculty of the University of Berlin in 1875 and was promoted to the rank of Professor Extraordinarius in 1880. In 1911 the honorary title of Geheimer Regierungsrat was conferred upon him. His most important work was concerned with the systematics and life histories of a number of parasitic fungi.

[Mordecai L. Gabriel]

MAGNUS, RUDOLPH (1873–1927), German physiologist and pharmacologist. Magnus, who was born in Brunswick, became one of the foremost co-workers of the famous physiologist Sir Charles Sherrington in Oxford. He investigated the mechanisms governing the posture and balance of the body and discovered its center of reflexes in the brainstem up to the midbrain. He became lecturer in pharmacology at Heidelberg until his appointment at Utrecht (1908), where he founded the first pharmacological institute in Holland. Magnus studied the pharmacology and physiology of the intestines, and worked on digitalis. In 1924 he collected the works of his institute in Koerperhaltung; Koerperstellung, Gleichgewicht und Bewegung bei Saeugern, with A. de Klein (1930); and Lane Lectures on Experimental Pharmacology and Medicine (1930). Other works are Von Urtier zum Menschen (1908) and Wil- helm Boelsche (1909).

[Nathan Koren]

MAGYAR ZSIDÓ SZEMLE ("Hungarian Jewish Review"), Hungarian Jewish monthly journal which was established in 1884 and appeared until 1948 in a total of 65 volumes. During the first decade each volume of Magyar Zsidó Szemle contained more than 600 pages, but the number was subsequently reduced; in the period of crisis following the two world wars only individual issues were published annually. The aims of the journal were: to serve as a platform for Hungarian Jewry; to deal in Hungarian with Jewish scholarly subjects; to publish sources of the history of Hungarian Jewry; to discuss problems of religious education; and to review works on Judaica and Jewish history published outside Hungary. The editorial board was headed by professors and directors of the Budapest rabbinical seminary: W. *Bacher (1884–90), L. *Blau (1891–1930), and D.S. *Loewinger (1931–48). The first associate editors did not belong to the seminary (J. Bánoczi, 1884–90; F. Mezey, 1891–95), but the subsequent ones were professors and lecturers at that institute: *M.Guttmann, H. Guttman, S. *Hevesi, F. Hevesi, D. Friedmann, J. Hahn, A. *Scheiber, and M. Weiss. Attempts were made to transfer some of the many and varied subjects covered by the journal to periodicals devoted to special topics: Yavneh, which dealt with problems of religious education (1928–30, vols. 1–3), and Moriah, in which sermons were published (1930, vol. 1). Of the appendices to the journal, the most important is the Hebrew supplement
Ha-Ẓofeh me-Ereẓ Hagar which appeared from 1911 onward. Among its contributors were distinguished Judaic scholars in the world. Until the outbreak of World War I its first four volumes appeared as a supplement to *Magyar Zsidó Szemle. Subsequently from 1921 to 1930 it was published separately as a quarterly, under the title of *Ha-Ẓofeh le-Hokhmot Yisrael.

During this decade the circle of its scholarly contributors widened still further and the journal became a focal point of scholarship of prime importance in the Jewish world. After *Ha-Ẓofeh ceased publication, its role was continued by *Ha-Soker, which appeared between 1933 and 1940 (i–vi) under the editorship of D.S. Loewenger, with J.M. Guttman, F. Hevesi, and D. Friedmann as associate editors. Between the two world wars a change also took place in the contents of *Magyar Zsidó Szemle, in which there began to appear articles not only in Hungarian but also in other European languages, as well as in Hebrew. The authors of these articles were Hungarian Jewish scholars, as well as Jewish and non-Jewish scholars from Hungary and other countries.

[David Samuel Loewinger]

**MAHAL**

Abbreviation of *Mitnaddevei Ḥuz la-Arez (Foreign Volunteers), the term used for volunteers from abroad, mainly Jews, who enlisted in the Israel Defense Forces (IDF) and participated in the *War of Independence, 1948/49. In practice the Mahal section of the IDF Manpower Branch handled volunteers who were citizens or residents of countries outside Eastern and Central Europe. No reliable statistics are available, but it was officially estimated that Mahal comprised about 5,000 volunteers. Of these, about 1,500 were from U.S.A. and Canada, about 500 from South Africa, and about 1,000 from Great Britain. The small Jewish community of Finland contributed the largest proportion of volunteers, a total of only 30, but 2% of its strength.

The first groups of volunteers were organized after the UN General Assembly recommended the partition of Palestine in November 1947. In some instances, the initiative was spontaneous and local. This was the case in Canada, where two Jewish ex-servicemen called for volunteers for Israel. The same was true in Scandinavia. In South Africa, the movement was organized after the arrival of two representatives of the *Jewish Agency who contacted the South African Jewish servicemen’s association. By the beginning of 1948, volunteer organizations were at work in most Jewish communities in the Western world. In many countries the activities were under cover: the official destination of the volunteers was France. A small number of volunteers, mainly with military skills urgently needed by the *Haganah, were smuggled into the country before the State of Israel was proclaimed. The majority of the volunteers were channeled through training camps in France and Italy, organized by the Haganah European Command (with headquarters in Paris) and staffed by instructors from Palestine. Most were World War II veterans, and some had been officers. Transport facilities across the Mediterranean were difficult to arrange.

On arrival, the Mahal volunteers were absorbed in IDF units according to the need for reinforcements, not fighting in separate formations. They thus fought on all fronts. Their contribution was not in numbers but in quality and experience, most necessary in a new army whose fighting tradition was that of an underground movement. Mahal’s major contribution was to the air force, which was organized, commanded, and to a large degree, staffed by overseas volunteers and by foreign air force veterans on special contract. Mahal volunteers also played an important part in staffing the army medical corps. Individual volunteers also made important contributions to the engineers’ corps, the signal corps, the armored units, and the artillery. Approximately 150 Mahal volunteers were killed in action, the majority from U.S.A. and Canada. About 300 remained in Israel or returned later to settle there, but the majority came, fought, and returned to their countries of origin.

[Herbert Pundik]

**MAHALALEL BEN SHABBETAI HALLEYAH** (d. after 1675), rabbi, kabbalist and Hebrew poet. Born at the beginning of the 17th century in Civitanova, Mahalalel suffered many hardships in his youth in Italy as a result of which he seems to have been compelled to wander to various places. Before 1660, he was appointed rabbi of Ancona. He was known primarily for his collection of poems and *piyyutim, Halleyah, recited in synagogues on Sabbaths and festivals. This collection also included prayers which were kabbalistic in spirit. Mahalalel and his community were ardent believers in “Shabbetai Zevi even after his apostasy in 1666. Two completely different versions of his hymn to Shabbetai Zevi and his prophet, *Nathan of Gaza, appear in Halleyah, one version, apparently, composed before and the other after the apostasy. Some of the poems from this collection were published by S. Bernstein (see bibliography). From those of Mahalalel’s letters which were also included in this collection and published in part by Bernstein, it seems that he had close ties with the great contemporary scholars in Italy. The following works by him remain in manuscript: *Kodesh Hillulim, a commentary on the Pentateuch, and Halalel Gamur. Sixty-eight halakhic rulings, his responsa, are included in manuscripts (Mantua, Municipal Library, Ms. 88; Ferrara, Talmud Torah, Ms. 20/1).

[Abraham David]

**MAHALLA AL-KUBRA**, town in Lower Egypt, halfway between *Alexandria and *Damietta. There was a flourishing Jewish community in Mahalla al-Kubra under the *Fatimids. Yosef ha-Yerushalmi, who stayed in Mahalla al-Kubra for a short time, sent a letter to this community at the end of the 11th
century. The community in Mahalla al-Kubra is noted in the Ebiatar Gaon scroll from the second half of the 11th century. "Benjamin of Tudela, the 12th-century traveler, relates that he found 500 Jews living there (E.N. Adler, ed., *Jewish Travelers* (1930), 74). According to a list of contributions to ransom Jewish prisoners, the sum donated by the Mahalla community in the middle of the 12th century was the largest of the Delta communities (Mann, Egypt, 2 (1922), 290). Many documents written in Mahalla during the 12th and early 13th centuries have been found in the Cairo *Genizah*. The Jews of Mahalla were engaged in handicrafts and commerce, such as the silk trade. According to a marriage takkanah, in 1187, R. Perayyah b. Joseph was dayyan in Mahalla. The community developed after the great fire in Pustat in 1168. Rabbi Hayyim ben Hananel ben Abraham al-Amshafi settled there after the fire. He was a famous physician and served also in the Fatimid court. Joseph "Sambari, the 17th-century Egyptian chronicler, mentions the Sefer Torah in the synagogue of Mahalla, which was read only on the New Moon and on which people took the tikkun. According to Jacob *Saphir in: JQR, 18 (1905/06), 10; Assaf, in: *Sefer Klausner* (1937), 232–4; idem, in: *Tarbiz*, (1937/38), 34; idem, in: *Melilah*, 3–4 (1950), 224–9; Ashtor, in: 115, 18 (1967) pp. 38 ff.; Ashtor, Toledot, 1 (1944), 251; 2 (1951), index; 3 (1970), index; Goitein, in: *Tarbiz*, 20 (1948/49), 201–2; 32 (1962/63) 192–4. 

[Eliyahu Ashtor / Leah Bornstein-Makovetsky (2nd ed.)]

**MAHANAIM** (Heb. מַחֲנַיִם), locality east of the Jordan which was named by Jacob before he crossed the Jabbok on his way to Penuel; according to the etiological version in Genesis 32:3, he named it "God's camp" after he saw the angels of God there. It was on the border between the territories of the half-tribe of Manasseh and of the tribe of Gad (Josh. 13:26; 30); it also appears as alevitical city in Gad (Josh. 21:38; 1 Chron. 5:6). After the disastrous battle of Mt. Gilboa, Abner son of Ner, captain of Saul's army, took Ish-Bosheth, Saul's son, to Mahanaim and established it as the capital of the dynasty of Saul (11 Sam. 2:8); from Mahanaim he started out on his ill-fated expedition to Gibeon and to it he later returned (2:12, 29). It was also chosen by David as his capital during Absalom's rebellion; here he received supplies from Barzillai and other Gileadites (17:24, 27), set out for battle with the rebels, and received the news of Absalom's death. It appears for the last time in the Bible as the capital of Solomon's seventh district with Ahinadab the son of Iddo as its governor (1 Kings 4:14). In Shishak's list of conquered towns, it occurs as one of the cities captured during his campaign in the fifth year of Rehoboam. All sources point to its location in the vicinity of the Jabbok in central Gilead, but its exact identification is disputed. The earliest identification of the place with Khirbat al-Makha (2.5 mi. 4 km.) north of Aijalon, following Estori ha-Parhi (13th century), has been discarded by modern scholars. Dalman was the first to point to the twin site of Tulul al-Dhahab on the Jabbok; Glueck, however, would look there for Penuel. Aharoni suggests that the western mound of Tulul al-Dhahab is Mahanaim and that the eastern mound is Penuel. De Vaux and Noth suggest Tell al-Hajaj, uphills and to the south of the Jabbok.

**BIBLIOGRAPHY:** Glueck, in: *AASOR*, 18/19 (1939), 232–5; EM, s.v. (incl. bibl.); Aharoni, Land, index.

[Michael Avi-Yonah]

**MAHANAYIM** (Heb. מַחֲנַיִם), “Two Camps,” allusion to Gen. 32:3 and other verses, although biblical *Mahanaim was in Transjordan*, kibbutz in northern Israel in the Huleh Valley, affiliated with Ha-Kibbutz ha-Me’uhad. First founded as a moshavah for Orthodox Jews in 1898, but soon abandoned. In 1902, the *Jewish Colonization Association (ICA)* settled a small group there whose economy was to be based on tobacco cultivation. The attempt failed, as did another plan to settle Jews from the Caucasus on the site to raise beef cattle. A further attempt was made in 1918, when a laborers’ group set
out to establish a moshav there. Finally, in 1939, the present kibbutz was established, when the Jewish institutions stepped up settlement on the land as a reply to the British "White Paper" (1939). In 1970 Mahanayim's economy was based on intensive farming. At the outset of the 21st century its economy included a few farming branches and industry based on Diuk Technology, a leading manufacturer of building profiles and metal components for solar heaters. In addition, Mahanayim had guest rooms and an interest in a nearby tourist site. Also nearby was the Mahanayim airfield, servicing the northeastern part of the country. In the mid-1990s, the kibbutz population was approximately 440, declining to 361 in 2002.

[Effray Orn / Shaked Gilboa (2nd ed.)]

MAHER SHALAL HASH BAZ (Heb. מבחר צלמה חוח), traditional vocalization of the name which, according to Isaiah 8:3–4, "Isaiah was commanded by the Lord to give to the son who was born to him during the Aramean Ephraimite war against Judah (734/3–732 B.C.E.), with the explanation that ‘before the lad is able to call ‘father!’ and ‘mother!’ the wealth of Damascus and the spoils of Samaria shall be carried off before the king of Assyria.” Since the four words express twice the idea of speed and booty, it is easy to understand how the name can signify that, but the traditional vocalization leaves the parallelism imperfect; for according to it the words mean literally “Hurry, spoil! Booty has rushed.” It therefore seems probable that either the vocalization of the third word is to be corrected to hush, in which case the name will mean, literally, “Hurry, spoil! Rush, booty!” or the vocalization of the first word is to be corrected to miḥar, yielding the literal sense, “Spoil has hurried, booty has rushed.” Such prophetic namings as portents of the future notoriously not only portend the future but help to bring it about, exactly like other prophetic acts that symbolize what they predict (see *Prophecy*). Accordingly, the writing involving the four words in 8:3–2 is also intended at once to portend and to effectuate the early plundering of Damascus and Samaria by the Assyrians; on some problems of detail, see Isaiah 3, Panel 3, Field A.

[Harold Louis Ginsberg]

MAHLER, ARTHUR (1871–1916), classical archaeologist and Zionist parliamentarian. Born in Prague, from 1902 Mahler was a professor of classical archaeology at the German University in Prague. He joined the Zionist Movement at the beginning of the 20th century, and in the elections of 1907 he was elected, together with A. Stand and H. Gabel, to the Austrian parliament on a pro-Zionist ticket. Together they established the Jewish Club headed by B. Straucher, which was the first of its kind in parliamentary history. Because of the Austrian government's intrigues and the influence of Jewish assimilationists, however, the pro-Zionist list lost the 1911 elections. Mahler then left Prague and settled in Vienna.

[Getzel Kressel]

MAHLER, EDUARD (1857–1945), Hungarian Orientalist, mathematician, and astronomer. Mahler was born in Cziffer, Hungary. In 1882 he became assistant to the astronomer Theodor Oppolzer at the Vienna Observatory and, in 1885, assistant at the Institute of Weights and Measures. The same year he published his Astronomische Untersuchungen ueber die in der Bibel erwahnte aegyptische Finsterniss and Astronomische Untersuchung ueber die in hebraischen Schriften erwahnten Finsenissse. ("Astronomical Researches on the Egyptian Darkness Account in the Bible" and "Astronomical Research on the Accounts of Darkness in the Hebrew Scriptures"). He had already written some important mathematical studies, particularly on the theory of surfaces, but his interest turned more and more to astronomy and chronology of the ancient Orient, as is evident in his Biblische Chronologie und Zeitrechnung der Hebräer, "Biblical Chronology and the Hebrews' Time-Reckoning" (1887) and his translation of and commentary on Maimonides, Kiddush ha-Hodesh (1889). In 1896 Mahler went to Budapest as assistant at the Institute of Trigonometry. Two years later he became assistant keeper in the department of archaeology of the Hungarian National Museum and also began lecturing on Oriental history and languages at Budapest University; in 1914 he was appointed professor there. In 1912 he became director of the newly founded Egyptological Institute and, in 1922, director of the Oriental Institute. Mahler explored the date of the Exodus and tried to demonstrate that the biblical data relating the Exodus are accurate in Der Pharao des Exodus, "The Pharaoh of the Exodus" (1896), and in various articles. He wrote the "Bibel-Babel" controversy, on the "Elephantine documents, and on calendar reform. Further chronological studies culminated in his classic Handbuch der juedischen Chronologie (1916, repr. 1967), in which he established the systems of the different Jewish calendars and chronologies in the light of ancient Near Eastern and medieval reckonings. He also provided comparative tables which make possible the conversion of a date in one system to the corresponding date in another system, especially the Christian calendar. Mahler later took up the problem of the Easter date and that of Jesus’ death. He was associated with the excavations of an old Roman settlement at Dunapentele, where evidence for the earliest presence of Jews in Hungary was discovered.

BIBLIOGRAPHY: Jubilee Volume… E. Mahler (1937), incl. bibl.

MAHLER, GUSTAV (1860–1911), composer and conductor. Born in Kalisch, Bohemia, Mahler began his career as a conductor of operettas in Bad Hall. He rose through positions in Ljubljana, Olomouc, Kassel, Prague, Leipzig, Budapest, and Hamburg and progressed to become, in 1897, the director of the Vienna Court Opera. (He had to convert to Catholicism to secure this position and was baptized in the spring of 1897) His tenure in Vienna brought the opera to a level of artistic achievement previously unknown there. However, he resigned in 1907 because of hostile intrigues. His remaining winters
were spent in New York where he conducted the Metropolitan Opera and the New York Philharmonic. He died in Vienna.

Mahler, although one of the most popular symphonic composers today, was overshadowed as a composer in his lifetime by his successes as a conductor. His attempts to compose opera were abortive despite his genius as opera director. His libretto Ruhezeit survives, without music, and unpublished. Though no opera by Mahler exists, his sense of musical drama is evident in his ten symphonies and his “symphony in songs,” Das Lied von der Erde. Four of the symphonies contain substantial vocal sections; in fact, the Eighth is a gigantic choral work. Mahler did not live to complete his Tenth Symphony; however, Deryck Cooke’s “performing version” has been widely accepted as an authentic presentation. Mahler’s songs, often written to folk texts, show deep understanding of the voice. Many themes from the songs were reworked in the symphonies. The most important song cycles are Lieder eines fahrenden Gesellen (1884) and Kindertotenlieder (1900–02).

---

**MAHLER, MARGARET** (Schoenberger; 1897–1985), child psychiatrist and psychoanalyst. Born in Sopron, Hungary, in the early 1930s she directed in Vienna the first psychoanalytically oriented child guidance clinic. In 1938 she settled in New York and in 1941 was appointed associate in psychiatry at Columbia University College of Physicians and Surgeons. In 1955 she was appointed clinical professor of psychiatry at the Albert Einstein College of Medicine. She was a training analyst at the New York Psychoanalytic Institute and in 1957 became the director of research of Masters Children’s Center, where parallel studies of psychotic and normal children and their mothers are conducted. A comprehensive summary of Mahler’s work of the 1940s appeared in the Psychoanalytic Study of the Child, vols. 3–4, 1948. Two main concepts associated with her name are the symbiotic infantile psychosis and the separation-individuation process of normal development during the first three years of life. In her book *On Human Symbiosis*, vol. 1 (1968), Mahler describes the core of infantile psychosis as “faulty or absent individuation” resulting from a deficiency in the child’s intrapsychic utilization of the mothering partner during the symbiotic phase.

In 1970 the Margaret S. Mahler Psychiatric Research Foundation was established in Wynnewood, Pennsylvania. Its objective is to increase understanding of children’s psychological and emotional development, particularly in the separation-individuation process, and to transmit that information to parents, therapists, and childcare providers.

Other books by Mahler include *The Psychological Birth of the Human Infant* (1975) and *The Memoirs of Margaret S. Mahler* (with P. Stepansky, 1988).

[Miriam Ben-Aaron / Ruth Beloff (2nd ed.)]

**MAHLER, RAPHAEL** (1899–1977), historian. Mahler, who was born in Nowy Sącz, eastern Galicia, Poland, studied at the rabbinical seminary and the University of Vienna until 1922. He served as a teacher of general and Jewish history in Jewish secondary schools in Poland. In 1937 he immigrated to the United States and was a teacher in various educational institutions in New York. He was a member from his youth of the left Po’alei Zion party and was connected with YIVO in its research studies and administration, both in Poland and in the U.S. In 1950 he went to Israel, where he lectured on the history of Israel at Tel Aviv University and in 1961 was appointed professor there. He wrote many studies on the history of the Jews in Yiddish, Polish, German, English, and, after going to Israel, chiefly in Hebrew. Among his works are the following: *Di Yidn in Amolikn Poyln* (New York, 1946, in the publication Di Yidn by Poyln); *Ha-Kara’im* (1946), on the Karaites; *Yidn in Amolikn Poyln in Likht fun Tsifern* (Warsaw, 1958); *Yehudei Polin bein Shetei ha-Milhamot* (“Jews in Poland Between the Two World Wars,” 1968). Among his articles is “Torat Boroch ve-Shitato be-Yamei Anu” (in: Ba-Derekh, 1965). His major work, *Divrei Yemei Yisrael; Dorot Aharonim* (“History of the Jewish People in Modern Times”), has been published only in part: first part (on 1789–1815) in 4 vols. (1956–62), and the first volume (1970) of part two (on 1815–48). In his introduction to the work Mahler explains his theory of Jewish history in accordance with historical materialism, his division of Jewish history in the modern period in conformity with social and economic evolution, and the class war and changes of governments during these years. His scientific work is based upon an abundance of sources and a rich bibliography. In 1977 he was awarded the Israel Prize for contributions to the study of Jewish history.

**MAHLON AND CHILION** ( Heb. מַהֲלוֹן and כִּלְיוֹן), the two sons of Elimelech and Naomi (Ruth 1:2ff.; 4:9–10). They were Ephrathites of Bethel who migrated to Moab, together with their parents, during a drought in the time of the Judges. After their father’s death, the two brothers married Moabite women, Chilion marrying Orpah, and Mahlon, “Ruth. Both died childless. Their names have been taken to mean “sickness” and “destruction” and have been explained as symbolic of their untimely death. But Mahlon could be connected with mahol, “dance,” and Chilion with a word meaning “completion.”

**In the Aggadah**

Mahlon and Chilion are identified with Joash and Saraph of 1 Chronicles 4:22, the different names indicating their char-
acteristics and destiny. Joash was so called because he lost hope (from the root לש, “to give up hope”) of the messianic era; Sarah because he was condemned to be burned (from the root תָּשִׁל, “to burn”); Mahlon, because he committed acts of profanation (from the root לָעַל, “to profane”); and Chilion because he was condemned by God to destruction (לָשֵׁל “to destroy”; בּ 91b). They sinned in leaving Erez Israel (ב 91a), and in that they neither proselytized their wives nor ensured that they performed ritual immersion (Ruth R. 2:9). Before they died, they were rendered penniless (Ruth R.2:10).

**BIBLIOGRAPHY:** Noth, Personennamen, 54, 249; Ginzenberg, Legends, 4 (1925), 31; 6 (1925), 189; Y. Ḥasida, Ishai ha-Tanakh (1964), 258–9.

**MAH NISHTANNAH** (Heb. מַה נִּשְׁתַּנְתָּה; “What is different?”), first words of the four questions asked at the Passover seder service. The questions come at the beginning of the recital of the *Haggadah and are usually asked by the youngest participant. The first sentence reads: “Why is this night different from all other nights?”

According to the Ashkenazi rite, the questions come in the following order: (1) Why on this night is only *mazzah* (“unleavened bread”) eaten? (2) Why are bitter herbs consumed? (3) Why are herbs dipped twice (in salt water and in *aroset*) during the *seder meal*? (4) Why do we sit reclined at the *seder* table? The text of the answers “We were slaves unto Pharaoh in Egypt…, “ follows the set of four questions. The reply is usually made by the father, or the person conducting the *seder*.

The *Mah Nishtannah* dates back to mishnaic times (Pes. 10:4) and originated in contemporaneous dining customs (manners and sequence) at festive meals. The questions were made part of the *seder* celebration as an introduction and reminder to the father to fulfill the biblical injunction: “And thou shalt tell thy son in that day, saying: it is because of that thou shalt tell thy son in that day, saying: it is because of that which the Lord did for me when I came forth out of Egypt” (Ex. 13:8; see also Ex. 13:14, 15). The Mishnah enumerates four questions to be asked during the *seder* (Pes. 10:4); the third, “Why do we eat only roasted meat [of the paschal sacrifice]?” was omitted after the Destruction of the Temple and the consequent cessation of sacrifices, and for it was substituted another question which is not mentioned in the Mishnah (Why do we recline?). The Sephardi retained the geonic order of the four questions: (1) dipping, (2) unleavened bread, (3) bitter herbs, (4) reclining.

In the geonic literature (and as late as *Rashi and *Maimonides, Yad, Hamez u-Mazzah, 8:2) the *Mah Nishtannah* was probably recited by the person conducting the *seder* and not asked by the children. Where there is no child present at the *seder* table, the questions should be asked by the housewife, and if only men participate, they must ask each other, even if they are learned scholars (Pes. 116a). The *Mah Nishtannah* questions form part of the *Haggadah* ritual of all trends and segments in Judaism, including Reform.

**MAHOZA,** town on the River Tigris (Ber. 59b), on the bank of the Nahar Malka (Fluvius Regem), one of the canals connecting the Euphrates with the Tigris. Mahoza was a suburb of Be-Ardashir, situated on the left bank of the Tigris, and of the town of Ctesiphon, situated on its right bank (Er. 57b). Ctesiphon, established by Seleucus Nicator, the founder of the Seleucid dynasty about 300 B.C.E., was destroyed by the Roman commander Avidus Cassius in 165 C.E. On its ruins Ardashir I (226–240 C.E.) erected a new city after his name, the Be-Ardashir mentioned occasionally in the Talmud. Both cities served as the capital. Mahoza’s importance derived also from the fact that it was situated on a central trading route through which caravans passed, as well as considerable merchandise which passed on the rivers. The Jews of Mahoza took a very active part in the commercial life, both within the town (ב 29b) and beyond it (Git. 6a). The merchants were very successful. They ate well (Shab. 109a), drank much wine (Ṭaan. 26a), and were hedonists (RH 17a). Of the women of Mahoza it is related that they were lazy (Shab. 32b) and wore many ornaments (oklyn 194a). Among the Jews of Mahoza were also successful farmers. Some of them possessed fields and orchards, irrigating their fields from the waters of the Tigris (Ber. 59b; Ket. 67a). They reared cattle (Er. 26a; ב 36a, Rashbam ad loc.) and also traded in grain (Git. 73a). A Jewish settlement in Seleucus and Ctesiphon during the first century C.E. is mentioned by Josephus (Ant., 18:310ff.).

Mahoza is mentioned for the first time as a center of study after the destruction of the academy of *Nehardea in 259* (Iggeret R. Sherira Gaon, ed. by B.M. Lewin (1921), 82). Mahoza attained the height of its fame after the death of *Abyane* in 338 when the academy of Pumbedita together with its scholars moved to Mahoza, where Rava, who headed the academy for 14 years from 338–352, dwelt (ibid., 88f.). During this period Mahoza had a considerable Jewish population. They constituted the majority of its inhabitants and Abyane was surprised that there was no *mezuzah* on the city gate (Yoma 11a). It also contained many proselytes (Kid. 73a). Because of Mahoza’s proximity to Be-Ardashir, Rava had close relations with the government (see *Shapur II*). When the emperor Julian invaded Babylon in 363, Mahoza was destroyed. However, on his death and the withdrawal of the Romans, it was rebuilt. Mahoza declined as a Jewish settlement in the second half of the fifth century as a result of the uprising of the Nestorian Christians.

*Moshe Beer*

**MAH TOVU** (Heb. מַה תּוּ, “How goodly”), the opening words of a prayer recited by Ashkenazi Jews upon entering
the synagogue. The initial words are a quotation from Numbers 24:5. The remainder of the prayer consists of Psalms 3:8; 26:8; 69:14; and 95:6 (with Ps. 95:6 modified from the plural to the singular form). The Talmud interprets the "tents" and "dwellings" of Numbers 24:5 to refer to synagogues and schools (Sanh. 105b), and the "time of grace" mentioned in Psalms 69:14, to mean the time of public worship (Ber. 8a). At one time, the rabbis apparently intended to include Balaam’s blessing of the children of Israel (Num. 22–24) in the recitation of *Shema; however, they decided that it was too lengthy for the congregation (Ber. 12b).

Sephardi Jews recite Psalms 5:8 on entering the synagogue, and Psalms 59 on leaving.

See “Liturgy; “Shaharit.”

**BIBLIOGRAPHY**: Elbogen, Gottesdienst, 87, 526; Idelsohn, Liturgy, 73f.; E. Levy, Yesodot ha-Tefillah (1952), 76, 131.

**MAHZIKE HADAS (Mahazikei ha-Dat)**, organization in Galicia and Bukovina, representing the first attempt of the Orthodox to unite for political action in order to foster its beliefs in the sphere of Jewish social life. The organization was initiated by a meeting of the larger Jewish communities which was convened by *Shomer Israel in Lvov (Lemberg)*, in 1878, in connection with their opposition to the founding of a rabbinical seminary and to the organizational changes in the communities. The Mahzike Hadas society was founded primarily to ward off the dangers that lay in such new plans. It was headed by Simon *Sofer (Schreiber)* of Cracow (son of the Hatam Sofer) and Joshua Rokeah, the rabbi of *Belz*. The founding convention took place on March 13, 1879. There the statutes of the new organization were determined and the bi-monthly Mahzikei ha-Dat which appeared in both Hebrew and in Yiddish and which was directed against the publication *Izraelita* was founded. The organization came out with a special list of candidates for the elections of the Austrian parliament of 1879. Of the four candidates it put forward only one, Simon Sofer, was elected, Sofer joined the “Polish club” in opposition to the Jewish assimilationist representatives. In 1882 the organization convened a large conference which was attended by 200 rabbis and 800 representatives of communities. The purpose of the conference was to protect the religious character of the communities from the reform tendencies of the progressives. The conference passed a resolution that only Jews observing the precepts of the Shulhan Arukh were to be granted full voting rights for communal elections. The death of Simon Schreiber in 1883 temporarily weakened the movement, but in 1908 the rabbi of Belz renewed its vigor by publishing a proclamation Kol Mahazikei ha-Dat which denounced any attempt to introduce a progressive spirit into the communities according to the patterns of Western Europe or, under the influence of Zionism and socialism, to inject into them a secular national content. The rabbi of Belz also denounced the efforts of the Vienna community to set up a central union for Austria. After World War I, when Poland became independent, a section of the Orthodox community, under the influence of the rabbi of Belz, organized an independent political party, calling itself Mahzike Hadas. The party was founded at a convention which was attended by representatives from 100 communities and which took place in Grodek Jagiellonski (Gorodok), on Dec. 22, 1931. Its influence was chiefly felt throughout Galicia as a rival to “Agudat Israel.”

**MAHZOR** (Heb. מַחֲזוֹר, mahazor; “cycle”), festival prayer book. The word is similar to the term Mahzarta of the Syrian Church, which means a breviary, and was originally applied to the poetical insertions to be recited in prayers throughout the yearly cycle. In Ashkenazi usage, it came to refer distinctly to the festival prayer book, as distinct from the siddur (the daily prayer book). The term is also used by Sephardi Jews.

**Mahzorim, Illuminated**

Illuminated mahzorim flourished in the Ashkenazi world throughout the 13th and 14th centuries, mainly in southwest Germany, in the Rhine valley, making their appearance soon after an authoritative “cycle” of prayers emerged. In the 15th century the fashion moved to northern Italy, where many Ashkenazim had settled, and influenced Italian Jewish illumination. While the Ashkenazi siddur contained the daily and personal prayers, both for home and synagogue, the mahzor contains the synagogal communal prayers for the festivals and the seven special Sabbaths of the Jewish year. In the Italian rite, the term mahzor embraced both the daily and festival prayers. Primarily intended for the use of the hazzan, the German mahzorim are usually large – written in clear, bold letters – and contain a large selection of piyyutim (“liturgical poems”) for each festival, offering the cantor a variety of choice. A large number of German mahzorim are illuminated with initial-word panels and with illustrations of a ritual and textual nature. These mahzorim were executed over a period of some 100 years, from the mid-13th to the mid-14th century.

The earliest surviving illuminated mahzor manuscript of the 13th century is the two-volume codex of the Michael Collection in the Bodleian Library (Mss. Mich. 617 and Mich. 627), written in 1258 by Judah b. Samuel, called Seltman. Though it is not extensively illustrated it is important, since it proves that illuminated mahzorim existed prior to this date. It was probably illuminated by a gentile, since the first initial-word panel was painted upside down, as though it was a Latin manuscript. However, despite this, the manuscript contains motifs which became traditional in later mahzorim and which could not have been invented by gentiles. The finest examples of mahzorim from the south of Germany are the first volume of the Worms Mahzor of 1272 (see below); the Laid Mahzor of about 1290 (Bodleian Library, Ms. Laud Or. 321); the Leipzig Mahzor of about 1300 (see below); the Dou-
ble Mahzor in Dresden (Saechsische Landesbibliothek, Ms. A 46a) and Breslau (State and University Library Cod. Or. 1. 1); the Tripartite Mahzor of about 1320 (Budapest, Hungarian Academy of Sciences, Ms. A. 384; British Museum, Add. Ms. 22413, and Bodleian Library, Ms. Mich. 619), and the Dormstadt Mahzor of 1340 (Hessische Landes- und Hochschulbibliothek, Cod. Or. 13).

These mahzorim illustrate both the development of style in southern Germany and the use of a special Jewish *iconography. An example of such development in both style and in motif is found in the distortion of human figures. In all manuscripts before 1300, the use of animal-headed people is consistent; in the Leipzig Mahzor, people have birds’ beaks instead of a nose and mouth; but the artists of the later Tripartite Mahzor did not understand the reason for such distortions, and painted all the male figures with ordinary human heads and all the females with animal heads.

Southern German mahzorim have a very wide range of text illustrations. Most of them begin with the prayers for the four special Sabbaths before Passover, continuing with Passover, the Feast of Weeks, the New Year, the Day of Atonement, and the Feast of Tabernacles. Four of the megillot ("scrolls") are also usually included in the mahzor – sometimes placed together, at other times appended to the particular celebrations with which they were associated. The Book of Esther was usually written separately on a scroll, to be read at the festival of Purim.

Most German mahzorim have illustrations of the signs of the zodiac for each of the verses of a piyyut in the prayer for dew recited on the first day of Passover (Leipzig Mahzor, vol. 1, fol. 133; Worms Mahzor, vol. 1, fol. 95v.; Ms. Mich. fols. 49–51). The signs of the zodiac are depicted in small medallions in the margin. In the Worms and the Tripartite manuscripts, the labors of the months are depicted in medallions next to the signs of the zodiac. Some specifically Jewish elements have developed in the zodiac illustrations, such as a bucket instead of Aquarius; in some cases a draw well is depicted instead of a mere bucket, and in some mahzorim a kid is shown next to the well to illustrate both Capricorn and Aquarius, which are referred to in one verse of this piyyut. In one mahzor (Bodleian Library, Ms. Opp. 161, fol. 84), 11 signs of the zodiac are depicted in one large roundel divided into 12 sections, similar to the arrangements of the signs of the zodiac in floor mosaics of early synagogues (e.g., Bet Alfa). This example may be an indication of a traditional way of depicting the astronomical *circulus, which survived into the Middle Ages.

The illustration for the Feast of Weeks traditionally depicts Moses receiving the Tablets of the Law and giving them to the Israelites, who are standing at the foot of Mount Sinai (e.g., Leipzig Mahzor, vol. 1, fol. 130v.; British Museum, Ms. Add. 22413, fol. 3v.; Worms Mahzor, vol. 1, fol. 151). In the Land Mahzor (fol. 127v.) the giving of the Law is combined with an illustration of Moses sprinkling the blood of the Covenant over the Israelites. In the Leipzig Mahzor (vol. 1, fol. 130) the Israelites are standing as though within the mountain, illustrating the Midrash which states that God erected a mountain over the Israelites until they agreed to accept the Torah.

The second volume of an Ashkenazi mahzor normally starts with the prayers for Rosh Ha-Shanah, illustrated by the sacrifice of Isaac, with the ram caught in a thicket by his horns. The sounding of the ram’s horn (*shofar*) on New Year’s day is a commemoration of God’s covenant with Abraham at the time of the sacrifice (e.g., Leipzig Mahzor, vol. 2, fols. 26v., 66; Bodleian Library, Ms. Laud Or. 321, fol. 184, and Ms. Reg. 1, fol. 207v.; Double Mahzor, Breslau, fol. 46v.). In some mahzorim, a horned and claw-footed devil is depicted next to a shofar blower, who sometimes supports his right foot on a three-legged stool in order to ward off the earthly influence of evil. This is in accordance with the common superstition that a three-point object keeps evil spirits away (e.g., Budapest, Ms. A. 388, vol. 2, fol. 12v.; Paris, Bibliothèque de l’Alliance Israélite Universelle). Openings of prayers from the Day of Atonement are usually illustrated by initial words and by parts of prayers written within full-page arches resembling doors, an allusion to the Gates of Mercy, now opened to accept the individual prayers of every Jew (e.g., Leipzig Mahzor, vol. 2; Berlin, Preussischer Kulturbesitz, Ms. Or. Fol. 388, fol. 69; Worms Mahzor, vol. 2; Double Mahzor, Breslau, fol. 89).

The prayers for the Feast of Tabernacles are sometimes illustrated by a man holding the fruits of the Holy Land: the *lulav* (“palm branch”), the *etrog* (“citrus fruit”), *Hadas* (“myrtle”), and *aravah* (“willow”).

Some mahzorim are merely decorated and contain no illustrations at all. An example is the Nuremberg Mahzor of 1331, which for six centuries was owned by the municipality of Nuremberg and is now in the Schocken Library in Jerusalem (Ms. 24100). Its large initial-word panel for the first day of Passover is decorated with foliage scrolls, grotesques, and an architectural top. In the 15th century, the illumination of large-sized mahzorim was no longer fashionable. The smaller-sized illuminated prayer book which became more common continued to be called a mahzor. One such example is the Mahzor of Rabbi Friedman of Ruzhin. This mid-15th-century eastern German prayer book was probably intended for use in the synagogue and at home by a wealthy member of the Jewish community. Though the system of illustration remained Ashkenazi, the decoration shows the influence of Italian motifs, evident in the marginal miniatures, initial-word panels, and human busts emerging from flowers. An example of the fusion of the two traditions is the Schocken Italian Mahzor of 1441 (Ms. 13873), which is a large volume, written and decorated in Roman style, of the Roman rite, but with illustrations following the Ashkenazi tradition.

Most of the 15th-century Italian mahzorim are personal rather than synagogal prayer books, stressing the daily prayers, and containing a *Haggadah* which was recited at home. They are therefore small, handy to carry to and from the synagogue, with the prayers arranged for the individual, starting with the daily and Sabbath prayers and the Festival ones. These illuminated small mahzorim were not usually extensively illustrated;
besides the decorated openings of prayers, they contained fairly simple marginal pen drawings. Good early examples are those related to famous families of northern and central Italy. Such are mahzorim executed at the order of Daniel b. Samuel ha-Rofe b. Daniel ha-Dayyan, one at Bertinoro in 1390 (Bodleian Library, Ms. Can. Or. 81) and another at Forli in 1393 (British Museum, Add. Ms. 26968). In these works, as in others done for the same patron, the tinted drawings are of Lombard style. A mahzor from Pisa of 1397 ordered by another well-known patron, Jehiel b. Mattathias of the Beit-El family (Sassoon Ms. 1028), is in the same style. Some of the text illustrations in these mahzorim resemble those of the traditional Ashkenazi ones: a horn-blower for the New Year; a sukkah for Tabernacles; the balance for Sabbath Shekalim; a crescent and star for Sabbath Ha-Hodesh; and more detailed illustrations for the Passover Haggadah.

The same system of illustration was also used by the Ashkenazi scribe and illuminator Joel b. *Simeon. Of the three mahzorim executed in his workshop in the third quarter of the 15th century, the last was probably made for a woman, since it contains several marginal pen drawings of a ritual nature in which a lady called Maraviglia is the main character. Closely related to the Florentine style of Joel b. Simeon are some more elegant mahzorim which have pen and colored decorations on almost every page. Such is the Rothschild Mahzor of 1492 from Florence (Jewish Theological Seminary in New York, Ms. 03225), which was illuminated in three different styles and techniques, with elaborate illuminated opening pages, illustrations to each section, and tinted decorations on each page. Moses receiving the Tablets of the Law illustrating the opening to the mishnaic tractate Avot (fol. 139) is an example of the second kind. Other mahzorim with a similar system of illustration are fairly common, though some are richer than others.

The mahzor in the Rothschild Miscellany, Ms. 24, Israel Museum, Ms. 180/51, which has sumptuous Ferrarese illuminations from about 1470, consists of textual illustrations for each festival and prayers for special occasions. In fact, it contains a wealth of material illustrating almost every custom of daily life in a rich Jewish Renaissance household. No other manuscript equals the richness and scope of the illumination of this miscellany, though only a portion of its 473 leaves is a mahzor. The Pesaro Mahzor of 1480 (Sassoon Ms. 23), containing almost as many pages as the Rothschild Miscellany, consists only of a prayer book of Roman rite. Its borders are very richly decorated by a Ferrarese artist, but there are fewer text illustrations, mostly within a wreath in the lower part of the border.

Two of the outstanding Ashkenazi Mahzorim are described in detail below.

The Leipzig Mahzor

(Leipzig, University Library, Ms. v. 1102) is the most sumptuous of the south German illuminated mahzorim and has the most extensive array of text illustrations. Almost all the special Sabbaths, feasts, and festivals are illustrated. The first volume was written by Menahem, who decorated his name (fol. 113, 137) in the same way as Menahem the scribe who copied the Birds’ Head Haggadah (see Illuminated “Haggadot). The second volume was copied by a scribe called Isaac. The two volumes were wrongly bound with additions and corrections in later dates. The giant manuscript was probably intended initially for a hazzan of a very rich community on the Upper Rhine. The first volume of the Leipzig Mahzor opens with a frontispiece representing Samson rending the lion, possibly an allusion to the phrase “Grow strong like a lion to fulfill the will of your Maker,” sometimes referring to the hazzan (vol. 1, fol. 19). At the end of the short introductory prayers, there is a miniature depicting the hazzan standing covered with his tallit (“prayer shawl”) in front of a marble pulpit, on which a large open book rests. This probably represents the first volume of the Leipzig manuscript. The second volume is shown in the hands of a young man wearing a Jewish hat, who is standing behind the hazzan accompanied by a bearded Jew (vol. 1, fol. 27). A man holding a scale is a common illustration for the Sabbath of Parashat Shemini, referring to the payment of the annual half-shekel for the Temple sacrifices (Ex. 30:11–16).

Most illustrations in the Leipzig Mahzor are common to other south German mahzorim, such as the tall tree from which Haman and his ten sons are hanging (vol. 1, fol. 51v.), illustrating a piyyut for Purim; a red heifer illustrates Parashat Parah (1, 53v); the sun and moon illustrate Parashat ha-Hodesh (1, 59); a betrothed couple sitting on a bench illustrates a piyyut for the “Great Sabbath” before Passover, alluding to the Torah as the bride of the people of Israel (1, 64). The Egyptians pursuing the Israelites illustrate the Passover Eve prayer (1, 72v–73), the signs of the zodiac the prayer for dew recited on the first day of Passover (1, 85–87), and Moses receiving the tablets of the Law illustrating Shavuot (1, 130v). An additional illustration (1, v. 131) depicts the contemporary custom of initiating children into the study of the Torah. The child is brought to his teacher’s lap to lick the honey-covered alphabet tablet in order to sweeten his introduction to the study of the Torah, while the other children, in celebration of his initiation, receive eggs and cakes. The first volume ends with the kinot (“dirges”) for the Ninth of Av, which are hardly ever illustrated. As is common in Ashkenazi mahzorim, the second volume begins with the prayers for Rosh Ha-Shanah, with illustrations of the “akedah and the ram caught in a thicket. The opening prayers for the Day of Atonement are illustrated with the customary arches resembling doors, alluding to the Gates of Mercy (2, fol. 74v., 85, 164v.), but one of the arches has in the lower margin the additional midrashic illustration of Abraham being saved from the fire of the Chaldeans because of his belief. The feast of Sukkot is illustrated by a man holding the prescribed “four species,” and in the lower margin the legendary beasts, the leviathan and behemoth are fighting, an event which is supposed to take place before the end of time. The style of the Leipzig Mahzor is related to south German illumination around 1300. A fascimile of 68 illuminated pages
from the Leipzig Mahzor, with an introductory volume, was published in 1964.

The Worms Mahzor

(Jerusalem, Jewish National and University Library, Ms. Heb. 4781/1–11) consists of two unrelated volumes, which were kept together in the Worms Synagogue from 1578. The fact that the page size, text area, and style of script are different in each volume, and that Ecclesiastes is repeated in both, indicates that they were executed independently. Only the first volume is dated, through a colophon (fol. 34v) stating that it was completed on Jan. 1, 1272, written by Simhah b. Judah for his uncle R. Baruch b. Isaac. Another entry mentions the scribe, his father Judah of Nuremberg, and Shemaiah the Frenchman, who may have been the artist. Neither volume was intended for the Worms community, since they both contain piyyutim and prayers which are not included in the Worms rite while one piyyut was common in the rite of Mainz. The first volume of the Worms Mahzor is one of the earliest dated illuminated mahzorim from southern Germany. Associated with the colored initial-word panels are many text illustrations for the special Sabbaths, Passover, and Shavuot. The illustration for Parashat Shelachim depicts a man holding a balance, weighing the half-shekels for the payment in the Temple (fol. 39v). Although the illumination of the Worms Mahzor is somewhat crude, it resembles south German Latin illumination of the second half of the 13th century. Another link with the south German school of illumination is the style of the animals, birds, and distorted heads of human figures. The second volume contains a very few decorations of a somewhat later south German style.
